kDEFLATED	8	The deflate compression method (the only one supported in this version)

50.14 class ZLibDecompressMBS

50.14.1 class ZLibDecompressMBS

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for zlib decompression.
Example:

```
// we do a one off compression
Var data as string = "Hello World Hello World"
Var z As new ZLibcompressMBS

z.InitZip(9)
call z.SetInput(data)
z.ProcessZip
z.EndZip

Var CompressedData as string = z.GetOutput

// and one off decompression
Var d As New ZLibDecompressMBS
d.InitZip
call d.SetInput(CompressedData)
d.ProcessZip
d.EndZip

Var UncompressedData as string = d.GetOutput

If UncompressedData = data Then
MessageBox "match"
Else
MessageBox "no match"
end if
```

Notes: See also ArchiveReaderMBS and ArchiveWriterMBS classes for more features and compression formats.

See ZLibCompressMBS class to compress first.

Xojo Developer Magazine

- 24.4, page 10: News

50.14.2 Methods

50.14.3 Adler32(start as UInt32, data as string) as UInt32

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 32bit Adler Checksum about a given string.
Notes: Set start to 0 for the first call.
Later you can pass the result as the new start value to add data to your checksum.

This function is part of the zlib library and given as a free utility function to this class.

50.14.4 close

MBS Compression Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

50.14.5 Constructor(BufferPtr as Ptr, BufferSize as Integer)

MBS Compression Plugin, Plugin Version: 24.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor taking an existing buffer.
Notes: For advanced users who use declares to preallocate the output buffer.
Stores Ptr in OutputPtr property for later access.
See also:

- 50.14.6 Constructor(BufferSize as Integer=20000) 8932

50.14.6 Constructor(BufferSize as Integer=20000)

MBS Compression Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes: The buffer size you specify is the output buffer size.
If this size is small, you need to flush with ProcessZip.
See also:

- 50.14.5 Constructor(BufferPtr as Ptr, BufferSize as Integer) 8932

50.14.7 CRC32(start as UInt32, data as string) as UInt32

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 32bit Checksum about a given string.
Notes: Set start to 0 for the first call.
Later you can pass the result as the new start value to add data to your checksum.

This function is part of the zlib library and given as a free utility function to this class.

50.14.8 EndZip

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finalizes the current decompression stream.
Notes: You may check the Output property after this.
Error is set.

50.14.9 GetOutput as string

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the content of the output buffer.
Notes: The buffer is cleared after this function returns.

50.14.10 InitZip

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the stream.
Notes: Error is set.
See also:

- 50.14.11 InitZip(Raw as Boolean) 8934

50.14.11 InitZip(Raw as Boolean)

MBS Compression Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the stream.
Example:

```
// we do a one off compression
Var data as string = "Hello World Hello World"
Var z As new ZLibcompressMBS

const raw = true

z.InitZip(9, raw)
call z.SetInput(data)
z.ProcessZip
z.EndZip

Var CompressedData as string = z.GetOutput

// and one off decompression
Var d As New ZLibDecompressMBS
d.InitZip(raw)
call d.SetInput(CompressedData)
d.ProcessZip
d.EndZip

Var UncompressedData as string = d.GetOutput

If UncompressedData = data Then
MessageBox "match"
Else
MessageBox "no match"
end if
```

Notes: Error is set.
Raw: Whether to provide raw compression, without header.
See also:

- 50.14.10 InitZip 8933

50.14.12 InputAvail as Integer

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes available in the input buffer.

50.14.13 OutputSize as Integer

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes available in the output buffer.

50.14.14 ProcessZip(Flush as boolean=false)

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does zip decompression.
Notes: Reduces the size of the input buffer and writes new data to the output buffer.
If the input buffer is not "" after this call, you need to call it again, but empty the output buffer before.
Error is set.

If flush is true, the data is flushed to output. Using flush=true all the time will slow down compression, so use it only on the end to clear the output buffers.

50.14.15 SetInput(data as Memoryblock) as boolean

MBS Compression Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the input buffer.
Notes: Returns true if successful.
Returns false if size is <= 0.

The data is read directly from the Memoryblock and the plugin keeps a reference until destructor runs or you set a new input data.
See also:

- 50.14.16 SetInput(data as ptr, Size as Integer) as boolean 8935
- 50.14.17 SetInput(data as string) as boolean 8936

50.14.16 SetInput(data as ptr, Size as Integer) as boolean

MBS Compression Plugin, Plugin Version: 24.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the input buffer.
Notes: Returns true if successful.
Returns false if Size is <= 0.

The data is read directly from the Ptr and you need to keep reference to the memory and prevent it from being released too early.
See also:

- 50.14.15 SetInput(data as Memoryblock) as boolean 8935
- 50.14.17 SetInput(data as string) as boolean 8936

50.14.17 SetInput(data as string) as boolean

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the input buffer.
Notes: Returns true if successful.
Returns false if length is <= 0.

The data is read directly from the String and the plugin keeps a reference until destructor runs or you set a new input data.
See also:

- 50.14.15 SetInput(data as Memoryblock) as boolean 8935
- 50.14.16 SetInput(data as ptr, Size as Integer) as boolean 8935

50.14.18 Properties

50.14.19 CRC as UInt32

MBS Compression Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CRC checksum.
Notes: (Read only property)

50.14.20 Error as Integer

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: Values:

(Read and Write property)

Z_OK	0	(no error)
Z_STREAM_END	1	(Should be handles by the plugin inside)
Z_NEED_DICT	2	
Z_ERRNO	-1	
Z_STREAM_ERROR	-2	
Z_DATA_ERROR	-3	
Z_MEM_ERROR	-4	
Z_BUF_ERROR	-5	
Z_VERSION_ERROR	-6	

50.14.21 ErrorMessage as String

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error message for the last error.
Notes: (Read only property)

50.14.22 OutputBufferSize as Integer

MBS Compression Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output buffer size used in the constructor.
Notes: (Read only property)

50.14.23 OutputPtr as Ptr

MBS Compression Plugin, Plugin Version: 24.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The pointer to the internal output buffer.
Notes: For advanced users to directly use the buffer for declares.
See OutputUsedSize property to see how many bytes are filled.
(Read only property)

50.14.24 OutputUsedSize as Integer

MBS Compression Plugin, Plugin Version: 24.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes used in output buffer currently.
Notes: (Read only property)

50.14.25 TotalInput as Integer

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes processed so far.
Notes: (Read and Write property)

50.14.26 TotalOutput as Integer

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes processed so far.
Notes: (Read and Write property)

50.14.27 Version as String

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version string of the used zlib library.
Example:

```
Var z As New ZLibDecompressMBS
MessageBox z.Version
```

Notes: (Read only property)

50.14.28 Constants

Data Types

Constant	Value	Description
kASCII	1	ASCII
kBINARY	0	Binary
kTEXT	1	Text
kUNKNOWN	2	Unknown

Compression Levels

Constant	Value	Description
kBEST_COMPRESSION	9	
kBEST_SPEED	1	
kDEFAULT_COMPRESSION	-1	
kNO_COMPRESSION	0	

Flush modes

Constant	Value	Description
kBLOCK	5	
kFINISH	4	
kFULL_FLUSH	3	
kNO_FLUSH	0	
kPARTIAL_FLUSH	1	
kSYNC_FLUSH	2	

Errors

Constant	Value	Description
kBUF_ERROR	-5	Negative values are errors, positive values are used for special but normal events.
kDATA_ERROR	-3	Negative values are errors, positive values are used for special but normal events.
kERRNO	-1	Negative values are errors, positive values are used for special but normal events.
kMEM_ERROR	-4	Negative values are errors, positive values are used for special but normal events.
kNEED_DICT	2	Negative values are errors, positive values are used for special but normal events.
kOK	0	Negative values are errors, positive values are used for special but normal events.
kSTREAM_END	1	Negative values are errors, positive values are used for special but normal events.
kSTREAM_ERROR	-2	Negative values are errors, positive values are used for special but normal events.
kVERSION_ERROR	-6	Negative values are errors, positive values are used for special but normal events.

Compression Strategies

Constant	Value	Description
kDEFAULT_STRATEGY	0	
kFILTERED	1	
kFIXED	4	
kHUFFMAN_ONLY	2	
kRLE	3	

Compression Methods

Constant	Value	Description
kDEFLATED	8	The deflate compression method (the only one supported in this version)

50.15 class ZStdMBS

50.15.1 class ZStdMBS

MBS Compression Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for ZStandard compression scheme.
Example:

```
Var InputText As String = "Hello World. Hello World. Hello World. Hello World. Just a test! Hello World. Testing üòù"

Var Compressed As String = ZStdMBS.Compress(InputText)
Var OutputText As String = ZStdMBS.Decompress(Compressed).DefineEncoding(encodings.UTF8)

Break
```

50.15.2 Methods

50.15.3 Compress(Data as MemoryBlock, CompressionLevel as Integer = 1) as MemoryBlock

MBS Compression Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Compresses the given MemoryBlock.
Example:

```
Var InputText As String = "Hello World. Hello World. Hello World. Hello World. Just a test! Hello World. Testing üòù"
Var InputData As MemoryBlock = InputText

Var Compressed As MemoryBlock = ZStdMBS.Compress(InputData)
Var OutputData As MemoryBlock = ZStdMBS.Decompress(Compressed)
```

```
Var OutputText As String = DefineEncoding(OutputData, encodings.UTF8)

Break
```

Notes: CompressionLevel range from 1 to 22 where 22 is best with most memory usage.

Raises exception (UnsupportedOperationException or OutOfMemoryException) in case it fails. Please read message property for details.
See also:

- 50.15.4 Compress(Data as String, CompressionLevel as Integer = 1) as String 8942

50.15.4 Compress(Data as String, CompressionLevel as Integer = 1) as String

MBS Compression Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Compresses the given string.
Example:

```
Var InputText As String = "Hello World. Hello World. Hello World. Hello World. Just a test! Hello World. Testing üòù"

Var Compressed As String = ZStdMBS.Compress(InputText)
Var OutputData As String = ZStdMBS.Decompress(Compressed).DefineEncoding(encodings.UTF8)

Break
```

Notes: CompressionLevel range from 1 to 22 where 22 is best with most memory usage.

Raises exception (UnsupportedOperationException or OutOfMemoryException) in case it fails. Please read message property for details.
See also:

- 50.15.3 Compress(Data as MemoryBlock, CompressionLevel as Integer = 1) as MemoryBlock 8941

50.15.5 Decompress(Data as MemoryBlock) as MemoryBlock

MBS Compression Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Decompresses MemoryBlock.
Example:

```
Var InputText As String = "Hello World. Hello World. Hello World. Hello World. Just a test! Hello World. Testing üòù"
Var InputData As MemoryBlock = InputText
```

```
Var Compressed As MemoryBlock = ZStdMBS.Compress(InputData)
Var OutputData As MemoryBlock = ZStdMBS.Decompress(Compressed)

Var OutputText As String = DefineEncoding(OutputData, encodings.UTF8)

Break
```

Notes: Raises exception (UnsupportedOperationException or OutOfMemoryException) in case it fails. Please read message property for details.
See also:

- 50.15.6 Decompress(Data as String) as String 8943

50.15.6 Decompress(Data as String) as String

MBS Compression Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Decompresses string.
Example:

```
Var InputText As String = "Hello World. Hello World. Hello World. Hello World. Just a test! Hello World. Testing üòù"

Var Compressed As String = ZStdMBS.Compress(InputText)
Var OutputData As String = ZStdMBS.Decompress(Compressed).DefineEncoding(encodings.UTF8)

Break
```

Notes: Raises exception (UnsupportedOperationException or OutOfMemoryException) in case it fails. Please read message property for details.
See also:

- 50.15.5 Decompress(Data as MemoryBlock) as MemoryBlock 8942

Chapter 51

Contacts

51.1 class CNChangeHistoryAddContactEventMBS

51.1.1 class CNChangeHistoryAddContactEventMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A contact was added.
Notes: Subclass of the CNChangeHistoryEventMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

51.1.2 Methods

51.1.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.

51.1.4 Properties

51.1.5 contact as CNContactMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The contact added.
Notes: (Read only property)

51.1.6 containerIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The identifier for the container.
Notes: (Read only property)

51.2 class CNChangeHistoryAddGroupEventMBS

51.2.1 class CNChangeHistoryAddGroupEventMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A group was added.
Notes: Subclass of the CNChangeHistoryEventMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

51.2.2 Methods

51.2.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.

51.2.4 Properties

51.2.5 containerIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The identifier for the container.
Notes: (Read only property)

51.2.6 group as CNGroupMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The group.
Notes: (Read only property)

51.3 class CNChangeHistoryAddMemberToGroupEventMBS

51.3.1 class CNChangeHistoryAddMemberToGroupEventMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A contact was added to a group.
Notes: Subclass of the CNChangeHistoryEventMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

51.8.2 Methods

51.8.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.

51.8.4 Properties

51.8.5 className as String

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The class name of the Objective-C class.
Notes: (Read only property)

51.8.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

51.9 class CNChangeHistoryFetchRequestMBS

51.9.1 class CNChangeHistoryFetchRequestMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Specifies the criteria to fetch change history.
Notes: Changes to contacts are always returned.
All changes are coalesced to remove redundant adds, updates and deletes.
This request is used with enumeratorForChangeHistoryFetchRequest in CNContactStoreMBS class.
Subclass of the CNContactFetchRequestMBS class.
Blog Entries

51.9.2 Methods

51.9.3 additionalContactKeyDescriptors as CNKeyDescriptorMBS()

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Additional keys to include in the fetched contacts.

51.9.4 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Returns true on macOS 10.15 or iOS 13 or later.

51.9.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The constructor.

51.9.6 excludedTransactionAuthors as String()

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Exclude changes made by certain authors.
Notes: If set, transactions made by the specified authors will be excluded from the results. Use this, in conjunction with CNSaveRequest.transactionAuthor, to suppress processing of changes you already know about.

51.9.7 setAdditionalContactKeyDescriptors(additionalContactKeyDescriptors() as CNKeyDescriptorMBS)

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Additional keys to include in the fetched contacts.
Notes: By default, only CNContactIdentifierKey will be fetched. If you would like to include additional key descriptors to process the contacts, include the key descriptors you need.

CNContactIdentifierKey will always be fetched, whether you request it or not.

51.9.8 setExcludedTransactionAuthors(setExcludedTransactionAuthors() as String)

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Exclude changes made by certain authors.
Notes: If set, transactions made by the specified authors will be excluded from the results. Use this, in conjunction with CNSaveRequest.transactionAuthor, to suppress processing of changes you already know about.

51.9.9 Properties

51.9.10 includeGroupChanges as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Set to true to also fetch group changes.
Notes: Default is false.
(Read and Write property)

51.9.11 mutableObjects as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: To return mutable contacts and groups.
Notes: If true returns mutable contacts and groups. Default is false.

(Read and Write property)

51.9.12 shouldUnifyResults as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Returns contact changes as unified contacts.
Notes: If true, returns unified contact history. Otherwise returns individual contact history. Default is true.

A unified contact is the aggregation of properties from a set of linked individual contacts.
If an individual contact is not linked then the unified contact is simply that individual contact.
(Read and Write property)

51.9.13 startingToken as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Request changes made after a certain point.
Notes: If non-nil, only changes made after this point in history will be returned.

If nil, a CNChangeHistoryDropEverythingEventMBS will be returned, followed by an add event for every contact and group currently in the contacts database.
(Read and Write property)

51.10 class CNChangeHistoryRemoveMemberFromGroupEventMBS

51.10.1 class CNChangeHistoryRemoveMemberFromGroupEventMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A contact was removed from a group.
Notes: Subclass of the CNChangeHistoryEventMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

51.10.2 Methods

51.10.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.

51.10.4 Properties

51.10.5 group as CNGroupMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The group.
Notes: (Read only property)

51.10.6 member as CNContactMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The member removed.
Notes: (Read only property)

51.11 class CNChangeHistoryRemoveSubgroupFromGroupEventMBS

51.11.1 class CNChangeHistoryRemoveSubgroupFromGroupEventMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A subgroup was removed from a group.
Notes: Subclass of the CNChangeHistoryEventMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

Function: The private constructor.

51.11.4 Properties

51.11.5 group as CNGroupMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The group.
Notes: (Read only property)

51.11.6 subgroup as CNGroupMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The sub group.
Notes: (Read only property)

51.12 class CNChangeHistoryUpdateContactEventMBS

51.12.1 class CNChangeHistoryUpdateContactEventMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A contact was updated.
Notes: Subclass of the CNChangeHistoryEventMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

51.13.2 Methods

51.13.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.

51.13.4 Properties

51.13.5 group as CNGroupMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The group used.
Notes: (Read only property)

51.14 class CNContactFetchRequestMBS

51.14.1 class CNContactFetchRequestMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A contact fetch request.
Example:

```
// list names and phone numbers of all contacts, sorted by family name
// The app needs permission to access contacts.
// MyContactStore is a subclass of CNContactStoreMBS with the enumerateContactsWithFetchRequest event implemented.
Var keys() As CNKeyDescriptorMBS
keys.Add New CNKeyDescriptorMBS(CNContactMBS.CNContactGivenNameKey)
keys.Add New CNKeyDescriptorMBS(CNContactMBS.CNContactFamilyNameKey)
keys.Add New CNKeyDescriptorMBS(CNContactMBS.CNContactPhoneNumbersKey)

Var request As New CNContactFetchRequestMBS(keys)
request.SortOrder = CNContactMBS.CNContactSortOrderFamilyName

Var store As New MyContactStore
Var error As NSErrorMBS
If Not store.enumerateContactsWithFetchRequest(request, error) And error <>Nil Then
MessageBox error.localizedDescription
End If

// in MyContactStore:
Sub enumerateContactsWithFetchRequest(contact As CNContactMBS, ByRef stop As Boolean, tag As Variant) Handles enumerateContactsWithFetchRequest
Var numbers() As String
For Each value As CNLabeledValueMBS In contact.phoneNumbers
numbers.Add CNPhoneNumberMBS(value.Value).stringValue
Next
System.DebugLog contact.familyName + ", " + contact.givenName + ": " + String.FromArray(numbers, ", ")
End Sub
```

Notes: The CNContactFetchRequest class defines fetching options to use while fetching contacts. It is required to have contact property key(s) to fetch a contact,Äôs properties. Use this class with the enumerateContactsWithFetchRequest method to execute the contact fetch request.

51.14.2 Methods

51.14.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

51.14.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: The designated initializer for a fetch request that uses all keys.
Notes: Same as calling other Constructor and passing result of CNContactStoreMBS.AllFetchKeys function.
See also:

- 51.14.5 Constructor(keysToFetch() as CNKeyDescriptorMBS) 8962

51.14.5 Constructor(keysToFetch() as CNKeyDescriptorMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The designated initializer for a fetch request that uses the specified keys.
Notes: keysToFetch: An array of contact property keys and/or key descriptors from contacts objects to be fetched in the returned contacts.
See also:

- 51.14.4 Constructor 8962

51.14.6 keysToFetch as CNKeyDescriptorMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The properties to fetch in the returned contacts.
Notes: An array of contact property keys or key descriptors from contact objects to be fetched in the returned contacts. For example, CNContactEmailAddressesKey, CNContactPhoneNumbersKey, CNContactFormatterStyleFullName fetches the contact,Äôs email addresses, phone numbers, and contact,Äôs full name with the contact formatter.

51.14.7 setKeysToFetch(keysToFetch() as CNKeyDescriptorMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the properties to fetch in the returned contacts.

51.14.8 Properties

51.14.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: Value is a pointer to a CNContactFetchRequest object.
(Read and Write property)

51.14.10 mutableObjects as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether to return mutable contacts.
Notes: When the value of this property is true, the fetch returns CNMutableContact objects; otherwise it returns CNContact objects. The default value of this property is false.
(Read and Write property)

51.14.11 predicate as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The predicate to match contacts against.
Notes: Set the value of this property to nil to match all contacts or use the predicates define in CNContact Predicates. Compound predicates are not supported.
(Read and Write property)

51.14.12 SortOrder as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The sort order for contacts.
Notes: The default sort order is CNContactSortOrderNone.
(Read and Write property)

51.14.13 unifyResults as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether to return linked contacts as unified contacts.
Notes: A unified contact is an aggregation of properties from a set of linked individual contacts. When the value of this property is true, the fetch returns unified contacts; otherwise, it returns individual contacts. The default value of this property is true.
(Read and Write property)

51.15 class CNContactFormatterMBS

51.15.1 class CNContactFormatterMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNContactFormatter class defines the different formatting styles for contacts.
Example:

```
Var m as new CNMutableContactMBS
m.givenName = "Bob"
m.familyName = "Miller"

Var f as new CNContactFormatterMBS
Var style as Integer = CNContactFormatterMBS.CNContactFormatterStyleFullName
MessageBox CNContactFormatterMBS.stringFromContact(m, style)
```

Notes: This class handles international ordering and delimiting for the contact name components. When formatting many contacts, create an instance of this class and use the instance methods; otherwise use the class methods.

51.15.2 Methods

51.15.3 attributedStringFromContact(contact as CNContactMBS, DefaultAttributes as Dictionary = nil) as NSAttributedStringMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Formats the contact name as an attributed string.
Notes: contact: The contact whose name is to be formatted.
attributes: The default attributes to use. For more information, see NSFormatter.

Returns the formatted contact name as an attributed string.

This method behaves similarly to stringFromContact, except that it returns an attributed string. It includes the attribute key CNContactPropertyAttribute whose attribute values are contact property keys, such as CNContactGivenNameKey. This identifies the name components in the formatted contact name.
See also:

- 51.15.4 attributedStringFromContact(contact as CNContactMBS, Style as Integer, DefaultAttributes as Dictionary = nil) as NSAttributedStringMBS 8966

51.15.4 attributedStringFromContact(contact as CNContactMBS, Style as Integer, DefaultAttributes as Dictionary = nil) as NSAttributedStringMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Formats the contact name as an attributed string.
Notes: contact: The contact whose name is to be formatted.
style: The formatting style to be used for the contact name.
attributes: The default attributes to use. For more information, see NSFormatter.

Returns the formatted contact name as an attributed string.

This method behaves similarly to stringFromContact, except that it returns an attributed string. It includes the attribute key CNContactPropertyAttribute, whose attribute values are contact property keys, such as CNContactGivenNameKey. This identifies the name components in the formatted contact name.
See also:

- 51.15.3 attributedStringFromContact(contact as CNContactMBS, DefaultAttributes as Dictionary = nil) as NSAttributedStringMBS 8965

51.15.5 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

51.15.6 CNContactPropertyAttribute as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the attributes in the attribute dictionary.
Notes: If the attributes include the key CNContactPropertyAttribute whose attribute values are contact property keys, such as CNContactGivenNameKey. This identifies the name components in the formatted contact name.

51.15.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

51.15.8 delimiterForContact(contact as CNContactMBS) as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the delimiter to use between name components.
Notes: contact: The contact whose name is to be formatted.

Returns the delimiter to use between name components.

If contact is nil, or if it has no first name, middle name, or last name, this method returns an empty string.

51.15.9 descriptorForRequiredKeysForStyle(Style as Integer) as CNKeyDescriptorMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the required key descriptor for the specified formatting style of the contact.
Notes: style: The formatting style to be used for contact name.

Returns the contact key descriptor for the formatting style.

Include this method with the keys to fetch when fetching contacts. To format multiple styles, you can include multiple key descriptors with the keys to fetch.

51.15.10 nameOrderForContact(contact as CNContactMBS) as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the display name order.
Notes: contact: The contact whose name is to be formatted.

Returns the display order to use when combining the given name and family name components.

For more information about display name orders, see CNContactDisplayNameOrder.

51.15.11 stringFromContact(contact as CNContactMBS) as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Formats the contact name.
See also:

- 51.15.12 stringFromContact(contact as CNContactMBS, Style as Integer) as String 8968

51.15.12 stringFromContact(contact as CNContactMBS, Style as Integer) as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the contact name, formatted with the specified formatter.
Notes: contact: The contact whose name is to be formatted.
style: The formatting style to be used for the contact name.
See also:

- 51.15.11 stringFromContact(contact as CNContactMBS) as String 8967

51.15.13 Properties

51.15.14 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: Value is a pointer to a CNContactFormatter object.
(Read and Write property)

51.15.15 Style as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The formatting style for the contact name.
Notes: The style for a contact formatter instance. The default value for this property is CNContactFormatterStyleFullName. For more information on formatting styles, see CNContactFormatterStyle.
(Read and Write property)

51.15.16 Constants

Display Name Order

Constant	Value	Description
CNContactDisplayNameOrderFamilyNameFirst	2	Display name order by family name first.
CNContactDisplayNameOrderGivenNameFirst	1	Display name order by given name first.
CNContactDisplayNameOrderUserDefault	0	Display name order by user default.

Styles

Constant	Value	Description
CNContactFormatterStyleFullName	0	Combines the contact name components into a full name.
CNContactFormatterStylePhoneticFullName	1	Combines the contact phonetic name components into a phonetic

51.16 class CNContactMBS

51.16.1 class CNContactMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The class for a contact.
Example:

```
// find contacts by name and show their phone numbers and email addresses
// The app needs contacts access, see CNContactStoreMBS.requestAccessForEntityType.
Var store As New CNContactStoreMBS
Var keys() As CNKeyDescriptorMBS
keys.Add New CNKeyDescriptorMBS(CNContactMBS.CNContactGivenNameKey)
keys.Add New CNKeyDescriptorMBS(CNContactMBS.CNContactFamilyNameKey)
keys.Add New CNKeyDescriptorMBS(CNContactMBS.CNContactPhoneNumbersKey)
keys.Add New CNKeyDescriptorMBS(CNContactMBS.CNContactEmailAddressesKey)

Var error As NSErrorMBS
Var lines() As String
For Each c As CNContactMBS In store.unifiedContactsMatchingPredicate(CNContactMBS.predicateFor-
ContactsMatchingName("Smith"), keys, error)
lines.Add c.givenName + " " + c.familyName
For Each phone As CNLabeledValueMBS In c.phoneNumbers
lines.Add " " + CNLabeledValueMBS.localizedStringForLabel(phone.label) + ": " + CNPhoneNumberMBS(phone.value).stri
Value
Next
For Each mail As CNLabeledValueMBS In c.emailAddresses
lines.Add " " + mail.value.StringValue
Next
Next
MessageBox String.FromArray(lines, EndOfLine)
```

Notes: The CNContact is a thread-safe class that represents an immutable value object for contact properties, such as the first name and phone numbers of a contact. CNContact is similar to a complex Foundation collection, in that it has a mutable subclass (CNMutableContact). Neither the CNContact nor CNMutableContact class maintain a reference to their data store. Every contact has a unique ID, which you obtain using the identifier property.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

51.16.2 Methods

51.16.3 areKeysAvailable(keyDescriptors() as CNKeyDescriptorMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Determines whether all contact property values for the specified keys are fetched.
Notes: The isKeyAvailable or areKeysAvailable methods are used where you are not certain of the keys that when fetched. If this method returns false, refetch the contact using the contact identifier and the keys you want to fetch. Accessing a property that was not fetched will throw an CNContactPropertyNotFetchedExceptionName exception.

51.16.4 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

51.16.5 CNContactBirthdayKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Birthday.

51.16.6 CNContactDatesKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Contact dates.

51.16.7 CNContactDepartmentNameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Department name.

51.16.8 CNContactEmailAddressesKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Email address.

51.16.9 CNContactFamilyNameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Family name.

51.16.10 CNContactGivenNameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Given name.

51.16.11 CNContactIdentifierKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: The identifier.

51.16.12 CNContactImageDataAvailableKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Image data availability.
Available in OS X 10.12 or newer.

51.16.13 CNContactImageDataKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Image data.

51.16.14 CNContactInstantMessageAddressesKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Instant messages.

51.16.15 CNContactJobTitleKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Job title.

51.16.16 CNContactMiddleNameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Middle name.

51.16.17 CNContactNamePrefixKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Name prefix.

51.16.18 CNContactNameSuffixKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Name suffix.

51.16.19 CNContactNicknameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Nickname.

51.16.20 CNContactNonGregorianBirthdayKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Non-Gregorian birthday.

51.16.21 CNContactNoteKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Note.

51.16.22 CNContactOrganizationNameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Organization name.

51.16.23 CNContactPhoneNumbersKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Phone number.

51.16.24 CNContactPhoneticFamilyNameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Phonetic family name.

51.16.25 CNContactPhoneticGivenNameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Phonetic given name.

51.16.26 CNContactPhoneticMiddleNameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Phonetic middle name.

51.16.27 CNContactPhoneticOrganizationNameKey as String

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The phonetic spelling of the contact's organization name.
Notes: Requires macOS 10.12 or newer.

51.16.28 CNContactPostalAddressesKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Postal address.

51.16.29 CNContactPreviousFamilyNameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Previous family name.

51.16.30 CNContactPropertyNotFetchedExceptionName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Exception thrown when an accessed property was not fetched.
Notes: The plugin throws a NSExceptionMBS where the name is this value in case a property is not available.

51.16.31 CNContactRelationsKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Contact relations.

51.16.32 CNContactSocialProfilesKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Social profile.

51.16.33 CNContactThumbnailImageDataKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Thumbnail data.

51.16.34 CNContactTypeKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Contact type.

51.16.35 CNContactUrlAddressesKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: URL Address.

51.16.36 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

51.16.37 contactRelations as CNLabeledValueMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: An array of labeled relations for the contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and a CNContactRelation value. This property was previously known as related names.

51.16.38 copy as CNContactMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a copy of the contact object.

51.16.39 dates as CNLabeledValueMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: An array containing labeled Gregorian dates.
Notes: This property is an array of CNLabeledValue objects, each of which has an NSString label and NSDateComponents value. You can use this property to store Gregorian dates such as anniversaries. Day and month components are required and year is optional. The calendar component can be nil or NSCalendarIdentifierGregorian. All other date components are invalid and including them results in an NSError object that includes the key paths of the invalid components and the error code CNErrorCodeValidationConfigurationError.

51.16.40 descriptorForAllComparatorKeys as CNKeyDescriptorMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Fetches all the keys required for the contact sort comparator.
Notes: This method implements the CNKeyDescriptor protocol and can be used as an array element when fetching keys for contacts.

51.16.41 emailAddresses as CNLabeledValueMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: An array of labeled email addresses for the contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and an NSString that contains the email address.

51.16.42 instantMessageAddresses as CNLabeledValueMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: An array of labeled IM addresses for the contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and a CNInstantMessageAddress value.

51.16.43 isKeyAvailable(key as String) as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Determines whether the contact property value for the specified key is fetched.
Notes: The isKeyAvailable or areKeysAvailable methods are used when you are not certain of the keys that were fetched. If this method returns false, refetch the contact using the contact identifier and the keys you want to fetch. Accessing a property that was not fetched will throw CNContactPropertyNotFetchedExceptionName.

51.16.44 isUnifiedWithContactWithIdentifier(contactIdentifier as String) as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns true if the receiver was fetched as a unified contact and includes the contact having contactIdentifier in its unification.

51.16.45 localizedStringForKey(key as String) as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a string containing the localized contact property name.
Notes: key: A string containing the contact property key.

Returns a localized string containing the contact property name.

This method returns a localized string for a contact property key. For example, the value of a Canadian CNContactPostalAddressesKey field would be ‚ÄúPostal Code‚Äù, while the value of a French one would be ‚ÄúCode Postal‚Äù.

51.16.46 mutableCopy as CNMutableContactMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a mutable copy of this contact.

51.16.47 phoneNumbers as CNLabeledValueMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: An array of labeled phone numbers for a contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and a CNPhoneNumber value.

51.16.48 postalAddresses as CNLabeledValueMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: An array of labeled postal addresses for a contact.
Example:

```
Var c As CNContactMBS // your contact

Var postalAddresses() As CNLabeledValueMBS = c.postalAddresses
For Each postalAddresse As CNLabeledValueMBS In postalAddresses

Var p As CNPostalAddressMBS = postalAddresse.Value

MessageBox p.Street + EndOfLine + p.PostalCode + " " + p.City
```

Next

Notes: This property is an array of CNLabeledValue objects, each of which has a label and a CNPostalAddress value.

51.16.49 predicateForContactsInContainerWithIdentifier(containerIdentifier as String) as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a predicate to find the contacts in the specified container.
Notes: Returns a predicate that can be used to fetch contacts from CNContactStore.

51.16.50 predicateForContactsInGroupWithIdentifier(groupIdentifier as String) as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a predicate to find the contacts that are members in the specified group.
Notes: Returns a predicate that can be used to fetch contacts from CNContactStore.

51.16.51 predicateForContactsMatchingEmailAddress(emailAddress as String) as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a predicate to find the contacts whose email address matches the specified value.
Example:

```
Var keysToFetch() As CNKeyDescriptorMBS
keysToFetch.Add CNContactVCardSerializationMBS.descriptorForRequiredKeys

Var predicate As NSPredicateMBS = CNContactMBS.predicateForContactsMatchingEmailAddress("test@test.test")

Var error As NSErrorMBS
Var contacts() As CNContactMBS = m.unifiedContactsMatchingPredicate(predicate, keysToFetch, error)

If error <>Nil Then
List.AddRow "Error: "+error.LocalizedDescription
Else
List.AddRow Str(contacts.Count)+" contacts found"
End If
```

Notes: emailAddress: The email address to be matched.

Returns a predicate that you can use to fetch contacts from CNContactStoreMBS class.

Requires macOS 10.13 or newer.

51.16.52 predicateForContactsMatchingName(name as String) as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a predicate to find the contacts matching the specified name.
Example:

```
Var keysToFetch() As CNKeyDescriptorMBS
keysToFetch.Add CNContactVCardSerializationMBS.descriptorForRequiredKeys

Var predicate As NSPredicateMBS = CNContactMBS.predicateForContactsMatchingName("Peter")

Var error As NSErrorMBS
Var contacts() As CNContactMBS = m.unifiedContactsMatchingPredicate(predicate, keysToFetch, error)

If error <>Nil Then
List.AddRow "Error: "+error.LlocalizedDescription
Else
List.AddRow Str(contacts.Count)+" contacts found"
End If
```

Notes: The name can contain any number of words.
Returns a predicate that can be used to fetch contacts from CNContactStore.

51.16.53 predicateForContactsMatchingPhoneNumber(phoneNumber as CNPhoneNumberMBS) as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a predicate to find the contacts whose phone number matches the specified value.
Example:

```
Var keysToFetch() As CNKeyDescriptorMBS
keysToFetch.Add CNContactVCardSerializationMBS.descriptorForRequiredKeys

Var phone As New CNPhoneNumberMBS("123456789,Ä¨")
```

```
Var predicate As NSPredicateMBS = CNContactMBS.predicateForContactsMatchingPhoneNumber(phone)

Var error As NSErrorMBS
Var contacts() As CNContactMBS = m.unifiedContactsMatchingPredicate(predicate, keysToFetch, error)

If error <>Nil Then
List.AddRow "Error: "+error.LocalizedDescription
Else
List.AddRow Str(contacts.Count)+" contacts found"
End If
```

Notes: Returns a predicate that you can use to fetch contacts from CNContactStoreMBS.

Requires macOS 10.13 or newer.

51.16.54 predicateForContactsWithIdentifiers(Identifiers() as String) as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a predicate to find the contacts matching the specified identifiers.
Notes: Returns a predicate that can be used to fetch contacts from CNContactStore.

51.16.55 socialProfiles as CNLabeledValueMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: An array of labeled social profiles for a contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and a CNSocialProfile value.

51.16.56 urlAddresses as CNLabeledValueMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: An array of labeled URL addresses for a contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and an NSString value that contains the URL.

51.16.57 valueForKey(key as String) as Variant

MBS Mac64bit Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop & iOS.

Function: Queries value for a given key.
Example:

```
// your contact
Var c as CNContactMBS

Var value as Variant = c.valueForKey(c.CNContactPreviousFamilyNameKey)
if value = nil then
// empty
else
MessageBox value.StringValue
end if
```

Notes: Normally you use the properties, but if you loop over a list of keys, you can use this function to query value for key.

51.16.58 Properties

51.16.59 birthday as NSDateComponentsMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A date component for the Gregorian birthday of the contact.
Notes: Birthdays are represented by this property, whose values are the relevant properties of an NSDateComponents object. Day and month components are required for this property, and year is optional. The calendar component can be nil or NSCalendarIdentifierGregorian. All other date components are invalid and including them results in an NSError object that includes the key paths of the invalid components and the error code CNErrorCodeValidationConfigurationError.
(Read only property)

51.16.60 contactType as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: An enum identifying the contact type.
Notes: Can be CNContactMBS.CNContactTypeOrganization or CNContactMBS.CNContactTypePerson.
(Read only property)

51.16.61 departmentName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The name of the department associated with the contact.
Notes: (Read only property)

51.16.62 familyName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The family name of the contact.
Notes: (Read only property)

51.16.63 givenName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The given name of the contact.
Notes: The given name is often known as the first name of the contact.
(Read only property)

51.16.64 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: Value is a pointer to a CNContact object.
(Read and Write property)

51.16.65 identifier as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A value that uniquely identifies a contact on the device.
Notes: It is recommended that you use the identifier when re-fetching the contact. An identifier can be persisted between the app launches. Note that this identifier only uniquely identifies the contact on the current device.
(Read only property)

51.16.66 imageData as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The profile picture of a contact.
Notes: It is recommended that you fetch this property only when you need to access its value, such as when you need to display the contact,Äôs profile picture.
(Read only property)

51.16.67 imageDataAvailable as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Indicates whether a contact has a profile picture.
Notes: (Read only property)

51.16.68 jobTitle as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The contact,Äôs job title.
Notes: (Read only property)

51.16.69 middleName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The middle name of the contact.
Notes: (Read only property)

51.16.70 namePrefix as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The name prefix of the contact.
Notes: (Read only property)

51.16.71 nameSuffix as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The name suffix of the contact.
Notes: (Read only property)

51.16.72 nickname as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The nickname of the contact.
Notes: (Read only property)

51.16.73 nonGregorianBirthday as NSDateComponentsMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A date component for the non-Gregorian birthday of the contact.
Notes: Non-Gregorian birthdays can be displayed using this property, whose values are the relevant properties of an NSDateComponents object. Day and month components are required; year and leap month are optional. The calendar component is also required and must be an NSCalendar object with an identifier other than NSCalendarIdentifierGregorian. For example, some supported calendars are Chinese, Hebrew, and Islamic. All other date components are invalid and including them results in an NSError object that includes the key paths of the invalid components and the error code CNErrorCodeValidationConfigurationError.
(Read only property)

51.16.74 note as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A string containing notes for the contact.
Notes: To fetch the note property in iOS 13 or later or macOS 16 or later, add the com.apple.developer.contacts.notes entitlement to your app. The entitlement requires permission from Apple to use, and you can,Äôt publicly distribute your app until you have permission to use it. For more information about adding the entitlement and getting permission, see com.apple.developer.contacts.notes.
(Read only property)

51.16.75 organizationName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The name of the organization associated with the contact.
Notes: (Read only property)

51.16.76 phoneticFamilyName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A string for the phonetic family name of the contact.
Notes: This property contains a string that specifies the pronunciation of the contact,Äôs family (or last) name.
(Read only property)

51.16.77 phoneticGivenName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The phonetic given name of the contact.
Notes: This property contains a string that specifies the pronunciation of the contact,Äôs given (or first) name.
(Read only property)

51.16.78 phoneticMiddleName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The phonetic middle name of the contact.
Notes: This property contains a string that specifies the pronunciation of the contact,Äôs middle name.
(Read only property)

51.16.79 phoneticOrganizationName as String

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The phonetic name of the organization associated with the contact.
Notes: This property contains a string that specifies the pronunciation of the contact,Äôs organization name.
Requires macOS 10.12 or newer.
(Read only property)

51.16.80 previousFamilyName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A string for the previous family name of the contact.
Notes: The previous family name is often known as the maiden name of the contact.

(Read only property)

51.16.81 thumbnailImageData as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The thumbnail version of the contact,Äôs profile picture.
Notes: The thumbnailImageData property is derived from the imageData property, including cropping information from vCards or edits from contact viewing. It is recommended that you fetch this property only when you need to access its value, such as when you need to display the contact,Äôs profile thumbnail picture.
(Read only property)

51.16.82 Constants

Sort Orders

Constant	Value	Description
CNContactSortOrderFamilyName	3	Order by Family Name.
CNContactSortOrderGivenName	2	Order by Given Name.
CNContactSortOrderNone	0	Order by no order.
CNContactSortOrderUserDefault	1	Order by user preference.

Contact Types

Constant	Value	Description
CNContactTypeOrganization	1	The contact is an Organization.
CNContactTypePerson	0	The contact is a person.

51.17 class CNContactPickerMBS

51.17.1 class CNContactPickerMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: The CNContactPicker object displays the popover-based system interface for selecting a contact.
Example:

```
// This example needs a window with Button1.
// show the contact picker next to a button
// MyContactPicker is a subclass of CNContactPickerMBS with the didSelectContact event implemented.
// Picker is a property of the window: Picker As MyContactPicker
Picker = New MyContactPicker

Var view As NSViewMBS = Button1.NSViewMBS
Picker.showRelativeToRect(view.bounds, view, CNContactPickerMBS.MaxYEdge)

// in MyContactPicker:
Sub didSelectContact(contact As CNContactMBS) Handles didSelectContact
System.DebugLog "Selected " + contact.givenName + " " + contact.familyName
End Sub
```

Notes: The methods and properties of this class help you choose a contact or a contact's value, such as a phone number or email address, of a contact.

51.17.2 Methods

51.17.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

51.17.4 close

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: Closes the popover.

51.17.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.

51.17.6 Destructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: The destructor.

51.17.7 displayedKeys as String()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: The keys to be displayed when a contact is expanded.
Notes: If no keys are provided, the picker selects contacts instead of values. For a list of possible keys, see Metadata Keys in CNContact.

51.17.8 setDisplayedKeys(keys() as String)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: Set the keys to be displayed when a contact is expanded.
Notes: If no keys are provided, the picker selects contacts instead of values. For a list of possible keys, see Metadata Keys in CNContact.

51.17.9 showRelativeToRect(positioningRect as NSRectMBS, view as NSViewMBS, edge as Integer)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: Shows the picker popover anchored to the specified view.
Notes: positioningRect: The content size of the popover.
positioningView: The view to which the popover should be positioned.
preferredEdge: The edge to which the popover should be anchored to. Can be MinYEdge, MinXEdge, MaxYEdge or MaxXEdge.

51.17.10 Properties

51.17.11 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: Value is a pointer to a CNContactPicker object.
(Read and Write property)

51.17.12 Events

51.17.13 DidClose

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: Called when the contact picker,Äôs popover has closed.

51.17.14 didSelectContact(contact as CNContactMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: Called after a contact has been selected by the user.
Notes: The contact may only be partial loaded and not have all fields available as the picker may not need/show all fields.

51.17.15 didSelectContactProperty(contactProperty as CNContactPropertyMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: The event called when a contact property was selected.
Notes: The contact may only be partial loaded and not have all fields available as the picker may not need/show all fields.

51.17.16 WillClose

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: Called when the contact picker,Äôs popover is about to close.

51.17.17 Constants

Edge Constants

Constant	Value	Description
MaxXEdge	2	
MaxYEdge	3	
MinXEdge	0	
MinYEdge	1	

51.18 class CNContactPickerViewControllerMBS

51.18.1 class CNContactPickerViewControllerMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: A view controller that displays an interface for picking contacts.
Example:

```
// let the user pick a phone number from the contacts
// MyContactPicker is a subclass of CNContactPickerViewControllerMBS with the events implemented.
// Picker is a property of the window: Picker As MyContactPicker
Picker = New MyContactPicker
Var keys() As String = Array(CNContactMBS.CNContactPhoneNumbersKey)
Picker.setdisplayedPropertyKeys keys
Picker.Present

// in MyContactPicker:
Sub didSelectContactProperty(contactProperty As CNContactPropertyMBS) Handles didSelectContactProp-
erty
Var c As CNContactMBS = contactProperty.Contact
If contactProperty.Value IsA CNPhoneNumberMBS Then
System.DebugLog c.givenName + " " + c.familyName + ": " + CNPhoneNumberMBS(contactProperty.Value).string-
Value
End If
End Sub

Sub didCancel() Handles didCancel
System.DebugLog "Cancelled."
End Sub
```

Notes: A CNContactPickerViewController allows the user to select one or more contacts (or their properties) from the list of contacts displayed in the contact view controller (CNContactViewController). The picker supports both single selection and multiselection of the contacts. The app using contact picker view does not need access to the user,Äôs contacts and the user will not be prompted for ,Äúgrant permission,Äù access. The app has access only to the user,Äôs final selection.
There are predefined predicates in this class that let you control the user selection of the contact. Changing the predicates only take effect before the view is presented.
Subclass of the NSViewControllerMBS class.

51.18.2 Methods

51.18.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: Whether this class is available.
Notes: Requires iOS 9.0

51.18.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: The constructor.

51.18.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: The destructor.

51.18.6 Dismiss

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: Dismisses the controller.

51.18.7 displayedPropertyKeys as String()

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: The CNContact property keys to display in the contact detail card.
Notes: All the properties of the contact are displayed if this property is not set.

51.18.8 Present

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: Presents the controller.

51.18.9 setdisplayedPropertyKeys(displayedPropertyKeys() as String)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: The CNContact property keys to display in the contact detail card.
Notes: All the properties of the contact are displayed if this property is not set.

51.18.10 Properties

51.18.11 isBeingPresented as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: Whether the controller is presented.
Notes: Returns true if the dialog is visible.
(Read only property)

51.18.12 predicateForEnablingContact as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: A predicate to determine the contact selectability in the list of contacts.
Notes: You can set a value for this property to determine which contact should become selectable, such as emailAddresses.@count >0 to enable all the contacts that have an email address to become selectable. If no predicate is set for this property, all contacts become selectable. To learn about predicate syntax, see NSPredicateMBS.
(Read and Write property)

51.18.13 predicateForSelectionOfContact as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: A predicate to control the return of the selected contact.
Notes: This property determines whether a selected contact should be returned (when the predicate evaluates to TRUE), or a default action for the property should be performed (when the predicate evaluates to FALSE). By default the contact picker view controller displays the contact,Äôs detail card when a contact is selected. To learn about predicates, see NSPredicateMBS.
(Read and Write property)

51.18.14 predicateForSelectionOfProperty as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: A predicate to control the properties of the selected contact.
Notes: This property determines whether a selected contact should be returned (when the predicate evaluates to TRUE), or a default action for the property should be performed (when the predicate evaluates to FALSE). By default the contact picker view controller returns the first selected property of the contact. This predicate is evaluated on the CNContactProperty property that is being selected, such as (key == 'emailAddresses') AND (value LIKE '*@apple.com') to return email address of the contact if the address contains the string ,Äú@apple.com,Äù.
(Read and Write property)

51.18.15 Events

51.18.16 didCancel

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: In iOS, called when the user taps Cancel.
Notes: The picker is dismissed automatically after a contact or property is picked.

51.18.17 didSelectContact(contact as CNContactMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: Called after a contact has been selected by the user.
Notes: This event is called when the user selects a single contact.

51.18.18 didSelectContactProperties(contactProperties() as CNContactPropertyMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: Called after contact properties have been selected by the user.
Notes: This event is invoked when the user selects more than one property. Implementing this method configures the picker for multi-selection.

51.18.19 didSelectContactProperty(contactProperty as CNContactPropertyMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: Called when a property of the contact has been selected by the user.
Notes: This event ia called when the user selects a single property of the contact.

51.18.20 didSelectContacts(contacts() as CNContactMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: Called after contacts have been selected by the user.
Notes: This event is called when the user selects more than one contact. Implementing this method configures the picker for multi-selection.

51.19 class CNContactPropertyMBS

51.19.1 class CNContactPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNContactProperty is a convenience class and returns a tuple or quadruple to a contact,Äôs property.
Example:

```
// inspect the property the user picked in a CNContactPickerViewControllerMBS
// This code goes into the didSelectContactProperty event of your picker subclass.
Var contactProperty As CNContactPropertyMBS // from the event
If contactProperty = Nil Then Return

Var c As CNContactMBS = contactProperty.Contact
MessageBox "Contact: " + c.givenName + " " + c.familyName + EndOfLine + _
"Key: " + contactProperty.Key + EndOfLine + _
"Label: " + CNLabeledValueMBS.localizedStringForLabel(contactProperty.Label)
```

Notes: A property contains related information for a specific contact. A contact (an instance of CNContact) has properties, such as firstName, phoneNumber, and jobTitle. Each property is represented by an instance of CNContactProperty, which provides a tuple that can contain three or five values, depending on whether the property is a member of an array of labeled values. For example, the phoneNumbers property is a member of an array of labeled values, so the CNContactProperty tuple contains the contact, key, value, identifier, and label. For the givenName property, which is not contained in a labeled array, CNContactProperty returns a tuple that contains the contact, key, and value. The CNContactProperty class is used by the CNContactPicker to return the user's selected property.

51.19.2 Methods

51.19.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

51.19.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

51.19.5 copy as CNContactPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a copy of the social property object.

51.19.6 Properties

51.19.7 Contact as CNContactMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: CNContact property of the selected contact.
Notes: This property is used for properties that may or may not be in labeled arrays.
(Read only property)

51.19.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: Value is a pointer to a CNContactProperty object.
(Read and Write property)

51.19.9 Identifier as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The identifier of the labeled value in the array of labeled.
Notes: Identifier is used only for properties in labeled arrays. If the property is not an array of labeled values, the value of the identifier is "".
(Read only property)

51.19.10 Key as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The key of the contact property.
Notes: This property is used for properties that may or may not be in labeled arrays.
(Read only property)

51.19.11 Label as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The label of the labeled value of the property array.
Notes: Labeled property is used only for properties that are in labeled arrays. If the property is not an array of labeled values, the value of the label is "".
(Read only property)

51.19.12 Value as Variant

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The value of the property.
Notes: This property is used for properties that may or may not be in labeled arrays.
(Read only property)

51.20 class CNContactRelationMBS

51.20.1 class CNContactRelationMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNContactRelation class defines an immutable value object representing a contact related to another.
Example:

```
// add the spouse and the manager to a contact
Var contact As New CNMutableContactMBS
contact.givenName = "John"
contact.familyName = "Appleseed"

Var relations() As CNLabeledValueMBS
relations.Add New CNLabeledValueMBS(CNContactRelationMBS.CNLabelContactRelationSpouse, New CN-
ContactRelationMBS("Jane Appleseed"))
relations.Add New CNLabeledValueMBS(CNContactRelationMBS.CNLabelContactRelationManager, New
CNContactRelationMBS("Tim Smith"))
contact.setContactRelations relations

// save with CNContactStoreMBS and CNSaveRequestMBS
```

Notes: This is a thread-safe class.

51.20.2 Methods

51.20.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

51.20.4 CNLabelContactRelationAssistant as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes: Assistant.

51.20.5 CNLabelContactRelationBrother as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes: Brother

51.20.6 CNLabelContactRelationChild as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes: Child

51.20.7 CNLabelContactRelationDaughter as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes: Daugther
for macOS 10.13 or newer.

51.20.8 CNLabelContactRelationFather as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes: Father

51.20.9 CNLabelContactRelationFriend as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes: Friend

51.20.10 CNLabelContactRelationManager as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes: Manager

51.20.11 CNLabelContactRelationMother as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes: Mother

51.20.12 CNLabelContactRelationParent as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes: Parent

51.20.13 CNLabelContactRelationPartner as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes: Partner

51.20.14 CNLabelContactRelationSister as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes: Sister

51.20.15 CNLabelContactRelationSon as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes: Son
for macOS 10.13 or newer.

51.20.16 CNLabelContactRelationSpouse as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes: Spouse

51.20.17 Constructor(name as String)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Initialize a class instance with the name of the related contact.

51.20.18 contactRelationWithName(name as string) as CNContactRelationMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new contact relation with a name.

51.20.19 copy as CNContactRelationMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a copy of the contact relation object.

51.20.20 Properties

51.20.21 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: Value is a pointer to a CNContactRelation object.
(Read and Write property)

51.20.22 Name as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The name of the related contact.
Notes: (Read only property)

51.21 class CNContactStoreMBS

51.21.1 class CNContactStoreMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNContactStore class is a thread-safe class that can fetch and save contacts, groups, and containers.
Example:

```
// ask for access and search contacts by name
// MyContactStore is a subclass of CNContactStoreMBS with the event implemented.
// Store is a property of the window: Store As MyContactStore

Store = New MyContactStore
Store.requestAccessForEntityType(CNContactStoreMBS.CNEntityTypeContacts)

// in MyContactStore:
Sub requestAccessForEntityType(granted As Boolean, error As NSErrorMBS, tag As Variant) Handles requestAccessForEntityType
If Not granted Then Return

// which fields we want to read
Var keys() As CNKeyDescriptorMBS
keys.Add New CNKeyDescriptorMBS(CNContactMBS.CNContactGivenNameKey)
keys.Add New CNKeyDescriptorMBS(CNContactMBS.CNContactFamilyNameKey)
keys.Add New CNKeyDescriptorMBS(CNContactMBS.CNContactEmailAddressesKey)

Var predicate As NSPredicateMBS = CNContactMBS.predicateForContactsMatchingName("Smith")
Var err As NSErrorMBS
Var contacts() As CNContactMBS = Me.unifiedContactsMatchingPredicate(predicate, keys, err)

For Each contact As CNContactMBS In contacts
Var line As String = contact.givenName + " " + contact.familyName
For Each email As CNLabeledValueMBS In contact.emailAddresses
line = line + ", " + email.Value.StringValue
Next
System.DebugLog line
Next
End Sub
```

Notes: The CNContactStore class provides ways to execute fetch and save requests. There are a few recommended ways you can implement these requests in your app to load contacts:

- Fetch only the contact properties that will be used.
- When fetching all contacts and caching the results, first fetch all contacts identifiers, then fetch batches

of detailed contacts by identifiers as required.

- To aggregate several contacts fetches, first collect a set of unique identifiers from the fetches. Then fetch batches of detailed contacts by those unique identifiers.
- If you cache the fetched contacts, groups, or containers, you need to refetch these objects (and release the old cached objects) when CNContactStoreDidChangeNotification is posted.

Because CNContactStore fetch methods perform I/O, it,Äôs recommended that you avoid using the main thread to execute fetches.

Your app must be code signed to see contacts.

Warning: Do not use in macOS 10.11 or earlier due to bugs, which have been fixed in macOS 10.12.

51.21.2 Methods

51.21.3 allContacts(byref error as NSErrorMBS) as CNContactMBS()

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Searches all contacts.
Notes: Same as ContactsWithFetchRequest function with key list from CNContactStoreMBS.AllFetchKeys function.

51.21.4 AllFetchKeys as String()

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Returns list of all keys used by the plugin to query all properties for contacts.

51.21.5 authorizationStatusForEntityType(entityType as Integer = 0) as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the current authorization status to access the contact data.
Notes: entityType: Set to CNEntityType, e.g. CNEntityTypeContacts.

Returns the current authorization status to access the contact data.

Based on the authorization status, your application might display or hide its UI elements that access any Contacts API. This method is thread-safe and will not block your application. To see different authorization status, see CNAuthorizationStatus.

51.21.6 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

51.21.7 CNContactStoreDidChangeNotification as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The notification posted when changes occur in another CNContactStore.

51.21.8 CNErrorDomain as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The error domain for NSErrorMBS.

51.21.9 CNErrorUserInfoAffectedRecordIdentifiersKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A key for the NSError userInfo dictionary.
Notes: When available an array of one or more NSString objects for which the error code applies.

51.21.10 CNErrorUserInfoAffectedRecordsKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A key for the NSError userInfo dictionary.
Notes: When available an array of one or more CNContact, CNGroup or CNContainer objects for which the error code applies.

51.21.11 CNErrorUserInfoKeyPathsKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A key for the NSError userInfo dictionary.
Notes: An array of key paths associated with a given error. For validation errors this will contain key paths to specific object properties.

51.21.12 CNErrorUserInfoValidationErrorsKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A key for the NSError userInfo dictionary.
Notes: An array of NSErrors for CNErrorCodeValidationMultipleErrors.

51.21.13 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

51.21.14 ContactsWithFetchRequest(fetchRequest as CNContactFetchRequestMBS, byref error as NSErrorMBS) as CNContactMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns all contacts matching a contact fetch request.
Notes: fetchRequest: The contact fetch request that specifies the search criteria.
error: Error information, if an error occurred.

This method waits until the enumeration is finished. If there are no results, the method returns an empty array.
This can be used to fetch all contacts without keeping all of them at once in memory because this is expensive.

Your app must be code signed to see contacts.

51.21.15 containersMatchingPredicate(predicate as NSPredicateMBS, byref error as NSErrorMBS) as CNContainerMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Fetches all containers matching the specified predicate.
Notes: predicate: The predicate to use to fetch matching containers. Set this property to nil to match all containers.
error: Error information, if an error occurred.

Returns an array of CNContainer objects that match the predicate.

A container holds a collection of contacts, a contact (each contact can be in only one container). CardDAV accounts usually have only one container of contacts. Exchange accounts may have multiple containers, where each container represents an Exchange folder.

This method returns an empty array when no matching container is found. In case of an error this method returns nil. You should use only the predicates defined CNContainer class. Compound predicates are not supported.

51.21.16 defaultContainerIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the identifier of the default container.
Notes: This identifier can be used to fetch a default container. A default container is where the user wants new contacts to be added implicitly.

51.21.17 Destructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

51.21.18 enumerateContactsWithFetchRequest(fetchRequest as CNContactFetchRequestMBS, byref error as NSErrorMBS, tag as Variant = nil) as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean value that indicates whether the enumeration of all contacts matching a contact fetch request executed successfully.
Notes: fetchRequest: The contact fetch request that specifies the search criteria.
error: Error information, if an error occurred.

Calls enumerateContactsWithFetchRequest event for each contact found.

Returns true if enumeration of all contacts matching a contact fetch request executes successfully; otherwise, false.

This method waits until the enumeration is finished. If there are no results, the event is not called and the method returns true.

This can be used to fetch all contacts without keeping all of them at once in memory because this is expensive.
See also:

- 51.21.37 enumerateContactsWithFetchRequest(contact as CNContactMBS, byref stop as boolean, tag as Variant) 9017

51.21.19 enumeratorForChangeHistoryFetchRequest(request as CNChangeHistoryFetchRequestMBS, byref error as NSErrorMBS) as CNFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop & iOS.

Function: Enumerate a change history fetch request.
Notes: Executes the given fetch request and returns an enumerator for the results.
This may prevent all events from being loaded into memory at once.

An exception may be thrown if an error occurs during enumeration.

request: A description of the events to fetch.
error: If the fetch fails, contains an NSErrorMBS object with more information.

Returns an enumerator of the events matching the result, or nil if there was an error.

51.21.20 enumeratorForContactFetchRequest(request as CNContactFetchRequestMBS, byref error as NSErrorMBS) as CNFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop & iOS.

Function: Enumerate a contact fetch request.
Notes: Executes the given fetch request and returns an enumerator for the results.
This may prevent all records from being loaded into memory at once.

An exception may be thrown if an error occurs during enumeration.

request: A description of the records to fetch.
error: If the fetch fails, contains an NSErrorMBS object with more information.

An enumerator of the records matching the result, or nil if there was an error.

51.21.21 executeSaveRequest(saveRequest as CNSaveRequestMBS, byref Error as NSErrorMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Executes a save request and returns success or failure.
Notes: saveRequest: The save request to execute.
error: Error information, if an error occurred.

Returns true if the save request executes successfully; otherwise, false.

It is recommended that you do not access objects in the save request from other threads when it is in the process of being executed, because it may modify the contacts in the process. A save request only applies the changes to the objects. If there are overlapping changes with multiple or concurrent CNSaveRequest then the last saved change wins.

Warning: Do not use in macOS 10.11 or earlier due to bugs, which have been fixed in macOS 10.12.

51.21.22 groupsByName(name as String, byref error as NSErrorMBS) as CNGroupMBS()

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Looks for groups with matching names.
Notes: Returns empty array if nothing found.
Comparison is localized case insensitive.

51.21.23 groupsForContact(contact as CNContactMBS, byref error as NSErrorMBS) as CNGroupMBS()

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Searches all groups for a given contact.

51.21.24 groupsMatchingPredicate(predicate as NSPredicateMBS, byref error as NSErrorMBS) as CNGroupMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Fetches all groups matching the specified predicate.
Notes: predicate: The predicate to use to fetch the matching groups. Set predicate to nil to match all groups.
error: Error information, if an error occurred.

Returns an array of CNGroup objects that match the predicate.

This method returns an empty array when no matching groups are found. If an error occurs, this method returns nil. You should use only the predicates defined in CNGroup class predicates. Compound predicates are not supported. Contacts may be members of one or more groups, depending upon the account they come from.

51.21.25 requestAccessForEntityType(entityType as Integer = 0, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Requests access to the user's contacts.
Notes: entityType: Set to CNEntityTypeContacts.

Users are able to grant or deny access to contact data on a per-application basis. Request access to contact data by calling requestAccessForEntityType method. This will not block your application while the user is being asked for permission. The user will only be prompted the first time access is requested; any subsequent CNContactStore calls will use the existing permissions. The requestAccessForEntityType event is later called. This method is optional when CNContactStore is used in the background thread. If this method is not used, CNContactStore may block your application while the user is asked for access permission.

Your app must be code signed to see contacts.
See also:

- 51.21.38 requestAccessForEntityType(granted as boolean, error as NSErrorMBS, tag as Variant) 9018

51.21.26 unifiedContactsMatchingPredicate(predicate as NSPredicateMBS, byref error as NSErrorMBS) as CNContactMBS()

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Fetches all unified contacts matching the specified predicate.
Notes: predicate: The predicate to match against.
error: Error information, if an error occurred.

Returns an array of CNContact objects matching the predicate.

If no matches are found, this method returns an empty array (or nil in case of error). Use only the predicates from the CNContact class predicates. Compound predicates are not supported by this method. Due to unification, the returned contacts may have different identifiers than you specify. To fetch all contacts, use enumerateContactsWithFetchRequest.

Same as other unifiedContactsMatchingPredicate function with key list from CNContactStoreMBS.AllFetchKeys function.
See also:

- 51.21.27 unifiedContactsMatchingPredicate(predicate as NSPredicateMBS, keysToFetch() as CNKeyDescriptorMBS, byref error as NSErrorMBS) as CNContactMBS() 9014

51.21.27 unifiedContactsMatchingPredicate(predicate as NSPredicateMBS, keysToFetch() as CNKeyDescriptorMBS, byref error as NSErrorMBS) as CNContactMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Fetches all unified contacts matching the specified predicate.
Notes: predicate: The predicate to match against.
keys: The properties to fetch in the returned CNContact objects. You should fetch only the properties that you plan to use. Note that you can combine contact keys and contact key descriptors.
error: Error information, if an error occurred.

Returns an array of CNContact objects matching the predicate.

If no matches are found, this method returns an empty array (or nil in case of error). Use only the predicates from the CNContact class predicates. Compound predicates are not supported by this method. Due to unification, the returned contacts may have different identifiers than you specify. To fetch all contacts, use enumerateContactsWithFetchRequest.
See also:

- 51.21.26 unifiedContactsMatchingPredicate(predicate as NSPredicateMBS, byref error as NSErrorMBS) as CNContactMBS() 9014

51.21.28 unifiedContactWithIdentifier(identifier as string, byref error as NSErrorMBS) as CNContactMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Fetches a unified contact for the specified contact identifier.
Notes: identifier: The identifier of the contact to fetch.
error: Error information, if an error occurred.

Returns an unified contact matching or linked to the identifier.

Due to unification, the returned contact may have a different identifier, than you specify. To fetch a batch of contacts by identifiers use predicateForContactsWithIdentifiers with unifiedContactsMatchingPredicate. It is recommended to fetch only the properties that will be used. You can combine contact keys and contact key descriptors together.

Same as other unifiedContactWithIdentifier function with key list from CNContactStoreMBS.AllFetchKeys function.
See also:

- 51.21.29 unifiedContactWithIdentifier(identifier as string, keys() as CNKeyDescriptorMBS, byref error as NSErrorMBS) as CNContactMBS 9016

51.21.29 unifiedContactWithIdentifier(identifier as string, keys() as CNKeyDescriptorMBS, byref error as NSErrorMBS) as CNContactMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Fetches a unified contact for the specified contact identifier.
Notes: identifier: The identifier of the contact to fetch.
keys: The properties to fetch in the returned CNContact object.
error: Error information, if an error occurred.

Returns an unified contact matching or linked to the identifier.

Due to unification, the returned contact may have a different identifier, than you specify. To fetch a batch of contacts by identifiers use predicateForContactsWithIdentifiers with unifiedContactsMatchingPredicate. It is recommended to fetch only the properties that will be used. You can combine contact keys and contact key descriptors together.
See also:

- 51.21.28 unifiedContactWithIdentifier(identifier as string, byref error as NSErrorMBS) as CNContactMBS 9015

51.21.30 unifiedMeContact(byref error as NSErrorMBS) as CNContactMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop only.

Function: Queries an unified contact for the user.
Example:

```
Var ContactStore as CNContactStoreMBS // your store
Var error As NSErrorMBS
Var contact As CNContactMBS = ContactStore.unifiedMeContact(Error)

If contact <>nil then
MessageBox contact.familyName
Else
MessageBox "No contact?"
End If
```

Notes: Same as unifiedMeContactWithKeysToFetch function with key list from CNContactStoreMBS.AllFetchKeys function.

51.21.31 unifiedMeContactWithKeysToFetch(keys() as CNKeyDescriptorMBS, byref error as NSErrorMBS) as CNContactMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: Queries an unified contact for the user.

51.21.32 Properties

51.21.33 currentHistoryToken as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieve the current history token.
Notes: If you are fetching contacts or change history events, you should use the token on the CNFetchResultMBS class instead.
(Read only property)

51.21.34 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: Value is a pointer to a CNContactStore object.
(Read and Write property)

51.21.35 Events

51.21.36 DidChange

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The event posted when changes occur in another CNContactStore.

51.21.37 enumerateContactsWithFetchRequest(contact as CNContactMBS, byref stop as boolean, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The event called by enumerateContactsWithFetchRequest for each new contact found.
See also:

- 51.21.18 enumerateContactsWithFetchRequest(fetchRequest as CNContactFetchRequestMBS, byref error as NSErrorMBS, tag as Variant = nil) as Boolean 9011

51.21.38 requestAccessForEntityType(granted as boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The request for access completed.
Notes: Set granted to true if the user allows access and error is nil.
See also:

- 51.21.25 requestAccessForEntityType(entityType as Integer = 0, tag as Variant = nil) 9013

51.21.39 Constants

Constants

Constant	Value	Description
CNAuthorizationStatusAuthorized	3	One of the authorization status values the user can grant for an app to the specified entity type. The application is authorized to access contact data.
CNAuthorizationStatusDenied	2	One of the authorization status values the user can grant for an app to the specified entity type. The user explicitly denied access to contact data for the application.
CNAuthorizationStatusNotDetermined	0	One of the authorization status values the user can grant for an app to the specified entity type. The user has not yet made a choice regarding whether the applicatio access contact data.
CNAuthorizationStatusRestricted	1	One of the authorization status values the user can grant for an app to the specified entity type. The application is not authorized to access contact data. The user c change this application,Äôs status, possibly due to active restrictions s parental controls being in place.

Contact Types

Constant	Value	Description
CNEntityTypeContacts	0	Contacts

Error Codes

Constant	Value	Description
CNErrorCodeAuthorizationDenied	100	Authentication denied error.
CNErrorCodeCommunicationError	1	Communication error.
CNErrorCodeContainmentCycle	202	Code containment cycle error.
CNErrorCodeContainmentScope	203	Code containment scope error.
CNErrorCodeDataAccessError	2	Data access error.
CNErrorCodeInsertedRecordAlreadyExists	201	Record already exists.
CNErrorCodeParentRecordDoesNotExist	204	The contact does not exist error.
CNErrorCodePolicyViolation	500	Policy validation error.
CNErrorCodePredicateInvalid	400	Invalid predicate error.
CNErrorCodeRecordDoesNotExist	200	Record not found.
CNErrorCodeRecordIdentifierInvalid	205	Record identifier not valid.
CNErrorCodeValidationConfigurationError	302	Configuration validation error.
CNErrorCodeValidationMultipleErrors	300	Multiple validation error.
CNErrorCodeValidationTypeMismatch	301	Type mismatch validation error.

51.22 class CNContactsUserDefaultsMBS

51.22.1 class CNContactsUserDefaultsMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNContactsUserDefaults class defines properties used to access the user defaults for a contact.
Example:

```
// read how the user wants contacts sorted and the default country for addresses
Var defaults As CNContactsUserDefaultsMBS = CNContactsUserDefaultsMBS.sharedDefaults
Var order As String
If defaults.sortOrder = CNContactMBS.CNContactSortOrderGivenName Then
order = "by first name"
Else
order = "by last name"
End If

MessageBox "Sort order: " + order + EndOfLine + "Country: " + defaults.countryCode
```

51.22.2 Methods

51.22.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

51.22.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

51.22.5 sharedDefaults as CNContactsUserDefaultsMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The singleton instance of the CNContactsUserDefaults class.

51.22.6 Properties

51.22.7 countryCode as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: An ISO country code.
Notes: ISO is the default country code for phone numbers. This is determined by the device,Äôs SIM card or the operating system,Äôs configured language.
(Read only property)

51.22.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: Value is a pointer to a CNContactsUserDefaults object.
(Read and Write property)

51.22.9 sortOrder as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Default sorting order by name.
Notes: Sort order is determined by the operating system,Äôs configured language or overridden by the user.
(Read only property)

51.23 class CNContactVCardSerializationMBS

51.23.1 class CNContactVCardSerializationMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNContactVCardSerialization supports vCard representation for the given set of contacts.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

51.23.2 Methods

51.23.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

51.23.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

51.23.5 contactsWithData(Data as MemoryBlock, byref error as NSErrorMBS) as CNContactMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the contacts from the vCard data.

51.23.6 dataWithContacts(Contacts() as CNContactMBS, byref error as NSErrorMBS) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the vCard representation of the specified contacts.

51.23.7 descriptorForRequiredKeys as CNKeyDescriptorMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Use to fetch all contact keys required to create vCard data from a contact.
Notes: A key descriptor to be used in the keysToFetch array when fetching the contacts.

51.24 class CNContactViewControllerMBS

51.24.1 class CNContactViewControllerMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNContactViewController class implements the view to display a contact.
Notes: CNContactViewController can display a new contact, unknown contact, or existing contact.
Subclass of the NSViewControllerMBS class.
Blog Entries

- MBS Xojo Plugins, version 17.5pr3

51.24.2 Methods

51.24.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

51.24.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

51.24.5 descriptorForRequiredKeys as CNKeyDescriptorMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Descriptor for all keys that must be fetched on a contact before setting it on the view controller.
Notes: Pass this descriptor to the keysToFetch of the CNContactFetchRequest if you want to display the contact in a CNContactViewController.

51.24.6 Properties

51.24.7 Contact as CNContactMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A contact to display.
Notes: When contact is nil, displays an empty selection state.
(Read and Write property)

51.25 class CNContainerMBS

51.25.1 class CNContainerMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNContainer class is a thread-safe class that defines an immutable object that represents a container.
Example:

```
// list the contact accounts (local, iCloud, Exchange, CardDAV)
// The app needs contacts access, see CNContactStoreMBS.requestAccessForEntityType.
Var store As New CNContactStoreMBS
Var error As NSErrorMBS
Var defaultID As String = store.defaultContainerIdentifier

Var lines() As String
For Each c As CNContainerMBS In store.containersMatchingPredicate(Nil, error)
Var kind As String = "type " + c.Type.ToString
If c.Type = CNContainerMBS.CNContainerTypeCardDAV Then kind = "CardDAV"
lines.Add c.Name + " (" + kind + ")" + If(c.Identifier = defaultID, " - default", "")
Next
MessageBox String.FromArray(lines, EndOfLine)
```

Notes: A container has a collection of contacts. A contact can be in only one container. CardDAV accounts usually have only one container whereas Exchange accounts may have multiple containers, where each container represents an Exchange folder
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

51.25.2 Methods

51.25.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

51.25.4 CNContainerIdentifierKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the predefined keys representing container properties that can be used with key value coding on CNContainer objects.

Notes: Identifier key.
This key represents the container identifier property for KVC/KVO usage. This property is always fetched.

51.25.5 CNContainerNameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the predefined keys representing container properties that can be used with key value coding on CNContainer objects.
Notes: Name key.
This key represents the container identifier property for KVC/KVO usage. This property is always fetched.

51.25.6 CNContainerTypeKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the predefined keys representing container properties that can be used with key value coding on CNContainer objects.
Notes: Type key.
This key represents the container identifier property for KVC/KVO usage. This property is always fetched.

51.25.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The private container.

51.25.8 copy as CNContainerMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a copy of the container object.

51.25.9 predicateForContainerOfContactWithIdentifier(contactIdentifier as String) as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a predicate to find the container of the specified contact.
Notes: If the identifier is for a unified contact then this method returns an empty array. To fetch the con-

tainers of a unified contact, first fetch the linked contacts and then fetch the container of each linked contact.

51.25.10 predicateForContainerOfGroupWithIdentifier(groupIdentifier as String) as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a predicate to find the container of the specified group.

51.25.11 predicateForContainersWithIdentifiers(Identifiers() as String) as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a predicate to find the containers with the specified identifiers.

51.25.12 Properties

51.25.13 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: Value is a pointer to a CNContainer object.
(Read and Write property)

51.25.14 Identifier as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The unique identifier for a contacts container on the device.
Notes: It is recommended that you use the identifier when re-fetching the container. The identifier can be persisted between app launches.
(Read only property)

51.25.15 Name as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The name of the container.
Notes: (Read only property)

51.25.16 Type as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The type of the container.
Notes: can be CNContainerTypeUnassigned, CNContainerTypeLocal, CNContainerTypeExchange or CNContainerTypeCardDAV.
(Read only property)

51.25.17 Constants

Container Types

Constant	Value	Description
CNContainerTypeCardDAV	3	A container for contacts stored in an CardDAV server, such as iCloud.
CNContainerTypeExchange	2	A container for contacts stored in an Exchange folder from an Exchange server.
CNContainerTypeLocal	1	A container for contacts only stored locally on the device. There is only one local container for a device.
CNContainerTypeUnassigned	0	

51.26 class CNFetchResultMBS

51.26.1 class CNFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The class for a fetch result with a time stamp.
Notes: Allows you to query contacts and changes with checking again later with new time.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- Contacts history for Xojo

51.26.2 Methods

51.26.3 ChangeHistoryEvents as CNChangeHistoryEventMBS()

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The history events.

51.26.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.

51.26.5 Contacts as CNContactMBS()

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The contacts found.

51.26.6 Destructor

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The destructor.

51.26.7 Properties

51.26.8 currentHistoryToken as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The current history token.
Notes: Retrieve the current history token. If you are fetching contacts or change history events, you should use the token on the CNFetchResultMBS class instead.
(Read only property)

51.27 class CNGroupMBS

51.27.1 class CNGroupMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNGroup is a thread-safe class that defines an immutable object that represents a group.
Example:

```
// list the contact groups and how many contacts each has
// The app needs contacts access, see CNContactStoreMBS.requestAccessForEntityType.
Var store As New CNContactStoreMBS
Var error As NSErrorMBS
Var keys() As CNKeyDescriptorMBS
keys.Add New CNKeyDescriptorMBS(CNContactMBS.CNContactGivenNameKey)

Var lines() As String
For Each g As CNGroupMBS In store.groupsMatchingPredicate(Nil, error)
Var members() As CNContactMBS = store.unifiedContactsMatchingPredicate(CNContactMBS.predicate-
ForContactsInGroupWithIdentifier(g.Identifier), keys, error)
lines.Add g.Name + ": " + members.Count.ToString + " contacts"
Next
MessageBox String.FromArray(lines, EndOfLine)
```

Notes: Contacts may be members of one or more groups, depending upon their accounts.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Xojo Plugins, version 17.2pr5

51.27.2 Methods

51.27.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

51.27.4 CNGroupIdentifierKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the predefined keys representing group properties that can be used with key value coding on CNGroup objects.

Notes: Group identifier.
This key takes a string value.

51.27.5 CNGroupNameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the predefined keys representing group properties that can be used with key value coding on CNGroup objects.
Notes: Group name.
This key takes a string value.

51.27.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

51.27.7 copy as CNGroupMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a copy of the group object.

51.27.8 mutableCopy as CNMutableGroupMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a mutable copy of this group.

51.27.9 predicateForGroupsInContainerWithIdentifier(groupIdentifier as String) as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a predicate to find groups in the specified container.
Notes: containerIdentifier: The container identifier to be matched.

Returns a predicate that can be used to fetch groups from CNContactStore.

51.27.10 predicateForGroupsWithIdentifiers(Identifiers() as String) as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a predicate to find groups with the specified identifiers.
Notes: identifiers: The group identifiers to be matched.

Returns a predicate that can be used to fetch groups from CNContactStore.

51.27.11 predicateForSubgroupsInGroupWithIdentifier(contactIdentifier as String) as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a predicate to find all subgroups for a group.

51.27.12 valueForKey(key as String) as Variant

MBS Mac64bit Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop & iOS.

Function: Queries value for a given key.

51.27.13 Properties

51.27.14 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: Value is a pointer to a CNGroup object.
(Read and Write property)

51.27.15 Identifier as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The unique identifier for a group on the device.
Notes: It is recommended that you use the identifier when re-fetching the group. The identifier can be persisted between app launches.
(Read only property)

51.27.16 Name as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The name of the group.
Notes: (Read only property)

51.28 class CNInstantMessageAddressMBS

51.28.1 class CNInstantMessageAddressMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNInstantMessageAddress class is a thread-safe class that defines an immutable value object representing an instant message address.
Example:

```
// add a Jabber (XMPP) address to a contact
Var contact As New CNMutableContactMBS
contact.givenName = "John"
contact.familyName = "Appleseed"

Var xmpp As New CNInstantMessageAddressMBS("john@jabber.example.com", CNInstantMessageAddressMBS.CNInstantMessageServiceJabber)
Var addresses() As CNLabeledValueMBS
addresses.Add New CNLabeledValueMBS(CNLabeledValueMBS.CNLabelWork, xmpp)
contact.setInstantMessageAddresses addresses

MessageBox CNInstantMessageAddressMBS.localizedStringForService(xmpp.service) + ": " + xmpp.username
```

Notes: Use the methods and properties of this class to identify instant messaging address. Some instant message services, such as Facebook and Skype are predefined in this class. You can also specify your own instant message service using Constructor.

51.28.2 Methods

51.28.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

51.28.4 CNInstantMessageAddressServiceKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Instant message address service key.
Notes: This key takes a string value.

51.28.5 CNInstantMessageAddressUsernameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Instant message address user name key.
Notes: This key takes a string value.

51.28.6 CNInstantMessageServiceAIM as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the service types.
Notes: Instant message service for AIM.
This key takes a string value.

51.28.7 CNInstantMessageServiceFacebook as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the service types.
Notes: Instant message service for Facebook.
This key takes a string value.

51.28.8 CNInstantMessageServiceGaduGadu as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the service types.
Notes: Instant message service for Gadu Gadu.
This key takes a string value.

51.28.9 CNInstantMessageServiceGoogleTalk as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the service types.
Notes: Instant message service for Google Talk.
This key takes a string value.

51.28.10 CNInstantMessageServiceICQ as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the service types.
Notes: Instant message service for ICQ.
This key takes a string value.

51.28.11 CNInstantMessageServiceJabber as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the service types.
Notes: Instant message service for Jabber.
This key takes a string value.

51.28.12 CNInstantMessageServiceMSN as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the service types.
Notes: Instant message service for MSN.
This key takes a string value.

51.28.13 CNInstantMessageServiceQQ as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the service types.
Notes: Instant message service for QQ.
This key takes a string value.

51.28.14 CNInstantMessageServiceSkype as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the service types.
Notes: Instant message service for Skype.
This key takes a string value.

51.28.15 CNInstantMessageServiceYahoo as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the service types.
Notes: Instant message service for Yahoo.
This key takes a string value.

51.28.16 Constructor(username as String, Service as String)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a CNInstantMessageAddress object initialized with the specified user name and service.
Notes: username: The user name with which to initialize the CNInstantMessageAddress object.
service: The service with which to Initialize the CNInstantMessageAddress object.

Returns the initialized CNInstantMessageAddress object with the specified user name and service.
User name and service are required to initialize CNInstantMessageAddress object.

51.28.17 copy as CNInstantMessageAddressMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a copy of the instant message address object.

51.28.18 localizedStringForKey(key as String) as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a string containing the localized property name.

51.28.19 localizedStringForService(key as String) as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a string containing the localized name of the specified service.

51.28.20 Properties

51.28.21 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: Value is a pointer to a CNInstantMessageAddress object.
(Read and Write property)

51.28.22 service as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Instant message address service.
Notes: (Read only property)

51.28.23 username as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The user name for instant message service address.
Notes: (Read only property)

51.29 class CNKeyDescriptorMBS

51.29.1 class CNKeyDescriptorMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The class for key descriptors.
Example:

```
// fetch only names and phone numbers of all contacts
Var keys() As CNKeyDescriptorMBS
keys.Add New CNKeyDescriptorMBS(CNContactMBS.CNContactGivenNameKey)
keys.Add New CNKeyDescriptorMBS(CNContactMBS.CNContactFamilyNameKey)
keys.Add New CNKeyDescriptorMBS(CNContactMBS.CNContactPhoneNumbersKey)

Var request As New CNContactFetchRequestMBS(keys)
// pass request to CNContactStoreMBS.enumerateContactsWithFetchRequest
```

- Contacts history for Xojo

51.29.2 Methods

51.29.3 Constructor(Key as String)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a key descriptor from a string value.

51.29.4 copy as CNKeyDescriptorMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a copy of the key descriptor object.

51.29.5 Operator_Convert as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Converts key to string value.
Notes: Same as using StringValue property, but automatic.
See also:

• 51.29.6 Operator_Convert(Key as String) 9042

51.29.6 Operator_Convert(Key as String)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a key descriptor from a string value.
Example:

```
Var k as CNKeyDescriptorMBS = CNContactMBS.CNContactJobTitleKey
```

Notes: Same as constructor, but automatic.
See also:

• 51.29.5 Operator_Convert as String 9041

51.29.7 Properties

51.29.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: Value is a pointer to a CNKeyDescriptor object.
(Read and Write property)

51.29.9 StringValue as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Queries string value of the key descriptor.
Notes: (Read only property)

51.30 class CNLabeledValueMBS

51.30.1 class CNLabeledValueMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The class for labeled values.
Example:

```
// add a mobile and a work phone number to a new contact
Var mobile As New CNLabeledValueMBS(CNPhoneNumberMBS.CNLabelPhoneNumberMobile, New CN-
PhoneNumberMBS("+1 555 1234"))
Var work As New CNLabeledValueMBS(CNLabeledValueMBS.CNLabelWork, New CNPhoneNumberMBS("+1
555 9876"))

Var numbers() As CNLabeledValueMBS
numbers.Add mobile
numbers.Add work

Var contact As New CNMutableContactMBS
contact.givenName = "John"
contact.familyName = "Smith"
contact.setPhoneNumbers numbers

For Each value As CNLabeledValueMBS In contact.phoneNumbers
System.DebugLog CNLabeledValueMBS.localizedStringForLabel(value.Label) + ": " + CNPhoneNumberMBS(value.Value).s
Value
Next
```

Notes: The CNLabeledValue class is a thread-safe class that defines an immutable value object that combines a contact property value with a label. For example, a contact phone number could have a label of Home, Work, iPhone, etc.

51.30.2 Methods

51.30.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

51.30.4 CNLabelDateAnniversary as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: This constant is a predefined label that can be used in a CNLabeledValue object having an NSDateComponents value.

51.30.5 CNLabelEmailiCloud as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: This constant is a predefined label that can be used in a CNLabeledValue object having an email address string value.
Notes: Email.

This label takes a string value.

51.30.6 CNLabelHome as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the predefined labels that can be used in a CNLabeledValue object having any value.
Notes: Home label.
This label takes a string value.

51.30.7 CNLabelOther as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the predefined labels that can be used in a CNLabeledValue object having any value.
Notes: Other label.
This label takes a string value.

51.30.8 CNLabelURLAddressHomePage as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: This constant is a predefined label that can be used in a CNLabeledValue object having a URL address string value.
Notes: Identifier for the URL property.
This label takes a string value.

51.30.9 CNLabelWork as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the predefined labels that can be used in a CNLabeledValue object having any value.
Notes: Work label.
This label takes a string value.

51.30.10 Constructor(label as string, value as Variant)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new labeled value identifier initialized with the specified label and value.
Notes: label: A string value for the label of the labeled ,Ä¶value object, or nil if the value doesn,Äôt have a label.
value: A value for the labeled value object. For valid values, see CNContact properties that are arrays of labeled value objects.

Returns a new labeled value object initialized with the specified identifier.

51.30.11 copy as CNLabeledValueMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a copy of the labeled value object.

51.30.12 labeledValueBySettingLabel(label as string) as CNLabeledValueMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a labeled value object with an existing value and identifier.
Notes: label: The label of the copied labeled value object, or nil if the contact property value doesn,Äôt have a label.

Returns a labeled value object with an existing value and identifier.
See also:

- 51.30.13 labeledValueBySettingLabel(label as string, value as Variant) as CNLabeledValueMBS 9046

51.30.13 labeledValueBySettingLabel(label as string, value as Variant) as CNLabeledValueMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a labeled value object with the specified label and value with the existing identifier.
Notes: label: The label of the copied labeled value object, or "" if the contact property value doesn,Äôt have a label.
value: The copied labeled value object. For valid values, see CNContact properties that are arrays of labeled value objects.

Returns a labeled value object with the existing identifier.
See also:

- 51.30.12 labeledValueBySettingLabel(label as string) as CNLabeledValueMBS 9045

51.30.14 labeledValueBySettingValue(value as Variant) as CNLabeledValueMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new value for an existing label and identifier.
Notes: value: A new value for the copied labeled value object. For valid values, see CNContact properties that are arrays of labeled value objects.

Returns the CNLabeledValue object with an existing label and identifier.

51.30.15 labeledValueWithLabel(label as string, value as Variant) as CNLabeledValueMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new labeled value identifier object with the specified label and value.
Notes: label: A string value for the label of the labeled value object, or nil if the value doesn,Äôt have a label.
value: A value for the labeled value object. For valid values, see CNContact properties that are arrays of labeled value objects.

Returns a new CNLabeledValue object with a new identifier.

51.30.16 localizedStringForLabel(label as string) as string

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a localized string for the specified label.
Notes: label: The label to be localized.

Returns a localized string for the label.

All predefined label constants are localized and this method returns their localized strings. A custom label will be returned as is, so this method can be used to convert all labels for display.

51.30.17 Properties

51.30.18 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: Value is a pointer to a CNLabeledValue object.
(Read and Write property)

51.30.19 Identifier as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A unique identifier for the labeled value object.
Notes: It is recommended that you use the identifier when searching for a previously known labeled value object in a re-fetched contact. The identifier can be persisted between the app launches.
(Read only property)

51.30.20 Label as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The label for a contact property value.
Notes: A contact property can have a label, such as Home, Work, iPhone, etc. For some predefined label constants, seeCNPhoneNumber, and CNContactRelation. Custom labels can also be used. Labels are not

used for CNSocialProfile and CNInstantMessageAddress properties.
(Read only property)

51.30.21 Value as Variant

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A contact property value.
Notes: A contact property value, such as CNPhoneNumberMBS for a phone number, String for an email address, and so on. For valid values, see CNContact properties that are arrays of labeled value objects.
(Read only property)

51.31 class CNMutableContactMBS

51.31.1 class CNMutableContactMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNMutableContact class represents a mutable value object for the contact properties, such as the first name and the phone number of a contact.
Example:

```
// create a new contact with an email address and phone number and save it
// Your app needs permission for contacts, see CNContactStoreMBS.requestAccessForEntityType.
Var contact As New CNMutableContactMBS
contact.givenName = "John"
contact.familyName = "Appleseed"
contact.organizationName = "Example Inc."

Var emails() As CNLabeledValueMBS
emails.Add CNLabeledValueMBS.labeledValueWithLabel(CNLabeledValueMBS.CNLabelWork, "john@example.com")
contact.setEmailAddresses emails

Var phones() As CNLabeledValueMBS
phones.Add CNLabeledValueMBS.labeledValueWithLabel(CNPhoneNumberMBS.CNLabelPhoneNumberMobile, New CNPhoneNumberMBS("+49 123 456789"))
contact.setPhoneNumbers phones

Var store As New CNContactStoreMBS
Var request As New CNSaveRequestMBS
request.addContact(contact, store.defaultContainerIdentifier)

Var error As NSErrorMBS
If Not store.executeSaveRequest(request, error) Then
MessageBox "Failed to save: " + error.localizedDescription
End If
```

Notes: When CNMutableContact object is a mutable copy of a CNContact object, if you access a CNMutableContact property value that was not fetched for the CNContact object, it throws an CNContactPropertyNotFetchedExceptionName exception. When needed, you can remove contact properties by setting string and array properties to empty, and all other properties to nil.
Available in OS X v10.11 and later.
Subclass of the CNContactMBS class.

51.31.2 Methods

51.31.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

51.31.4 setContactRelations(contactRelations() as CNLabeledValueMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the array of labeled contact relations for the contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and a CNContactRelationMBS value.

51.31.5 setDates(dates() as CNLabeledValueMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the array containing labeled Gregorian dates.
Notes: This property is an array of CNLabeledValue objects, each of which has an String label and NSDateComponentsMBS value. You can use this property to store Gregorian dates such as anniversaries. Day and month are required and year is optional. Calendar is nil or Gregorian. All other date components are invalid.

51.31.6 setEmailAddresses(emailAddresses() as CNLabeledValueMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the array of labeled email addresses for the contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and a String value.

51.31.7 setInstantMessageAddresses(instantMessageAddresses() as CNLabeledValueMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the array of labeled IM addresses for the contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and a CNInstantMessageAddressMBS value.

51.31.8 setPhoneNumbers(phoneNumbers() as CNLabeledValueMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the array of labeled phone numbers for a contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and a CNPhoneNumberMBS value.

51.31.9 setPostalAddresses(postalAddresses() as CNLabeledValueMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the array of labeled postal addresses for a contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and a CNPostalAddressMBS value.

51.31.10 setSocialProfiles(socialProfiles() as CNLabeledValueMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the array of labeled social profiles for a contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and a CNSocialProfileMBS value.

51.31.11 setURLAddresses(urlAddresses() as CNLabeledValueMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the array of labeled URL addresses for a contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and a string value that contains the URL.

51.31.12 Properties

51.31.13 birthday as NSDateComponentsMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A date component for the Gregorian birthday of the contact.
Notes: A Gregorian birthday can be displayed using this property, whose values are the relevant properties of an NSDateComponents object. Day and month are required for this property, and year is optional. Calendar can be nil or Gregorian. All other date components are invalid.
(Read and Write property)

51.31.14 contactType as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: An enum identifying the contact type.
Notes: Can be CNContactMBS.CNContactTypeOrganization or CNContactMBS.CNContactTypePerson.
(Read and Write property)

51.31.15 departmentName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The name of the department associated with the contact.
Notes: (Read and Write property)

51.31.16 familyName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The family name of the contact.
Example:

```
Var m as new CNMutableContactMBS
m.familyName = "Miller"
MessageBox "name: "+m.familyName
```

Notes: The family name is often known as the last name of the contact.
(Read and Write property)

51.31.17 givenName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The given name of the contact.
Notes: The given name is often known as the first name of the contact.
(Read and Write property)

51.31.18 imageData as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The profile picture of a contact.
Notes: It is recommended that you fetch this property only when you need to access its value, such as when you need to display the contact,Äôs profile picture.
(Read and Write property)

51.31.19 jobTitle as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The contact,Äôs job title.
Notes: (Read and Write property)

51.31.20 middleName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The middle name of the contact.
Notes: (Read and Write property)

51.31.21 namePrefix as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The name prefix of the contact.
Notes: (Read and Write property)

51.31.22 nameSuffix as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The name suffix of the contact.
Notes: (Read and Write property)

51.31.23 nickname as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The nickname of the contact.
Notes: (Read and Write property)

51.31.24 nonGregorianBirthday as NSDateComponentsMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A date component for the non-Gregorian birthday of the contact.
Notes: A non-Gregorian birthday such as Lunisolar birthdays can be displayed using this property, whose values are the relevant properties of an NSDateComponents object. Day and month are required; year and leapMonth are optional. The calendar property is also required and must be non-Gregorian. Some supported calendars are Buddhist, Chinese, and Islamic. All other date components are invalid.
(Read and Write property)

51.31.25 note as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A string containing notes for the contact.
Notes: (Read and Write property)

51.31.26 organizationName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The name of the organization associated with the contact.
Notes: (Read and Write property)

51.31.27 phoneticFamilyName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The phonetic family name of the contact.
Notes: This property contains a string that specifies the pronunciation of the contact,Äôs family (or last) name.
(Read and Write property)

51.31.28 phoneticGivenName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The phonetic given name of the contact.
Notes: This property contains a string that specifies the pronunciation of the contact,Äôs given (or first) name.
(Read and Write property)

51.31.29 phoneticMiddleName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The phonetic middle name of the contact.
Notes: This property contains a string that specifies the pronunciation of the contact,Äôs middle name.
(Read and Write property)

51.31.30 phoneticOrganizationName as String

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The phonetic name of the organization associated with the contact.
Notes: This property contains a string that specifies the pronunciation of the contact,Äôs organization name.
Requires macOS 10.12 or newer.
(Read and Write property)

51.31.31 previousFamilyName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The previous family name of the contact.
Notes: The previous family name is often known as the maiden name of the contact.

(Read and Write property)

51.31.32 valueForKey(key as String) as Variant

MBS Mac64bit Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop & iOS.

Function: Queries or sets value for a given key.
Notes: (Read and Write computed property)

51.32 class CNMutableGroupMBS

51.32.1 class CNMutableGroupMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNMutableGroup class defines a mutable value object representing a group for a contact.
Notes: Contacts may be members of one or more groups, depending upon the accounts they come from.
Subclass of the CNGroupMBS class.

51.32.2 Methods

51.32.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

51.32.4 Properties

51.32.5 Name as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Name of the group.
Example:

```
Var m as new CNMutableGroupMBS
m.Name = "Hello"
```

Notes: (Read and Write property)

51.32.6 valueForKey(key as String) as Variant

MBS Mac64bit Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop & iOS.

Function: Queries or sets value for a given key.
Notes: (Read and Write computed property)

51.33 class CNMutablePostalAddressMBS

51.33.1 class CNMutablePostalAddressMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNMutablePostalAddress class defines a mutable value object representing the postal address for a contact.
Example:

```
// create a postal address and format it for the current region
Var address As New CNMutablePostalAddressMBS
address.Street = "1 Infinite Loop"
address.City = "Cupertino"
address.State = "CA"
address.PostalCode = "95014"
address.Country = "United States"
address.ISOCountryCode = "us"

Var formatter As New CNPostalAddressFormatterMBS
MessageBox formatter.stringFromPostalAddress(address)
```

Notes: To remove properties when saving a mutable postal address, set string properties to empty values.
Subclass of the CNPostalAddressMBS class.
Xojo Developer Magazine

- 18.5, page 83: Maps (Part 6), A deep dive into Annotations by Markus Winter

51.33.2 Methods

51.33.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

51.33.4 Properties

51.33.5 City as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The city name.
Example:

```
Var m as new CNMutablePostalAddressMBS
m.City = "New York"
MessageBox m.city
```

Notes: (Read and Write property)

51.33.6 Country as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The country name.
Notes: (Read and Write property)

51.33.7 ISOCountryCode as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The ISO country code.
Notes: (Read and Write property)

51.33.8 PostalCode as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The postal code.
Notes: (Read and Write property)

51.33.9 State as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The state name.
Notes: (Read and Write property)

51.33.10 Street as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The street name.
Notes: A multiline address is delimited with carriage returns (that is, ,Äú\n,Äù).
(Read and Write property)

51.34 class CNPhoneNumberMBS

51.34.1 class CNPhoneNumberMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNPhoneNumber class defines an immutable value object representing a phone number for a contact.
Example:

```
// create a contact with two phone numbers
Var contact As New CNMutableContactMBS
contact.givenName = "John"
contact.familyName = "Appleseed"

Var numbers() As CNLabeledValueMBS
numbers.Add New CNLabeledValueMBS(CNPhoneNumberMBS.CNLabelPhoneNumberMobile, New CNPhoneNumberMBS("+49 170 1234567"))
numbers.Add New CNLabeledValueMBS(CNPhoneNumberMBS.CNLabelPhoneNumberMain, New CNPhoneNumberMBS("+49 261 123456"))
contact.setPhoneNumbers numbers

// save with CNContactStoreMBS and CNSaveRequestMBS
```

Notes: It is a thread-safe class.

51.34.2 Methods

51.34.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

51.34.4 CNLabelPhoneNumberAppleWatch as String

MBS Mac64bit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop & iOS.

Function: Phone number for Apple Watch.
Notes: This label takes a string value.
Available in macOS 11.1 or newer.

51.34.5 CNLabelPhoneNumberHomeFax as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Home fax number.
Notes: This label takes a string value.

51.34.6 CNLabelPhoneNumberiPhone as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: iPhone number.
Notes: This label takes a string value.

51.34.7 CNLabelPhoneNumberMain as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Main phone number.
Notes: This label takes a string value.

51.34.8 CNLabelPhoneNumberMobile as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Mobile phone number.
Notes: This label takes a string value.

51.34.9 CNLabelPhoneNumberOtherFax as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Other fax number.
Notes: This label takes a string value.

51.34.10 CNLabelPhoneNumberPager as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Pager phone number.
Notes: This label takes a string value.

51.34.11 CNLabelPhoneNumberWorkFax as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Work fax number.
Notes: This label takes a string value.

51.34.12 Constructor(value as string)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new phone number object initialized with the specified phone number string.
Notes: You should initialize this with a phone number string. This method fails when the value of string is empty.

51.34.13 copy as CNPhoneNumberMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a copy of the phone number object.

51.34.14 phoneNumberWithStringValue(p as string) as CNPhoneNumberMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new phone number object initialized with the specified phone number string.
Notes: This is a convenience class method that provides the same functionality as Constructor.
This method fails when the value of stringValue is "".

51.34.15 Properties

51.34.16 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: Value is a pointer to a CNPhoneNumber object.
(Read and Write property)

51.34.17 stringValue as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The string value of the phone number.
Notes: (Read only property)

51.35 class CNPostalAddressFormatterMBS

51.35.1 class CNPostalAddressFormatterMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNPostalAddressFormatter class formats the postal address in a contact.
Example:

```
// format the postal addresses of a contact as text
// contact is a CNContactMBS fetched with the CNContactPostalAddressesKey key
Var contact As CNContactMBS // your contact
If contact = Nil Then Return

Var formatter As New CNPostalAddressFormatterMBS
For Each value As CNLabeledValueMBS In contact.postalAddresses
Var address As CNPostalAddressMBS = CNPostalAddressMBS(value.Value)
System.DebugLog CNLabeledValueMBS.localizedStringForLabel(value.Label) + ":" + EndOfLine + formatter.stringFromPostalAddress(address)
Next
```

Notes: This class handles international formatting of postal addresses. It is recommended that you create an instance of this class when formatting many postal addresses, and use the instance methods; otherwise use the class methods.

51.35.2 Methods

51.35.3 attributedStringFromPostalAddress(postalAddress as CNPostalAddressMBS, DefaultAttributes as Dictionary = nil) as NSAttributedStringMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a formatted postal address as an attributed string.
Notes: postalAddress: The postal address to format.
DefaultAttributes: The default attributes to use. To learn more, see NSFormatter.

Returns the formatted postal address as an attributed string.

This method behaves similarly to stringFromPostalAddress, except that it returns an attributed string. It includes the attribute key CNPostalAddressPropertyAttribute, whose attribute values are postal address property keys, such as CNPostalAddressStreetKey. This identifies the postal address components in the formatted postal address. Also includes the attribute key CNPostalAddressLocalizedPropertyNameAttribute whose attribute values are the localized strings for the postal address property keys.
See also:

- 51.35.4 attributedStringFromPostalAddress(postalAddress as CNPostalAddressMBS, style as Integer, DefaultAttributes as Dictionary = nil) as NSAttributedStringMBS 9066

51.35.4 attributedStringFromPostalAddress(postalAddress as CNPostalAddressMBS, style as Integer, DefaultAttributes as Dictionary = nil) as NSAttributedStringMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a formatted postal address as an attributed string.
Notes: postalAddress: The postal address to format.
DefaultAttributes: The default attributes to use. To learn more, see NSFormatter.

Returns the formatted postal address as an attributed string.

This method behaves similarly to stringFromPostalAddress, except that it returns an attributed string. It includes the attribute key CNPostalAddressPropertyAttribute, whose attribute values are postal address property keys, such as CNPostalAddressStreetKey. This identifies the postal address components in the formatted postal address. Also includes the attribute key CNPostalAddressLocalizedPropertyNameAttribute whose attribute values are the localized strings for the postal address property keys.
See also:

- 51.35.3 attributedStringFromPostalAddress(postalAddress as CNPostalAddressMBS, DefaultAttributes as Dictionary = nil) as NSAttributedStringMBS 9065

51.35.5 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

51.35.6 CNPostalAddressLocalizedPropertyNameAttribute as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: This constant is a key in the attributed string whose value is a localized version of the CNPostalAddress property key.
Notes: This label takes a string value.

51.35.7 CNPostalAddressPropertyAttribute as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: This constant is a key in the attributed string whose value is a CNPostalAddress property key.
Notes: This key takes a string value.

51.35.8 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

51.35.9 stringFromPostalAddress(postalAddress as CNPostalAddressMBS) as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a formatted postal address.
See also:

- 51.35.10 stringFromPostalAddress(postalAddress as CNPostalAddressMBS, style as Integer) as String 9067

51.35.10 stringFromPostalAddress(postalAddress as CNPostalAddressMBS, style as Integer) as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a formatted postal address.
Notes: Style can currently only be CNPostalAddressFormatterStyleMailingAddress.
See also:

- 51.35.9 stringFromPostalAddress(postalAddress as CNPostalAddressMBS) as String 9067

51.35.11 Properties

51.35.12 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: Value is a pointer to a CNPostalAddressFormatter object.

(Read and Write property)

51.35.13 Style as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The style to use.
Notes: Style can currently only be CNPostalAddressFormatterStyleMailingAddress.
(Read and Write property)

51.35.14 Constants

Constants

Constant	Value	Description
CNPostalAddressFormatterStyleMailingAddress	0	One of the style constants.

51.36 class CNPostalAddressMBS

51.36.1 class CNPostalAddressMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNPostalAddress class defines an immutable object that represents the postal address for a contact.
Example:

```
// show the postal addresses of a contact formatted for printing
// c is a CNContactMBS fetched with the CNContactPostalAddressesKey, see CNContactMBS
Var c As CNContactMBS // your contact
If c = Nil Then Return

For Each lv As CNLabeledValueMBS In c.postalAddresses
Var address As CNPostalAddressMBS = lv.Value
MessageBox CNLabeledValueMBS.localizedStringForLabel(lv.Label) + ":" + EndOfLine + _
address.Street + EndOfLine + address.PostalCode + " " + address.City + EndOfLine + address.Country
Next
```

Notes: This is a thread-safe class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Xojo Developer Magazine

- 18.5, page 83: Maps (Part 6), A deep dive into Annotations by Markus Winter

51.36.2 Methods

51.36.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

51.36.4 CNPostalAddressCityKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties to fetch.
Notes: City.
This key takes a string value.

51.36.5 CNPostalAddressCountryKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties to fetch.
Notes: Country.
This key takes a string value.

51.36.6 CNPostalAddressISOCountryCodeKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties to fetch.
Notes: ISO country code.
This key takes a string value.

51.36.7 CNPostalAddressPostalCodeKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties to fetch.
Notes: Postal code.
This key takes a string value.

51.36.8 CNPostalAddressStateKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties to fetch.
Notes: State.
This key takes a string value.

51.36.9 CNPostalAddressStreetKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties to fetch.
Notes: Street.
This key takes a string value.

51.36.10 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

51.36.11 copy as CNPostalAddressMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a copy of the postal address object.

51.36.12 localizedStringForKey(key as String) as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the localized name for the property associated with the specified key.
Example:

MessageBox CNPostalAddressMBS.localizedStringForKey(CNPostalAddressMBS.CNPostalAddressStreetKey)

51.36.13 mutableCopy as CNMutablePostalAddressMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a mutable copy of this postal address.

51.36.14 Properties

51.36.15 City as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The city name in a postal address.
Notes: (Read only property)

51.36.16 Country as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The country name in a postal address.
Notes: (Read only property)

51.36.17 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: Value is a pointer to a CNPostalAddress object.
(Read and Write property)

51.36.18 ISOCountryCode as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The ISO country code for the country in a postal address.
Notes: (Read only property)

51.36.19 PostalCode as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The postal code in a postal address.
Notes: (Read only property)

51.36.20 State as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The state name in a postal address.
Notes: (Read only property)

51.36.21 Street as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The street name in a postal address.
Notes: Multiline addresses are delimited by carriage returns (that is, ,Äú\n,Äù).
(Read only property)

51.37 class CNSaveRequestMBS

51.37.1 class CNSaveRequestMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNSaveRequest class defines a save request operation for contacts.
Example:

```
// add a new contact to the address book
// Your app needs permission for contacts, see CNContactStoreMBS.requestAccessForEntityType.
Var contact As New CNMutableContactMBS
contact.givenName = "Jane"
contact.familyName = "Doe"

Var store As New CNContactStoreMBS
Var request As New CNSaveRequestMBS
request.addContact(contact, store.defaultContainerIdentifier)

Var error As NSErrorMBS
If store.executeSaveRequest(request, error) Then
MessageBox "Contact saved."
Else
MessageBox "Failed to save: " + error.localizedDescription
End If
```

Notes: The CNSaveRequest class creates a new save request for each save operation on the contact store. You can batch multiple changes into one save request (note that these changes only apply to objects). In the case of overlapping changes in multiple or concurrent save requests, the last change wins. If you try to add an object (that is, a contact, or a group,) that already exists in the contact store, the CNErrorCodeInsertedRecordAlreadyExists error occurs and the CNErrorUserInfoAffectedRecordsKey array is updated to contain the object you tried to add. If you try to update or delete an object that is not present in the contact store, the save request does not perform the update or deletion, the CNErrorCodeRecordDoesNotExist error occurs, and the CNErrorUserInfoAffectedRecordsKey array is updated to contain the object you tried to update or delete. Do not access objects in the save request while a save request is executing.

- 23.1, page 67: First Contact, Adding New Contact into Apple Contacts by Stefanie Juchmes-Simonis

51.37.2 Methods

51.37.3 addContact(contact as CNMutableContactMBS, ContainerIdentifier as String)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Adds the specified contact to the contact store.
Notes: contact: The new contact to add.
identifier: The identifier of the container to add the new contact. To add the new contact to the default container set identifier to "".

This method overrides any previously made deletion requests for the contact. The new contact may be modified by executing the save request.

51.37.4 addGroup(group as CNMutableGroupMBS, identifier as String)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Adds a group to the contact store.
Notes: group: The group to add.
identifier: The identifier of the container to add the new group. To add the new group to the default container, set identifier to "".

This method overrides any previously made delete request for the group.

51.37.5 addMember(contact as CNContactMBS, group as CNGroupMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Adds a contact as a member of a group.
Notes: contact: The contact to add to the group membership.
group: The group to add the contact to its membership.

This method overrides any previously made remove membership request on the contact from the group.

51.37.6 addSubgroup(subgroup as CNGroupMBS, group as CNGroupMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: Adds a subgroup to a group.

51.37.7 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

51.37.8 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

51.37.9 deleteContact(contact as CNMutableContactMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Deletes a contact from the contact store.
Notes: contact: Contact to be delete.

51.37.10 deleteGroup(contact as CNMutableGroupMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Deletes a group from the contact store.
Notes: group: The group to delete.

This method overrides any previously made add request on the group. The group to be deleted must already exist in the contact store. If it does not, the delete request fails, the CNErrorCodeRecordDoesNotExist error is thrown, and the CNErrorUserInfoAffectedRecordsKey array is updated to contain that object.

51.37.11 removeMember(contact as CNContactMBS, group as CNGroupMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Removes a contact as a member of a group.
Notes: contact: The contact to remove from the group membership.

group: The group to remove the contact from its membership.

This method removes the contact from the group, but does not delete it from the contact store. This method overrides any previously made add membership request on the contact to the group.

51.37.12 removeSubgroup(subgroup as CNGroupMBS, group as CNGroupMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: Removes a subgroup from a group.

51.37.13 updateContact(contact as CNMutableContactMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Updates an existing contact in the contact store.
Notes: contact: The contact to update.

The contact to be updated must already exist in the contact store. If it does not, the update request fails, the CNErrorCodeRecordDoesNotExist error occurs, and the CNErrorUserInfoAffectedRecordsKey array is updated to contain the object. Note that the contact may be modified when the save request is executing.

51.37.14 updateGroup(contact as CNMutableGroupMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Updates an existing group in the contact store.
Notes: group: The group to update.

The group to be updated must already exist in the contact store. If it does not, the update request fails, the CNErrorCodeRecordDoesNotExist error is thrown, and the CNErrorUserInfoAffectedRecordsKey array is updated to contain that object.

51.37.15 Properties

51.37.16 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: Value is a pointer to a CNSaveRequest object.
(Read and Write property)

51.37.17 shouldRefetchContacts as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.5, Platform: macOS, Targets: Desktop & iOS.

Function: Should the contacts be refetched as part of executing the save request.
Notes: Default is true where added and updated contacts are refetched by the executing save request.
Set to false to suppress this refetch behavior and reduce the execution time of the save request.

If set to false do not use the contacts after the executed save request as they may not be in a current state.
(Read and Write property)

51.37.18 transactionAuthor as String

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The author of this transaction.
Notes: Use this, in conjunction with CNChangeHistoryFetchRequestMBS.excludedTransactionAuthors, to suppress fetching of changes the author already knows about.
(Read and Write property)

51.38 class CNSocialProfileMBS

51.38.1 class CNSocialProfileMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNSocialProfile class defines an immutable object representing a social profile.
Example:

```
Var ContactStore as new CNContactStoreMBS
Var c as new CNMutableContactMBS

c.givenName = "Bob"

Var sr as new CNSaveRequestMBS

Var ContainerIdentifier as string = ContactStore.defaultContainerIdentifier
sr.addContact c, ContainerIdentifier

Var e as NSErrorMBS
if ContactStore.executeSaveRequest(sr, e) then
MessageBox "Saved"
else
MessageBox "Failed to save contact"+EndOfLine+EndOfLine+e.localizedDescription
end if
```

Notes: This is a thread-safe class. Some social profile services, such as Facebook and Twitter are predefined in this class. You can also specify your own social profile service with Constructor.

51.38.2 Methods

51.38.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

51.38.4 CNSocialProfileServiceFacebook as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the possible service keys.
Notes: Facebook

51.38.5 CNSocialProfileServiceFlickr as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the possible service keys.
Notes: Flickr

51.38.6 CNSocialProfileServiceGameCenter as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the possible service keys.
Notes: Game Center

51.38.7 CNSocialProfileServiceKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties.
Notes: The social profile service.
This key takes a string value.

51.38.8 CNSocialProfileServiceLinkedIn as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the possible service keys.
Notes: LinkedIn

51.38.9 CNSocialProfileServiceMySpace as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the possible service keys.
Notes: MySpace

51.38.10 CNSocialProfileServiceSinaWeibo as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the possible service keys.
Notes: Sina Weibo

51.38.11 CNSocialProfileServiceTencentWeibo as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the possible service keys.
Notes: Tencent Weibo

51.38.12 CNSocialProfileServiceTwitter as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the possible service keys.
Notes: Twitter

51.38.13 CNSocialProfileServiceYelp as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the possible service keys.
Notes: Yelp

51.38.14 CNSocialProfileURLStringKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties.
Notes: The URL of the service.

51.38.15 CNSocialProfileUserIdentifierKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties.
Notes: The social profile user identifier.
This key takes a string value.

51.38.16 CNSocialProfileUsernameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties.
Notes: The social profile user name.
This key takes a string value.

51.38.17 Constructor(URLString as String, UserName as String, Identifier as String, Service as String)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes a new social profile object with the specified URL.
Notes: urlString: The URL for the social profile.
username: The user name for the social profile.
userIdentifier: The service,Äôs user identifier for the social profile.
service: The service name of the social profile.

51.38.18 copy as CNSocialProfileMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a copy of the social profile object.

51.38.19 localizedStringForKey(key as String) as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the localized name of the property for the specified key.
Example:

MessageBox CNSocialProfileMBS.localizedStringForService(CNSocialProfileServiceGameCenter)

Notes: key: Key for which to get the localized property name.

51.38.20 localizedStringForService(service as String) as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the localized name of the specified service.
Example:

MessageBox CNSocialProfileMBS.localizedStringForKey(CNSocialProfileUsernameKey)

Notes: service: The service name for which to get the localized name.

51.38.21 Properties

51.38.22 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: Value is a pointer to a CNSocialProfile object.
(Read and Write property)

51.38.23 service as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The social profile,Äôs service name.
Notes: (Read only property)

51.38.24 urlString as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The URL associated with the social profile.
Notes: (Read only property)

51.38.25 userIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The service,Äôs user identifier associated with the social profile.
Notes: (Read only property)

51.38.26 username as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The user name for the social profile.
Notes: (Read only property)

Chapter 52

Continuity Camera

52.1 class ContinuityCameraMBS

52.1.1 class ContinuityCameraMBS

MBS MacExtras Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop only.

Function: The class to work with Continuity feature in MacOS Mojave.
Example:

```
// This example needs a window with Canvas1.
// take a photo with the iPhone and show it in a canvas (Continuity Camera)
// MyContinuityCamera is a subclass of ContinuityCameraMBS with the Received event implemented.
// Camera is a property of the window: Camera As MyContinuityCamera
Camera = New MyContinuityCamera
Camera.Import(ContinuityCameraMBS.kIndexTakePhoto, Canvas1)

// in MyContinuityCamera:
Sub Received(Data As MemoryBlock, type As String) Handles Received
// Data is the image file data, type the UTI, e.g. public.jpeg
Var pic As Picture = Picture.FromData(Data)
System.DebugLog "Received " + type + ", " + pic.Width.ToString + " x " + pic.Height.ToString
End Sub
```

Notes: Works also with services to receive e.g. screenshot for older versions.

See also VNDocumentCameraViewControllerMBS for iOS.

52.1.2 Methods

52.1.3 Constructor

MBS MacExtras Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop only.

Function: The constructor.

52.1.4 Destructor

MBS MacExtras Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop only.

Function: The destructor.

52.1.5 Import(index as Integer)

MBS MacExtras Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop only.

Function: Starts import.
Notes: Index is 0 for photo, 1 for document or 2 for sketch.

If you have multiple devices, you may add 3 to switch to next device or better use popup menu.
If index is too big, nothing happens.
See also:

- 52.1.6 Import(index as Integer, Control as control) 9087
- 52.1.7 Import(index as Integer, Control as DesktopControl) 9088
- 52.1.8 Import(index as Integer, Win as DesktopWindow) 9088
- 52.1.9 Import(index as Integer, Win as window) 9088

52.1.6 Import(index as Integer, Control as control)

MBS MacExtras Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop only.

Function: Starts import for control.
Notes: Index is 0 for photo, 1 for document or 2 for sketch.

If you have multiple devices, you may add 3 to switch to next device or better use popup menu.
If index is invalid, nothing happens.
See also:

- 52.1.5 Import(index as Integer) 9087
- 52.1.7 Import(index as Integer, Control as DesktopControl) 9088
- 52.1.8 Import(index as Integer, Win as DesktopWindow) 9088
- 52.1.9 Import(index as Integer, Win as window) 9088

52.1.7 Import(index as Integer, Control as DesktopControl)

MBS MacExtras Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop only.

Function: Starts import for control.
Notes: Index is 0 for photo, 1 for document or 2 for sketch.

If you have multiple devices, you may add 3 to switch to next device or better use popup menu.
If index is invalid, nothing happens.
See also:

- 52.1.8 Import(index as Integer, Win as DesktopWindow) 9088
- 52.1.9 Import(index as Integer, Win as window) 9088

52.1.8 Import(index as Integer, Win as DesktopWindow)

MBS MacExtras Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop only.

Function: Starts import for window.
Notes: Index is 0 for photo, 1 for document or 2 for sketch.

If you have multiple devices, you may add 3 to switch to next device or better use popup menu.
If index is invalid, nothing happens.
See also:

- 52.1.5 Import(index as Integer) 9087

- 52.1.8 Import(index as Integer, Win as DesktopWindow) 9088

52.1.10 InstallForCanvas

MBS MacExtras Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop only.

Function: Installs receiver for Xojo canvas controls.

52.1.11 InstallForListbox

MBS MacExtras Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop only.

Function: Installs receiver for Xojo listbox controls.

52.1.12 InstallForWindow

MBS MacExtras Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop only.

Function: Installs receiver for Xojo windows.

52.1.13 PopupMenu as NSMenuMBS

MBS MacExtras Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop only.

Function: Shows the import from device popup menu.
Notes: You can show this menu with popup method.
May return nil if unavailable.

52.1.14 SetDelegate(d as ContinuityCameraDelegateMBS)

MBS MacExtras Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop only.

Function: Sets delegate to call when we got new data.

52.1.15 Properties

52.1.16 Enabled as Boolean

MBS MacExtras Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Whether this is enabled.
Notes: Defaults to true.
(Read and Write property)

52.1.17 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop only.

Function: The handle for the internal controller.
Notes: Is zero in case the constructor failed.
(Read only property)

52.1.18 Events

52.1.19 Allow(Handle as Integer) as boolean

MBS MacExtras Plugin, Plugin Version: 22.5, Platform: macOS, Targets: Desktop only.

Function: Whether to allow the control to receive data.
Example:

```
Function Allow(Handle as Integer) Handles Allow as boolean
System.DebugLog CurrentMethodName+": "+Str(Handle)

For Each control As RectControl In allowedControls

// we hit our control
If control.handle = handle Then
Return True
End If

// are we within the coordinates with the mouse?

Var cx As Integer = control.MouseX
Var cy As Integer = control.MouseY

'System.DebugLog Str(cx)+"/"+Str(cy)
```

```
Var controlLeft As Integer = control.Left
Var controlTop As Integer = control.top
Var controlRight As Integer = controlLeft + control.Width
Var controlBottom As Integer = controlTop + control.Height

Var win As Window = control.Window // container?
If win <>control.TrueWindow Then
controlLeft = controlLeft + win.Left
controlTop = controlTop + win.Top
controlRight = controlRight + win.Left
controlBottom = controlBottom + win.Top
End If

If cX >= controlLeft And cY >= controlTop And cX <controlRight And cy <controlBottom Then
return true
End If

Next
End Function
```

Notes: Return true to allow or false to disallow.
You may get the call for the control below mouse and for other control below it like containers.
So you may best decide based on the

52.1.20 Received(Data as MemoryBlock, type as String)

MBS MacExtras Plugin, Plugin Version: 22.5, Platform: macOS, Targets: Desktop only.

Function: Data was received.
Example:

```
Sub Received(Data as MemoryBlock, type as String)
Select Case type
Case "JPEG"
WriteFile("import.jpg", data)

Var p As Picture = Picture.FromData(data)
MainWindow.setPicture p

Else
MessageBox "new type: "+type
End Select
End Sub
```

Notes: Alternatively to using the delegate, you can subclass ContinuityCameraMBS and add this event to

have a central place to receive data.

52.1.21 Constants

Index Values

Constant	Value	Description
kIndexDrawSketch	2	Draw a sketch.
kIndexScanDocument	1	Scan a document as PDF.
kIndexTakePhoto	0	Take a picture.

52.1.22 Delegates

52.1.23 ContinuityCameraDelegateMBS(Data as MemoryBlock, type as String)

MBS MacExtras Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop only.

Function: The delegate definition for the callback.
Notes: Please define a method in app or a module and pass addressOf that method to SetDelegate method.

52.2 class VNDocumentCameraScanMBS

52.2.1 class VNDocumentCameraScanMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: A single document scanned in the document camera.
Notes: When the document camera scans a document, it returns the resulting information in this format, through the didFinishWithScan event.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

52.2.2 Methods

52.2.3 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The private constructor.

52.2.4 imageOfPageAtIndex(Index as Integer) as Variant

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The image of the page at a specified index.
Notes: We return a NSImageMBS wrapping the UIImage.

52.2.5 pictureOfPageAtIndex(Index as Integer) as Picture

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The picture of the page at a specified index.
Notes: We build a Picture wrapping the UIIMage.

52.2.6 Properties

52.2.7 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

52.2.8 pageCount as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The number of pages in the scanned document.
Notes: (Read only property)

52.2.9 title as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The title of the scanned document.
Notes: (Read only property)

52.3 class VNDocumentCameraViewControllerMBS

52.3.1 class VNDocumentCameraViewControllerMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Shows a panel to allow the user to scan a document.
Notes: A view controller that shows what the document camera sees.
Present this view controller, as follows, and add it to your view controller hierarchy to scan documents.

See also ContinuityCameraMBS for macOS.

52.3.2 Methods

52.3.3 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The constructor.

52.3.4 Destructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The destructor.

52.3.5 Dismiss

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Dismisses the controller.

52.3.6 Present

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Presents the controller.

52.3.7 Properties

52.3.8 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

52.3.9 isBeingPresented as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Whether the controller is presented.
Notes: Returns true if the dialog is visible.
(Read only property)

52.3.10 Supported as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Whether you can use this class on the current device.
Notes: Returns false for unsupported hardware.
(Read only property)

52.3.11 title as String

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: A localized string that represents the view this controller manages.
Notes: Set the title to a human-readable string that describes the view. If the view controller has a valid navigation item or tab-bar item, assigning a value to this property updates the title text of those objects.
(Read and Write property)

52.3.12 Events

52.3.13 didCancel

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when the user cancels.
Notes: The plugin dismisses the dialog automatically.

52.3.14 didFailWithError(error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when the user is unable to scan, with the following error.
Notes: The plugin dismisses the dialog automatically.

52.3.15 didFinishWithScan(scan as VNDocumentCameraScanMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event to be called when something was scanned.
Notes: The plugin dismisses the dialog automatically.

Chapter 53

Controls

53.1 control ButtonMBS

53.1.1 control ButtonMBS

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use Canvas instead. **Function:** A control to have a custom button in Xojo.
Notes: You provide the images for the button and the control will do the rest.

There are possibilities that this control shows thru pagepanels from a hidden panel.

53.1.2 Properties

53.1.3 ImageDisabled as Picture

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The image used if the button is disabled.
Notes: (Read and Write property)

53.1.4 ImageMouseOver as Picture

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The image used for the unpressed button if the mouse is over the button.
Notes: (Read and Write property)

53.1.5 ImageNormal as Picture

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The image for the normal state.
Notes: (Read and Write property)

53.1.6 ImagePressed as Picture

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The image used for the pressed button.
Notes: (Read and Write property)

53.1.7 ImagePressedDisabled as Picture

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The image used when the button is pressed and the button is disabled.
Notes: If this image is nil, the ImagePressed picture is used.
(Read and Write property)

53.1.8 ImagePressedMouseOver as Picture

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The image used when the button is pressed and the mouse is over the button.
Notes: If this image is nil, the ImagePressed picture is used.
(Read and Write property)

53.1.9 Sticky as Boolean

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether the button is sticky.
Notes: Normally the value is set to false when you release the mouse button.
If Sticky is true, the button is not unpressed.
(Read and Write property)

53.1.10 TestEnabled as Boolean

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: This property can be used to see in the window editor how the button looks like when the button is enabled.
Notes: This property is only for designing, not for runtime.
(Read and Write property)

53.1.11 TestMouseOver as Boolean

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: This property can be used to see in the window editor how the button looks like if the mouse is over the button.
Notes: This property is only for designing, not for runtime.
(Read and Write property)

53.1.12 TestPressed as Boolean

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: This property can be used to see in the window editor how the button looks like when the button is pressed.
Notes: This property is only for designing, not for runtime.
(Read and Write property)

53.1.13 Toggle as Boolean

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether the button should toggle.
Notes: If pressed the button switches the value property.

Set Sticky to true if use set Toggle to true.
(Read and Write property)

53.1.14 Value as Boolean

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether the button is currently pressed.
Notes: True if the button is pressed.
(Read and Write property)

53.1.15 Events

53.1.16 Action(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called when the mouse button is clicked in the control.
Notes: Currently called after each MouseUp event.

53.1.17 Close

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The control is about to close.

53.1.18 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS Overlay Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This event is called when it is appropriate to display a contextual menu for the control.

53.1.19 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Called when a menuitem is chosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

53.1.20 EnableMenuItems

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event where you can enable menu items.

53.1.21 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

53.1.22 MouseDrag(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mouse drag event.

53.1.23 MouseUp(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called when the mouse button is released.

53.1.24 Open

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The control is about to was created and you can initialize it.

53.1.25 ScaleFactorChanged(NewFactor as Double)

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

53.2 class Control

53.2.1 class Control

Plugin Version: 9.7, Platform: macOS, Targets: Desktop only.

Function: The built in Control class in Xojo.

53.2.2 Methods

53.2.3 CALayerMBS as CALayerMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the Core Animation layer that the receiver uses as its backing store.
Notes: Works only in Cocoa target.
Also sets wantsLayer to true for the view to make sure it has a layer.

53.2.4 NSControlMBS as NSControlMBS

MBS MacCocoa Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: Creates a NSControlMBS object for the given control.
Example:

```
// This example needs a window with BevelButton1.
BevelButton1.NSControlMBS.StringValue = "Hello"
```

Notes: This way you can manipulate Cocoa controls directly.

53.2.5 NSViewMBS as NSViewMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop only.

Function: Creates a NSViewMBS object for the given control.
Example:

```
// This example needs a window with PushButton1.
MessageBox PushButton1.NSViewMBS.className
```

Notes: This way you can manipulate Cocoa controls directly.
For a pushbutton you may want to cast the NSViewMBS to NSButtonMBS to have more options.

53.2.6 WinClassNameMBS as string

MBS Win Plugin, Plugin Version: 14.3, Platform: Windows, Targets: Desktop only.

Function: Returns internal control class name for a Windows control.

53.3 Globals

53.3.1 ShowModalWithinThreadSafeMBS(extends theMessageDialog as MessageDialog, parent as DesktopWindow)

MBS Util Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Call ShowModalWithin method on main thread.
Notes: This method is to allow you to call the ShowModalWithin method of a MessageDialog in a thread without a problem.

If called on main thread, the plugin will simply call method directly.
If called on other threads the plugin will schedule to call the method a short time later on the main thread.

Of course as this is asynchronously, you do not get details on which button was pressed.
Deprecated. Behavior from Xojo changed, so this method does no longer work.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

53.3.2 ShowModalThreadSafeMBS(extends theMessageDialog as MessageDialog)

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Call ShowModal method on main thread.
Notes: This method is to allow you to call the ShowModal method of a MessageDialog in a thread without a problem.

If called on main thread, the plugin will simply call method directly.
If called on other threads the plugin will schedule to call the method a short time later on the main thread.

Of course as this is asynchronously, you do not get details on which button was pressed.
Deprecated. Behavior from Xojo changed, so this method does no longer work.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

53.4 control CustomControlMBS

53.4.1 control CustomControlMBS

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use Canvas instead. **Function:** A control where you can in the IDE define the paint event and see in the IDE what you see in the compiled application.

53.4.2 Properties

53.4.3 Code as String

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The code for the paint event.
Notes: Commands:
PenWidth n
PenHeight n
ForeColor n
FillRect x,y,w,h
DrawRect x,y,w,h
FillRoundRect x,y,w,h,X,Y
DrawRoundRect x,y,w,h,X,Y
FillOval x,y,w,h
DrawOval x,y,w,h
DrawPicture X,x,y,w,h - draws picture number X into the given rectangle
DrawLine x1,y1,x1,y1 - draws line

Variables:
width: width of control
height: height of control
left: left position of control
top: top position of control
ValueX: Value of the ValueX property (X from 1 to 4)
ColorX: Value of the Color1 property (X from 1 to 4)
(Read and Write property)

53.4.4 Color1 as Color

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: One of the color properties.
Notes: (Read and Write property)

53.4.5 Color2 as Color

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: One of the color properties.
Notes: (Read and Write property)

53.4.6 Color3 as Color

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: One of the color properties.

Notes: (Read and Write property)

53.4.7 Color4 as Color

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: One of the color properties.
Notes: (Read and Write property)

53.4.8 Picture1 as Picture

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: One of the picture properties you can use for the drawpicture command.
Notes: (Read and Write property)

53.4.9 Picture2 as Picture

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: One of the picture properties you can use for the drawpicture command.
Notes: (Read and Write property)

53.4.10 Picture3 as Picture

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: One of the picture properties you can use for the drawpicture command.
Notes: (Read and Write property)

53.4.11 Picture4 as Picture

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: One of the picture properties you can use for the drawpicture command.
Notes: (Read and Write property)

53.4.12 Value1 as String

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: One of the value properties.
Notes: (Read and Write property)

53.4.13 Value2 as String

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: One of the value properties.
Notes: (Read and Write property)

53.4.14 Value3 as String

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: One of the value properties.
Notes: (Read and Write property)

53.4.15 Value4 as String

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: One of the value properties.
Notes: (Read and Write property)

53.4.16 Events

53.4.17 Close

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The control is about to close.

53.4.18 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS Overlay Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: This event is called when it is appropriate to display a contextual menu for the control.

53.4.19 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Called when a menuitem is chosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

53.4.20 EnableMenuItems

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The event where you can enable menu items.

53.4.21 MouseDown(x as Integer, y as Integer, Modifiers as Integer) as boolean

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The event called when the user clicks with the mouse in the control area.
Notes: Return true to handle the event and enable the MouseUp event.

This event exists because RB does not add a Mousedown event by default to the plugin control.

53.4.22 MouseDrag(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The mouse drag event.

53.4.23 MouseUp(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The event called when the user releases the mouse button and you returned true on the MouseDown event.

53.4.24 Open

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The control is about to was created and you can initialize it.

53.4.25 ScaleFactorChanged(NewFactor as Double)

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

53.5 class DesktopControl

53.5.1 class DesktopControl

Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The built in Control class in Xojo.

53.5.2 Methods

53.5.3 CALayerMBS as CALayerMBS

MBS MacCG Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns the Core Animation layer that the receiver uses as its backing store.
Notes: Works only in Cocoa target.
Also sets wantsLayer to true for the view to make sure it has a layer.

53.5.4 NSControlMBS as NSControlMBS

MBS MacCocoa Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Creates a NSControlMBS object for the given control.
Example:

```
// This example needs a window with BevelButton1.
BevelButton1.NSControlMBS.StringValue = "Hello"
```

Notes: This way you can manipulate Cocoa controls directly.

53.5.5 NSViewMBS as NSViewMBS

MBS MacBase Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Creates a NSViewMBS object for the given control.
Example:

```
// This example needs a window with PushButton1.
MessageBox PushButton1.NSViewMBS.className
```

Notes: This way you can manipulate Cocoa controls directly.
For a pushbutton you may want to cast the NSViewMBS to NSButtonMBS to have more options.

53.5.6 WinClassNameMBS as string

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Returns internal control class name for a Windows control.

53.6 class DesktopLabel

53.6.1 class DesktopLabel

Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: An extension of Xojo's internal control.

53.6.2 Methods

53.6.3 NSTextFieldMBS as NSTextFieldMBS

MBS MacCocoa Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Creates a NSTextFieldMBS object for the given control.
Notes: This way you can manipulate Cocoa controls directly.

53.6.4 SetTextThreadSafeMBS(text as string)

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Sets text property on main thread.
Notes: This method is to allow you to set the text property of a label in a thread without a problem.

If called on main thread, the plugin will simply set text property directly.
If called on other threads the plugin will schedule to set the property a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

53.7 class DesktopListbox

53.7.1 class DesktopListbox

Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The built in listbox class in Xojo.

53.7.2 Methods

53.7.3 HorizontalNSScrollerMBS as NSScrollerMBS

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns horizontal scrollbar for a listbox.
Notes: Only for Cocoa target.

53.7.4 RefreshCellThreadSafeMBS(Row As Integer, Column As Integer)

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Calls refresh cell on main thread.
Notes: This method is to allow you to invalidate a listbox cell in a thread without a problem.

If called on main thread, the plugin will simply call through directly.
If called on other threads the plugin will schedule to call the method a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

53.7.5 VerticalNSScrollerMBS as NSScrollerMBS

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns vertical scrollbar for a listbox.
Notes: Only for Cocoa target.

53.8 class DesktopProgressbar

53.8.1 class DesktopProgressbar

Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The built in progressbar class in Xojo.

53.8.2 Methods

53.8.3 NSProgressIndicatorMBS as NSProgressIndicatorMBS

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Creates a NSProgressIndicatorMBS object for the given control.
Example:

```
// This example needs a window with ProgressBar1.
MessageBox ProgressBar1.NSProgressIndicatorMBS.className
```

Notes: This way you can manipulate Cocoa controls directly.

53.8.4 SetMaximumThreadSafeMBS(maximum as integer)

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Sets maximum property on main thread.
Notes: This method is to allow you to set the maximum property of a progressbar in a thread without a problem.

If called on main thread, the plugin will simply set maximum property directly.
If called on other threads the plugin will schedule to set the property a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

53.8.5 SetValueThreadSafeMBS(value as integer)

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Sets value property on main thread.

Notes: This method is to allow you to set the value property of a progressbar in a thread without a problem.

If called on main thread, the plugin will simply set value property directly.
If called on other threads the plugin will schedule to set the property a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

53.9 class DesktopTextField

53.9.1 class DesktopTextField

Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The built in TextField class in Xojo.

53.9.2 Methods

53.9.3 NSTextFieldMBS as NSTextFieldMBS

MBS MacCocoa Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Creates a NSTextFieldMBS object for the given control.
Notes: This way you can manipulate Cocoa controls directly.
Seems like Xojo 2011r1 uses a NSTextField, so this method should return an object on Cocoa targets.

53.9.4 NSTextViewMBS as NSTextViewMBS

MBS MacCocoa Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Creates a NSTextViewMBS object for the given control.
Notes: This way you can manipulate Cocoa controls directly.
Seems like Xojo 2011r1 uses a NSTextField, so this method should return nil on Cocoa targets. Please use NSTextFieldMBS method in this case.

53.9.5 SetTextThreadSafeMBS(text as string)

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Sets text property on main thread.
Notes: This method is to allow you to set the text property of a label in a thread without a problem.

If called on main thread, the plugin will simply set text property directly.
If called on other threads the plugin will schedule to set the property a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

53.10 class DesktopUIControl

53.10.1 class DesktopUIControl

Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: An extension of Xojo's internal control.

53.10.2 Methods

53.10.3 RefreshThreadSafeMBS(immediately as Boolean = False)

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Call refresh method on main thread.
Notes: This method is to allow you to call the refresh method of a control in a thread without a problem.

If called on main thread, the plugin will simply call method directly.
If called on other threads the plugin will schedule to call the method a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.
See also:

- 53.10.4 RefreshThreadSafeMBS(X As Integer, Y As Integer, Width As Integer, Height As Integer, immediately as Boolean = False) 9121

53.10.4 RefreshThreadSafeMBS(X As Integer, Y As Integer, Width As Integer, Height As Integer, immediately as Boolean = False)

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Call refresh method on main thread.
Notes: This method is to allow you to call the refresh method of a control in a thread without a problem.

If called on main thread, the plugin will simply call method directly.
If called on other threads the plugin will schedule to call the method a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.
See also:

- 53.10.3 RefreshThreadSafeMBS(immediately as Boolean = False) 9121

53.10.5 SetEnabledThreadSafeMBS(value as boolean)

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Sets enabled property on main thread.
Notes: This method is to allow you to set the enabled property of a control in a thread without a problem.

If called on main thread, the plugin will simply set enabled property directly.
If called on other threads the plugin will schedule to set the property a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

53.10.6 SetVisibleThreadSafeMBS(value as boolean)

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Sets visible property on main thread.
Notes: This method is to allow you to set the visible property of a control in a thread without a problem.

If called on main thread, the plugin will simply set visible property directly.
If called on other threads the plugin will schedule to set the property a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

53.11 control ImageMBS

53.11.1 control ImageMBS

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use Canvas instead. **Function:** A control for Xojo to draw an image into a window.
Notes: The image is scaled to the size of the control.

53.11.2 Properties

53.11.3 Backdrop as Picture

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The image to display.
Notes: This image is scaled to the needed size.
(Read and Write property)

53.11.4 Events

53.11.5 Close

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The control is about to close.

53.11.6 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS Overlay Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This event is called when it is appropriate to display a contextual menu for the control.

53.11.7 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Called when a menuitem is chosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

53.11.8 EnableMenuItems

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event where you can enable menu items.

53.11.9 MouseDown(x as Integer, y as Integer, Modifiers as Integer) as boolean

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called when the user clicks with the mouse in the control area.
Notes: Return true to handle the event and enable the MouseUp event.

This event exists because RB does not add a Mousedown event by default to the plugin control.

53.11.10 MouseDrag(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mouse drag event.

53.11.11 MouseUp(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called when the user releases the mouse button and you returned true on the MouseDown event.

53.11.12 Open

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The control is about to was created and you can initialize it.

53.11.13 ScaleFactorChanged(NewFactor as Double)

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

53.12 class Label

53.12.1 class Label

Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: An extension of Xojo's internal control.

53.12.2 Methods

53.12.3 NSTextFieldMBS as NSTextFieldMBS

MBS MacCocoa Plugin, Plugin Version: 13.3, Platform: macOS, Targets: Desktop only.

Function: Creates a NSTextFieldMBS object for the given control.
Notes: This way you can manipulate Cocoa controls directly.

53.12.4 SetTextThreadSafeMBS(text as string)

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Sets text property on main thread.
Notes: This method is to allow you to set the text property of a label in a thread without a problem.

If called on main thread, the plugin will simply set text property directly.
If called on other threads the plugin will schedule to set the property a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

53.13 control LineMBS

53.13.1 control LineMBS

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use Line instead. **Function:** A control for Xojo to draw a line into a window.
Notes: Basicly the same as the original Line control from Xojo.

53.13.2 Properties

53.13.3 BorderWidth as Integer

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The width of the line.
Notes: Set to 0 to disabled the border.
(Read and Write property)

53.13.4 LineColor as Color

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The color for drawing the line.
Notes: There is a bug in Xojo. If you enter the color as a hex value (e.g. "&c123456"), the control will get black as color. If you use the color panel using the "..." buttons, the control will get the correct color.
(Read and Write property)

53.13.5 Mirror as Boolean

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether the line is mirrored.
Notes: Normally the line is drawn from top left to bottom right.

If Mirror is true, the line is drawn from bottom left to top right.
(Read and Write property)

53.13.6 Events

53.13.7 Close

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The control is about to close.

53.13.8 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS Overlay Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: This event is called when it is appropriate to display a contextual menu for the control.

53.13.9 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Called when a menuitem is chosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

53.13.10 EnableMenuItems

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The event where you can enable menu items.

53.13.11 MouseDown(x as Integer, y as Integer, Modifiers as Integer) as boolean

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The event called when the user clicks with the mouse in the control area.
Notes: Return true to handle the event and enable the MouseUp event.

This event exists because RB does not add a Mousedown event by default to the plugin control.

53.13.12 MouseDrag(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The mouse drag event.

53.13.13 MouseUp(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The event called when the user releases the mouse button and you returned true on the MouseDown event.

53.13.14 Open

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The control is about to was created and you can initialize it.

53.13.15 ScaleFactorChanged(NewFactor as Double)

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

53.14 class Listbox

53.14.1 class Listbox

Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The built in listbox class in Xojo.

53.14.2 Methods

53.14.3 HorizontalNSScrollerMBS as NSScrollerMBS

MBS MacControls Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Returns horizontal scrollbar for a listbox.
Notes: Only for Cocoa target.

53.15.2 Properties

53.15.3 BorderColor as Color

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The color for drawing the border.
Notes: There is a bug in Xojo. If you enter the color as a hex value (e.g. "&c123456"), the control will get black as color. If you use the color panel using the "..." buttons, the control will get the correct color.
(Read and Write property)

53.15.4 BorderWidth as Integer

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The width of the border line.
Notes: Set to 0 to disabled the border.
(Read and Write property)

53.15.5 FillColor as Color

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The color for filling the oval.
Notes: There is a bug in Xojo. If you enter the color as a hex value (e.g. "&c123456"), the control will get black as color. If you use the color panel using the "..." buttons, the control will get the correct color.

(Read and Write property)

53.15.6 Events

53.15.7 Close

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The control is about to close.

53.15.8 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS Overlay Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: This event is called when it is appropriate to display a contextual menu for the control.

53.15.9 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Called when a menuitem is chosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

53.15.10 EnableMenuItems

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The event where you can enable menu items.

53.15.11 MouseDown(x as Integer, y as Integer, Modifiers as Integer) as boolean

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The event called when the user clicks with the mouse in the control area.
Notes: Return true to handle the event and enable the MouseUp event.

This event exists because RB does not add a Mousedown event by default to the plugin control.

53.15.12 MouseDrag(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The mouse drag event.

53.15.13 MouseUp(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The event called when the user releases the mouse button and you returned true on the MouseDown event.

53.15.14 Open

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The control is about to was created and you can initialize it.

53.15.15 ScaleFactorChanged(NewFactor as Double)

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

53.16 class ProgressBar

53.16.1 class ProgressBar

Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The built in progressbar class in Xojo.

53.16.2 Methods

53.16.3 NSProgressIndicatorMBS as NSProgressIndicatorMBS

MBS MacControls Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop only.

Function: Creates a NSProgressIndicatorMBS object for the given control.
Example:

```
// This example needs a window with ProgressBar1.
MessageBox ProgressBar1.NSProgressIndicatorMBS.className
```

Notes: This way you can manipulate Cocoa controls directly.

53.16.4 SetMaximumThreadSafeMBS(maximum as Integer)

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Sets maximum property on main thread.
Notes: This method is to allow you to set the maximum property of a progressbar in a thread without a problem.

If called on main thread, the plugin will simply set maximum property directly.
If called on other threads the plugin will schedule to set the property a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

53.17.7 Events

53.17.8 Close

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The control is about to close.

53.17.9 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS Overlay Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This event is called when it is appropriate to display a contextual menu for the control.

53.17.10 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Called when a menuitem is chosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

53.17.11 EnableMenuItems

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event where you can enable menu items.

53.17.12 MouseDown(x as Integer, y as Integer, Modifiers as Integer) as boolean

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called when the user clicks with the mouse in the control area.
Notes: Return true to handle the event and enable the MouseUp event.

This event exists because RB does not add a Mousedown event by default to the plugin control.

53.17.13 MouseDrag(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mouse drag event.

53.17.14 MouseUp(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called when the user releases the mouse button and you returned true on the MouseDown event.

53.17.15 Open

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The control is about to was created and you can initialize it.

53.17.16 ScaleFactorChanged(NewFactor as Double)

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

53.18 class RectControl

53.18.1 class RectControl

Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: An extension of Xojo's internal control.

53.18.2 Methods

53.18.3 InvalidateThreadSafeMBS(EraseBackground as boolean = true)

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Call invalidate method on main thread.
Notes: This method is to allow you to call the invalidate method of a control in a thread without a problem.

If called on main thread, the plugin will simply call method directly.
If called on other threads the plugin will schedule to call the method a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

- 53.18.4 InvalidateThreadSafeMBS(X as Integer, Y as Integer, Width as Integer, Height as Integer, EraseBackground as boolean = true) 9141

53.18.4 InvalidateThreadSafeMBS(X as Integer, Y as Integer, Width as Integer, Height as Integer, EraseBackground as boolean = true)

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Call invalidate method on main thread.
Notes: This method is to allow you to call the invalidate method of a control in a thread without a problem.

If called on main thread, the plugin will simply call method directly.
If called on other threads the plugin will schedule to call the method a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.
See also:

- 53.18.3 InvalidateThreadSafeMBS(EraseBackground as boolean = true) 9141

53.18.5 RefreshThreadSafeMBS(EraseBackground as boolean = true)

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Call refresh method on main thread.
Notes: This method is to allow you to call the refresh method of a control in a thread without a problem.

If called on main thread, the plugin will simply call method directly.
If called on other threads the plugin will schedule to call the method a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

53.18.6 SetEnabledThreadSafeMBS(value as boolean)

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Sets enabled property on main thread.
Notes: This method is to allow you to set the enabled property of a control in a thread without a problem.

If called on main thread, the plugin will simply set enabled property directly.
If called on other threads the plugin will schedule to set the property a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

53.18.7 SetVisibleThreadSafeMBS(value as boolean)

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Sets visible property on main thread.
Notes: This method is to allow you to set the visible property of a control in a thread without a problem.

If called on main thread, the plugin will simply set visible property directly.
If called on other threads the plugin will schedule to set the property a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

53.19 control RoundRectangleMBS

53.19.1 control RoundRectangleMBS

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use RoundRectangle instead.
Function: A control for Xojo to draw a round rectangle into a window.
Notes: Basicly the same as the original round rectangle control from Xojo.
For composite windows there is a non zero chance that you see redraw problems.
Blog Entries

- MonkeyBread Software Releases the MBS REALbasic plug-ins 8.4

53.19.2 Properties

53.19.3 BorderColor as Color

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The color for drawing the border lines.
Notes: There is a bug in Xojo. If you enter the color as a hex value (e.g. "&c123456"), the control will get black as color. If you use the color panel using the "..." buttons, the control will get the correct color.
(Read and Write property)

53.19.4 BorderWidth as Integer

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The width of the border line.
Notes: Set to 0 to disabled the border.
(Read and Write property)

53.19.5 FillColor as Color

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The color for filling the rectangle.
Notes: There is a bug in Xojo. If you enter the color as a hex value (e.g. "&c123456"), the control will get black as color. If you use the color panel using the "..." buttons, the control will get the correct color.
(Read and Write property)

53.19.6 OvalHeight as Integer

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The height of the rounded corners in pixels.
Notes: (Read and Write property)

53.19.7 OvalWidth as Integer

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The width of the rounded corners in pixels.
Notes: (Read and Write property)

53.19.8 Events

53.19.9 Close

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The control is about to close.

53.19.10 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS Overlay Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: This event is called when it is appropriate to display a contextual menu for the control.

53.19.11 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Called when a menuitem is chosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

53.19.12 EnableMenuItems

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The event where you can enable menu items.

53.19.13 MouseDown(x as Integer, y as Integer, Modifiers as Integer) as boolean

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The event called when the user clicks with the mouse in the control area.
Notes: Return true to handle the event and enable the MouseUp event.

This event exists because RB does not add a Mousedown event by default to the plugin control.

53.19.14 MouseDrag(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The mouse drag event.

53.19.15 MouseUp(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The event called when the user releases the mouse button and you returned true on the MouseDown event.

53.19.16 Open

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The control is about to was created and you can initialize it.

53.19.17 ScaleFactorChanged(NewFactor as Double)

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

53.20 class TabPanel

53.20.1 class TabPanel

Platform: macOS, Targets: Desktop only.

Function: Extends the TabPanel control inside Xojo.

53.20.2 Methods

53.20.3 NSTabViewMBS as NSTabViewMBS

MBS MacCocoa Plugin, Plugin Version: 10.0, Platform: macOS, Targets: Desktop only.

Function: Creates a NSTabViewMBS object for the given control.
Example:

```
// This example needs a window with TabPanel1.
MessageBox TabPanel1.NSTabViewMBS.className
```

Notes: This way you can manipulate Cocoa controls directly.

53.21 class TextField

53.21.1 class TextField

Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The built in TextField class in Xojo.

53.21.2 Methods

53.21.3 NSTextFieldMBS as NSTextFieldMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Creates a NSTextFieldMBS object for the given control.
Notes: This way you can manipulate Cocoa controls directly.
Seems like Xojo 2011r1 uses a NSTextField, so this method should return an object on Cocoa targets.

53.21.4 NSTextViewMBS as NSTextViewMBS

MBS MacCocoa Plugin, Plugin Version: 10.0, Platform: macOS, Targets: Desktop only.

Function: Creates a NSTextViewMBS object for the given control.
Notes: This way you can manipulate Cocoa controls directly.
Seems like Xojo 2011r1 uses a NSTextField, so this method should return nil on Cocoa targets. Please use NSTextFieldMBS method in this case.

53.21.5 SetTextThreadSafeMBS(text as string)

MBS Util Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Sets text property on main thread.
Notes: This method is to allow you to set the text property of a label in a thread without a problem.

If called on main thread, the plugin will simply set text property directly.
If called on other threads the plugin will schedule to set the property a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

Chapter 54

CoreAnimation

54.1 class CALayerMBS

54.1.1 class CALayerMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The plugin class for a CoreAnimation.
Example:

```
// add gray layer over Xojo window. Or hide it on second call, show on third call, etc...

If view = Nil Then
// view is property in window/module

Var win As NSWindowMBS = Self.NSWindowMBS

view = New NSViewMBS(0, 0, Width, Height)

win.contentView.AddSubView(view)

view.wantsLayer = True
view.autoresizesSubviews = True
view.autoresizingMask = view.NSViewWidthSizable + view.NSViewHeightSizable

Var layer As CALayerMBS = view.layer
layer.backgroundColor = CGColorMBS.CreateDeviceGray(0.3, 0.5)

Else

// show or hide
view.isHidden = Not view.isHidden
```

End If

Notes: The CALayer class manages image-based content and allows you to perform animations on that content. Layers are often used to provide the backing store for views but can also be used without a view to display content. A layer's main job is to manage the visual content that you provide but the layer itself has visual attributes that can be set, such as a background color, border, and shadow. In addition to managing visual content, the layer also maintains information about the geometry of its content (such as its position, size, and transform) that is used to present that content onscreen. Modifying the properties of the layer is how you initiate animations on the layer's content or geometry. A layer object encapsulates the duration and pacing of a layer and its animations by adopting the CAMediaTiming protocol, which defines the layer's timing information.

If the layer object was created by a view, the view typically assigns itself as the layer's delegate automatically, and you should not change that relationship. For layers you create yourself, you can assign a delegate object and use that object to provide the contents of the layer dynamically and perform other tasks. A layer may also have a layout manager object (assigned to the layoutManager property) to manage the layout of subviews separately.

Available in OS X v10.5 and later.

54.1.2 Methods

54.1.3 addSublayer(layer as CALayerMBS)

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Appends the layer to the layer's list of sublayers.
Notes: If the array in the sublayers property is nil, calling this method creates an array for that property and adds the specified layer to it.

54.1.4 available as boolean

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns true if CALayer is available.
Notes: True on Mac and False on Windows/Linux.

54.1.5 Constructor

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Initializes the layer.
Notes: Available in OS X v10.5 and later.

54.1.6 display

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Reloads the content of this layer.
Notes: Do not call this method directly. The layer calls this method at appropriate times to update the layer's content. If the layer has a delegate object, this method attempts to call the delegate's Configuring the Layer's Rendering Behavior method, which the delegate can use to update the layer's contents. If the delegate does not implement the Configuring the Layer's Rendering Behavior method, this method creates a backing store and calls the layer's drawInContext: method to fill that backing store with content. The new backing store replaces the previous contents of the layer.

Subclasses can override this method and use it to set the layer's contents property directly. You might do this if your custom layer subclass handles layer updates differently.

54.1.7 displayIfNeeded

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Initiates the update process for a layer if it is currently marked as needing an update.
Notes: You can call this method as needed to force an update to your layer's contents outside of the normal update cycle. Doing so is generally not needed, though. The preferred way to update a layer is to call setNeedsDisplay and let the system update the layer during the next cycle.
Available in OS X v10.6 and later.

54.1.8 layer as CALayerMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates and returns an instance of the layer object.
Notes: Returns the initialized layer object or nil if initialization was not successful.
If you subclass CALayer, you may override this method and use it to provide an instance of your specific subclass.

54.1.9 layerFromHandle(Handle as Integer) as CALayerMBS

MBS MacCG Plugin, Plugin Version: 21.0, Platforms: macOS, iOS, Targets: All.

Function: Returns a new MBS layer object for the given handle.
Notes: Handle must be pointing to a CALayer, UIView or NSView.
Returns nil in case of an error.
See also:

- 54.1.10 layerFromHandle(Handle as Ptr) as CALayerMBS 9154

54.1.10 layerFromHandle(Handle as Ptr) as CALayerMBS

MBS MacCG Plugin, Plugin Version: 21.0, Platforms: macOS, iOS, Targets: All.

Function: Returns a new MBS layer object for the given handle.
Notes: Handle must be pointing to a CALayer, UIView or NSView.
Returns nil in case of an error.
See also:

- 54.1.9 layerFromHandle(Handle as Integer) as CALayerMBS 9154

54.1.11 layoutIfNeeded

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Recalculate the receiver's layout, if required.
Notes: When this message is received, the layer's super layers are traversed until a ancestor layer is found that does not require layout. Then layout is performed on the entire layer-tree beneath that ancestor.

54.1.12 layoutSublayers

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Tells the layer to update its layout.
Notes: Subclasses can override this method and use it to implement their own layout algorithm. Your implementation must set the frame of each sublayer managed by the receiver.

The default implementation of this method calls the layoutSublayersOfLayer method of the layer's delegate object. If there is no delegate object, or the delegate does not implement that method, this method calls the layoutSublayersOfLayer method of the object in the layoutManager property.

54.1.13 removeAllAnimations

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Remove all animations attached to the layer.

54.1.14 removeFromSuperlayer

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Detaches the layer from its parent layer.
Notes: You can use this method to remove a layer (and all of its sublayers) from a layer hierarchy. This method updates both the superlayer's list of sublayers and sets this layer's superlayer property to nil.
Available in OS X v10.5 and later.

54.1.15 renderInContext(CGContextHandle as Integer) as boolean

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: Renders content of CALayer into given CGContext.
Notes: Renders the receiver and its sublayers into the specified context.
This method renders directly from the layer tree, ignoring any animations added to the render tree. Renders in the coordinate space of the layer.

Returns true if plugin called render command, so layer can draw itself.
Not all layers support drawing into context.

54.1.16 renderInPicture(Pic as Picture) as boolean

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: Renders content of CALayer into given Picture.

Notes: Renders the receiver and its sublayers into the specified context.
This method renders directly from the layer tree, ignoring any animations added to the render tree. Renders in the coordinate space of the layer.

Returns true if plugin called render command, so layer can draw itself.
Not all layers support drawing into context.

54.1.17 setNeedsDisplay

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Marks the layer's contents as needing to be updated.
Notes: Calling this method causes the layer to recache its content. This results in the layer potentially calling either the displayLayer or drawLayer:inContext method of its delegate. The existing content in the layer's contents property is removed to make way for the new content.

Available in OS X v10.5 and later.

54.1.18 setNeedsDisplayInRect(r as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Marks the region within the specified rectangle as needing to be updated.
Notes: r: The rectangular region of the layer to mark as invalid. You must specify this rectangle in the layer's own coordinate system.
Available in OS X v10.5 and later.

54.1.19 setNeedsLayout

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Invalidates the layer's layout and marks it as needing an update.
Notes: You can call this method to indicate that the layout of a layer's sublayers has changed and must be updated. The system typically calls this method automatically when the layer's bounds change or when sublayers are added or removed. In OS X, if your layer's layoutManager property contains an object that implements the invalidateLayoutOfLayer method, that method is called too.

During the next update cycle, the system calls the layoutSublayers method of any layers requiring layout updates.
Available in OS X v10.5 and later.

54.1.20 sublayers as CALayerMBS()

MBS MacCG Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

Function: The array with sublayers.

54.1.21 Properties

54.1.22 affineTransform as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The affine version of the layer's transform..
Notes: The affine transform structure that corresponds to the value in the layer's transform property.
(Read and Write property)

54.1.23 anchorPoint as CGRectMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Defines the anchor point of the layer's bounds rectangle. Animatable.
Notes: You specify the value for this property using the unit coordinate space. The default value of this property is (0.5, 0.5), which represents the center of the layer's bounds rectangle. All geometric manipulations to the view occur about the specified point. For example, applying a rotation transform to a layer with the default anchor point causes the layer to rotate around its center. Changing the anchor point to a different location would cause the layer to rotate around that new point.

For more information about the relationship between the frame, bounds, anchorPoint and position properties, see Core Animation Programming Guide.
Available in OS X v10.5 and later.
(Read and Write property)

54.1.24 anchorPointZ as Double

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The anchor point for the layer's position along the z axis. Animatable.
Notes: This property specifies the anchor point on the z axis around which geometric manipulations occur. The point is expressed as a distance (measured in points) along the z axis. The default value of this property is 0.
Available in OS X v10.6 and later.

(Read and Write property)

54.1.25 AutoresizingMask as Integer

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: A bitmask defining how the layer is resized when the bounds of its superlayer changes.
Notes: If your app does not use a layout manager or constraints to handle layout changes, you can assign a value to this property to adjust the layer's size in response to changes in the superlayer's bounds. For a list of possible values, see "Autoresizing Mask".

The default value of this property is kCALayerNotSizable.
(Read and Write property)

54.1.26 backgroundColor as Variant

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The background color of the receiver. Animatable.
Notes: Value is a CGColorMBS. We use variant to reduce dependency to other plugins.

The default value of this property is nil.

The value of this property is retained using the Core Foundation retain/release semantics. This behavior occurs despite the fact that the property declaration appears to use the default assign semantics for object retention.
(Read and Write property)

54.1.27 borderColor as Variant

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The color of the layer's border. Animatable.
Notes: Value is a CGColorMBS. We use variant to reduce dependency to other plugins.

The default value of this property is an opaque black color.

The value of this property is retained using the Core Foundation retain/release semantics. This behavior occurs despite the fact that the property declaration appears to use the default assign semantics for object retention.

(Read and Write property)

54.1.28 borderWidth as Double

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The width of the layer's border. Animatable.
Notes: When this value is greater than 0.0, the layer draws a border using the current borderColor value. The border is drawn inset from the receiver's bounds by the value specified in this property. It is composited above the receiver's contents and sublayers and includes the effects of the cornerRadius property.

The default value of this property is 0.0.
(Read and Write property)

54.1.29 bounds as CGRectMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The layer's bounds rectangle. Animatable.
Notes: The bounds rectangle is the origin and size of the layer in its own coordinate space. When you create a new standalone layer, the default value for this property is an empty rectangle, which you must change before using the layer. The values of each coordinate in the rectangle are measured in points.

For more information about the relationship between the frame, bounds, anchorPoint and position properties, see Core Animation Programming Guide.
(Read and Write property)

54.1.30 className as string

MBS MacCG Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

Function: The class name of the layer.
Notes: Useful for debugging.
(Read only property)

54.1.31 classPath as string

MBS MacCG Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

Function: The path of this layer class.

Notes: Useful for debugging to know what super classes the layer has.
(Read only property)

54.1.32 contents as Variant

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The contents of the layer.
Notes: Value is a CGImageMBS. We use variant to reduce dependency to other plugins.
(or NSImageMBS)
(Read and Write property)

54.1.33 contentsCenter as CGRectMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The rectangle that defines how the layer contents are scaled during a resizing operation. Animatable.
Notes: You can use this property to subdivide the layer's content into a 3x3 grid. The value in this property specifies the location and size of the center rectangle in that grid. If the layer's contentsGravity property is set to one of the resizing modes, resizing the layer causes scaling to occur differently in each rectangle of the grid. The center rectangle is stretched in both dimensions, the top-center and bottom-center rectangles are stretched only horizontally, the left-center and right-center rectangles are stretched only vertically, and the four corner rectangles are not stretched at all. Therefore, you can use this technique to implement stretchable backgrounds or images using a three-part or nine-part image.

The value in this property is set to the unit rectangle (0.0,0.0) (1.0,1.0) by default, which causes the entire image to scale in both dimensions. If you specify a rectangle that extends outside the unit rectangle, the result is undefined. The rectangle you specify is applied only after the contentsRect property has been applied to the image.

Note: If the width or height of the rectangle in this property is very small or 0, the value is implicitly changed to the width or height of a single source pixel centered at the specified location.
(Read and Write property)

54.1.34 contentsRect as CGRectMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The rectangle, in the unit coordinate space, that defines the portion of the layer's contents that should be used. Animatable.
Notes: Defaults to the unit rectangle (0.0, 0.0, 1.0, 1.0).

If pixels outside the unit rectangle are requested, the edge pixels of the contents image will be extended outwards.
If an empty rectangle is provided, the results are undefined.
(Read and Write property)

54.1.35 contentsScale as Double

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The scale factor applied to the layer.
Notes: This value defines the mapping between the logical coordinate space of the layer (measured in points) and the physical coordinate space (measured in pixels). Higher scale factors indicate that each point in the layer is represented by more than one pixel at render time. For example, if the scale factor is 2.0 and the layer's bounds are 50 x 50 points, the size of the bitmap used to present the layer's content is 100 x 100 pixels.

The default value of this property is 1.0. For layers attached to a view, the view changes the scale factor automatically to a value that is appropriate for the current screen. For layers you create and manage yourself, you must set the value of this property yourself based on the resolution of the screen and the content you are providing. Core Animation uses the value you specify as a cue to determine how to render your content.

Available in OS X v10.7 and later.
(Read and Write property)

54.1.36 cornerRadius as Double

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The radius to use when drawing rounded corners for the layer's background. Animatable.
Notes: Setting the radius to a value greater than 0.0 causes the layer to begin drawing rounded corners on its background. By default, the corner radius does not apply to the image in the layer's contents property; it applies only to the background color and border of the layer. However, setting the masksToBounds property to true causes the content to be clipped to the rounded corners.

The default value of this property is 0.0.
(Read and Write property)

54.1.37 DoubleSided as boolean

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: A Boolean indicating whether the layer displays its content when facing away from the viewer.

Animatable.
Notes: When the value in this property is false, the layer hides its content when it faces away from the viewer. The default value of this property is true.
Available in OS X v10.5 and later.
(Read and Write property)

54.1.38 drawsAsynchronously as boolean

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: A Boolean indicating whether drawing commands are deferred and processed asynchronously in a background thread.
Notes: When this property is set to true, the graphics context used to draw the layer's contents queues drawing commands and executes them on a background thread rather than executing them synchronously. Performing these commands asynchronously can improve performance in some apps. However, you should always measure the actual performance benefits before enabling this capability.

The default value for this property is false.
Available in OS X v10.8 and later.
(Read and Write property)

54.1.39 frame as CGRectMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The layer's frame rectangle.
Notes: The frame rectangle is position and size of the layer specified in the superlayer's coordinate space. For layers, the frame rectangle is a computed property that is derived from the values in the bounds, anchorPoint and position properties. When you assign a new value to this property, the layer changes its position and bounds properties to match the rectangle you specified. The values of each coordinate in the rectangle are measured in points.

For more information about the relationship between the frame, bounds, anchorPoint and position properties, see Core Animation Programming Guide.

Note: The frame property is not directly animatable. Instead you should animate the appropriate combination of the bounds, anchorPoint and position properties to achieve the desired result.
(Read and Write property)

54.1.40 Handle as Integer

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The internal reference to the layer.
Notes: (Read and Write property)

54.1.41 Hidden as boolean

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: A Boolean indicating whether the layer is displayed. Animatable.
Notes: The default value of this property is false.
(Read and Write property)

54.1.42 mask as CALayerMBS

MBS MacCG Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The layer to be used as mask for this layer.
Notes: A layer whose alpha channel is used as a mask to select between the layer's background and the result of compositing the layer's contents with its filtered background. Defaults to nil. When used as a mask the layer's 'compositingFilter' and 'backgroundFilters' properties are ignored. When setting the mask to a new layer, the new layer must have a nil superlayer, otherwise the behavior is undefined. Nested masks (mask layers with their own masks) are unsupported.
(Read and Write property)

54.1.43 masksToBounds as Boolean

MBS MacCG Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Whether to mask by bounds.
Notes: When true an implicit mask matching the layer bounds is applied to the layer (including the effects of the 'cornerRadius' property). If both 'mask' and 'masksToBounds' are non-nil the two masks are multiplied to get the actual mask values. Defaults to false. Animatable.
(Read and Write property)

54.1.44 minificationFilterBias as Double

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The bias factor used by the minification filter to determine the levels of detail.
Notes: This value is used by the minificationFilter when it is set to kCAFilterTrilinear.
The default value of this property is 0.0.
Available in OS X v10.6 and later.
(Read and Write property)

54.1.45 modelLayer as CALayerMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns the model layer object associated with the receiver, if any.
Notes: Calling this method on a layer in the presentation tree returns the corresponding layer object in the model tree. This method returns a value only when a transaction involving changes to the presentation layer is in progress. If no transaction is in progress, the results of calling this method are undefined.

Available in OS X v10.5 and later.
(Read only property)

54.1.46 needsDisplay as boolean

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns a Boolean indicating whether the layer has been marked as needing an update.
Notes: True if the layer needs to be updated.
Available in OS X v10.6 and later.
(Read only property)

54.1.47 needsDisplayOnBoundsChange as boolean

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: A Boolean indicating whether the layer contents must be updated when its bounds rectangle changes.
Notes: When this property is set to true, the layer automatically calls its setNeedsDisplay method whenever its bounds property changes. The default value of this property is false.
(Read and Write property)

54.1.48 needsLayout as boolean

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns a Boolean indicating whether the layer has been marked as needing a layout update.
Notes: True if the layer has been marked as requiring a layout update.
Available in OS X v10.6 and later.
(Read only property)

54.1.49 opacity as Double

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The opacity of the receiver. Animatable.
Notes: The value of this property must be in the range 0.0 (transparent) to 1.0 (opaque). Values outside that range are clamped to the minimum or maximum. The default value of this property is 1.0.
(Read and Write property)

54.1.50 Opaque as boolean

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether the layer contains completely opaque content.
Notes: The default value of this property is false. If your app draws completely opaque content that fills the layer's bounds, setting this property to true lets the system optimize the rendering behavior for the layer. Specifically, when the layer creates the backing store for your drawing commands, Core Animation omits the alpha channel of that backing store. Doing so can improve the performance of compositing operations. If you set the value of this property to true, you must fill the layer's bounds with opaque content.

Setting this property affects only the backing store managed by Core Animation. If you assign an image with an alpha channel to the layer's contents property, that image retains its alpha channel regardless of the value of this property.
(Read and Write property)

54.1.51 position as CGRectMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The layer's position in its superlayer's coordinate space. Animatable.
Notes: The value of this property is specified in points and is always specified relative to the value in the anchorPoint property. For new standalone layers, the default position is set to (0.0, 0.0). Changing the frame property also updates the value in this property.

For more information about the relationship between the frame, bounds, anchorPoint and position properties, see Core Animation Programming Guide.

(Read and Write property)

54.1.52 preferredFrameSize as CGSizeMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns the preferred size of the layer in the coordinate space of its superlayer.
Notes: In OS X, the default implementation of this method calls the preferredSizeOfLayer method of its layout manager—that is, the object in its layoutManager property. If that object does not exist or does not implement that method, this method returns the size of the layer's current bounds rectangle mapped into the coordinate space of its superlayer.
(Read only property)

54.1.53 presentationLayer as CALayerMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns a copy of the presentation layer object that represents the state of the layer as it currently appears onscreen.
Notes: The layer object returned by this method provides a close approximation of the layer that is currently being displayed onscreen. While an animation is in progress, you can retrieve this object and use it to get the current values for those animations.

The sublayers, mask, and superlayer properties of the returned layer return the corresponding objects from the presentation tree (not the model tree). This pattern also applies to any read-only layer methods. For example, the hitTest: method of the returned object queries the layer objects in the presentation tree.

Available in OS X v10.5 and later.
(Read only property)

54.1.54 rasterizationScale as Double

MBS MacCG Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The scale at which the layer will be rasterized.
Notes: (when the shouldRasterize property has been set to true) relative to the coordinate space of the layer. Defaults to one. Animatable.
(Read and Write property)

54.1.55 shadowColor as Variant

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The color of the layer,Äôs shadow. Animatable.
Notes: The default value of this property is an opaque black color.

The value of this property is retained using the Core Foundation retain/release semantics. This behavior occurs despite the fact that the property declaration appears to use the default assign semantics for object retention.

Value is a CGColorMBS. We use variant to reduce dependency to other plugins.
(Read and Write property)

54.1.56 shadowOffset as CGSizeMBS

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The offset (in points) of the layer,Äôs shadow. Animatable.
Notes: The default value of this property is (0.0, -3.0).
(Read and Write property)

54.1.57 shadowOpacity as Double

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The opacity of the layer's shadow. Animatable.
Notes: The value in this property must be in the range 0.0 (transparent) to 1.0 (opaque). The default value of this property is 0.0.
Available in OS X v10.5 and later.
(Read and Write property)

54.1.58 shadowPath as Variant

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The shadow path.
Notes: Value is a CGPathMBS. We use variant to reduce dependency to other plugins.

The default value of this property is nil, which causes the layer to use a standard shadow shape. If you specify a value for this property, the layer creates its shadow using the specified path instead of the layer,Äôs

composited alpha channel. The path you provide defines the outline of the shadow. It is filled using the non-zero winding rule and the current shadow color, opacity, and blur radius.

Unlike most animatable properties, this property (as with all CGPathRef animatable properties) does not support implicit animation. However, the path object may be animated using any of the concrete subclasses of CAPropertyAnimation. Paths will interpolate as a linear blend of the "on-line" points; "off-line" points may be interpolated non-linearly (to preserve continuity of the curve's derivative). If the two paths have a different number of control points or segments, the results are undefined. If the path extends outside the layer bounds it will not automatically be clipped to the layer, only if the normal layer masking rules cause that.

Specifying an explicit path usually improves rendering performance.

The value of this property is retained using the Core Foundation retain/release semantics. This behavior occurs despite the fact that the property declaration appears to use the default assign semantics for object retention.
(Read and Write property)

54.1.59 shadowRadius as Double

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The blur radius (in points) used to render the layer,Äôs shadow. Animatable.
Notes: You specify the radius The default value of this property is 3.0.
(Read and Write property)

54.1.60 shouldRasterize as Boolean

MBS MacCG Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Whether view should raster.
Notes: When true, the layer is rendered as a bitmap in its local coordinate space ("rasterized"), then the bitmap is composited into the destination (with the minificationFilter and magnificationFilter properties of the layer applied if the bitmap needs scaling). Rasterization occurs after the layer's filters and shadow effects are applied, but before the opacity modulation. As an implementation detail the rendering engine may attempt to cache and reuse the bitmap from one frame to the next. (Whether it does or not will have no affect on the rendered output.) When false the layer is composited directly into the destination whenever possible (however, certain features of the compositing model may force rasterization, e.g. adding filters). Defaults to false. Animatable.
(Read and Write property)

54.1.61 superlayer as CALayerMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The superlayer of the layer.
Notes: The superlayer manages the layout of its sublayers.
Available in OS X v10.5 and later.
(Read only property)

54.1.62 zPosition as Double

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The layer's position on the z axis. Animatable.
Notes: The default value of this property is 0. Changing the value of this property changes the front-to-back ordering of layers onscreen. This can affect the visibility of layers whose frame rectangles overlap.

The value of this property is measured in points.
Available in OS X v10.5 and later.
(Read and Write property)

54.1.63 Constants

Edge constants

Constant	Value	Description
kCALayerBottomEdge	4	Specifies that the bottom edge of the receiver's content should be antialiased.
kCALayerLeftEdge	1	Specifies that the left edge of the receiver's content should be antialiased.
kCALayerRightEdge	2	Specifies that the right edge of the receiver's content should be antialiased.
kCALayerTopEdge	8	Specifies that the top edge of the receiver's content should be antialiased.

Autoresize Mask Constants

Constant	Value	Description
kCALayerHeightSizable	16	The receiver's height is flexible.
kCALayerMaxXMargin	4	The left margin between the receiver and its superview is flexible.
kCALayerMaxYMargin	32	The top margin between the receiver and its superview is flexible.
kCALayerMinXMargin	1	The left margin between the receiver and its superview is flexible.
kCALayerMinYMargin	8	The top margin between the receiver and its superview is flexible.
kCALayerNotSizable	0	The receiver cannot be resized.
kCALayerWidthSizable	2	The receiver's width is flexible.

54.2 class CATextLayerMBS

54.2.1 class CATextLayerMBS

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: The text layer provides simple text layout and rendering of plain or attributed strings.
Example:

```
// This example needs a window with Canvas1.
// show a text layer on top of a canvas
Var view As NSViewMBS = Canvas1.NSViewMBS
view.wantsLayer = True
Var root As CALayerMBS = view.layer

Var textLayer As New CATextLayerMBS
textLayer.String = "Hello from Core Animation"
textLayer.fontSize = 24
textLayer.foregroundColor = CGColorMBS.CreateGenericRGB(0.0, 0.3, 1.0)
textLayer.alignmentMode = CATextLayerMBS.kCAAlignmentCenter
textLayer.frame = New CGRectMBS(0, 20, Canvas1.Width, 40)

root.addSublayer textLayer
```

Notes: The first line is aligned to the top of the layer.
Subclass of the CALayerMBS class.

- MBS Xojo Plugins, version 18.4pr1

Xojo Developer Magazine

- 17.1, page 11: News
- 16.6, page 9: News

54.2.2 Methods

54.2.3 Constructor

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: The constructor.

54.2.4 kCAAlignmentCenter as String

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: One of the modes for alignment.

54.2.5 kCAAlignmentJustified as String

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: One of the modes for alignment.

54.2.6 kCAAlignmentLeft as String

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: One of the modes for alignment.

54.2.7 kCAAlignmentNatural as String

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: One of the modes for alignment.

54.2.8 kCAAlignmentRight as String

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: One of the modes for alignment.

54.2.9 kCATruncationEnd as String

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: One of the modes for truncation.

54.2.10 kCATruncationMiddle as String

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: One of the modes for truncation.

54.2.11 kCATruncationNone as String

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: One of the modes for truncation.

54.2.12 kCATruncationStart as String

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: One of the modes for truncation.

54.2.13 Properties

54.2.14 alignmentMode as String

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: Describes how individual lines of text are aligned within the layer bounds.
Notes: The possible options are 'natural', 'left', 'right', 'center' and 'justified'. Defaults to 'natural'.
(Read and Write property)

54.2.15 allowsFontSubpixelQuantization as Boolean

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: Sets allowsFontSubpixelQuantization parameter of CGContextMBS passed to the drawInContext method.
Notes: Defaults to false.
(Read and Write property)

54.2.16 font as Variant

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: The font to use.
Notes: May be either a CTFontMBS, NSFontMBS, CGFontMBS, or a string naming the font.
Defaults to the Helvetica font. Only used when the 'string' property is not an NSAttributedStringMBS object.
(Read and Write property)

54.2.17 fontSize as Double

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: The font size.
Notes: Defaults to 36. Only used when the 'string' property is not an NSAttributedStringMBS. Animatable (Mac OS X 10.6 and later.)
(Read and Write property)

54.2.18 foregroundColor as Variant

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: The color object used to draw the text.
Notes: Defaults to opaque white.
Only used when the 'string' property is not an NSAttributedStringMBS object.
Animatable (Mac OS X 10.6 and later.)
(Read and Write property)

54.2.19 String as Variant

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: The text to be rendered, should be either a string or an NSAttributedString.
Notes: Defaults to nil.
(Read and Write property)

54.2.20 truncationMode as String

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: Describes how the string is truncated to fit within the layer bounds.
Notes: The possible options are 'none', 'start', 'middle' and 'end'. Defaults to 'none'.
(Read and Write property)

54.2.21 Wrapped as Boolean

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: When true the string is wrapped to fit within the layer bounds.
Notes: Defaults to false.
(Read and Write property)

54.3 class CATransactionMBS

54.3.1 class CATransactionMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The plugin class for a CoreAnimation transaction.
Example:

```
// change layer properties in one transaction with a custom animation duration
// layer is a CALayerMBS, e.g. from a view with wantsLayer = True
Var layer As CALayerMBS // your layer
If layer = Nil Then Return

CATransactionMBS.begin
CATransactionMBS.setAnimationDuration(1.5) // seconds
layer.opacity = 0.5
layer.cornerRadius = 20
CATransactionMBS.commit
```

Notes: CATransaction is the Core Animation mechanism for batching multiple layer-tree operations into atomic updates to the render tree. Every modification to a layer tree must be part of a transaction. Nested transactions are supported.

Core Animation supports two types of transactions: implicit transactions and explicit transactions. Implicit transactions are created automatically when the layer tree is modified by a thread without an active transaction and are committed automatically when the thread's run-loop next iterates. Explicit transactions occur when the application sends the CATransaction class a begin message before modifying the layer tree, and a commit message afterwards.

CATransaction allows you to override default animation properties that are set for animatable properties. You can customize duration, timing function, whether changes to properties trigger animations, and provide a handler that informs you when all animations from the transaction group are completed.

During a transaction you can temporarily acquire a recursive spin-lock for managing property atomicity.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Real Studio Plugins, version 13.1pr9

54.3.2 Methods

54.3.3 animationDuration as Double

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns the animation duration used by all animations within this transaction group.

54.3.4 available as boolean

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns true if transaction class is available.
Notes: Returns true on Mac and false on Linux/Windows.

54.3.5 begin

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Begin a new transaction for the current thread.
Notes: The transaction is nested within the thread's current transaction, if there is one.
Available in OS X v10.5 and later.

54.3.6 commit

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Commit all changes made during the current transaction.
Notes: Raises an exception if no current transaction exists.
Available in OS X v10.5 and later.

54.3.7 Constructor

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The private constructor.

54.3.8 flush

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Flushes any extant implicit transaction.
Notes: Delays the commit until any nested explicit transactions have completed.

Flush is typically called automatically at the end of the current runloop, regardless of the runloop mode. If your application does not have a runloop, you must call this method explicitly.

However, you should attempt to avoid calling flush explicitly. By allowing flush to execute during the runloop your application will achieve better performance, atomic screen updates will be preserved, and transactions and animations that work from transaction to transaction will continue to function.

Available in OS X v10.5 and later.

54.3.9 kCATransactionAnimationDuration as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keys for values of a transaction.
Notes: Duration, in seconds, for animations triggered within the transaction group. The value for this key must be a number.
Available in OS X v10.5 and later.

54.3.10 kCATransactionDisableActions as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keys for values of a transaction.
Notes: If true, implicit actions for property changes made within the transaction group are suppressed. The value for this key must be a boolean.
Available in OS X v10.5 and later.

54.3.11 setAnimationDuration(value as Double)

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Sets the animation duration used by all animations within this transaction group.
Notes: Available in OS X v10.6 and later.

54.3.12 setValue(value as Variant, key as string)

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Sets the arbitrary keyed-data for the specified key.
Notes: value: The value for the key identified by key.
key: The name of one of the receiver's properties.

Nested transactions have nested data scope; setting a key always sets it in the innermost scope.
Available in OS X v10.5 and later.

54.3.13 valueForKey(key as string) as Variant

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns the arbitrary keyed-data specified by the given key.
Notes: key: The name of one of the receiver's properties.

Returns the value for the data specified by the key.
Nested transactions have nested data scope. Requesting a value for a key first searches the innermost scope, then the enclosing transactions.
Available in OS X v10.5 and later.

54.3.14 Properties

54.3.15 Handle as Integer

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The internal transaction handle.
Notes: (Read and Write property)

Chapter 55

CoreAudio

55.1 class AudioPlayThruMBS

55.1.1 class AudioPlayThruMBS

MBS MacOSX Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class to do active play through on Mac OS X using CoreAudio.
Notes: Requires Mac OS X 10.4.
Blog Entries

- MBS Real Studio Plugins, version 13.0pr3

55.1.2 Methods

55.1.3 Constructor

MBS MacOSX Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor.
Example:

Var a as AudioPlayThruMBS
a=new AudioPlayThruMBS

Notes: Does nothing.
Only useful if you want to create an object, set the buffersize and call Init after that.
See also:

- 55.1.4 Constructor(InputDeviceID as Integer, OutputDeviceID as Integer, BufferSizeWish as Integer

= 0) 9180

55.1.4 Constructor(InputDeviceID as Integer, OutputDeviceID as Integer, BufferSizeWish as Integer = 0)

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor.
Example:

```
Var InputDeviceID,OutputDeviceID as Integer
// get device IDs
Var a as AudioPlayThruMBS

a=new AudioPlayThruMBS(InputDeviceID, OutputDeviceID)
```

Notes: Calls Init method behind scenes with default buffer size.
Lasterror is set.
Device IDs are the IDs you get in the CoreAudio classes.
BufferSizeWish is the buffer size you prefer to use. If value is too small the default value will be used.
See also:

- 55.1.3 Constructor 9179

55.1.5 Init(InputDeviceID as Integer, OutputDeviceID as Integer, BufferSizeWish as Integer = 0)

MBS MacOSX Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes the engine behind this class.
Example:

```
Var InputDeviceID as Integer
Var OutputDeviceID as Integer
// get device IDs

Var a as AudioPlayThruMBS
a=new AudioPlayThruMBS
a.Init(InputDeviceID, OutputDeviceID)
```

Notes: Lasterror is set.
Device IDs are the IDs you get in the CoreAudio classes.
Can be used to set the buffersize before calling this method.

55.1.6 IsRunning as boolean

MBS MacOSX Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether playthrough is active.

55.1.7 SetInputDeviceAsCurrent(DeviceID as Integer)

MBS MacOSX Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets input device.
Notes: Device IDs are the IDs you get in the CoreAudio classes.

55.1.8 SetOutputDeviceAsCurrent(DeviceID as Integer)

MBS MacOSX Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets output device.
Notes: Lasterror is set.
Device IDs are the IDs you get in the CoreAudio classes.

55.1.9 Start

MBS MacOSX Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Starts playing.
Notes: Lasterror is set.

55.1.10 Stop

MBS MacOSX Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Stops playing.
Notes: Lasterror is set.

55.1.11 Properties

55.1.12 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code reported.
Notes: 0 for success. -1 in case function is not available.
(Read and Write property)

55.1.13 Volume as Double

MBS MacOSX Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Get or set the volume of the output audio unit.
Notes: Lasterror is set.
Range is from 0.0 to 1.0.
(Read and Write computed property)

Chapter 56

CoreFoundation

56.1 Globals

56.1.1 NewCFObjectMBSFromXML(XMLdata as MemoryBlock) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 19.0, Platform: macOS, Targets: All.

Function: Parses the XML data and returns a CFObject.
Notes: Note that the CFObject returned is in most times a CFDictionary or a CFArray.
This function takes text and binary plist file content.
See also:

- 56.1.2 NewCFObjectMBSFromXML(XMLdata as String) as CFObjectMBS 9183

56.1.2 NewCFObjectMBSFromXML(XMLdata as String) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 19.0, Platform: macOS, Targets: All.

Function: Parses the XML data and returns a CFObject.
Example:

```
// read a property list from XML text into Core Foundation objects
Var xml As String = "<?xml version=""1.0"" encoding=""UTF-8""?><plist version=""1.0""><dict><key>Name</key><
Var o As CFObjectMBS = NewCFObjectMBSFromXML(xml)
If o IsA CFDictionaryMBS Then
Var d As CFDictionaryMBS = CFDictionaryMBS(o)
MessageBox d.Count.ToString + " entries, Name = " + CFStringMBS(d.Value(NewCFStringMBS("Name"))).Str
End If
```

Notes: Note that the CFObject returned is in most times a CFDictionary or a CFArray.
This function takes text and binary plist file content.

See also:

- 56.1.1 NewCFObjectMBSFromXML(XMLdata as MemoryBlock) as CFObjectMBS 9183

56.1.3 NewCFStringMBS2(s as string) as CFStringMBS

MBS MacCF Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Returns a CFStringMBS object created using the given string.
Example:

```
Var s as CFStringMBS

s=NewCFStringMBS2("")
// s is not nil here
MessageBox str(s.Handle)
```

Notes: The cfstring may be unicode.
See also NewCFStringMBS.

56.1.4 kCFCharacterSetMBSTypeID as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFCharacterSetMBS object.
Example:

```
// compare the type of a Core Foundation object with the CFCharacterSetMBS type ID
Var o As CFObjectMBS // e.g. a value from a CFDictionaryMBS or CFArrayMBS
If o <>Nil And o.Type = kCFCharacterSetMBSTypeID Then
System.DebugLog "It is a CFCharacterSetMBS."
End If
System.DebugLog "CFCharacterSetMBS type ID " + kCFCharacterSetMBSTypeID.ToString + " = " +
TypeIDDescriptionMBS(kCFCharacterSetMBSTypeID).Str
```

56.1.5 NewCFObjectMBSFromXMLMT(data as string) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Parses the XML data and returns a CFObject.
Notes: Same as NewCFObjectMBSFromXML, but with additional multithreading.

Note that the CFObject returned is in most times a CFDictionary or a CFArray.

This function takes text and binary plist file content.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 56.1.6 NewCFObjectMBSFromXMLMT(file as folderitem) as CFObjectMBS 9185
- 56.1.7 NewCFObjectMBSFromXMLMT(XMLdata as CFBinaryDataMBS) as CFObjectMBS 9185

56.1.6 NewCFObjectMBSFromXMLMT(file as folderitem) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Parses the XML data and returns a CFObject.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.xml")
Var o as CFObjectMBS = NewCFObjectMBSFromXMLMT(f)

if o = nil then
MessageBox "Error"
else
MessageBox "OK"
end if
```

Notes: Same as NewCFObjectMBSFromXML, but with additional multithreading.

Note that the CFObject returned is in most times a CFDictionary or a CFArray.
This function takes text and binary plist file content.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 56.1.5 NewCFObjectMBSFromXMLMT(data as string) as CFObjectMBS 9184
- 56.1.7 NewCFObjectMBSFromXMLMT(XMLdata as CFBinaryDataMBS) as CFObjectMBS 9185

56.1.7 NewCFObjectMBSFromXMLMT(XMLdata as CFBinaryDataMBS) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Parses the XML data and returns a CFObject.
Notes: Note that the CFObject returned is in most times a CFDictionary or a CFArray.
This function takes text and binary plist file content.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 56.1.5 NewCFObjectMBSFromXMLMT(data as string) as CFObjectMBS 9184

56.1.8 CFShowCFStringMBS(cfstring as CFStringMBS)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Prints the content of the given CFString to the console.
Example:

```
// print a CFString to the system console for debugging
CFShowCFStringMBS NewCFStringMBS("Debug message from Xojo")
```

Blog Entries

- MBS Real Studio Plugins, version 12.4pr3

56.1.9 CFShowMBS(cfobject as CFObjectMBS)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Prints the content of the given CFObject to the console.
Example:

```
// print the description of any Core Foundation object to the console
Var n As CFNumberMBS = NewCFNumberMBSDouble(3.14)
CFShowMBS n // shows e.g. <CFNumber ...>{ value = +3.14, type = kCFNumberFloat64Type }
```

Notes: Very useful for e.g. CFDictionarys.
Blog Entries

- MBS Real Studio Plugins, version 12.4pr3

56.1.10 CreateBundleMBS(file as folderitem) as CFBundleMBS

MBS MacCF Plugin, Plugin Version: 10.1, Platform: macOS, Targets: All.

Function: Creates a CFBundle object for the bundle folder on the given position.
Example:

```
// Find and show the main executable file of a bundled application

Var f as FolderItem

f=SpecialFolder.Applications.Child("Mail.app")
MessageBox f.NativePath // shows app bundle path

Var b as CFBundleMBS
Var u as CFURLMBS

b=CreateBundleMBS(f)
if b<>nil then
u=b.ExecutableFile
if u<>nil then
MessageBox f.NativePath // shows app executable path
end if
end if
```

Notes: Returns nil on any error.
See also:

- 56.1.11 CreateBundleMBS(url as CFURLMBS) as CFBundleMBS 9187

56.1.11 CreateBundleMBS(url as CFURLMBS) as CFBundleMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a CFBundle object for the bundle folder on the given position.
Example:

```
// Find and show the main executable file of a bundled application

Var f as FolderItem

f=SpecialFolder.Applications.Child("Mail.app")
MessageBox f.NativePath // shows app bundle path

Var b as CFBundleMBS
Var u as CFURLMBS

u=NewCFURLMBSFile(f)
```

```
if u<>Nil then
b=CreateBundleMBS(u)
if b<>nil then
u=b.ExecutableFile
if u<>nil then
MessageBox f.NativePath // shows app executable path
end if
end if
end if
```

Notes: Returns nil on any error.
See also:

- 56.1.10 CreateBundleMBS(file as folderitem) as CFBundleMBS 9187

56.1.12 CreateBundlesFromDirectoryMBS(url as CFURLMBS, type as CFStringMBS) as CFArrayMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a list of all bundles in a folder.
Notes: Returns nil on any error.

With the Type parameter you can limit the bundles to a certain type.
The abstract type of the bundles you wish to locate and create. The type is expressed as a filename extension, such as bundle. Pass NULL to create CFBundle objects for bundles of any type.

56.1.13 CreateCFTimeZoneMBS(name as CFStringMBS, data as CFBinaryDataMBS) as CFTimeZoneMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Creates a new timezone object with the given name and data.
Notes: Returns nil on any error.

56.1.14 CreateCFTimeZoneMBSwithName(name as CFStringMBS, TryAbbrev as boolean) as CFTimeZoneMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Creates a new timezone object with the object from the system which matches the given name.
Example:

```
// create a time zone by name and show its offset now
Var tz As CFTimeZoneMBS = CreateCFTimeZoneMBSwithName(NewCFStringMBS("Europe/Berlin"),
True)
Var offset As CFTimeIntervalMBS = tz.SecondsFromGMT(CurrentCFAbsoluteTimeMBS)
MessageBox tz.Name.Str + ": GMT+" + Format(offset.Value / 3600, "0")
```

Notes: If TryAbbrev is true the system also checks if the name matches the abbreviated name of the timezone object.
Returns nil on any error.

56.1.15 CreateCFTimeZoneMBSwithTimeIntervalFromGMT(time as CFTimeIntervalMBS) as CFTimeZoneMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Creates a new timezone object with the given time interval.
Example:

```
// create a time zone with a fixed offset of 5:30 hours
Var tz As CFTimeZoneMBS = CreateCFTimeZoneMBSwithTimeIntervalFromGMT(NewCFTimeIntervalMBS(5.5
* 3600))
MessageBox tz.Name.Str // GMT+0530
```

Notes: Returns nil on any error.

56.1.16 CreateStringByAddingPercentEscapesMBS(original as CFStringMBS,charactersToLeaveEscaped as CFStringMBS,legalURLCharactersToBeEscaped as CFStringMBS,encoding as Integer) as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Addes percent escapes inside a string.
Example:

```
// escape special characters for use in an URL
Var escaped As CFStringMBS = CreateStringByAddingPercentEscapesMBS(NewCFStringMBS("a b&c=√§"),
Nil, NewCFStringMBS("&="), &h08000100)
MessageBox escaped.Str // a%20b%26c%3D%C3%A4
```

Notes: If charactersToLeaveEscaped=nil then no string is changed. If charactersToLeaveEscaped contains an emptry string ("") all escapes are changed and if charactersToLeaveEscaped contains a string<>"" then this characters are not escaped.

56.1.17 CreateStringByReplacingPercentEscapesMBS(original as CFStringMBS,charactersToLeaveEscaped as CFStringMBS) as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Replaces percent escapes inside a string.
Example:

```
// decode percent escapes in an URL part
Var decoded As CFStringMBS = CreateStringByReplacingPercentEscapesMBS(NewCFStringMBS("a%20b%26c"),
NewCFStringMBS(""))
MessageBox decoded.Str // a b&c
```

Notes: If charactersToLeaveEscaped=nil then no string is changed. If charactersToLeaveEscaped contains an emptry string ("") all escapes are changed and if charactersToLeaveEscaped contains a string<>"" then this characters are not escaped.

56.1.18 CurrentCFAbsoluteTimeMBS as CFAbsoluteTimeMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The current time as an absolute time object.
Example:

```
// get current timezone
Var c as CFTimeZoneMBS = SystemCFTimeZoneMBS

// and current time
Var time as CFAbsoluteTimeMBS = CurrentCFAbsoluteTimeMBS

// Do we have daylight saving time?
MessageBox str(c.IsDaylightSavingTime(time))
```

Notes: Returns nil on any error.

56.1.19 GetAllBundlesMBS as CFArrayMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a list of all known bundles on the system.
Example:

```
// count the bundles loaded into the app
Var bundles As CFArrayMBS = GetAllBundlesMBS
```

```
MessageBox bundles.count.ToString + " bundles loaded"
```

Notes: Returns nil on any error.

56.1.20 GetBundleWithIdentifierMBS(id as CFStringMBS) as CFBundleMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a CFBundle object for the bundle with the given ID.
Example:

```
// find a loaded bundle by its identifier and show its path
Var bundle As CFBundleMBS = GetBundleWithIdentifierMBS(NewCFStringMBS("com.apple.Foundation"))
If bundle <>Nil Then MessageBox bundle.Identifier.Str + " version " + bundle.Version.ToString
```

Notes: Returns nil on any error.

Returns only a bundle if that bundle has been loaded before.

For a bundle to be located using its identifier, the bundle object must have already been created. The principal intended purpose for locating bundles by identifier is so that code (in frameworks, plugins, etc.) can find its own bundle. If a bundle is created, then the bundle deleted from the filesystem and this function invoked afterwards, it will still return the original bundle.

56.1.21 GetDefaultCFTimeZoneMBS as CFTimeZoneMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The default time zone.
Example:

```
MessageBox str(GetDefaultCFTimeZoneMBS.SecondsFromGMT(nil).Value)
```

Notes: Returns nil on any error.

56.1.22 kCFArrayMBSTypeID as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFArrayMBS object.
Example:

```
// compare the type of a Core Foundation object with the CFArrayMBS type ID
Var o As CFObjectMBS // e.g. a value from a CFDictionaryMBS or CFArrayMBS
If o <>Nil And o.Type = kCFArrayMBSTypeID Then
System.DebugLog "It is a CFArrayMBS."
End If
System.DebugLog "CFArrayMBS type ID " + kCFArrayMBSTypeID.ToString + " = " + TypeIDDescriptionMBS(kCFArrayMBSTypeID).Str
```

56.1.23 kCFBagMBSTypeID as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFBagMBS object.
Example:

```
// compare the type of a Core Foundation object with the CFBagMBS type ID
Var o As CFObjectMBS // e.g. a value from a CFDictionaryMBS or CFArrayMBS
If o <>Nil And o.Type = kCFBagMBSTypeID Then
System.DebugLog "It is a CFBagMBS."
End If
System.DebugLog "CFBagMBS type ID " + kCFBagMBSTypeID.ToString + " = " + TypeIDDescriptionMBS(kCFBagMBSTypeID).Str
```

56.1.24 kCFBinaryDataMBSTypeID as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFBinary object.
Example:

```
// compare the type of a Core Foundation object with the CFBinaryDataMBS type ID
Var o As CFObjectMBS // e.g. a value from a CFDictionaryMBS or CFArrayMBS
If o <>Nil And o.Type = kCFBinaryDataMBSTypeID Then
System.DebugLog "It is a CFBinaryDataMBS."
End If
System.DebugLog "CFBinaryDataMBS type ID " + kCFBinaryDataMBSTypeID.ToString + " = " + TypeIDDescriptionMBS(kCFBinaryDataMBSTypeID).Str
```

56.1.25 kCFBooleanMBSTypeID as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFBooleanMBS object.
Example:

```
// compare the type of a Core Foundation object with the CFBooleanMBS type ID
Var o As CFObjectMBS // e.g. a value from a CFDictionaryMBS or CFArrayMBS
If o <>Nil And o.Type = kCFBooleanMBSTypeID Then
System.DebugLog "It is a CFBooleanMBS."
End If
System.DebugLog "CFBooleanMBS type ID " + kCFBooleanMBSTypeID.ToString + " = " + TypeIDDescriptionMBS(kCFBooleanMBSTypeID).Str
```

56.1.26 kCFBundleMBSTypeID as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFBundle object.
Example:

```
// compare the type of a Core Foundation object with the CFBundleMBS type ID
Var o As CFObjectMBS // e.g. a value from a CFDictionaryMBS or CFArrayMBS
If o <>Nil And o.Type = kCFBundleMBSTypeID Then
System.DebugLog "It is a CFBundleMBS."
End If
System.DebugLog "CFBundleMBS type ID " + kCFBundleMBSTypeID.ToString + " = " + TypeIDDescriptionMBS(kCFBundleMBSTypeID).Str
```

Notes: CFBundle objects may be supported in a future version of this plugin.
Request if you need more than the app.bundle functions offer you.

56.1.27 kCFDateMBSTypeID as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFDateMBS object.
Example:

```
// compare the type of a Core Foundation object with the CFDateMBS type ID
Var o As CFObjectMBS // e.g. a value from a CFDictionaryMBS or CFArrayMBS
If o <>Nil And o.Type = kCFDateMBSTypeID Then
System.DebugLog "It is a CFDateMBS."
End If
System.DebugLog "CFDateMBS type ID " + kCFDateMBSTypeID.ToString + " = " + TypeIDDescriptionMBS(kCFDateMBSTypeID).Str
```

56.1.28 kCFDictionaryMBSTypeID as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFDictionaryMBS object.
Example:

```
// compare the type of a Core Foundation object with the CFDictionaryMBS type ID
Var o As CFObjectMBS // e.g. a value from a CFDictionaryMBS or CFArrayMBS
If o <>Nil And o.Type = kCFDictionaryMBSTypeID Then
System.DebugLog "It is a CFDictionaryMBS."
End If
System.DebugLog "CFDictionaryMBS type ID " + kCFDictionaryMBSTypeID.ToString + " = " + TypeIDDescriptionMBS(kCFDictionaryMBSTypeID).Str
```

56.1.29 kCFNumberMBSNaN as CFNumberMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a CFNumberMBS object for NaN (not a number).
Example:

```
// get the "not a number" CFNumber, e.g. to mark a missing value in a plist
Var nan As CFNumberMBS = kCFNumberMBSNaN
MessageBox nan.doubleValue.ToString // NaN
```

56.1.30 kCFNumberMBSNegativeInfinity as CFNumberMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a CFNumberMBS object for negative infinity.

56.1.31 kCFNumberMBSPositiveInfinity as CFNumberMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a CFNumberMBS object for positive infinity.

56.1.32 kCFNumberMBSTypeID as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFNumberMBS object.
Example:

```
// check whether a Core Foundation object is a number
Var o As CFObjectMBS = NewCFNumberMBSInteger(5)
If o.Type = kCFNumberMBSTypeID Then MessageBox "It is a CFNumber with value " + CFNumberMBS(o).integerValue.ToString
```

56.1.33 kCFSetMBSTypeID as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFSetMBS object.
Example:

```
// compare the type of a Core Foundation object with the CFSetMBS type ID
Var o As CFObjectMBS // e.g. a value from a CFDictionaryMBS or CFArrayMBS
If o <>Nil And o.Type = kCFSetMBSTypeID Then
System.DebugLog "It is a CFSetMBS."
End If
System.DebugLog "CFSetMBS type ID " + kCFSetMBSTypeID.ToString + " = " + TypeIDDescriptionMBS(kCFSetMBSTypeID).Str
```

56.1.34 kCFStringMBSTypeID as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFStringMBS object.
Example:

```
// check whether a Core Foundation object is a string
Var o As CFObjectMBS = NewCFStringMBS("test")
If o.Type = kCFStringMBSTypeID Then MessageBox "It is a CFString."
```

56.1.35 kCFTimeZoneMBSTypeID as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFTimeZone object.
Example:

```
// compare the type of a Core Foundation object with the CFTimeZoneMBS type ID
Var o As CFObjectMBS // e.g. a value from a CFDictionaryMBS or CFArrayMBS
If o <>Nil And o.Type = kCFTimeZoneMBSTypeID Then
System.DebugLog "It is a CFTimeZoneMBS."
```

```
End If
System.DebugLog "CFTimeZoneMBS type ID " + kCFTimeZoneMBSTypeID.ToString + " = " + TypeIDDescriptionMBS(kCFTimeZoneMBSTypeID).Str
```

56.1.36 kCFURLMBSTypeID as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFURLMBS object.
Example:

```
// compare the type of a Core Foundation object with the CFURLMBS type ID
Var o As CFObjectMBS // e.g. a value from a CFDictionaryMBS or CFArrayMBS
If o <>Nil And o.Type = kCFURLMBSTypeID Then
System.DebugLog "It is a CFURLMBS."
End If
System.DebugLog "CFURLMBS type ID " + kCFURLMBSTypeID.ToString + " = " + TypeIDDescriptionMBS(kCFURLMBSTypeID).Str
```

56.1.37 KnownTimeZoneNamesAsCFArrayMBS as CFArrayMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: An array of all known time zone names.
Example:

```
// list all time zone names known to the system
Var names As CFArrayMBS = KnownTimeZoneNamesAsCFArrayMBS
MessageBox names.count.ToString + " time zones, first: " + CFStringMBS(names.Item(0)).Str
```

Notes: Returns nil on any error.

56.1.38 MacShowAboutBoxMBS(options as CFDictionaryMBS) as Integer

MBS MacCF Plugin, Plugin Version: 9.3, Platform: macOS, Targets: All.

Function: Displays an HI-conformant about box.
Example:

```
Var kHIAboutBoxNameKey as CFStringMBS = NewCFStringMBS("HIAboutBoxName")
Var kHIAboutBoxVersionKey as CFStringMBS = NewCFStringMBS("HIAboutBoxVersion")
Var kHIAboutBoxCopyrightKey as CFStringMBS = NewCFStringMBS("HIAboutBoxCopyright")
Var kHIAboutBoxDescriptionKey as CFStringMBS = NewCFStringMBS("HIAboutBoxDescription")
Var kHIAboutBoxStringFileKey as CFStringMBS = NewCFStringMBS("HIAboutBoxStringFile")
```

```
Var d as CFMutableDictionaryMBS

d=NewCFMutableDictionaryMBS

// name, version and copyright are optional:
d.add(kHIAboutBoxNameKey, NewCFStringMBS("MyApp"))
d.add(kHIAboutBoxVersionKey, NewCFStringMBS("1.0"))
d.add(kHIAboutBoxCopyrightKey, NewCFStringMBS("©2009 by Christian Schmitz"))

// description is needed
d.add(kHIAboutBoxDescriptionKey, NewCFStringMBS("The best application I ever made!"))

// optional
'd.add(kHIAboutBoxStringFileKey, NewCFStringMBS("somefile"))

MessageBox Str(MacShowAboutBoxMBS(d))
```

Notes: This about box is a generic about box that automatically can display your application name, version string, and copyright string. It peeks into either the Info.plist (for the CFBundleName, CFBundleVersion, and CFBundleGetInfoString keys) or your bundle resource (not recommended) to get the information by default. You can customize what it displays by passing in various options in the input dictionary. Note that currently the description string can only be specified in the options dictionary; this function does not check your Info.plist for a descriptions string.

There are three basic ways to call this function. First, you can pass nil for inOptions. As mentioned, default information will be displayed. Second, you can pass the actual values for the strings displayed by passing the strings in the inOptions dictionary using the keys provided, such as kHIAboutBoxNameKey. If a replacement string is not passed, the default behavior kicks in. For example, you could pass some variant of your application name in the dictionary, but not pass a replacement version or copyright strings. The Toolbox would display your replacement string, and fall back to looking in the Info.plist for the other strings. The third way to call this is to pass the name of a string file in the dictionary with the key kHIAboutBoxStringFileKey. We will automatically use that file to find the strings for the about box. The keys in the string file should be the same value as the keys you would use to pass into the inOptions dictionary. Again, if a string is not found in that file, we would fall back to looking for a string in the dictionary, and then finally the Info.plist. Certainly this is not the be-all-end-all of about boxes, but it does provide a simple no-work about box for your application. The standard Toolbox application handler now responds to the kHICommandAbout command ID by calling HIAboutBox for you. This means that any Carbon Event-based application will get this behavior for free right out of the box. If you wish for the window to respond to cmd-W in the menu bar, you should make sure that menu item has the kHICommandClose commandID.

Options: A dictionary of replacement strings, or the name of a string file to retrieve the strings from, or nil. See the discussion for how this is used.

Returns a Mac OS error code or -1 if function is not available.

Not supported on 64 bit targets.
Blog Entries

- MBS REALbasic plug-ins version 9.3

Xojo Developer Magazine

- 7.4, page 8: News

56.1.39 NewCFAbsoluteTimeMBS(time as Double) as CFAbsoluteTimeMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns a new absolute time object with the given value.
Example:

```
// create an absolute time one day after the reference date 2001-01-01
Var t As CFAbsoluteTimeMBS = NewCFAbsoluteTimeMBS(86400)
Var d As CFGregorianDateMBS = t.GregorianDate(SystemCFTimeZoneMBS)
MessageBox d.Year.ToString + "-" + d.Month.ToString + "-" + d.Day.ToString
```

Notes: Returns nil on any error.

56.1.40 NewCFBinaryDataMBSMem(mem as memoryblock,len as Integer) as CFBinaryDataMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a CFBinary object for the given memoryblock.
Example:

```
// wrap the bytes of a MemoryBlock in a CFData object
Var m As MemoryBlock = "Hello"
Var data As CFBinaryDataMBS = NewCFBinaryDataMBSMem(m, m.Size)
MessageBox data.len.ToString + " bytes: " + data.Str
```

56.1.41 NewCFBinaryDataMBSStr(s as string) as CFBinaryDataMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a CFBinary object for the given string.
Example:

```
Var t as TextOutputStream
Var f as FolderItem
Var o as CFObjectMBS
Var s as string
Var i as TextInputStream

f=SpecialFolder.Desktop.Child("test")
o=NewCFStringMBS("Hello")

// write

s=o.XML.str
s=ConvertEncoding(s,Encodings.UTF8)

t=f.CreateTextFile
t.Write s
t.Close

// clear

o=nil

// now read back

i=f.OpenAsTextFile
s=i.ReadAll(Encodings.UTF8)
i.Close

o=NewCFObjectMBSFromXML(NewCFBinaryDataMBSStr(s))

MessageBox CFStringMBS(o).str
```

56.1.42 NewCFBooleanMBS(value as boolean) as CFBooleanMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a CFBooleanMBS object created using the given boolean.
Example:

```
// create a CFBoolean, e.g. for a preference value
Var b As CFBooleanMBS = NewCFBooleanMBS(True)
MessageBox b.Value.ToString
```

56.1.43 NewCFDateMBS as CFDateMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a new emptry CFDateMBS.
Example:

```
// create a CFDate for the current time
Var d As CFDateMBS = NewCFDateMBS
MessageBox d.AbsoluteTime.Value.ToString + " seconds since 2001-01-01"
```

56.1.44 NewCFMutableArrayMBS as CFMutableArrayMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a new empty mutable array.
Example:

```
// build a Core Foundation array with strings and numbers
Var a As CFMutableArrayMBS = NewCFMutableArrayMBS
a.Append NewCFStringMBS("Apple")
a.Append NewCFNumberMBSInteger(5)
MessageBox a.count.ToString + " items, first: " + CFStringMBS(a.Item(0)).Str
```

Notes: The array's maximum capacity is unlimited (or rather, only limited by address space and available memory constraints).

56.1.45 NewCFMutableBagMBS as CFMutableBagMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a new emptry CFMutableBagMBS.
Example:

```
// count how often values occur with a Core Foundation bag
Var bag As CFMutableBagMBS = NewCFMutableBagMBS
Var red As CFStringMBS = NewCFStringMBS("red")
bag.Add red
bag.Add red
bag.Add NewCFStringMBS("blue")
MessageBox "red: " + bag.CountValue(red).ToString + ", total: " + bag.Count.ToString // 2, 3
```

56.1.46 NewCFMutableBinaryDataMBSMem(len as Integer) as CFMutableBinaryDataMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a CFMutableBinary object with the given size in bytes.
Example:

```
// create an empty mutable CFData with room for 1024 bytes
Var data As CFMutableBinaryDataMBS = NewCFMutableBinaryDataMBSMem(1024)
MessageBox data.len.ToString + " bytes"
```

56.1.47 NewCFMutableDictionaryMBS as CFMutableDictionaryMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a new emptry CFMutableDictionaryMBS.
Example:

```
Var d as CFMutableDictionaryMBS

d=NewCFMutableDictionaryMBS
d.Add NewCFStringMBS("Key"),NewCFStringMBS("Value")
MessageBox d.XML.str
```

Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr10

56.1.48 NewCFMutableSetMBS as CFMutableSetMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a new emptry CFMutableSetMBS.
Example:

```
// collect unique values in a Core Foundation set
Var s As CFMutableSetMBS = NewCFMutableSetMBS
s.Add NewCFStringMBS("red")
s.Add NewCFStringMBS("green")
s.Add NewCFStringMBS("red") // already there
MessageBox s.Count.ToString + " values" // 2
```

56.1.49 NewCFNumberMBSDouble(doubleValue as Double) as CFNumberMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a CFNumberMBS object for the given double value.
Example:

```
// create a CFNumber from a Double
Var n As CFNumberMBS = NewCFNumberMBSDouble(2.5)
MessageBox n.doubleValue.ToString
```

56.1.50 NewCFNumberMBSInteger(integerValue as Integer) as CFNumberMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a CFNumberMBS object for the given integer value.
Example:

```
// create a CFNumber from an Integer
Var n As CFNumberMBS = NewCFNumberMBSInteger(42)
MessageBox n.integerValue.ToString + ", " + n.ByteSize.ToString + " bytes"
```

56.1.51 NewCFNumberMBSSingle(singleValue as single) as CFNumberMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a CFNumberMBS object for the given single value.
Example:

```
// create a CFNumber from a Single
Var n As CFNumberMBS = NewCFNumberMBSSingle(1.5)
MessageBox n.doubleValue.ToString
```

56.1.52 NewCFObjectMBS(handle as Integer) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a CFObjectMBS object for the given handle.
Example:

```
Var d as CFMutableDictionaryMBS
Var s as CFStringMBS
Var o as CFObjectMBS
Var t as CFStringMBS
```

```
d=NewCFMutableDictionaryMBS
s=NewCFStringMBS("Hello")

d.Add s,s

o=d.Value(s) // uses NewCFObjectMBS internally

t=cfstringMBS(o) // Now you can cast here in v5.2!

MessageBox t.str
```

Notes: Handle is just a CFTypeRef.
If release is true, the destructor of the CFObjectMBS will release the handle later.
In Version 5.2 this function can return objects which may be casted to CFURL, CFDictionary, CFString, CFNumber, CFCharacterSet, CFBag, CFArray, CFBoolean, CFBinaryData or CFSet.

56.1.53 NewCFObjectMBSFromXML(XMLdata as CFBinaryDataMBS) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Parses the XML data and returns a CFObject.
Example:

```
Var f as FolderItem
Var t as TextInputStream
Var s as String
Var o as CFObjectMBS
Var d as CFDictionaryMBS

// get file name
f=New FolderItem("CF XML Test.txt")
// open file
t=f.OpenAsTextFile
// Read String
s=t.ReadAll

// Create back
o=NewCFObjectMBSFromXML(NewCFBinaryDataMBSStr(s))

// now check if the dictionary we saved is there:
if o<>nil then
if o isa CFDictionaryMBS then
d=CFDictionaryMBS(o)
MessageBox CFStringMBS(d.Value(NewCFStringMBS("Key"))).str
end if
```

```
end if
```

Notes: Note that the CFObject returned is in most times a CFDictionary or a CFArray.
This function takes text and binary plist file content.

56.1.54 NewCFStringMBS(s as string) as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a CFStringMBS object created using the given string.
Example:

```
// create a Core Foundation string from a Xojo string and convert it back
Var s As CFStringMBS = NewCFStringMBS("Hello World")
MessageBox s.Str + " (" + s.TypeDescription + ")"
```

Notes: Returns nil if s is empty.
The cfstring may be unicode.

See also NewCFStringMBS2 if you want to get an empty CFString object for an empty string.

56.1.55 NewCFTimeIntervalMBS(time as Double) as CFTimeIntervalMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns a new time interval object with the given value.
Example:

```
// create a time interval of one hour
Var hour As CFTimeIntervalMBS = NewCFTimeIntervalMBS(3600)
MessageBox hour.Value.ToString + " seconds"
```

Notes: Returns nil on any error.

56.1.56 NewCFURLMBSCFStringMBS(cfstr as CFStringMBS, baseurl as CFURLMBS) as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a new CFURLMBS from the CFStringMBS.
Example:

```
// create a CFURL from a string, relative to a base URL
Var base As CFURLMBS = NewCFURLMBSCFStringMBS(NewCFStringMBS("https://www.example.com/docs/"),
Nil)
Var url As CFURLMBS = NewCFURLMBSCFStringMBS(NewCFStringMBS("page.html"), base)
MessageBox url.Str.Str
```

56.1.57 NewCFURLMBSFile(f as folderitem) as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a new CFURLMBS from a file.
Example:

```
// get a CFURL for a folder item
Var url As CFURLMBS = NewCFURLMBSFile(SpecialFolder.Desktop)
MessageBox url.Str.Str
```

56.1.58 NewCFURLMBSHFSPath(cfstr as CFStringMBS,directory as boolean) as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a new CFURLMBS from the CFStringMBS which is interpreted as a HFS path.

56.1.59 NewCFURLMBSMem(mem as memoryblock,len as Integer,encoding as Integer,baseurl as CFURLMBS) as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a new CFURLMBS from the data inside the memoryblock.
Notes: Len is the len of the data inside the memoryblock.
Encoding the ID of the text encoding.
BaseURL is the base url. If baseurl=nil then the current application directory is used.

56.1.60 NewCFURLMBSPosixPath(cfstr as CFStringMBS,directory as boolean) as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a new CFURLMBS from the CFStringMBS which is interpreted as a Posix path.
Example:

```
// create a CFURL from a unix path
Var url As CFURLMBS = NewCFURLMBSPosixPath(NewCFStringMBS("/Applications"), True) // True
= directory
MessageBox url.Str.Str // file:///Applications/
```

56.1.61 NewCFURLMBSStr(str as string, baseurl as CFURLMBS) as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a new CFURLMBS from the string.
Example:

```
Var s as string
Var f as FolderItem
Var cu as CFURLMBS

s="file://localhost/Users/cs/Music/iTunes/iTunes%20Music"

cu=NewCFURLMBSStr(s,nil) // true=isdirectory
f=cu.file

MessageBox f.NativePath
```

Notes: BaseURL is the base url. If baseurl=nil then the current application directory is used.

56.1.62 NewCFURLMBSWindowsPath(cfstr as CFStringMBS,directory as boolean) as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a new CFURLMBS from the CFStringMBS which is interpreted as a Windows path.

56.1.63 SetDefaultCFTimeZoneMBS(timezone as CFTimeZoneMBS)

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The default time zone.
Example:

```
MessageBox str(GetDefaultCFTimeZoneMBS.SecondsFromGMT(nil).Value)
```

Notes: Returns nil on any error.

56.1.64 SystemCFTimeZoneMBS as CFTimeZoneMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The current system time zone.
Example:

```
Var s as CFTimeZoneMBS
s=SystemCFTimeZoneMBS
MessageBox s.Name.str
```

Notes: Returns nil on any error.

56.1.65 TypeIDDescriptionMBS(TypeID as Integer) as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a string with the name for the CoreFoundation data type.
Example:

```
// show the name of a Core Foundation type ID
MessageBox TypeIDDescriptionMBS(kCFStringMBSTypeID).Str + ", " + TypeIDDescriptionMBS(kCFArrayMBSTypeID).Str
```

Notes: e.g. "CFStringMBS" for a CFStringMBS.

56.2 class CFAbsoluteTimeMBS

56.2.1 class CFAbsoluteTimeMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: A class for an absolute time value.
Example:

```
Var t as new CFAbsoluteTimeMBS
MessageBox str(T.Value)
```

Notes: Basicly just a double property.
Subclass of the CFTimeIntervalMBS class.

56.2.2 Methods

56.2.3 AddGregorianUnits(timezone as CFTimeZoneMBS, units as CFGregorianUnitsMBS) as CFAbsoluteTimeMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Adds gregorian time units to the given absolute time and returns the result.
Notes: Returns nil on any error.
Timezone is optional and can be nil.

56.2.4 Constructor

MBS MacCF Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: The constructor to initialize the absolution time with the current time.
Example:

```
Var CFDateLocal as new CFAbsoluteTimeMBS
Var CFTimeZone as new CFTimeZoneMBS

Var MyDSTState as Boolean = CFTimeZone.IsDaylightSavingTime(CFDateLocal)

MessageBox str(MyDSTState)
```

See also:

- 56.2.5 Constructor(value as Double) 9208

56.2.5 Constructor(value as Double)

MBS MacCF Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: The constructor to initialize the absolution time with the given value.
Example:

```
Var a as new CFAbsoluteTimeMBS(5)
MessageBox str(a.Value)
```

See also:

- 56.2.4 Constructor 9208

56.2.6 DayofWeek(timezone as CFTimeZoneMBS) as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns an integer representing the day of the week indicated by the specified date.
Example:

```
Var t as new CFAbsoluteTimeMBS
MessageBox str(t.DayofWeek(nil))
```

56.2.7 DayofYear(timezone as CFTimeZoneMBS) as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns an integer representing the day of the year indicated by the specified date.
Example:

```
Var t as new CFAbsoluteTimeMBS
MessageBox str(t.DayofYear(nil))
```

56.2.8 GetDifferenceAsGregorianUnits(secondtime as CFAbsoluteTimeMBS, timezone as CFTimeZoneMBS, flags as Integer) as CFGregorianUnitsMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns the difference of the two absolute times in gregorian units.
Notes: Timezone is optional and may be nil.

For flags:

```
kCFGregorianUnitsYears      = 1
kCFGregorianUnitsMonths     = 2
kCFGregorianUnitsDays       = 4
kCFGregorianUnitsHours      = 8
kCFGregorianUnitsMinutes    = 16
kCFGregorianUnitsSeconds    = 32
kCFGregorianAllUnits        = &hFFFFFF
```

56.2.9 GregorianDate(timezone as CFTimeZoneMBS) as CFGregorianDateMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns the gregorian date for the given absolute time.
Example:

```
Var t as new CFAbsoluteTimeMBS
Var g as CFGregorianDateMBS = t.GregorianDate(nil)
MessageBox str(g.Year)
```

Notes: Timezone is optional and can be nil.
Returns nil on any error.

56.2.10 WeekofYear(timezone as CFTimeZoneMBS) as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns an integer representing the week of the year indicated by the specified date.
Example:

```
Var t as new CFAbsoluteTimeMBS
MessageBox str(t.WeekofYear(nil))
```

56.2.11 Properties

56.2.12 Date as CFDateMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date object representing this absolute time value.
Notes: Returns nil on any error.
(Read only property)

56.3 class CFArrayMBS

56.3.1 class CFArrayMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation Array.
Example:

```
// copy names of recent items in Xojo Preferences

Var names() as string
Var c as new CFPreferencesMBS

Var o as CFObjectMBS = c.CopyAppValue(NewCFStringMBS("Recent Items Dict"), NewCFStringMBS("com.realsoftware.realstudio"))

if o isa CFArrayMBS then
Var a as CFArrayMBS = CFArrayMBS(o)

Var u as Integer = a.Count-1
for i as Integer = 0 to u

o = a.Item(i)

if o isa CFDictionaryMBS then
Var d as CFDictionaryMBS = CFDictionaryMBS(o)

Var no as CFObjectMBS = d.Value(NewCFStringMBS("Name"))
if no isa CFStringMBS then

Var ns as CFStringMBS = CFStringMBS(no)

names.Add ns.str
end if
end if
next
end if

MessageBox Join(names,EndOfLine)
```

Notes: If the release property is true, the destructor of this class will release the array reference.

From CFArrayMBS.h:

CFArray implements an ordered, compact container of pointer-sized values. Values are accessed via integer

keys (indices), from the range 0 to N-1, where N is the number of values in the array when an operation is performed. The array is said to be "compact" because deleted or inserted values do not leave a gap in the key space – the values with higher-numbered indices have their indices renumbered lower (or higher, in the case of insertion) so that the set of valid indices is always in the integer range [0, N-1] . Thus, the index to access a particular value in the array may change over time as other values are inserted into or deleted from the array.

Arrays come in two flavors, immutable, which cannot have values added to them or removed from them after the array is created, and mutable, to which you can add values or from which remove values. Mutable arrays have two subflavors, fixed-capacity, for which there is a maximum number set at creation time of values which can be put into the array, and variable capacity, which can have an unlimited number of values (or rather, limited only by constraints external to CFArray, like the amount of available memory). Fixed-capacity arrays can be somewhat higher performing, if you can put a definate upper limit on the number of values that might be put into the array.

As with all CoreFoundation collection types, arrays maintain hard references on the values you put in them, but the retaining and releasing functions are user-defined callbacks that can actually do whatever the user wants (for example, nothing).

Computational Complexity The access time for a value in the array is guaranteed to be at worst O(lg N) for any implementation, current and future, but will often be O(1) (constant time). Linear search operations similarly have a worst case complexity of O(N*lg N), though typically the bounds will be tighter, and so on. Insertion or deletion operations will typically be linear in the number of values in the array, but may be O(N*lg N) clearly in the worst case in some implementations. There are no favored positions within the array for performance; that is, it is not necessarily faster access values with low indices, or to insert or delete values with high indices, or whatever.

This class works on Windows with QuickTime 7 installed.
Subclass of the CFObjectMBS class.

56.3.2 Methods

56.3.3 arrayWithContentsOfFile(file as folderitem) as CFArrayMBS

MBS MacCF Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Creates and returns an array containing the contents of the file specified by a given path.
Example:

```
Var a as new CFMutableArrayMBS

a.Append NewCFStringMBS("Hello")
a.Append NewCFStringMBS("World")

Var f as FolderItem = SpecialFolder.Desktop.Child("test.xml")

if a.writeToFile(f, true) then
MessageBox "OK"
else
MessageBox "Failed"
end if

Var x as CFArrayMBS = CFArrayMBS.arrayWithContentsOfFile(f)
MessageBox x.XML.str
```

Notes: file: The path to a file containing a string representation of an array produced by the writeToFile method.

Returns an array containing the contents of the file specified by aPath. Returns nil if the file can't be opened or if the contents of the file can't be parsed into an array.

The array representation in the file identified by aPath must contain only property list objects (NSString/CFString, NSData/CFData, NSArray/CFArray, or NSDictionary/CFDictionary objects).

Returns nil on any error.

56.3.4 arrayWithContentsOfURL(URL as string) as CFArrayMBS

MBS MacCF Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Creates and returns an array containing the contents specified by a given URL.
Notes: URL: The location of a file containing a string representation of an array produced by the writeToURL method.

Returns an array containing the contents specified by aURL. Returns nil if the location can't be opened or if the contents of the location can't be parsed into an array.

The array representation at the location identified by aURL must contain only property list objects (NSString/CFString, NSData/CFData, NSArray/CFArray, or NSDictionary/CFDictionary objects).

Returns nil on any error.

56.3.5 arrayWithHandle(Handle as Integer) as CFArrayMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: Creates a new array object based on a handle value.
Notes: Will retain the reference.

56.3.6 AsArray as Variant()

MBS MacCF Plugin, Plugin Version: 23.2, Platform: macOS, Targets: All.

Function: Converts all objects in the CFArray to Xojo variants.
Example:

```
Var m As New CFMutableArrayMBS

// add one value
m.Append NewCFStringMBS("Hello")

// convert to Xojo array
Var a() As Variant = m.AsArray

// and show value
MessageBox a(0)
```

56.3.7 clone as CFArrayMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a new immutable array with the values from the given array.
Notes: The values itself are not duplicated, but retained.

56.3.8 Constructor

MBS MacCF Plugin, Plugin Version: 10.1, Platform: macOS, Targets: All.

Function: Creates a new editable array object.
Example:

```
Var b as new CFMutableArrayMBS

b.Append(NewCFStringMBS("Hello"))

MessageBox str(b.Count)
```

See also:

- 56.3.9 Constructor(values() as string) 9215

56.3.9 Constructor(values() as string)

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Creates a new CFArrayMBS object with CFString objects created from the given string array.
Example:

```
Var values() as string = array("Hello", "World", "Just", "a", "Test")
Var a as new CFArrayMBS(values)

MessageBox str(a.Count)+" elements"
MessageBox a.XML.Str // show as xml
```

See also:

- 56.3.8 Constructor 9214

56.3.10 ContainsValue(value as CFObjectMBS) as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Reports whether or not the value is in the array.

56.3.11 CountOfValue(value as CFObjectMBS) as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Counts the number of times the given value occurs in the array.

56.3.12 Edit as CFMutableArrayMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a new mutable array with the values from the current array.

56.3.13 FirstIndexOfValue(value as CFObjectMBS) as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Searches the array for the value.
Notes: Result:
The lowest index of the matching values, or -1 if no value matched.

56.3.14 Item(index as Integer) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the entry with the given index.
Notes: Index from 0 to count-1.

56.3.15 LastIndexOfValue(value as CFObjectMBS) as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Searches the array for the value.
Notes: Result:
The lowest highest of the matching values, or -1 if no value matched.

56.3.16 writeToFile(file as folderitem, useAuxiliaryFile as boolean) as boolean

MBS MacCF Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Writes the contents of the receiver to a file at a given path.
Example:

```
Var a as new CFMutableArrayMBS

a.Append NewCFStringMBS("Hello")
a.Append NewCFStringMBS("World")

Var f as FolderItem = SpecialFolder.Desktop.Child("test.xml")

if a.writeToFile(f, true) then
MessageBox "OK"
else
```

```
MessageBox "Failed"
end if

Var x as CFArrayMBS = CFArrayMBS.arrayWithContentsOfFile(f)
MessageBox x.XML.str
```

Notes: file: The path at which to write the contents of the receiver.
useAuxiliaryFile: If true, the array is written to an auxiliary file, and then the auxiliary file is renamed to path. If false, the array is written directly to path. The true option guarantees that path, if it exists at all, won't be corrupted even if the system should crash during writing.

Returns true if the file is written successfully, otherwise false.

If the receiver's contents are all property list objects (NSString, NSData, NSArray, or NSDictionary objects), the file written by this method can be used to initialize a new array with the class method arrayWithContentsOfFile. This method recursively validates that all the contained objects are property list objects before writing out the file, and returns false if all the objects are not property list objects, since the resultant file would not be a valid property list.

56.3.17 writeToURL(url as string, atomically as boolean) as boolean

MBS MacCF Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Writes the contents of the receiver to the location specified by a given URL.
Notes: URL: The location at which to write the receiver.
atomically: If true, the array is written to an auxiliary location, and then the auxiliary location is renamed to aURL. If false, the array is written directly to aURL. The true option guarantees that aURL, if it exists at all, won't be corrupted even if the system should crash during writing.

Returns true if the location is written successfully, otherwise false.

If the receiver's contents are all property list objects (NSString, NSData, NSArray, or NSDictionary objects), the location written by this method can be used to initialize a new array with the class method arrayWithContentsOfURL.

56.3.18 Properties

56.3.19 count as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the number of values currently in the array.
Example:

```
Var x as new CFMutableDictionaryMBS

x.Add(NewCFStringMBS("Hello"), NewCFStringMBS("World"))

MessageBox str(x.Count)
```

Notes: (Read only property)

56.4 class CFAttributedStringMBS

56.4.1 class CFAttributedStringMBS

MBS MacCF Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: This is the class for a CoreFoundation attributed string.
Example:

```
// create a Core Foundation attributed string and convert it for Cocoa
Var s As New CFAttributedStringMBS(New CFStringMBS("Hello World"))
Var text As String = s.String
MessageBox text + " has " + s.Length.ToString + " characters"

// use it with Cocoa functions
Var ns As NSAttributedStringMBS = s.AsNSAttributedString
```

Notes: Subclass of the CFObjectMBS class.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr9
- MBS Plugins 10.3 Release Notes
- MBS REALbasic Plugins, version 10.3pr8

56.4.2 Methods

56.4.3 AsNSAttributedString as Variant

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a new NSAttributedStringMBS object pointing to same attributed string.
Example:

```
// make CF version
Var c as CFAttributedStringMBS = CFAttributedStringMBS.Create("Hello World", nil)
MessageBox c.String

// get NS Version
Var n as NSAttributedStringMBS = c.AsNSAttributedString
MessageBox n.text
```

Notes: For passing to functions which need a NSAttributedStringMBS.

56.4.4 AttributeAndLongestEffectiveRange(location as Integer, attrName as CFStringMBS, inRange as CFRangeMBS, byref effectiveRange as CFRangeMBS) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the value of a given attribute of an attributed string at a specified location.
Notes: location: The location in str at which to determine the attributes. It is a programming error for loc to specify a location outside the bounds of str.
attrName: The name of the attribute whose value you want to determine.
inRange: The range in str within which you want to find the longest effective range of the attributes at loc. inRange must not exceed the bounds of str.
effectiveRange: upon return contains the maximal range within inRange over which the exact same set of attributes apply. The returned range is clipped to inRange.
Returns the attribute value of str at the specified location.

56.4.5 AttributesAndLongestEffectiveRange(location as Integer, inRange as CFRangeMBS, byref effectiveRange as CFRangeMBS) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the attributes of an attributed string at a specified location.
Notes: location: The location in str at which to determine the attributes. loc must not exceed the bounds of str.
inRange: The range in str within to find the longest effective range of the attributes at loc. inRange must not exceed the bounds of str.
effectiveRange: upon return contains the maximal range within inRange over which the exact same set of attributes apply. The returned range is clipped to inRange.

56.4.6 AttributesDictionary(location as Integer, byref effectiveRange as CFRangeMBS) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the attributes of an attributed string at a specified location.
Notes: location: The location in str at which to determine the attributes. loc must not exceed the bounds of str.
effectiveRange: upon return contains a range including loc over which exactly the same set of attributes apply as at loc.

Returns a dictionary that contains the attributes of str at the specified location. Ownership follows the Get Rule.

For performance reasons, a range returned in effectiveRange is not necessarily the maximal range. If you need the maximum range, you should use AttributesAndLongestEffectiveRange.

Note that the returned attribute dictionary might change in unpredictable ways if the attributed string is edited after this call. If you want to preserve the state of the dictionary, you should make an actual copy of it rather than just retaining it. In addition, you should make no assumptions about the relationship of the actual dictionary returned by this call and the dictionary originally used to set the attributes, other than the fact that the values stored in the dictionaries will be identical (that is, ==) to those originally specified.

56.4.7 AttributeValue(location as Integer, attrName as CFStringMBS, byref effectiveRange as CFRangeMBS) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the value of a given attribute of an attributed string at a specified location.
Notes: location: The location in str at which to determine the attributes. loc must not exceed the bounds of str.
attrName: The name of the attribute whose value you want to determine.
effectiveRange: upon return contains a range including loc over which exactly the same set of attributes apply as at location.

Returns the value of the specified attribute at the specified location in str. Ownership follows the Get Rule.

For performance reasons, a range returned in effectiveRange is not necessarily the maximal range. If you need the maximum range, you should use AttributeAndLongestEffectiveRange.

56.4.8 Constructor(str as CFAttributedStringMBS, range as CFRangeMBS)

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a sub-attributed string from the specified range.
Notes: str: The attributed string to copy.
range: The range of the attributed string to copy. range must not exceed the bounds of Str.

Returns a new attributed string whose string and attributes are copied from the specified range of the supplied attributed string. Raises OutOfMemory exception if there was a problem copying the object. Ownership follows the Create Rule.
See also:

- 56.4.9 Constructor(str as CFStringMBS, attributeDictionary as CFDictionaryMBS = nil) 9222

56.4.9 Constructor(str as CFStringMBS, attributeDictionary as CFDictionaryMBS = nil)

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an attributed string with specified string and attributes.
Notes: str: A string that specifies the characters to use in the new attributed string. This value is copied. attributeDictionary: A dictionary that contains the attributes to apply to the new attributed string. This value is copied.

Returns an attributed string that contains the characters from str and the attributes specified by attributes. Raises OutOfMemory exception if there was a problem in creating the attributed string.

Note that both the string and the attributes dictionary are copied. The specified attributes are applied to the whole string. If you want to apply different attributes to different ranges of the string, you should use a mutable attributed string.
See also:

- 56.4.8 Constructor(str as CFAttributedStringMBS, range as CFRangeMBS) 9221

56.4.10 Copy as CFAttributedStringMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable copy of an attributed string.

56.4.11 Create(str as CFStringMBS, attributeDictionary as CFDictionaryMBS = nil) as CFAttributedStringMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an attributed string with specified string and attributes.
Notes: str: A string that specifies the characters to use in the new attributed string. This value is copied. attributeDictionary: A dictionary that contains the attributes to apply to the new attributed string. This value is copied.

Returns an attributed string that contains the characters from str and the attributes specified by attributes. The result is nil if there was a problem in creating the attributed string.

Note that both the string and the attributes dictionary are copied. The specified attributes are applied to the whole string. If you want to apply different attributes to different ranges of the string, you should use a mutable attributed string.

56.4.12 CreateWithSubstring(str as CFAttributedStringMBS, range as CFRangeMBS) as CFAttributedStringMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a sub-attributed string from the specified range.
Notes: str: The attributed string to copy.
range: The range of the attributed string to copy. range must not exceed the bounds of Str.

Returns a new attributed string whose string and attributes are copied from the specified range of the supplied attributed string. Returns nil if there was a problem copying the object. Ownership follows the Create Rule.

56.4.13 GetLength as Integer

MBS MacCF Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Queries the length of the string.
Notes: Deprecated in favor of Length property.

56.4.14 GetString as CFStringMBS

MBS MacCF Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Queries the text of the attributed string.
Notes: Deprecated in favor of String function.

56.4.15 MutableCopy(maxLength as Integer = 0) as CFAttributedStringMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a mutable attributed string copy.
Notes: maxLength, if not 0, is a hard bound on the length of the attributed string; exceeding this size limit during any editing operation is a programming error. If 0, there is no limit on the length.

56.4.16 String as CFStringMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the string for an attributed string.
Notes: For performance reasons, the string returned will often be the backing store of the attributed string, and it might therefore change if the attributed string is edited. However, this is an implementation detail, and you should not rely on this behavior.

56.4.17 Properties

56.4.18 Length as Integer

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the length of the attributed string in characters.
Notes: (Read only property)

56.5 class CFBagListMBS

56.5.1 class CFBagListMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for the items of a CFBag.

56.5.2 Methods

56.5.3 Value(index as Integer) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the value with the given index.

56.5.4 Properties

56.5.5 Count as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Counts the items in the set.
Notes: (Read and Write property)

56.6 class CFBagMBS

56.6.1 class CFBagMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation bag.
Example:

```
// count how often values occur with a Core Foundation bag
Var b As New CFBagMBS
Var m As CFMutableBagMBS = b.edit
For Each word As String In Array("red", "green", "red", "blue", "red")
m.Add New CFStringMBS(word)
Next

MessageBox "red occurs " + m.CountValue(New CFStringMBS("red")).ToString + " times, " + m.Count.ToString
+ " values in total"
```

Notes: If the release property is true, the destructor of this class will release the set reference.
Subclass of the CFObjectMBS class.

56.6.2 Methods

56.6.3 clone as CFBagMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Clones the set and all values.

56.6.4 Constructor

MBS MacCF Plugin, Plugin Version: 10.1, Platform: macOS, Targets: All.

Function: The constructor which creates a new editable bag.
Example:

```
Var b as new CFMutableBagMBS
```

56.6.5 ContainsValue(value as CFObjectMBS) as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Does the set contain this value?

56.6.6 CountValue(value as CFObjectMBS) as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Counts how often this value is inside the set.

56.6.7 edit as CFMutableBagMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: To edit a set, this method returns you a CFMutableBagMBS.

56.6.8 List as CFBagListMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a list of all values.
Notes: This list will be invalid whenever this set is destroyed.

56.6.9 Value(value as CFObjectMBS) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: If the value is found the value is returned.
Notes: Returns nil if key is not found.

56.6.10 Properties

56.6.11 Count as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Counts all values.
Example:

```
Var b as new CFMutableBagMBS

b.Add(NewCFStringMBS("Hello"))
```

MessageBox str(b.Count)

Notes: (Read only property)

56.7 class CFBinaryDataMBS

56.7.1 class CFBinaryDataMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for core foundation data.
Example:

```
// compress data with zlib and encode it as Base64
Var text As String = "Hello World! Hello World! Hello World! Hello World!"
Var data As New CFBinaryDataMBS(text)

Var errorCode As Integer
Var errorMessage As String
Var compressed As CFBinaryDataMBS = data.compressedDataUsingAlgorithm(CFBinaryDataMBS.CompressionAlgorithmZlib, errorCode, errorMessage)
If compressed = Nil Then
MessageBox errorMessage
Return
End If

Var base64 As CFBinaryDataMBS = compressed.base64EncodedData
MessageBox data.len.ToString + " bytes compressed to " + compressed.len.ToString + " bytes" + EndOfLine + base64.Str
```

Notes: If the release property is true, the destructor of this class will release the data reference.
This class works on Windows with QuickTime 7 installed.

This wraps a CFDataRef from Apple. It was named CFBinaryDataMBS instead of CFDataMBS over 10 years ago.
Subclass of the CFObjectMBS class.

56.7.2 Methods

56.7.3 base64DecodedData(options as Integer = 0) as CFBinaryDataMBS

MBS MacCF Plugin, Plugin Version: 25.2, Platform: macOS, Targets: All.

Function: Initializes a data object with the given Base64 encoded data.
Example:

```
Var d As New CFBinaryDataMBS("Hello World")

// encode
Var b As CFBinaryDataMBS = d.base64EncodedData

// decode
Var t As CFBinaryDataMBS = b.base64DecodedData

MessageBox b.Str + EndOfLine + t.Str
```

Notes: Returns a data object containing the Base64 decoded data.
Returns nil if the data object could not be decoded.

56.7.4 base64EncodedData(options as Integer = 0) as CFBinaryDataMBS

MBS MacCF Plugin, Plugin Version: 25.2, Platform: macOS, Targets: All.

Function: Creates a Base64, UTF-8 encoded data object from the string using the given options.
Example:

```
Var d As New CFBinaryDataMBS("Hello World")

// encode
Var b As CFBinaryDataMBS = d.base64EncodedData

// decode
Var t As CFBinaryDataMBS = b.base64DecodedData

MessageBox b.Str + EndOfLine + t.Str
```

Notes: options: A mask that specifies options for Base64 encoding the data. Possible values are given in constants.

By default, no line endings are inserted.
If you specify one of the line length options (Base64Encoding64CharacterLineLength or Base64Encoding76CharacterLineLength) but don,Äôt specify the kind of line ending to insert, the default line ending

is Carriage Return + Line Feed.

56.7.5 clone as CFBinaryDataMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Makes a deep copy of the CFBinaryDataMBS object.

56.7.6 compressedDataUsingAlgorithm(algorithm as Integer, byref ErrorCode as Integer, byref ErrorMessage as String) as CFBinaryDataMBS

MBS MacCF Plugin, Plugin Version: 25.2, Platform: macOS, Targets: All.

Function: Returns a new data object by compressing the data object,Äôs bytes.
Example:

```
// generate some data to compress
Var m As New MemoryBlock(1000)
m.Int64Value(100) = 12345

// copy constructor
Var d As New CFBinaryDataMBS(m)

// compress
Var ErrorCode As Integer
var ErrorMessage as string
Var b As CFBinaryDataMBS = d.compressedDataUsingAlgorithm(d.CompressionAlgorithmLZ4, ErrorCode,
ErrorMessage)

MessageBox Str(b.Len)+" bytes"

// decompress
Var t As CFBinaryDataMBS = b.decompressedDataUsingAlgorithm(d.CompressionAlgorithmLZ4, Error-
Code, ErrorMessage)

If t.Len = 1000 And t.Data.Int64(100) = 12345 Then
MessageBox "success"
Else
MessageBox "failed: "+ErrorMessage
End If
```

Notes: algorithm: An algorithm used to compress the data. For a list of available algorithms, see constants. ErrorCode and ErrorMessage: The errro that indicates why compressing the data failed, or "" and 0 if no error occurred.

Returns a CFBinaryDataMBS instance that contains the compressed buffer data. On failure, this method returns nil.

Use this method to compress in-memory data when you want to reduce memory usage and can afford the time to compress and decompress it. If your data object is already in a compressed format, such as media formats like JPEG images or AAC audio, additional compression may provide minimal or no reduction in memory usage.
To restore this data, use decompressedDataUsingAlgorithm(), and specify the algorithm originally used to compress the data.

56.7.7 Constructor(data as MemoryBlock)

MBS MacCF Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Creates a new data object with given content.
Example:

```
Var m as MemoryBlock = "Hello"
Var d as new CFBinaryDataMBS(m)

MessageBox d.Str
```

See also:

- 56.7.8 Constructor(data as Ptr, Size as Integer) 9232
- 56.7.9 Constructor(data as string) 9233

56.7.8 Constructor(data as Ptr, Size as Integer)

MBS MacCF Plugin, Plugin Version: 25.2, Platform: macOS, Targets: All.

Function: Wraps a pointer into a CFData object.
Example:

```
Var m As New MemoryBlock(100)

Var p As Ptr = m
// this CFBinaryDataMBS is only valid as long as the MemoryBlock lives
Var d As New CFBinaryDataMBS(p, 100)

If d.Data = p Then
// okay
Else
```

```
Break
End If

m.StringValue(0, 5) = "Hello"

// shows Hello
MessageBox d.Str(0,5)
```

Notes: Warning: The Ptr is not reference counted, so once the underlaying memory gets freed, this CFBinaryDataMBS object should no longer be used.
See also:

- 56.7.7 Constructor(data as MemoryBlock) 9232
- 56.7.9 Constructor(data as string) 9233

56.7.9 Constructor(data as string)

MBS MacCF Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Creates a new data object with given content.
Example:

```
Var m as string = "Hello"
Var d as new CFBinaryDataMBS(m)

MessageBox d.Str
```

See also:

- 56.7.7 Constructor(data as MemoryBlock) 9232
- 56.7.8 Constructor(data as Ptr, Size as Integer) 9232

56.7.10 decompressedDataUsingAlgorithm(algorithm as Integer, byref ErrorCode as Integer, byref ErrorMessage as String) as CFBinaryDataMBS

MBS MacCF Plugin, Plugin Version: 25.2, Platform: macOS, Targets: All.

Function: Returns a new data object by decompressing data object,Äôs bytes.
Example:

```
// generate some data to compress
Var m As New MemoryBlock(1000)
m.Int64Value(100) = 12345
```

```
// copy constructor
Var d As New CFBinaryDataMBS(m)

// compress
Var ErrorCode As Integer
var ErrorMessage as string
Var b As CFBinaryDataMBS = d.compressedDataUsingAlgorithm(d.CompressionAlgorithmLZ4, ErrorCode,
ErrorMessage)

MessageBox Str(b.Len)+" bytes"

// decompress
Var t As CFBinaryDataMBS = b.decompressedDataUsingAlgorithm(d.CompressionAlgorithmLZ4, Error-
Code, ErrorMessage)

If t.Len = 1000 And t.Data.Int64(100) = 12345 Then
MessageBox "success"
Else
MessageBox "failed: "+ErrorMessage
End If
```

Notes: algorithm: An algorithm used to decompress the data. For a list of available algorithms, see constants.
error
ErrorCode and ErrorMessage: The errro that indicates why decompressing the data failed, or "" and 0 if no error occurred.

Returns a CFBinaryDataMBS instance that contains the decompressed buffer data. On failure, this method returns nil.

Use this method to inflate in-memory data when you need uncompressed bytes. Specify the same algorithm used to compress the data to successfully decompress it.

56.7.11 Edit as CFMutableBinaryDataMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Makes a copy of the CFBinaryDataMBS object for editing.

56.7.12 Mem as Memoryblock

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The binary data returned as a Xojo memoryblocks.
See also:

- 56.7.13 Mem(pos as Integer,len as Integer) as Memoryblock 9235

56.7.13 Mem(pos as Integer,len as Integer) as Memoryblock

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The binary data returned as a Xojo memoryblocks.
See also:

- 56.7.12 Mem as Memoryblock 9234

56.7.14 Str as String

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The binary data returned as a Xojo string.
See also:

- 56.7.15 Str(pos as Integer,len as Integer) as String 9235

56.7.15 Str(pos as Integer,len as Integer) as String

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The binary data returned as a Xojo string.
See also:

- 56.7.14 Str as String 9235

56.7.16 Properties

56.7.17 Data as Ptr

MBS MacCF Plugin, Plugin Version: 25.2, Platform: macOS, Targets: All.

Function: The raw data pointer.
Example:

```
Var d As New CFBinaryDataMBS("Hello")
Var p As Ptr = d.data
// read bytes and show as text, so we get back Hello
```

MessageBox Chr(p.Int8(0))+Chr(p.Int8(1))+Chr(p.Int8(2))+Chr(p.Int8(3))+Chr(p.Int8(4))

Notes: Only valid until something changes like data getting resized.
(Read only property)

56.7.18 len as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The length of this binary data in bytes.
Example:

```
Var b as CFBinaryDataMBS = NewCFBinaryDataMBSStr("Hello")
MessageBox str(b.Len) // shows 5
```

Notes: (Read only property)

56.7.19 Constants

Base64 options

Constant	Value	Description
Base64DecodingIgnoreUnknownCharacters	1	Use the following option to modify the decoding algorithm so th unknown non-Base64 bytes, including line ending characters.
Base64Encoding64CharacterLineLength	1	Line length limit should be 64.
Base64Encoding76CharacterLineLength	2	Line length limit should be 76.
Base64EncodingEndLineWithCarriageReturn	16	use CR as line ending instead of CRLF.
Base64EncodingEndLineWithLineFeed	32	use LF as line ending instead of CRLF.

Compression Algorithm

Constant	Value	Description
CompressionAlgorithmLZ4	1	LZ4 is appropriate if compression speed is critical. LZ4 generally sacrifices compression ratio in order to achieve its greater speed. This implementation of LZ4 makes a small modification to the standard format, which is described in greater detail in <compression.h>.
CompressionAlgorithmLZFSE	0	LZFSE is the recommended compression algorithm if you don't have a specific reason to use another algorithm. Note that LZFSE is intended for use with Apple devices only. This algorithm generally compresses better than Zlib, but not as well as LZMA. It is generally slower than LZ4.
CompressionAlgorithmLZMA	2	LZMA is appropriate if compression ratio is critical and memory usage and compression speed are not a factor. LZMA is an order of magnitude slower for both compression and decompression than other algorithms. It can also use a very large amount of memory, so if you need to compress large amounts of data on embedded devices with limited memory you should probably avoid LZMA. Encoding uses LZMA level 6 only, but decompression works with any compression level.
CompressionAlgorithmZlib	3	Zlib is appropriate if you want a good balance between compression speed and compression ratio, but only if you need interoperability with non-Apple platforms. Otherwise, LZFSE is generally a better choice than Zlib. Encoding uses Zlib level 5 only, but decompression works with any compression level. It uses the raw DEFLATE format as described in IETF RFC 1951.

56.8 class CFBooleanMBS

56.8.1 class CFBooleanMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation boolean.
Notes: If the release property is true, the destructor of this class will release the boolean reference.
This class works on Windows with QuickTime 7 installed.
Subclass of the CFObjectMBS class.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr2
- MBS Real Studio Plugins, version 13.0pr1

56.8.2 Methods

56.8.3 Constructor(value as Boolean)

MBS MacCF Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: The constructor.

56.8.4 Operator_Convert as Boolean

MBS MacCF Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: A helper method for auto conversion between boolean and CFBooleanMBS.
See also:

- 56.8.5 Operator_Convert(v As Boolean) 9238

56.8.5 Operator_Convert(v As Boolean)

MBS MacCF Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: A helper method for auto conversion between boolean and CFBooleanMBS.
See also:

- 56.8.4 Operator_Convert as Boolean 9238

56.8.6 Properties

56.8.7 Value as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The value of this CFBooleanMBS object.
Notes: (Read only property)

56.9 class CFBundleMBS

56.9.1 class CFBundleMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation bundle.
Example:

```
// get FolderItem
Var f as FolderItem = SpecialFolder.Applications.Child("Safari.app")

// make bundle
Var b as CFBundleMBS = CreateBundleMBS(f)

// make a key
Var k as CFStringMBS = NewCFStringMBS("CFBundleShortVersionString")

// lookup the value
Var i as CFObjectMBS = b.GetValueForInfoDictionaryKey(k)

// it's a string, so show it
Var s as CFStringMBS = CFStringMBS(i)
MessageBox s.str
```

Notes: If the release property is true, the destructor of this class will release the boolean reference.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 17.3pr1
- NSBundleMBS and NSDirectoryEnumeratorMBS

56.9.2 Methods

56.9.3 BuiltInPlugInsDirectory as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The built in plugins folder of the bundle.
Notes: Returns nil on any error.

56.9.4 Constructor

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: The private constructor.

56.9.5 DevelopmentRegion as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The development region of the bundle.
Notes: Returns nil on any error.

56.9.6 ExecutableFile as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The executable file of the bundle.
Example:

```
// The following code does not have any check for nil, so it may crash at any point!

Var f as FolderItem
Var c as CFBundleMBS
Var url as CFURLMBS

// Get Path to Mail
f=ApplicationsFolderMBS(-32766).Child("mail.app")

// Make a CFURL from the file
url=NewCFURLMBSFile(f)
// Create a bundle object
c=CreateBundleMBS(url)

// show the path
MessageBox c.ExecutableFile.file.NativePath
```

Notes: Returns nil on any error.

56.9.7 GetInfoDictionary as CFDictionaryMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The information dictionary for the bundle.
Notes: Returns nil on any error.

56.9.8 GetLocalInfoDictionary as CFDictionaryMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The local information dictionary for the bundle.
Notes: Returns nil on any error.

56.9.9 GetValueForInfoDictionaryKey(key as CFStringMBS) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a value from the information dictionary for the given key.
Example:

```
// lists the document types Mail.app can read

Var f as FolderItem
Var b as CFBundleMBS
Var u as CFURLMBS
Var s as string
Var a as CFArrayMBS
Var i as Integer
Var c as Integer
Var o as CFObjectMBS
Var d as CFDictionaryMBS
Var t(-1) as string

f=ApplicationsFolderMBS(-32766).Child("Mail.app")
u=NewCFURLMBSFile(f)
b=CreateBundleMBS(u)
o=b.GetValueForInfoDictionaryKey(NewCFStringMBS("CFBundleDocumentTypes"))

if o isa CFArrayMBS then
a=cfarraymbs(o)

c=a.Count-1
for i=0 to c
o=a.Item(i)
if o isa CFDictionaryMBS then
d=CFDictionaryMBS(o)
o=d.Value(NewCFStringMBS("CFBundleTypeName"))
if o isa CFStringMBS then
```

```
s=CFStringMBS(o).str
t.Add s
end if
end if
next
end if

s=Join(t,", ")
MessageBox s
```

Notes: Returns nil on any error.

56.9.10 Identifier as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The identifier for the bundle.
Notes: Returns nil on any error.

56.9.11 kCFBundleDevelopmentRegionKey as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: One of the keys for the dictionaries.
Notes: Returns nil on any error.

56.9.12 kCFBundleDisplayNameKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the keys for the dictionaries.
Notes: Display name of the bundle. Can be localized.
Returns nil on any error.

56.9.13 kCFBundleExecutableKey as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: One of the keys for the dictionaries.
Notes: Returns nil on any error.

56.9.14 kCFBundleIdentifierKey as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: One of the keys for the dictionaries.
Example:

```
// Find the bundle id for Mail.app

Var f as FolderItem
Var b as CFBundleMBS
Var u as CFURLMBS
Var s as string
Var o as CFObjectMBS

f=ApplicationsFolderMBS(-32766).Child("Mail.app")
u=NewCFURLMBSFile(f)
b=CreateBundleMBS(u)
o=b.GetValueForInfoDictionaryKey(b.kCFBundleIdentifierKey)

if o isa CFStringMBS then
s=cfstringmbs(o).str
end if

MessageBox s
```

Notes: Returns nil on any error.

56.9.15 kCFBundleInfoDictionaryVersionKey as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: One of the keys for the dictionaries.
Notes: Returns nil on any error.

56.9.16 kCFBundleNameKey as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: One of the keys for the dictionaries.
Notes: Returns nil on any error.

56.9.17 kCFBundleVersionKey as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: One of the keys for the dictionaries.
Notes: Returns nil on any error.

56.9.18 LocalizedString(key as CFStringMBS) as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: Same as the other LocalizedString functions, but the default table and not value is always used.
See also:

- 56.9.19 LocalizedString(key as CFStringMBS, value as CFStringMBS) as CFStringMBS 9245
- 56.9.20 LocalizedString(key as CFStringMBS, value as CFStringMBS, TableName as CFStringMBS) as CFStringMBS 9245

56.9.19 LocalizedString(key as CFStringMBS, value as CFStringMBS) as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: Same as the other LocalizedString functions, but the default table is always used.
See also:

- 56.9.18 LocalizedString(key as CFStringMBS) as CFStringMBS 9245
- 56.9.20 LocalizedString(key as CFStringMBS, value as CFStringMBS, TableName as CFStringMBS) as CFStringMBS 9245

56.9.20 LocalizedString(key as CFStringMBS, value as CFStringMBS, TableName as CFStringMBS) as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: Returns the localized string for the given key and table.
Notes: The table parameter is optional to specify which ".strings"-file to use.
without table or table="" the "Localizable.strings" file is used by Mac OS X.

key: The key for the localized string you wish to retrieve. This key will be used to look up the localized string in the strings file. Typically the key is identical to the value of the localized string in the development language.

value: A comment which might assist the translator. As used by the localized string macros and the genstrings tool, this value becomes an annotation in the generated strings file.

tableName: The name of the strings file you wish to search. The name should not include the strings filename extension.

Returns "" (empty string) on Mac OS Classic or Windows.
See also:

- 56.9.18 LocalizedString(key as CFStringMBS) as CFStringMBS 9245
- 56.9.19 LocalizedString(key as CFStringMBS, value as CFStringMBS) as CFStringMBS 9245

56.9.21 MainBundle as CFBundleMBS

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Returns a CFBundle for the main bundle (current app).
Example:

MessageBox CFBundleMBS.MainBundle.Identifier

56.9.22 PackageMacCreator as string

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The Mac OS creator code for this bundle.
Notes: Returns "" on any error.

56.9.23 PackageMacType as string

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The Mac OS file type code for this bundle.
Notes: Returns "" on any error.
Should be "APPL" for applications.

56.9.24 PrivateFrameworksDirectory as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The private framework folder of the bundle.
Notes: Returns nil on any error.

56.9.25 ResourceDirectory as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The resource folder of the bundle.
Notes: Returns nil on any error.

56.9.26 ResourceURL(resourceName as CFStringMBS, resourceType as CFStringMBS, subDirName as CFStringMBS) as CFURLMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: Searches inside the application bundle for a file.
Example:

```
Var b as CFBundleMBS
Var u as CFURLMBS
Var f as FolderItem

b=app.MainBundleMBS

u=b.ResourceURL(NewCFStringMBS("Photo"),NewCFStringMBS("tif"),nil)

f=u.file

MessageBox f.NativePath
// e.g. "Content/Resources/Photo.tif" inside your bundle.
```

Notes: ResourceName is the filename of the resource file.
ResourceType is the file extension.
SubDirectory is the name of the directory.
This function will take care for localization folders.

56.9.27 ResourceURLForLocalization(resourceName as CFStringMBS, resourceType as CFStringMBS, subDirName as CFStringMBS, localizationName as CFStringMBS) as CFURLMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: Searches inside the application bundle for a file with the given localization.
Notes: ResourceName is the filename of the resource file.
ResourceType is the file extension.
SubDirectory is the name of the directory.
localizationName is the name of the localization requested.
This function will take care for localization folders.

56.9.28 ResourceURLsOfType(resourceType as CFStringMBS, subDirName as CFStringMBS) as CFArrayMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: Searches inside the bundle like ResourceURL, but returns an array of all matching files.

56.9.29 ResourceURLsOfTypeForLocalization(resourceType as CFStringMBS, subDirName as CFStringMBS, localizationName as CFStringMBS) as CFArrayMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: Searches inside the bundle like ResourceURLForLocalization, but returns an array of all matching files.

56.9.30 SharedFrameworksDirectory as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The shared framework folder of the bundle.
Notes: Returns nil on any error.

56.9.31 SharedSupportURL as CFURLMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: The shared support files folder of the bundle.
Notes: Returns nil on any error.

56.9.32 SupportFilesDirectory as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The support files folder of the bundle.
Notes: Returns nil on any error.

56.9.33 URL as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The URL for the given bundle.
Notes: Returns nil on any error.

56.9.34 Version as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The version of the bundle.
Notes: Returns nil on any error.

56.10 class CFCharacterSetMBS

56.10.1 class CFCharacterSetMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation character Set.
Example:

```
// count digits and letters in a text with predefined character sets
Var digits As CFCharacterSetMBS = CFCharacterSetMBS.GetPredefinedCFCharacterSet(CFCharacterSetMBS.kCFCharacterSetDecimalDigit)
Var letters As CFCharacterSetMBS = CFCharacterSetMBS.GetPredefinedCFCharacterSet(CFCharacterSetMBS.kCFCharacterSetLetter)

Var text As String = "Order 4711 from M√ºller, 23 items"
Var digitCount, letterCount As Integer
For Each c As String In text.Characters
If digits.IsMember(c.Asc) Then digitCount = digitCount + 1
If letters.IsMember(c.Asc) Then letterCount = letterCount + 1
Next

MessageBox digitCount.ToString + " digits, " + letterCount.ToString + " letters"
```

Notes: If the release property is true, the destructor of this class will release the set reference.
This class works on Windows with QuickTime 7 installed.
Subclass of the CFObjectMBS class.

56.10.2 Methods

56.10.3 Binary as CFBinaryDataMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: This function returns the content of the CharacterSet as a CFBinaryData.
Notes: Returns nil on any error.

56.10.4 edit as CFMutableCharacterSetMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: To edit a character set, this method returns you a CFMutableCharacterSetMBS.

56.10.5 GetPredefinedCFCharacterSet(id as Integer) as CFCharacterSetMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a predefined Character set.

56.10.6 IsMember(charcode as Integer) as Boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns true if the unicode character is part of this CharacterSet.
Notes: Works only for charcode from 0 to &hFFFF.

56.10.7 kCFCharacterSetAlphaNumeric as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ID of the predefined character set for alpha numeric characters.

56.10.8 kCFCharacterSetControl as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ID of the predefined character set for control characters.

56.10.9 kCFCharacterSetDecimalDigit as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ID of the predefined character set for decimal digit characters.

56.10.10 kCFCharacterSetDecomposable as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ID of the predefined character set for decomposable characters.

56.10.11 kCFCharacterSetIllegal as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ID of the predefined character set for illegal characters.

56.10.12 kCFCharacterSetLetter as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ID of the predefined character set for letter characters.

56.10.13 kCFCharacterSetLowercaseLetter as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ID of the predefined character set for lowercase letter characters.

56.10.14 kCFCharacterSetNonBase as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ID of the predefined character set for non base characters.

56.10.15 kCFCharacterSetPunctuation as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ID of the predefined character set for punctuation characters.

56.10.16 kCFCharacterSetUppercaseLetter as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ID of the predefined character set for uppercase letter characters.

56.10.17 kCFCharacterSetWhitespace as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ID of the predefined character set for whitespace characters.

56.10.18 kCFCharacterSetWhitespaceAndNewline as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ID of the predefined character set for whitespace characters and newline.

56.10.19 NewCFCharacterSet(str as CFBinaryDataMBS) as CFCharacterSetMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a Character set with characters inside the CFBinary object.
See also:

- 56.10.20 NewCFCharacterSet(str as CFStringMBS) as CFCharacterSetMBS 9253

56.10.20 NewCFCharacterSet(str as CFStringMBS) as CFCharacterSetMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a Character set with characters inside the CFStringMBS object.
See also:

- 56.10.19 NewCFCharacterSet(str as CFBinaryDataMBS) as CFCharacterSetMBS 9253

56.10.21 NewCFCharacterSetRange(min as Integer, length as Integer) as CFCharacterSetMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a Character set with chars between min and max.
Example:

```
Var c as new CFCharacterSetMBS

c = CFCharacterSetMBS.NewCFCharacterSetRange(asc("A"), 26)

MessageBox str(c.IsMember(asc("C"))) // true
```

```
MessageBox str(c.IsMember(asc("1"))) // false
```

Notes: Use Unicode charcodes for min and max.

56.11 class CFDateMBS

56.11.1 class CFDateMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation date.
Example:

```
// convert between DateTime and CFDateMBS and measure time
Var start As CFDateMBS = CFDateMBS.Now

Var birthday As CFDateMBS = CFDateMBS.NewDate(New DateTime(2000, 1, 1))
Var seconds As Double = start.TimeIntervalSinceDate(birthday).Value
MessageBox "Days since 2000: " + Format(seconds / 86400, "0")

Var d As DateTime = start.DateTime
MessageBox "Now: " + d.ToString
```

Notes: If the release property is true, the destructor of this class will release the date reference.
Subclass of the CFObjectMBS class.

- News from the MBS Xojo Plugins Version 20.5
- MBS Xojo Plugins, version 19.0pr6

56.11.2 Methods

56.11.3 AbsoluteTime as CFAbsoluteTimeMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The absolute time value for this date.
Notes: Returns nil on any error.
timezone is optional and may be nil.

56.11.4 Compare(otherdate as CFDateMBS) as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Compares two date objects.
Notes: Result codes:
kCFCompareLessThan = -1
kCFCompareEqualTo = 0

kCFCompareGreaterThan = 1

On any error returns 0.

56.11.5 Constructor

MBS MacCF Plugin, Plugin Version: 19.0, Platform: macOS, Targets: All.

Function: Creates new date object with current timestamp.
Example:

```
Var d as new CFDateMBS
MessageBox d.date.SQLDateTime
```

See also:

- 56.11.6 Constructor(date as CFDateMBS) 9256
- 56.11.7 Constructor(date as date, timeZone as CFTimeZoneMBS = nil) 9256

56.11.6 Constructor(date as CFDateMBS)

MBS MacCF Plugin, Plugin Version: 19.0, Platform: macOS, Targets: All.

Function: Creates a new Xojo object with a copy of the CFDate object inside.
See also:

- 56.11.5 Constructor 9256
- 56.11.7 Constructor(date as date, timeZone as CFTimeZoneMBS = nil) 9256

56.11.7 Constructor(date as date, timeZone as CFTimeZoneMBS = nil)

MBS MacCF Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor using Xojo date.
Example:

```
// Xojo now
Var d as new date
// convert to CFDate
Var c as new CFDateMBS(d)
// and convert back
Var x as date = c
```

```
// compare in de bugger
Var ds as string = d.SQLDateTime
Var dx as string = x.SQLDateTime

Break
```

Notes: If time zone is nil, we use UTC.
See also:

- 56.11.5 Constructor 9256
- 56.11.6 Constructor(date as CFDateMBS) 9256

56.11.8 Date(timeZone as CFTimeZoneMBS = nil) as Date

MBS MacCF Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a Xojo date from CFDate with given time zoen.
Notes: If time zone is nil, we use UTC.

56.11.9 DateTime(timeZone as CFTimeZoneMBS = nil) as DateTime

MBS MacCF Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Creates a Xojo date from CFDate with given time zoen.
Notes: If time zone is nil, we use UTC.

56.11.10 NewDate(date as date, timeZone as CFTimeZoneMBS = nil) as CFDateMBS

MBS MacCF Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a Xojo date from CFDate with given time zone.
Example:

```
// Xojo now
Var d as new date
// convert to CFDate in UTC
Var c as CFDateMBS = CFDateMBS.NewDate(d, nil)
// and convert back
Var x as date = c.Date(nil)

// compare in debugger
Var ds as string = d.SQLDateTime
```

```
Var dx as string = x.SQLDateTime

// and with current time zone
Var dx2 as string = c.Date(SystemCFTimeZoneMBS).SQLDateTime

Break
```

Notes: If time zone is nil, we use UTC.
See also:

- 56.11.11 NewDate(date as dateTime, timeZone as CFTimeZoneMBS = nil) as CFDateMBS 9258

56.11.11 NewDate(date as dateTime, timeZone as CFTimeZoneMBS = nil) as CFDateMBS

MBS MacCF Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Creates a Xojo dateTime from CFDate with given time zone.
Notes: If time zone is nil, we use UTC.
See also:

- 56.11.10 NewDate(date as date, timeZone as CFTimeZoneMBS = nil) as CFDateMBS 9257

56.11.12 Now as CFDateMBS

MBS MacCF Plugin, Plugin Version: 19.0, Platform: macOS, Targets: All.

Function: Creates new date object with current timestamp.
Example:

```
Var d as CFDateMBS = CFDateMBS.now
MessageBox d.date.SQLDateTime
```

56.11.13 Operator_Convert as Date

MBS MacCF Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Converts from CFDate to Xojo date in UTC.
Example:

```
// Xojo now
Var d as new date
// convert to CFDate
Var c as new CFDateMBS(d)
// and convert back
```

```
Var x as date = c

// compare in de bugger
Var ds as string = d.SQLDateTime
Var dx as string = x.SQLDateTime

Break
```

See also:

- 56.11.14 Operator_Convert as DateTime 9259

56.11.14 Operator_Convert as DateTime

MBS MacCF Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Converts from CFDate to Xojo dateTime in UTC.
See also:

- 56.11.13 Operator_Convert as Date 9258

56.11.15 TimeIntervalSinceDate(otherdate as CFDateMBS) as CFTimeIntervalMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The dfference between two dates as a time interval.
Notes: Returns nil on any error.

56.12 class CFDictionaryListMBS

56.12.1 class CFDictionaryListMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for the items of a CFDictionaryMBS.
Notes: This class works on Windows with QuickTime 7 installed.

56.12.2 Methods

56.12.3 close

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

56.12.4 Key(index as Integer) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the key with the given index.
Notes: Index between 0 and count-1.

56.12.5 Value(index as Integer) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the value with the given index.
Notes: Index between 0 and count-1.

56.12.6 Properties

56.12.7 count as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Counts the elements inside this list.
Notes: (Read and Write property)

56.13 class CFDictionaryMBS

56.13.1 class CFDictionaryMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation dictionary.
Example:

```
Var c as new CFPreferencesMBS
Var o as CFObjectMBS = c.CopyAppValue(NewCFStringMBS("VisibleIdentifiers"), NewCFStringMBS("com.apple.speech.voice.prefs"))
Var d as CFDictionaryMBS = CFDictionaryMBS(o)

break // see dictionary in debugger
```

Notes: If the release property is true, the destructor of this class will release the dictionary reference.
This class works on Windows with QuickTime 7 installed.
Subclass of the CFObjectMBS class.

56.13.2 Methods

56.13.3 CGPointFromDictionary(dic as CFDictionaryMBS) as variant

MBS MacCF Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates CGPointMBS object from dictionary.
Notes: Make a CGPointMBS from the contents of dict (presumably returned earlier from CFDictionaryMBS.dictionaryWithCGPoint) and returns the value in point. Returns object on success; nil otherwise.

56.13.4 CGRectFromDictionary(dic as CFDictionaryMBS) as variant

MBS MacCF Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates CGRectMBS object from dictionary.
Notes: Make a CGRect from the contents of dict (presumably returned earlier from CFDictionaryMBS.dictionaryWithCGRect) and returns the value in point. Returns object on success; nil otherwise.

56.13.5 CGSizeFromDictionary(dic as CFDictionaryMBS) as variant

MBS MacCF Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates CGSizeMBS object from dictionary.
Notes: Make a CGSize from the contents of dict (presumably returned earlier from CFDictionaryMBS.dictionaryWithCGSize) and returns the value in point. Returns object on success; nil otherwise.

56.13.6 clone as CFDictionaryMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Clones the dictionary and all values.

56.13.7 Constructor

MBS MacCF Plugin, Plugin Version: 10.1, Platform: macOS, Targets: All.

Function: Creates a new editable dictionary.
Example:

```
Var m as new CFMutableDictionaryMBS
m.Add(NewCFStringMBS("Key"), NewCFStringMBS("value"))
MessageBox str(m.Count)
```

See also:

- 56.13.8 Constructor(dic as dictionary) 9264

56.13.8 Constructor(dic as dictionary)

MBS MacCF Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Creates a new CFDictionary based on the Xojo Dictionary.
Example:

```
// build a dictionary
Var d as new Dictionary

d.Value("Hello")=2
d.Value("test")="World"
d.Value("ddd")=5.6

// convert to CFDictionary
Var c as new CFDictionaryMBS(d)

// Display as XML
Var b as CFBinaryDataMBS = c.XML
MessageBox b.str

// now convert back
Var e as Dictionary = c.dictionary

// and display values
for each key as Variant in e.keys
MessageBox key+" ->"+e.Value(key)
next
```

Notes: Be aware that the Dictionary is converted as good as possible. Unsupported datatype will be missing.

See the FAQ for the supported type translation between CoreFoundation and Xojo data types.
See also:

- 56.13.7 Constructor 9263

56.13.9 ContainsKey(value as CFObjectMBS) as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Does the dictionary contain this key?
Example:

```
Var c as CFMutableDictionaryMBS = NewCFMutableDictionaryMBS

c.Add NewCFStringMBS("test"),NewCFStringMBS("Value")
```

```
MessageBox c.XML.Str

if c.ContainsKey(NewCFStringMBS("test")) then
MessageBox "OK"
else
MessageBox "Failed"
end if

if c.ContainsKey(NewCFStringMBS("missing")) then
MessageBox "Failed"
else
MessageBox "OK"
end if
```

56.13.10 ContainsValue(value as CFObjectMBS) as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Does the dictionary contain this value?

56.13.11 CountKey(value as CFObjectMBS) as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Counts how often this key is inside the dictionary.

56.13.12 CountValue(value as CFObjectMBS) as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Counts how often this value is inside the dictionary.

56.13.13 Dictionary as Dictionary

MBS MacCF Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Creates a Xojo Dictionary from this CFDictionary.
Example:

```
// build a dictionary
Var d as new Dictionary
```

```
d.Value("Hello")=2
d.Value("test")="World"
d.Value("ddd")=5.6

// convert to CFDictionary
Var c as new CFDictionaryMBS(d)

// Display as XML
Var b as CFBinaryDataMBS = c.XML
MessageBox b.str

// now convert back
Var e as Dictionary = c.dictionary

// and display values
for each key as Variant in e.keys
MessageBox key+" ->"+e.Value(key)
next
```

Notes: Be aware that the CFDictionary is converted as good as possible. Unsupported datatype will be missing.

See the FAQ for the supported type translation between CoreFoundation and Xojo data types.

56.13.14 dictionaryWithCGPoint(point as variant) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Return a dictionary representation of point.
Notes: Rect must be a CGPointMBS object or nil.
Returns dictionary or nil.

56.13.15 dictionaryWithCGRect(rect as variant) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Return a dictionary representation of rect.
Notes: Rect must be a CGRectMBS object or nil.
Returns dictionary or nil.

56.13.16 dictionaryWithCGSize(size as variant) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Return a dictionary representation of size.
Notes: Rect must be a CGSizeMBS object or nil.
Returns dictionary or nil.

56.13.17 dictionaryWithContentsOfFile(file as folderitem) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 10.1, Platform: macOS, Targets: All.

Function: Creates and returns a dictionary using the keys and values found in a file specified by a given path.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.plist")
Var d as CFDictionaryMBS = CFDictionaryMBS.dictionaryWithContentsOfFile(f)

MessageBox d.XML.Str
```

Notes: path: A full or relative pathname. The file identified by path must contain a string representation of a property list whose root object is a dictionary. The dictionary must contain only property list objects (instances of NSData, NSDate, NSNumber, NSString, NSArray, or NSDictionary).

Returns a new dictionary that contains the dictionary at path, or nil if there is a file error or if the contents of the file are an invalid representation of a dictionary.

56.13.18 dictionaryWithContentsOfURL(URL as string) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 10.1, Platform: macOS, Targets: All.

Function: Creates and returns a dictionary using the keys and values found in a resource specified by a given URL.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.plist")
Var d as CFDictionaryMBS = CFDictionaryMBS.dictionaryWithContentsOfURL(f.URLPath)

MessageBox d.XML.Str
```

Notes: URL: An URL that identifies a resource containing a string representation of a property list whose root object is a dictionary. The dictionary must contain only property list objects (instances of NSData, NSDate, NSNumber, NSString, NSArray, or NSDictionary).

Returns a new dictionary that contains the dictionary at aURL, or nil if there is an error or if the contents of the resource are an invalid representation of a dictionary.

56.13.19 dictionaryWithHandle(Handle as Integer) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: Creates a new dictionary object based on a handle value.
Notes: Will retain the reference.

56.13.20 edit as CFMutableDictionaryMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: To edit a dictionary, this method returns you a CFMutableDictionaryMBS.

56.13.21 list as CFDictionaryListMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a list of all values.
Notes: This list will be invalid whenever this dictionary is destroyed.

56.13.22 Value(key as CFObjectMBS) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: If the key is found the value for this key is returned.
Notes: Returns nil if key is not found.

56.13.23 writeToFile(file as folderitem, useAuxiliaryFile as boolean) as boolean

MBS MacCF Plugin, Plugin Version: 10.1, Platform: macOS, Targets: All.

Function: Writes a property list representation of the contents of the receiver to a given path.
Example:

```
Var m as new CFMutableDictionaryMBS
```

```
m.Set(NewCFStringMBS("key"), NewCFStringMBS("value"))

Var f as FolderItem = SpecialFolder.Desktop.Child("test.plist")

if m.writeToFile(f, true) then
MessageBox "OK"
else
MessageBox "Failed"
end if
```

Notes: path: The path at which to write the file. Must be an absolute URL.
useAuxiliaryFile: A flag that specifies whether the file should be written atomically.

If flag is true, the receiver is written to an auxiliary file, and then the auxiliary file is renamed to path. If flag is false, the dictionary is written directly to path. The true option guarantees that path, if it exists at all, won't be corrupted even if the system should crash during writing.

Returns true if the file is written successfully, otherwise false.

This method recursively validates that all the contained objects are property list objects (instances of NSData, NSDate, NSNumber, NSString, NSArray, or NSDictionary) before writing out the file, and returns false if all the objects are not property list objects, since the resultant file would not be a valid property list.

If the receiver's contents are all property list objects, the file written by this method can be used to initialize a new dictionary with the class method dictionaryWithContentsOfFile or dictionaryWithContentsOfURL.

56.13.24 writeToURL(url as string, atomically as boolean) as boolean

MBS MacCF Plugin, Plugin Version: 10.1, Platform: macOS, Targets: All.

Function: Writes a property list representation of the contents of the receiver to a given URL.
Example:

```
Var m as new CFMutableDictionaryMBS

m.Set(NewCFStringMBS("key"), NewCFStringMBS("value"))

Var f as FolderItem = SpecialFolder.Desktop.Child("test.plist")

if m.writeTourl(f.URLPath, true) then
MessageBox "OK"
else
MessageBox "Failed"
end if
```

Notes: url: The URL to which to write the receiver.
atomically: A flag that specifies whether the output should be written atomically.

If flag is YtrueES, the receiver is written to an auxiliary location, and then the auxiliary location is renamed to aURL. If flag is false, the dictionary is written directly to aURL. The true option guarantees that aURL, if it exists at all, won't be corrupted even if the system should crash during writing. flag is ignored if aURL is of a type that cannot be written atomically.

Returns true if the location is written successfully, otherwise false.

This method recursively validates that all the contained objects are property list objects (instances of NSData, NSDate, NSNumber, NSString, NSArray, or NSDictionary) before writing out the file, and returns false if all the objects are not property list objects, since the resultant output would not be a valid property list.

If the receiver's contents are all property list objects, the location written by this method can be used to initialize a new dictionary with the class method dictionaryWithContentsOfURL or dictionaryWithContentsOfFile.

For more information about property lists, see Property List Programming Guide.

56.13.25 Properties

56.13.26 Count as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Counts all values.
Example:

```
Var x as new CFMutableDictionaryMBS

x.Add(NewCFStringMBS("Hello"), NewCFStringMBS("World"))

MessageBox str(x.Count)
```

Notes: (Read only property)

56.14 class CFErrorMBS

56.14.1 class CFErrorMBS

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: The Core Foundation error class.
Notes: A CFError object encapsulates rich and extensible error information than is possible using only an error code or error string. The core attributes of a CFError object are an error domain (represented by a string), a domain-specific error code and a user info dictionary containing application specific information. Errors are required to have a domain and an error code within that domain. The optional "userInfo" dictionary may provide additional information that might be useful for the interpretation and reporting of the error. This dictionary can even contain an "underlying" error, which is wrapped as an error bubbles up through various layers.

Several well-known domains are defined corresponding to Mach, POSIX, and OSStatus errors. In addition, CFError allows you to attach an arbitrary user info dictionary to an error object, and provides the means to return a human-readable description for the error.

In general, a method should signal an error condition by—for example—returning false or nil rather than by the simple presence of an error object. The method can then optionally return an CFError object by reference, in order to further describe the error.

CFError is toll-free bridged to NSError in the Foundation framework—for more details on toll-free bridging, see Interchangeable Data Types. NSError has some additional guidelines which makes it easy to automatically report errors to users and even try to recover from them. See Error Handling Programming Guide for more information on NSError programming guidelines.

Requires Mac OS X 10.5 or newer.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 19.6pr4
- MBS REALbasic Plugins, version 10.5pr5

56.14.2 Methods

56.14.3 Constructor

MBS MacCF Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

56.14.4 kCFErrorDescriptionKey as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: One of the keys in the userInfo dictionary.
Notes: Key to identify the description in the userInfo dictionary.
When you create a CFError, you can provide a value for this key if you do not have localizable error strings. The description should be a complete sentence if possible, and should not contain the domain name or error

56.14.5 kCFErrorDomainCocoa as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: One of the constants defining domains for CFError objects.
Notes: A constant that specified the Cocoa domain.

56.14.6 kCFErrorDomainMach as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: One of the constants defining domains for CFError objects.
Notes: A constant that specified the Mach domain.

56.14.7 kCFErrorDomainOSStatus as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: One of the constants defining domains for CFError objects.
Notes: A constant that specified the OS domain.

56.14.8 kCFErrorDomainPOSIX as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: One of the constants defining domains for CFError objects.
Notes: A constant that specified the POSIX domain.

56.14.9 kCFErrorLocalizedDescriptionKey as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: One of the keys in the userInfo dictionary.
Notes: Key to identify the end user-presentable description in the userInfo dictionary.

56.14.10 kCFErrorLocalizedFailureReasonKey as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: One of the keys in the userInfo dictionary.
Notes: Key to identify the end user-presentable failure reason in the userInfo dictionary.

56.14.11 kCFErrorLocalizedRecoverySuggestionKey as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: One of the keys in the userInfo dictionary.
Notes: Key to identify the end user-presentable recovery suggestion in the userInfo dictionary.

56.14.12 kCFErrorUnderlyingErrorKey as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: One of the keys in the userInfo dictionary.
Notes: Key to identify the underlying error in the userInfo dictionary.

56.14.13 Properties

56.14.14 Code as Integer

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Returns the error code for a given CFError.
Notes: (Read only property)

56.14.15 Description as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Returns a human-presentable description for a given error.
Notes: (Read only property)

56.14.16 Domain as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Returns the error domain for a given CFError.
Notes: (Read only property)

56.14.17 FailureReason as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Returns a human-presentable failure reason for a given error.
Notes: (Read only property)

56.14.18 RecoverySuggestion as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Returns a human presentable recovery suggestion for a given error.
Notes: (Read only property)

56.14.19 UserInfo as dictionary

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Returns the user info dictionary for a given CFError.
Notes: (Read only property)

56.15 class CFGregorianDateMBS

56.15.1 class CFGregorianDateMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: A class for a core foundation gregorian date value.
Example:

```
// split the current time into its calendar parts with Core Foundation
Var now As CFAbsoluteTimeMBS = CurrentCFAbsoluteTimeMBS
Var d As CFGregorianDateMBS = now.GregorianDate(GetDefaultCFTimeZoneMBS)
MessageBox d.Year.ToString + "-" + Format(d.Month, "00") + "-" + Format(d.Day, "00") + " " + _
Format(d.Hour, "00") + ":" + Format(d.Minute, "00") + ":" + Format(d.Second, "00.0") + ", valid: " +
d.Valid.ToString
```

56.15.2 Methods

56.15.3 AbsoluteTime(timezone as CFTimeZoneMBS) as CFAbsoluteTimeMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The absolute time value for this date.
Notes: Returns nil on any error.

56.15.4 DateValid as boolean

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Are all those date properties in this object valid?

56.15.5 IsValid(flags as Integer) as boolean

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns true if the requested parts of the date values are valid.
Notes: Flags can be a combination of the following values:

Combine using BitwiseOr.

kCFGregorianUnitsYears = 1
kCFGregorianUnitsMonths = 2
kCFGregorianUnitsDays = 4
kCFGregorianUnitsHours = 8
kCFGregorianUnitsMinutes = 16
kCFGregorianUnitsSeconds = 32
kCFGregorianAllUnits = &hFFFFFF

56.15.6 TimeValid as boolean

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Are all those time properties in this object valid?

56.15.7 Valid as boolean

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Are all those properties in this object valid?

56.15.8 Properties

56.15.9 Day as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The day value.
Notes: Setting this property does not run a test for validation like Xojo's date class does.
(Read and Write property)

56.15.10 Hour as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The hour value.
Notes: Setting this property does not run a test for validation like Xojo's date class does.
(Read and Write property)

56.15.11 Minute as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The minute value.
Notes: Setting this property does not run a test for validation like Xojo's date class does.
(Read and Write property)

56.15.12 Month as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The month value.
Notes: Setting this property does not run a test for validation like Xojo's date class does.
(Read and Write property)

56.15.13 Second as Double

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The second value.
Notes: Setting this property does not run a test for validation like Xojo's date class does.
(Read and Write property)

56.15.14 Year as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The year value.
Notes: Setting this property does not run a test for validation like Xojo's date class does.
(Read and Write property)

56.16 class CFGregorianUnitsMBS

56.16.1 class CFGregorianUnitsMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: A class for gregorian time units.

56.16.2 Properties

56.16.3 Days as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The days.
Notes: (Read and Write property)

56.16.4 Hours as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The hours.
Notes: (Read and Write property)

56.16.5 Minutes as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The minutes.
Notes: (Read and Write property)

56.16.6 Months as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The months.
Notes: (Read and Write property)

56.16.7 Seconds as Double

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The seconds.
Notes: (Read and Write property)

56.16.8 Years as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The years.
Notes: (Read and Write property)

56.17 class CFMutableArrayMBS

56.17.1 class CFMutableArrayMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation Array.
Notes: If the release property is true, the destructor of this class will release the array reference.
This class works on Windows with QuickTime 7 installed.
Subclass of the CFArrayMBS class.
Blog Entries

- MBS Real Studio Plugins, version 13.0pr1

56.17.2 Methods

56.17.3 Append(value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Appends an item to this array.
Example:

Var a as CFMutableArrayMBS

a=NewCFMutableArrayMBS

a.Append NewCFStringMBS("Hello")

MessageBox str(a.Count)

MessageBox CFStringMBS(a.Item(0)).str

56.17.4 AppendArray(sourcearray as CFArrayMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Adds the values from an array to another array.
Notes: The whole array should be copied.
See also:

- 56.17.5 AppendArray(sourcearray as CFArrayMBS,min as Integer,max as Integer) 9281

56.17.5 AppendArray(sourcearray as CFArrayMBS,min as Integer,max as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Adds the values from an array to another array.
Notes: The whole array should be copied.
Min and Max are the range to be copied. Make sure they are correct indexes!
See also:

- 56.17.4 AppendArray(sourcearray as CFArrayMBS) 9280

56.17.6 Exchange(index1 as Integer,index2 as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Exchanges the values at two indices of the array.
Notes: Make sure indexes are in range between 0 and count-1.

56.17.7 Insert(index as Integer,value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Inserts an item to this array.
Notes: Make sure index is in range between 0 and count.
If Index=count then this function does like append.

56.17.8 Remove(index as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Removes the value with the given index from the array.
Notes: Make sure index is in range between 0 and count-1.

56.17.9 RemoveAll

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Removes all the values from the array, making it empty.

56.17.10 SetValue(index as Integer,value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Changes the value with the given index in the array.

56.18 class CFMutableAttributedStringMBS

56.18.1 class CFMutableAttributedStringMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The mutable version of an CoreFoundation attributed string.
Example:

```
// change the text of a mutable attributed string
Var s As New CFMutableAttributedStringMBS(New CFStringMBS("Hello World"))
s.BeginEditing
s.ReplaceString(New CFRangeMBS(6, 5), New CFStringMBS("Xojo")) // replace "World"
s.EndEditing

Var text As String = s.String
MessageBox text
```

Notes: Subclass of the CFAttributedStringMBS class.

- MBS Xojo / Real Studio Plugins, version 14.2pr9

Xojo Developer Magazine

- 12.4, page 9: News

56.18.2 Methods

56.18.3 AsNSMutableAttributedString as Variant

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a new NSMutableAttributedStringMBS object pointing to same mutable attributed string.
Notes: For passing to functions which need a NSMutableAttributedStringMBS.

56.18.4 BeginEditing

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Marks the beginning of a series of changes.
Notes: In cases where attributed string might do a bunch of work to assure self-consistency, BeginEdit-

ing/EndEditing allow disabling that to allow deferring and coalescing any work. It's a good idea to call these around a set of related mutation calls which don't require the string to be in consistent state in between. These calls can be nested.

56.18.5 Constructor(maxLength as Integer = 0)

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a mutable empty attributed string.
Notes: maxLength, if not 0, is a hard bound on the length of the attributed string; exceeding this size limit during any editing operation is a programming error. If 0, there is no limit on the length.
See also:

- 56.18.6 Constructor(str as CFAttributedStringMBS, range as CFRangeMBS) 9284
- 56.18.7 Constructor(str as CFStringMBS, attributeDictionary as CFDictionaryMBS = nil) 9284

56.18.6 Constructor(str as CFAttributedStringMBS, range as CFRangeMBS)

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a sub-attributed string from the specified range.
Notes: str: The attributed string to copy.
range: The range of the attributed string to copy. range must not exceed the bounds of Str.

Returns a new attributed string whose string and attributes are copied from the specified range of the supplied attributed string. Raises OutOfMemory exception if there was a problem copying the object. Ownership follows the Create Rule.
See also:

- 56.18.5 Constructor(maxLength as Integer = 0) 9284
- 56.18.7 Constructor(str as CFStringMBS, attributeDictionary as CFDictionaryMBS = nil) 9284

56.18.7 Constructor(str as CFStringMBS, attributeDictionary as CFDictionaryMBS = nil)

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an attributed string with specified string and attributes.
Notes: str: A string that specifies the characters to use in the new attributed string. This value is copied.
attributeDictionary: A dictionary that contains the attributes to apply to the new attributed string. This value is copied.

Returns an attributed string that contains the characters from str and the attributes specified by attributes. Raises OutOfMemory exception if there was a problem in creating the attributed string.

Note that both the string and the attributes dictionary are copied. The specified attributes are applied to the whole string. If you want to apply different attributes to different ranges of the string, you should use a mutable attributed string.
See also:

- 56.18.5 Constructor(maxLength as Integer = 0) 9284
- 56.18.6 Constructor(str as CFAttributedStringMBS, range as CFRangeMBS) 9284

56.18.8 EndEditing

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Marks the end of a series of changes.
Notes: In cases where attributed string might do a bunch of work to assure self-consistency, BeginEditing/EndEditing allow disabling that to allow deferring and coalescing any work. It's a good idea to call these around a set of related mutation calls which don't require the string to be in consistent state in between. These calls can be nested.

56.18.9 MutableString as CFMutableStringMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the string for the attributed string as a mutable string, allowing editing the character contents of the string as if it were an CFMutableString.
Notes: Attributes corresponding to the edited range are appropriately modified. If, as a result of the edit, new characters are introduced into the string, they inherit the attributes of the first replaced character from range. If no existing characters are replaced by the edit, the new characters inherit the attributes of the character preceding range if it has any, otherwise of the character following range. If the initial string is empty, the attributes for the new characters are also empty.

(Note: This function is not yet implemented and will return NULL except for toll-free bridged instances.)

56.18.10 RemoveAttribute(Range as CFRangeMBS, attrName as CFStringMBS)

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Removes the value of a single attribute over the specified range, which should be valid.
Notes: It's OK for the attribute not the exist over the specified range.

56.18.11 ReplaceAttributedString(Range as CFRangeMBS, Replacement as CFStringMBS)

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Replaces the attributed substring over the specified range with the attributed string specified in replacement.
Notes: range should be valid. To delete a range of the attributed string, call ReplaceString() with empty string and specified range.

56.18.12 ReplaceString(Range as CFRangeMBS, Replacement as CFStringMBS)

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Modifies the string for the attributed string, much like CFString.Replace.
Notes: It's an error for range to specify characters outside the bounds of aStr.

56.18.13 SetAttribute(Range as CFRangeMBS, attrName as CFStringMBS, Value as CFObjectMBS)

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Sets the value of a single attribute over the specified range, which should be valid.
Notes: value should not be nil.

56.18.14 SetAttributes(Range as CFRangeMBS, replacements as CFDictionaryMBS, clearOtherAttributes as boolean)

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Sets the value of multiple attributes over the specified range, which should be valid.
Notes: If clearOtherAttributes is false, existing attributes (which aren't being replaced) are left alone; otherwise they are cleared. The dictionary should be setup for "usual" CF type usage — CFString keys, and arbitrary CFType values. Note that after this call, further mutations to the replacement dictionary argument by the caller will not affect the contents of the attributed string.

56.19 class CFMutableBagMBS

56.19.1 class CFMutableBagMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation mutable bag.
Notes: If the release property is true, the destructor of this class will release the set reference.
Subclass of the CFBagMBS class.

56.19.2 Methods

56.19.3 Add(value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Adds an object to this bag.

56.19.4 Remove(value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Removes an object in this bag.

56.19.5 RemoveAll

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Removes all items from this bag.

56.19.6 Replace(value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Replaces an object in this bag.

56.19.7 Set(value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Sets an object in this bag.

56.20 class CFMutableBinaryDataMBS

56.20.1 class CFMutableBinaryDataMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for core foundation data.
Example:

```
// build binary data piece by piece
Var data As New CFMutableBinaryDataMBS(0)
data.AppendStr "Header"

Var numbers As New MemoryBlock(8)
numbers.Int32Value(0) = 1234
numbers.Int32Value(4) = 5678
data.AppendMem numbers

data.ReplaceStr("HEADER", 0, 6) // overwrite the first 6 bytes
MessageBox data.len.ToString + " bytes, starts with " + data.Str(0, 6)
```

Notes: If the release property is true, the destructor of this class will release the data reference.
This class works on Windows with QuickTime 7 installed.
Subclass of the CFBinaryDataMBS class.
Blog Entries

- MBS Real Studio Plugins, version 13.0pr1

56.20.2 Methods

56.20.3 AppendCFBinaryDataMBS(m as CFBinaryDataMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Appends the bytes from the given CFBinary object.
Notes: This method may fail on low memory, e.g. on Mac OS Classic running a Carbon application with a small application memory partition size.
See also:

- 56.20.4 AppendCFBinaryDataMBS(m as CFBinaryDataMBS,len as Integer) 9289

56.20.4 AppendCFBinaryDataMBS(m as CFBinaryDataMBS,len as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Appends the bytes from the given CFBinary object.
Notes: This method may fail on low memory, e.g. on Mac OS Classic running a Carbon application with a small application memory partition size.
See also:

- 56.20.3 AppendCFBinaryDataMBS(m as CFBinaryDataMBS) 9289

56.20.5 AppendMem(m as memoryblock)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Appends the bytes from the given memoryblock.
Notes: This method may fail on low memory, e.g. on Mac OS Classic running a Carbon application with a small application memory partition size.
See also:

- 56.20.6 AppendMem(m as memoryblock,len as Integer) 9290

56.20.6 AppendMem(m as memoryblock,len as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Appends the bytes from the given memoryblock.
Notes: This method may fail on low memory, e.g. on Mac OS Classic running a Carbon application with a small application memory partition size.
See also:

- 56.20.5 AppendMem(m as memoryblock) 9290

56.20.7 AppendStr(s as string)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Appends the bytes from the given string.
Notes: This method may fail on low memory, e.g. on Mac OS Classic running a Carbon application with a small application memory partition size.
See also:

- 56.20.8 AppendStr(s as string,len as Integer) 9290

56.20.8 AppendStr(s as string,len as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Appends the bytes from the given string.
Notes: This method may fail on low memory, e.g. on Mac OS Classic running a Carbon application with a small application memory partition size.
See also:

- 56.20.7 AppendStr(s as string) 9290

56.20.9 Constructor(capacity as Integer)

MBS MacCF Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: The constructor for creating a new mutable data object.
Example:

```
// creates empty data object
Var c as new CFMutableBinaryDataMBS(10)
MessageBox str(c.Len)+" length"
```

See also:

- 56.20.10 Constructor(data as MemoryBlock) 9291
- 56.20.11 Constructor(data as string) 9291

56.20.10 Constructor(data as MemoryBlock)

MBS MacCF Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Creates a new data object with given content.
Example:

```
Var m as MemoryBlock = "Hello"
Var d as new CFMutableBinaryDataMBS(m)

MessageBox d.Str
```

See also:

- 56.20.9 Constructor(capacity as Integer) 9291
- 56.20.11 Constructor(data as string) 9291

56.20.11 Constructor(data as string)

MBS MacCF Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Creates a new data object with given content.
Example:

```
Var m as string = "Hello"
Var d as new CFMutableBinaryDataMBS(m)

MessageBox d.Str
```

See also:

- 56.20.9 Constructor(capacity as Integer) 9291
- 56.20.10 Constructor(data as MemoryBlock) 9291

56.20.12 Delete(pos as Integer,len as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Deletes bytes from a binary data object.
Notes: This method may fail on low memory, e.g. on Mac OS Classic running a Carbon application with a small application memory partition size.

56.20.13 IncreaseLength(extralen as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Resizes the binary data by extralen adding additional bytes.
Notes: This method may fail on low memory, e.g. on Mac OS Classic running a Carbon application with a small application memory partition size.

56.20.14 ReplaceCFBinaryDataMBS(m as CFBinaryDataMBS,pos as Integer,len as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Replaces len bytes inside the binary data which start at position pos with the bytes from the given binary data.
See also:

- 56.20.15 ReplaceCFBinaryDataMBS(m as CFBinaryDataMBS,pos as Integer,len as Integer,newlen as Integer) 9293

56.20.15 ReplaceCFBinaryDataMBS(m as CFBinaryDataMBS,pos as Integer,len as Integer,newlen as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Replaces len bytes inside the binary data which start at position pos with the bytes from the given binary data.
See also:

- 56.20.14 ReplaceCFBinaryDataMBS(m as CFBinaryDataMBS,pos as Integer,len as Integer) 9292

56.20.16 ReplaceMem(m as memoryblock,pos as Integer,len as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Replaces len bytes inside the binary data which start at position pos with the bytes from the memoryblock.
See also:

- 56.20.17 ReplaceMem(m as memoryblock,pos as Integer,len as Integer,newlen as Integer) 9293

56.20.17 ReplaceMem(m as memoryblock,pos as Integer,len as Integer,newlen as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Replaces len bytes inside the binary data which start at position pos with the bytes from the memoryblock.
See also:

- 56.20.16 ReplaceMem(m as memoryblock,pos as Integer,len as Integer) 9293

56.20.18 ReplaceStr(s as string,pos as Integer,len as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Replaces len bytes inside the binary data which start at position pos with the bytes from the string.
See also:

- 56.20.19 ReplaceStr(s as string,pos as Integer,len as Integer,newlen as Integer) 9293

56.20.19 ReplaceStr(s as string,pos as Integer,len as Integer,newlen as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Replaces len bytes inside the binary data which start at position pos with the bytes from the string.
See also:

- 56.20.18 ReplaceStr(s as string,pos as Integer,len as Integer) 9293

56.20.20 SetLength(len as Integer)

MBS MacCF Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Sets length of the data.

56.21 class CFMutableCharacterSetMBS

56.21.1 class CFMutableCharacterSetMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation character set.
Notes: If the release property is true, the destructor of this class will release the set reference.
This class works on Windows with QuickTime 7 installed.
Subclass of the CFCharacterSetMBS class.
Blog Entries

- MBS Real Studio Plugins, version 13.0pr1

56.21.2 Methods

56.21.3 AddCFStringMBS(s as CFStringMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Adds a range of characters from the CFStringMBS.

56.21.4 AddRange(min as Integer,max as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Adds a range of characters from min to max to the character set.

56.21.5 Intersect(value as CFCharacterSetMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Makes a intersection between both CFCharacterSets.

56.21.6 Invert

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Inverts this character set.

56.21.7 RemoveCFStringMBS(s as CFStringMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Removes a range of characters from the CFStringMBS.

56.21.8 RemoveRange(min as Integer,max as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Removes a range of characters from min to max to the character set.

56.21.9 Union(value as CFCharacterSetMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Makes a Union between both CFCharacterSets.

56.22 class CFMutableDictionaryMBS

56.22.1 class CFMutableDictionaryMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation dictionary.
Notes: If the release property is true, the destructor of this class will release the dictionary reference.
This class works on Windows with QuickTime 7 installed.
Subclass of the CFDictionaryMBS class.
Blog Entries

- MBS Real Studio Plugins, version 13.0pr1

56.22.2 Methods

56.22.3 Add(key as CFObjectMBS,value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Adds a key value combination to the dictionary.
Example:

```
Var d as CFMutableDictionaryMBS

d=NewCFMutableDictionaryMBS
d.Add NewCFStringMBS("Key"),NewCFStringMBS("Value")
MessageBox d.XML.str
```

56.22.4 Remove(key as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Removes all entries with the given key.
Notes: Maybe no key is found.

56.22.5 RemoveAll

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Removes all entries.

56.22.6 Replace(key as CFObjectMBS,value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Replaces all entries with the given key to contain the given value.
Notes: Maybe no key is found.

56.22.7 Set(key as CFObjectMBS,value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Sets the entry with the given key to the given value.
Example:

```
Var d as new CFMutableDictionaryMBS

d.Add NewCFStringMBS("Key"), NewCFStringMBS("Value")
d.Set NewCFStringMBS("Key"), NewCFStringMBS("Value2") // set changes value, add would not change
it here

MessageBox d.XML.Str
```

56.23 class CFMutableSetMBS

56.23.1 class CFMutableSetMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation set.
Notes: If the release property is true, the destructor of this class will release the set reference.
Subclass of the CFSetMBS class.

56.23.2 Methods

56.23.3 Add(value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Adds an object to this set.

56.23.4 Remove(value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Removes an object in this set.

56.23.5 RemoveAll

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Removes all items from this set.

56.23.6 Replace(value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Replaces an object in this set.

56.23.7 Set(value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Sets an object in this set.

56.24 class CFMutableStringMBS

56.24.1 class CFMutableStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation mutable string.
Example:

```
// edit a Core Foundation string in place: trim, capitalize and append
Var s As CFMutableStringMBS = NewCFStringMBS(" hello world ").Edit
s.Trim(NewCFStringMBS(" "))
s.Capitalize
s.AppendString "!"
MessageBox s.Str // Hello World!
```

Notes: If the release property is true, the destructor of this class will release the set reference.
This class works on Windows with QuickTime 7 installed.
Subclass of the CFStringMBS class.
Blog Entries

- MBS Xojo Plugins, version 18.2pr1
- MBS Real Studio Plugins, version 13.0pr1

56.24.2 Methods

56.24.3 AppendCFStringMBS(s as CFStringMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Appends the given CFStringMBS.

56.24.4 AppendString(s as String)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Appends the given Xojo string.

56.24.5 Capitalize

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Changes the first character represented by a CFStringMBS object to uppercase (if it is a lowercase alphabetical character).

56.24.6 Delete(pos as Integer,len as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Deletes a range of characters in a mutable CFStringMBS object.

56.24.7 Insert(index as Integer,s as CFStringMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Inserts a string at a specified location in the character buffer of a mutable CFStringMBS object.

56.24.8 LocalizedCapitalize(LocaleIdentifier as String)

MBS MacCF Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: Localized capitalize.
Notes: Locale identifier can be "de", "de_DE" or "German" style.
Raises RaiseUnsupportedOperationException if locale identifier is not known.

56.24.9 LocalizedLowercase(LocaleIdentifier as String)

MBS MacCF Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: Localized lowercase.
Notes: Locale identifier can be "de", "de_DE" or "German" style.
Raises RaiseUnsupportedOperationException if locale identifier is not known.

56.24.10 LocalizedUppercase(LocaleIdentifier as String)

MBS MacCF Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: Localized uppercase.
Example:

```
Var m1 as new CFMutableStringMBS("i")
Var m2 as new CFMutableStringMBS("i")
```

```
m1.Uppercase
m2.LocalizedUppercase("Turkish")

MessageBox m1.Str+EndOfLine+m2.Str
// shows to variants of capital I
```

Notes: Locale identifier can be "de", "de_DE" or "German" style.
Raises RaiseUnsupportedOperationException if locale identifier is not known.

56.24.11 Lowercase

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Changes all uppercase alphabetical characters in a mutable CFStringMBS to lowercase.

56.24.12 Normalize(NormalizationForm as Integer)

MBS MacCF Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: Normalizes the string into the specified form as described in Unicode Technical Report #15.
Example:

```
const kCFStringNormalizationFormD = 0 // Canonical Decomposition
const kCFStringNormalizationFormKD = 1 // Compatibility Decomposition
const kCFStringNormalizationFormC = 2 // Canonical Decomposition followed by Canonical Composition
const kCFStringNormalizationFormKC = 3 // Compatibility Decomposition followed by Canonical Composition

Var s as CFStringMBS
Var m as CFMutableStringMBS

s=NewCFStringMBS("Hello √©")
m=s.Normalize(kCFStringNormalizationFormD)

MessageBox str(s.Len)+" "+str(m.len)

// decomposed the length is one more.
```

Notes: Requires Mac OS X 10.2 or newer.

56.24.13 Pad(padstr as CFStringMBS,len as Integer,indexIntoPad as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Enlarges the string represented by a CFStringMBS object, padding it with specified characters, or truncates the string.
Notes: The CFStringMBS.Pad function has two purposes. It either enlarges the character buffer of a mutable CFStringMBS object to a given length, padding the added length with a given character or characters, or it truncates the character buffer to a smaller size. The key parameter for this behavior is the length parameter; if it is greater than the current length of the represented string, padding takes place, and if it less than that length, truncation occurs.

For example, say you have a mutable CFStringMBS (aMutStr) containing the characters "abcdef". The call

CFStringMBS.Pad(newcfstring(". "), 12, 1)

results in aMutStr containing "abcdef . . .". However, the following call

CFStringMBS.Pad(nil, 3, 0)

results in aMutStr containing "abc".

56.24.14 Replace(newstr as CFStringMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Replaces the content of this CFMutableStringMBS with the one from newstr.
See also:

- 56.24.15 Replace(pos as Integer,len as Integer,newstr as CFStringMBS) 9304

56.24.15 Replace(pos as Integer,len as Integer,newstr as CFStringMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Replaces the substring with the given range of this CFMutableStringMBS with the one from newstr.
See also:

- 56.24.14 Replace(newstr as CFStringMBS) 9304

56.24.16 Trim

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Trims whitespace from the beginning and end of the characters represented by a mutable CFStringMBS object.
See also:

- 56.24.17 Trim(trimchar as CFStringMBS) 9305

56.24.17 Trim(trimchar as CFStringMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Trims a specified substring from the beginning and end of the character contents represented by a mutable CFStringMBS object.
See also:

- 56.24.16 Trim 9305

56.24.18 Truncate(len as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: If the string is longer than len, it is truncated to len.

56.24.19 Uppercase

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Changes all lowercase alphabetical characters in a mutable CFStringMBS object to uppercase.

56.25 class CFNumberMBS

56.25.1 class CFNumberMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation number.
Example:

Var n as CFNumberMBS = NewCFNumberMBSDouble(4.3)

MessageBox str(n.doubleValue)

Notes: If the release property is true, the destructor of this class will release the number reference.
Subclass of the CFObjectMBS class.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.4pr4

56.25.2 Methods

56.25.3 Compare(other as CFNumberMBS) as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Compares two CFNumbers.
Notes: Return values:

Less Than	-1
Equal To	0
Greater Than	1

From CFNumberMBS.h:

Compares the two CFNumberMBS instances. If conversion of the types of the values is needed, the conversion and comparison follow human expectations and not C's promotion and comparison rules. Negative zero compares less than positive zero.
Positive infinity compares greater than everything except itself, to which it compares equal. Negative infinity compares less than everything except itself, to which it compares equal. Unlike standard practice, if both numbers are NaN, then they compare equal; if only one of the numbers is NaN, then the NaN compares greater than the other number if it is negative, and smaller than the other number if it is positive.

56.25.4 NewWithDouble(value as Double) as CFNumberMBS

MBS MacCF Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a new CFNumberMBS with a 64bit float value.

56.25.5 NewWithInt16(value as Int16) as CFNumberMBS

MBS MacCF Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a new CFNumberMBS with a 16bit integer value.

56.25.6 NewWithInt32(value as Int32) as CFNumberMBS

MBS MacCF Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a new CFNumberMBS with a 32bit integer value.

56.25.7 NewWithInt64(value as Int64) as CFNumberMBS

MBS MacCF Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a new CFNumberMBS with a 64bit integer value.
Example:

```
Var c as CFNumberMBS = CFNumberMBS.NewWithInt64(1234567891234567 89)

// shows type. 4 is signed 64-bit integer
MessageBox str(c.NumberType)+": "+str(c.int64Value)
```

56.25.8 NewWithInt8(value as Int8) as CFNumberMBS

MBS MacCF Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a new CFNumberMBS with a 8bit integer value.

56.25.9 NewWithSingle(value as Single) as CFNumberMBS

MBS MacCF Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a new CFNumberMBS with a 32bit float value.

56.25.10 Properties

56.25.11 ByteSize as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the size in bytes of the type of the number.
Notes: (Read only property)

56.25.12 doubleValue as Double

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The value of this CFNumberMBS object.
Notes: (Read only property)

56.25.13 int16Value as Int16

MBS MacCF Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Queries value as 16bit integer.
Notes: (Read only property)

56.25.14 int32Value as Int32

MBS MacCF Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Queries value as 32bit integer.
Notes: (Read only property)

56.25.15 int64Value as Int64

MBS MacCF Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Queries value as 64bit integer.
Example:

```
Var c as CFNumberMBS = CFNumberMBS.NewWithInt64(123456789123456789)

// shows type. 4 is signed 64-bit integer
MessageBox str(c.NumberType)+": "+str(c.int64Value)
```

Notes: (Read only property)

56.25.16 int8Value as Int8

MBS MacCF Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Queries value as 8bit integer.
Notes: (Read only property)

56.25.17 integerValue as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The value of this CFNumberMBS object.
Example:

```
Var n as CFNumberMBS

n=NewCFNumberMBSInteger(45)

MessageBox str(n.doubleValue)+" "+str(n.integerValue)+" "+str(n.singleValue)

n=NewCFNumberMBSSingle(45.67)

MessageBox str(n.doubleValue)+" "+str(n.integerValue)+" "+str(n.singleValue)

n=NewCFNumberMBSDouble(45.6789)

MessageBox str(n.doubleValue)+" "+str(n.integerValue)+" "+str(n.singleValue)

// in version 5.1 of the plugins:
// 45 45 45
// 45.67 0 45.67
// 45.6789 0 0
//
// in version 5.2 of the plugins: (after a fix)
// 45 45 45
// 45.67 45 45.67
// 45.6789 45 45.6789
```

Notes: Returns a trancated value if the number is not storeable in an integer.
(Read only property)

56.25.18 isFloat as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns TRUE if the type of the CFNumberMBS's value is one of the defined floating point types.
Notes: (Read only property)

56.25.19 NumberType as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the storage format of the CFNumberMBS's value.
Notes: Possible values:

Name	Value	Xojo Datatype
SInt8	1	-
SInt16	2	-
SInt32	3	integer
SInt64	4	-
Float32	5	single
Float64	6	double
Char	7	-
Short	8	-
Int	9	-
Long	10	integer
LongLong	11	-
Float	12	single
Double	13	double
CFIndex	14	integer

(Read only property)

56.25.20 singleValue as single

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The value of this CFNumberMBS object.
Example:

```
Var n as CFNumberMBS

n=NewCFNumberMBSInteger(45)

MessageBox str(n.doubleValue)+" "+str(n.integerValue)+" "+str(n.singleValue)

n=NewCFNumberMBSSingle(45.67)

MessageBox str(n.doubleValue)+" "+str(n.integerValue)+" "+str(n.singleValue)

n=NewCFNumberMBSDouble(45.6789)

MessageBox str(n.doubleValue)+" "+str(n.integerValue)+" "+str(n.singleValue)

// in version 5.1 of the plugins:
// 45 45 45
// 45.67 0 45.67
// 45.6789 0 0
//
// in version 5.2 of the plugins: (after a fix)
// 45 45 45
// 45.67 45 45.67
// 45.6789 45 45.6789
```

Notes: Returns a trancated value if the number is not storeable in a single.
(Read only property)

56.26 class CFObjectMBS

56.26.1 class CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation object.
Example:

```
// is object is a CFStringMBS, return it a Xojo string.
Function st(o as CFObjectMBS) As string
if o isa CFStringMBS then
return CFStringMBS(o).str
end if
End Function
```

Notes: If the release property is true, the destructor of this class will release the object reference.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr5
- MBS Real Studio Plugins, version 13.0fc1

56.26.2 Methods

56.26.3 close

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

56.26.4 DeepCopy as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a deep copy of the CFObject.
Notes: Copies all sub objects if the Object has sub objects (like the Dictionary).

56.26.5 EncodedData as MemoryBlock

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: Returns the content of the object and all subobjects as a binary encoded plist file content.
Notes: Returns nil on any error. For example if you have CFDictionary with keys not being CFStringMBS objects.
You can write this to a plist file.

56.26.6 Equal(o as CFObjectMBS) as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns true if both CFObjects are equal in type and content.

56.26.7 NewCFObject(handle as Integer) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates new plugin CFObjectMBS around a handle of a CF Type.
Example:

```
// make string
Var s as CFStringMBS = NewCFStringMBS("Hello World")

// get handle
Var h as Integer = s.Handle

// get back from handle to plugin object
Var o as CFObjectMBS = CFObjectMBS.NewCFObject(h)

// and see if plugin detected a string
if o isa CFStringMBS then
Var t as CFStringMBS = CFStringMBS(o)

MessageBox t.str
end if
```

56.26.8 ReleaseObject

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Decreases the retain count of this object.
Notes: If the retain count falls below 1, the object is destroyed.

56.26.9 RetainCount as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the reference counter of the object.
Example:

```
Var o as CFObjectMBS
Var s as CFStringMBS

s=NewCFStringMBS("Hello")

MessageBox "s has "+str(s.RetainCount)+" refs in CF"
o=s

MessageBox "o has "+str(o.RetainCount)+" refs in CF"

o.RetainObject

MessageBox "o has "+str(o.RetainCount)+" refs in CF"

o.ReleaseObject

MessageBox "o has "+str(o.RetainCount)+" refs in CF"

o.Close

MessageBox "o has "+str(o.RetainCount)+" refs in CF"
```

Notes: If the retain count falls below 1, the object is destroyed.

56.26.10 RetainObject

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Increases the retain count of this object.
Example:

```
Function CFDateFromCFObject(o as cfobjectMBS) As cfdateMBS
Var d as CFDateMBS

if o<>nil then
if o.Type=kCFDateMBSTypeID then
d=new CFDateMBS
d.Handle=o.Handle
d.RetainObject
end if
end if

Exception
End Function
```

Notes: If the retain count falls below 1, the object is destroyed.

56.26.11 XML as CFBinaryDataMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the content of the object and all subobjects as a XML file content.
Example:

```
// Save a dictionary in a XML file:

Var d as CFMutableDictionaryMBS
Var f as FolderItem
Var t as TextOutputStream

// Create dictionary
d=NewCFMutableDictionaryMBS
// Fill dictionary
d.Add NewCFStringMBS("Key"),NewCFStringMBS("Value")

// get file name
f=New FolderItem("CF XML Test.txt")

// create file
t=f.CreateTextFile
// Write XML
t.Write d.XML.Str
// close file
t.Close
```

Notes: Returns nil on any error. For example if you have CFDictionary with keys not being CFStringMBS

objects.
You can write this to a plist file.

56.26.12 XMLdata as String

MBS MacCF Plugin, Plugin Version: 19.0, Platform: macOS, Targets: All.

Function: Returns the content of the object and all subobjects as a XML file content.
Notes: Returns empty string on any error. For example if you have CFDictionary with keys not being CFStringMBS objects.
You can write this to a plist file.

56.26.13 Properties

56.26.14 Handle as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The core foundation object references.
Notes: (Read and Write property)

56.26.15 Hash as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a hash code for this object.
Notes: (Read only property)

56.26.16 Lasterror as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The last error code reported.
Notes: Please check each function on whether it sets the lasterror property.
(Read and Write property)

56.26.17 Type as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID for this object.
Notes: (Read only property)

56.26.18 TypeDescription as String

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the type description for this object.
Notes: e.g. "CFString" or "CFNumber".
(Read only property)

56.27 class CFPreferencesMBS

56.27.1 class CFPreferencesMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for the core foundation preferences services.
Example:

```
// This example needs a window with ListBox1.
Sub Open()
// in a listbox on a window, list all preferences applications for the current user
Var c as CFArrayMBS
Var p as CFPreferencesMBS
Var i as Integer
Var count as Integer
Var o as CFObjectMBS
Var s as CFStringMBS

p=new CFPreferencesMBS
c=p.CopyApplicationList(p.kCFPreferencesCurrentUser, p.kCFPreferencesAnyHost)

count=c.Count-1
for i=0 to count
o=c.Item(i)
if o isa CFStringMBS then
s=CFStringMBS(o)
Window1.ListBox1.AddRow s.str
end if
next

Title=str(ListBox1.ListCount)+" "+Title
End Sub
```

Notes: Search for Apple Developer documentation on CFPreferences for details on functionality these plugin functions provide.

56.27.2 Methods

56.27.3 AddSuitePreferencesToApp(ApplicationID as CFStringMBS, SuiteID as CFStringMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Adds a new suite to the application preferences.

56.27.4 AppSynchronize(ApplicationID as CFStringMBS) as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Synchronizes the values in the RAM with the disk for the given application.
Notes: Returns false on any error.

56.27.5 CopyAppBooleanValue(Key as CFStringMBS, ApplicationID as CFStringMBS) as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Copies the application preferences boolean value.
Notes: On an error it returns false and KeyExistsAndHasValidFormat is set to false.

56.27.6 CopyAppIntegerValue(Key as CFStringMBS, ApplicationID as CFStringMBS) as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Copies the application preferences integer value.
Notes: On an error it returns false and KeyExistsAndHasValidFormat is set to false.

56.27.7 CopyApplicationList(userName as CFStringMBS, hostName as CFStringMBS) as CFArrayMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a list of all applications which have preferences.
Example:

```
// This example needs a window with ListBox1.
Sub Open()
// in a listbox on a window, list all preferences applications for the current user
Var c as CFArrayMBS
Var p as CFPreferencesMBS
Var i as Integer
Var count as Integer
Var o as CFObjectMBS
```

```
Var s as CFStringMBS

p=new CFPreferencesMBS
c=p.CopyApplicationList(p.kCFPreferencesCurrentUser, p.kCFPreferencesAnyHost)

count=c.Count-1
for i=0 to count
o=c.Item(i)
if o isa CFStringMBS then
s=CFStringMBS(o)
ListBox1.AddRow s.str
end if
next

Title=str(ListBox1.ListCount)+" "+Title
End Sub
```

Notes: Returns false on any error.

56.27.8 CopyAppValue(Key as CFStringMBS, ApplicationID as CFStringMBS) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Copies the application preferences value.
Example:

```
// copy names of recent items in Xojo Preferences

Var names() as string
Var c as new CFPreferencesMBS

Var o as CFObjectMBS = c.CopyAppValue(NewCFStringMBS("Recent Items Dict"), NewCFStringMBS("com.realsoftware.realstudio"))

if o isa CFArrayMBS then
Var a as CFArrayMBS = CFArrayMBS(o)

Var u as Integer = a.Count-1
for i as Integer = 0 to u

o = a.Item(i)

if o isa CFDictionaryMBS then
Var d as CFDictionaryMBS = CFDictionaryMBS(o)
```

```
Var no as CFObjectMBS = d.Value(NewCFStringMBS("Name"))
if no isa CFStringMBS then

Var ns as CFStringMBS = CFStringMBS(no)

names.Add ns.str
end if
end if
next
end if

MessageBox Join(names,EndOfLine)
```

Notes: Returns nil on any error.

56.27.9 CopyDictionary(ApplicationID as CFStringMBS, userName as CFStringMBS, hostName as CFStringMBS) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Copies all preferences value.
Example:

```
Var p as new CFPreferencesMBS

p.SetValue(NewCFStringMBS("TestString"), NewCFStringMBS("Hello World"), p.kCFPreferencesCurrentApplication, p.kCFPreferencesCurrentUser, p.kCFPreferencesCurrentHost)
p.SetValue(NewCFStringMBS("TestDouble"), NewCFNumberMBSDouble(5.6), p.kCFPreferencesCurrentApplication, p.kCFPreferencesCurrentUser, p.kCFPreferencesCurrentHost)
p.SetValue(NewCFStringMBS("TestInteger"), NewCFNumberMBSInteger(3), p.kCFPreferencesCurrentApplication, p.kCFPreferencesCurrentUser, p.kCFPreferencesCurrentHost)

Var d as CFDictionaryMBS = p.CopyDictionary(p.kCFPreferencesCurrentApplication, p.kCFPreferencesCurrentUser, p.kCFPreferencesCurrentHost)
Var x as CFBinaryDataMBS = d.XML
Var s as string = x.Str

break
// check data in variable s with xml of all properties
```

Notes: Returns nil on any error.

56.27.10 CopyKeyList(ApplicationID as CFStringMBS, userName as CFStringMBS, hostName as CFStringMBS) as CFArrayMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a list of all preferences keys for the given application.
Notes: Returns false on any error.

56.27.11 CopyMultiple(Key as CFArrayMBS, ApplicationID as CFStringMBS, userName as CFStringMBS, hostName as CFStringMBS) as CFDictionaryMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Copies several preferences value.
Notes: Returns nil on any error.

56.27.12 CopyValue(Key as CFStringMBS, ApplicationID as CFStringMBS, userName as CFStringMBS, hostName as CFStringMBS) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Copies a preferences value.
Example:

```
Var c as CFPreferencesMBS
Var o as CFObjectMBS
Var a as CFStringMBS // application
Var k as CFStringMBS // key

k=NewCFStringMBS("AvailableLanguages")
a=NewCFStringMBS("com.apple.systempreferences")

c=new CFPreferencesMBS

o=c.CopyValue(k,a,c.kCFPreferencesCurrentUser,c.kCFPreferencesAnyHost)

CFShowMBS o

// Shows in the console application something like this:
//
// <CFArray >{ type = mutable-small, count = 2, values = (
// 0 : <CFString >{ contents = "en" }
```

```
// 1 : <CFString >{ contents = "de" }
// ) }
```

Notes: Returns nil on any error.

56.27.13 kCFPreferencesAnyApplication as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A constant for preferences functions of Mac OS X.

56.27.14 kCFPreferencesAnyHost as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A constant for preferences functions of Mac OS X.

56.27.15 kCFPreferencesAnyUser as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A constant for preferences functions of Mac OS X.

56.27.16 kCFPreferencesCurrentApplication as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A constant for preferences functions of Mac OS X.

56.27.17 kCFPreferencesCurrentHost as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A constant for preferences functions of Mac OS X.

56.27.18 kCFPreferencesCurrentUser as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A constant for preferences functions of Mac OS X.

56.27.19 RemoveSuitePreferencesFromApp(ApplicationID as CFStringMBS, SuiteID as CFStringMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Removes a new suite to the application preferences.

56.27.20 SetAppValue(Key as CFStringMBS, value as CFObjectMBS, ApplicationID as CFStringMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Sets an application preferences value.
Notes: Note that on saveing all strings are internally converted to UTF-8.

56.27.21 SetMultiple(KeysToSet as CFDictionaryMBS, KeysToRemove as CFArrayMBS, ApplicationID as CFStringMBS, userName as CFStringMBS, hostName as CFStringMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Sets several preferences values.
Notes: Note that on saveing all strings are internally converted to UTF-8.

56.27.22 SetValue(Key as CFStringMBS, Value as CFObjectMBS, ApplicationID as CFStringMBS, userName as CFStringMBS, hostName as CFStringMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Sets a preferences value.
Notes: Note that on saveing all strings are internally converted to UTF-8.

56.27.23 Synchronize(ApplicationID as CFStringMBS, userName as CFStringMBS, hostName as CFStringMBS) as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Synchronizes the values in the RAM with the disk for the given application.
Notes: Returns false on any error.

56.27.24 Properties

56.27.25 KeyExistsAndHasValidFormat as Boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Set by CopyAppBooleanValue and CopyAppIntegerValue.
Notes: (Read and Write property)

56.28 class CFRangeMBS

56.28.1 class CFRangeMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The class for a CFRange.
Notes: A range of sequential items in a container, such as characters in a buffer or elements in a collection.

Xojo Developer Magazine

- 12.4, page 9: News

56.28.2 Methods

56.28.3 Constructor(location as Integer = 0, length as Integer = 0)

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a new range with given values.

56.28.4 Properties

56.28.5 length as Integer

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: An integer representing the number of items in the range.
Notes: (Read and Write property)

56.28.6 location as Integer

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: An integer representing the starting location of the range.
Notes: (Read and Write property)

56.29 class CFSetListMBS

56.29.1 class CFSetListMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for the items of a CFSetMBS.

56.29.2 Methods

56.29.3 Value(index as Integer) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the value with the given index.

56.29.4 Properties

56.29.5 Count as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Counts the items in the set.
Notes: (Read and Write property)

56.30 class CFSetMBS

56.30.1 class CFSetMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation set.
Example:

```
// collect unique values in a Core Foundation set
Var s As New CFSetMBS
Var m As CFMutableSetMBS = s.edit
m.Add New CFStringMBS("apple")
m.Add New CFStringMBS("pear")
m.Add New CFStringMBS("apple") // ignored, already in the set

MessageBox m.Count.ToString + " values, contains pear: " + m.ContainsValue(New CFStringMBS("pear")).ToString
```

Notes: If the release property is true, the destructor of this class will release the set reference.
Subclass of the CFObjectMBS class.

56.30.2 Methods

56.30.3 clone as CFSetMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Clones the set and all values.

56.30.4 Constructor

MBS MacCF Plugin, Plugin Version: 10.1, Platform: macOS, Targets: All.

Function: Creates a new editable set object.
Example:

```
Var e as new CFMutableSetMBS
e.Add(NewCFStringMBS("Hello"))
MessageBox str(e.Count)
```

56.30.5 ContainsValue(value as CFObjectMBS) as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Does the set contain this value?

56.30.6 CountValue(value as CFObjectMBS) as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Counts how often this value is inside the set.

56.30.7 edit as CFMutableSetMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: To edit a set, this method returns you a CFMutableSetMBS.

56.30.8 list as CFSetListMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a list of all values.
Notes: This list will be invalid whenever this set is destroyed.

56.30.9 Value(value as CFObjectMBS) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: If the value is found the value is returned.
Notes: Returns nil if key is not found.

56.30.10 Properties

56.30.11 Count as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Counts all values.
Example:

```
Var x as new CFMutableSetMBS

x.Set(NewCFStringMBS("Hello"))

MessageBox str(x.Count)
```

Notes: (Read only property)

56.31 class CFStringMBS

56.31.1 class CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation string.
Example:

```
Var s as CFStringMBS
Var t as CFStringMBS
Var x as string
Var o as CFObjectMBS

s=NewCFStringMBS("hello")

// make XML as string
x=s.XML.str

// recreate object from XML
o=NewCFObjectMBSFromXML(NewCFBinaryDataMBSStr(x))

if o isa CFStringMBS then
t=CFStringMBS(o)

// show string content
MessageBox t.str
end if
```

Notes: If the release property is true, the destructor of this class will release the string reference.
This class works on Windows with QuickTime 7 installed.
Subclass of the CFObjectMBS class.

56.31.2 Methods

56.31.3 Character(index as Integer) as string

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the character from this string with the given index.
Notes: The returned Xojo string contains a Unicode character.

56.31.4 Characters(pos as Integer,len as Integer) as string

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the characters from this string in the given range.
Notes: The returned Xojo string contains Unicode characters.

56.31.5 Compare(other as CFStringMBS) as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Compares two strings.
Notes: Return values:

Less Than	-1
Equal To	0
Greater Than	1
Function not available	-2

See also:

- 56.31.6 Compare(other as CFStringMBS, CaseInsensitive as boolean) as Integer 9332
- 56.31.7 Compare(other as CFStringMBS, CaseInsensitive as boolean, Numerically as boolean) as Integer 9333
- 56.31.8 Compare(other as CFStringMBS, Options as Integer) as Integer 9334

56.31.6 Compare(other as CFStringMBS, CaseInsensitive as boolean) as Integer

MBS MacCF Plugin, Plugin Version: 2.8, Platform: macOS, Targets: All.

Function: Compares two strings.
Notes: Return values:

Less Than	-1
Equal To	0
Greater Than	1
Function not available	-2

See also:

- 56.31.5 Compare(other as CFStringMBS) as Integer 9332
- 56.31.7 Compare(other as CFStringMBS, CaseInsensitive as boolean, Numerically as boolean) as Integer 9333
- 56.31.8 Compare(other as CFStringMBS, Options as Integer) as Integer 9334

56.31.7 Compare(other as CFStringMBS, CaseInsensitive as boolean, Numerically as boolean) as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Compares two strings.
Example:

```
Var s as CFStringMBS
Var t as CFStringMBS
Var n1,n2 as Integer

s=NewCFStringMBS("Hello7.txt")
t=NewCFStringMBS("Hello10.txt")
n1=s.Compare(t,false)

n2=s.Compare(t,false,true)

MessageBox "Without nummerical: "+str(n1)+", With nummerical: "+str(n2)+"."
```

Notes: Numerically works only if Mac OS X 10.2 or newer is running.

Return values:

See also:

- 56.31.5 Compare(other as CFStringMBS) as Integer 9332

Less Than	-1
Equal To	0
Greater Than	1
Function not available	-2

- 56.31.6 Compare(other as CFStringMBS, CaseInsensitive as boolean) as Integer 9332
- 56.31.8 Compare(other as CFStringMBS, Options as Integer) as Integer 9334

56.31.8 Compare(other as CFStringMBS, Options as Integer) as Integer

MBS MacCF Plugin, Plugin Version: 7.1, Platform: macOS, Targets: All.

Function: Compares two strings.
Example:

```
// Just a quick and dirty test for this function:

Var s(10) as string
Var i as Integer
Var temp as string
Var isDirty as boolean
Var a,b as CFStringMBS

s(1)="Apfel"
s(2)="Strasse"
s(3)="B√§um"
s(4)="Stra√üe"
s(5)="Zaun"
s(6)="√§pfel"
s(7)="b√§um"
s(8)="Baum"
s(9)="√Ñpfel"
s(10)="Ende"

// if kCFCompareLocalized is used, the √Ñpfel come near Apfel.

const kCFCompareCaseInsensitive = 1
const kCFCompareBackwards = 4 //* Starting from the end of the string */
const kCFCompareAnchored = 8 //* Only at the specified starting point */
const kCFCompareNonliteral = 16 //* If specified, loose equivalence is performed (o-umlaut == o, umlaut)
*/
const kCFCompareLocalized = 32 //* User's default locale is used for the comparisons */
const kCFCompareNumerically = 64 //* Numeric comparison is used; that is, Foo2.txt <Foo7.txt <Foo25.txt
*/
```

```
'Sortieren
do
isDirty = false// we haven't touched anything yet
for i = 1 to 10-1// loop through all the numbers

a=NewCFStringMBS(s(i))
b=NewCFStringMBS(s(i+1))

if a.Compare(b,kCFCompareLocalized)>0 then
temp = s(i+1)
s(i+1) = s(i)
s(i) = temp
isDirty = true// we touched the data so mark it as dirty
end
next
loop until isDirty = false// if we made it without touching the data then we are done

for i=1 to 10
EditField1.text=EditField1.text + s(i) + chr(13)
next i
```

Notes: Numerically works only if Mac OS X 10.2 or newer is running.

Return values:

Less Than	-1
Equal To	0
Greater Than	1
Function not available	-2

See also:

- 56.31.5 Compare(other as CFStringMBS) as Integer 9332
- 56.31.6 Compare(other as CFStringMBS, CaseInsensitive as boolean) as Integer 9332
- 56.31.7 Compare(other as CFStringMBS, CaseInsensitive as boolean, Numerically as boolean) as Integer 9333

56.31.9 Constructor(text as string = "")

MBS MacCF Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Creates a new CFString.
Example:

```
Var c as new CFStringMBS("Hello")
MessageBox c
```

56.31.10 Edit as CFMutableStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a mutable string.

56.31.11 ExactFind(stringtofind as CFStringMBS) as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Finds the given string.
Notes: Exactly, so case sensitive.

56.31.12 Find(stringtofind as CFStringMBS) as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Finds the given string.

56.31.13 HasPrefix(s as CFStringMBS) as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Does this string start with s.

56.31.14 HasSuffix(s as CFStringMBS) as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Does this string end with s.

56.31.15 Mid(pos as Integer,len as Integer) as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a new CFStringMBS with a substring from the current CFStringMBS.
Notes: Compare to Mid in RB.

56.31.16 Normalize(NormalizationForm as Integer) as CFMutableStringMBS

MBS MacCF Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: Normalizes the string into the specified form as described in Unicode Technical Report #15.
Example:

```
const kCFStringNormalizationFormD = 0 // Canonical Decomposition
const kCFStringNormalizationFormKD = 1 // Compatibility Decomposition
const kCFStringNormalizationFormC = 2 // Canonical Decomposition followed by Canonical Composition
const kCFStringNormalizationFormKC = 3 // Compatibility Decomposition followed by Canonical Composition

Var s as CFStringMBS
Var m as CFMutableStringMBS

s=NewCFStringMBS("Hello √©")
m=s.Normalize(kCFStringNormalizationFormD)

MessageBox str(s.Len)+" "+str(m.len)

// decomposed the length is one more.
```

Notes: Requires Mac OS X 10.2 or newer.
Returns nil on any error.

56.31.17 Operator_Convert as String

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: An internal method for Xojo 5.x.
Example:

```
Var s as cfstringmbs
s=NewCFStringMBS("Hello")
MessageBox s
```

Notes: This method is used by Xojo 5.x to allow you to directly create a Xojo string based on a CoreFoundation string.
Xojo may create a NilObjectException if the cfstring object is nil.
See also:

- 56.31.18 Operator_Convert(v As String) 9338

56.31.18 Operator_Convert(v As String)

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: An internal method for Xojo 5.x.
Example:

```
Var s as cfstringmbs
s="Hello"
// replaces: s=NewCFStringMBS("Hello")
```

Notes: This method is used by Xojo 5.x to allow you to directly create a corefoundation string object based on a Xojo string.
See also:

- 56.31.17 Operator_Convert as String 9337

56.31.19 stringWithHandle(Handle as Integer) as CFStringMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: Creates a new string object based on a handle value.
Notes: Will retain the reference.

56.31.20 Properties

56.31.21 DisplayString as String

MBS MacCF Plugin, Plugin Version: 10.1, Platform: macOS, Targets: All.

Function: For the debugger the string of this CFString reduced to maximum of 1000 characters.
Notes: (Read only property)

56.31.22 DoubleValue as Double

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the string interpreted as an double value.
Example:

```
Var d as CFStringMBS = NewCFStringMBS("3.4")
MessageBox str(d.DoubleValue)
```

Notes: Compare to val.
Skips whitespace; returns 0.0 on error.
(Read only property)

56.31.23 FastestEncoding as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Obtains the encoding for the characters in a CFString that requires the least conversion time.
Notes: -1 on Windows.
(Read only property)

56.31.24 IntegerValue as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the string interpreted as an integer value.
Example:

```
Var d as CFStringMBS = NewCFStringMBS("3.4")
MessageBox str(d.IntegerValue) // shows 3
```

Notes: Compare to val.
Skips whitespace; returns 0 on error, MAX or -MAX on overflow.
(Read only property)

56.31.25 Len as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the length in chars of the string.
Notes: (Read only property)

56.31.26 SmallestEncoding as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Obtains the smallest encoding on the current system for the character contents of a CFString object.
Notes: Value is -1 on Windows and Mac OS Classic.
(Read only property)

56.31.27 Str as String

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the string data as Xojo string.
Notes: Returns the string in a one byte encoding. If possible ASCII string, else if possible MacRoman encoded else UTF8.
(Read and Write computed property)

56.31.28 UStr as String

MBS MacCF Plugin, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use Str instead. **Function:** Returns the string data as Xojo unicode string (16bit).
Notes: If the string can not be returned as an unicode string, this function returns it as a normal string in System script (e.g. MacRoman).
(Read and Write computed property)

56.32 class CFTimeIntervalMBS

56.32.1 class CFTimeIntervalMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: A class for a time interval value.
Notes: The time interval is basicly a double property inside the class.

56.32.2 Properties

56.32.3 Value as Double

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The value of the class.
Notes: (Read and Write property)

56.33 class CFTimeZoneMBS

56.33.1 class CFTimeZoneMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: A class for a core foundation time zone.
Example:

```
Var t as new CFTimeZoneMBS
MessageBox t.Name.str
```

Notes: Subclass of the CFObjectMBS class.

56.33.2 Methods

56.33.3 Abbreviation(atTime as CFAbsoluteTimeMBS) as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The abbreviation for the given timezone name.
Example:

```
Var t as new CFTimeZoneMBS
MessageBox t.Abbreviation(nil)
```

Notes: Returns nil on any error.
As the name may change depending on whether it's daylight saving time, you should give an absolute time value.

56.33.4 Constructor

MBS MacCF Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: A constructor which fills the object with the system timezone.
Example:

```
Var CFDateLocal as new CFAbsoluteTimeMBS
Var CFTimeZone as new CFTimeZoneMBS

Var MyDSTState as Boolean = CFTimeZone.IsDaylightSavingTime(CFDateLocal)

MessageBox str(MyDSTState)
```

56.33.5 Data as CFBinaryDataMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The binary data for the timezone.
Example:

```
Var t as new CFTimeZoneMBS
MessageBox t.Data.Str
```

56.33.6 IsDaylightSavingTime(atTime as CFAbsoluteTimeMBS) as boolean

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: whether it's daylight saving time at the given absolute time.
Example:

```
// get current timezone
Var c as CFTimeZoneMBS = SystemCFTimeZoneMBS

// and current time
Var time as CFAbsoluteTimeMBS = CurrentCFAbsoluteTimeMBS

// Do we have daylight saving time?
MessageBox str(c.IsDaylightSavingTime(time))
```

56.33.7 Name as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The name of the timezone.
Example:

```
Var s as CFTimeZoneMBS
s=SystemCFTimeZoneMBS
MessageBox s.Name
```

56.33.8 SecondsFromGMT(atTime as CFAbsoluteTimeMBS) as CFTimeIntervalMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns the time difference to GMT for the given time (for daylight saving).
Example:

```
Var s as cfTimeZoneMBS
s=SystemCFTimeZoneMBS
MessageBox str(s.SecondsFromGMT(nil).Value) // 3600 in Germany
```

Notes: Returns nil on any error.

56.34 class CFURLMBS

56.34.1 class CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation boolean.
Example:

```
// show some properties of an application bundle
Var url As New CFURLMBS(SpecialFolder.Applications.Child("Safari.app"))

Var name As String = url.LocalizedName
Var path As String = url.PosixFileSystemPath
Var isPackage As Boolean = url.IsPackage
Var created As DateTime = url.CreationDate.DateTime

MessageBox "Name: " + name + EndOfLine + _
"Path: " + path + EndOfLine + _
"Package: " + isPackage.ToString + EndOfLine + _
"Created: " + created.ToString
```

Notes: If the release property is true, the destructor of this class will release the url reference.
This class works on Windows with QuickTime 7 installed.
Subclass of the CFObjectMBS class.

56.34.2 Methods

56.34.3 AbsoluteURL as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the absolute URL.
Notes: A URL contains normally a base and a relative part. This function creates one absolute URL from

those parts.

56.34.4 AppendPathComponent(pathcomponent as CFStringMBS,isDirectory as boolean) as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Appends a path component to this URL.

56.34.5 AppendPathExtension(extension as CFStringMBS) as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Appends a path extension to this URL.

56.34.6 BaseURL as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the base URL.
Notes: A URL contains normally a base and a relative part.

56.34.7 CanBeDecomposed as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Can this url be decomposed?

56.34.8 Constructor(File as FolderItem)

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Creates new CFURLMBS based on given folderitem.
Notes: Raises exception if not called on macOS or called with invalid URL.
See also:

- 56.34.9 Constructor(URL as string)

56.34.9 Constructor(URL as string)

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Creates new CFURLMBS based on given URL.
Notes: Raises exception if not called on macOS or called with invalid URL.
See also:

- 56.34.8 Constructor(File as FolderItem) 9346

56.34.10 Data(encoding as Integer, escapeWhitespace as boolean) as CFBinaryDataMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the URL as binary data using the given encoding.

56.34.11 DeleteLastPathComponent as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Deletes the last path component of this URL.

56.34.12 DeletePathExtension as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Deletes the path extension of this URL.

56.34.13 DisplayName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 2.9, Platform: macOS, Targets: All.

Function: Returns the display name for the url.
Notes: Returns "" on any error.

56.34.14 file as folderitem

MBS MacCF Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns the URL as a folderitem.
Notes: Works only on RB 4.5 or later and if the file exists.

56.34.15 Fragment(charactersToLeaveEscaped as CFStringMBS) as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Fragment part of this URL.

56.34.16 HasDirectoryPath as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Has this URL a directory path?

56.34.17 HFSFileSystemPath as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the URL as HFSFileSystemPath.

56.34.18 HostName as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the HostName part of this URL.

56.34.19 isAbsolutePath as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Is the path an absolute path?

56.34.20 kCFURLAddedToDirectoryDateKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The date the resource was created, or renamed into or within its parent directory. Note that inconsistent behavior may be observed when this attribute is requested on hard-linked items. This property is not supported by all volumes. (Read-only, value type CFDateMBS)
for macOS 10.10 or later.

56.34.21 kCFURLApplicationIsScriptableKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: True if the resource is scriptable. Only applies to applications. (Read-only, value type CFBoolean-MBS)
for macOS 10.11 or later.

56.34.22 kCFURLAttributeModificationDateKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The time the resource's attributes were last modified (Read-only, value type CFDateMBS)

56.34.23 kCFURLCanonicalPathKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: the URL's path as a canonical absolute file system path (Read-only, value type CFStringMBS)
for macOS 10.12 or later.

56.34.24 kCFURLContentAccessDateKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The date the resource was last accessed (Read-only, value type CFDateMBS)

56.34.25 kCFURLContentModificationDateKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The time the resource content was last modified (Read-write, value type CFDateMBS)

56.34.26 kCFURLCreationDateKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The date the resource was created (Read-write, value type CFDateMBS)

56.34.27 kCFURLDocumentIdentifierKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The document identifier – a value assigned by the kernel to a document (which can be either a file or directory) and is used to identify the document regardless of where it gets moved on a volume. The document identifier survives "safe save,Äù operations; i.e it is sticky to the path it was assigned to (NSURL -replaceItemAtURL:withItemAtURL:backupItemName:options:resultingItemURL:error: is the preferred safe-save API). The document identifier is persistent across system restarts. The document identifier is not transferred when the file is copied. Document identifiers are only unique within a single volume. This property is not supported by all volumes. (Read-only, value type CFNumberMBS)
for macOS 10.10 or later.

56.34.28 kCFURLFileAllocatedSizeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Total size allocated on disk for the file in bytes (number of blocks times block size) (Read-only, value type CFNumberMBS)

56.34.29 kCFURLFileResourceIdentifierKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: An identifier which can be used to compare two file system objects for equality using CFOb-

jectMBS.Equal (i.e, two object identifiers are equal if they have the same file system path or if the paths are linked to same inode on the same file system). This identifier is not persistent across system restarts. (Read-only, value type CFObjectMBS)

56.34.30 kCFURLFileResourceTypeBlockSpecial as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the file resource type values.
Notes: Special block device.

56.34.31 kCFURLFileResourceTypeCharacterSpecial as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the file resource type values.
Notes: Special charset device.

56.34.32 kCFURLFileResourceTypeDirectory as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the file resource type values.
Notes: A folder.

56.34.33 kCFURLFileResourceTypeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Returns the file system object type. (Read-only, value type CFStringMBS)
for macOS 10.7 or later.

56.34.34 kCFURLFileResourceTypeNamedPipe as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the file resource type values.
Notes: A named pipe.

56.34.35 kCFURLFileResourceTypeRegular as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the file resource type values.
Notes: Regular file.

56.34.36 kCFURLFileResourceTypeSocket as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the file resource type values.
Notes: A network socket.

56.34.37 kCFURLFileResourceTypeSymbolicLink as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the file resource type values.
Notes: An symbolic link.

56.34.38 kCFURLFileResourceTypeUnknown as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the file resource type values.
Notes: Unknown.

56.34.39 kCFURLFileSecurityKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The file system object's security information encapsulated in a CFFileSecurity object. (Read-write, value type CFFileSecurity)

56.34.40 kCFURLFileSizeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Total file size in bytes (Read-only, value type CFNumberMBS)

56.34.41 kCFURLGenerationIdentifierKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: An opaque generation identifier which can be compared using CFObjectMBS.Equal() to determine if the data in a document has been modified. For URLs which refer to the same file inode, the generation identifier will change when the data in the file's data fork is changed (changes to extended attributes or other file system metadata do not change the generation identifier). For URLs which refer to the same directory inode, the generation identifier will change when direct children of that directory are added, removed or renamed (changes to the data of the direct children of that directory will not change the generation identifier). The generation identifier is persistent across system restarts. The generation identifier is tied to a specific document on a specific volume and is not transferred when the document is copied to another volume. This property is not supported by all volumes. (Read-only, value type CFObjectMBS)
for macOS 10.10 or later.

56.34.42 kCFURLHasHiddenExtensionKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: True for resources whose filename extension is removed from the localized name property (Read-write, value type CFBooleanMBS)

56.34.43 kCFURLIsAliasFileKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the resource is a Finder alias file or a symlink, false otherwise (Read-only, value type CFBooleanMBS)

56.34.44 kCFURLIsApplicationKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: True if resource is an application (Read-only, value type CFBooleanMBS)

for macOS 10.11 or later.

56.34.45 kCFURLIsDirectoryKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: True for directories (Read-only, CFBooleanMBS)

56.34.46 kCFURLIsExcludedFromBackupKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if resource should be excluded from backups, false otherwise (Read-write, value type CFBooleanMBS). This property is only useful for excluding cache and other application support files which are not needed in a backup. Some operations commonly made to user documents will cause this property to be reset to false and so this property should not be used on user documents.
for macOS 10.8 or later.

56.34.47 kCFURLIsExecutableKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if this process (as determined by EUID) can execute a file resource or search a directory resource. (Read-only, value type CFBooleanMBS)
for mac OS 10.7 or later.

56.34.48 kCFURLIsHiddenKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: True for resources normally not displayed to users (Read-write, value type CFBooleanMBS).

If the resource is a hidden because its name starts with a period, setting this property to false will not change the property.

56.34.49 kCFURLIsMountTriggerKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if this URL is a file system trigger directory. Traversing or opening a file system trigger will cause an attempt to mount a file system on the trigger directory. (Read-only, value type CFBooleanMBS) for macOS 10.7 or later.

56.34.50 kCFURLIsPackageKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test")
Var c as CFURLMBS = NewCFURLMBSFile(f)

Var v as Variant
Var e as CFErrorMBS

if c.ResourcePropertyForKey(c.kCFURLIsPackageKey, v1, e) then
Var p as CFBooleanMBS = v

MessageBox "IsPackage: "+str(p.Value)
else
MessageBox "Error: "+e.Description
end if
```

Notes: True for packaged directories (Read-only 10.6 and 10.7, read-write 10.8, value type CFBooleanMBS).

You can only set or clear this property on directories; if you try to set this property on non-directory objects, the property is ignored. If the directory is a package for some other reason (extension type, etc), setting this property to false will have no effect.

56.34.51 kCFURLIsReadableKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if this process (as determined by EUID) can read the resource. (Read-only, value type CF-BooleanMBS)
for macOS 10.7 or later.

56.34.52 kCFURLIsRegularFileKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: True for regular files (Read-only, value type CFBooleanMBS)

56.34.53 kCFURLIsSymbolicLinkKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: True for symlinks (Read-only, value type CFBooleanMBS)

56.34.54 kCFURLIsSystemImmutableKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: True for system-immutable resources (Read-write, value type CFBooleanMBS)

56.34.55 kCFURLIsUbiquitousItemKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if this item is synced to the cloud, false if it is only a local file. (Read-only, value type CF-BooleanMBS)
for macOS 10.7 or newer.

56.34.56 kCFURLIsUserImmutableKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: True for user-immutable resources (Read-write, value type CFBooleanMBS)

56.34.57 kCFURLIsVolumeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: True for the root directory of a volume (Read-only, value type CFBooleanMBS)

56.34.58 kCFURLIsWritableKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if this process (as determined by EUID) can write to the resource. (Read-only, value type CFBooleanMBS)
for mac OS 10.7 or later.

56.34.59 kCFURLLabelNumberKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The label number assigned to the resource (Read-write, value type CFNumberMBS)

56.34.60 kCFURLLinkCountKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Number of hard links to the resource (Read-only, value type CFNumberMBS)

56.34.61 kCFURLLocalizedLabelKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The user-visible label text (Read-only, value type CFStringMBS)

56.34.62 kCFURLLocalizedNameKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Localized or extension-hidden name as displayed to users (Read-only, value type CFStringMBS)

56.34.63 kCFURLLocalizedTypeDescriptionKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: User-visible type or "kind" description (Read-only, value type CFStringMBS)

56.34.64 kCFURLNameKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The resource name provided by the file system (Read-write, value type CFStringMBS)

56.34.65 kCFURLParentDirectoryURLKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The resource's parent directory, if any (Read-only, value type CFURLMBS)

56.34.66 kCFURLPathKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: the URL's path as a file system path (Read-only, value type CFStringMBS)
for macOS 10.8 or later.

56.34.67 kCFURLPreferredIOBlockSizeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The optimal block size when reading or writing this file's data, or NULL if not available. (Read-only, value type CFNumberMBS)

56.34.68 kCFURLQuarantinePropertiesKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Example:

```
Var f As FolderItem = SpecialFolder.UserHome.Child("Downloads").Child("Installation.pdf")
Var n As New CFURLMBS(f)

Var d As CFDictionaryMBS
Var v As Variant
Var e As CFErrorMBS

If n.ResourcePropertyForKey(n.kCFURLQuarantinePropertiesKey, v, e) Then

d = v
Var dic As Dictionary = d.Dictionary
Break // inspect in debugger

Else
Break // failed
End If
```

Notes: The quarantine properties as defined in LSQuarantine.h. To remove quarantine information from a file, pass kCFNull as the value when setting this property. (Read-write, value type CFDictionaryMBS) for macOS 10.10 or later.

56.34.69 kCFURLTagNamesKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The array of Tag names (Read-write, value type CFArrayMBS of CFStringMBS) for macOS 10.9 or later.

56.34.70 kCFURLTotalFileAllocatedSizeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Total allocated size of the file in bytes (this may include space used by metadata), or nil if not available. This can be less than the value returned by kCFURLTotalFileSizeKey if the resource is compressed. (Read-only, value type CFNumberMBS)

56.34.71 kCFURLTotalFileSizeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Total displayable size of the file in bytes (this may include space used by metadata), or NULL if not available. (Read-only, value type CFNumberMBS)

56.34.72 kCFURLTypeIdentifierKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Uniform type identifier (UTI) for the resource (Read-only, value type CFStringMBS)

56.34.73 kCFURLUbiquitousItemDownloadingErrorKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: returns the error when downloading the item from iCloud failed. See the NSUbiquitousFile section in FoundationErrors.h. (Read-only, value type CFErrorMBS)
for macOS 10.9 or later.

56.34.74 kCFURLUbiquitousItemDownloadingStatusCurrent as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the download status values.
Notes: there is a local version of this item and it is the most up-to-date version known to this device.
for macOS 10.9 or later.

56.34.75 kCFURLUbiquitousItemDownloadingStatusDownloaded as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the download status values.
Notes: there is a local version of this item available. The most current version will get downloaded as soon as possible.
for macOS 10.9 or later.

56.34.76 kCFURLUbiquitousItemDownloadingStatusKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Returns the download status of this item. (Read-only, value type CFStringMBS).
for macOS 10.9 or later.

56.34.77 kCFURLUbiquitousItemDownloadingStatusNotDownloaded as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the download status values.
Notes: this item has not been downloaded yet. Use NSFileManager's startDownloadingUbiquitousItemAtURL:error: to download it.
for macOS 10.9 or later.

56.34.78 kCFURLUbiquitousItemHasUnresolvedConflictsKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if this item has conflicts outstanding. (Read-only, value type CFBooleanMBS)

56.34.79 kCFURLUbiquitousItemIsDownloadedKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Equivalent to NSURLUbiquitousItemDownloadingStatusKey = NSURLUbiquitousItemDownloadingStatusCurrent. Has never behaved as documented in earlier releases, hence deprecated. (Read-only, value type CFBooleanMBS)

56.34.80 kCFURLUbiquitousItemIsDownloadingKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if data is being downloaded for this item. (Read-only, value type CFBooleanMBS)

56.34.81 kCFURLUbiquitousItemIsExcludedFromSyncKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 21.5, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Value is a boolean.
The item is excluded from sync, which means it is locally on disk but won't be available on the server. An excluded item is no longer ubiquitous.

56.34.82 kCFURLUbiquitousItemIsUploadedKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if there is data present in the cloud for this item. (Read-only, value type CFBooleanMBS)

56.34.83 kCFURLUbiquitousItemIsUploadingKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if data is being uploaded for this item. (Read-only, value type CFBooleanMBS)

56.34.84 kCFURLUbiquitousItemPercentDownloadedKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Percent downloaded.
Use NSMetadataQuery and NSMetadataUbiquitousItemPercentDownloadedKey on NSMetadataItem instead.

56.34.85 kCFURLUbiquitousItemPercentUploadedKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Percent uploaded.
Use NSMetadataQuery and NSMetadataUbiquitousItemPercentUploadedKey on NSMetadataItem instead

56.34.86 kCFURLUbiquitousItemUploadingErrorKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: returns the error when uploading the item to iCloud failed. See the NSUbiquitousFile section in FoundationErrors.h. (Read-only, value type CFErrorMBS)
for macOS 10.9 or later.

56.34.87 kCFURLVolumeAvailableCapacityKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Total free space in bytes (Read-only, value type CFNumberMBS)

56.34.88 kCFURLVolumeCreationDateKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The volume's creation date, or nil if this cannot be determined. (Read-only, value type CFDateMBS)

56.34.89 kCFURLVolumeIdentifierKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: An identifier that can be used to identify the volume the file system object is on. Other objects on the same volume will have the same volume identifier and can be compared using for equality using CFObjectMBS.Equal. This identifier is not persistent across system restarts. (Read-only, value type CFObjectMBS)

56.34.90 kCFURLVolumeIsAutomountedKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume is automounted. Note: do not mistake this with the functionality provided by kCFURLVolumeSupportsBrowsingKey. (Read-only, value type CFBooleanMBS)

56.34.91 kCFURLVolumeIsBrowsableKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume should be visible via the GUI (i.e., appear on the Desktop as a separate volume). (Read-only, value type CFBooleanMBS)

56.34.92 kCFURLVolumeIsEjectableKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume's media is ejectable from the drive mechanism under software control. (Read-only, value type CFBooleanMBS)

56.34.93 kCFURLVolumeIsEncryptedKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume is encrypted. (Read-only, value type CFBooleanMBS)
for macOS 10.12 or later.

56.34.94 kCFURLVolumeIsInternalKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume's device is connected to an internal bus, false if connected to an external bus, or nil if not available. (Read-only, value type CFBooleanMBS)

56.34.95 kCFURLVolumeIsJournalingKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume is currently using a journal for speedy recovery after an unplanned restart. (Read-only, value type CFBooleanMBS)

56.34.96 kCFURLVolumeIsLocalKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume is stored on a local device. (Read-only, value type CFBooleanMBS)

56.34.97 kCFURLVolumeIsReadOnlyKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume is read-only. (Read-only, value type CFBooleanMBS)

56.34.98 kCFURLVolumeIsRemovableKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume's media is removable from the drive mechanism. (Read-only, value type CF-BooleanMBS)

56.34.99 kCFURLVolumeIsRootFileSystemKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume is the root filesystem. (Read-only, value type CFBooleanMBS)
for macOS 10.12 or later.

56.34.100 kCFURLVolumeLocalizedFormatDescriptionKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The user-visible volume format (Read-only, value type CFStringMBS)

56.34.101 kCFURLVolumeLocalizedNameKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The user-presentable name of the volume (Read-only, value type CFStringMBS)

56.34.102 kCFURLVolumeMaximumFileSizeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The largest file size (in bytes) supported by this file system, or nil if this cannot be determined. (Read-only, value type CFNumberMBS)

56.34.103 kCFURLVolumeNameKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The name of the volume (Read-write, settable if kCFURLVolumeSupportsRenamingKey is true and permissions allow, value type CFStringMBS)

56.34.104 kCFURLVolumeResourceCountKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Total number of resources on the volume (Read-only, value type CFNumberMBS)

56.34.105 kCFURLVolumeSupportsAdvisoryFileLockingKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume implements whole-file flock(2) style advisory locks, and the O_EXLOCK and O_SHLOCK flags of the open(2) call. (Read-only, value type CFBooleanMBS)

56.34.106 kCFURLVolumeSupportsCasePreservedNamesKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume format preserves the case of file and directory names. Otherwise the volume may change the case of some characters (typically making them all upper or all lower case). (Read-only, value type CFBooleanMBS)

56.34.107 kCFURLVolumeSupportsCaseSensitiveNamesKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume format treats upper and lower case characters in file and directory names as different. Otherwise an upper case character is equivalent to a lower case character, and you can't have two names that differ solely in the case of the characters. (Read-only, value type CFBooleanMBS)

56.34.108 kCFURLVolumeSupportsCompressionKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume supports transparent decompression of compressed files using decmpfs. (Read-only, value type CFBooleanMBS)
for macOS 10.12.

56.34.109 kCFURLVolumeSupportsExclusiveRenamingKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume supports renamex_np(2)'s RENAME_EXCL option (Read-only, value type CFBooleanMBS)
for macOS 10.12 or later.

56.34.110 kCFURLVolumeSupportsExtendedSecurityKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume implements extended security (ACLs). (Read-only, value type CFBooleanMBS)

56.34.111 kCFURLVolumeSupportsFileCloningKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume supports clonefile(2) (Read-only, value type CFBooleanMBS)
for macOS 10.12 or later.

56.34.112 kCFURLVolumeSupportsHardLinksKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume format supports hard links (Read-only, value type CFBooleanMBS)

56.34.113 kCFURLVolumeSupportsJournalingKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume format supports a journal used to speed recovery in case of unplanned restart (such as a power outage or crash). This does not necessarily mean the volume is actively using a journal. (Read-only, value type CFBooleanMBS)

56.34.114 kCFURLVolumeSupportsPersistentIDsKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume format supports persistent object identifiers and can look up file system objects by their IDs (Read-only, value type CFBooleanMBS)

56.34.115 kCFURLVolumeSupportsRenamingKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume can be renamed. (Read-only, value type CFBooleanMBS)

56.34.116 kCFURLVolumeSupportsRootDirectoryDatesKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume supports reliable storage of times for the root directory. (Read-only, value type CFBooleanMBS)
for macOS 10.7 or later.

56.34.117 kCFURLVolumeSupportsSparseFilesKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume format supports sparse files, that is, files which can have 'holes' that have never been written to, and thus do not consume space on disk. A sparse file may have an allocated size on disk that is less than its logical length. (Read-only, value type CFBooleanMBS)

56.34.118 kCFURLVolumeSupportsSwapRenamingKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume supports renamex_np(2)'s RENAME_SWAP option (Read-only, value type CFBooleanMBS)
for macOS 10.12 or later.

56.34.119 kCFURLVolumeSupportsSymbolicLinksKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume format supports symbolic links (Read-only, value type CFBooleanMBS)

56.34.120 kCFURLVolumeSupportsVolumeSizesKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume supports returning volume size values (kCFURLVolumeTotalCapacityKey and kCFURLVolumeAvailableCapacityKey). (Read-only, value type CFBooleanMBS)

56.34.121 kCFURLVolumeSupportsZeroRunsKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: For security reasons, parts of a file (runs) that have never been written to must appear to contain zeroes. true if the volume keeps track of allocated but unwritten runs of a file so that it can substitute zeroes without actually writing zeroes to the media. (Read-only, value type CFBooleanMBS)

56.34.122 kCFURLVolumeTotalCapacityKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Total volume capacity in bytes (Read-only, value type CFNumberMBS)

56.34.123 kCFURLVolumeURLForRemountingKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The CFURLMBS needed to remount a network volume, or nil if not available. (Read-only, value type CFURLMBS)

56.34.124 kCFURLVolumeURLKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: URL of the volume on which the resource is stored (Read-only, value type CFURLMBS)

56.34.125 kCFURLVolumeUUIDStringKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The volume's persistent UUID as a string, or nil if a persistent UUID is not available for the volume. (Read-only, value type CFStringMBS)

56.34.126 Kind as CFStringMBS

MBS MacCF Plugin, Plugin Version: 2.9, Platform: macOS, Targets: All.

Function: Returns the kind string for the file.

56.34.127 LastPathComponent as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the LastPathComponent part of this URL.

56.34.128 Launch as Integer

MBS MacCF Plugin, Plugin Version: 2.9, Platform: macOS, Targets: All.

Function: Launches a file.
Notes: Returns a Mac OS error string or -1 if the function is not available.

56.34.129 NetLocation as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the NetLocation part of this URL.

56.34.130 ParameterString(charactersToLeaveEscaped as CFStringMBS) as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ParameterString part of this URL.

56.34.131 Password as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Password part of this URL.

56.34.132 Path as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Path part of this URL.
See also:

- 56.34.133 Path(resolveAgainstBase as boolean) as string 9372

56.34.133 Path(resolveAgainstBase as boolean) as string

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the path of this URL.
See also:

- 56.34.132 Path as CFStringMBS 9372

56.34.134 PathExtension as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the PathExtension part of this URL.

56.34.135 PortNumber as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the PortNumber part of this URL.
Notes: Returns -1 if no port specified and -2 on Windows and Mac OS Classic.

56.34.136 PosixFileSystemPath as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the URL as PosixFileSystemPath.

56.34.137 QueryString(charactersToLeaveEscaped as CFStringMBS) as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the QueryString part of this URL.

56.34.138 ResourcePropertyForKey(key as CFStringMBS, byref value as Variant, byref error as CFErrorMBS) as boolean

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: Returns the resource value identified by a given resource key.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test")
Var c as CFURLMBS = NewCFURLMBSFile(f)

Var v as Variant
Var e as CFErrorMBS

if c.ResourcePropertyForKey(c.kCFURLIsPackageKey, v1, e) then
Var p as CFBooleanMBS = v
```

```
MessageBox "IsPackage: "+str(p.Value)
else
MessageBox "Error: "+e.Description
end if
```

Notes: key: The resource key that identifies the resource property.
Value: On output when the result is true, the resource value or nil.
error: On output when the result is false, the error that occurred.

Returns true if value is successfully populated; false if an error occurs.

ResourcePropertyForKey first checks if the URL object already caches the resource value. If so, it returns the cached resource value to the caller. If not, then ResourcePropertyForKey synchronously obtains the resource value from the backing store, adds the resource value to the URL object's cache, and returns the resource value to the caller. The type of the resource value varies by resource property (see resource key definitions). If this function returns true and v alue is populated with nil, it means the resource property is not available for the specified resource and no errors occurred when determining the resource property was not available. If this function returns false, the optional error is populated. This function is currently applicable only to URLs for file system resources.

56.34.139 ResourceSpecifier as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ResourceSpecifier part of this URL.

56.34.140 Scheme as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the scheme part of this URL.

56.34.141 SetResourcePropertyForKey(key as CFStringMBS, value as Variant, byref error as CFErrorMBS) as boolean

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: Sets the resource value identified by a given resource key.
Example:

```
Var f As FolderItem = SpecialFolder.Desktop.Child("test")
```

```
Var c As CFURLMBS = NewCFURLMBSFile(f)

Var e As CFErrorMBS

If c.SetResourcePropertyForKey(c.kCFURLIsPackageKey, NewCFBooleanMBS(true), e) Then
MessageBox "OK"
Else
MessageBox "Error: "+e.Description
End If
```

Notes: key: The resource key that identifies the resource property.
Value: The resource value.
error: On output when the result is false, the error that occurred.

Returns true if the attempt to set the resource value completed with no errors; otherwise, false.

CFURLSetResourcePropertyForKey writes the new resource value out to the backing store. Attempts to set a read-only resource property or to set a resource property not supported by the resource are ignored and are not considered errors. If this function returns false, the optional error is populated. This function is currently applicable only to URLs for file system resources.

56.34.142 Str as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the URL as binary data.

56.34.143 StrictPath as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the StrictPath part of this URL.

56.34.144 URLWithHandle(Handle as Integer) as CFURLMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: Creates a new URL object based on a handle value.
Notes: Will retain the reference.

56.34.145 UserName as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the UserName part of this URL.

56.34.146 WindowsFileSystemPath as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the URL as WindowsFileSystemPath.

56.34.147 Properties

56.34.148 AddedToDirectoryDate as CFDateMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: The date the resource was created, or renamed into or within its parent directory.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("blog.html")
Var u as CFURLMBS = NewCFURLMBSFile(f)
Var d as CFDateMBS = u.AddedToDirectoryDate
Var t as CFTimeZoneMBS = SystemCFTimeZoneMBS
Var x as CFGregorianDateMBS = d.AbsoluteTime.GregorianDate(t)
Var y as new date(x.Year, x.Month, x.Day, x.Hour, x.Minute, x.Second)
MessageBox "AddedToDirectoryDate: " + y.SQLDateTime
```

Notes: Note that inconsistent behavior may be observed when this attribute is requested on hard-linked items. This property is not supported by all volumes.
(Read only property)

56.34.149 AttributeModificationDate as CFDateMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: The time the resource's attributes were last modified.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("blog.html")
Var u as CFURLMBS = NewCFURLMBSFile(f)
Var d as CFDateMBS = u.AttributeModificationDate
```

```
Var t as CFTimeZoneMBS = SystemCFTimeZoneMBS
Var x as CFGregorianDateMBS = d.AbsoluteTime.GregorianDate(t)
Var y as new date(x.Year, x.Month, x.Day, x.Hour, x.Minute, x.Second)
MessageBox "AttributeModificationDate: " + y.SQLDateTime
```

Notes: (Read only property)

56.34.150 ContentAccessDate as CFDateMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: The date the resource was last accessed.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("blog.html")
Var u as CFURLMBS = NewCFURLMBSFile(f)
Var d as CFDateMBS = u.ContentAccessDate
Var t as CFTimeZoneMBS = SystemCFTimeZoneMBS
Var x as CFGregorianDateMBS = d.AbsoluteTime.GregorianDate(t)
Var y as new date(x.Year, x.Month, x.Day, x.Hour, x.Minute, x.Second)
MessageBox "ContentAccessDate: " + y.SQLDateTime
```

Notes: (Read only property)

56.34.151 ContentModificationDate as CFDateMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: The time the resource content was last modified.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("blog.html")
Var u as CFURLMBS = NewCFURLMBSFile(f)
Var d as CFDateMBS = u.ContentModificationDate
Var t as CFTimeZoneMBS = SystemCFTimeZoneMBS
Var x as CFGregorianDateMBS = d.AbsoluteTime.GregorianDate(t)
Var y as new date(x.Year, x.Month, x.Day, x.Hour, x.Minute, x.Second)
MessageBox "ContentModificationDate: " + y.SQLDateTime
```

Notes: (Read only property)

56.34.152 CreationDate as CFDateMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: The date the resource was created.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("blog.html")
Var u as CFURLMBS = NewCFURLMBSFile(f)
Var d as CFDateMBS = u.CreationDate
Var t as CFTimeZoneMBS = SystemCFTimeZoneMBS
Var x as CFGregorianDateMBS = d.AbsoluteTime.GregorianDate(t)
Var y as new date(x.Year, x.Month, x.Day, x.Hour, x.Minute, x.Second)
MessageBox "CreationDate: " + y.SQLDateTime
```

Notes: (Read only property)

56.34.153 HasHiddenExtension as CFBooleanMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: True for resources whose filename extension is removed from the localized name property.
Notes: (Read only property)

56.34.154 IsAlias as CFBooleanMBS

MBS MacCF Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Whether this is an alias file.
Notes: true if the resource is a Finder alias file or a symlink, false otherwise.
(Read only property)

56.34.155 IsApplication as CFBooleanMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: True if resource is an application.
Notes: (Read only property)

56.34.156 IsDirectory as CFBooleanMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: True for directories.
Notes: (Read only property)

56.34.157 IsHidden as CFBooleanMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: True for resources normally not displayed to users.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("blog.html")
Var u as CFURLMBS = NewCFURLMBSFile(f)
MessageBox "IsHidden: "+str(u.IsHidden.Value)
```

Notes: If the resource is a hidden because its name starts with a period, setting this property to false will not change the property.
(Read only property)

56.34.158 IsPackage as CFBooleanMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: True for packaged directories.
Example:

```
Var c As New CFURLMBS("file:///Applications/Xcode.app")

If c.IsPackage Then
MessageBox "is a package, bundle or application."
Else
MessageBox "not a bundle"
End If
```

Notes: Note: You can only set or clear this property on directories; if you try to set this property on non-directory objects, the property is ignored. If the directory is a package for some other reason (extension type, etc), setting this property to false will have no effect.
(Read only property)

56.34.159 IsRegularFile as CFBooleanMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: True for regular files.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("blog.html")
Var u as CFURLMBS = NewCFURLMBSFile(f)
MessageBox "IsRegularFile: "+str(u.IsRegularFile.Value)
```

Notes: (Read only property)

56.34.160 IsSymbolicLink as CFBooleanMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: True for symlinks.
Notes: (Read only property)

56.34.161 IsSystemImmutable as CFBooleanMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: True for system-immutable resources.
Notes: (Read only property)

56.34.162 IsUserImmutable as CFBooleanMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: True for user-immutable resources.
Notes: (Read only property)

56.34.163 IsVolume as CFBooleanMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: True for the root directory of a volume.
Notes: (Read only property)

56.34.164 LocalizedName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: Localized or extension-hidden name as displayed to users.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("blog.html")
Var u as CFURLMBS = NewCFURLMBSFile(f)
MessageBox u.LocalizedName
```

Notes: (Read only property)

56.34.165 Name as CFStringMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: The resource name provided by the file system.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("blog.html")
Var u as CFURLMBS = NewCFURLMBSFile(f)
MessageBox u.Name
```

Notes: (Read only property)

56.35 class CFUUIDMBS

56.35.1 class CFUUIDMBS

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: The Core Foundation class for an unique identifier.
Example:

```
Var u as new CFUUIDMBS
MessageBox u.StringValue
```

Notes: CFUUID objects are used by plug-ins to uniquely identify types, interfaces, and factories. When creating a new type, host developers must generate UUIDs to identify the type as well as its interfaces and factories.

UUIDs (Universally Unique Identifiers), also known as GUIDs (Globally Unique Identifiers) or IIDs (Interface Identifiers), are 128-bit values guaranteed to be unique. A UUID is made unique over both space and time by combining a value unique to the computer on which it was generated—usually the Ethernet hardware address—and a value representing the number of 100-nanosecond intervals since October 15, 1582 at 00:00:00.

The standard format for UUIDs represented in ASCII is a string punctuated by hyphens, for example 68753A44-4D6F-1226-9C60-0050E4C00067. The hex representation looks, as you might expect, like a list of numerical values preceded by &h. For example, &hD7, &h36, &h95, &h0A, &h4D, &h6E, &h12, &h26, &h80, &h3A, &h00, &h50, &hE4, &hC0, &h00, &h67 . To use a UUID, you simply create it and then copy the resulting strings into your header and C language source files. Because a UUID is expressed simply as an array of bytes, there are no endianness considerations for different platforms.

You can create a CFUUID object, and thereby generate a UUID, using any one of the Constructors.
Subclass of the CFObjectMBS class.

- MBS REALbasic Plugins, version 10.5pr5

56.35.2 Methods

56.35.3 Bytes as Memoryblock

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Returns the value of a UUID object as raw bytes.
Example:

```
// create new UUID
```

```
Var u as new CFUUIDMBS

// get raw data

Var m as MemoryBlock = u.Bytes

// display

MessageBox EncodingToHexMBS(m)+EndOfLine+u.StringValue
```

Notes: Returns the value of uuid represented as raw bytes.

56.35.4 Constructor

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Creates a Universally Unique Identifier (UUID) object.
Example:

```
Var u as new CFUUIDMBS
MessageBox u.StringValue
```

Notes: Returns a new CFUUID object or nil on any failure.
See also:

- 56.35.5 Constructor(Bytes as Memoryblock) 9383
- 56.35.6 Constructor(uuidStr as string) 9384

56.35.5 Constructor(Bytes as Memoryblock)

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Creates a CFUUID object from raw UUID bytes.
Example:

```
// create new UUID

Var u as new CFUUIDMBS

// get raw data

Var m as MemoryBlock = u.Bytes

// create new UUID with this bytes
```

```
Var v as new CFUUIDMBS(m)

// display UUIDs:

MessageBox u.StringValue+EndOfLine+v.StringValue

if u.Equal(v) then
MessageBox "equal"
else
MessageBox "not equal"
end if
```

Notes: bytes: Raw UUID bytes to use to create the CFUUID object.

Rerturns a new CFUUID object or nil on any error.
See also:

- 56.35.4 Constructor 9383
- 56.35.6 Constructor(uuidStr as string) 9384

56.35.6 Constructor(uuidStr as string)

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Creates a CFUUID object for a specified string.
Example:

```
// create new UUID

Var u as new CFUUIDMBS

// get string

Var s as string = u.StringValue

// create new UUID with this string

Var v as new CFUUIDMBS(s)

// display UUIDs:

MessageBox u.StringValue+EndOfLine+v.StringValue

if u.Equal(v) then
MessageBox "equal"
```

```
else
MessageBox "not equal"
end if
```

Notes: uuidStr: A string containing a UUID. The standard format for UUIDs represented in ASCII is a string punctuated by hyphens, for example 68753A44-4D6F-1226-9C60-0050E4C00067.

Returns a new CFUUID object, or if a CFUUID object of the same value already exists, the existing instance with its reference count incremented. Returns nil on any error.

If you need to validate a GUID or UUID, please check the IsGUID function in our FAQ.
See also:

- 56.35.4 Constructor 9383
- 56.35.5 Constructor(Bytes as Memoryblock) 9383

56.35.7 StringValue as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Returns the string representation of a specified CFUUID object.
Example:

```
Var u as new CFUUIDMBS
MessageBox u.StringValue
```

Chapter 57

CoreFoundation Network

57.1 class CFHostMBS

57.1.1 class CFHostMBS

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: A class for the CFHost API in CoreFoundation.
Notes: You can asynchronously resolve hostnames to IPs and back.
IPv6 compatible.
Subclass of the CFObjectMBS class.
Xojo Developer Magazine

- 3.6, page 6: News

57.1.2 Methods

57.1.3 LookupAddress(address as string) as boolean

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Starts the asyncron lookup process for the given address.
Notes: Address must be an IPv4 or IPv6 address.
Returns true on success or false on failure.

57.1.4 LookupName(hostname as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Starts an asyncron lookup process to find the IP addresses for the given domain name.
Notes: Returns true on success and false on failure.

57.1.5 Events

57.1.6 Error(ErrorDomain as Integer, ErrorCode as Integer)

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: An error occurred.

57.1.7 GotAddress(address as string, addressIndex as Integer, count as Integer)

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: An IP address was found.
Notes: As plugins can't create arrays, the plugin will call this event count times with addressIndex going from 0 to count-1.
Name is the IP address, e.g. "12.34.56.78".

57.1.8 GotName(name as CFStringMBS, nameIndex as Integer, count as Integer)

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: A name was found.
Notes: As plugins can't create arrays, the plugin will call this event count times with nameIndex going from 0 to count-1.
Name is the domain name, e.g. "apple.com".

57.2 class CFHTTPMessageMBS

57.2.1 class CFHTTPMessageMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A class for a HTTP message.
Notes: Subclass of the CFObjectMBS class.

57.2.2 Methods

57.2.3 AddAuthentication(authenticationFailureResponse as CFHTTPMessageMBS, username as CFStringMBS, password as CFStringMBS, authenticationScheme as CFStringMBS, forProxy as Boolean) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Adds authentication details.
Notes: Tries to modify request to contain the authentication information requested by authenticationFailureResponse (which presumably is a 401 or 407 response). Returns TRUE if successful; FALSE otherwise (leaving request unmodified). If authenticationScheme is NULL, the strongest supported scheme listed in failedResponse will be used.

57.2.4 AppendBytes(s as string) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Adds additional bytes to the message.
Notes: The following function appends the given bytes to the message given (parsing out any control information if appropriate).
Returns FALSE if a parsing error occurs while processing the new data.

57.2.5 Copy as CFHTTPMessageMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a copy of the HTTP message.
Notes: Returns nil on any error.

57.2.6 HeaderFields as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: All header fields in one big CFDictionary.

57.2.7 IsHeaderComplete as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Whether further header data is expected by the message.

57.2.8 IsRequest as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Whether the message is a response or a request.

57.2.9 kCFHTTPAuthenticationSchemeBasic as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A possible value you can pass when creating a HTTPMessage.

57.2.10 kCFHTTPAuthenticationSchemeDigest as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A possible value you can pass when creating a HTTPMessage.

57.2.11 kCFHTTPVersion1_0 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A possible value you can pass when creating a HTTPMessage.

57.2.12 kCFHTTPVersion1_1 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A possible value you can pass when creating a HTTPMessage.

57.2.13 RequestMethod as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The request method.

57.2.14 RequestURL as CFURLMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The request URL.

57.2.15 ResponseStatusCode as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The response status code.
Notes: See RFC 2616 for the codes.

57.2.16 ResponseStatusLine as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The response status line.

57.2.17 SerializedMessage as CFBinaryDataMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: This message with all data stored in one CFBinaryData object to store in e.g. a file.

57.2.18 Version as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The HTTP version of the message.

57.2.19 Properties

57.2.20 Body as CFBinaryDataMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The body of this message.
Notes: (Read and Write computed property)

57.2.21 HeaderField(headerfield as CFStringMBS) as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Set or Get one of the header fields of the Message.
Notes: (Read and Write computed property)

57.3 Globals

57.3.1 CFStreamCreatePairWithSocketMBS(TheSocket as CFSocketMBS, readstream as CFReadStreamMBS, writestream as CFWriteStreamMBS)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates two streams based on one socket.
Notes: You need to pass in stream objects to get those objects filled.
If you forget one of this objects the stream will be readonly or writeonly.

57.3.2 CFStreamCreatePairWithSocketToHostMBS(host as CFStringMBS, port as Integer, readstream as CFReadStreamMBS, writestream as CFWriteStreamMBS)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a pair of streams based on a socket which connects to the given host.

57.3.3 CFHTTPMessageCreateEmptyMBS(isRequest as boolean) as CFHTTPMessageMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new empty http message.
Notes: Returns nil on any error.

Creates an empty request or response, which you can then append bytes to via CFHTTPMessage.AppendBytes(). The HTTP header information will be parsed out as the bytes are appended.

57.3.4 CFHTTPMessageCreateRequestMBS(requestMethod as CFStringMBS, url as CFURLMBS, httpVersion as CFStringMBS) as CFHTTPMessageMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new HTTP message as a request.

57.3.5 CFHTTPMessageCreateResponseMBS(statusCode as Integer, statusDescription as CFStringMBS, httpVersion as CFStringMBS) as CFHTTPMessageMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new HTTP message as a response.
Notes: Pass nil to use the standard description for the given status code, as found in RFC 2616.

57.3.6 kCFHostMBSGetTypeID as Integer

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFHostMBS object.
Example:

```
// compare the type of a Core Foundation object with the CFHostMBS type ID
Var o As CFObjectMBS // e.g. a value from a CFDictionaryMBS or CFArrayMBS
If o <>Nil And o.Type = kCFHostMBSGetTypeID Then
System.DebugLog "It is a CFHostMBS."
End If
System.DebugLog "CFHostMBS type ID " + kCFHostMBSGetTypeID.ToString + " = " + TypeIDDescriptionMBS(kCFHostMBSGetTypeID).Str
```

57.3.7 kCFHTTPMessageMBSGetTypeID as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFHTTPMessageMBS object.
Example:

```
// compare the type of a Core Foundation object with the CFHTTPMessageMBS type ID
Var o As CFObjectMBS // e.g. a value from a CFDictionaryMBS or CFArrayMBS
If o <>Nil And o.Type = kCFHTTPMessageMBSGetTypeID Then
System.DebugLog "It is a CFHTTPMessageMBS."
End If
System.DebugLog "CFHTTPMessageMBS type ID " + kCFHTTPMessageMBSGetTypeID.ToString + " =
" + TypeIDDescriptionMBS(kCFHTTPMessageMBSGetTypeID).Str
```

57.3.8 kCFReadStreamMBSGetTypeID as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFReadStreamMBS object.
Example:

```
// compare the type of a Core Foundation object with the CFReadStreamMBS type ID
Var o As CFObjectMBS // e.g. a value from a CFDictionaryMBS or CFArrayMBS
If o <>Nil And o.Type = kCFReadStreamMBSGetTypeID Then
System.DebugLog "It is a CFReadStreamMBS."
End If
System.DebugLog "CFReadStreamMBS type ID " + kCFReadStreamMBSGetTypeID.ToString + " = " +
TypeIDDescriptionMBS(kCFReadStreamMBSGetTypeID).Str
```

57.3.9 kCFSocketMBSGetTypeID as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFSocketMBS object.
Example:

```
// compare the type of a Core Foundation object with the CFSocketMBS type ID
Var o As CFObjectMBS // e.g. a value from a CFDictionaryMBS or CFArrayMBS
If o <>Nil And o.Type = kCFSocketMBSGetTypeID Then
System.DebugLog "It is a CFSocketMBS."
End If
System.DebugLog "CFSocketMBS type ID " + kCFSocketMBSGetTypeID.ToString + " = " + TypeIDDe-
scriptionMBS(kCFSocketMBSGetTypeID).Str
```

57.3.10 kCFWriteStreamMBSGetTypeID as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFWriteStreamMBS object.
Example:

```
// compare the type of a Core Foundation object with the CFWriteStreamMBS type ID
Var o As CFObjectMBS // e.g. a value from a CFDictionaryMBS or CFArrayMBS
If o <>Nil And o.Type = kCFWriteStreamMBSGetTypeID Then
System.DebugLog "It is a CFWriteStreamMBS."
End If
System.DebugLog "CFWriteStreamMBS type ID " + kCFWriteStreamMBSGetTypeID.ToString + " = " +
TypeIDDescriptionMBS(kCFWriteStreamMBSGetTypeID).Str
```

57.4 class CFProxyMBS

57.4.1 class CFProxyMBS

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: The class for proxy queries.
Example:

```
// find which proxy the Mac uses for a given URL
Var settings As Dictionary = CFProxyMBS.SystemProxySettings
Var lines() As String
For Each proxy As Dictionary In CFProxyMBS.ProxiesForURL("https://www.monkeybreadsoftware.de/",
settings)
Var type As String = proxy.Lookup(CFProxyMBS.kCFProxyTypeKey, "")
Var host As String = proxy.Lookup(CFProxyMBS.kCFProxyHostNameKey, "")
Var port As String = proxy.Lookup(CFProxyMBS.kCFProxyPortNumberKey, "")
lines.Add type + " " + host + ":" + port
Next
MessageBox String.FromArray(lines, EndOfLine) // kCFProxyTypeNone means direct connection
```

Notes: These APIs return arrays of dictionaries, where each dictionary describes a single proxy.
The arrays represent the order in which the proxies should be tried - try to download the URL using the first entry in the array, and if that fails, try using the second entry, and so on.

The keys to the proxy dictionaries follow the function declarations; every proxy dictionary will have an entry for kCFProxyTypeKey. If the type is anything except kCFProxyTypeAutoConfigurationURL, the dictionary will also have entries for the proxy's host and port (under kCFProxyHostNameKey and kCF-ProxyPortNumberKey respectively). If the type is kCFProxyTypeAutoConfigurationURL, it will have an entry for kCFProxyAutoConfigurationURLKey.

The keys for username and password are optional and will only be present if the username or password could be extracted from the information passed in (i.e. either the URL itself or the proxy dictionary supplied). These APIs do not consult any external credential stores (such as the Keychain).

All the class methods require Mac OS X 10.5 or newer.

- MBS Xojo / Real Studio Plugins, version 14.1pr1

57.4.2 Methods

57.4.3 ExecuteProxyAutoConfigurationScript(proxyAutoConfigurationScript as string, targetURL as string) as boolean

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Begins the process of executing proxyAutoConfigurationScript to determine the correct proxy to use to retrieve targetURL.
Notes: When the results are found, the event will be called on the main thread, passing a valid proxyList and nil error upon success, or a nil proxyList and valid error on failure.

proxyAutoConfigurationScript: A string containing the code of the script to be executed.
targetURL: The URL that should be passed to the autoconfiguration script.

Returns true if the request was started.

57.4.4 ExecuteProxyAutoConfigurationURL(proxyAutoConfigURL as string, targetURL as string) as boolean

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Executes the proxy auto configuration URL and returns which proxy to use.
Notes: As ExecuteProxyAutoConfigurationScript(), except that ExecuteProxyAutoConfigurationURL will additionally download the contents of proxyAutoConfigURL, convert it to a JavaScript string, and then execute that script.

57.4.5 kCFNetworkProxiesExceptionsList as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the list of host name patterns that should bypass the proxy.
Notes: Value is an array of strings.

57.4.6 kCFNetworkProxiesExcludeSimpleHostnames as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key whose value indicates if simple hostnames will be excluded
Notes: Value is a number.
Simple hostnames will be excluded if the key is present and has a non-zero value.

57.4.7 kCFNetworkProxiesFTPEnable as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the enabled status of the ftp proxy.
Notes: Value is a number.
The proxy is enabled if the key is present and has a non-zero value.

57.4.8 kCFNetworkProxiesFTPPassive as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the state of passive mode for the ftp proxy.
Notes: Value is a Number.
A value of one indicates that passive mode is enabled, a value of zero indicates that passive mode is not enabled.

57.4.9 kCFNetworkProxiesFTPPort as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the port number associated with the ftp proxy.
Notes: Value is a number which is the port number.

57.4.10 kCFNetworkProxiesFTPProxy as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the host name associated with the ftp proxy.
Notes: Value is a string which is the proxy host name.

57.4.11 kCFNetworkProxiesHTTPPort as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the port number associated with the HTTP proxy.
Notes: Value is a number which is the port number.

57.4.12 kCFNetworkProxiesHTTPProxy as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the host name associated with the HTTP proxy.
Notes: Value is a string which is the proxy host name.

57.4.13 kCFNetworkProxiesHTTPSEnable as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the enabled status of the HTTPS proxy; value is a number.
Notes: The proxy is enabled if the key is present and has a non-zero value.

57.4.14 kCFNetworkProxiesHTTPSPort as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the port number associated with the HTTPS proxy.
Notes: Value is a Number which is the port number.

57.4.15 kCFNetworkProxiesHTTPSProxy as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the host name associated with the HTTPS proxy.
Notes: Value is a string which is the proxy host name.

57.4.16 kCFNetworkProxiesProxyAutoConfigEnable as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the enabled status ProxyAutoConfig (PAC).
Notes: Value is a number.
ProxyAutoConfig is enabled if the key is present and has a non-zero value.

57.4.17 kCFNetworkProxiesProxyAutoConfigURLString as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the url which indicates the location of the ProxyAutoConfig (PAC) file.
Notes: Value is a string which is url for the PAC file.

57.4.18 kCFNetworkProxiesProxyAutoDiscoveryEnable as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the enabled status of proxy auto discovery.
Notes: Value is a number.
Proxy auto discovery is enabled if the key is present and has a non-zero value.

57.4.19 kCFNetworkProxiesRTSPEnable as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the enabled status of the RTSP proxy.
Notes: Value is a Number.
The proxy is enabled if the key is present and has a non-zero value.

57.4.20 kCFNetworkProxiesRTSPPort as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the port number associated with the RTSP proxy.
Notes: Value is a Number which is the port number.

57.4.21 kCFNetworkProxiesRTSPProxy as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the host name associated with the RTSP proxy.
Notes: Value is a string which is the proxy host name.

57.4.22 kCFNetworkProxiesSOCKSEnable as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the enabled status of the SOCKS proxy.
Notes: Value is a number.

The proxy is enabled if the key is present and has a non-zero value.

57.4.23 kCFNetworkProxiesSOCKSPort as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the port number associated with the SOCKS proxy.
Notes: Value is a Number which is the port number.

57.4.24 kCFNetworkProxiesSOCKSProxy as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the host name associated with the SOCKS proxy.
Notes: value is a String which is the proxy host name.

57.4.25 kCFProxyAutoConfigurationJavaScriptKey as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the proxy's PAC script.
Notes: The value is a String that contains the full JavaScript soure text for the PAC file.

57.4.26 kCFProxyAutoConfigurationURLKey as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the proxy's PAC file location.
Notes: This key is only present if the proxy's type is kCFProxyTypeAutoConfigurationURL. Value is a string with URL specifying the location of a proxy auto-configuration file.

57.4.27 kCFProxyHostNameKey as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the proxy's hostname; value is a string.
Notes: Note that this may be an IPv4 or IPv6 dotted-IP string.

57.4.28 kCFProxyPasswordKey as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the password to be used with the proxy.
Notes: Value is a String. Note that this key will only be present if the username could be extracted from the information passed in. No external credential stores (like the Keychain) are consulted.

57.4.29 kCFProxyPortNumberKey as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the proxy's port number.
Notes: Value is a CFNumber specifying the port on which to contact the proxy.

57.4.30 kCFProxyTypeAutoConfigurationJavaScript as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: One of the proxy types.
Notes: The proxy is specified by a proxy autoconfiguration (PAC) file content.

57.4.31 kCFProxyTypeAutoConfigurationURL as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: One of the proxy types.
Notes: The proxy is specified by a proxy autoconfiguration (PAC) file.

57.4.32 kCFProxyTypeFTP as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: One of the proxy types.
Notes: The proxy is an FTP proxy.

57.4.33 kCFProxyTypeHTTP as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: One of the proxy types.
Notes: The proxy is an HTTP proxy.

57.4.34 kCFProxyTypeHTTPS as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: One of the proxy types.
Notes: The proxy is a tunneling proxy as used for HTTPS.

57.4.35 kCFProxyTypeKey as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the type of proxy being represented.
Notes: value will be one of the kCFProxyType* constants listed below.

57.4.36 kCFProxyTypeNone as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: One of the proxy types.
Notes: No proxy should be used; contact the origin server directly.

57.4.37 kCFProxyTypeSOCKS as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: One of the proxy types.
Notes: The proxy is a SOCKS proxy.

57.4.38 kCFProxyUsernameKey as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the username to be used with the proxy.
Notes: Value is a String. Note that this key will only be present if the username could be extracted from the information passed in. No external credential stores (like the Keychain) are consulted.

57.4.39 ProxiesForAutoConfigurationScript(proxyAutoConfigurationScript as string, URL as string, byref error as CFErrorMBS) as Dictionary()

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function:

Synchronously executes the given proxy autoconfiguration script and returns a valid proxyList and nil error upon success or a
nil proxyList and valid error on failure.
Notes:

proxyAutoConfigurationScript: A string containing the code of the script to be executed.
targetURL: The URL that should be input in to the autoconfiguration script.
error: A return argument that will contain a valid error in case of failure.

Returns an array of dictionaries describing the proxies returned by the script or nil on failure.

57.4.40 ProxiesForURL(URL as string, proxySettings as Dictionary = nil) as Dictionary()

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Given a URL and a proxy dictionary, determines the ordered list of proxies that should be used to download the given URL.
Notes: url: The URL to be accessed
proxySettings: A dictionary describing the available proxy settings; the dictionary's format should match the dictionary returned by SystemProxySettings described below. If you pass nil, the plugin queries SystemProxySettings functions for you.

Returns an array of dictionaries; each dictionary describes a single proxy. See the comment at the top of this file for how to interpret the returned dictionaries.

57.4.41 SystemProxySettings as Dictionary

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Returns a Dictionary containing the current system internet proxy settings.
Example:

```
Var d as Dictionary = CFProxyMBS.SystemProxySettings

Var k as string = CFProxyMBS.kCFProxyTypeKey
MessageBox "Type: "+d.lookup(k, "unknown")
```

Notes: Returns a dictionary containing key-value pairs that represent the current internet proxy settings. Value is nil if no proxy settings have been defined or if an error was encountered.

57.4.42 Events

57.4.43 AutoConfigurationResult(error as CFErrorMBS, proxyList() as Dictionary)

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Event to be called when a PAC file computation has completed.
Notes: Initiated by either ExecuteProxyAutoConfigurationScript or ExecuteProxyAutoConfigurationURL.

proxyList: Upon success, the list of proxies returned by the autoconfiguration script. The list has the same format as returned by ProxiesForURL, above, except that no entry may be of type kCFProxyTypeAutoConfigurationURL.
error: Upon failure, an error object explaining the failure.

57.5 class CFReadStreamMBS

57.5.1 class CFReadStreamMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A class for a CoreFoundation write stream.
Notes: You can read from a file, a memoryblock or using a socket over the network.
Subclass of the CFStreamMBS class.

57.5.2 Methods

57.5.3 close

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Closes the stream.
Notes: Terminates the flow of bytes; releases any system resources required by the stream. The stream may not fail to close.

57.5.4 CreateForHTTPRequest(request as CFHTTPMessageMBS) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new read stream based on the given HTTP request.
Notes: Creates a read stream for the response to the given request; when the stream is opened, it will begin transmitting the request. The bytes returned are the pure body bytes; the response header has been parsed off. To retrieve the response header, ask for kCFStreamPropertyHTTPResponseHeader any time after the first bytes arrive on the stream (or when stream end is reported, if there are no data bytes).

Returns true if successful.

57.5.5 CreateWithFile(fileurl as CFURLMBS) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new file based readstream.
Notes: Returns true if successful.

57.5.6 CreateWithMemoryBlock(mem as memoryblock, len as Integer) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new readstream based on the data of the given memoryblock.
Notes: Returns true if successful.

57.5.7 CreateWithString(s as string) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new readstream based on the data of the given string.
Notes: Returns true if successful.

57.5.8 ErrorCode as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The last error code.
Notes: Meaning depends on the ErrorDomain.

57.5.9 ErrorDomain as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The error domain of the last error code.
Notes: Possible domains:

kCFStreamErrorDomainCustom	= -1	custom to the kind of stream in question
kCFStreamErrorDomainPOSIX	= 1	POSIX errno; interpret using <sys/errno.h>
kCFStreamErrorDomainMacOSStatus	= 2	OSStatus type from Carbon APIs; interpret using <MacTypes.h>

57.5.10 GetProperty(propertyName as CFStringMBS) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns a property of the stream.
Notes: Returns nil on any error.
Particular streams can name properties and assign meanings to them; you access these properties through the GetProperty and SetProperty calls. A property is any interesting information about the stream other than the data being transmitted itself. Examples include the headers from an HTTP transmission, or the

expected number of bytes, or permission information, etc. Properties that can be set configure the behavior of the stream, and may only be settable at particular times (like before the stream has been opened). See the documentation for particular properties to determine their get- and set-ability.

57.5.11 HasBytesAvailable as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: True if you can read bytes.
Notes: Whether there is data currently available for reading;
Returns TRUE if it's impossible to tell without trying.

57.5.12 InstallEvents

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Installs the event handler.
Notes: You need to remove the event handler later to not leak memory!
The event handler is needed to have the Callback event fireing.

57.5.13 Open as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Opens the stream.
Notes: Returns success/failure. Opening a stream causes it to reserve all the system resources it requires. If the stream can open non-blocking, this will always return TRUE; listen to the Callback to find out when the open completes and whether it was successful, or poll using the Status property, waiting for a status of kCFStreamStatusOpen or kCFStreamStatusError.

57.5.14 ReadMemory(maxBytesToRead as Integer, mem as memoryblock) as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Reads some bytes from the stream.
Notes: Returns the number of bytes read, or -1 if an error occurs preventing any bytes from being read, or 0 if the stream's end was encountered.
It is an error to try and read from a stream that hasn't been opened first.
This call will block until at least one byte is available; it will NOT block until the entire buffer can be filled.

To avoid blocking, either poll using HasBytesAvailable or use the run loop and listen for the kCFStreamCanRead event for notification of data available.

57.5.15 ReadString(maxBytesToRead as Integer) as string

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Reads some bytes from the stream.
Notes: Returns a string as long as the number of bytes read, or "" if an error occurs preventing any bytes from being read or the stream's end was encountered.
It is an error to try and read from a stream that hasn't been opened first.
This call will block until at least one byte is available; it will NOT block until the entire buffer can be filled.
To avoid blocking, either poll using HasBytesAvailable or use the run loop and listen for the kCFStreamCanRead event for notification of data available.

57.5.16 RemoveEvents

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Removes the event handler.
Notes: You should remove this event handler after you finished with the stream.

57.5.17 SetProperty(propertyName as CFStringMBS, propertyValue as CFObjectMBS) as Boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Sets a property of the stream.
Notes: Returns true if successful.

57.5.18 Status as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The status of the stream.
Notes: Possible values:

kCFStreamStatusNotOpen	= 0
kCFStreamStatusOpening	= 1 (open is in-progress)
kCFStreamStatusOpen	= 2
kCFStreamStatusReading	= 3
kCFStreamStatusWriting	= 4
kCFStreamStatusAtEnd	= 5 (no further bytes can be read/written)
kCFStreamStatusClosed	= 6
kCFStreamStatusError	= 7

57.5.19 Events

57.5.20 Callback(reason as Integer)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Called when something happens.
Notes: Possible values for the reason:

kCFStreamEventNone	= 0
kCFStreamEventOpenCompleted	= 1
kCFStreamEventHasBytesAvailable	= 2
kCFStreamEventCanAcceptBytes	= 4
kCFStreamEventErrorOccurred	= 8
kCFStreamEventEndEncountered	= 16

57.6 class CFSocketMBS

57.6.1 class CFSocketMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A class for a CFSocket.
Notes: A CFSocket contains a native socket within a structure that can be used to read from the socket in the background and make the data thus read available using a runloop source.

Addresses are stored as CFDatas containing a struct sockaddr appropriate for the protocol family; make sure that all fields are filled in properly when passing in an address.

Some error codes:

```
kCFSocketSuccess    = 0
 kCFSocketError     = -1
 kCFSocketTimeout   = -2
```

Subclass of the CFObjectMBS class.

57.6.2 Methods

57.6.3 ConnectToAddress(address as CFBinaryDataMBS, timeout as Double) as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Connects the socket to the given address.
Notes: Returns a socket error.

Some error codes:

```
kCFSocketSuccess    = 0
 kCFSocketError     = -1
 kCFSocketTimeout   = -2
```

57.6.4 Create as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new socket.
Notes: Some error codes:

```
kCFSocketSuccess     = 0,
 kCFSocketError      = -1,
 kCFSocketTimeout    = -2
```

57.6.5 Invalidate

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Invalidates the socket.

57.6.6 IsValid as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Checks if the socket is valid.

57.6.7 NativeSocketHandle as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The native socket handle.

57.6.8 PeerAddress as CFBinaryDataMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The peer address of this socket.
Notes: Returns nil on any error.

57.6.9 SendData(data as CFBinaryDataMBS, timeout as Double) as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Sends data over the socket with a given timeout.
Notes: For convenience, a function is provided to send data using the socket with a timeout. The timeout will be used only if the specified value is positive.

Some error codes:

kCFSocketSuccess	= 0
kCFSocketError	= -1
kCFSocketTimeout	= -2

57.6.10 Properties

57.6.11 Address as CFBinaryDataMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The address of this socket.
Notes: (Read and Write computed property)

57.6.12 Events

57.6.13 Callback(reason as Integer, address as CFBinaryDataMBS, data as memoryblock)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The callback event for this socket.
Notes: Possible reasons:

kCFSocketNoCallBack	= 0
kCFSocketReadCallBack	= 1
kCFSocketAcceptCallBack	= 2
kCFSocketDataCallBack	= 3
kCFSocketConnectCallBack	= 4
kCFSocketWriteCallBack	= 8

57.7 class CFStreamMBS

57.7.1 class CFStreamMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A class for a CFStream.
Notes: (Only a place to store all those constants ;-)
Subclass of the CFObjectMBS class.

57.7.2 Methods

57.7.3 kCFHTTPAuthenticationSchemeBasic as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the authentication schemes available.

57.7.4 kCFHTTPAuthenticationSchemeDigest as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the authentication schemes available.

57.7.5 kCFHTTPVersion1_0 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: HTTP Version 1.0.

57.7.6 kCFHTTPVersion1_1 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: HTTP Version 1.1.

57.7.7 kCFStreamErrorDomainHTTP as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: An error domain used with the socket based streams.
Notes: Possible error values:

```
kCFStreamErrorHTTPParseFailure        = -1
kCFStreamErrorHTTPRedirectionLoop     = -2
kCFStreamErrorHTTPBadURL              = -3
```

57.7.8 kCFStreamErrorDomainSOCKS as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: SOCKS proxy error domain.

57.7.9 kCFStreamErrorDomainSSL as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: An error domain used with the socket based streams.
Notes: Secure stream support.

57.7.10 kCFStreamPropertyAppendToFile as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Whether to append new bytes to an existing file.
Notes: Property for file write streams; value should be a CFBoolean.
Set to TRUE to append to a file, rather than to replace its contents.
Requires Mac OS X 10.2

57.7.11 kCFStreamPropertyDataWritten as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A property name for use with the CFWriteStream class.
Example:

```
Var writestream as CFWriteStreamMBS
Var c as cfobjectmbs
c=writestream.getproperty(writestream.kCFStreamPropertyDataWritten)
```

Notes: Value will be a CFData containing all bytes thusfar written; used to recover the data written to a memory write stream.

57.7.12 kCFStreamPropertyHTTPAttemptPersistentConnection as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.
Notes: Value should be a CFBoolean. If this property is set to true, an HTTP stream will look for an appropriate extant persistent connection to use, and if it finds none, will try to create one.

57.7.13 kCFStreamPropertyHTTPFinalURL as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.
Notes: Value is the CFURL from the final request; will only differ from the URL in the original request if an autoredirection has occurred.

57.7.14 kCFStreamPropertyHTTPProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Which HTTP Proxy to use.
Notes: HTTP proxy information is set the same way as SOCKS proxies.
Call CFReadStream.SetProperty() passing an HTTP stream and the property kCFStreamPropertyHTTP-Proxy.
The value should be a CFDictionary that includes at least one Host/Port pair from the keys below.
The dictionary returned by SystemConfiguration.framework can also be passed directly as the value

Keys for the dictionary to use:
kCFStreamPropertyHTTPProxyHost
kCFStreamPropertyHTTPProxyPort
kCFStreamPropertyHTTPSProxyHost
kCFStreamPropertyHTTPSProxyPort

57.7.15 kCFStreamPropertyHTTPProxyHost as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the keys for the proxy CFDictionary for a socket based stream.

57.7.16 kCFStreamPropertyHTTPProxyPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the keys for the proxy CFDictionary for a socket based stream.

57.7.17 kCFStreamPropertyHTTPResponseHeader as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.
Notes: Value is a CFHTTPMessage with 0 bytes data.

57.7.18 kCFStreamPropertyHTTPShouldAutoredirect as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.
Notes: Value should be a CFBoolean.

57.7.19 kCFStreamPropertyHTTPSProxyHost as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the keys for the proxy CFDictionary for a socket based stream.

57.7.20 kCFStreamPropertyHTTPSProxyPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the keys for the proxy CFDictionary for a socket based stream.

57.7.21 kCFStreamPropertyShouldCloseNativeSocket as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.
Notes: Set the value to kCFBooleanTrue if the stream should close and release the underlying native socket when the stream is released. Set the value to kCFBooleanFalse to keep the native socket from closing and releasing when the stream is released.

If the stream was created with a native socket, the default property setting on the stream is kCFBooleanFalse.

The kCFStreamPropertyShouldCloseNativeSocket can be set through CFReadStream.SetProperty or CFWriteStream.SetProperty. The property can be copied through CFReadStream.GetProperty or CFWriteStream.GetProperty.

57.7.22 kCFStreamPropertySocketNativeHandle as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.
Notes: Value will be a CFData containing the native handle.

57.7.23 kCFStreamPropertySocketRemoteHostName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.
Notes: Value will be a CFString, or nil if unknown.

57.7.24 kCFStreamPropertySocketRemotePortNumber as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.
Notes: Value will be a CFNumber, or nil if unknown.

57.7.25 kCFStreamPropertySocketSecurityLevel as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.
Notes: You set this property to one of the following values:
kCFStreamSocketSecurityLevelSSLv3
kCFStreamSocketSecurityLevelSSLv2
kCFStreamSocketSecurityLevelNone

kCFStreamSocketSecurityLevelNegotiatedSSL
kCFStreamSocketSecurityLevelTLSv1
(this 5 properties return CFStrings which you pass to SetProperty)

57.7.26 kCFStreamPropertySOCKSPassword as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.

57.7.27 kCFStreamPropertySOCKSProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.
Notes: SOCKS Proxy usage
To set a stream to use a SOCKS proxy, call CFReadStream.SetProperty or CFWriteStream.SetProperty with the property name set to kCFStreamPropertySOCKSProxy and the value being a CFDictionary with at least the following two keys: kCFStreamPropertySOCKSProxyHost and kCFStreamPropertySOCKSProxyPort.
The dictionary returned by SystemConfiguration for SOCKS proxies will work without alteration.
The key kCFStreamPropertySOCKSProxyHost should contain a CFStringRef value representing the SOCKS proxy host. The key kCFStreamPropertySOCKSProxyPort should contain a CFNumberRef which itself is of type kCFNumberSInt32Type. This value should represent the port on which the proxy is listening.

By default, SOCKS5 will be used unless there is a kCFStreamPropertySOCKSVersion key in the CFDictionary. Its value must be kCFStreamSocketSOCKSVersion4 or kCFStreamSocketSOCKSVersion5 to set SOCKS4 or SOCKS5, respectively.

To set a user name and/or password, if required, the dictionary must contain the key(s) kCFStreamPropertySOCKSUser and/or kCFStreamPropertySOCKSPassword with the value being the user's name as a CFString and/or the user's password as a CFString, respectively.

kCFStreamPropertySOCKSProxy can be set through CFReadStream.SetProperty or CFWriteStream.SetProperty. The property can be copied through CFReadStream.GetProperty or CFWriteStream.GetProperty.

57.7.28 kCFStreamPropertySOCKSProxyHost as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.

57.7.29 kCFStreamPropertySOCKSProxyPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.

57.7.30 kCFStreamPropertySOCKSUser as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.

57.7.31 kCFStreamPropertySOCKSVersion as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.

57.7.32 kCFStreamSocketSecurityLevelNegotiatedSSL as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property values for a socket based stream.
Notes: TLS or SSL with fallback to lower versions; this is what HTTPS does, for instance.

57.7.33 kCFStreamSocketSecurityLevelNone as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property values for a socket based stream.

57.7.34 kCFStreamSocketSecurityLevelSSLv2 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property values for a socket based stream.

57.7.35 kCFStreamSocketSecurityLevelSSLv3 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property values for a socket based stream.

57.7.36 kCFStreamSocketSecurityLevelTLSv1 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property values for a socket based stream.

57.7.37 kCFStreamSocketSOCKSVersion4 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the values used with the kCFStreamPropertySOCKSVersion property for a socket based stream.

57.7.38 kCFStreamSocketSOCKSVersion5 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the values used with the kCFStreamPropertySOCKSVersion property for a socket based stream.

57.8 class CFWriteStreamMBS

57.8.1 class CFWriteStreamMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A class for a CoreFoundation write stream.
Notes: You can write to a file, a memoryblock or using a socket over the network.
Subclass of the CFStreamMBS class.

57.8.2 Methods

57.8.3 CanAcceptBytes as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Whether the stream can now accept data to write.
Notes: Whether the stream can currently be written to without blocking;
Returns TRUE if it's impossible to tell without trying.

57.8.4 close

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Closes the stream.
Notes: Terminates the flow of bytes; releases any system resources required by the stream. The stream may not fail to close.

57.8.5 CreateWithFile(fileurl as CFURLMBS) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new WriteStream using the given file specification.
Notes: Returns true if successful.

57.8.6 CreateWithMemory as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new memory based stream.
Notes: New buffers are allocated as bytes are written to the stream. At any point, you can recover the

bytes thusfar written by asking for the property kCFStreamPropertyDataWritten (using GetProperty).

57.8.7 CreateWithMemoryBlock(mem as memoryblock, len as Integer) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new WriteStream which writes the data into the given memoryblock.
Notes: The stream writes into the memoryblock given; when bufferCapacity is exhausted, the stream is exhausted (status becomes kCFStreamStatusAtEnd).
Returns nil on any error.

57.8.8 ErrorCode as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The last error code.
Notes: Meaning depends on the ErrorDomain.

57.8.9 ErrorDomain as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The error domain of the last error code.
Notes: Possible domains:

kCFStreamErrorDomainCustom	= -1	custom to the kind of stream in question
kCFStreamErrorDomainPOSIX	= 1	POSIX errno; interpret using <sys/errno.h>
kCFStreamErrorDomainMacOSStatus	= 2	OSStatus type from Carbon APIs; interpret using <MacTypes.h>

57.8.10 GetProperty(propertyName as CFStringMBS) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns a property of the stream.
Notes: Returns nil on any error.
Particular streams can name properties and assign meanings to them; you access these properties through the GetProperty and SetProperty calls. A property is any interesting information about the stream other than the data being transmitted itself. Examples include the headers from an HTTP transmission, or the expected number of bytes, or permission information, etc. Properties that can be set configure the behavior of the stream, and may only be settable at particular times (like before the stream has been opened). See

the documentation for particular properties to determine their get- and set-ability.

57.8.11 InstallEvents

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Installs the event handler.
Notes: You need to remove the event handler later to not leak memory!
The event handler is needed to have the Callback event fireing.

57.8.12 Open as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Opens the stream.
Notes: Returns success/failure. Opening a stream causes it to reserve all the system resources it requires. If the stream can open non-blocking, this will always return TRUE; listen to the Callback to find out when the open completes and whether it was successful, or poll using the Status property, waiting for a status of kCFStreamStatusOpen or kCFStreamStatusError.

57.8.13 RemoveEvents

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Removes the event handler.
Notes: You should remove this event handler after you finished with the stream.

57.8.14 SetProperty(propertyName as CFStringMBS, propertyValue as CFObjectMBS) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Sets a property of the stream.
Notes: Returns true if successful.

57.8.15 Status as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The status of the stream.
Notes: Possible values:

kCFStreamStatusNotOpen	= 0
kCFStreamStatusOpening	= 1 (open is in-progress)
kCFStreamStatusOpen	= 2
kCFStreamStatusReading	= 3
kCFStreamStatusWriting	= 4
kCFStreamStatusAtEnd	= 5 (no further bytes can be read/written)
kCFStreamStatusClosed	= 6
kCFStreamStatusError	= 7

57.8.16 WriteMemory(mem as memoryblock, len as Integer) as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Write the data from inside the memoryblock to the stream.
Notes: Returns the number of bytes successfully written, -1 if an error has occurred, or 0 if the stream has been filled to capacity (for fixed-length streams). If the stream is not full, this call will block until at least one byte is written. To avoid blocking, either poll via CanAcceptBytes or use the run loop and listen for the kCFStreamCanWrite event.

57.8.17 WriteString(buf as string) as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Write the data from inside the string to the stream.
Notes: Returns the number of bytes successfully written, -1 if an error has occurred, or 0 if the stream has been filled to capacity (for fixed-length streams). If the stream is not full, this call will block until at least one byte is written. To avoid blocking, either poll via CanAcceptBytes or use the run loop and listen for the kCFStreamCanWrite event.

57.8.18 Events

57.8.19 Callback(reason as Integer)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Called when something happens.
Notes: Possible values for the reason:

kCFStreamEventNone	= 0
kCFStreamEventOpenCompleted	= 1
kCFStreamEventHasBytesAvailable	= 2
kCFStreamEventCanAcceptBytes	= 4
kCFStreamEventErrorOccurred	= 8
kCFStreamEventEndEncountered	= 16

CoreGraphics

58.1 Globals

58.1.1 CGNewPDFDocumentMBS(file as folderitem, MediaBox as CGRectMBS, title as string, author as string, creator as string, subject as string, keywords as string, OwnerPassword as string, UserPassword as string, AllowsPrinting as boolean, AllowsCopy as boolean) as CGPDFContextMBS

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Creates a PDF document.
Notes: Title, Author, Creator, Subject and Keywords parameters can be empty.

If OwnerPassword and UserPassword are filled in the PDF is encrypted and AllowsPrinting/AllowsCopy define what the user can do after he entered his password.

The passwords must be a string which can be represented in ASCII encoding; only the first 32 bytes will be used for the password.

Requires Mac OS X to work.
See also:

- 58.1.2 CGNewPDFDocumentMBS(file as folderitem, MediaBox as CGRectMBS, title as string, author as string, creator as string, subject as string, keywords as string, OwnerPassword as string, UserPassword as string, AllowsPrinting as boolean, AllowsCopy as boolean, KeyLength as Integer) as CGPDFContextMBS 9428

58.1.2 CGNewPDFDocumentMBS(file as folderitem, MediaBox as CGRectMBS, title as string, author as string, creator as string, subject as string, keywords as string, OwnerPassword as string, UserPassword as string, AllowsPrinting as boolean, AllowsCopy as boolean, KeyLength as Integer) as CGPDFContextMBS

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Creates a PDF document.
Notes: Title, Author, Creator, Subject and Keywords parameters can be empty.

If OwnerPassword and UserPassword are filled in the PDF is encrypted and AllowsPrinting/AllowsCopy define what the user can do after he entered his password. #

The passwords must be a string which can be represented in ASCII encoding; only the first 32 bytes will be used for the password.

Keylength must be a value between 48 bit and 128 bit in 8 bit steps. 0 uses default value.

Requires Mac OS X to work.
Xojo Developer Magazine

See also:

- 58.1.1 CGNewPDFDocumentMBS(file as folderitem, MediaBox as CGRectMBS, title as string, author as string, creator as string, subject as string, keywords as string, OwnerPassword as string, UserPassword as string, AllowsPrinting as boolean, AllowsCopy as boolean) as CGPDFContextMBS 9427

58.1.3 GetCurrentCGContextMBS as CGContextMBS

MBS MacCG Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new CGContextMBS object for the current Cocoa graphics context.
Example:

```
// get the CoreGraphics context while drawing, e.g. in a Canvas Paint event
Var c As CGContextMBS = GetCurrentCGContextMBS
If c <>Nil Then
c.SetRGBFillColor(1, 0, 0, 1)
c.FillRect CGMakeRectMBS(10, 10, 100, 50)
End If
```

Notes: Requires Mac OS X to work.
Returns nil on any error.

58.1.4 CGBitmapContextCreateMBS(data as memoryblock, width as Integer, height as Integer, bitsPerComponent as Integer, bytesPerRow as Integer, colorspace as CGColorSpaceMBS, alphaInfo as Integer) as CGBitmapContextMBS

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Create a bitmap context.
Notes: The context draws into a bitmap which is 'width' pixels wide and 'height' pixels high. The number of components for each pixel is specified by 'colorspace', which also may specify a destination color profile. The number of bits for each component of a pixel is specified by 'bitsPerComponent', which must be 1, 2, 4, or 8. Each row of the bitmap consists of 'bytesPerRow' bytes, which must be at least '(width * bitsPerComponent * number of components + 7)/8' bytes. 'data' points a block of memory at least 'bytesPerRow * height' bytes. 'alphaInfo' specifies whether the bitmap should contain an alpha channel, and how it's to be generated.

Fails if data=nil or colorspace=nil.
The memoryblock is not referenced and not stored, so keep it alive while using the BitmapContext object.

Returns nil on any error.

data
A pointer to the destination in memory where the drawing is to be rendered. The size of this memoryblock should be at least(bytesPerRow*height) bytes.

width
The width of the bitmap in pixels.

height
The height of the bitmap in pixels.

bitsPerComponent
The number of bits to use for each component of a pixel in memory. Allowable values are 4, 5, or 8. For example, for a 32-bit RGB(A) colorspace, you would specify a value of 8 bits per color component. In combination, the number of bits per component, the color space, and the alpha value determine which bitmap context formats Quartz supports.

bytesPerRow
The number of bytes of memory to use per row of the bitmap. This value must be at least the product of the width and bitsPerComponentparameters, times the number of components per pixel. The result should

be divided by 8 and rounded up to the nearest whole number to obtain the number of bytes to use per row. That is, the value must be at least (((width)*(bits per component)*(number of components per pixel))+7)/8 bytes. For a given row, Quartz stores bitmap data for the first width pixels and ignores any remaining bytes. The colorspace value referenced by the colorspace parameter specifies the number of components for each pixel.

colorspace
The color space to use for the bitmap context.

alphaInfo
A CGImageAlphaInfo constant specifying whether the bitmap should contain an alpha channel and how it is to be generated. The alpha value determines the opacity of a pixel when it is drawn.

Supported pixel formats:

Pixel format	Color space	Bits per pixel	Bits per component	Alpha option
Gray_8	Grayscale	8	8	kCGImageAlphaNone
RGB555	RGB	16	5	kCGImageAlphaNoneSkipFirst
XRGB_32	RGB	32	8	kCGImageAlphaNoneSkipFirst
ARGB_32	RGB	32	8	kCGImageAlphaPremultipliedFirst
RGBX_32	RGB	32	8	kCGImageAlphaNoneSkipLast
RGBA_32	RGB	32	8	kCGImageAlphaPremultipliedLast

Quartz does not support the following formats in a bitmap context:

- 1-bit grayscale
- 24-bit RGB
- CMYK (any depth)

CGImageAlphaInfo constants:

kCGImageAlphaNone	0	
kCGImageAlphaPremultipliedLast	1	For example, premultiplied RGBA
kCGImageAlphaPremultipliedFirst	2	For example, premultiplied ARGB
kCGImageAlphaLast	3	For example, non-premultiplied RGBA
kCGImageAlphaFirst	4	For example, non-premultiplied ARGB
kCGImageAlphaNoneSkipLast	5	Equivalent to kCGImageAlphaNone.
kCGImageAlphaNoneSkipFirst	6	

58.1.5 CGOpenPDFDocumentMBS(dataprovider as CGDataProviderMBS) as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 5.1, Platform: macOS, Targets: All.

Function: Opens a CG PDF Document from a data stream.
Example:

```
Sub Paint(g As Graphics)
// window.paint event
Var f as FolderItem
Var b as BinaryStream
Var s as string
Var d as CGDataProviderMBS
Var p as CGPDFDocumentMBS

// get a folderitem to a pdf file.
f=SpecialFolder.Desktop.Child("notes.pdf")

// load the content in a string variable
b=f.OpenAsBinaryFile(false)
s=b.Read(b.Length)
b.Close

// now make a CGDataProvider based on a string.
d=CGDataProviderMBS.CreateWithData(s)

// Open the PDF from the Data Provider
p=CGOpenPDFDocumentMBS(d)

// And play with it
g.DrawCGPDFDocumentMBS p,p.MediaBox(1),1

Exception
// trouble goes here.
End Sub
```

Notes: Returns nil on any error.

58.1.6 CGShadingCreateAxialMBS(colorspace as CGColorSpaceMBS, startPoint as CGPointMBS, endPoint as CGPointMBS, func as CGFunctionMBS, extendStart as boolean, extendEnd as boolean) as CGShadingMBS

MBS MacCG Plugin, Plugin Version: 6.2, Platform: macOS, Targets: All.

Function: Creates a Quartz axial shading.
Notes: Parameters:

colorspace: The color space in which color values are expressed. Quartz retains this object; upon return, you may safely release it.

startPoint: The starting point of the axis, in the shading's target coordinate space.
endPoint: The ending point of the axis, in the shading's target coordinate space.
function: A CGFunction object. This object refers to your function for creating an axial shading. Quartz retains this object; upon return, you may safely release it.
extendStart: A Boolean value that specifies whether to extend the shading beyond the starting point of the axis.
extendEnd: A Boolean value that specifies whether to extend the shading beyond the ending point of the axis.

Returns a new Quartz axial shading or nil on any error.

Discussion
An axial shading is a color blend that varies along a linear axis between two endpoints and extends indefinitely perpendicular to that axis. When you are ready to draw the shading, call the function CGContextMBS.DrawShading.

Available in Mac OS X version 10.2 and later.

58.1.7 CGShadingCreateRadialMBS(colorspace as CGColorSpaceMBS, startPoint as CGPointMBS, startRadius as Double, endPoint as CGPointMBS, endRadius as Double, func as CGFunctionMBS, extendStart as boolean, extendEnd as boolean) as CGShadingMBS

MBS MacCG Plugin, Plugin Version: 6.2, Platform: macOS, Targets: All.

Function: Creates a Quartz radial shading.
Notes: Parameters
colorspace: The color space in which color values are expressed.
startPoint: The center of the starting circle, in the shading's target coordinate space.
startRadius: The radius of the starting circle, in the shading's target coordinate space.
endPoint: The center of the ending circle, in the shading's target coordinate space.
endRadius: The radius of the ending circle, in the shading's target coordinate space.
function: A CGFunction object. This object refers to your function for creating a radial shading.
extendStart: A Boolean value that specifies whether to extend the shading beyond the starting circle.
extendEnd: A Boolean value that specifies whether to extend the shading beyond the ending circle.

Returns a new Quartz radial shading or nil on any error.

A radial shading is a color blend that varies between two circles. To draw the shading, call the function CGContextDrawShading.

Available in Mac OS X version 10.2 and later.

58.1.8 CGCreateImageFromJPEGDataProviderMBS(dataprovider as Variant, decode as memoryblock, shouldInterpolate as boolean, intent as Integer) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new CGImage with JPEG data.
Example:

```
// Shows moon.jpg from the desktop folder
// shows in the window title if i,p or u is nil.

Sub Mainwindow.Paint(g As Graphics)
Var f as FolderItem
Var p as CGDataProviderMBS
Var i as CGImageMBS

f=SpecialFolder.Desktop.Child("moon.jpg")
p=CGDataProviderMBS.CreateWithFile(f)
if p=nil then
Title="p=nil"
else
i=CGCreateImageFromJPEGDataProviderMBS(p,nil,true,0)

if i=nil then
Title="i=nil"
else
Window1.CGContextMBS.DrawPicture i,CGMakeRectMBS(0,0,i.Width,i.Height)
end if
end if

End Sub
```

Notes: Dataprovider must be a CGDataProviderMBS object.

Parameters:

dataprovider:
A reference to a data provider supplying JPEG-encoded data.

decode:
Pass the decode array for the image. In the decode array, for each color component in the source color space, you provide a pair of values denoting the upper and lower limits of a range. For example, the decode array for a source image in the RGB color space would contain six entries total, consisting of one pair each for red, green, and blue. When the image is rendered, Quartz uses a linear transform to map the original component value into a relative number within your designated range that is appropriate for the destination

color space. If you do not want to allow remapping of the image's color values, pass nil for the decode array. The memoryblock for the array needs to be filled with double values.

shouldInterpolate:
Pass true if interpolation should occur; otherwise, pass false . The interpolation setting specifies whether Quartz should apply a pixel-smoothing algorithm to the image. If you pass false , the image may appear jagged or pixelated when drawn on an output device with higher resolution than the image data.

intent:
Pass a CGColorRenderingIntent value specifying how Quartz should display colors in the image that are not located within the current color space of the graphics context. The rendering intent determines the exact method used to map colors from one color space to another.

58.1.9 CGCreateImageFromPNGDataProviderMBS(dataprovider as Variant, decode as memoryblock, shouldInterpolate as boolean, intent as Integer) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new CGImage with PNG data.
Notes: Dataprovider must be a CGDataProviderMBS object.

Parameters:

dataprovider:
A reference to a data provider supplying JPEG-encoded data.

decode:
Pass the decode array for the image. In the decode array, for each color component in the source color space, you provide a pair of values denoting the upper and lower limits of a range. For example, the decode array for a source image in the RGB color space would contain six entries total, consisting of one pair each for red, green, and blue. When the image is rendered, Quartz uses a linear transform to map the original component value into a relative number within your designated range that is appropriate for the destination color space. If you do not want to allow remapping of the image's color values, pass nil for the decode array. The memoryblock for the array needs to be filled with double values.

shouldInterpolate:
Pass true if interpolation should occur; otherwise, pass false . The interpolation setting specifies whether Quartz should apply a pixel-smoothing algorithm to the image. If you pass false , the image may appear jagged or pixelated when drawn on an output device with higher resolution than the image data.

intent:

Pass a CGColorRenderingIntent value specifying how Quartz should display colors in the image that are not located within the current color space of the graphics context. The rendering intent determines the exact method used to map colors from one color space to another.

58.1.10 CGCreateImageMBS(pic as picture) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Creates a new CGImageMBS from the given images.
Example:

```
Var c as CGImageMBS
Var pic, mask as Picture
// get picture and mask

c=CGCreateImageMBS(pic)
if c<>Nil then
// go on
end if
```

Notes: If the image has a mask, it is used.
See also:

- 58.1.11 CGCreateImageMBS(pic as picture, mask as picture) as CGImageMBS 9435

58.1.11 CGCreateImageMBS(pic as picture, mask as picture) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Creates a new CGImageMBS from the given images.
Example:

```
Var c as CGImageMBS
Var pic, mask as Picture
// get picture and mask

c=CGCreateImageMBS(pic, mask)
if c<>Nil then
// go on
end if
```

Notes: The mask is taken from the second image.
With 11.3 plugins we are deprecating to pass a mask. The plugin prefers to simply take the mask or alpha channel of the picture itself.

See also:

- 58.1.10 CGCreateImageMBS(pic as picture) as CGImageMBS 9435

58.1.12 CGMakePointMBS(x as Double, y as Double) as CGPointMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns a new CGPointMBS object.
Example:

```
// create a CoreGraphics point
Var p As CGPointMBS = CGMakePointMBS(100, 50)
MessageBox p.x.ToString + "/" + p.y.ToString
```

58.1.13 CGMakeRectMBS(left as Double, top as Double, width as Double, height as Double) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns a new CGRectMBS object with the given value.
Example:

```
// create a rectangle for CoreGraphics and check its values
Var r As CGRectMBS = CGMakeRectMBS(10, 20, 300, 200)
MessageBox "Rect: " + r.Left.ToString + "/" + r.Top.ToString + ", " + r.Width.ToString + " x " +
r.Height.ToString
```

58.1.14 CGMakeSizeMBS(width as Double, height as Double) as CGSizeMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns a new CGSizeMBS object.
Example:

```
// create a CoreGraphics size
Var s As CGSizeMBS = CGMakeSizeMBS(1920, 1080)
MessageBox s.width.ToString + " x " + s.height.ToString
```

58.1.15 CGNewPDFDocumentMBS(consumer as CGDataConsumerMBS, MediaBox as CGRectMBS, title as string, author as string, creator as string) as CGPDFContextMBS

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Creates a PDF document.
Notes: Title, author and creator are all optional.
Requires Mac OS X to work.
Keep yourself a reference to the consumer object so RB does not release it resulting in a crash.

58.1.16 CGNewPDFDocumentMBS(file as folderitem, MediaBox as CGRectMBS, title as string, author as string, creator as string) as CGPDFContextMBS

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Creates a PDF document.
Example:

```
// create a PDF with Quartz and draw a text on one page
Var file As FolderItem = SpecialFolder.Desktop.Child("quartz.pdf")
Var box As CGRectMBS = CGMakeRectMBS(0, 0, 595, 842) // A4
Var pdf As CGPDFContextMBS = CGNewPDFDocumentMBS(file, box, "Test", "Me", "Xojo")
pdf.BeginPage(box)
pdf.SetRGBFillColor(0, 0, 0, 1)
pdf.SelectFont("Helvetica", 24, 1)
pdf.ShowTextAtPoint("Hello World", 72, 700)
pdf.EndPage
pdf.Flush
pdf = Nil // closes the file
```

Notes: Title, author and creator are all optional.

Requires Mac OS X to work.

58.1.17 CGOpenPDFDocumentMBS(file as folderitem) as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Opens a PDF document.
Example:

```
// open a PDF with Quartz and show the page count
Var doc As CGPDFDocumentMBS = CGOpenPDFDocumentMBS(SpecialFolder.Desktop.Child("test.pdf"))
If doc <>Nil Then MessageBox doc.PageCount.ToString + " pages"
```

Notes: RB 4.5 should do this perfectly, but older RB versions may have problems with longer file names.
Requires Mac OS X to work.

- MBS REALbasic Plugins, version 10.4pr11

58.1.18 CGSessionMBS as CGSessionMBS

MBS MacOSX Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A function to return the current CoreGraphics session information.
Example:

```
Var c as CGSessionMBS

c=CGSessionMBS

MessageBox C.UserName+" "+str(c.Userid)
```

Notes: Returns nil on any error.

Returns nil if the caller is not within a GUI session, as when the caller is a UNIX daemon, or if a system is configured to not run a Quartz GUI (window server disabled).

58.2 class CGAffineTransformMBS

58.2.1 class CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: A class for an affine transformation.
Example:

```
Var af as CGAffineTransformMBS = CGAffineTransformMBS.Identity

MessageBox str(af.A)+" "+str(af.b)+" "+str(af.c)+" "+str(af.d)+" "+str(af.tx)+" "+str(af.ty)

af = af.Scale( 1, -1 )

MessageBox str(af.A)+" "+str(af.b)+" "+str(af.c)+" "+str(af.d)+" "+str(af.tx)+" "+str(af.ty)

af = af.Translate( 0, 100 )

MessageBox str(af.A)+" "+str(af.b)+" "+str(af.c)+" "+str(af.d)+" "+str(af.tx)+" "+str(af.ty)

Var r1 as CGRectMBS
Var r2 as CGRectMBS

r1=CGMakeRectMBS(100,100,100,100)

r2=r1.ApplyAffineTransform(af)

MessageBox "("+str(r1.Left)+", "+str(r1.top)+", "+str(r1.width)+", "+str(r1.height)+") =>("+str(r2.Left)+",
"+str(r2.top)+", "+str(r2.width)+", "+str(r2.height)+")"
```

58.2.2 Methods

58.2.3 Binary as MemoryBlock

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns the binary data of the object for toolbox calls.

58.2.4 Concat(t as CGAffineTransformMBS) as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Concatenate 't2' to 't1' and returne the result: t' = t1 * t2

58.2.5 Constructor

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: This constructor creates the identity transform: [1 0 0 1 0 0] .
See also:

- 58.2.6 Constructor(a as double, b as double, c as double, d as double, tx as double = 0.0, ty as double = 0.0) 9440
- 58.2.7 Constructor(p as Ptr) 9440
- 58.2.8 Constructor(transform as CGAffineTransformMBS) 9441

58.2.6 Constructor(a as double, b as double, c as double, d as double, tx as double = 0.0, ty as double = 0.0)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates the transformation with the given values.
See also:

- 58.2.5 Constructor 9440
- 58.2.7 Constructor(p as Ptr) 9440
- 58.2.8 Constructor(transform as CGAffineTransformMBS) 9441

58.2.7 Constructor(p as Ptr)

MBS MacCG Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: Creates a new instance using data at the pointer.
Notes: Make sure the pointer is valid and has the right data and size.
See also:

- 58.2.5 Constructor 9440
- 58.2.6 Constructor(a as double, b as double, c as double, d as double, tx as double = 0.0, ty as double = 0.0) 9440
- 58.2.8 Constructor(transform as CGAffineTransformMBS) 9441

58.2.8 Constructor(transform as CGAffineTransformMBS)

MBS MacCG Plugin, Plugin Version: 20.2, Platform: macOS, Targets: All.

Function: Creates a matrix object with copying the values.
Example:

```
Var m as new CGAffineTransformMBS(1,2,3,4,5,6)
Var n as new CGAffineTransformMBS(m)
MessageBox n
```

See also:

- 58.2.5 Constructor 9440
- 58.2.6 Constructor(a as double, b as double, c as double, d as double, tx as double = 0.0, ty as double = 0.0) 9440
- 58.2.7 Constructor(p as Ptr) 9440

58.2.9 EqualToTransform(t as CGAffineTransformMBS) as boolean

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Checks whether two affine transforms are equal.
Notes: Returns true if t1 and t2 are equal, false otherwise.
Available in Mac OS X v10.4 and later.

58.2.10 Identity as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The identity transform: [1 0 0 1 0 0] .

58.2.11 Invert as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Invert 't' and return the result. If 't' has zero determinant, then 't' is returned unchanged.

58.2.12 IsIdentity as boolean

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Checks whether an affine transform is the identity transform.
Notes: Returns true if t is the identity transform, false otherwise.
Available in Mac OS X v10.4 and later.

58.2.13 Make(a as double, b as double, c as double, d as double, tx as double = 0.0, ty as double = 0.0) as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Return the transform [a b c d tx ty] .

58.2.14 MakeRotation(angle as Double) as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Return a transform which rotates by 'angle' radians: t' = [cos(angle) sin(angle) -sin(angle) cos(angle) 0 0]

58.2.15 MakeScale(sx as Double, sy as Double) as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Return a transform which scales by '(sx, sy)': t' = [sx 0 0 sy 0 0]

58.2.16 MakeTranslation(tx as Double, ty as Double) as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Return a transform which translates by '(tx, ty)': t' = [1 0 0 1 tx ty]

58.2.17 Operator_Convert as String

MBS MacCG Plugin, Plugin Version: 20.2, Platform: macOS, Targets: All.

Function: Returns string value.

58.2.18 Operator_Multiply(other as CGAffineTransformMBS) as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 20.2, Platform: macOS, Targets: All.

Function: Multiplies both matrix where self is on the left side.

58.2.19 Operator_MultiplyRight(other as CGAffineTransformMBS) as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 20.2, Platform: macOS, Targets: All.

Function: Multiplies both matrix where self is on the right side.

58.2.20 Rotate(angle as Double) as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Rotate 't' by 'angle' radians and return the result: t' = [cos(angle) sin(angle) -sin(angle) cos(angle) 0 0] * t

58.2.21 Scale(sx as Double, sy as Double) as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Scale 't' by '(sx, sy)' and return the result: t' = [sx 0 0 sy 0 0] * t

58.2.22 Translate(tx as Double, ty as Double) as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Translate 't' by '(tx, ty)' and return the result: t' = [1 0 0 1 tx ty] * t
Example:

```
Var t as new CGAffineTransformMBS(1,0,0,1,1,1)
t=t.Translate(2,3)

MessageBox str(T.A)+" "+str(t.B)+" "+str(t.C)+" "+str(t.D)+" "+str(t.TX)+" "+str(t.TY)

// shows 1 0 0 1 3 4
```

58.2.23 Properties

58.2.24 A as Double

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The A value.
Notes: (Read and Write property)

58.2.25 B as Double

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The B value.
Notes: (Read and Write property)

58.2.26 C as Double

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The C value.
Notes: (Read and Write property)

58.2.27 D as Double

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The D value.
Notes: (Read and Write property)

58.2.28 StringValue as String

MBS MacCG Plugin, Plugin Version: 20.2, Platform: macOS, Targets: All.

Function: Returns string value.
Notes: (Read only property)

58.2.29 TX as Double

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The TX value.
Notes: (Read and Write property)

58.2.30 TY as Double

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The TY value.
Notes: (Read and Write property)

58.3 class CGBitmapContextMBS

58.3.1 class CGBitmapContextMBS

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: A class to hold a CoreGraphics bitmap context.
Example:

```
Sub Paint(g As Graphics)
Var c as CGPictureContextMBS
Var w as CGContextMBS // of window
Var p,m as Picture

c=new CGPictureContextMBS(100,100)

c.ClearRect CGMakeRectMBS(0,0,100,100)
c.SetRGBFillColor 1,0,0,1
c.FillRect CGMakeRectMBS(0,0,50,50)

w=Window1.CGContextMBS // we are inside paint event!
// Draw using CGImage
w.DrawPicture c.CGImage(false,0),CGMakeRectMBS(0,0,c.BitmapWidth,c.BitmapHeight)
w.Flush

// Draw using RB picture, so we can see whether it looks equal.
m=c.CopyPictureMask
p=New Picture(m.Width,m.Height,32)
p.Graphics.DrawPicture c.CopyPicture,0,0
p.Mask.Graphics.DrawPicture m,0,0
g.DrawPicture p,0,0

End Sub
```

Notes: If the RB graphics class is like a CGContext, the RB picture class (created using NewPicture) is something like a CGBitmapContext.
Subclass of the CGContextMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

58.3.2 Methods

58.3.3 CGImage(shouldInterpolate as boolean = false, intent as Integer = 0) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Creates a CGImageMBS object referencing the CGBitmapContext object.
Example:

```
Var c as CGPictureContextMBS
Var w as CGContextMBS // of window

c=new CGPictureContextMBS(100,100)

c.SetRGBFillColor 1,0,0,1
c.FillRect CGMakeRectMBS(0,0,50,50)

w=Window1.CGContextMBS // we are inside paint event!
w.DrawPicture c.CGImage(false,0),CGMakeRectMBS(0,0,c.BitmapWidth,c.BitmapHeight)
w.Flush
```

Notes: You will crash your application if you use this Image after the CGBitmapContext object was destroyed.
Changes made to the connected CGBitmapContext will be seen in the CGImage.
Returns nil on low memory.

Constants for intent:

kCGRenderingIntentDefault	0
kCGRenderingIntentAbsoluteColorimetric	1
kCGRenderingIntentRelativeColorimetric	2
kCGRenderingIntentPerceptual	3
kCGRenderingIntentSaturation	4

Set shouldInterpolate to true if the image should use interpolation.

58.3.4 Constructor

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The private constructor.

58.3.5 Create(data as memoryblock, width as Integer, height as Integer, bitsPerComponent as Integer, bytesPerRow as Integer, colorspace as CGColorSpaceMBS, alphaInfo as Integer) as CGBitmapContextMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Create a bitmap context.
Notes: The context draws into a bitmap which is 'width' pixels wide and 'height' pixels high. The number of components for each pixel is specified by 'colorspace', which also may specify a destination color profile. The number of bits for each component of a pixel is specified by 'bitsPerComponent', which must be 1, 2, 4, or 8. Each row of the bitmap consists of 'bytesPerRow' bytes, which must be at least '(width * bitsPerComponent * number of components + 7)/8' bytes. 'data' points a block of memory at least 'bytesPerRow * height' bytes. 'alphaInfo' specifies whether the bitmap should contain an alpha channel, and how it's to be generated.

Fails if data=nil or colorspace=nil.
The memoryblock is not referenced and not stored, so keep it alive while using the BitmapContext object.

Returns nil on any error.

data
A pointer to the destination in memory where the drawing is to be rendered. The size of this memoryblock should be at least(bytesPerRow*height) bytes. Can be nil to let system allocate it.

width
The width of the bitmap in pixels.

height
The height of the bitmap in pixels.

bitsPerComponent
The number of bits to use for each component of a pixel in memory. Allowable values are 4, 5, or 8. For example, for a 32-bit RGB(A) colorspace, you would specify a value of 8 bits per color component. In combination, the number of bits per component, the color space, and the alpha value determine which bitmap context formats Quartz supports.

bytesPerRow
The number of bytes of memory to use per row of the bitmap. This value must be at least the product of the width and bitsPerComponentparameters, times the number of components per pixel. The result should be divided by 8 and rounded up to the nearest whole number to obtain the number of bytes to use per row. That is, the value must be at least (((width)*(bits per component)*(number of components per pixel))+7)/8 bytes. For a given row, Quartz stores bitmap data for the first width pixels and ignores any remaining bytes. The colorspace value referenced by the colorspace parameter specifies the number of components for each pixel. Can be zero to let system decide (especially if data is nil)

colorspace
The color space to use for the bitmap context.

alphaInfo
A CGImageAlphaInfo constant specifying whether the bitmap should contain an alpha channel and how it is to be generated. The alpha value determines the opacity of a pixel when it is drawn.

Supported pixel formats:

Pixel format	Color space	Bits per pixel	Bits per component	Alpha option
Gray_8	Grayscale	8	8	kCGImageAlphaNone
RGB555	RGB	16	5	kCGImageAlphaNoneSkipFirst
XRGB_32	RGB	32	8	kCGImageAlphaNoneSkipFirst
ARGB_32	RGB	32	8	kCGImageAlphaPremultipliedFirst
RGBX_32	RGB	32	8	kCGImageAlphaNoneSkipLast
RGBA_32	RGB	32	8	kCGImageAlphaPremultipliedLast

Quartz does not support the following formats in a bitmap context:

- 1-bit grayscale
- 24-bit RGB
- CMYK (any depth)

CGImageAlphaInfo constants:

kCGImageAlphaNone	0	
kCGImageAlphaPremultipliedLast	1	For example, premultiplied RGBA
kCGImageAlphaPremultipliedFirst	2	For example, premultiplied ARGB
kCGImageAlphaLast	3	For example, non-premultiplied RGBA
kCGImageAlphaFirst	4	For example, non-premultiplied ARGB
kCGImageAlphaNoneSkipLast	5	Equivalent to kCGImageAlphaNone.
kCGImageAlphaNoneSkipFirst	6	

See also:

- 58.3.6 Create(Other as CGBitmapContextMBS, NewColorspace as CGColorSpaceMBS) as CGBitmapContextMBS 9449

58.3.6 Create(Other as CGBitmapContextMBS, NewColorspace as CGColorSpaceMBS) as CGBitmapContextMBS

MBS MacCG Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Creates a new bitmap object.
Example:

```
Var pic as new Picture(100,100) // some picture
Var ICCProfileData as memoryblock // get a IIC Profile somewhere

Var colorspace as CGColorSpaceMBS = CGColorSpaceMBS.CreateWithICCProfile(ICCProfileData)
Var bitmap as CGBitmapContextMBS = CGBitmapContextMBS.CreateWithPicture(pic)
Var zweiteBitmap as CGBitmapContextMBS = bitmap.Create(bitmap, colorspace)
```

Notes: The new bitmap object uses same data as existing object, just accesses the pixels using the new color space.
See also:

- 58.3.5 Create(data as memoryblock, width as Integer, height as Integer, bitsPerComponent as Integer, bytesPerRow as Integer, colorspace as CGColorSpaceMBS, alphaInfo as Integer) as CGBitmapContextMBS 9448

58.3.7 CreateImage as CGImageMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Return an image containing a snapshot of the bitmap context.
Example:

```
// a new picture in RB
Var pic as new Picture(500, 500)

// and create CGBitmapContextMBS pointing to it
Var b as CGBitmapContextMBS = CGBitmapContextMBS.CreateWithPicture(pic)

// color set to full red
b.SetRGBFillColor 1.0, 0.0, 0.0, 1.0

// draw ellipse
Var r as CGRectMBS = CGRectMBS.Make(0, 0, 500, 500)
b.FillEllipseInRect r

// flush drawings
b.Flush

// now try CGImage creation
Var cgimage as CGImageMBS = b.CreateImage

// and display by converting to a new picture
Backdrop = cgimage.Picture
```

Notes: If context is not a bitmap context, or if the image cannot be created for any reason, this function returns NULL. This is a "copy" operation subsequent changes to context will not affect the contents of the returned image.

Note that in some cases the copy will actually follow "copy-on-write" semantics, so that the actual physical copy of the bits will only occur if the underlying data in the bitmap context is modified. As a consequence, you may wish to use the resulting image and release it before performing more drawing into the bitmap context; in this way, the actual physical copy of the data may be avoided.

58.3.8 CreateRGB(data as memoryblock, width as Integer, height as Integer, bytesPerRow as Integer, colorspace as CGColorSpaceMBS = nil) as CGBitmapContextMBS

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: Convenience function to handle RGB data.
Notes: Same as Create method, but for RGB data.
Converts data from 3 byte/pixel to 4 byte/pixel and than creates CGBitmapContextMBS.
Colorspace is optional and defaults to Generic RGB.
Returns nil on error, raises OutOfBounds exception for invalid parameters.

58.3.9 CreateWithPicture(Pic as Picture) as CGBitmapContextMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a CGBitmapContext referencing the given picture.
Example:

```
// a new picture in RB
Var pic as new Picture(500, 500)

// and create CGBitmapContextMBS pointing to it
Var b as CGBitmapContextMBS = CGBitmapContextMBS.CreateWithPicture(pic)

// color set to full red
b.SetRGBFillColor 1.0, 0.0, 0.0, 1.0

// draw ellipse
Var r as CGRectMBS = CGRectMBS.Make(0, 0, 500, 500)
b.FillEllipseInRect r

// flush drawings
b.Flush
```

```
// and show
Backdrop = pic
```

Notes: Only for Cocoa target.
The plugin will do a clear cache on the picture in the destructor.

58.3.10 Properties

58.3.11 BitmapAlphaInfo as Integer

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns the alpha info of the bitmap.
Example:

```
// a new picture in RB
Var pic as new Picture(500, 500)

// and create CGBitmapContextMBS pointing to it
Var b as CGBitmapContextMBS = CGBitmapContextMBS.CreateWithPicture(pic)

// shows 2 for kCGImageAlphaPremultipliedFirst
MessageBox str(b.BitmapAlphaInfo)
```

Notes: Returns 0 on any error.

CGImageAlphaInfo constants:

kCGImageAlphaNone	0	
kCGImageAlphaPremultipliedLast	1	For example, premultiplied RGBA
kCGImageAlphaPremultipliedFirst	2	For example, premultiplied ARGB
kCGImageAlphaLast	3	For example, non-premultiplied RGBA
kCGImageAlphaFirst	4	For example, non-premultiplied ARGB
kCGImageAlphaNoneSkipLast	5	Equivalent to kCGImageAlphaNone.
kCGImageAlphaNoneSkipFirst	6	

(Read only property)

58.3.12 BitmapBitsPerComponent as Integer

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns the bits per component of the bitmap.
Example:

```
// a new picture in RB
Var pic as new Picture(500, 500)

// and create CGBitmapContextMBS pointing to it
Var b as CGBitmapContextMBS = CGBitmapContextMBS.CreateWithPicture(pic)

// shows 8
MessageBox str(b.BitmapBitsPerComponent)
```

Notes: Returns 0 on any error.
(Read only property)

58.3.13 BitmapBitsPerPixel as Integer

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns the bits per pixel of the bitmap.
Example:

```
// a new picture in RB
Var pic as new Picture(500, 500)

// and create CGBitmapContextMBS pointing to it
Var b as CGBitmapContextMBS = CGBitmapContextMBS.CreateWithPicture(pic)

// shows 32
MessageBox str(b.BitmapBitsPerPixel)
```

Notes: Returns 0 on any error.
(Read only property)

58.3.14 BitmapBytesPerRow as Integer

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns the bytes per row of the bitmap.
Example:

```
// a new picture in RB
Var pic as new Picture(500, 500)

// and create CGBitmapContextMBS pointing to it
```

```
Var b as CGBitmapContextMBS = CGBitmapContextMBS.CreateWithPicture(pic)

// shows 2000
MessageBox str(b.BitmapBytesPerRow)
```

Notes: Returns 0 on any error.
(Read only property)

58.3.15 BitmapColorSpace as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns the colorspace used for this bitmap.
Notes: Returns nil on any error.

This is not the same RB object used when you created the bitmap, but it will contain the same handle.
(Read only property)

58.3.16 BitmapData as MemoryBlock

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns a memoryblock for the data of the bitmap.
Notes: Returns nil on any error.

This is not the same RB memoryblock object as you passed to the Create function, but it will point to the same bytes in memory.
(Read only property)

58.3.17 BitmapHeight as Integer

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns the height of the bitmap.
Example:

```
// a new picture in RB
Var pic as new Picture(500, 500)

// and create CGBitmapContextMBS pointing to it
Var b as CGBitmapContextMBS = CGBitmapContextMBS.CreateWithPicture(pic)
```

```
// shows 500
MessageBox str(b.BitmapHeight)
```

Notes: Returns 0 on any error.
(Read only property)

58.3.18 BitmapInfo as Integer

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Obtains the bitmap information associated with a bitmap graphics context.
Example:

```
// a new picture in RB
Var pic as new Picture(500, 500)

// and create CGBitmapContextMBS pointing to it
Var b as CGBitmapContextMBS = CGBitmapContextMBS.CreateWithPicture(pic)

// shows info: 2 for kCGImageAlphaPremultipliedFirst
MessageBox str(b.BitmapInfo)
```

Notes: The bitmap info of the bitmap graphics context or 0 if c is not a bitmap graphics context. See CGImage Reference for a description of the Image Bitmap Information constants that can be returned.

The CGBitmapInfo data returned by the function specifies whether the bitmap contains an alpha channel and how the alpha channel is generated, along with whether the components are floating-point or integer.
(Read only property)

58.3.19 BitmapWidth as Integer

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns the width of the bitmap.
Example:

```
// a new picture in RB
Var pic as new Picture(500, 500)

// and create CGBitmapContextMBS pointing to it
Var b as CGBitmapContextMBS = CGBitmapContextMBS.CreateWithPicture(pic)

// show info: 500
```

MessageBox str(b.BitmapWidth)

Notes: Returns 0 on any error.
(Read only property)

58.4 class CGColorMBS

58.4.1 class CGColorMBS

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: A class for a CoreGraphics color object.
Example:

```
// create CoreGraphics colors and read their components
Var red As CGColorMBS = CGColorMBS.CreateGenericRGB(1.0, 0.0, 0.0)
Var halfRed As CGColorMBS = red.CopyWithAlpha(0.5)
Var gray As CGColorMBS = CGColorMBS.CreateGenericGray(0.5)

Var c As MemoryBlock = halfRed.Components // Double values per component
Var lines() As String
For i As Integer = 0 To halfRed.NumberOfComponents - 1
lines.Add c.DoubleValue(i * 8).ToString
Next

MessageBox "Components: " + String.FromArray(lines, ", ") + EndOfLine + _
"Same as gray: " + red.Equal(gray).ToString
```

Blog Entries

- Colorspaces in MacOS with Xojo
- MBS Real Studio Plugins, version 13.1pr16
- MBS REALbasic plug-ins version 9.5

58.4.2 Methods

58.4.3 Alpha as Double

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: The alpha value of the color.

58.4.4 Black as CGColorMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The black color in the Generic gray color space.

58.4.5 Clear as CGColorMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The clear color in the Generic gray color space.

58.4.6 ColorSpace as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: The colorspace of this color.
Notes: May be nil if unkown.

58.4.7 Components as memoryblock

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: The components of the color as a memoryblock.
Notes: The memoryblock contains double properties.
m.double(0), m.double(4), etc.

58.4.8 Copy as CGColorMBS

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: Creates a copy of the color.
Notes: Returns nil on any error.

58.4.9 CopyWithAlpha(alpha as Double) as CGColorMBS

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: Makes a new copy of the color with a different alpha value.
Notes: Returns nil on any error.

58.4.10 Create(colorspace as CGColorSpaceMBS, components as memoryblock) as CGColorMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new color with the given components.
Example:

```
Var c as color = &cFF0000

Var m As MemoryBlock

m=NewMemoryBlock(16)
m.SingleValue(0)=c.Red/256
m.SingleValue(4)=c.Green/256
m.SingleValue(8)=c.Blue/256
m.SingleValue(12)=1.0

Var colorspace as CGColorSpaceMBS

colorspace=CGColorSpaceMBS.CreateDeviceRGB

if colorspace=nil or colorspace.Handle=0 then
MessageBox "Failed to get RGB color space!"
Return
end if

Var col As CGColorMBS

col=CGColorMBS.Create(colorspace, m)

if col=nil or col.Handle=0 then
MessageBox "Failed to create color."
Return
end if

MessageBox str(Col.NumberOfComponents)
```

Notes: This method was called NewCGColorMBS in earlier MBS Plugins.
See also:

- 58.4.11 Create(colorspace as CGColorSpaceMBS, components() as Double) as CGColorMBS 9459

58.4.11 Create(colorspace as CGColorSpaceMBS, components() as Double) as CGColorMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a new color with the given components.
Notes: Supports up to 32 components.
Returns nil on any error.
See also:

- 58.4.10 Create(colorspace as CGColorSpaceMBS, components as memoryblock) as CGColorMBS 9458

58.4.12 CreateDeviceCMYK(cyan as Double, magenta as Double, yellow as Double, black as Double, alpha as Double = 1.0) as CGColorMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a color in the device CMYK color space.
Notes: cyan: A cyan value (0.0 - 1.0).
magenta: A magenta value (0.0 - 1.0).
yellow: A yellow value (0.0 - 1.0).
black: A black value (0.0 - 1.0).
alpha: An alpha value (0.0 - 1.0).

Returns a color object.

58.4.13 CreateDeviceGray(gray as Double, alpha as Double = 1.0) as CGColorMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a color in the device gray color space.
Notes: gray: A grayscale value (0.0 - 1.0).
alpha: An alpha value (0.0 - 1.0).

Returns a color object.

58.4.14 CreateDeviceRGB(red as Double, green as Double, blue as Double, alpha as Double = 1.0) as CGColorMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a color in the device RGB color space.
Notes: red: A red component value (0.0 - 1.0).
green: A green component value (0.0 - 1.0).
blue: A blue component value (0.0 - 1.0).
alpha: An alpha value (0.0 - 1.0).

Returns a new color object.

58.4.15 CreateGenericCMYK(cyan as Double, magenta as Double, yellow as Double, black as Double, alpha as Double = 1.0) as CGColorMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a color in the Generic CMYK color space.
Notes: cyan: A cyan value (0.0 - 1.0).
magenta: A magenta value (0.0 - 1.0).
yellow: A yellow value (0.0 - 1.0).
black: A black value (0.0 - 1.0).
alpha: An alpha value (0.0 - 1.0).

Returns a color object.
Available in Mac OS X v10.5 and later.

58.4.16 CreateGenericGray(gray as Double, alpha as Double = 1.0) as CGColorMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a color in the Generic gray color space.
Notes: gray: A grayscale value (0.0 - 1.0).
alpha: An alpha value (0.0 - 1.0).

Returns a color object.
Available in Mac OS X v10.5 and later.

58.4.17 CreateGenericRGB(red as Double, green as Double, blue as Double, alpha as Double = 1.0) as CGColorMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a color in the Generic RGB color space.
Notes: red: A red component value (0.0 - 1.0).
green: A green component value (0.0 - 1.0).
blue: A blue component value (0.0 - 1.0).
alpha: An alpha value (0.0 - 1.0).

Returns a new color object.
Available in Mac OS X v10.5 and later.

58.4.18 Equal(secondColor as CGColorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: True if both colors have equal values.
Notes: False on any error.

58.4.19 NumberOfComponents as Integer

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: The number of components.
Notes: Should be 3 for RGB and 4 for CMYK.

58.4.20 White as CGColorMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The white color in the Generic gray color space.

58.4.21 Properties

58.4.22 Handle as Integer

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: The handle to the CGColorRef used internal.
Notes: (Read and Write property)

58.5 class CGColorSpaceMBS

58.5.1 class CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A class for a CoreGraphics color space.
Example:

```
// create color spaces and show their properties
Var srgb As CGColorSpaceMBS = CGColorSpaceMBS.CreateWithName(CGColorSpaceMBS.kCGColorSpaceS-
RGB)
Var p3 As CGColorSpaceMBS = CGColorSpaceMBS.CreateWithName(CGColorSpaceMBS.kCGColorSpaceDis-
playP3)

MessageBox srgb.Name + ": " + srgb.NumberOfComponents.ToString + " components" + EndOfLine
+ _
p3.Name + ": " + p3.NumberOfComponents.ToString + " components"

// the ICC profile data, e.g. to embed in a file
Var profile As String = p3.ICCProfile
```

58.5.2 Methods

58.5.3 CreateCalibratedGray(whitePoint() as Double, blackPoint() as Double, gamma as Double) as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a calibrated gray colorspace.
Notes: WhitePoint is an array of 3 numbers (type double) specifying the tristimulus value, in the CIE 1931 XYZ-space, of the diffuse white point.
BlackPoint is an array of 3 numbers (type double) specifying the tristimulus value, in CIE 1931 XYZ-space, of the diffuse black point.
Gamma defines the gamma for the gray component.
Returns nil on any error.

58.5.4 CreateCalibratedRGB(whitePoint() as Double, blackPoint() as Double, gamma() as Double, matrix() as Double) as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a calibrated RGB colorspace.
Notes: WhitePoint is an array of 3 numbers (type double) specifying the tristimulus value, in the CIE 1931 XYZ-space, of the diffuse white point.
BlackPoint is an array of 3 numbers (type double) specifying the tristimulus value, in CIE 1931 XYZ-space, of the diffuse black point.
Gamma is an array of 3 numbers (type double) specifying the gamma for the red, green, and blue components of the color space.
Matrix is an array of 9 numbers (type double) specifying the linear interpretation of the gamma-modified RGB values of the colorspace with respect to the final XYZ representation.
Returns nil on any error.

58.5.5 CreateDeviceCMYK as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a DeviceCMYK colorspace.
Notes: Returns nil on any error.

58.5.6 CreateDeviceGray as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a DeviceGray colorspace.
Notes: Returns nil on any error.

58.5.7 CreateDeviceRGB as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a DeviceRGB colorspace.
Notes: Returns nil on any error.

Old name: CGColorSpaceCreateDeviceRGBMBS

58.5.8 CreateLab(whitePoint() as Double, blackPoint() as Double, range() as Double) as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an L*a*b* colorspace.
Notes: WhitePoint is an array of 3 numbers (type double) specifying the tristimulus value, in the CIE 1931 XYZ-space, of the diffuse white point.
BlackPoint is an array of 3 numbers (type double) specifying the tristimulus value, in CIE 1931 XYZ-space, of the diffuse black point.
Range is an array of four numbers (type double) specifying the range of valid values for the a* and b* components of the color space.
Returns nil on any error.

58.5.9 CreatePattern(baseSpace as CGColorSpaceMBS) as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a pattern colorspace.
Notes: BaseSpace is the underlying colorspace of the pattern colorspace. For colored patterns, baseSpace should be nil; for uncolored patterns, baseSpace specifies the colorspace of colors which will be painted through the pattern.

Returns nil on any error.

58.5.10 CreateWithHandle(Handle as Integer) as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: Creates a CGColorSpace for a handle.
Example:

```
Var n as NSColorSpaceMBS = NSColorSpaceMBS.genericCMYKColorSpace
Var c as CGColorSpaceMBS = CGColorSpaceMBS.CreateWithHandle(n.CGColorSpaceHandle)
MessageBox c.Name
```

Notes: Sometimes you need to create CGColorSpaceMBS from NSColorSpaceMBS or some handle you got from an OS function and than you can use this function.
Returns nil on any error. Retains the handle.

58.5.11 CreateWithICCProfile(ICCProfileData as memoryblock) as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Creates an ICC-based color space using the ICC profile contained in the specified data.
Notes: data: The data containing the ICC profile to set for the new color space.
Returns a new color space based on the specified profile.
See also:

- 58.5.12 CreateWithICCProfile(ICCProfileData as string) as CGColorSpaceMBS 9466

58.5.12 CreateWithICCProfile(ICCProfileData as string) as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Creates an ICC-based color space using the ICC profile contained in the specified data.
Notes: data: The data containing the ICC profile to set for the new color space.
Returns a new color space based on the specified profile.
See also:

- 58.5.11 CreateWithICCProfile(ICCProfileData as memoryblock) as CGColorSpaceMBS 9466

58.5.13 CreateWithName(name as string) as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Create a color space using name as the identifier for the color space.
Notes: Pass one of the kCGColorSpace* string constants.

58.5.14 CreateWithPlatformColorSpace(Handle as Integer) as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a CGColorSpace using a Colorsync Profile Handle.
Notes: Returns nil on any error.

58.5.15 ICCProfile as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns a copy of the ICC profile of the provided color space.
Notes: The ICC profile or "" if the color space does not have an ICC profile.

Available in Mac OS X v10.5 and later.

58.5.16 kCGColorSpaceACESCGLinear as string

MBS MacCG Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes: The name of the ACEScg color space. For more information, see ‚ÄúACEScg —A Working Space for CGI Render and Compositing‚Äù, Version 1.0.1, Academy of Motion Picture Arts and Sciences (http://www.oscars.org/science-technology/sci-tech-projects/aces).

Available in OS X v10.11 and later.

58.5.17 kCGColorSpaceAdobeRGB1998 as string

MBS MacCG Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes: The name of the Adobe RGB (1998) color space. For more information, see "Adobe RGB (1998) Color Image Encoding", Version 2005-05, Adobe Systems Inc. (http://www.adobe.com).

58.5.18 kCGColorSpaceDCIP3 as string

MBS MacCG Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes: The name of the DCI P3 color space, created by Digital Cinema Initiatives, LLC. This color space is the digital cinema standard.

Available in OS X v10.11 and later.

58.5.19 kCGColorSpaceDisplayP3 as string

MBS MacCG Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes: The name of the Display P3 color space, created by Apple Inc. This color space uses the DCI P3 primaries, a D65 white point, and the same gamma curve as the sRGB color space.

Available in OS X v10.10 and later.

58.5.20 kCGColorSpaceGenericCMYK as string

MBS MacCG Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes: The name of the "Generic" CMYK color space.

58.5.21 kCGColorSpaceGenericGray as string

MBS MacCG Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes: The name of the "Generic" gray color space.

58.5.22 kCGColorSpaceGenericGrayGamma2_2 as string

MBS MacCG Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes: The name of the generic gray color space with a gamma value of 2.2.

Available in OS X v10.6 and later.

58.5.23 kCGColorSpaceGenericRGB as string

MBS MacCG Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes: The name of the "Generic" RGB color space.

58.5.24 kCGColorSpaceGenericRGBLinear as string

MBS MacCG Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes: The name of the "Generic" linear RGB color space. This is the same as kCGColorSpaceGenericRGB but with a 1.0 gamma.

58.5.25 kCGColorSpaceGenericXYZ as string

MBS MacCG Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes: The name of the generic XYZ color space.

Available in OS X v10.11 and later.

58.5.26 kCGColorSpaceITUR_2020 as string

MBS MacCG Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes: The name of the ITU-R Recommendation BT.2020 color space. For more information, see ,ÄúBT.2020 : Parameter values for ultra-high definition television systems for production and international programme exchange,Äù, Version 2014-06, International Telecommunication Union (https://www.itu.int/rec/R-REC-BT.2020).

Available in OS X v10.11 and later.

58.5.27 kCGColorSpaceITUR_709 as string

MBS MacCG Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes: The name of the ITU-R Recommendation BT.2020 color space. For more information, see ,ÄúBT.2020 : Parameter values for ultra-high definition television systems for production and international programme exchange,Äù, Version 2014-06, International Telecommunication Union (https://www.itu.int/rec/R-REC-BT.2020).

Available in OS X v10.11 and later.

58.5.28 kCGColorSpaceROMMRGB as string

MBS MacCG Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes: The name of the ROMM RGB color space. For more information, see ,ÄúReference Output Medium Metric RGB Color Space (ROMM RGB) White Paper,Äù, Version 2.1, Eastman Kodak Company (http://www.kodak.com/global/plugins/acrobat/en/professional/products/software/colorFlow/romm_rgb.pdf).

Available in OS X v10.11 and later.

58.5.29 kCGColorSpaceSRGB as string

MBS MacCG Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes: The name of the sRGB color space. The capitalization in the name, while strictly inaccurate, avoids interpretational ambiguity. For more information, see IEC 61966-2-1 (1999-10): "Multimedia systems and equipment - Colour measurement and management - Part 2-1: Colour management - Default RGB colour space - sRGB".

58.5.30 Properties

58.5.31 BaseColorSpace as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns the base color space of a pattern or indexed color space.
Notes: The base color space if the space parameter is a pattern or indexed color space; otherwise, nil.

Available in Mac OS X v10.5 and later.
(Read only property)

58.5.32 ColorTableCount as Integer

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns the number of entries in the color table of an indexed color space.
Notes: The number of entries in the color table of the space parameter if the color space is an indexed color space; otherwise, returns 0.

Available in Mac OS X v10.5 and later.
(Read only property)

58.5.33 Description as String

MBS MacCG Plugin, Plugin Version: 15.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The description text.
Example:

```
Var c as CGColorSpaceMBS = Window1.CGColorSpaceMBS
MessageBox c.description
```

Notes: (Read only property)

58.5.34 Handle as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The handle to the color space.
Notes: (a CGColorSpaceRef)
(Read and Write property)

58.5.35 Model as Integer

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns the color space model of the provided color space.
Notes: Available in Mac OS X v10.5 and later.

Use this constants:
CGColorSpaceMBS.kCGColorSpaceModelUnknown
CGColorSpaceMBS.kCGColorSpaceModelCMYK
CGColorSpaceMBS.kCGColorSpaceModelDeviceN
CGColorSpaceMBS.kCGColorSpaceModelIndexed
CGColorSpaceMBS.kCGColorSpaceModelLab
CGColorSpaceMBS.kCGColorSpaceModelMonochrome
CGColorSpaceMBS.kCGColorSpaceModelPattern
CGColorSpaceMBS.kCGColorSpaceModelRGB
(Read only property)

58.5.36 ModelText as String

MBS MacCG Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: The model as text.
Notes: For viewing in debugger.
(Read only property)

58.5.37 Name as String

MBS MacCG Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Queries the name of the colorspace.
Notes: Not all CGColorspace objects have names. Some have only ICC Profile and you can get name via Name property in LCMS2ProfileMBS if you open the profile with LCMS.
(Read only property)

58.5.38 NumberOfComponents as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns the number of components.
Notes: typical 1 for grayscale, 3 for RGB and 4 for CMYK.
(Read only property)

58.5.39 Constants

Constants

Constant	Value	Description
kCGColorSpaceModelCMYK	2	One of the colorspace model constants. A CMYK color space model. Available in Mac OS X v10.5 and later.
kCGColorSpaceModelDeviceN	4	One of the colorspace model constants. A DeviceN color space model. Available in Mac OS X v10.5 and later.
kCGColorSpaceModelIndexed	5	One of the colorspace model constants. An indexed color space model. Available in Mac OS X v10.5 and later.
kCGColorSpaceModelLab	3	One of the colorspace model constants. A Lab color space model. Available in Mac OS X v10.5 and later.
kCGColorSpaceModelMonochrome	0	One of the colorspace model constants. A monochrome color space model. Available in Mac OS X v10.5 and later.
kCGColorSpaceModelPattern	6	One of the colorspace model constants. A pattern color space model. Available in Mac OS X v10.5 and later.
kCGColorSpaceModelRGB	1	One of the colorspace model constants. An RGB color space model. Available in Mac OS X v10.5 and later.
kCGColorSpaceModelUnknown	-1	One of the colorspace model constants. An unknown color space model. Available in Mac OS X v10.5 and later.
kCGRenderingIntentAbsoluteColorimetric	1	One of the color rendering intents constants. Map colors outside of the gamut of the output device to the closes match inside the gamut of the output device. This can produce a effect, where two different color values in the gamut of the graphic are mapped to the same color value in the output device's gamut. U relative colorimetric, absolute colorimetric does not modify colors i gamut of the output device.
kCGRenderingIntentDefault	0	One of the color rendering intents constants. The default rendering intent for the graphics context.
kCGRenderingIntentPerceptual	3	One of the color rendering intents constants. Preserve the visual relationship between colors by compressing the the graphics context to fit inside the gamut of the output device. P intent is good for photographs and other complex, detailed images.
kCGRenderingIntentRelativeColorimetric	2	One of the color rendering intents constants. Map colors outside of the gamut of the output device to the closes match inside the gamut of the output device. This can produce a effect, where two different color values in the gamut of the graphic are mapped to the same color value in the output device's gamut. Th colorimetric shifts all colors (including those within the gamut) to ac the difference between the white point of the graphics context and point of the output device.
kCGRenderingIntentSaturation	4	One of the color rendering intents constants. Preserve the relative saturation value of the colors when convertin gamut of the output device. The result is an image with bright, colors. Saturation intent is good for reproducing images with low de as presentation charts and graphs.

58.6 class CGContextMBS

58.6.1 class CGContextMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: A class for a core graphics context.
Example:

```
Var p As New Picture(200, 200)
Var g As Graphics = p.Graphics

// Clear image with white
g.ForeColor = &cFFFFFF
g.FillRect 0, 0, g.Width, g.Height

Var c As New CGContextMBS(g)

c.SetRGBFillColor(1, 0, 0)

// coordinates are swapped in CGContext, so y = 20 means 20 pixels from bottom of picture!

Const x = 10
Const y = 20
Const w = 120
Const h = 100

c.FillRect New CGRectMBS(x, y, w, h)

Self.Backdrop = p
```

Notes: If the handle property has a non zero value, the destructor of this class will release the context reference.

If you create this in a method based on a window, please release it within that method. e.g. in a paint event, create it and let RB delete the last reference on the end of the method. Else you may see crashes as the context is still being around while the graphics port has been released.

58.6.2 Methods

58.6.3 AddArc(x as Double, y as Double, radius as Double, startangle as Double, endangle as Double, clockwise as boolean)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Add an arc to the current path.
Example:

```
const r=100.0
Var c as CGContextMBS
// draws a circle with radius r
c.BeginPath
c.SetLineWidth 5
c.SetGrayStrokeColor 0,1
c.AddArc 250,150,r,0,360,false
c.StrokePath
```

Notes: Add an arc of a circle to the context's path, possibly preceded by a straight line segment. '(x, y)' is the center of the arc; 'radius' is its radius; 'startAngle' is the angle to the first endpoint of the arc; 'endAngle' is the angle to the second endpoint of the arc; and 'clockwise' is true if the arc is to be drawn clockwise, false otherwise. 'startAngle' and 'endAngle' are measured in radians.

58.6.4 addArcToPath(x as Double, y as Double, w as Double, h as Double, startAngle as Integer, arcAngle as Integer)

MBS MacCG Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Adds an arc to the current path.

58.6.5 AddArcToPoint(x1 as Double, y1 as Double, x2 as Double, y2 as Double, radius as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Add an arc to the current path.
Notes: Add an arc of a circle to the context's path, possibly preceded by a straight line segment. 'radius' is the radius of the arc. The arc is tangent to the line from the current point to '(x1, y1)', and the line from '(x1, y1)' to '(x2, y2)'.

58.6.6 AddCurveToPoint(cp1x as Double, cp1y as Double, cp2x as Double, cp2y as Double, x as Double, y as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Append a cubic Bezier curve from the current point to (x,y), with control points (cp1x, cp1y) and (cp2x, cp2y)

58.6.7 AddEllipseInRect(r as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Add an ellipse inside rect to the current path of context.
Notes: See the function CGPathMBS.AddEllipseInRect for more information on how the path for the ellipse is constructed.
Requires Mac OS X 10.4.

58.6.8 AddLines(p() as CGPointMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Add a set of lines to the context's path.
Notes: Currently this function is not available to RB versions before 3.5.
Note that the p parameter is an array of CGPointMBS and not just one.

58.6.9 AddLineToPoint(x as Double, y as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Append a straight line segment from the current point to (x, y).
Example:

```
Var c as CGContextMBS

c=Window1.CGContextMBS

c.SetRGBStrokeColor 1,0,0,1
c.BeginPath
c.MoveToPoint 0,0
c.AddLineToPoint 100,100
c.StrokePath
c.Flush
```

58.6.10 addOvalToPath(x as Double, y as Double, w as Double, h as Double)

MBS MacCG Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Adds an oval to the current path.

58.6.11 AddPath(path as CGPathMBS)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Add path to the path of context.
Notes: The points in path are transformed by the CTM of context before they are added.
Requires Mac OS X 10.2.

58.6.12 AddQuadCurveToPoint(cpx as Double, cpy as Double, x as Double, y as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Append a quadratic curve from the current point to (x, y), with control point (cpx, cpy).

58.6.13 AddRect(r as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Add a double rect to the context's path.

58.6.14 AddRects(r() as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Add a set of rects to the context's path.
Notes: Currently this function is not available to RB versions before 3.5.
Note that the r parameter is an array of CGRectMBS and not just one.

58.6.15 addRoundedRectToPath(x as Double, y as Double, w as Double, h as Double, arcWidth as Double, arcHeight as Double)

MBS MacCG Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Adds a round rectangle to the current path.

58.6.16 BeginPage(mediabox as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Begin a new page.

58.6.17 BeginPath

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Begin a new path. The old path is discarded.
Example:

```
#If XojoVersion >= 2019.02 Then
Var p As ptr = g.Handle(Graphics.HandleTypes.CGContextRef)
Var c As CGContextMBS = CGContextMBS.contextWithCGContext(p)
#Else
Var h As Integer = g.Handle(g.HandleTypeCGContextRef)
Var c As CGContextMBS = CGContextMBS.contextWithCGContext(h)
#EndIf

c.SetGrayStrokeColor(0,1)
c.SetGrayFillColor(0,1)
c.BeginPath
c.SetLineWidth 0.5
```

```
c.MoveToPoint 50, 550
c.AddLineToPoint 100, 600
c.StrokePath
c.Flush
c = nil
```

Notes: Note that a context has a double path in use at any time: a path is not part of the graphics state.

58.6.18 BeginTransparencyLayer(auxiliaryInfo as Dictionary = nil)

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Begin a transparency layer in context.
Notes: All subsequent drawing operations until a corresponding EndTransparencyLayer are composited into a fully transparent backdrop (which is treated as a separate destination buffer from the context). After the transparency layer is ended, the result is composited into the context using the global alpha and shadow state of the context. This operation respects the clipping region of the context. After a call to this function, all of the parameters in the graphics state remain unchanged with the exception of the following:

- The global alpha is set to 1.
- The shadow is turned off.
- The blend mode is set to 'kCGBlendModeNormal'.

Ending the transparency layer restores these parameters to the values they had before BeginTransparency-Layer was called. Transparency layers may be nested.

58.6.19 BeginTransparencyLayerWithRect(r as CGRectMBS, auxiliaryInfo as Dictionary = nil)

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Begin a transparency layer in context.
Notes: This function is identical to BeginTransparencyLayer except that the content of the transparency layer will be bounded by rect (specified in user space).

58.6.20 clearRect(rect as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Clears the background.
Notes: Remeber that in CoreGraphics the position 0/0 is in the bottom left corner. In Xojo 0/0 is in the

top left corner.

58.6.21 clip

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Clips the current path.
Notes: Intersect the context's path with the current clip path and use the resulting path as the clip path for subsequent rendering operations. Use the winding-number fill rule for deciding what's inside the path.

58.6.22 ClipToMask(rect as CGRectMBS, mask as CGImageMBS)

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Maps a mask into the specified rectangle and intersects it with the current clipping area of the graphics context.
Notes: rect: The rectangle to map the mask parameter to.
mask: An image or an image mask. If mask is an image, then it must be in the DeviceGray color space, may not have an alpha component, and may not be masked by an image mask or masking color.

If the mask parameter is an image mask, then Quartz clips in a manner identical to the behavior seen with the function DrawImage—the mask indicates an area to be left unchanged when drawing. The source samples of the image mask determine which points of the clipping area are changed, acting as an "inverse alpha" value. If the value of a source sample in the image mask is S, then the corresponding point in the current clipping area is multiplied by an alpha value of (1–S). For example, if S is 1 then the point in the clipping area becomes transparent. If S is 0, the point in the clipping area is unchanged.

If the mask parameter is an image, then mask acts like an alpha mask and is blended with the current clipping area. The source samples of mask determine which points of the clipping area are changed. If the value of the source sample in mask is S, then the corresponding point in the current clipping area is multiplied by an alpha of S. For example, if S is 0, then the point in the clipping area becomes transparent. If S is 1, the point in the clipping area is unchanged.

Available in Mac OS X v10.4 and later.

58.6.23 clipToRect(rect as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Clips the current path.
Notes: Intersect the current clipping path with 'rect'. Note that this function resets the context's path to

the empty path.

58.6.24 Close

MBS MacCG Plugin, Plugin Version: 15.2, Platform: macOS, Targets: All.

Function: Closes the context.
Notes: Same as destructor later, but running now when you call method.

58.6.25 closePath

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Close the current subpath of the context's path.

58.6.26 ConcatCTM(transform as CGAffineTransformMBS)

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: Concatenate the current graphics state's transformation matrix (the CTM) with the affine transform 'transform'.

58.6.27 Constructor(g as graphics)

MBS MacCG Plugin, Plugin Version: 20.3, Platform: macOS, Targets: All.

Function: Creates a new CGContextMBS object drawing to the existing graphics object.
Example:

```
Var p As New Picture(200, 200)
Var g As Graphics = p.Graphics

// Clear image with white
g.ForeColor = &cFFFFFF
g.FillRect 0, 0, g.Width, g.Height

Var c As New CGContextMBS(g)

c.SetRGBFillColor(1, 0, 0)

// coordinates are swapped in CGContext, so y = 20 means 20 pixels from bottom of picture!
```

```
Const x = 10
Const y = 20
Const w = 120
Const h = 100

c.FillRect New CGRectMBS(x, y, w, h)

Self.Backdrop = p
```

Notes: Raises exception if we fail to get the CGContext from Xojo.
Works on macOS and iOS.
See also:

- 58.6.28 Constructor(handle as Integer) 9482
- 58.6.29 Constructor(pic as Picture) 9482

58.6.28 Constructor(handle as Integer)

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a new CGContextMBS object based on a CGContextRef.
Notes: The CGContext is retained.
See also:

- 58.6.27 Constructor(g as graphics) 9481
- 58.6.29 Constructor(pic as Picture) 9482

58.6.29 Constructor(pic as Picture)

MBS MacCG Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Creates a new CGContextMBS object drawing to the existing Picture object.
Example:

```
Var p As New Picture(100,100)
Var pg As New CGContextMBS(p)
break // inspect in debugger
```

Notes: Raises exception, if the picture is not a bitmap picture.
Works on macOS and iOS.
See also:

- 58.6.27 Constructor(g as graphics) 9481
- 58.6.28 Constructor(handle as Integer) 9482

58.6.30 contextWithCGContext(handle as Integer) as CGContextMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a new CGContextMBS object based on a CGContextRef.
Example:

```
// load a picture
Var f as FolderItem = SpecialFolder.Desktop.Child("ColorSpin.jpg")
Var pic as Picture = picture.Open(f)

// open printer
Var g as Graphics = OpenPrinterDialog
if g = nil then Return

// draw
g.DrawPicture pic, 0, 0

// now load again
Var ImageSource as new CGImageSourceMBS(f)
Var img as CGImageMBS = ImageSource.CreateImageAtIndex(0)
Var cs as CGColorSpaceMBS = CGColorSpaceMBS.CreateDeviceRGB

// copy with replacing colorspace
img = img.CopyWithColorSpace(cs)

// and draw
#If XojoVersion >= 2019.02 Then
Var p As ptr = g.Handle(Graphics.HandleTypes.CGContextRef)
Var c As CGContextMBS = CGContextMBS.contextWithCGContext(p)
#Else
Var h As Integer = g.Handle(g.HandleTypeCGContextRef)
Var c As CGContextMBS = CGContextMBS.contextWithCGContext(h)
#EndIf
Var r as CGRectMBS = CGMakeRectMBS(0, 0, img.Width, img.Height)

c.DrawPicture(img, r)
c.Flush
```

Notes: The CGContext is retained.
Returns nil on any error.
See also:

- 58.6.31 contextWithCGContext(handle as Ptr) as CGContextMBS

58.6.31 contextWithCGContext(handle as Ptr) as CGContextMBS

MBS MacCG Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates a new CGContextMBS object based on a CGContextRef.
Example:

```
// load a picture
Var f as FolderItem = SpecialFolder.Desktop.Child("ColorSpin.jpg")
Var pic as Picture = picture.Open(f)

// open printer
Var g as Graphics = OpenPrinterDialog
if g = nil then Return

// draw
g.DrawPicture pic, 0, 0

// now load again
Var ImageSource as new CGImageSourceMBS(f)
Var img as CGImageMBS = ImageSource.CreateImageAtIndex(0)
Var cs as CGColorSpaceMBS = CGColorSpaceMBS.CreateDeviceRGB

// copy with replacing colorspace
img = img.CopyWithColorSpace(cs)

// and draw
#If XojoVersion >= 2019.02 Then
Var p As ptr = g.Handle(Graphics.HandleTypes.CGContextRef)
Var c As CGContextMBS = CGContextMBS.contextWithCGContext(p)
#Else
Var h As Integer = g.Handle(g.HandleTypeCGContextRef)
Var c As CGContextMBS = CGContextMBS.contextWithCGContext(h)
#EndIf
Var r as CGRectMBS = CGMakeRectMBS(0, 0, img.Width, img.Height)

c.DrawPicture(img, r)
c.Flush
```

Notes: The CGContext is retained.
Returns nil on any error.
See also:

- 58.6.30 contextWithCGContext(handle as Integer) as CGContextMBS 9483

58.6.32 CopyPath as CGPathMBS

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns a Quartz path object built from the current path information in a graphics context.
Notes: Available in Mac OS X v10.6 and later.

58.6.33 DrawCGPDFDocument(pdf as Variant, rect as CGRectMBS, page as Integer)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Draw 'page' in 'document' in the rectangular area specified by 'rect'.
Example:

```
'get a print session

// print this PDF
Var pathPrinted as FolderItem=New FolderItem("test.pdf")

Var thePrintSession as CPMPrintSessionMBS = NewCPMPrintSessionMBS
if thePrintSession = nil then Return

'get default page format and print settings and attach it to the print settings
Var thePageFormat as CPMPageFormatMBS = NewCPMPageFormatMBS
Var thePrintSettings as CPMPrintSettingsMBS = NewCPMPrintSettingsMBS
thePrintSession.DefaultPageFormat thePageFormat
thePrintSession.DefaultPrintSettings thePrintSettings

'show the print dialog
if not thePrintSession.PrintDialog(thePrintSettings,thePageFormat) then return

'open the file which will be printed
Var thePdfDocument as CGPDFDocumentMBS = pathPrinted.OpenAsCGPDFDocumentMBS

' limit page counts to the one we have
Var LastPage as Integer = thePdfDocument.PageCount
if thePrintSettings.LastPage<lastpage then
lastpage=thePrintSettings.LastPage
end if

' you get better progress bar if you tell how many pages will come
thePrintSettings.LastPage=lastpage

'begin the printing
thePrintSession.BeginDocument(thePrintSettings, thePageFormat)
```

```
'loop over the number of copies
for currentCopy as Integer = 1 to thePrintSettings.Copies

'loop over the pages
for currentPage as Integer = thePrintSettings.FirstPage to LastPage

'prepage the page
Var PrintRect as CPMRectMBS =thePageFormat.AdjustedPageSize
Var CGRect as CGRectMBS =CGMakeRectMBS(PrintRect.left, PrintRect.top, PrintRect.Width, Print-
Rect.Height)
thePrintSession.BeginPage(thePageFormat, nil)
Var thePrintContext as CGContextMBS = thePrintSession.PageContext
if thePrintContext = Nil then return

'print the page
thePrintContext.DrawCGPDFDocument thePdfDocument, CGRect, currentPage

'end the page
thePrintContext = nil
thePrintSession.EndPage
next

next

'end the printing
thePrintSession.EndDocument
```

Notes: Pass a CGPDFDocumentMBS object for the pdf argument.
The media box of the page is scaled, if necessary, to fit into 'rect'.

58.6.34 DrawLayerAtPoint(Point as CGPointMBS, layer as CGLayerMBS)

MBS MacCG Plugin, Plugin Version: 12.2, Platform: macOS, Targets: All.

Function: Draws the contents of a CGLayer object at the specified point.
Notes: context: The graphics context associated with the layer.
point: The location, in current user space coordinates, to use as the origin for the drawing.
layer: The layer whose contents you want to draw.

Calling the function DrawLayerAtPoint is equivalent to calling the function DrawLayerInRect with a rectangle that has its origin at point and its size equal to the size of the layer.

Available in Mac OS X version 10.4 and later.

58.6.35 DrawLayerInRect(rect as CGRectMBS, layer as CGLayerMBS)

MBS MacCG Plugin, Plugin Version: 12.2, Platform: macOS, Targets: All.

Function: Draws the contents of a CGLayer object into the specified rectangle.
Notes: context: The graphics context associated with the layer.
rect: The rectangle, in current user space coordinates, to draw to.
layer: The layer whose contents you want to draw.

The contents are scaled, if necessary, to fit into the rectangle.
Available in Mac OS X version 10.4 and later.

58.6.36 DrawLinearGradient(gradient as CGGradientMBS, startPoint as CGPointMBS, endPoint as CGPointMBS, options as Integer)

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Paints a gradient fill that varies along the line defined by the provided starting and ending points.
Notes: gradient: A CGGradient object.
startPoint: The coordinate that defines the starting point of the gradient.
endPoint: The coordinate that defines the ending point of the gradient.
options: Option flags (kCGGradientDrawsBeforeStartLocation or kCGGradientDrawsAfterEndLocation) that control whether the fill is extended beyond the starting or ending point.

The color at location 0 in the CGGradient object is mapped to the starting point. The color at location 1 in the CGGradient object is mapped to the ending point. Colors are linearly interpolated between these two points based on the location values of the gradient. The option flags control whether the gradient is drawn before the start point or after the end point.

Available in Mac OS X v10.5 and later.

58.6.37 DrawPath(mode as Integer)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Draw the context's path using drawing mode 'mode'.

58.6.38 DrawPicture(pic as CGImageMBS, rect as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Draws a CGImageMBS at the given position.
Example:

```
// put inside window paint event

Var c as CGContextMBS
if TargetCocoa then
c = GetCurrentCGContextMBS
else
c = Window1.CGContextMBS
end if

Var logo as Picture = logoMBS(500)
Var image as CGImageMBS = CGCreateImageMBS(logo)

Var r as CGRectMBS = CGMakeRectMBS(0,0,g.Width,g.Height)

c.DrawPicture image, r
```

Notes: Remeber that in CoreGraphics the position 0/0 is in the bottom left corner. In Xojo 0/0 is in the top left corner.

58.6.39 DrawRadialGradient(gradient as CGGradientMBS, startCenter as CGPointMBS, startRadius as Double, endCenter as CGPointMBS, endRadius as Double, options as Integer)

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Paints a gradient fill that varies along the area defined by the provided starting and ending circles.
Notes: gradient: A CGGradient object.
startCenter: The coordinate that defines the center of the starting circle.
startRadius: The radius of the starting circle.
endCenter: The coordinate that defines the center of the ending circle.
endRadius: The radius of the ending circle.
options: Option flags (kCGGradientDrawsBeforeStartLocation or kCGGradientDrawsAfterEndLocation) that control whether the gradient is drawn before the starting circle or after the ending circle.

The color at location 0 in the CGGradient object is mapped to the circle defined by startCenter and startRadius. The color at location 1 in the CGGradient object is mapped to the circle defined by endCenter and endRadius. Colors are linearly interpolated between the starting and ending circles based on the location values of the gradient. The option flags control whether the gradient is drawn before the start point or after the end point.

Available in Mac OS X v10.5 and later.

58.6.40 DrawShading(shading as CGShadingMBS)

MBS MacCG Plugin, Plugin Version: 6.2, Platform: macOS, Targets: All.

Function: Fills the clipping path of a context with the specified shading.
Notes: shading: A Quartz shading. Quartz retains this object; upon return, you may safely release it.
Available in Mac OS X version 10.2 and later.

58.6.41 DrawTiledImage(pic as CGImageMBS, rect as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Repeatedly draws an image, scaled to the provided rectangle, to fill the current clip region.
Example:

```
// put inside window paint event

Var c as CGContextMBS
if TargetCocoa then
c = GetCurrentCGContextMBS
else
c = Window1.CGContextMBS
end if

Var logo as Picture = logoMBS(50)
Var image as CGImageMBS = CGCreateImageMBS(logo)

Var r as CGRectMBS = CGMakeRectMBS(0,0,50,50)

c.DrawTiledImage image, r
```

Notes: rect: A rectangle that specifies the origin and size of the destination tile. Quartz scales the image—disproportionately, if necessary—to fit the bounds specified by the rect parameter.

image: The image to draw.

Quartz draws the scaled image starting at the origin of the rectangle in user space, then moves to a new point (horizontally by the width of the tile and/or vertically by the height of the tile), draws the scaled image, moves again, draws again, and so on, until the current clip region is tiled with copies of the image. Unlike patterns, the image is tiled in user space, so transformations applied to the CTM affect the final result.

Available in Mac OS X v10.5 and later.

58.6.42 EndPage

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: End the current page.

58.6.43 EndTransparencyLayer

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: End a tranparency layer.

58.6.44 EOClip

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Clips the current path.
Notes: Intersect the context's path with the current clip path and use the resulting path as the clip path for subsequent rendering operations. Use the even-odd fill rule for deciding what's inside the path.

58.6.45 EOFillPath

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Fill the context's path using the even-odd fill rule. Any open subpath of the path is implicitly closed.

58.6.46 FillEllipseInRect(rect as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Fill an ellipse (an oval) inside rect.
Example:

```
// a new picture in RB
Var pic as new Picture(500, 500)

// and create CGBitmapContextMBS pointing to it
```

```
Var b as CGBitmapContextMBS = CGBitmapContextMBS.CreateWithPicture(pic)

// color set to full red
b.SetRGBFillColor 1.0, 0.0, 0.0, 1.0

// draw ellipse
Var r as CGRectMBS = CGRectMBS.Make(0, 0, 500, 500)
b.FillEllipseInRect r

// flush drawings
b.Flush

// and show
Backdrop = pic
```

Notes: Requires Mac OS X 10.4.

58.6.47 FillPath

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Fill the context's path using the winding-number fill rule. Any open subpath of the path is implicitly closed.

58.6.48 FillRect(rect as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Fills the background with current fill color.
Example:

```
// put in window.paint event
Var c as CGContextMBS

c=Window1.CGContextMBS

c.RotateCTM 0.1
c.SetRGBFillColor 0,0,1,0.5
c.FillRect CGMakeRectMBS(0,0,100,100)

c.Flush
```

Notes: Remeber that in CoreGraphics the position 0/0 is in the bottom left corner. In Xojo 0/0 is in the top left corner.

58.6.49 fillRoundedRect(x as Double, y as Double, w as Double, h as Double, arcWidth as Double, arcHeight as Double)

MBS MacCG Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Fills a round rectangle.
Example:

```
Var c as CGContextMBS

c=Window1.CGContextMBS

// fill in red
c.SetRGBFillColor 1,0,0,1
c.fillRoundedRect 100,100,100,100,20,20

// draw in green
c.SetRGBStrokeColor 0,1,0,1
c.strokeRoundedRect 100,100,100,100,20,20
```

58.6.50 Flush

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Updates the screen to show the current content.
Notes: Like UpdateNow in the RB window class.

58.6.51 frameArc(x as Double, y as Double, w as Double, h as Double, startAngle as Integer, arcAngle as Integer)

MBS MacCG Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Draws an arc.
Example:

```
Var c as CGContextMBS

c=Window1.CGContextMBS

// fill in red
c.SetRGBFillColor 1,0,0,1
```

```
c.paintArc 100,100,100,100,50,90

// draw in green
c.SetRGBStrokeColor 0,1,0,1
c.frameArc 100,100,100,100,50,90
```

Notes: angles are in degree.

58.6.52 frameOval(x as Double, y as Double, w as Double, h as Double)

MBS MacCG Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Draws an oval.
Example:

```
Var c as CGContextMBS

c=Window1.CGContextMBS

// fill in red
c.SetRGBFillColor 1,0,0,1
c.paintOval 100,100,100,100

// draw in green
c.SetRGBStrokeColor 0,1,0,1
c.frameOval 100,100,100,100
```

58.6.53 frameRect(x as Double, y as Double, w as Double, h as Double)

MBS MacCG Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Draws the frame for the rectangle.
Example:

```
Var c as CGContextMBS

c=Window1.CGContextMBS

// fill in red
c.SetRGBFillColor 1,0,0,1
c.paintRect 100,100,100,100

// draw in green
c.SetRGBStrokeColor 0,1,0,1
c.frameRect 100,100,100,100
```

58.6.54 GetClipBoundingBox as CGRectMBS

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns the bounding box of a clipping path.
Notes: Returns the bounding box of the clipping path, specified in user space.

The bounding box is the smallest rectangle completely enclosing all points in the clipping path, including control points for any Bezier curves in the path.

Available in Mac OS X v10.3 and later.

58.6.55 GetCTM as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: Return the current graphics state's transformation matrix.
Notes: Returns nil on any error.

58.6.56 GetPathBoundingBox as CGRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Return the bounding box of the context's path.
Notes: The bounding box is the smallest rectangle completely enclosing all points in the path, including control points for Bezier and quadratic curves.

58.6.57 GetPathCurrentPoint as CGPointMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Return the current point of the current subpath of the context's path.

58.6.58 GetTextPosition as CGPointMBS

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: Return the current user-space point at which text will be drawn to (x,y).
Notes: Returns nil on any problem.

58.6.59 IsPathEmpty as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns true if the context's path contains no elements.

58.6.60 MoveToPoint(x as Double, y as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Append a straight line segment from the current point to (x, y).

58.6.61 paintArc(x as Double, y as Double, w as Double, h as Double, startAngle as Integer, arcAngle as Integer)

MBS MacCG Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Fills an arc.
Example:

```
Var c as CGContextMBS

c=Window1.CGContextMBS

// fill in red
c.SetRGBFillColor 1,0,0,1
c.paintArc 100,100,100,100,50,90

// draw in green
c.SetRGBStrokeColor 0,1,0,1
c.frameArc 100,100,100,100,50,90
```

Notes: angles are in degree.

58.6.62 paintOval(x as Double, y as Double, w as Double, h as Double)

MBS MacCG Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Fills an oval.
Example:

```
Var c as CGContextMBS

c=Window1.CGContextMBS

// fill in red
c.SetRGBFillColor 1,0,0,1
c.paintOval 100,100,100,100

// draw in green
c.SetRGBStrokeColor 0,1,0,1
c.frameOval 100,100,100,100
```

58.6.63 paintRect(x as Double, y as Double, w as Double, h as Double)

MBS MacCG Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Fills the rectangle.
Example:

```
Var c as CGContextMBS

c=Window1.CGContextMBS

// fill in red
c.SetRGBFillColor 1,0,0,1
c.paintRect 100,100,100,100

// draw in green
c.SetRGBStrokeColor 0,1,0,1
c.frameRect 100,100,100,100
```

58.6.64 PathContainsPoint(point as CGPointMBS, mode as Integer) as boolean

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Return true if point is contained in the current path of context.
Notes: A point is contained within a contexts path if it is inside the painted region when the path is stroked or filled with opaque colors using the path drawing mode mode. point is specified is user space.

Requires Mac OS X 10.4.

58.6.65 ReplacePathWithStrokedPath

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Replace the path in context with the stroked version of the path, using the parameters of context to calculate the stroked path.
Notes: The resulting path is created such that filling it with the appropriate color will produce the same results as stroking the original path. You can use this path in the same way you can use the path of any context; for example, you can clip to the stroked version of a path by calling this function followed by a call to "ClipPath".
Requires Mac OS X 10.4.

58.6.66 RestoreGState

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Restores the last saved graphics state.

58.6.67 RotateCTM(angle as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Rotate the current graphics state's transformation matrix (the CTM) by 'angle' radians.
Example:

```
// This example needs a window with Slider1.
// Rotate a picture not on the edge of the context:

Var c as CGImageMBS
Var f as FolderItem
Var d as CGDataProviderMBS
Var cg as CGContextMBS
Var r as CGRectMBS

f=SpecialFolder.Desktop.Child("IMAG0001.JPG")

d=CGDataProviderMBS.CreateWithFile(f)
c=CGCreateImageFromJPEGDataProviderMBS(d,nil,true,0)

cg=Window1.CGContextMBS

r=CGMakeRectMBS(-c.Width/2,-c.Height/2,c.Width,c.Height)
cg.TranslateCTM Width/2,Height/2
cg.RotateCTM Slider1.Value/180.0*3.14
cg.DrawPicture c,r
```

cg.Flush

58.6.68 SaveGState

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Saves the current graphics state.

58.6.69 ScaleCTM(sx as Double, sy as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Scale the current graphics state's transformation matrix (the CTM) by (sx, sy).

58.6.70 SelectFont(name as string, size as Double, fontencoding as Integer)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Attempts to find the font named 'name'. If successful, scales it to 'size' units in user space.
Notes: Name: string that contains the PostScript name of the font to set.

'textEncoding' specifies how to translate from bytes to glyphs.

kCGEncodingFontSpecific	0
kCGEncodingMacRoman	1

As "Comic Sans MS" works, but not ""Comic Sans ms" this functions seems to be case sensitive.

Matthias Buercher notes that sometimes a font is not selected if the RGBFillColor was not set before.

You may need to reset the textmatrix with some code like c.TextMatrix = CGAffineTransformMBS.Identity.
If the text matrix is different, your text may be rotated, skewed or resized.

58.6.71 SetAllowsAntialiasing(allowsAntialiasing as boolean)

MBS MacCG Plugin, Plugin Version: 7.2, Platform: macOS, Targets: All.

Function: Whether to allow antialiasing.
Notes: Allow antialiasing in context if allowsAntialiasing is true; don't allow it otherwise. This parameter is not part of the graphics state. A context will perform antialiasing if both allowsAntialiasing and the graphics state parameter shouldAntialias are true.
Requires Mac OS X 10.4 to work.

58.6.72 SetAlpha(alpha as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Set the alpha value in the current graphics state to alpha.

58.6.73 SetBlendMode(BlendMode as Integer)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Set the blend mode of context to mode.
Notes: Requires Mac OS X 10.4.

58.6.74 SetCharacterSpacing(spacing as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Set the current character spacing to 'spacing'.
Notes: The character spacing is added to the displacement between the origin of one character and the origin of the next.

58.6.75 SetCMYKFillColor(cyan as Double, magenta as Double, yellow as Double, black as Double, alpha as Double = 1.0)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Sets the fill color to a CMYK color.
Notes: colors are from 0 to 1 and alpha is from 0 (transparent) to 1 (solid).

58.6.76 SetCMYKStrokeColor(cyan as Double, magenta as Double, yellow as Double, black as Double, alpha as Double = 1.0)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Sets the stroke color to a CMYK color.
Notes: colors are from 0 to 1 and alpha is from 0 (transparent) to 1 (solid).

58.6.77 SetFillColor(color as CGColorMBS)

MBS MacCG Plugin, Plugin Version: 17.2, Platform: macOS, Targets: All.

Function: Sets the given color as fill color.

58.6.78 SetFillColorSpace(colorspace as CGColorSpaceMBS)

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: Sets the colorspace used for the fill color of the graphics context.

58.6.79 SetFlatness(flatness as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Set the path flatness parameter in the current graphics state to flatness.

58.6.80 SetFont(font as CGFontMBS)

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Sets the current font.

58.6.81 SetFontSize(size as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Set the current font size to 'size'.

58.6.82 SetGrayFillColor(gray as Double, alpha as Double = 1.0)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Sets the fill color to a gray color.
Notes: gray is from 0 to 1 and alpha is from 0 (transparent) to 1 (solid).

58.6.83 SetGrayStrokeColor(gray as Double, alpha as Double = 1.0)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Sets the stroke color to a gray color.
Notes: gray is from 0 to 1 and alpha is from 0 (transparent) to 1 (solid).

58.6.84 SetLineCap(cap as Integer)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Set the line cap in the current graphics state to cap.

58.6.85 SetLineDash(phase as Double, lengths as memoryblock, count as Integer)

MBS MacCG Plugin, Plugin Version: 7.7, Platform: macOS, Targets: All.

Function: Sets the pattern for dashed lines in a graphics context.
Notes: phase:
A value that specifies how far into the dash pattern the line starts, in units of the user space. For example, passing a value of 3 means the line is drawn with the dash pattern starting at three units from its beginning. Passing a value of 0 draws a line starting with the beginning of a dash pattern.

lengths:
A memoryblock of float values that specify the lengths of the painted segments and unpainted segments, respectively, of the dash pattern—or nil for no dash pattern.

For example, passing a memoryblock with the values [2,3] sets a dash pattern that alternates between a 2-user-space-unit-long painted segment and a 3-user-space-unit-long unpainted segment. Passing the values [1,3,4,2] sets the pattern to a 1-unit painted segment, a 3-unit unpainted segment, a 4-unit painted segment, and a 2-unit unpainted segment.

count
If the lengths parameter specifies a memorybloc, pass the number of elements in the memoryblock. Otherwise, pass 0.

58.6.86 SetLineJoin(join as Integer)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Set the line join in the current graphics state to join.

58.6.87 SetLineWidth(width as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Set the line width in the current graphics state to width.
Example:

```
#If XojoVersion >= 2019.02 Then
Var p As ptr = g.Handle(Graphics.HandleTypes.CGContextRef)
Var c As CGContextMBS = CGContextMBS.contextWithCGContext(p)
#Else
Var h As Integer = g.Handle(g.HandleTypeCGContextRef)
Var c As CGContextMBS = CGContextMBS.contextWithCGContext(h)
#EndIf

c.SetGrayStrokeColor(0,1)
c.SetGrayFillColor(0,1)
c.BeginPath
c.SetLineWidth 0.5
c.MoveToPoint 50, 550
c.AddLineToPoint 100, 600
c.StrokePath
c.Flush
c = nil
```

58.6.88 SetMiterLimit(limit as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Set the miter limit in the current graphics state to limit.

58.6.89 SetRenderingIntent(intent as Integer)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Set the rendering intent in the graphics state to 'intent'.
Notes: Possible values for intent:

kCGRenderingIntentDefault	0
kCGRenderingIntentAbsoluteColorimetric	1
kCGRenderingIntentRelativeColorimetric	2
kCGRenderingIntentPerceptual	3
kCGRenderingIntentSaturation	4

58.6.90 SetRGBFillColor(red as Double, green as Double, blue as Double, alpha as Double = 1.0)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Sets the fill color to a RGB color.
Notes: colors are from 0 to 1 and alpha is from 0 (transparent) to 1 (solid).

58.6.91 SetRGBStrokeColor(red as Double, green as Double, blue as Double, alpha as Double = 1.0)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Sets the stroke color to a RGB color.
Notes: colors are from 0 to 1 and alpha is from 0 (transparent) to 1 (solid).

58.6.92 SetShadow(x as Double, y as Double, blur as Double)

MBS MacCG Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Enables shadowing in a graphics context.
Example:

```
Sub Paint(g As Graphics)
Var c as CGContextMBS

c=Window1.CGContextMBS

c.SetShadow 5,5,0.5
c.SetRGBFillColor 1,0,0,1
c.FillRect CGMakeRectMBS(100,100,100,100)
c.Flush

End Sub
```

Notes: x/y: Specifies a translation of the context's coordinate system, to establish an offset for the shadow ({ 0,0 } specifies a light source immediately above the screen).

blur: A non-negative number specifying the amount of blur.

Shadow parameters are part of the graphics state in a context. After shadowing is set, all objects drawn are shadowed using a black color with 1/3 alpha (i.e., RGBA = { 0, 0, 0, 1.0/3.0 }) in the DeviceRGB color space.

To turn off shadowing:

- Use the standard save/restore mechanism for the graphics state.
- Use CGContextSetShadowWithColor to set the shadow color to a fully transparent color (or pass nil as the color).

58.6.93 SetShadowWithColor(x as Double, y as Double, blur as Double, colorvalue as CGColorMBS)

MBS MacCG Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Enables shadowing with color a graphics context.
Notes: x/y: Specifies a translation in base-space.
blur: A non-negative number specifying the amount of blur.
colorvalue: Specifies the color of the shadow, which may contain a non-opaque alpha value. If nil, then shadowing is disabled.

See also SetShadow.

58.6.94 SetShouldAntialias(shouldAntialias as boolean)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Turn off antialiasing if 'shouldAntialias' is zero; turn it on otherwise.
Notes: This parameter is part of the graphics state.

58.6.95 SetShouldSmoothFonts(shouldSmoothFonts as boolean)

MBS MacCG Plugin, Plugin Version: 7.2, Platform: macOS, Targets: All.

Function: Whether font smoothing is enabled.
Notes: Turn on font smoothing if shouldSmoothFonts is true; turn it off otherwise. This parameter is part of the graphics state. Note that this doesn't guarantee that font smoothing will occur: not all destination contexts support font smoothing.
Requires Mac OS X 10.2.

58.6.96 SetStrokeColor(color as CGColorMBS)

MBS MacCG Plugin, Plugin Version: 17.2, Platform: macOS, Targets: All.

Function: Sets the given color as stroke color.

58.6.97 SetStrokeColorSpace(colorspace as CGColorSpaceMBS)

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: Sets the colorspace used for the stroke color of the graphics context.

58.6.98 SetTextDrawingMode(mode as Integer)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Set the text drawing mode to 'mode'.
Notes: Possible values:

kCGTextFill	0
kCGTextStroke	1
kCGTextFillStroke	2
kCGTextInvisible	3
kCGTextFillClip	4
kCGTextStrokeClip	5
kCGTextFillStrokeClip	6
kCGTextClip	7

58.6.99 ShowText(text as string)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Draw 'string' at the point specified by the current text matrix.
Notes: Each byte of the string is mapped through the encoding vector of the current font to obtain the glyph to display.
This function is more for quick and dirty text output, but not for serious drawing as it does not do most unicode strings correctly. Use ATS for better drawing.

Some RB 5.x versions show a bug that the text is not displayed on a CGContext in while running the application in debug mode.

58.6.100 ShowTextAtPoint(text as string, x as Double, y as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Draw 'string' at the point '(x, y)', specified in user space.
Notes: Each byte of the string is mapped through the encoding vector of the current font to obtain the glyph to display.
This function is more for quick and dirty text output, but not for serious drawing as it does not do most unicode strings correctly. Use ATS for better drawing.

Some RB 5.x versions show a bug that the text is not displayed on a CGContext in while running the application in debug mode.

58.6.101 StrokeEllipseInRect(rect as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Stroke an ellipse (an oval) inside rect.
Notes: Requires Mac OS X 10.4.

58.6.102 StrokePath

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Stroke the context's path.
Example:

```
Var c as CGContextMBS

c=Window1.CGContextMBS

c.SetRGBStrokeColor 1,0,0,1
c.BeginPath
c.MoveToPoint 0,0
c.AddLineToPoint 100,100
c.StrokePath
c.Flush
```

58.6.103 StrokeRect(rect as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Stroke 'rect' with the current stroke color and the current linewidth.

58.6.104 StrokeRectWithWidth(rect as CGRectMBS, width as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Stroke 'rect' with the current stroke color, using 'width' as the line width.

58.6.105 strokeRoundedRect(x as Double, y as Double, w as Double, h as Double, arcWidth as Double, arcHeight as Double)

MBS MacCG Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Draws the frame for the round rectangle.
Example:

```
Var c as CGContextMBS

c=Window1.CGContextMBS

// fill in red
c.SetRGBFillColor 1,0,0,1
c.fillRoundedRect 100,100,100,100,20,20

// draw in green
c.SetRGBStrokeColor 0,1,0,1
c.strokeRoundedRect 100,100,100,100,20,20
```

58.6.106 Synchronize

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Synchronizes the context with the device.

58.6.107 TranslateCTM(tx as Double, ty as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Translate the current graphics state's transformation matrix (the CTM) by (tx,ty).
Example:

```
// Rotate a PDF page

// our files
Var sourcefile as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var destfile as FolderItem = SpecialFolder.Desktop.Child("rotated.pdf")

// open PDF
Var pdf as CGPDFDocumentMBS = sourcefile.OpenAsCGPDFDocumentMBS

// query media size of first page
Var r as CGRectMBS = pdf.MediaBox(1)

// create new PDF
Var c as CGContextMBS = destfile.NewCGPDFDocumentMBS(r,"title","Author","Creator")

// create rotated rectangle
Var nr as new CGRectMBS(0,0,r.Height,r.Width)

// create new page
c.BeginPage nr
c.SaveGState

const pi = 3.14159265

// rotate by 90¬∞
c.RotateCTM pi*1.5

// fix origin
c.TranslateCTM -r.width,0

// draw PDF
c.DrawCGPDFDocument pdf,r,1

// cleanup
c.RestoreGState
c.EndPage

c = nil

// show in PDF viewer
destfile.Launch
```

58.6.108 Properties

58.6.109 handle as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The handle for this context.
Notes: Handle is a CGContextRef.
(Read and Write property)

58.6.110 InterpolationQuality as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The interpolation quality for image rendering of this context.
Notes: The interpolation quality is a gstate-parameter which controls the level of interpolation performed when an image is interpolated (for example, when scaling the image). Note that it is merely a hint to the context: not all contexts support all interpolation quality levels.

Possible values:

kCGInterpolationDefault	0	Let the context decide.
kCGInterpolationNone	1	Never interpolate.
kCGInterpolationLow	2	Fast, low quality.
kCGInterpolationHigh	3	Slow, high quality.

(Read and Write property)

58.6.111 RetainCount as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the reference counter of the object.
Notes: If the retain count falls below 1, the object is destroyed.
(Read only property)

58.6.112 TextMatrix as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: Return the text matrix.
Notes: Returns nil on any error.
(Read and Write computed property)

58.6.113 TextPosition as CGPointMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: User-space point at which text will be drawn to (x,y).
Notes: (Read and Write computed property)

58.6.114 Constants

Constants

Constant	Value	Description
kCGLineCapButt	0	A constant for the Line cap styles.
kCGLineCapRound	1	A constant for the Line cap styles.
kCGLineCapSquare	2	A constant for the Line cap styles.
kCGLineJoinBevel	2	A constant for the Line join styles.
kCGLineJoinMiter	0	A constant for the Line join styles.
kCGLineJoinRound	1	A constant for the Line join styles.
kCGPathEOFill	1	A constant for the Drawing modes for paths.
kCGPathEOFillStroke	4	A constant for the Drawing modes for paths.
kCGPathFill	0	A constant for the Drawing modes for paths.
kCGPathFillStroke	3	A constant for the Drawing modes for paths.
kCGPathStroke	2	A constant for the Drawing modes for paths.
kCGTextClip	7	A constant for the Drawing modes for text.
kCGTextFill	0	A constant for the Drawing modes for text.
kCGTextFillClip	4	A constant for the Drawing modes for text.
kCGTextFillStroke	2	A constant for the Drawing modes for text.
kCGTextFillStrokeClip	6	A constant for the Drawing modes for text.
kCGTextInvisible	3	A constant for the Drawing modes for text.
kCGTextStroke	1	A constant for the Drawing modes for text.
kCGTextStrokeClip	5	A constant for the Drawing modes for text.

Blend Mode Constants

Constant	Value	Description
kCGBlendModeClear	16	R = 0 Available in Mac OS X v10.5 and later.
kCGBlendModeColor	14	
kCGBlendModeColorBurn	7	
kCGBlendModeColorDodge	6	
kCGBlendModeCopy	17	R = S Available in Mac OS X v10.5 and later.
kCGBlendModeDarken	4	
kCGBlendModeDestinationAtop	24	R = S*(1 - Da) + D*Sa Available in Mac OS X v10.5 and later.
kCGBlendModeDestinationIn	22	R = D*Sa Available in Mac OS X v10.5 and later.
kCGBlendModeDestinationOut	23	R = D*(1 - Sa) Available in Mac OS X v10.5 and later.
kCGBlendModeDestinationOver	21	R = S*(1 - Da) + D Available in Mac OS X v10.5 and later.
kCGBlendModeDifference	10	
kCGBlendModeExclusion	11	
kCGBlendModeHardLight	9	
kCGBlendModeHue	12	
kCGBlendModeLighten	5	
kCGBlendModeLuminosity	15	
kCGBlendModeMultiply	1	
kCGBlendModeNormal	0	
kCGBlendModeOverlay	3	
kCGBlendModePlusDarker	26	R = MAX(0, (1 - D) + (1 - S)) Available in Mac OS X v10.5 and later.
kCGBlendModePlusLighter	27	R = MIN(1, S + D) Available in Mac OS X v10.5 and later.
kCGBlendModeSaturation	13	
kCGBlendModeScreen	2	
kCGBlendModeSoftLight	8	
kCGBlendModeSourceAtop	20	R = S*Da + D*(1 - Sa) Available in Mac OS X v10.5 and later.
kCGBlendModeSourceIn	18	R = S*Da Available in Mac OS X v10.5 and later.
kCGBlendModeSourceOut	19	R = S*(1 - Da) Available in Mac OS X v10.5 and later.
kCGBlendModeXOR	25	R = S*(1 - Da) + D*(1 - Sa). This XOR mode is only nominally related to the classical bitmap XOR operation, which is not supported by Quartz 2D. Available in Mac OS X v10.5 and later.

Encodings

Constant	Value	Description
kCGEncodingFontSpecific	0	Font Specific encoding
kCGEncodingMacRoman	1	Mac Roman Encoding

Interpolation Constants

Constant	Value	Description
kCGInterpolationDefault	0	Let the context decide.
kCGInterpolationHigh	3	Slower, higher quality.
kCGInterpolationLow	2	Faster, lower quality.
kCGInterpolationMedium	4	A medium level of interpolation quality. This setting is slower than the low setting but faster than the high setting. Available in Mac OS X v10.6 and later.
kCGInterpolationNone	1	Never interpolate.

58.7 class CGDataConsumerMBS

58.7.1 class CGDataConsumerMBS

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: A class for CoreGraphics to write data.
Example:

```
// create a PDF in memory with your own data consumer
// MyConsumer is a subclass of CGDataConsumerMBS with the Put event implemented and a property Data As String.
Var consumer As New MyConsumer
Var pdf As CGPDFContextMBS = CGNewPDFDocumentMBS(consumer, CGRectMBS.Make(0, 0, 595, 842), "Test", "John", "MyApp")

pdf.BeginPage Nil
pdf.SetRGBFillColor(1, 0, 0)
pdf.FillRect CGRectMBS.Make(100, 600, 200, 100)
pdf.EndPage
pdf.Close

MessageBox "PDF size: " + consumer.Data.Bytes.ToString + " bytes"

// in MyConsumer:
Function Put(data As String) As Integer Handles Put
Me.Data = Me.Data + data
Return data.Bytes // number of bytes consumed
End Function
```

Blog Entries

- MBS REALbasic plug-ins version 9.5

58.7.2 Methods

58.7.3 Constructor

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new event based data consumer.
Notes: On failure the handle property is zero.
See also:

- 58.7.4 Constructor(file as folderitem) 9514
- 58.7.5 Constructor(url as string) 9514

58.7.4 Constructor(file as folderitem)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new CGDataConsumer to write data to the given file.
Notes: On failure the handle property is zero.
See also:

- 58.7.3 Constructor 9513
- 58.7.5 Constructor(url as string) 9514

58.7.5 Constructor(url as string)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new CGDataConsumer to write data to the given url.
Notes: On failure the handle property is zero.
See also:

- 58.7.3 Constructor 9513
- 58.7.4 Constructor(file as folderitem) 9514

58.7.6 CreateWithFile(file as folderitem) as CGDataConsumerMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new CGDataConsumer to write data to the given file.
Notes: Returns nil on any error.

58.7.7 CreateWithURL(url as string) as CGDataConsumerMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new CGDataConsumer to write data to the given url.
Notes: Returns nil on any error.

58.7.8 Properties

58.7.9 Handle as Integer

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: The hande to the CGDataConsumer object.
Notes: Data is a CGDataConsumerRef.
(Read and Write property)

58.7.10 Events

58.7.11 CloseConsumer

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: Event called when the consumer is no longer needed.

58.7.12 Put(data as string) as Integer

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: Some data needs to be stored.
Notes: Write the given data string into your backbuffer or file and return the number of bytes written. Return 0 if you can't accept new input.

58.8 class CGDataProviderMBS

58.8.1 class CGDataProviderMBS

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A class for a Coregraphics data provider.
Example:

```
// load a font file through a data provider
Var provider As CGDataProviderMBS = CGDataProviderMBS.CreateWithFile(SpecialFolder.Desktop.Child("My-Font.ttf"))
If provider = Nil Then Return

Var font As CGFontMBS = CGFontMBS.CreateWithDataProvider(provider)
If font <>Nil Then
MessageBox font.FullName + ", " + provider.Data.Bytes.ToString + " bytes"
End If
```

Notes: Something like a textinputstream in RB, but for Coregraphics this stream provides binary data.
Blog Entries

- MBS REALbasic plug-ins version 9.5

58.8.2 Methods

58.8.3 Constructor(data as string)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new data provider reading data from the given string.
Notes: On failure the handle property is zero.
Available in Mac OS X v10.4 and later.
See also:

- 58.8.4 Constructor(file as folderitem) 9516

58.8.4 Constructor(file as folderitem)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a data provider using a CFUrl.
Notes: On failure the handle property is zero.
See also:

- 58.8.3 Constructor(data as string) 9516

58.8.5 CreateWithData(data as string) as CGDataProviderMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new data provider reading data from the given string.
Notes: On failure the handle property is zero.
Available in Mac OS X v10.4 and later.

58.8.6 CreateWithFile(file as folderitem) as CGDataProviderMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a data provider using a file.
Notes: Returns nil on any error.

58.8.7 CreateWithURL(url as string) as CGDataProviderMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a data provider using an URL.
Notes: Returns nil on any error.

58.8.8 Data as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns a copy of the provider's data.
Notes: Available in Mac OS X v10.5 and later.

58.8.9 Properties

58.8.10 Handle as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The handle to CGDataProvider object.
Notes: (a CGDataProviderRef)
(Read and Write property)

58.9 class CGDisplayConfigMBS

58.9.1 class CGDisplayConfigMBS

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: The class for a display configuration.
Notes: The display reconfiguration process:

- Make all desired changes for all displays.
- Commit the changes using Complete(), or cancel with Cancel().

The resulting layout will be adjusted to remove gaps or overlaps from the requested layout, if needed. */
Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8

58.9.2 Methods

58.9.3 Cancel

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Cancel a set of display configuration changes.
Notes: On return, the configuration is cancelled and is no longer valid.
Calls CGCancelDisplayConfiguration.

58.9.4 Complete(options as Integer)

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Complete a set of display configuration changes.
Notes: On return, the configuration is no longer valid.

A configuration change can apply for the life of an application, the life of a login session, or permanently. If a request is made to make a change permanent, and the change cannot be supported by Mac OS X user interface, then the configuration change lasts only for the current login session.

A permanent configuration change also becomes the current session's configuration.
When the system reverts configurations at app termination, the configuration reverts to the session or permanent configuration setting.

When the system reverts configurations at session termination, the configuration reverts to the permanent configuration setting.
This operation may fail if an unsupported display mode is requested, or if another app is running in full-screen mode.

Calls CGCompleteDisplayConfiguration.

58.9.5 DisplayMode(display as CGDisplayMBS, mode as CGDisplayModeMBS)

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Configure the display mode of a display.
Notes: A display mode is a set of properties such as width, height, pixel depth, and refresh rate, and options such as stretched LCD panel filling.

If you use this function to change the mode of a display in a mirroring set, Quartz may adjust the bounds, resolutions, and depth of the other displays in the set to a safe mode, with matching depth and the smallest enclosing size.

Calls CGConfigureDisplayWithDisplayMode.

58.9.6 MirrorOfDisplay(display as CGDisplayMBS, master as CGDisplayMBS)

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Make a display a mirror of a master display.
Notes: Pass nil for the master display to disable mirroring.
Pass MainDisplay for the master display to mirror the main display.

Display mirroring and display matte generation are implemented either in hardware (preferred) or software, at the discretion of the device driver.

- Hardware mirroring

With hardware mirroring enabled, all drawing is directed to the primary
display — see PrimaryDisplay.

If the device driver selects hardware matte generation, the display bounds and rowbytes values are adjusted to reflect the active drawable area.

- Software mirroring

In this form of mirroring, identical content is drawn into each display in the mirroring set. Applications that use the window system need not be concerned about mirroring, as the window system takes care of all flushing of window content to the appropriate displays.

Applications that draw directly to the display, as with display capture, must make sure to draw the same content to all mirrored displays in a software mirror set. When drawing to software mirrored displays using a full screen OpenGL context (not drawing through a window), you should create shared OpenGL contexts for each display and re-render for each display.

You can use the function GetActiveDisplayList to determine which displays are active, or drawable. This automatically gives your application the correct view of the current displays.

Calls CGConfigureDisplayMirrorOfDisplay.

58.9.7 Mode(display as CGDisplayMBS, mode as Dictionary)

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Sets the mode given the values in the dictionary.
Notes: Deprecated with Mac OS X 10.6.
Calls CGConfigureDisplayMode.

58.9.8 Origin(display as CGDisplayMBS, x as Integer, y as Integer)

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Configure the origin of a display in global display coordinates.
Notes: The new origin of the display is placed as close as possible to the requested location, without overlapping or leaving a gap between displays.

Any display whose origin is not explicitly set in a reconfiguration will be repositioned to a location as close as possible to its current location without overlapping or leaving a gap between displays.

Note that setting the origin of a display which is mirroring another display will remove that display from any mirroring set.

Calls CGConfigureDisplayOrigin.

58.9.9 RestorePermanentDisplayConfiguration

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Restore the permanent display configuration settings for the current user.
Notes: Calls CGRestorePermanentDisplayConfiguration.

58.9.10 StereoOperation(display as CGDisplayMBS, stereo as Boolean, forceBlueLine as Boolean)

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Enable or disable stereo operation for a display.
Notes: Note that the system normally detects the presence of a stereo window, and will automatically switch a display containing a stereo window to stereo operation. This function provides a mechanism to force a display to stereo operation, and to set options (such as blue line sync signal) when in stereo operation.

When in stereo operation, a display may need to generate a special stereo sync signal as part of the video output. The sync signal consists of a blue line which occupies the first 25% of the last scanline for the left eye view, and the first 75% of the last scanline for the right eye view. The remainder of the scanline is black. To force the display to generate this sync signal, pass true for forceBlueLine; otherwise, pass false.

Returns kCGErrorSuccess on success, or kCGErrorRangeCheck if the display does not support the stereo operation settings requested.

On success, the display resolution, mirroring mode, and available display modes may change due to hardware-specific capabilities and limitations. You should check these settings to verify that they are appropriate for your application.

Calls CGConfigureDisplayStereoOperation.

58.9.11 Properties

58.9.12 Handle as Integer

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read only property)

58.9.13 Lasterror as Integer

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: The last error value.
Notes: (Read only property)

58.9.14 Constants

Options for Complete

Constant	Value	Description
kCGConfigureForAppOnly	0	For application only.
kCGConfigureForSession	1	For session only.
kCGConfigurePermanently	2	Permanently.

58.10 class CGDisplayMBS

58.10.1 class CGDisplayMBS

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: A class for a CoreGraphics Display object.
Example:

```
Var c as new CGDisplayMBS
Var lines(-1) as string

Var DPIWidth as Double = c.PixelsWide/(c.ScreenSizeWidth/10.0/2.54)
Var DPIHeight as Double = c.PixelsHigh/(c.ScreenSizeHeight/10.0/2.54)

lines.Add str(c.ScreenSizeWidth)+" x "+str(c.ScreenSizeHeight)+" Millimeter with"
lines.Add str(c.PixelsWide)+" x "+str(c.PixelsHigh)+" Pixel is"
lines.Add str(DPIWidth)+" x "+str(DPIHeight)+" DPI"

MessageBox Join(lines,EndOfLine)
```

58.10.2 Methods

58.10.3 AllDisplayModes(Options as Dictionary = nil) as CGDisplayModeMBS()

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return an array of all modes for the specified display.
Example:

```
Var d as CGDisplayMBS = CGDisplayMBS.MainDisplay

Var options As New Dictionary
options.Value(CGDisplayMBS.kCGDisplayShowDuplicateLowResolutionModes) = false

Var modes(-1) as string
for each mode as CGDisplayModeMBS in d.AllDisplayModes(options)
modes.Add str(mode.Width)+" x "+str(mode.Height)
next
MessageBox Join(modes,EndOfLine)
```

Notes: Returns an empty array on any error.
Requires Mac OS X 10.6

58.10.4 AvailableModes as Dictionary()

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Returns an array filled with dictionaries (one for each mode).
Example:

```
// This example needs a window with ListBox1.
// Display all available graphic modes:

ListBox1.DeleteAllRows
ListBox1.ColumnCount = 4

Var d as CGDisplayMBS = CGDisplayMBS.MainDisplay

Var a(-1) as Dictionary = d.AvailableModes

for each di as Dictionary in a

ListBox1.AddRow di.Value(d.kCGDisplayMode).stringValue
ListBox1.CellTextAt(ListBox1.LastAddedRowIndex,1) = di.Value(d.kCGDisplayWidth)+" x "+di.Value(d.kCGDisplayHeight)
ListBox1.CellTextAt(ListBox1.LastAddedRowIndex,2) = di.Value(d.kCGDisplayRefreshRate)
ListBox1.CellTextAt(ListBox1.LastAddedRowIndex,3) = di.Value(d.kCGDisplayBitsPerPixel)

next
```

Notes: Returns empty error on any error.

58.10.5 BestModeForParameters(BitsPerPixel as Integer, Width as Integer, Height as Integer, byref ExactMatch as boolean) as Dictionary

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Returns a Dictionary with the best mode found for the given parameters.
Notes: Returns nil on any error.

Try to find a display mode of specified depth with dimensions equal or greater than specified.
If no depth match is found, try for the next larger depth with dimensions equal or greater than specified. If no luck, then just return the current mode.

exactmatch is set to 'true' if an exact match in width, height, and depth is found, and 'false' otherwise.
Returns nil if display is invalid.

58.10.6 BestModeForParametersAndRefreshRate(BitsPerPixel as Integer, Width as Integer, Height as Integer, RefreshRate as Integer, byref ExactMatch as boolean) as Dictionary

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Returns a Dictionary with the best mode found for the given parameters.
Notes: Returns nil on any error.

Try to find a display mode of specified depth with dimensions equal or greater than specified.
If no depth match is found, try for the next larger depth with dimensions equal or greater than specified. If no luck, then just return the current mode.

exactmatch is set to 'true' if an exact match in width, height, and depth is found, and 'false' otherwise.
Returns nil if display is invalid.

58.10.7 BestModeForParametersAndRefreshRateWithProperty(BitsPerPixel as Integer, Width as Integer, Height as Integer, RefreshRate as Integer, propertyName as string, byref ExactMatch as boolean) as Dictionary

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Returns a Dictionary with the best mode found for the given parameters.
Notes: Returns nil on any error.

Try to find a display mode of specified depth with dimensions equal or greater than specified.

If no depth match is found, try for the next larger depth with dimensions equal or greater than specified. If no luck, then just return the current mode.

exactmatch is set to 'true' if an exact match in width, height, and depth is found, and 'false' otherwise.
Returns nil if display is invalid.

58.10.8 Capture as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Captures this display for your use.
Example:

```
Var d as CGDisplayMBS = CGDisplayMBS.MainDisplay

if d.Capture = 0 then

Var c as CGContextMBS = d.DrawingContext

// watch it drawing red
c.SetRGBFillColor 1.0, 0.0, 0.0, 1.0
c.FillRect CGMakeRectMBS(0,0,d.PixelsWide,d.PixelsHigh)

DelayMBS 3.0

call d.Release
else
MessageBox "Failed to capture displays."
end if
```

Notes: Don't forget to Release the display later.
Returns an error code.

58.10.9 CaptureAllDisplays as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Capture all displays.
Example:

```
Var d as CGDisplayMBS = CGDisplayMBS.MainDisplay

if d.CaptureAllDisplays = 0 then
```

```
Var c as CGContextMBS = d.DrawingContext

// watch it drawing red
c.SetRGBFillColor 1.0, 0.0, 0.0, 1.0
c.FillRect CGMakeRectMBS(0,0,d.PixelsWide,d.PixelsHigh)

DelayMBS 3.0

call d.ReleaseAllDisplays
else
MessageBox "Failed to capture displays."
end if
```

Notes: This has the nice effect of providing an immersive environment, and preventing other apps from trying to adjust themselves to display changes only needed by your app.

Returns an error code.

58.10.10 CaptureAllDisplaysWithOptions(options as Integer) as Integer

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Capture all displays.
Example:

```
Var d as CGDisplayMBS = CGDisplayMBS.MainDisplay

if d.CaptureAllDisplaysWithOptions(d.kCGCaptureNoOptions) = 0 then

Var c as CGContextMBS = d.DrawingContext

// watch it drawing red
c.SetRGBFillColor 1.0, 0.0, 0.0, 1.0
c.FillRect CGMakeRectMBS(0,0,d.PixelsWide,d.PixelsHigh)

DelayMBS 3.0

call d.ReleaseAllDisplays
else
MessageBox "Failed to capture displays."
end if
```

Notes: This has the nice effect of providing an immersive environment, and preventing other apps from trying to adjust themselves to display changes only needed by your app.

Use kCGCaptureNoOptions and kCGCaptureNoFill for options parameter.
Returns an error code.

58.10.11 CaptureWithOptions(options as Integer) as Integer

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Captures this display for your use.
Example:

```
Var d as CGDisplayMBS = CGDisplayMBS.MainDisplay

if d.CaptureWithOptions(d.kCGCaptureNoOptions) = 0 then

Var c as CGContextMBS = d.DrawingContext

// watch it drawing red
c.SetRGBFillColor 1.0, 0.0, 0.0, 1.0
c.FillRect CGMakeRectMBS(0,0,d.PixelsWide,d.PixelsHigh)

DelayMBS 3.0

call d.Release
else
MessageBox "Failed to capture displays."
end if
```

Notes: Don't forget to Release the display later.
Returns an error code.
Use kCGCaptureNoOptions and kCGCaptureNoFill for options parameter.

58.10.12 CreateImage as CGImageMBS

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return an image containing the contents of the display.
Example:

```
Var d as CGDisplayMBS = CGDisplayMBS.MainDisplay
Var img as CGImageMBS = d.CreateImage

Backdrop = img.Picture
```

Notes: Requires Mac OS X 10.6.

58.10.13 CreateImageAsync(receiverDelegate as CreateImageAsyncDelegateMBS, jpegQuality as Double = 0.9, tag as Variant = nil)

MBS MacCG Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

Function: Asynchronously creates an image with screenshot.
Notes: If jpeg is >= 0, we use it as quality for the jpeg compression and provide the JPEG data as memoryblock in the delegate.
Tag is passed through as is.

Delegate declaration:
CreateImageAsyncDelegateMBS(img as CGImageMBS, JPEGData as MemoryBlock, Tag as Variant)

58.10.14 CreateImageForRect(rect as CGRectMBS) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return an image containing the contents of the rectangle rect, specified in display space, of the display identified by self.
Example:

```
Var r as CGRectMBS = CGMakeRectMBS(100,100,500,500)
Var d as CGDisplayMBS = CGDisplayMBS.MainDisplay
Var img as CGImageMBS = d.CreateImageForRect(r)

Backdrop = img.Picture
```

Notes: The actual rectangle used is the rectangle returned from CGRectIntegral(rect).
Requires Mac OS X 10.6.

58.10.15 DrawingContext as CGContextMBS

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return a CGContext suitable for drawing to the captured display, or nil if display has not been captured.
Example:

```
Var d as CGDisplayMBS = CGDisplayMBS.MainDisplay

if d.Capture = 0 then
```

```
Var c as CGContextMBS = d.DrawingContext

// watch it drawing red
c.SetRGBFillColor 1.0, 0.0, 0.0, 1.0
c.FillRect CGMakeRectMBS(0,0,d.PixelsWide,d.PixelsHigh)

DelayMBS 3.0

call d.Release
else
MessageBox "Failed to capture displays."
end if
```

Notes: The context is owned by the device and should not be released by the caller.

The context remains valid while the display is captured and while the display configuration is unchanged. Releasing the captured display or reconfiguring the display invalidates the drawing context.

The determine when the display configuration is changing, use CGDisplayReconfigurationEventMBS class.

58.10.16 GetActiveDisplayList as CGDisplayMBS()

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Returns an array with the active displays.
Example:

```
// This example needs a window with ListBox1.
// List all displays in a 2 column listbox:

ListBox1.DeleteAllRows

for each d as CGDisplayMBS in CGDisplayMBS.GetActiveDisplayList

ListBox1.AddRow hex(d.Handle)
ListBox1.CellTextAt(ListBox1.LastAddedRowIndex,1)=str(d.PixelsWide)+" x "+str(d.PixelsHigh)

next
```

Notes: Returns an empty array on any error.

The first display returned in the list is the main display, the one with the menu bar.

When mirroring, this will be the largest display, or if all are the same size, the one with the deepest pixel depth.

This function was named CGGetActiveDisplayListMBS in older plugin versions.

58.10.17 GetDisplaysWithOpenGLDisplayMask(mask as Integer) as CGDisplayMBS()

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Find all displays for the given OpenGL mask.
Notes: Returns an empty array on any error.

58.10.18 GetDisplaysWithPoint(cgpoint as CGPointMBS) as CGDisplayMBS()

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Returns an array of CGDisplayMBS objects who are visible at the point on the virtual screen.
Example:

```
// This example needs a window with ListBox1.
// List all displays in a 2 column listbox which match the point:

ListBox1.DeleteAllRows

Var p as CGPointMBS = CGMakePointMBS(100,100)
for each d as CGDisplayMBS in CGDisplayMBS.GetDisplaysWithPoint(p)

ListBox1.AddRow hex(d.Handle)
ListBox1.CellTextAt(ListBox1.LastAddedRowIndex,1)=str(d.PixelsWide)+" x "+str(d.PixelsHigh)

next
```

Notes: Returns an empty array on any error.

This function was called CGGetDisplaysWithPointMBS in older plugin versions.
See also:

- 58.10.19 GetDisplaysWithPoint(x as Double, y as Double) as CGDisplayMBS() 9531

58.10.19 GetDisplaysWithPoint(x as Double, y as Double) as CGDisplayMBS()

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Returns an array of CGDisplayMBS objects who are visible at the point on the virtual screen.
Example:

```
// This example needs a window with ListBox1.
// List all displays in a 2 column listbox which match the point:

ListBox1.DeleteAllRows

for each d as CGDisplayMBS in CGDisplayMBS.GetDisplaysWithPoint(100,100)

ListBox1.AddRow hex(d.Handle)
ListBox1.CellTextAt(ListBox1.LastAddedRowIndex,1)=str(d.PixelsWide)+" x "+str(d.PixelsHigh)

next
```

Notes: Returns an empty array on any error.

This function was called CGGetDisplaysWithPointMBS in older plugin versions.
See also:

- 58.10.18 GetDisplaysWithPoint(cgpoint as CGPointMBS) as CGDisplayMBS() 9531

58.10.20 GetDisplaysWithRect(cgrect as CGRectMBS) as CGDisplayMBS()

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Returns an array of CGDisplayMBS objects who are visible within the rectangle on the virtual screen.
Example:

```
// This example needs a window with ListBox1.
// List all displays in a 2 column listbox which match the rectangle:

ListBox1.DeleteAllRows

Var p as CGRectMBS = CGMakeRectMBS(100,100,100,100)
for each d as CGDisplayMBS in CGDisplayMBS.GetDisplaysWithRect(p)

ListBox1.AddRow hex(d.Handle)
ListBox1.CellTextAt(ListBox1.LastAddedRowIndex,1)=str(d.PixelsWide)+" x "+str(d.PixelsHigh)

next
```

Notes: Returns an empty array on any error.
This function was called CGGetDisplaysWithRectMBS in older plugin versions.
See also:

- 58.10.21 GetDisplaysWithRect(x as Double, y as Double, w as Double, h as Double) as CGDisplayMBS() 9533

58.10.21 GetDisplaysWithRect(x as Double, y as Double, w as Double, h as Double) as CGDisplayMBS()

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Returns an array of CGDisplayMBS objects who are visible within the rectangle on the virtual screen.
Example:

```
// This example needs a window with ListBox1.
// List all displays in a 2 column listbox which match the rectangle:

ListBox1.DeleteAllRows

for each d as CGDisplayMBS in CGDisplayMBS.GetDisplaysWithRect(100,100,100,100)

ListBox1.AddRow hex(d.Handle)
ListBox1.CellTextAt(ListBox1.LastAddedRowIndex,1)=str(d.PixelsWide)+" x "+str(d.PixelsHigh)

next
```

Notes: Returns an empty array on any error.
This function was called CGGetDisplaysWithRectMBS in older plugin versions.
See also:

- 58.10.20 GetDisplaysWithRect(cgrect as CGRectMBS) as CGDisplayMBS() 9532

58.10.22 GetDisplayTransferByTable(capacity as Integer, red as memoryblock, green as memoryblock, blue as memoryblock, byref samplecount as Integer) as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Get transfer tables.
Notes: Capacity should contain the number of samples each array can hold, and sampleCount is filled in with the number of samples actually copied in.

You must pass in Memoryblocks with the given size (capacity*4 Bytes).
Returns an error code.

58.10.23 GetDisplayTransferFormula(byref formula as CGDisplayTransferFormulaMBS) as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Queries the display for the current gamma formula.
Notes: Returns an error code.

58.10.24 GetLastMouseDelta(byref deltax as Integer, byref deltay as Integer)

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Report the mouse position change associated with the last mouse move event received by this application.

58.10.25 GetOnlineDisplayList as CGDisplayMBS()

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Returns an array with the online displays.
Example:

```
// This example needs a window with ListBox1.
// List all online displays in a 2 column listbox:

ListBox1.DeleteAllRows

for each d as CGDisplayMBS in CGDisplayMBS.GetOnlineDisplayList

ListBox1.AddRow hex(d.Handle)
ListBox1.CellTextAt(ListBox1.LastAddedRowIndex,1)=str(d.PixelsWide)+" x "+str(d.PixelsHigh)

next
```

Notes: Returns an empty array on any error.

The first display returned in the list is the main display, the one with the menu bar.
When mirroring, this will be the largest display, or if all are the same size, the one with the deepest pixel depth.

With hardware mirroring, a display may be on-line, but not necessarily active, or drawable. Programs which manipulate display settings such as the palette or gamma tables need access to all displays in use, including hardware mirrors which are not drawable.

This function was named CGGetOnlineDisplayListMBS in older plugin versions.

58.10.26 HideCursor as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Hides the mouse cursor.
Notes: Returns an error code.
Decrements hide cursor count.

58.10.27 Info as Dictionary

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns the information CFDictionary about the display.
Example:

```
Var c as CGDisplayMBS = CGDisplayMBS.MainDisplay
Var d as Dictionary = c.Info

MessageBox d.Value("DisplaySerialNumber")
```

Notes: On any error the return value is nil.
This function leaks around 4 to 16 KB of memory on Mac OS X 10.4. Not in the versions 10.3 or 10.5.

58.10.28 InfoAsCFDictionary as Variant

MBS MacCG Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: Returns the information CFDictionary about the display.
Notes: On any error the return value is nil.
Returns a CFDictionaryMBS object. Returned as Variant to reduce plugin dependencies.

58.10.29 IsCaptured as boolean

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Returns true if you captured this display.
Example:

```
Var d as new CGDisplayMBS // pick main display

MessageBox str(d.IsCaptured)
```

58.10.30 MainDisplay as CGDisplayMBS

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return the display object of the current main display.
Example:

```
Var c as CGDisplayMBS = CGDisplayMBS.MainDisplay

MessageBox str(c.PixelsWide)+" x "+str(c.PixelsHigh)
```

58.10.31 MoveCursorToPoint(x as Double, y as Double) as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Move the cursor to the specified point relative to the display origin (the upper left corner of the display).
Example:

```
Function KeyDown(Key As String) As Boolean
// in a window keydown event:

if asc(key)=32 then
Var c as new CGDisplayMBS
Var error as Integer = c.MoveCursorToPoint(200,200)

Title=str(error) // zero on success

end if

End Function
```

Notes: Returns CGDisplayNoErr (0) on success.
No events are generated as a result of this move.
Points that would lie outside the desktop are clipped to the desktop.

58.10.32 OpenGLDisplayMask as Integer

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return the OpenGL display mask for display, or 0 is display is an invalid display.

58.10.33 Release as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Releases the display.
Example:

```
Var d as CGDisplayMBS = CGDisplayMBS.MainDisplay

if d.Capture = 0 then

Var c as CGContextMBS = d.DrawingContext

// watch it drawing red
c.SetRGBFillColor 1.0, 0.0, 0.0, 1.0
c.FillRect CGMakeRectMBS(0,0,d.PixelsWide,d.PixelsHigh)

DelayMBS 3.0

call d.Release
else
MessageBox "Failed to capture displays."
end if
```

Notes: Returns an error code.

58.10.34 ReleaseAllDisplays as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Release all captured displays.
Example:

```
Var d as CGDisplayMBS = CGDisplayMBS.MainDisplay

if d.CaptureAllDisplays = 0 then

Var c as CGContextMBS = d.DrawingContext

// watch it drawing red
c.SetRGBFillColor 1.0, 0.0, 0.0, 1.0
c.FillRect CGMakeRectMBS(0,0,d.PixelsWide,d.PixelsHigh)
```

DelayMBS 3.0

```
call d.ReleaseAllDisplays
else
MessageBox "Failed to capture displays."
end if
```

Notes: Release all captured displays, and restore the display modes to the user's preferences. May be used in conjunction with Capture or CaptureAllDisplays.

58.10.35 RestoreColorSyncSettings

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Restore gamma tables of system displays to the user's ColorSync specified values.

58.10.36 SetDisplayMode(mode as CGDisplayModeMBS) as Integer

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Switch the display mode to mode.
Notes: The selected display mode persists for the life of the program, and automatically reverts to the permanent setting when the program terminates.

When changing display modes of displays in a mirroring set, other displays in the mirroring set will be set to a display mode capable of mirroring the bounds of the largest display being explicitly set.

Note that after switching, display parameters and addresses may change.

58.10.37 SetDisplayTransferByByteTable(count as Integer, red as memoryblock, green as memoryblock, blue as memoryblock) as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Set a display gamma/transfer function using tables of data for each channel.
Notes: As a convenience, allow setting of the gamma table by byte values.
Returns an error code.

58.10.38 SetDisplayTransferByTable(count as Integer, red as memoryblock, green as memoryblock, blue as memoryblock) as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Set a display gamma/transfer function.
Notes: Set a display gamma/transfer function using tables of data for each channel.
Values within each table should have values in the range of 0.0 through 1.0.
The same table may be passed in for red, green, and blue channels. 'count' indicates the number of entries in each table.
The tables are interpolated as needed to generate the number of samples needed by hardware.

Returns an error code.

58.10.39 SetDisplayTransferFormula(formula as CGDisplayTransferFormulaMBS) as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Set a display gamma/transfer function.
Notes: Set a display gamma/transfer function from a formula specifying min and max values and a gamma for each channel.
Gamma values must be greater than 0.0.
To get an antigamma of 1.6, one would specify a value of (1.0 / 1.6)
Min values must be greater than or equal to 0.0 and less than 1.0.
Max values must be greater than 0.0 and less than or equal to 1.0.
Out of range values, or Max greater than or equal to Min result in a kCGSRangeCheck error.

Values are computed by sampling a function for a range of indices from 0 through 1: value = Min + ((Max - Min) * pow(index, Gamma))
The resulting values are converted to a machine specific format and loaded into hardware.

Returns an error code.

58.10.40 SetRotation(angle as Integer) as Integer

MBS MacCG Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Rescans the bus of displays and changes the rotation of the display.
Example:

```
Var d as CGDisplayMBS = CGDisplayMBS.MainDisplay
Var e as Integer = d.SetRotation(90)
```

```
if e<>0 then
MessageBox "Error: "+str(e)
end if
```

Notes: Returns IOKit error code. Zero means success.

Lasterror is set.

58.10.41 SetStereoOperation(stereo as boolean, forceBlueLine as boolean, option as Integer) as Integer

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Immediately enable or disable stereo operation for a display.
Notes: Note that the system normally detects the presence of a stereo window, and will automatically switch a display containing a stereo window to stereo operation. This function provides a mechanism to force a display to stereo operation, and to set options (such as blue line sync signal) when in stereo operation.

When in stereo operation, a display may need to generate a special stereo sync signal as part of the video output. The sync signal consists of a blue line which occupies the first 25% of the last scanline for the left eye view, and the first 75% of the last scanline for the right eye view. The remainder of the scanline is black. To force the display to generate this sync signal, pass true for forceBlueLine; otherwise, pass false.

Lasterror is set to kCGErrorSuccess on success, or kCGErrorRangeCheck if the display does not support the stereo operation settings requested.

On success, the display resolution, mirroring mode, and available display modes may change due to hardware-specific capabilities and limitations. You should check these settings to verify that they are appropriate for your application.

Lasterror is set.

58.10.42 ShieldingWindowID as UInt32

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Returns window ID of the shield window for the captured display, or 0 if the display is not not shielded.

58.10.43 ShieldingWindowLevel as Int32

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Returns the window level of the shield window for the captured display.

58.10.44 ShowCursor as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Shows the mouse cursor.
Notes: Returns an error code.
Increments hide cursor count.

58.10.45 SwitchToMode(Mode as Dictionary) as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Switch display mode.
Notes: Note that after switching, display parameters and addresses may change.
The selected display mode persists for the life of the program, and automatically reverts to the permanent setting made by Preferences when the program terminates.
The mode dictionary passed in must be a dictionary vended by other CGDirectDisplay APIs such as BestModeForParameters() and AvailableModes().
Returns an error code.

58.10.46 WaitForBeamPositionOutsideLines(upperScanLine as UInt32, lowerScanLine as UInt32) as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Wait until the beam position is outside the range specified.
Notes: Wait until the beam position is outside the range specified by upperScanLine and lowerScanLine.
Note that if upperScanLine and lowerScanLine encompass the entire display height, the function returns an error.
lowerScanLine must be greater than or equal to upperScanLine.

Some display systems may not conventional video vertical and horizontal sweep in painting.
These displays report a kCGDisplayRefreshRate of 0 in the CFDictionaryRef returned by CurrentMode().
On such displays, this function returns at once.

Some drivers may not implement support for this mechanism.

On such displays, this function returns at once.

Returns CGDisplayNoErr on success, and an error if display or upperScanLine and lowerScanLine are invalid.

The app should set the values of upperScanLine and lowerScanLine to allow enough lead time for the drawing operation to complete. A common strategy is to wait for the beam to pass the bottom of the drawing area, allowing almost a full vertical sweep period to perform drawing.

To do this, set upperScanLine to 0, and set lowerScanLine to the bottom of the bounding box:
lowerScanLine = (CGBeamPosition)(cgrect.origin.y + cgrect.size.height);

IOKit may implement this as a spin-loop on the beam position call used for BeamPosition().
On such system the function is CPU bound, and subject to all the usual scheduling pre-emption.
In particular, attempting to wait for the beam to hit a specific scanline may be an exercise in frustration.

These functions are advisary in nature, and depend on IOKit and hardware specific drivers to implement support. If you need extremely precise timing, or access to vertical blanking interrupts, you should consider writing a device driver to tie into hardware-specific capabilities.

Returns an error code.

58.10.47 Properties

58.10.48 BeamPosition as UInt32

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Returns the current beam position on the display.
Example:

```
Var d as new CGDisplayMBS // pick main display

MessageBox str(d.BeamPosition)
```

Notes: If display is invalid, or the display does not implement conventional video vertical and horizontal sweep in painting, or the driver does not implement this functionality, 0 is returned.
(Read only property)

58.10.49 Bounds as CGRectMBS

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Return screen size and origin in global coords.
Notes: Empty rect or nil if display is invalid.
(Read only property)

58.10.50 Brightness as Double

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: Get/Set brightness of display.
Notes: Returns -1 if not supported.
Lasterror is set.
(Read and Write property)

58.10.51 CanSetPalette as boolean

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Returns true if the current display mode supports palettes.
Example:

```
Var d as new CGDisplayMBS // pick main display

MessageBox str(d.CanSetPalette)
```

Notes: (Read only property)

58.10.52 ColorSpace as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns the color space for a display.
Example:

```
Var d as new CGDisplayMBS // pick main display

MessageBox str(d.ColorSpace.Model) // typical 1 = CGColorSpaceMBS.kCGColorSpaceModelRGB
```

Notes: This function returns a display-dependent ICC-based color space. You can use this function when rendering content for a specific display in order to produce color-matched output for that display.

Available in Mac OS X v10.5 and later.
(Read only property)

58.10.53 CurrentMode as Dictionary

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Return a Dictionary describing the current display mode.
Example:

```
Var d as CGDisplayMBS = CGDisplayMBS.MainDisplay
Var dic as Dictionary = d.CurrentMode

MessageBox dic.Value(d.kCGDisplayWidth)+" x "+dic.Value(d.kCGDisplayHeight)
```

Notes: Returns nil on any error.
(Read only property)

58.10.54 DisplayMode as CGDisplayModeMBS

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return the current mode of the specified display.
Example:

```
Var d as CGDisplayMBS = CGDisplayMBS.MainDisplay
MessageBox str(d.DisplayMode.Width)+" x "+str(d.DisplayMode.Height)
```

Notes: Returns nil on any error.
Requires Mac OS X 10.6
(Read only property)

58.10.55 DisplayProductNames as Dictionary

MBS MacCG Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: Queries product names for display in all available languages.
Example:

```
Var display as CGDisplayMBS = CGDisplayMBS.MainDisplay
Var names as Dictionary = display.DisplayProductNames
```

```
MessageBox names.Lookup("en_US", "?")
```

Notes: (Read only property)

58.10.56 Handle as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: The handle to the current display.
Notes: Internally: The DisplayID.
0 is the main display (to keep it easier).
(Read only property)

58.10.57 IOServicePort as Integer

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return the IOKit service port of a display.
Notes: (Read only property)

58.10.58 IsActive as boolean

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether a display is active.
Example:

```
Var d as new CGDisplayMBS // pick main display

MessageBox str(d.IsActive)
```

Notes: If true, the specified display is active; otherwise, false.

An active display is connected, awake, and available for drawing. In a hardware mirroring set, only the primary display is active.
(Read only property)

58.10.59 IsAlwaysInMirrorSet as boolean

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether a display is always in a mirroring set.
Example:

```
Var d as new CGDisplayMBS // pick main display

MessageBox str(d.IsAlwaysInMirrorSet)
```

Notes: If true, the specified display is in a mirroring set and cannot be removed from this set.

Some hardware configurations support the connection of auxiliary displays that always mirror the main display, and therefore cannot be removed from the mirroring set to which they belong.
(Read only property)

58.10.60 IsAsleep as boolean

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether a display is sleeping (and is therefore not drawable.)
Example:

```
Var d as new CGDisplayMBS // pick main display

MessageBox str(d.IsAsleep)
```

Notes: If true, the specified display is in sleep mode; otherwise, false.

A display is sleeping when its frame buffer and the attached monitor are in reduced power mode. A sleeping display is still considered to be a part of global display (desktop) space, but it is not drawable.
(Read only property)

58.10.61 IsBuiltin as boolean

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether a display is built-in, such as the internal display in portable systems.
Example:

```
Var d as new CGDisplayMBS // pick main display
```

MessageBox str(d.IsBuiltin)

Notes: If true, the specified display is considered to be a built-in display; otherwise, false.

Portable systems typically identify the internal LCD panel as a built-in display.

Note that it is possible and reasonable for a system to have no displays marked as built-in. For example, a portable system running with the lid closed may report no built-in displays.
(Read only property)

58.10.62 IsInHWMirrorSet as boolean

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether a display is in a hardware mirroring set.
Example:

Var d as new CGDisplayMBS // pick main display

MessageBox str(d.IsInHWMirrorSet)

Notes: If true, the specified display is a member of a hardware mirroring set; otherwise, false.

When hardware mirroring is enabled, the contents of a double frame buffer are rendered in all displays in the hardware mirroring set.
(Read only property)

58.10.63 IsInMirrorSet as boolean

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether a display is in a mirroring set.
Example:

Var d as new CGDisplayMBS // pick main display

MessageBox str(d.IsInMirrorSet)

Notes: (Read only property)

58.10.64 IsMain as boolean

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether a display is the main display.
Example:

```
Var d as new CGDisplayMBS // pick main display

MessageBox str(d.IsMain)
```

Notes: If true, the specified display is currently the main display; otherwise, false.
(Read only property)

58.10.65 IsOnline as boolean

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether a display is connected or online.
Example:

```
Var d as new CGDisplayMBS // pick main display

MessageBox str(d.IsOnline)
```

Notes: Returns true if the specified display is connected; otherwise, false.

A display is considered connected or online when the frame buffer hardware is connected to a monitor.

You can use this function to determine if someone has hot-plugged a display to the system. Note that hot-plugging is a hardware feature that may not be present on all displays.
(Read only property)

58.10.66 IsStereo as boolean

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether a display is running in a stereo graphics mode.
Example:

```
Var d as new CGDisplayMBS // pick main display

MessageBox str(d.IsStereo)
```

Notes: If true, the specified display is running in a stereo graphics mode; otherwise, false.

Available in Mac OS X v10.4 and later.
(Read only property)

58.10.67 LastError as Integer

MBS MacCG Plugin, Plugin Version: 15.4, Platform: macOS, Targets: Desktop only.

Function: The last error code.
Notes: Only set for a few properties like brightness where we do have an error code.
(Read only property)

58.10.68 MirrorsDisplay as CGDisplayMBS

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: For a secondary display in a mirroring set, returns the primary display.
Notes: Returns the primary display in the mirroring set. Returns kCGNullDirectDisplay if the specified display is actually the primary display or is not in a mirroring set.
(Read only property)

58.10.69 ModelNumber as Integer

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns the model number of a display monitor.
Example:

```
Var d as new CGDisplayMBS // pick main display

MessageBox str(d.ModelNumber)
```

Notes: A model number for the monitor associated with the specified display, or a constant to indicate an exception—see the discussion below.

This function uses I/O Kit to identify the monitor associated with the specified display. The return value depends on the following:

If I/O Kit can identify the monitor, the product ID code for the monitor is returned.
If I/O Kit can't identify the monitor, kDisplayProductIDGeneric is returned.

If no monitor is connected, a value of 0xFFFFFFFF is returned.
(Read only property)

58.10.70 PixelsHigh as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Height of the display in pixels.
Notes: Var d as new CGDisplayMBS // pick main display

MessageBox str(D.PixelsHigh)
(Read only property)

58.10.71 PixelsWide as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Width of the display in pixels.
Example:

```
Var d as new CGDisplayMBS // pick main display

MessageBox str(D.PixelsWide)
```

Notes: (Read only property)

58.10.72 PrimaryDisplay as CGDisplayMBS

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns the primary display in a hardware mirroring set.
Notes: The primary display in the mirror set. If display is not hardware-mirrored, this function simply returns display.

In hardware mirroring, the contents of a double frame buffer are rendered in two or more displays simultaneously. The mirrored displays are said to be in a hardware mirroring set.

At the discretion of the device driver, one of the displays in a hardware mirroring set is designated as the primary display. The device driver binds the drawing engine, hardware accelerator, and 3D engine to the primary display, and directs all drawing operations to this display.
(Read only property)

58.10.73 RefreshRate as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Queries refresh rate in Hz for this display.
Example:

```
Var m as CGDisplayMBS = CGDisplayMBS.MainDisplay
MessageBox str(m.RefreshRate)+" Hz"
```

Notes: Returns 60 for LCD displays.
(Read only property)

58.10.74 Rotation as Double

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns the rotation angle of a display in degrees.
Example:

```
Var d as new CGDisplayMBS // pick main display

MessageBox str(d.Rotation)
```

Notes: The rotation angle of the display in degrees, or 0 if the display is not valid.

This function returns the rotation angle of a display in a clockwise direction. For example, if the specified display is rotated clockwise 90 degrees then this function returns 90.0. After a 90 degree clockwise rotation, the physical bottom of the display is on the left side and the physical top is on the right side.

Available in Mac OS X v10.5 and later.
(Read only property)

58.10.75 ScreenSizeHeight as Double

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns the height of a display in millimeters.
Example:

```
Var c as new CGDisplayMBS
Var lines(-1) as string

Var DPIWidth as Double = c.PixelsWide/(c.ScreenSizeWidth/10.0/2.54)
```

```
Var DPIHeight as Double = c.PixelsHigh/(c.ScreenSizeHeight/10.0/2.54)

lines.Add str(c.ScreenSizeWidth)+" x "+str(c.ScreenSizeHeight)+" Millimeter with"
lines.Add str(c.PixelsWide)+" x "+str(c.PixelsHigh)+" Pixel is"
lines.Add str(DPIWidth)+" x "+str(DPIHeight)+" DPI"

MessageBox Join(lines,EndOfLine)
```

Notes: If Extended Display Identification Data (EDID) for the display device is not available, the size is estimated based on the device width and height in pixels from CGDisplayBounds, with an assumed resolution of 2.835 pixels/mm or 72 DPI, a reasonable guess for displays predating EDID support.
(Read only property)

58.10.76 ScreenSizeWidth as Double

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns the width of a display in millimeters.
Example:

```
Var d as new CGDisplayMBS // pick main display

MessageBox str(d.ScreenSizeHeight) // for example 400 on a 30" Apple Display
MessageBox str(d.ScreenSizeWidth) // for example 640 on a 30" Apple Display
```

Notes: If Extended Display Identification Data (EDID) for the display device is not available, the size is estimated based on the device width and height in pixels from CGDisplayBounds, with an assumed resolution of 2.835 pixels/mm or 72 DPI, a reasonable guess for displays predating EDID support.
(Read only property)

58.10.77 SerialNumber as Integer

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns the serial number of a display monitor.
Example:

```
Var d as new CGDisplayMBS // pick main display

MessageBox str(D.SerialNumber)
```

Notes: Returns the serial number for the monitor associated with the specified display, or a constant to indicate an exception—see the discussion below.

This function uses I/O Kit to identify the monitor associated with the specified display.

If I/O Kit can identify the monitor:

If the manufacturer has encoded a serial number for the monitor, the number is returned.
If there is no encoded serial number, 0x00000000 is returned.

If I/O Kit cannot identify the monitor:

If a monitor is connected to the display, 0x00000000 is returned.
If no monitor is connected to the display hardware, a value of 0xFFFFFFFF is returned.

Note that a serial number is meaningful only in conjunction with a specific vendor and product or model.
(Read only property)

58.10.78 UnitNumber as Integer

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns the logical unit number of a display.
Example:

```
Var d as new CGDisplayMBS // pick main display

MessageBox str(D.UnitNumber)
```

Notes: A logical unit number for the specified display.

The logical unit number represents a particular node in the I/O Kit device tree associated with the display's frame buffer. For a particular hardware configuration, this value will not change when the attached monitor is changed.

The unit number will change if the I/O Kit device tree changes, as when hardware is reconfigured, drivers are replaced, or significant changes occur to I/O Kit, so it should not be assumed to be invariant across login sessions.

For more information about I/O Kit, see the Apple publication "I/O Kit Fundamentals".
(Read only property)

58.10.79 UsesOpenGLAcceleration as boolean

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether Quartz is using OpenGL-based window acceleration (Quartz Extreme) to render in a display.
Example:

```
Var d as new CGDisplayMBS // pick main display

MessageBox str(D.UsesOpenGLAcceleration)
```

Notes: Return value: If true, Quartz Extreme is used to render in the specified display; otherwise, false.

Quartz Extreme is an OpenGL-based, hardware-accelerated window compositor available in Mac OS X version 10.2 and later. Quartz Extreme requires a minimum hardware configuration to operate.

The information this function provides is typically used to adjust the demands of drawing operations to the capabilities of the display hardware. For example, an application running on an unaccelerated system could disable live window-resizing.
(Read only property)

58.10.80 VendorNumber as Integer

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns the vendor number of the specified display's monitor.
Example:

```
Var d as new CGDisplayMBS // pick main display

MessageBox str(D.VendorNumber)
// 1552 seems to be Apple
```

Notes: A vendor number for the monitor associated with the specified display, or a constant to indicate an exception—see the discussion below.

This function uses I/O Kit to identify the monitor associated with the specified display.

There are three cases:

If I/O Kit can identify the monitor, the vendor ID is returned.
If I/O Kit cannot identify the monitor, kDisplayVendorIDUnknown is returned.

If there is no monitor associated with the display, 0xFFFFFFFF is returned.
(Read only property)

58.10.81 Constants

Capture option flags.

Constant	Value	Description
kCGCaptureNoFill	1	Disables fill with black on capture.
kCGCaptureNoOptions	0	Default behavior.

Keys for mode dictionary

Constant	Value	Description
kCGDisplayBitsPerPixel	"BitsPerPixel"	The number of bits per pixel. The value for this key is a number in
kCGDisplayBitsPerSample	"BitsPerSample"	The number of bits per sample. The value for this key is a number in
kCGDisplayBytesPerRow	"kCGDisplayBytesPerRow"	
kCGDisplayHeight	"Height"	The display height. The value for this key is a number in
kCGDisplayIOFlags	"IOFlags"	The value for this key is a number in
kCGDisplayMode	"Mode"	The value for this key is a number in
kCGDisplayModeIsInterlaced	"kCGDisplayModeIsInterlaced"	This key reflects interesting bits of th
kCGDisplayModeIsSafeForHardware	"kCGDisplayModeIsSafeForHardware"	Set if display mode doesn't need a co
kCGDisplayModeIsStretched	"kCGDisplayModeIsStretched"	This key reflects interesting bits of th
kCGDisplayModeIsTelevisionOutput	"kCGDisplayModeIsTelevisionOutput"	This key reflects interesting bits of th
kCGDisplayModeUsableForDesktopGUI	"UsableForDesktopGUI"	Whether this display can be used for The value for this key is a boolean in
kCGDisplayRefreshRate	"RefreshRate"	The refresh rate. The value for this key is a number in
kCGDisplaySamplesPerPixel	"SamplesPerPixel"	The number of samples per pixel. The value for this key is a number in
kCGDisplayWidth	"Width"	The width of the display. The value for this key is a number in
kCGIODisplayModeID	"IODisplayModeID"	

Keys for options dictionary

Constant	Value	Description
kCGDisplayShowDuplicateLowResolutionModes	"kCGDisplayResolution"	Pass to AllDisplayModes with boolean to in low resolution modes.

58.10.82 Delegates

58.10.83 CreateImageAsyncDelegateMBS(img as CGImageMBS, JPEGData as MemoryBlock, Tag as Variant)

MBS MacCG Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

Function: The delegate for CreateImageAsync method.

58.11 class CGDisplayModeMBS

58.11.1 class CGDisplayModeMBS

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: The class for a display mode.
Example:

```
// list the display modes of the main display and show the current one
Var display As CGDisplayMBS = CGDisplayMBS.MainDisplay
Var current As CGDisplayModeMBS = display.DisplayMode
Var lines() As String
lines.Add "Current: " + current.Width.ToString + " x " + current.Height.ToString + " (" + current.Pixel-
Width.ToString + " x " + current.PixelHeight.ToString + " pixels)"

For Each mode As CGDisplayModeMBS In display.AllDisplayModes
If mode.IsUsableForDesktopGUI Then
lines.Add mode.Width.ToString + " x " + mode.Height.ToString + " @ " + Format(mode.RefreshRate, "0")
+ " Hz"
End If
Next
MessageBox String.FromArray(lines, EndOfLine)
```

Notes: Requires Mac OS X 10.6
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Real Studio Plugins, version 11.1pr8

58.11.2 Methods

58.11.3 Constructor

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

58.11.4 Properties

58.11.5 Handle as Integer

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read only property)

58.11.6 Height as Integer

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return the height in pixels of the specified display mode.
Example:

```
Var display as CGDisplayMBS = CGDisplayMBS.MainDisplay
Var mode as CGDisplayModeMBS = Display.DisplayMode

MessageBox str(mode.Height)+" Pixel"
```

Notes: Call CGDisplayModeGetHeight function.
(Read only property)

58.11.7 IODisplayModeID as Int32

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return the IOKit display mode ID of the specified display mode.
Notes: Call CGDisplayModeGetIODisplayModeID function.
(Read only property)

58.11.8 IOFlags as UInt32

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return the IOKit flags of the specified display mode.
Example:

```
Var display as CGDisplayMBS = CGDisplayMBS.MainDisplay
Var mode as CGDisplayModeMBS = Display.DisplayMode
```

MessageBox str(mode.IOFlags)

Notes: Call CGDisplayModeGetIOFlags function.
(Read only property)

58.11.9 IsUsableForDesktopGUI as boolean

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return true if the specified mode is usable for displaying the desktop GUI; false otherwise.
Notes: Call CGDisplayModeIsUsableForDesktopGUI function.
(Read only property)

58.11.10 PixelEncoding as string

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return a string representing the pixel encoding of the specified display mode, expressed as a CFString containing an IOKit graphics mode.
Example:

```
Var display as CGDisplayMBS = CGDisplayMBS.MainDisplay
Var mode as CGDisplayModeMBS = Display.DisplayMode

MessageBox mode.PixelEncoding // shows e.g. ---RRRRRRRRGGGGGGGGBBBBBBBB
```

Notes: Call CGDisplayModeCopyPixelEncoding function.
(Read only property)

58.11.11 PixelHeight as Integer

MBS MacCG Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Return the height in pixels of the specified display mode.
Notes: Call CGDisplayModeGetPixelHeight function.
(Read only property)

58.11.12 PixelWidth as Integer

MBS MacCG Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Return the width in pixels of the specified display mode.
Notes: Call CGDisplayModeGetPixelWidth function.
(Read only property)

58.11.13 RefreshRate as Double

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return the refresh rate of the specified display mode.
Example:

```
Var display as CGDisplayMBS = CGDisplayMBS.MainDisplay
Var mode as CGDisplayModeMBS = Display.DisplayMode

MessageBox str(mode.RefreshRate)
```

Notes: Call CGDisplayModeGetRefreshRate function.
(Read only property)

58.11.14 Width as Integer

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return the width in pixels of the specified display mode.
Example:

```
Var display as CGDisplayMBS = CGDisplayMBS.MainDisplay
Var mode as CGDisplayModeMBS = Display.DisplayMode

MessageBox str(mode.Width)+" Pixel"
```

Notes: Call CGDisplayModeGetWidth function.
(Read only property)

58.12 class CGDisplayReconfigurationEventMBS

58.12.1 class CGDisplayReconfigurationEventMBS

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: The class to listen for display configuration changes.
Notes: In constructor the plugin registers for the event and in destructor unregisters. So keep the object reference alive to receive events.

events are invoked when the app is listening for events, on the event processing thread, or from within the display reconfiguration function when in the program that is driving the reconfiguration.

events should avoid changing display configurations, and should not raise exceptions or perform a non-local return such as calling longjmp.

Before display reconfiguration, a event fires to inform applications of a configuration change. The event runs once for each on-line display. The flag is set to kCGDisplayBeginConfigurationFlag. This event does not carry other per-display information, as details of how a reconfiguration affects a particular device rely on device-specific behaviors which may not be exposed by a device driver.

After display reconfiguration, at the time the event function is invoked, all display state reported by CoreGraphics, QuickDraw, and the Carbon Display Manager API will be up to date. This event runs after the Carbon Display Manager notification events. The event runs once for each added, removed, and currently on-line display. Note that in the case of removed displays, calls into the CoreGraphics API with the removed display ID will fail.

58.12.2 Events

58.12.3 DisplayReconfiguration(DisplayID as Integer, flags as Integer)

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: This event is invoked whenever the configuration of a local display is changed.

58.12.4 Constants

Possible Flag Values

Constant	Value	Description
kCGDisplayAddFlag	16	Display Added
kCGDisplayBeginConfigurationFlag	1	Begin Configuration for display.
kCGDisplayDesktopShapeChangedFlag	4096	Desktop Shape Changed.
kCGDisplayDisabledFlag	512	Display disabled.
kCGDisplayEnabledFlag	256	Display enabled.
kCGDisplayMirrorFlag	1024	Mirror enabled
kCGDisplayMovedFlag	2	Display Moved
kCGDisplayRemoveFlag	32	Display Removed
kCGDisplaySetMainFlag	4	Set Main
kCGDisplaySetModeFlag	8	Set Mode
kCGDisplayUnMirrorFlag	2048	Mirror disabled

58.13 class CGDisplayStreamEventMBS

58.13.1 class CGDisplayStreamEventMBS

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: CGDisplayStreamEventMBS provides a streaming API for capturing display updates in a real-time manner.
Notes: It can also provide scaling and color space conversion services, as well as allow capturing sub regions of the display.
Requires OS X 10.8.

58.13.2 Methods

58.13.3 Constructor(DisplayHandle as Integer, outputWidth as Integer, outputHeight as Integer, pixelFormat as Integer = 0, properties as dictionary = nil)

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new CGDisplayStream.
Notes: This function creates a new CGDisplayStream that is to be used to get a stream of frame updates from a particular display.

DisplayHandle: The CGDirectDisplayID to use as the source for generated frames. (Handle from CGDisplayMBS class)
outputWidth: The output width (in pixels, not points) of the frames to be generated. Must not be zero.
outputWidth: The output height (in pixels, not points) of the frames to be generated. Must not be zero.
pixelFormat: The desired CoreVideo/CoreMedia-style pixel format of the output IOSurfaces. If 0 the plugin will use RGBA.
properties: Any optional properties of the CGDisplayStream.

58.13.4 kCGDisplayStreamColorSpace as String

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the properties dictionary.
Notes: Set the desired CGColorSpace of the output frames.
By default the color space will be that of the display.

58.13.5 kCGDisplayStreamDestinationRect as String

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the properties dictionary.
Notes: This may be used to request where within the destination buffer the display updates should be placed. Use CGRectCreateDictionaryRepresentation to convert from a CGRect to the value used here.
Note: The coordinate system for the destination rectangle is always specified in output pixels to match the fact that the output buffer size is also specified in terms of pixels.
Defaults to entire buffer

58.13.6 kCGDisplayStreamMinimumFrameTime as String

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the properties dictionary.
Notes: Request that the delta between frame updates be at least as much specified by this value.
Number in seconds, defaults to zero.

58.13.7 kCGDisplayStreamPreserveAspectRatio as String

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the properties dictionary.
Notes: Enable/disable the work the Window Server will do to preserve the display aspect ratio. By default the Window Server will assume that it should preserve the original aspect ratio of the source display rect. If the aspect ratio of the source display and the display stream destination rect are not the same, black borders will be inserted at the top/bottom or right/left sides of the destination in order to preserve the source aspect ratio.
Boolean - defaults to true

58.13.8 kCGDisplayStreamQueueDepth as String

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the properties dictionary.
Notes: Controls how many frames deep the frame queue will be.
Defaults to 3.

58.13.9 kCGDisplayStreamShowCursor as String

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Controls whether the cursor is embedded within the provided buffers or not.

58.13.10 kCGDisplayStreamSourceRect as String

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the properties dictionary.
Notes: This may be used to request a subregion of the display to be provided as the source of the display stream. Use CGRectCreateDictionaryRepresentation to convert from a CGRect to the value used here. N
Note: The coordinate system for the source rectangle is specified in display logical coordinates and not in pixels, in order to match the normal convention on HiDPI displays.
Defaults to entire display.

58.13.11 kCGDisplayStreamYCbCrMatrix as String

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the properties dictionary.
Notes: When outputting frames in 420v or 420f format, this key may be used to control which YCbCr matrix is used
The value should be one of the three kCGDisplayStreamYCbCrMatrix values specified below:
kCGDisplayStreamYCbCrMatrix_SMPTE_240M_1995
kCGDisplayStreamYCbCrMatrix_ITU_R_709_2
kCGDisplayStreamYCbCrMatrix_ITU_R_601_4

58.13.12 kCGDisplayStreamYCbCrMatrix_ITU_R_601_4 as String

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: A possible value for kCGDisplayStreamYCbCrMatrix key.

58.13.13 kCGDisplayStreamYCbCrMatrix_ITU_R_709_2 as String

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: A possible value for kCGDisplayStreamYCbCrMatrix key.

58.13.14 kCGDisplayStreamYCbCrMatrix_SMPTE_240M_1995 as String

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: A possible value for kCGDisplayStreamYCbCrMatrix key.

58.13.15 Start

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Begin delivering frame updates to the event.

58.13.16 Stop

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: End delivery of frame updates.
Notes: After this call returns, the CGDisplayStream callback function will eventually be called with a status of StatusStopped. After that point it is safe to release the object.
It is safe to call this function from within the event, but the previous caveat still applies.

58.13.17 Properties

58.13.18 Handle as Integer

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

58.13.19 Lasterror as Integer

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The lasterror code.
Notes: (Read only property)

58.13.20 Events

58.13.21 FrameAvailable(Status as Integer, displayTime as UInt64, frameSurfaceHandle as Integer, Update as CGDisplayStreamUpdateMBS)

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: A new frame is available.
Notes: The event used for new frame delivery by CGDisplayStream objects

For each frame that is generated by the WindowServer for a particular display, the user provided event is invoked and provides the user with an IOSurface handle (inside update object), that contains the pixel data for the new frame, as well as a CGDisplayStreamUpdateMBS that contains all of the metadata associated with that IOSurface.

frameSurfaceHandle: The IOSurfaceRef for the current frame. May be zero/nil in some cases. The plugin retains it as part of Update object to keeps it alive.
displayTime: The mach absolute time of when the corresponding frame was to be displayed by the WindowServer
Update: The CGDisplayStreamUpdateMBS for the current frame. will be nil in cases when status is not kCGDisplayStreamFrameStatusFrameComplete.

58.13.22 Constants

Frame Status

Constant	Value	Description
StatusFrameBlank	2	As of displayTime, the display is has gone blank
StatusFrameComplete	0	A new frame has been generated by the Window Server for a particular display at time displayTime.
StatusFrameIdle	1	The Window Server did not generate a new frame for displayTime
StatusStopped	3	The display stream has stopped and no more calls will be made to the handler until the stream is started.

58.14 class CGDisplayStreamUpdateMBS

58.14.1 class CGDisplayStreamUpdateMBS

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: A single frame's extra metadata that describes useful frame delta information.
Notes: A CGDisplayStreamUpdate encapsulates information about what portions of a frame have changed relative to a previously delivered frame. This includes regions that were changed in any way, which ones were actually redrawn, and which regions were merely copied from one place to another.

58.14.2 Methods

58.14.3 getRects(type as Integer) as CGRectMBS()

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of CGRectMBS that describe what parts of the frame have changed relative to the previously delivered frame.
Notes: This rectangle list encapsulates both the update rectangles and movement rectangles.

58.14.4 Properties

58.14.5 CIImage as Variant

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries the IOSurface with frame as CIImageMBS.
Notes: Value is a CIImageMBS. We use variant to reduce dependency to other plugins.
(Read only property)

58.14.6 DeltaX as Double

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The x component of the movement delta.
Notes: (Read only property)

58.14.7 DeltaY as Double

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The y component of the movement delta.
Notes: (Read only property)

58.14.8 DropCount as Integer

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Return how many frames (if any) have been dropped since the last call to the event.
Notes: This call is primarily useful for performance measurement to determine if the client is keeping up with all WindowServer updates.
(Read only property)

58.14.9 Handle as Integer

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

58.14.10 IOSurfaceHandle as Integer

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference for the IOSurface.
Notes: (Read only property)

58.14.11 Constants

Rectangle Selectors

Constant	Value	Description
UpdateDirtyRects	2	The union of both refreshed and moved rects.
UpdateMovedRects	1	The rectangles that were simply moved from one part of the display to another
UpdateReducedDirtyRects	3	A possibly simplified (but overstated) array of dirty rectangles.
UpdateRefreshedRects	0	The rectangles that were refreshed on the display, not counting moved rectangles

58.15 class CGDisplayTransferFormulaMBS

58.15.1 class CGDisplayTransferFormulaMBS

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: A class for a transfer formula.

58.15.2 Properties

58.15.3 BlueGamma as Double

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: The blue gamma value.
Notes: (Read and Write property)

58.15.4 BlueMax as Double

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: The maximum blue value.
Notes: (Read and Write property)

58.15.5 BlueMin as Double

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: The minimum blue value.
Notes: (Read and Write property)

58.15.6 GreenGamma as Double

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: The green gamma value.
Notes: (Read and Write property)

58.15.7 GreenMax as Double

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: The maximum green value.
Notes: (Read and Write property)

58.15.8 GreenMin as Double

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: The minimum green value.
Notes: (Read and Write property)

58.15.9 RedGamma as Double

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: The red gamma value.
Notes: (Read and Write property)

58.15.10 RedMax as Double

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: The maximum red value.
Notes: (Read and Write property)

58.15.11 RedMin as Double

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: The minimum red value.
Notes: (Read and Write property)

58.16 class CGFontMBS

58.16.1 class CGFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CoreGraphics class for a font.
Example:

```
// show some metrics of a font
Var font As CGFontMBS = CGFontMBS.CreateWithFontName("Helvetica")
If font = Nil Then Return

MessageBox font.FullName + " (" + font.PostScriptName + ")" + EndOfLine + _
"Units per em: " + font.UnitsPerEm.ToString + EndOfLine + _
"Ascent: " + font.Ascent.ToString + ", Descent: " + font.Descent.ToString + EndOfLine + _
"Glyphs: " + font.NumberOfGlyphs.ToString
```

Notes: The CGFontRef opaque type encapsulates font information. A font is a set of shapes or glyphs associated with a character set. A glyph can represent a single character (such as ,Äòb,Äô), more than one character (such as the "Ô¨Å" ligature), or a special character such as a space. Quartz retrieves the glyphs for the font from ATS (Apple Type Services) and paints the glyphs based on the relevant parameters of the current graphics state.

Quartz provides a limited, low-level interface for drawing text. For information on text-drawing functions, see CGContext Reference. For full Unicode and text-layout support, use the services provided by Core Text or ATSUI).

58.16.2 Methods

58.16.3 CreateWithDataProvider(CGDataProvider as Variant) as CGFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a font object from data supplied from a data provider.
Notes: Dataprovider must be a CGDataProviderMBS object.

Returns the font object or nil if the font can't be created.

Before drawing text in a Quartz context, you must set the font in the current graphics state by calling the function CGContextMBS.SetFontSize.

58.16.4 CreateWithFontName(name as string) as CGFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a font object corresponding to the font specified by a PostScript or full name.
Example:

```
Var c as CGFontMBS = CGFontMBS.CreateWithFontName("Courier")
MessageBox c.FullName
```

Notes: Returns the font object or nil if the font can't be created.
Before drawing text in a Quartz context, you must set the font in the current graphics state by calling the function CGContextMBS.SetFont.

58.16.5 CreateWithPlatformFont(ATSFontHandle as Integer) as CGFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a new font reference from an ATSFontRef.
Notes: Create a CGFont using platformFontReference, a handle to a platform-specific font reference.
For MacOS X, platformFontReference should be a handle to an ATSFontRef.

58.16.6 Properties

58.16.7 Ascent as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the ascent of a font.
Example:

```
Var c as CGFontMBS = CGFontMBS.CreateWithFontName("Times")
MessageBox str(c.Ascent)
```

Notes: The ascent is the maximum distance above the baseline of glyphs in a font. The value is specified in glyph space units.

(Read only property)

58.16.8 CapHeight as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the cap height of a font.
Example:

```
Var c as CGFontMBS = CGFontMBS.CreateWithFontName("Times")
MessageBox str(c.CapHeight)
```

Notes: The cap height is the distance above the baseline of the top of flat capital letters of glyphs in a font. The value is specified in glyph space units.
(Read only property)

58.16.9 Descent as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the descent of a font.
Example:

```
Var c as CGFontMBS = CGFontMBS.CreateWithFontName("Times")
MessageBox str(c.Descent)
```

Notes: The descent is the maximum distance below the baseline of glyphs in a font. The value is specified in glyph space units.
(Read only property)

58.16.10 FontBBox as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the bounding box of a font.
Example:

```
Var c as CGFontMBS = CGFontMBS.CreateWithFontName("Times")
Var r as CGRectMBS = c.FontBBox
MessageBox str(r.Width)+" "+str(r.Height)
```

Notes: The font bounding box is the union of all of the bounding boxes for all the glyphs in a font. The

value is specified in glyph space units.
(Read only property)

58.16.11 FullName as String

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the full name associated with a font object.
Example:

```
Var c as CGFontMBS = CGFontMBS.CreateWithFontName("Courier")
MessageBox c.FullName
```

Notes: (Read only property)

58.16.12 Handle as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

58.16.13 ItalicAngle as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the italic angle of a font.
Example:

```
Var c as CGFontMBS = CGFontMBS.CreateWithFontName("Times")
MessageBox str(c.ItalicAngle)
```

Notes: The italic angle of the font, measured in degrees counter-clockwise from the vertical.
(Read only property)

58.16.14 Leading as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the leading of a font.
Example:

```
Var c as CGFontMBS = CGFontMBS.CreateWithFontName("Times")
MessageBox str(c.Leading)
```

Notes: The leading is the spacing between consecutive lines of text in a font. The value is specified in glyph space units.
(Read only property)

58.16.15 NumberOfGlyphs as UInt64

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the number of glyphs in a font.
Example:

```
Var c as CGFontMBS = CGFontMBS.CreateWithFontName("Times")
MessageBox str(c.NumberOfGlyphs)
```

Notes: (Read only property)

58.16.16 PostScriptName as String

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Obtains the PostScript name of a font.
Example:

```
Var c as CGFontMBS = CGFontMBS.CreateWithFontName("Courier")
MessageBox c.PostScriptName
```

Notes: (Read only property)

58.16.17 StemV as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the thickness of the dominant vertical stems of glyphs in a font.
Example:

```
Var c as CGFontMBS = CGFontMBS.CreateWithFontName("Times")
MessageBox str(c.StemV)
```

Notes: The thickness of the dominant vertical stems of glyphs in a font.

(Read only property)

58.16.18 UnitsPerEm as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the number of glyph space units per em for the provided font.
Example:

```
Var c as CGFontMBS = CGFontMBS.CreateWithFontName("Times")
MessageBox str(c.UnitsPerEm)
```

Notes: The number of glyph space units per em for the provided font.
(Read only property)

58.16.19 XHeight as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the x-height of a font.
Example:

```
Var c as CGFontMBS = CGFontMBS.CreateWithFontName("Times")
MessageBox str(c.XHeight)
```

Notes: The x-height is the distance above the baseline of the top of flat, non-ascending lowercase letters (such as x) of glyphs in a font. The value is specified in glyph space units.
(Read only property)

58.16.20 Constants

Constants

Constant	Value	Description
kCGFontIndexInvalid	65535	An invalid font index (a value which never represents a valid glyph).
kCGFontIndexMax	65534	The maximum allowed value for font index.
kCGGlyphMax	65534	The maximum value for a glyph.

PostScript Formats

Constant	Value	Description
kCGFontPostScriptFormatType1	1	This is documented in Adobe Type 1 Font Format, which is available fro http://partners.adobe.com/.
kCGFontPostScriptFormatType3	3	This is documented in PostScript Language Reference, 3rd edition, which available from http://partners.adobe.com/.
kCGFontPostScriptFormatType42	42	This is documented in Adobe Technical Note 5012, The Type 42 Font Forma Specification, which is available from http://partners.adobe.com/.

58.17 class CGFunctionMBS

58.17.1 class CGFunctionMBS

MBS MacCG Plugin, Plugin Version: 6.2, Platform: macOS, Targets: All.

Function: CGFunction provides a general facility for defining and using callback functions that take an arbitrary number of floating-point input values, and pass back an arbitrary number of floating-point output values.
Blog Entries

- MBS Real Studio Plugins, version 13.1fc1

58.17.2 Methods

58.17.3 Create(domainDimension as Integer, domain as memoryblock, rangeDimension as Integer, range as memoryblock)

MBS MacCG Plugin, Plugin Version: 6.2, Platform: macOS, Targets: All.

Function: Creates a Quartz function.
Notes: Parameters

domainDimension: The number of inputs.
domain: An array of (2*domainDimension) floats used to specify the valid intervals of input values. For each k from 0 to (domainDimension - 1), domain [2*k] must be less than or equal to domain [2*k+1] , and the kth input value will be clipped to lie in the interval domain [2*k] ,â§ input [k] ,â§ domain [2*k+1] . If this parameter is nil, then the input values are not clipped.
rangeDimension: The number of outputs.
range: An array of (2*rangeDimension) floats that specifies the valid intervals of output values. For each k from 0 to (rangeDimension - 1), range [2*k] must be less than or equal to range [2*k+1] , and the kth output value will be clipped to lie in the interval range [2*k] ,â§ output [k] ,â§ range [2*k+1] . If this parameter is nil, then the output values are not clipped.

Returns the new Quartz function or nil on any error.

Available in Mac OS X version 10.2 and later.

58.17.4 Properties

58.17.5 Handle as Integer

MBS MacCG Plugin, Plugin Version: 6.2, Platform: macOS, Targets: All.

Function: Handle to the CGFunctionRef.
Notes: (Read and Write property)

58.17.6 Events

58.17.7 Evaluate(Input as memoryblock, Output as memoryblock)

MBS MacCG Plugin, Plugin Version: 6.2, Platform: macOS, Targets: All.

Function: Asks the CGFunction to calculate the values.
Notes: memoryblocks must be big enough.

58.18 class CGGradientMBS

58.18.1 class CGGradientMBS

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: A gradient defines a smooth transition between colors across an area.
Example:

```
// draw a linear gradient from red to blue into a picture
Var colorSpace As CGColorSpaceMBS = CGColorSpaceMBS.CreateDeviceRGB
// RGBA components for two colors
Var components() As Double = Array(1.0, 0.0, 0.0, 1.0, 0.0, 0.0, 1.0, 1.0)
Var gradient As CGGradientMBS = CGGradientMBS.CreateWithColorComponents(colorSpace, components)

Var pic As New Picture(300, 100)
Var ctx As CGBitmapContextMBS = CGBitmapContextMBS.CreateWithPicture(pic)
ctx.DrawLinearGradient(gradient, CGPointMBS.Make(0, 0), CGPointMBS.Make(300, 0), 0)

Var result As Picture = ctx.CreateImage.Picture
// show result in a Canvas or ImageViewer
```

Notes: The CGGradientMBS class, and the functions that operate on it, make creating and using radial and axial gradient fills an easy task. A CGGradient object has a color space, two or more colors, and a location for each color. The color space cannot be a pattern or indexed color space, otherwise it can be any Quartz color space (CGColorSpaceMBS).

Colors can be provided as component values (such as red, green, blue) or as Quartz color objects (CGColorMBS). In Quartz, component can vary from 0.0 to 1.0, designating the proportion of the component present in the color.

A location is a normalized value. When it comes time to paint the gradient, Quartz maps the normalized location values to the points in coordinate space that you provide.

If you want more precise control over gradients, or if your application runs in versions of Mac OS X that are earlier than v10.5, see CGShadingMBS.

Requires Mac OS X 10.5.

58.18.2 Methods

58.18.3 CreateWithColorComponents(colorSpace as CGColorSpaceMBS, components() as Double) as CGGradientMBS

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Creates a CGGradient object from a color space and the provided color components and locations.
Notes: space: The color space to use for the gradient. You cannot use a pattern or indexed color space.
components: The color components for each color that defines the gradient. The components should be in the color space specified by space. If you are unsure of the number of components, you can call the function CGColorSpaceMBS.NumberOfComponents.

The number of items in this array should be the product of count and the number of components in the color space. For example, if the color space is an RGBA color space and you want to use two colors in the gradient (one for a starting location and another for an ending location), then you need to provide 8 values in components—red, green, blue, and alpha values for the first color, followed by red, green, blue, and alpha values for the second color.

locations: Optional, The location for each color provided in components. Each location must be a CGFloat value in the range of 0 to 1, inclusive. If 0 and 1 are not in the locations array, Quartz uses the colors provided that are closest to 0 and 1 for those locations.

If locations is not passed, the first color in colors is assigned to location 0, the last color incolors is assigned to location 1, and intervening colors are assigned locations that are at equal intervals in between.

Available in Mac OS X v10.5 and later.

- 58.18.4 CreateWithColorComponents(colorSpace as CGColorSpaceMBS, components() as Double, locations() as Double) as CGGradientMBS 9582

58.18.4 CreateWithColorComponents(colorSpace as CGColorSpaceMBS, components() as Double, locations() as Double) as CGGradientMBS

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Creates a CGGradient object from a color space and the provided color components and locations.
Example:

```
// put into paint event of window
Var c as CGContextMBS
if TargetCocoa then
c = GetCurrentCGContextMBS
```

```
else
c = Window1.CGContextMBS
end if

Var locations() as Double = array(0.0, 0.6, 1.0)
Var components() as Double = array(1.0, 0.0, 0.0, 0.35, 0.0, 1.0, 0.0, 0.2, 0.0, 0.0, 1.0, 0.06) // Start color and End color

Var rgbColorspace as CGColorSpaceMBS = CGColorSpaceMBS.CreateDeviceRGB
Var glossGradient as CGGradientMBS = CGGradientMBS.CreateWithColorComponents(rgbColorspace, components, locations)
'dim glossGradient as CGGradientMBS = CGGradientMBS.CreateWithColorComponents(rgbColorspace, components)

Var currentBounds as CGRectMBS = CGMakeRectMBS(0,0,g.Width,g.Height)

Var topCenter as CGPointMBS = CGMakePointMBS(g.width/2, 0.0)
Var midCenter as CGPointMBS = CGMakePointMBS(g.width/2, g.height)

c.SaveGState

// fill white
c.SetRGBFillColor 1.0, 1.0, 1.0, 1.0
c.FillRect currentBounds

// draw gradient
c.AddRect(currentBounds)
c.Clip
c.DrawLinearGradient(glossGradient, topCenter, midCenter, 0)
c.RestoreGState
c.Flush
```

Notes: space: The color space to use for the gradient. You cannot use a pattern or indexed color space. components: The color components for each color that defines the gradient. The components should be in the color space specified by space. If you are unsure of the number of components, you can call the function CGColorSpaceMBS.NumberOfComponents.

The number of items in this array should be the product of count and the number of components in the color space. For example, if the color space is an RGBA color space and you want to use two colors in the gradient (one for a starting location and another for an ending location), then you need to provide 8 values in components—red, green, blue, and alpha values for the first color, followed by red, green, blue, and alpha values for the second color.

locations: Optional, The location for each color provided in components. Each location must be a CGFloat value in the range of 0 to 1, inclusive. If 0 and 1 are not in the locations array, Quartz uses the colors

provided that are closest to 0 and 1 for those locations.

If locations is not passed, the first color in colors is assigned to location 0, the last color incolors is assigned to location 1, and intervening colors are assigned locations that are at equal intervals in between.

Available in Mac OS X v10.5 and later.

- 58.18.3 CreateWithColorComponents(colorSpace as CGColorSpaceMBS, components() as Double) as CGGradientMBS 9582

58.18.5 CreateWithColors(colorSpace as CGColorSpaceMBS, colors() as CGColorMBS) as CGGradientMBS

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Creates a CGGradient object from a color space and the provided color objects and locations.
Example:

```
// put into window paint event
Var c as CGContextMBS
if TargetCocoa then
c = GetCurrentCGContextMBS
else
c = Window1.CGContextMBS
end if

Var colors(-1) as CGColorMBS

colors.Add CGColorMBS.CreateGenericRGB(1.0, 0.0, 0.0, 0.35)
colors.Add CGColorMBS.CreateGenericRGB(0.0, 1.0, 0.0, 0.2)
colors.Add CGColorMBS.CreateGenericRGB(0.0, 0.0, 1.0, 0.06)

Var glossGradient as CGGradientMBS = CGGradientMBS.CreateWithColors(nil, colors)

Var topCenter as CGPointMBS = CGMakePointMBS(g.width/2, 0.0)
Var midCenter as CGPointMBS = CGMakePointMBS(g.width/2, g.height)

// fill white
c.SetRGBFillColor 1.0, 1.0, 1.0, 1.0
c.FillRect CGMakeRectMBS(0,0,g.Width,g.Height)

// gradient
Var currentBounds as CGRectMBS = CGMakeRectMBS(0,0,g.Width,g.Height)
c.SaveGState
c.AddRect(currentBounds)
```

```
c.Clip
c.DrawLinearGradient(glossGradient, topCenter, midCenter, 0)
c.RestoreGState

c.Flush
```

Notes: space: The color space to use for the gradient. You cannot use a pattern or indexed color space. Can be nil.
colors: A non-empty array of CGColorMBS objects that should be in the color space specified by space. If space is not nil, each color will be converted (if necessary) to that color space and the gradient will drawn in that color space. Otherwise, each color will be converted to and drawn in the GenericRGB color space.
locations: Optional. The location for each color provided in colors; each location must be a CGFloat value in the range of 0 to 1, inclusive. If 0 and 1 are not in the locations array, Quartz uses the colors provided that are closest to 0 and 1 for those locations.

If locations is missing, the first color in colors is assigned to location 0, the last color incolors is assigned to location 1, and intervening colors are assigned locations that are at equal intervals in between.
The locations array should contain the same number of items as the colors array.

Available in Mac OS X v10.5 and later.

- 58.18.6 CreateWithColors(colorSpace as CGColorSpaceMBS, colors() as CGColorMBS, locations() as Double) as CGGradientMBS 9585

58.18.6 CreateWithColors(colorSpace as CGColorSpaceMBS, colors() as CGColorMBS, locations() as Double) as CGGradientMBS

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Creates a CGGradient object from a color space and the provided color objects and locations.
Example:

```
// put into window paint event
Var c as CGContextMBS
if TargetCocoa then
c = GetCurrentCGContextMBS
else
c = Window1.CGContextMBS
end if

Var locations() as Double = array(0.0, 0.8, 1.0)

Var colors(-1) as CGColorMBS

colors.Add CGColorMBS.CreateGenericRGB(1.0, 0.0, 0.0, 0.35)
```

```
colors.Add CGColorMBS.CreateGenericRGB(0.0, 1.0, 0.0, 0.2)
colors.Add CGColorMBS.CreateGenericRGB(0.0, 0.0, 1.0, 0.06)

Var glossGradient as CGGradientMBS = CGGradientMBS.CreateWithColors(nil, colors, locations)

Var topCenter as CGPointMBS = CGMakePointMBS(g.width/2, 0.0)
Var midCenter as CGPointMBS = CGMakePointMBS(g.width/2, g.height)

// fill white
c.SetRGBFillColor 1.0, 1.0, 1.0, 1.0
c.FillRect CGMakeRectMBS(0,0,g.Width,g.Height)

// gradient
Var currentBounds as CGRectMBS = CGMakeRectMBS(0,0,g.Width,g.Height)
c.SaveGState
c.AddRect(currentBounds)
c.Clip
c.DrawLinearGradient(glossGradient, topCenter, midCenter, 0)
c.RestoreGState

c.Flush
```

Notes: space: The color space to use for the gradient. You cannot use a pattern or indexed color space. Can be nil.
colors: A non-empty array of CGColorMBS objects that should be in the color space specified by space. If space is not nil, each color will be converted (if necessary) to that color space and the gradient will drawn in that color space. Otherwise, each color will be converted to and drawn in the GenericRGB color space.
locations: Optional. The location for each color provided in colors; each location must be a CGFloat value in the range of 0 to 1, inclusive. If 0 and 1 are not in the locations array, Quartz uses the colors provided that are closest to 0 and 1 for those locations.

If locations is missing, the first color in colors is assigned to location 0, the last color incolors is assigned to location 1, and intervening colors are assigned locations that are at equal intervals in between.
The locations array should contain the same number of items as the colors array.

Available in Mac OS X v10.5 and later.

- 58.18.5 CreateWithColors(colorSpace as CGColorSpaceMBS, colors() as CGColorMBS) as CGGradientMBS 9584

58.18.7 Properties

58.18.8 Handle as Integer

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Handle to the CGGradientRef.
Notes: (Read and Write property)

58.18.9 Constants

Gradient Drawing Options

Constant	Value	Description
kCGGradientDrawsAfterEndLocation	2	The fill should extend beyond the ending location. The color that beyond the ending point is the solid color defined by the CGGradient to be at location 1. Available in Mac OS X v10.5 and later.
kCGGradientDrawsBeforeStartLocation	1	The fill should extend beyond the starting location. The color that beyond the starting point is the solid color defined by the CGGradient to be at location 0. Available in Mac OS X v10.5 and later.

58.19 class CGImageDestinationMBS

58.19.1 class CGImageDestinationMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: A class to write CGImages.
Example:

```
Var logo as Picture = LogoMBS(500)
Var image as CGImageMBS = CGCreateImageMBS(logo)

Var dic as new Dictionary

// 10%
'dic.Value(CGImageDestinationMBS.kCGImageDestinationLossyCompressionQuality)=0.1

// 100%
dic.Value(CGImageDestinationMBS.kCGImageDestinationLossyCompressionQuality)=1.0

Var file as FolderItem = SpecialFolder.Desktop.Child("logo.jpg")
Var d as new CGImageDestinationMBS(file, "public.jpeg", 1)

d.AddImage(image, dic)

if d.Finalize then
MessageBox "Saved"
else
MessageBox "Failed to save."
end if
```

Notes: CGImageDestination objects, available in Mac OS X v10.4 or later, abstract the data-writing task. An image destination can represent a single image or multiple images. It can contain thumbnail images as well as properties for each image.

The functions described in this reference can write data to three kinds of destinations: a file, an URL and a string. After creating a CGImageDestination object for the appropriate destination, you can add image data and set image properties. When you are finished adding data, call the function Finalize to write the image data and properties.

58.19.2 Methods

58.19.3 AddImage(image as CGImageMBS, properties as Variant = nil)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Adds an image to an image destination.
Example:

```
Var inputfile as FolderItem = SpecialFolder.Desktop.Child("test.jpg")

// reading the picture
Var c as new CGImageSourceMBS(inputfile)
Var img as CGImageMBS = c.CreateImageAtIndex(0)
Var propertiesGlobal as Dictionary = c.Properties
Var propertiesImage as Dictionary = c.PropertiesAtIndex(0)

Var outputFile as FolderItem = SpecialFolder.Desktop.Child("output.jpg")
Var d as new CGImageDestinationMBS(outputFile, "public.jpeg", 1)

// writing the picture and include metadata
d.SetProperties(propertiesGlobal)
d.AddImage(img, propertiesImage)
if d.FinalizeMT then
outputFile.Launch
else
MessageBox "Failed to write jpeg."
end if
```

Notes: image: The image to add.
properties: An optional dictionary that specifies the properties of the added image.

For properties you can use those in the CGImageSourceMBS class, kCGImageDestinationLossyCompressionQuality and kCGImageDestinationBackgroundColor.

The function logs an error if you add more images than what you specified when you created the image destination.
Available in Mac OS X version 10.4 and later.

58.19.4 AddImageFromSource(source as CGImageSourceMBS, index as Integer, options as Variant = nil)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Adds an image from an image source to an image destination.
Notes: source: An image source.
index: An index that specifies the location of the image in the image source. The index is zero-based.
properties: A dictionary that specifies properties to overwrite or add to the source image properties.

Available in Mac OS X version 10.4 and later.

58.19.5 Constructor(file as folderitem, type as string, count as Integer = 1)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an image destination that writes to a location specified by a folderitem.
Example:

```
Var p As Picture = LogoMBS(500)

// save as Photoshop

Var image As CGImageMBS = CGImageMBS.CreateImage(p)
Var file1 As FolderItem = SpecialFolder.Desktop.Child("test1.psd")
Var dest As New CGImageDestinationMBS(file1, "com.adobe.photoshop-image", 1)

dest.AddImage(image, Nil)

If dest.Finalize Then
// MessageBox "Saved"
Else
MessageBox "Failed to save."
End If
```

Notes: file: The file to write to. If the file already exists, the data at this location is overwritten.

type: The UTI (uniform type identifier) of the resulting image file. See Uniform Type Identifiers Overview for a list of system-declared and third-party UTIs.

count: The number of images (not including thumbnail images) that the image file will contain.

On success the handle value is not zero.

Available in Mac OS X version 10.4 and later.
See also:

- 58.19.6 Constructor(type as string, count as Integer = 1) 9591
- 58.19.7 Constructor(url as string, type as string, count as Integer = 1) 9591

58.19.6 Constructor(type as string, count as Integer = 1)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an image destination that writes to a string.
Notes: type: The uniform type identifier (UTI) of the resulting image file. See Uniform Type Identifiers Overview for a list of system-declared and third-party UTIs.

count: The number of images (not including thumbnail images) that the image file will contain.

On success the handle is not zero.

Available in Mac OS X version 10.4 and later.
See also:

- 58.19.5 Constructor(file as folderitem, type as string, count as Integer = 1) 9590
- 58.19.7 Constructor(url as string, type as string, count as Integer = 1) 9591

58.19.7 Constructor(url as string, type as string, count as Integer = 1)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an image destination that writes to a location specified by a URL.
Notes: url: The URL to write to. If the URL already exists, the data at this location is overwritten.

type: The UTI (uniform type identifier) of the resulting image file. See Uniform Type Identifiers Overview for a list of system-declared and third-party UTIs.

count: The number of images (not including thumbnail images) that the image file will contain.

On success the handle value is not zero.

Available in Mac OS X version 10.4 and later.
See also:

- 58.19.5 Constructor(file as folderitem, type as string, count as Integer = 1) 9590
- 58.19.6 Constructor(type as string, count as Integer = 1) 9591

58.19.8 CopyImageSource(source as CGImageSourceMBS, byref Error as CFErrorMBS, options as variant = nil) as Boolean

MBS MacCG Plugin, Plugin Version: 26.4, Platform: macOS, Targets: All.

Function: Losslessly copies the contents of the image source to the destination.
Example:

```
Var inputfile As FolderItem = SpecialFolder.Desktop.Child("test.jpg")

// reading the picture
Var c As New CGImageSourceMBS(inputfile)

Var outputFile As FolderItem = SpecialFolder.Desktop.Child("output.jpg")
Var d As New CGImageDestinationMBS(outputFile, "public.jpeg", 1)

// include global metadata
Var properiesDic As Dictionary = c.Properties
d.SetProperties(properiesDic)

// move image from source to dest lossless
Var error As CFErrorMBS

If d.CopyImageSource(c, error) Then
MessageBox "OK"
Else
MessageBox "Failed: "+error.Description
End If
```

Notes: The image data will not be modified. The image's metadata can be modified by adding the keys and values defined above to 'options'. No other images should be added to the image destination. Finalize()

should not be called afterward - the result is saved to the destination when this function returns.

The image type of the destination must match the image source. Returns true if the operation was successful. If an error occurs, false will be returned and Error will be set to a CFErrorMBS. Not all image formats are supported for this operation.

Options can be a Dictionary or CFDictionaryMBS object.

58.19.9 CreateWithData(type as string, count as Integer = 1) as CGImageDestinationMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an image destination that writes to a string.
Notes: type: The uniform type identifier (UTI) of the resulting image file. See Uniform Type Identifiers Overview for a list of system-declared and third-party UTIs.

count: The number of images (not including thumbnail images) that the image file will contain.

On error the function returns nil.

Available in Mac OS X version 10.4 and later.

58.19.10 CreateWithFile(file as folderitem, type as string, count as Integer = 1) as CGImageDestinationMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an image destination that writes to a location specified by a folderitem.
Example:

```
Var p As Picture = LogoMBS(500)

// save as tiff

Var image As CGImageMBS = CGImageMBS.CreateImage(p)
Var file2 As FolderItem = SpecialFolder.Desktop.Child("test2.tif")
Var dest As CGImageDestinationMBS = CGImageDestinationMBS.CreateWithFile(file2, "public.tiff", 1)

dest.AddImage(image, Nil)

If dest.Finalize Then
```

```
// MessageBox "Saved"
Else
MessageBox "Failed to save."
End If
```

Notes: file: The file to write to. If the file already exists, the data at this location is overwritten.

type: The UTI (uniform type identifier) of the resulting image file. See Uniform Type Identifiers Overview for a list of system-declared and third-party UTIs.

count: The number of images (not including thumbnail images) that the image file will contain.

On failure the function returns nil.

Available in Mac OS X version 10.4 and later.

58.19.11 CreateWithURL(url as string, type as string, count as Integer = 1) as CGImageDestinationMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an image destination that writes to a location specified by a URL.
Notes: url: The URL to write to. If the URL already exists, the data at this location is overwritten.

type: The UTI (uniform type identifier) of the resulting image file. See Uniform Type Identifiers Overview for a list of system-declared and third-party UTIs.

count: The number of images (not including thumbnail images) that the image file will contain.

On error nil is returned.

Available in Mac OS X version 10.4 and later.

58.19.12 Data as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Makes a copy of the data.
Notes: The data is collected and after you called Finalize you can pick the data here.

58.19.13 Finalize as boolean

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Writes image data and properties to the data or URL associated with the image destination.
Example:

```
Var logo as Picture = LogoMBS(500)
Var image as CGImageMBS = CGCreateImageMBS(logo)

Var file as FolderItem = SpecialFolder.Desktop.Child("logo.png")
Var d as new CGImageDestinationMBS(file, "public.png", 1)

d.AddImage(image, nil)

if d.Finalize then
MessageBox "Saved"
else
MessageBox "Failed to save."
end if
```

Notes: Returns true if the image is successfully written; false otherwise.

You must call this function or the output of the image destination will not be valid. After calling this function, no additional data can be added to the image destination.

Available in Mac OS X version 10.4 and later.

58.19.14 FinalizeMT as boolean

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Writes image data and properties to the data or URL associated with the image destination.
Notes: Returns true if the image is successfully written; false otherwise.

You must call this function or the output of the image destination will not be valid. After calling this function, no additional data can be added to the image destination.

Available in Mac OS X version 10.4 and later.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

58.19.15 kCGImageDestinationBackgroundColor as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: The desired background color to composite against when writing an image that has an alpha component to a destination format that does not support alpha. If present, the value associated with this key must be a CGColorRef data type without an alpha component of its own. If not present, and if a background color is needed, a white color is used.

Available in Mac OS X v10.4 and later.

58.19.16 kCGImageDestinationDateTime as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: Updates the DateTime parameters of the image metadata. Only values present in the original image will updated. If present, the value should be a String or a Date. If String, the value must be in Exif DateTime or ISO 8601 DateTime format. This option is mutually exclusive with kCGImageDestinationMetadata.

58.19.17 kCGImageDestinationEmbedThumbnail as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: Enable or disable thumbnail embedding for JPEG and HEIF.
The value should be a boolean, true or false. Defaults to false.

58.19.18 kCGImageDestinationEncodeAlternateColorSpace as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: One of the encode options.

58.19.19 kCGImageDestinationEncodeBaseColorSpace as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: One of the encode options.

58.19.20 kCGImageDestinationEncodeBaseIsSDR as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: One of the encode options.

58.19.21 kCGImageDestinationEncodeBasePixelFormatRequest as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: One of the encode options.

58.19.22 kCGImageDestinationEncodeGainMapPixelFormatRequest as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: One of the encode options.

58.19.23 kCGImageDestinationEncodeGainMapSubsampleFactor as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: One of the encode options.

58.19.24 kCGImageDestinationEncodeGenerateGainMapWithBaseImage as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: One of the encode options.

58.19.25 kCGImageDestinationEncodeIsBaseImage as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: One of the encode options.

58.19.26 kCGImageDestinationEncodeRequest as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: One of the encode options.

58.19.27 kCGImageDestinationEncodeRequestOptions as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: One of the encode options.

58.19.28 kCGImageDestinationEncodeToISOGainmap as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: One of the encode options.

58.19.29 kCGImageDestinationEncodeToISOHDR as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: One of the encode options.

58.19.30 kCGImageDestinationEncodeTonemapMode as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: One of the encode options.

58.19.31 kCGImageDestinationEncodeToSDR as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: One of the encode options.

58.19.32 kCGImageDestinationImageMaxPixelSize as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: Rescale the image to the maximum width and height in pixels.
If present, this value of this key must be a number.

58.19.33 kCGImageDestinationLossyCompressionQuality as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: The desired compression quality to use when writing to an image destination. If present, the value associated with this key must be a double in the range 0.0 to 1.0. A value of 1.0 specifies to use lossless compression if destination format supports it. A value of 0.0 implies to use maximum compression.

Available in Mac OS X v10.4 and later.

58.19.34 kCGImageDestinationMergeMetadata as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Example:

```
// Change rotation in an image file
```

```
// files
Var dpath as folderitem = SpecialFolder.Desktop.Child("test.jpg")
Var opath as folderitem = dpath.parent.Child("output.jpg")

// open source
Var imageSource as new cgimagesourcembs(dpath)

// read image
Var img as cgimagembs = imageSource.createimageatindex(0)

// global properties
Var globalprop as dictionary = imageSource.properties
// per image properties
Var p as Dictionary = imageSource.PropertiesAtIndex(0)

Var imageDest as new CGImageDestinationMBS(opath,"public.jpeg",1)

'const orientation = 1 // top left
const orientation = 3 // bottom right

// set globals
imageDest.SetProperties(globalprop)

// now set new orientation
p.value(imageDest.kCGImageDestinationOrientation) = orientation
p.value(imageDest.kCGImageDestinationMergeMetadata) = true

// change tiff dictionary, if present
Var dTIFF as Dictionary = p.lookup(imageSource.kCGImagePropertyTIFFDictionary, nil)
if dTIFF <>nil then
dTIFF.value(imageSource.kCGImagePropertyTIFFOrientation) = orientation
end if

// change iptc dictionary, if present
Var dIPTC as Dictionary = p.lookup(imageSource.kCGImagePropertyIPTCDictionary, nil)
if dIPTC <>nil then
dIPTC.value(imageSource.kCGImagePropertyIPTCImageOrientation) = orientation
end if

// write out image
imageDest.AddImage(img,p)
call imageDest.Finalize
```

Notes: If true, The metadata will be copied from the source and merged with the tags specified in kCGImageDestinationMetadata. If a tag does not exist in the source, it will be added. If the tag exists in the source, it will be updated. A metadata tag can be removed by setting the tag's value to nil. If present, the

value of this key is a Boolean. The default is False.

58.19.35 kCGImageDestinationMetadata as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: Set the metadata tags for the image destination. If present, the value of this key is a CGImageMetadata. By default, all EXIF, IPTC, and XMP tags will be replaced. Use kCGImageDestinationMergeMetadata to merge the tags with the existing tags in the image source.

58.19.36 kCGImageDestinationOptimizeColorForSharing as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: Create an image using a colorspace, that has is compatible with older devices
The value should be True or False
Defaults to False = don't do any color conversion

58.19.37 kCGImageDestinationOrientation as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Example:

```
// Change rotation in an image file

// files
Var dpath as folderitem = SpecialFolder.Desktop.Child("test.jpg")
Var opath as folderitem = dpath.parent.Child("output.jpg")

// open source
Var imageSource as new cgimagesourcembs(dpath)

// read image
Var img as cgimagembs = imageSource.createimageatindex(0)

// global properties
Var globalprop as dictionary = imageSource.properties
// per image properties
Var p as Dictionary = imageSource.PropertiesAtIndex(0)
```

```
Var imageDest as new CGImageDestinationMBS(opath,"public.jpeg",1)

'const orientation = 1 // top left
const orientation = 3 // bottom right

// set globals
imageDest.SetProperties(globalprop)

// now set new orientation
p.value(imageDest.kCGImageDestinationOrientation) = orientation
p.value(imageDest.kCGImageDestinationMergeMetadata) = true

// change tiff dictionary, if present
Var dTIFF as Dictionary = p.lookup(imageSource.kCGImagePropertyTIFFDictionary, nil)
if dTIFF <>nil then
dTIFF.value(imageSource.kCGImagePropertyTIFFOrientation) = orientation
end if

// change iptc dictionary, if present
Var dIPTC as Dictionary = p.lookup(imageSource.kCGImagePropertyIPTCDictionary, nil)
if dIPTC <>nil then
dIPTC.value(imageSource.kCGImagePropertyIPTCImageOrientation) = orientation
end if

// write out image
imageDest.AddImage(img,p)
call imageDest.Finalize
```

Notes: Updates the orientation in the image metadata. The image data itself will not be rotated. If present, the value should be a Integer from 1 to 8. This option is mutually exclusive with kCGImageDestination-Metadata.

58.19.38 kCGImageDestinationPreserveGainMap as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: For CGImageDestinationAddImageFromSource: when set to True, a HEIF-embedded GainMap will be preserved.
If the destination image is scaled (using kCGImageDestinationImageMaxPixelSize), the GainMap will be scaled accordingly.
The value should be True or False
Defaults to False

58.19.39 kCGImageMetadataShouldExcludeGPS as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: If true, GPS metadata will not be written to EXIF data or the corresponding EXIF tags in XMP. This flag cannot filter any proprietary location data that could be stored in a manufacturer's EXIF MakerNote or custom XMP properties.
If present, the value for this key is a boolean. The default is False.

58.19.40 kCGImageMetadataShouldExcludeXMP as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: XMP data will not be written to the destination. If used in conjunction with kCGImageDestinationMetadata, EXIF and/or IPTC tags will be preserved, but an XMP packet will not be written to the file.
If present, the value for this key is a Boolean. The default is False.

58.19.41 kCGImagePropertyASTCBlockSize as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: For ASTC / KTX(ASTC) files: Specifies ASTC block size.
The value of this key must be either kCGImagePropertyASTCBlockSize4x4 or kCGImagePropertyASTCBlockSize8x8.

58.19.42 kCGImagePropertyASTCBlockSize4x4 as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: For ASTC / KTX(ASTC) files: Specifies ASTC block size.

58.19.43 kCGImagePropertyASTCBlockSize8x8 as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: For ASTC / KTX(ASTC) files: Specifies ASTC block size.

58.19.44 kCGImagePropertyASTCEncoder as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: One of the encoders for KTX files.

58.19.45 kCGImagePropertyBCEncoder as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: One of the encoders for KTX files.

58.19.46 kCGImagePropertyBCFormat as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: For BC / KTX(BC) / DDS files:
Specifies the specific pixel format to be encoded.
The value of this key must be an integer CFNumberRef, containing a OpenGL format enum.

58.19.47 kCGImagePropertyEncoder as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: For KTX files:
The key 'kCGImagePropertyEncoder' can be used with AddImage...() to specify the encoder to be used.

58.19.48 kCGImagePropertyPVREncoder as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: One of the encoders for KTX files.

58.19.49 SetProperties(options as Variant = nil)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Applies one or more properties to all images in an image destination.
Example:

```
Var inputfile as FolderItem = SpecialFolder.Desktop.Child("test.jpg")

// reading the picture
Var c as new CGImageSourceMBS(inputfile)
Var img as CGImageMBS = c.CreateImageAtIndex(0)
Var propertiesGlobal as Dictionary = c.Properties
Var propertiesImage as Dictionary = c.PropertiesAtIndex(0)

Var outputFile as FolderItem = SpecialFolder.Desktop.Child("output.jpg")
Var d as new CGImageDestinationMBS(outputFile, "public.jpeg", 1)

// writing the picture and include metadata
d.SetProperties(propertiesGlobal)
d.AddImage(img, propertiesImage)
if d.FinalizeMT then
outputFile.Launch
else
MessageBox "Failed to write jpeg."
end if
```

Notes: Available in Mac OS X version 10.4 and later.

58.19.50 TypeIdentifiers as string()

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns an array of the uniform type identifiers (UTIs) that are supported for image destinations.
Example:

```
Var s(-1) as string = CGImageDestinationMBS.TypeIdentifiers

MessageBox Join(s,EndOfLine)

// shows on Mac OS X 10.5:
//
// public.png
// public.jpeg
// com.compuserve.gif
// public.jpeg-2000
// public.tiff
```

// com.adobe.photoshop-image
// com.adobe.pdf
// com.microsoft.bmp
// com.apple.pict
// com.truevision.tga-image
// com.sgi.sgi-image
// com.ilm.openexr-image

Notes: Returns an array of the UTIs that are supported for image destinations. See Uniform Type Identifiers Overview for a list of system-declared and third-party UTIs that can be returned.

Available in Mac OS X version 10.4 and later.

58.19.51 Properties

58.19.52 Handle as Integer

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The internal reference.
Notes: (Read and Write property)

58.20 class CGImageMBS

58.20.1 class CGImageMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: A class for a core graphics image.
Example:

```
// convert a Xojo picture to a CGImage, inspect it and convert back
Var pic As Picture = LogoMBS(500)
Var image As CGImageMBS = CGCreateImageMBS(pic)

MessageBox image.width.ToString + " x " + image.height.ToString + ", " + image.BitsPerPixel.ToString
+ " bits per pixel"

// back to a Xojo picture
Var copy As Picture = image.Picture
```

Notes: If the release property is true, the destructor of this class will release the image reference.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

58.20.2 Methods

58.20.3 AsNSImageMBS as variant

MBS MacCG Plugin, Plugin Version: 24.3, Platform: macOS, Targets: All.

Function: Creates a NSImageMBS which references the given CGImage.
Notes: Returns nil on error.
Result declared as Variant to avoid plugin dependencies.

58.20.4 Constructor

MBS MacCG Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The private constructor.

58.20.5 Copy as CGImageMBS

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: All.

Function: Creates a copy of a bitmap image.
See also:

- 58.20.6 Copy(r as CGRectMBS) as CGImageMBS 9608

58.20.6 Copy(r as CGRectMBS) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: All.

Function: Creates a copy of a bitmap image.
See also:

- 58.20.5 Copy as CGImageMBS 9608

58.20.7 CopyWithColorSpace(profile as CGColorSpaceMBS) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns a copy of the image with the new Colorspace included.
Example:

```
// load a picture
Var f as FolderItem = SpecialFolder.Desktop.Child("ColorSpin.jpg")
```

```
Var pic as Picture = picture.Open(f)

// open printer
Var g as Graphics = OpenPrinterDialog
if g = nil then Return

// draw
g.DrawPicture pic, 0, 0

// now load again
Var ImageSource as new CGImageSourceMBS(f)
Var img as CGImageMBS = ImageSource.CreateImageAtIndex(0)
Var cs as CGColorSpaceMBS = CGColorSpaceMBS.CreateDeviceRGB

// copy with replacing colorspace
img = img.CopyWithColorSpace(cs)

// and draw
#If XojoVersion >= 2019.02 Then
Var p As ptr = g.Handle(Graphics.HandleTypes.CGContextRef)
Var c As CGContextMBS = CGContextMBS.contextWithCGContext(p)
#Else
Var h As Integer = g.Handle(g.HandleTypeCGContextRef)
Var c As CGContextMBS = CGContextMBS.contextWithCGContext(h)
#EndIf
Var r as CGRectMBS = CGMakeRectMBS(0, 0, img.Width, img.Height)

c.DrawPicture(img, r)
c.Flush
```

Notes: profile must be a CGColorSpaceMBS.
Requires Mac OS X 10.3.

58.20.8 CopyWithMask(mask as CGImageMBS) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: All.

Function: reates a bitmap image from an existing image and an image mask.
Notes: Parameters:

self: The image to apply the mask parameter to. This image must not be an image mask and may not have an image mask or masking color associated with it.

mask: A mask. If the mask is an image, it must be in the DeviceGray color space, must not have an alpha

component, and may not itself be masked by an image mask or a masking color. If the mask is not the same size as the image specified by the image parameter, then Quartz scales the mask to fit the image.

Return Value: An image created by masking image with mask. You are responsible for releasing this object by calling CGImageRelease.

The resulting image depends on whether the mask parameter is an image mask or an image. If the mask parameter is an image mask, then the source samples of the image mask act as an inverse alpha value. That is, if the value of a source sample in the image mask is S, then the corresponding region in image is blended with the destination using an alpha value of (1-S). For example, if S is 1, then the region is not painted, while if S is 0, the region is fully painted.

If the mask parameter is an image, then it serves as an alpha mask for blending the image onto the destination. The source samples of mask' act as an alpha value. If the value of the source sample in mask is S, then the corresponding region in image is blended with the destination with an alpha of S. For example, if S is 0, then the region is not painted, while if S is 1, the region is fully painted.

58.20.9 CreateImage(pic as picture) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Creates a new CGImageMBS from the given images.
Example:

```
Var c as CGImageMBS
Var pic, mask as Picture
// get picture and mask

c = CGImageMBS.CreateImage(pic)
if c<>Nil then
// go on
end if
```

Notes: If the image has a mask, it is used.
See also:

- 58.20.10 CreateImage(pic as picture, mask as picture) as CGImageMBS 9610

58.20.10 CreateImage(pic as picture, mask as picture) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Creates a new CGImageMBS from the given images.
Example:

```
Var c as CGImageMBS
Var pic, mask as Picture
// get picture and mask

c = CGImageMBS.CreateImage(pic, mask)
if c<>Nil then
// go on
end if
```

Notes: The mask is taken from the second image.
With 11.3 plugins we are deprecating to pass a mask. The plugin prefers to simply take the mask or alpha channel of the picture itself.
See also:

- 58.20.9 CreateImage(pic as picture) as CGImageMBS 9610

58.20.11 CreateImageFromJPEGDataProvider(dataprovider as Variant, decode as memoryblock, shouldInterpolate as boolean, intent as Integer) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Creates a new CGImage with JPEG data.
Example:

```
// Shows moon.jpg from the desktop folder
// shows in the window title if i,p or u is nil.

Sub Mainwindow.Paint(g As Graphics)
Var f as FolderItem
Var p as CGDataProviderMBS
Var i as CGImageMBS

f=SpecialFolder.Desktop.Child("moon.jpg")
p=CGDataProviderMBS.CreateWithFile(f)
if p=nil then
Title="p=nil"
else
i = CGImageMBS.CreateImageFromJPEGDataProvider(p,nil,true,0)

if i=nil then
Title="i=nil"
else
Window1.CGContextMBS.DrawPicture i,CGMakeRectMBS(0,0,i.Width,i.Height)
end if
end if
```

End Sub

Notes: Parameters:

dataprovider:
A reference to a data provider supplying JPEG-encoded data.

decode:
Pass the decode array for the image. In the decode array, for each color component in the source color space, you provide a pair of values denoting the upper and lower limits of a range. For example, the decode array for a source image in the RGB color space would contain six entries total, consisting of one pair each for red, green, and blue. When the image is rendered, Quartz uses a linear transform to map the original component value into a relative number within your designated range that is appropriate for the destination color space. If you do not want to allow remapping of the image's color values, pass nil for the decode array. The memoryblock for the array needs to be filled with double values.

shouldInterpolate:
Pass true if interpolation should occur; otherwise, pass false . The interpolation setting specifies whether Quartz should apply a pixel-smoothing algorithm to the image. If you pass false , the image may appear jagged or pixelated when drawn on an output device with higher resolution than the image data.

intent:
Pass a CGColorRenderingIntent value specifying how Quartz should display colors in the image that are not located within the current color space of the graphics context. The rendering intent determines the exact method used to map colors from one color space to another.

58.20.12 CreateImageFromPNGDataProvider(dataprovider as Variant, decode as memoryblock, shouldInterpolate as boolean, intent as Integer) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Creates a new CGImage with PNG data.
Notes: Parameters:

dataprovider:
A reference to a data provider supplying JPEG-encoded data.

decode:
Pass the decode array for the image. In the decode array, for each color component in the source color space, you provide a pair of values denoting the upper and lower limits of a range. For example, the decode array for a source image in the RGB color space would contain six entries total, consisting of one pair each

for red, green, and blue. When the image is rendered, Quartz uses a linear transform to map the original component value into a relative number within your designated range that is appropriate for the destination color space. If you do not want to allow remapping of the image's color values, pass nil for the decode array. The memoryblock for the array needs to be filled with double values.

shouldInterpolate:
Pass true if interpolation should occur; otherwise, pass false . The interpolation setting specifies whether Quartz should apply a pixel-smoothing algorithm to the image. If you pass false , the image may appear jagged or pixelated when drawn on an output device with higher resolution than the image data.

intent:
Pass a CGColorRenderingIntent value specifying how Quartz should display colors in the image that are not located within the current color space of the graphics context. The rendering intent determines the exact method used to map colors from one color space to another.

58.20.13 CreateImageWithFile(file as folderitem) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: Opens a file as CGImage object.
Notes: Returns nil on any error.

58.20.14 CreateImageWithHandle(handle as Integer) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Creates image from a CGImageRef handle value.
Notes: Internally the CGImageMBS retains this reference and releases it in destructor.

58.20.15 DataProvider as Variant

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The data provider used for the image.
Notes: Value is a CGDataProviderMBS object.
Returns nil on any error.

58.20.16 DecodeArray as memoryblock

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The decode array used for the image.
Notes: A memoryblock with an array of double variables.
Returns nil on any error.

58.20.17 JPEGData(Compression as Integer = 90) as MemoryBlock

MBS MacCG Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Returns image compressed as JPEG file.
Notes: Compression defines the compression level from 0 to 100.
Returns nil on any error.

58.20.18 Picture(ColorSpace as CGColorSpaceMBS = nil) as Picture

MBS MacCG Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Creates a copy of the CGImage as a picture.
Example:

```
// get CGImage
Var f as FolderItem = SpecialFolder.Desktop.Child("bild.jpg")
Var c as CGImageMBS = CGImageMBS.CreateImageWithFile(f)
// get picture
Var p as Picture = c.Picture
// save as jpeg
Var d as FolderItem = SpecialFolder.Desktop.Child("output.jpg")
p.Save(d, p.SaveAsJPEG, 80)
```

Notes: Colorspace: the optional CoreGraphcis Colorspace to use for the bitmap conversion (CGColorSpaceMBS class).
Returns nil on any error.

58.20.19 PictureScaled(OutputWidth as Integer, OutputHeight as Integer, ColorSpace as CGColorSpaceMBS = nil) as Picture

MBS MacCG Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: Creates a copy of the CGImage as a picture scaled.
Example:

```
// get CGImage
Var f as FolderItem = SpecialFolder.Desktop.Child("bild.jpg")
Var c as CGImageMBS = CGImageMBS.CreateImageWithFile(f)
```

```
// get picture
Var p as Picture = c.PictureScaled(640,480)
// save as jpeg
Var d as FolderItem = SpecialFolder.Desktop.Child("output.jpg")
p.Save(d, p.SaveAsJPEG, 80)
```

Notes: Colorspace: the optional CoreGraphcis Colorspace to use for the bitmap conversion (CGColorSpaceMBS class).
Returns nil on any error.

If output width and height are zero, we use the image sizes.

58.20.20 PNGData as MemoryBlock

MBS MacCG Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Returns image compressed as PNG file.
Notes: Returns nil on any error.

58.20.21 ReleaseHandle

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Decrements the retain count of a CGImageRef.
Notes: Each retain must have a release. Too many releases and your app will crash, too many retains and it will leak memory.
Use only if you really know what you are doing.

58.20.22 RetainHandle

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Increments the retain count of a CGImageRef.
Notes: Each retain must have a release. Too many releases and your app will crash, too many retains and it will leak memory.
Use only if you really know what you are doing.

58.20.23 Properties

58.20.24 AlphaInfo as Integer

MBS MacCG Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Returns the alpha channel information for a bitmap image.
Notes: A CGImageAlphaInfo constant that specifies (1) whether the bitmap contains an alpha channel, (2) where the alpha bits are located in the image data, and (3) whether the alpha value is premultiplied. For possible values, see Constants. The function returns kCGImageAlphaNone if the image parameter refers to an image mask.
(Read only property)

58.20.25 BitmapInfo as Integer

MBS MacCG Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Returns the bitmap information for a bitmap image.
Notes: This function returns a constant that specifies:

The type of bitmap data—floating point or integer. You use the constant kCGBitmapFloatComponents to extract this information.

Whether an alpha channel is in the data, and if so, how the alpha data is stored. You use the constant kCGBitmapAlphaInfoMask to extract the alpha information. Alpha information is specified as one of the constants listed in Alpha Information for Images.
(Read only property)

58.20.26 BitsPerComponent as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns the number of bits/component of the image.
Notes: (Read only property)

58.20.27 BitsPerPixel as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns the number of bits/pixel of image.
Notes: (Read only property)

58.20.28 BytesPerRow as Integer

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: All.

Function: Returns the number of bytes allocated for a double row of a bitmap image.
Notes: (Read only property)

58.20.29 ColorSpace as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The color space used for the image.
Example:

```
// get a picture file
Var file as FolderItem = SpecialFolder.Desktop.Child("sylwia.jpg")
// get image source
Var source as new CGImageSourceMBS(file)
// read image
Var image as CGImageMBS = source.CreateImageAtIndex(0)
// get Color space from image
Var profile as CGColorSpaceMBS = image.ColorSpace
// get ICC profile data
Var ICCProfile as string = profile.ICCProfile
// and parse it with LCMS and show name
Var LCMSProfile as LCMS2ProfileMBS = LCMS2ProfileMBS.OpenProfileFromString(ICCProfile)
MessageBox LCMSProfile.Name
```

Notes: Value is a CGColorSpaceMBS.
Returns nil on any error.
(Read only property)

58.20.30 handle as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The handle for this image.
Notes: Handle is a CGImageRef.
(Read and Write property)

58.20.31 height as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns the image's height.
Notes: Returns 0 on error.
(Read only property)

58.20.32 ImageIsMask as boolean

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns true if the image is an image mask, false otherwise.
Notes: (Read only property)

58.20.33 RenderingIntent as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns the rendering intent of the image.
Notes: Constants:

kCGRenderingIntentDefault	0
kCGRenderingIntentAbsoluteColorimetric	1
kCGRenderingIntentRelativeColorimetric	2
kCGRenderingIntentPerceptual	3
kCGRenderingIntentSaturation	4

(Read only property)

58.20.34 RetainCount as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the retain count of the CGImageRef.
Notes: This is useful for debugging.
The retain count is for the CGImageRef, not the CGImageMBS object.
(Read only property)

58.20.35 ShouldInterpolate as boolean

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns the interpolation parameter of image.
Notes: True if the image should use interpolation.

(Read only property)

58.20.36 width as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns the image's width.
Notes: Returns 0 on error.
(Read only property)

58.20.37 Constants

Bitmap Info

Constant	Value	Description
kCGBitmapAlphaInfoMask	&h1F	The alpha information mask. Use this to extract alpha information that specifies whether a bitmap contains an alpha channel and how the alpha channel is generated.
kCGBitmapByteOrder16Big	12288	16-bit, big endian format.
kCGBitmapByteOrder16Little	4096	16-bit, little endian format.
kCGBitmapByteOrder32Big	16384	32-bit, big endian format.
kCGBitmapByteOrder32Little	8192	32-bit, little endian format.
kCGBitmapByteOrderDefault	0	The default byte order.
kCGBitmapByteOrderMask	&h7000	The byte ordering of pixel formats.
kCGBitmapFloatComponents	256	The components of a bitmap are floating-point values.

Alpha Info

Constant	Value	Description
kCGImageAlphaFirst	4	The alpha component is stored in the most significant bits of each pixel. F example, non-premultiplied ARGB.
kCGImageAlphaLast	3	The alpha component is stored in the least significant bits of each pixel. F example, non-premultiplied RGBA.
kCGImageAlphaNone	0	There is no alpha channel. If the total size of the pixel is greater than t space required for the number of color components in the color space, t least significant bits are ignored. This value is equivalent to kCGImageA phaNoneSkipLast.
kCGImageAlphaNoneSkipFirst	6	There is no alpha channel. If the total size of the pixel is greater than t space required for the number of color components in the color space, the mo significant bits are ignored.
kCGImageAlphaNoneSkipLast	5	There is no alpha channel. If the total size of the pixel is greater than t space required for the number of color components in the color space, the lea significant bits are ignored. This value is equivalent to kCGImageAlphaNon
kCGImageAlphaOnly	7	There is no color data, only an alpha channel.
kCGImageAlphaPremultipliedFirst	2	The alpha component is stored in the most significant bits of each pixel a the color components have already been multiplied by this alpha value. F example, premultiplied ARGB.
kCGImageAlphaPremultipliedLast	1	The alpha component is stored in the least significant bits of each pixel a the color components have already been multiplied by this alpha value. F example, premultiplied RGBA.

58.21 class CGImageMetadataMBS

58.21.1 class CGImageMetadataMBS

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The class for a tag container.
Example:

```
// read XMP metadata from a sidecar file and list the tags
Var file As FolderItem = SpecialFolder.Desktop.Child("photo.xmp")
Var stream As BinaryStream = BinaryStream.Open(file)
Var data As MemoryBlock = stream.Read(stream.Length)
stream.Close
Var meta As CGImageMetadataMBS = CGImageMetadataMBS.CreateFromXMPData(data)
If meta = Nil Then Return

Var lines() As String
lines.Add "Title: " + meta.StringValueWithPath(Nil, "dc:title")
For Each tag As CGImageMetadataTagMBS In meta.Tags
lines.Add tag.Prefix + ":" + tag.Name
Next

MessageBox String.FromArray(lines, EndOfLine)
```

Blog Entries

- MBS Xojo Plugins, version 18.6pr1
- MBS Xojo Plugins, version 18.5pr8

58.21.2 Methods

58.21.3 Constructor

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Creates an empty metadata object.
See also:

- 58.21.4 Constructor(metadata as CGImageMetadataMBS) 9621

58.21.4 Constructor(metadata as CGImageMetadataMBS)

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Copy constructor.
Notes: Creates a copy of the metadata.
See also:

- 58.21.3 Constructor 9621

58.21.5 CreateFromXMPData(data as MemoryBlock) as CGImageMetadataMBS

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Creates a collection of CGImageMetadataTags from a block of XMP data.
Notes: Converts XMP data into a collection of metadata tags.
The data must be a complete XMP tree. XMP packet headers (<?xpacket .. ?>) are supported.

data: The XMP data.

Returns a collection of CGImageMetadata tags. Returns nil if an error occurred.

58.21.6 CreateXMPData(options as Dictionary = nil) as MemoryBlock

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Serializes the CGImageMetadataRef to XMP data.
Notes: This converts all of the metadata tags to a block of XMP data. Common uses include creating sidecar files that contain metadata for image formats that do not support embedded XMP, or cannot be edited due to other format restrictions (such as proprietary RAW camera formats).

options: should be nil. Options are currently not used, but may be used in future release.

Returns a Memoryblock containing an XMP representation of the metadata. Returns nil if an error occurred.

58.21.7 kCFErrorDomainCGImageMetadata as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Error domain for all errors originating in ImageIO for CGImageMetadata APIs.

58.21.8 kCGImageMetadataEnumerateRecursively as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A key for the 'options' of Tags function.
Notes: If present, the value should be a CFBoolean. If true, tags will be enumerated recursively, if false, only the direct children of 'rootPath' will be enumerated. The default is non-recursive.

58.21.9 kCGImageMetadataNamespaceDublinCore as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the metadata namespaces.
Notes: Dublin Core

58.21.10 kCGImageMetadataNamespaceExif as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the metadata namespaces.
Notes: Exif

58.21.11 kCGImageMetadataNamespaceExifAux as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the metadata namespaces.
Notes: Exif Aux

58.21.12 kCGImageMetadataNamespaceExifEX as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the metadata namespaces.
Notes: ExifEX

58.21.13 kCGImageMetadataNamespaceIPTCCore as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the metadata namespaces.
Notes: IPTC Core

58.21.14 kCGImageMetadataNamespaceIPTCExtension as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the metadata namespaces.
Notes: IPTC Extension

58.21.15 kCGImageMetadataNamespacePhotoshop as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the metadata namespaces.
Notes: Photoshop

58.21.16 kCGImageMetadataNamespaceTIFF as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the metadata namespaces.
Notes: TIFF

58.21.17 kCGImageMetadataNamespaceXMPBasic as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the metadata namespaces.
Notes: XMP Basic

58.21.18 kCGImageMetadataNamespaceXMPRights as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the metadata namespaces.
Notes: XMP Rights

58.21.19 kCGImageMetadataPrefixDublinCore as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the common prefix names.
Notes: Dublin Core

58.21.20 kCGImageMetadataPrefixExif as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the common prefix names.
Notes: Exif

58.21.21 kCGImageMetadataPrefixExifAux as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the common prefix names.
Notes: Exif Aux

58.21.22 kCGImageMetadataPrefixExifEX as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the common prefix names.
Notes: Exif EX

58.21.23 kCGImageMetadataPrefixIPTCCore as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the common prefix names.
Notes: IPTC Core

58.21.24 kCGImageMetadataPrefixIPTCExtension as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the common prefix names.
Notes: IPTC Extension

58.21.25 kCGImageMetadataPrefixPhotoshop as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the common prefix names.
Notes: Photoshop

58.21.26 kCGImageMetadataPrefixTIFF as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the common prefix names.
Notes: TIFF

58.21.27 kCGImageMetadataPrefixXMPBasic as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the common prefix names.
Notes: XMP Basic

58.21.28 kCGImageMetadataPrefixXMPRights as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the common prefix names.
Notes: XMP Rights

58.21.29 StringValueWithPath(parent as CGImageMetadataTagMBS = nil, path as String) as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Searches for a specific tag in a CGImageMetadataRef and returns its string value.
Notes: This is a convenience method for searching for a tag at path and extracting the string value.

parent: A parent tag. If nil, the path is relative to the root of the metadata (i.e. it is not a child of another property).
path: A string with the path to the desired tag. Please consult the documentation of TagWithPath for information about path syntax.

Returns a string from a CGImageMetadataTagMBS located at 'path'. The tag must be of type kTypeString or kTypeAlternateText.
For AlternateText tags, the element with the "x-default" language qualifier will be returned. For other types, "" will be returned.

58.21.30 TagMatchingImageProperty(dictionaryName as String, propertyName as String) as Variant

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Searches for a specific CGImageMetadataTag matching an image property constant.
Notes: Provides a bridge for values from CGImageCopyPropertiesAtIndex, simplifying access for properties defined in EXIF and IPTC standards, which have no notion of namespaces, prefixes, or XMP property types.

Metadata: Working Group guidance is factored into the mapping of CGImage properties to XMP compatible metadata tags.

For example, kCGImagePropertyExifDateTimeOriginal will get the value of the corresponding XMP tag, which is photoshop:DateCreated. Note that property values will still be in their XMP forms, such as "YYYY-MM-DDThh:mm:ss" for DateTime, rather than the EXIF or IPTC DateTime formats.

dictionaryName: the metadata subdictionary to which the image property belongs, such as kCGImagePropertyExifDictionary or kCGImagePropertyIPTCDictionary. Not all dictionaries and properties are supported at this time.
propertyName: the name of the property. This must be a defined property constant corresponding to the 'dictionaryName'. For example, kCGImagePropertyTIFFOrientation, kCGImagePropertyExifDateTimeOriginal, or kCGImagePropertyIPTCKeywords. A warning will be logged if the CGImageProperty is unsupported by CGImageMetadata.

Returns a CGImageMetadataTagRef with the appropriate namespace, prefix, tag name, and XMP value for the corresponding CGImageProperty. Returns nil if the property could not be found.

58.21.31 Tags as CGImageMetadataTagMBS()

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Obtain an array of tags from a metadata object.
See also:

- 58.21.32 Tags(rootPath as string, options as Dictionary = nil) as CGImageMetadataTagMBS() 9628

58.21.32 Tags(rootPath as string, options as Dictionary = nil) as CGImageMetadataTagMBS()

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns the tags matching the path and options.
Notes: This function iterates over all of the tags in a metadata to collect the matching one. The default behavior iterates over all top-level tags in the metadata.

rootPath: Iteration will occur for all children of the tag matching the root path. Please refer to TagWithPath for information about path syntax. If an empty string, the search will be executed for all top-level tags in the metadata container.
options: A dictionary of options for iterating through the tags.
Currently the only supported option is kCGImageMetadataEnumerateRecursively, which should be set to a boolean.

Returns array with found items.
See also:

- 58.21.31 Tags as CGImageMetadataTagMBS() 9627

58.21.33 TagWithPath(parent as CGImageMetadataTagMBS = nil, path as string) as Variant

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Searches for a specific CGImageMetadataTagMBS in a CGImageMetadataMBS.
Notes: This is the primary function for clients to obtain specific metadata properties from an image. The 'path' mechanism provides a way to access both simple top-level properties, such as Date & Time, or complex deeply-nested properties with ease.

parent: A parent tag. If nil, the path is relative to the root of the metadata (i.e. it is not a child of another property). If the parent is provided, the effective path will be the concatenation of the parent's path and the 'path' parameter. This is useful for accessing array elements or structure fields inside nested tags.

path: A string representing a path to the desired tag. Paths consist of a tag prefix (i.e. "exif") joined with a tag name (i.e. "Flash") by a colon (":"), such as "exif:Flash".
Elements of ordered and unordered arrays are accessed via 0-based indices inside square [ ] brackets.
Elements of alternate-text arrays are accessed by an RFC 3066 language code inside square [ ] brackets.
Fields of a structure are delimited by a period, '.'.
Qualifiers are delimited by the '?' character. Only tags with string values (kTypeString) are allowed to have qualifiers - arrays and structures may not contain qualifiers.

If parent is nil, a prefix must be specified for the first tag. Prefixes for all subsequent tags are optional. If

unspecified, the prefix is inherented from the nearest parent tag with a prefix. Custom prefixes must be registered using RegisterNamespaceForPrefix prior to use in any path-based functions.

Examples:

- 'path' = "xmp:CreateDate"
- 'path' = "exif:Flash.Fired"
- 'parent' = tag at path "exif:Flash", path = "exif:Fired" (equivilent to previous)
- 'path' = "exif:Flash.RedEyeMode"
- 'path' = "dc:title"
- 'path' = "dc:subject"
- 'path' = "dc:subject [2] "
- 'parent' = tag at path "dc:subject", path = " [2] " (equivilent to previous
- 'path' = "dc:description [x-default]
- 'path' = "dc.description [de]
- 'path' = "dc.description [fr]
- 'path' = "foo:product
- 'path' = "foo:product?bar:manufacturer

Returns a CGImageMetadataTagMBS matching 'path', or nil if no match is found. The copy of the tag's value is shallow. Tags copied from an immutable CGImageMetadataMBS are also immutable. Because this function returns a copy of the tag's value, any modification of the tag's value must be followed by a SetTagWithPath to commit the change to the metadata container.

58.21.34 Properties

58.21.35 Handle as Integer

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

58.21.36 Constants

Errors

Constant	Value	Description
kErrorBadArgument	2	Bad argument
kErrorConflictingArguments	3	Conflicting Arguments
kErrorPrefixConflict	4	Prefix conflict
kErrorUnknown	0	Unknown error
kErrorUnsupportedFormat	1	Unsupported Format

58.22 class CGImageMetadataTagMBS

58.22.1 class CGImageMetadataTagMBS

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The class for a metadata tag.
Example:

```
// create a list of keywords as metadata tag and write it as XMP
Var keywords() As Variant
keywords.Add "beach"
keywords.Add "sunset"
keywords.Add "holiday"
Var tag As CGImageMetadataTagMBS = CGImageMetadataTagMBS.Create("http://purl.org/dc/elements/1.1/",
"dc", "subject", CGImageMetadataTagMBS.kTypeArrayUnordered, keywords)

Var meta As New CGMutableImageMetadataMBS
Call meta.SetTagWithPath(Nil, "dc:subject", tag)

Var xmp As MemoryBlock = meta.CreateXMPData
MessageBox "Tag " + tag.Prefix + ":" + tag.Name + EndOfLine + xmp.StringValue(0, xmp.Size)
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 18.5pr8

58.22.2 Methods

58.22.3 Constructor

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.

58.22.4 Create(XMLNS as String, Prefix as String, Name as String, Type as Integer, Value as Variant) as CGImageMetadataTagMBS

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Creates a new CGImageMetadataTagMBS object.
Notes: xmlns: The namespace for the tag. The value can be a common XMP namespace defined above,

such as kCGImageMetadataNamespaceExif, or a string with a custom namespace URI. Custom namespaces must be a valid XML namespace. By convention, namespaces should end with either '/' or '#'. For example, exif uses the namespace "http://ns.adobe.com/exif/1.0/".
prefix: An abbreviation for the XML namespace. The value can be empty if the namespace is defined as a constant. Custom prefixes must be a valid XML name. For example, the prefix used for "http://ns.adobe.com/exif/1.0/" is "exif". The XMP serialization of the tag will use the prefix. Prefixes are also important for path-based metadata functions, such as StringValueWithPath or SetValueWithPath.
name: The name of the tag. It must be a valid XMP name.
type: The type of the tag's value. Must be a kType* constant.
value: The value of the tag. Allowable types include string, double, integer, boolean, array, and dictionary. The type of 'value' must correspond to the 'type'. The elements of an array must be either a string or tags itself. The keys of a CFDictionary must be string with valid XMP names. The values of a dictionary must be either strings or tags. A shallow copy of the value is stored in the tag. Therefore, modifying a mutable value after the tag is created will not affect the tag's value.

Returns a new CGImageMetadataTagMBS object. Returns nil if a tag could not be created with the specified parameters.

58.22.5 Qualifiers as CGImageMetadataTagMBS()

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Return a copy of the tag's qualifiers.
Notes: XMP allows properties to contain supplemental properties called qualifiers. Qualifiers are themselves CGImageMetadataTagMBS objects with their own namespace, prefix, name, and value. A common use is the xml:lang qualifier for elements of an alternate-text array.

Returns a copy of the array of qualifiers. Elements of the array are CGImageMetadataTagMBS. Returns nil if the tag does not have any qualifiers.

58.22.6 Properties

58.22.7 Handle as Integer

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

58.22.8 Name as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns the tag's name.
Notes: (Read only property)

58.22.9 Namespace_ as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns the tag's namespace.
Notes: As Namespace is a reserved word in Xojo, we need to add a _ to get it to compile.
(Read only property)

58.22.10 Prefix as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns the tag's prefix.
Notes: (Read only property)

58.22.11 Type as Integer

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Get the type of the tag.
Notes: Returns a kType constant for the tag.
This is primarily used to determine how to interpret the tag's value.
(Read only property)

58.22.12 Value as Variant

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns a shallow copy of the tag's value.
Notes: This function should only be used to read the tag's value.
TagWithPath returns the tag (including the tag's value). Therefore mutating a tag's value returned from this function may not actually mutate the value in the CGImageMetadata. It is recommended to create a new tag followed by SetTagWithPath, or use SetValueWithPath to mutate a metadata value.
(Read only property)

58.22.13 Constants

Types

Constant	Value	Description
kTypeAlternateArray	4	An ordered array where all elements are alternates for the same value. Serialized in XMP as <rdf:Alt>.
kTypeAlternateText	5	A special case of an alternate array where all elements are different localized strings for the same value. Serialized in XMP as an alternate array of strings with xml:lang qualifiers.
kTypeArrayOrdered	3	An array where order is preserved. Serialized in XMP as <rdf:Seq>.
kTypeArrayUnordered	2	An array where order does not matter. Serialized in XMP as <rdf:Bag>.
kTypeDefault	0	The type is taken from the passed value for new tags.
kTypeInvalid	-1	Invalid.
kTypeString	1	A string value. Number and boolean values will be converted to a string.
kTypeStructure	6	A collection of keys and values. Unlike array elements, fields of a structure may belong to different namespaces.

58.23 class CGImageSourceMBS

58.23.1 class CGImageSourceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The CoreGraphics class for image loading.
Example:

```
Var file as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var c as new CGImageSourceMBS(file)
Var img as CGImageMBS = c.CreateImageAtIndex(0)

Backdrop=img.Picture
```

Notes: CGImageSource objects, available in Mac OS X v10.4 or later, abstract the data-reading task. An image source can read image data from a URL, a file or a string.

After creating a CGImageSource object for the appropriate source, you can obtain images, thumbnails, image properties, and other image information using CGImageSource functions.

58.23.2 Methods

58.23.3 AuxiliaryDataInfoAtIndex(index as integer, auxiliaryImageDataType as String, returnCFDictionary as Boolean = False) as Variant

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: Queries the auxiliary data dictionary.
Notes: Auxiliary data support for JPEG, HEIF, and DNG images (kCGImageAuxiliaryDataTypeDepth, ...)
The returned CFDictionary contains:

- the depth data (MemoryBlock) - (kCGImageAuxiliaryDataInfoData),
- the depth data description (CFDictionary) - (kCGImageAuxiliaryDataInfoDataDescription)
- metadata (CGImageMetadataRef) - (kCGImageAuxiliaryDataInfoMetadata)
- optional color space (CGColorSpaceRef) - (kCGImageAuxiliaryDataInfoColorSpace)

AuxiliaryDataInfoAtIndex returns nil if the image did not contain ,ÄòauxiliaryImageDataType,Äô data.

Returns a Dictionary or optional a CFDictionaryMBS object.

58.23.4 Constructor(data as string, options as Variant = nil)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an image source that reads from a string.
Notes: data: The data string to read from.
options: A dictionary that specifies additional creation options. For example kCGImageSourceTypeIdentifierHint.

On success the handle value is not zero.
Available in Mac OS X version 10.4 and later.

Options can be a Dictionary or CFDictionaryMBS object.
See also:

- 58.23.5 Constructor(file as folderitem, options as Variant = nil) 9637
- 58.23.6 Constructor(options as Variant = nil) 9637

58.23.5 Constructor(file as folderitem, options as Variant = nil)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an image source that reads from a location specified by a file.
Notes: url: The URL to read from.

options: A dictionary that specifies additional creation options. For example kCGImageSourceTypeIdentifierHint.

On success the handle value is not zero.

Available in Mac OS X version 10.4 and later.

Options can be a Dictionary or CFDictionaryMBS object.
See also:

- 58.23.4 Constructor(data as string, options as Variant = nil) 9636
- 58.23.6 Constructor(options as Variant = nil) 9637

58.23.6 Constructor(options as Variant = nil)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Create an incremental image source.
Notes: options: A dictionary that specifies additional creation options. For example kCGImageSourceTypeIdentifierHint.

Returns an image source object.

The constructor creates an empty image source container to which you can add data later by calling the function UpdateData. You don't provide data when you call this function.

An incremental image is an image that is created in chunks, similar to the way large images viewed over the web are loaded piece by piece.

Available in Mac OS X version 10.4 and later.

Options can be a Dictionary or CFDictionaryMBS object.
See also:

- 58.23.4 Constructor(data as string, options as Variant = nil) 9636

• 58.23.5 Constructor(file as folderitem, options as Variant = nil) 9637

58.23.7 CreateImageAtIndex(index as integer, options as Variant = nil) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a CGImage object for the image data associated with the specified index in an image source.
Example:

```
Var file as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var c as new CGImageSourceMBS(file)
Var img as CGImageMBS = c.CreateImageAtIndex(0)

Backdrop=img.Picture
```

Notes: index: The index that specifies the location of the image. The index is zero-based.

options: A dictionary that specifies additional creation options.

Returns a CGImage object.

Available in Mac OS X version 10.4 and later.

Options can be a Dictionary or CFDictionaryMBS object.

58.23.8 CreateIncremental(options as Variant = nil) as CGImageSourceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Create an incremental image source.
Notes: options: A dictionary that specifies additional creation options. For example kCGImageSourceTypeIdentifierHint.

The function CreateIncremental creates an empty image source container to which you can add data later by calling the function UpdateData. You don't provide data when you call this function.

An incremental image is an image that is created in chunks, similar to the way large images viewed over the web are loaded piece by piece.

Available in Mac OS X version 10.4 and later.

Options can be a Dictionary or CFDictionaryMBS object.

58.23.9 CreateThumbnailAtIndex(index as integer, options as Variant = nil) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a thumbnail image of the image located at a specified location in an image source.
Example:

```
Var file as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var c as new CGImageSourceMBS(file)

Var d as new Dictionary
d.Value(c.kCGImageSourceThumbnailMaxPixelSize)=200
d.Value(c.kCGImageSourceCreateThumbnailFromImageIfAbsent)=true

Var img as CGImageMBS = c.CreateThumbnailAtIndex(0,d)

Backdrop=img.Picture
```

Notes: index: The index that specifies the location of the image. The index is zero-based.

options: A dictionary that specifies additional creation options.

Returns a CGImageMBS.

If the image source is a PDF, this function creates a 72 dpi image of the PDF page specified by the index that you pass. You must, however, pass an options dictionary that contains either the kCGImageSourceCreateThumbnailFromImageIfAbsent or kCGImageSourceCreateThumbnailFromImageAlways keys, with the value of the key set to TRUE.

Available in Mac OS X version 10.4 and later.

Options can be a Dictionary or CFDictionaryMBS object.

58.23.10 CreateThumbnailMT(data as MemoryBlock, ImageIndex as integer = 0, Options as Variant = nil) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates thumbnail for image thread friendly.
Notes: Data contains the image file data.
ImageIndex is the index of the image in the file to query.
Options contains various flags for options to creating image source and creating thumbnail.

Returns nil in case of any error.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

Options can be a Dictionary or CFDictionaryMBS object.
See also:

- 58.23.11 CreateThumbnailMT(data as string, ImageIndex as integer = 0, Options as Variant = nil) as CGImageMBS 9640
- 58.23.12 CreateThumbnailMT(file as FolderItem, ImageIndex as integer = 0, Options as Variant = nil) as CGImageMBS 9641

58.23.11 CreateThumbnailMT(data as string, ImageIndex as integer = 0, Options as Variant = nil) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates thumbnail for image thread friendly.
Notes: Data contains the image file data.
ImageIndex is the index of the image in the file to query.
Options contains various flags for options to creating image source and creating thumbnail.

Returns nil in case of any error.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

Options can be a Dictionary or CFDictionaryMBS object.
See also:

- 58.23.12 CreateThumbnailMT(file as FolderItem, ImageIndex as integer = 0, Options as Variant = nil) as CGImageMBS 9641

58.23.12 CreateThumbnailMT(file as FolderItem, ImageIndex as integer = 0, Options as Variant = nil) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates thumbnail for image thread friendly.
Notes: File refers to image file on disk.
ImageIndex is the index of the image in the file to query.
Options contains various flags for options to creating image source and creating thumbnail.

Returns nil in case of any error.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

Options can be a Dictionary or CFDictionaryMBS object.

- 58.23.11 CreateThumbnailMT(data as string, ImageIndex as integer = 0, Options as Variant = nil) as CGImageMBS 9640

58.23.13 CreateWithData(data as string, options as Variant = nil) as CGImageSourceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an image source that reads from a string.
Notes: data: The data string to read from.
options: A dictionary that specifies additional creation options. For example kCGImageSourceTypeIdentifierHint.

Returns an image source.
Available in Mac OS X version 10.4 and later.

Options can be a Dictionary or CFDictionaryMBS object.

58.23.14 CreateWithFile(file as folderitem, options as Variant = nil) as CGImageSourceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an image source that reads from a location specified by a file.
Example:

```
// get a picture file
Var file as FolderItem = SpecialFolder.Desktop.Child("sylwia.jpg")
// get image source
Var source as new CGImageSourceMBS(file)
// read image
Var image as CGImageMBS = source.CreateImageAtIndex(0)
// get Color space from image
Var profile as CGColorSpaceMBS = image.ColorSpace
// get ICC profile data
Var ICCProfile as string = profile.ICCProfile
// and parse it with LCMS and show name
Var LCMSProfile as LCMS2ProfileMBS = LCMS2ProfileMBS.OpenProfileFromString(ICCProfile)
MessageBox LCMSProfile.Name
```

Notes: url: The URL to read from.

options: A dictionary that specifies additional creation options. For example kCGImageSourceTypeIdentifierHint.

Returns an image source.

Available in Mac OS X version 10.4 and later.

Options can be a Dictionary or CFDictionaryMBS object.

58.23.15 CreateWithURL(url as string, options as Variant = nil) as CGImageSourceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an image source that reads from a location specified by a URL.
Notes: url: The URL to read from.

options: A dictionary that specifies additional creation options. For example kCGImageSourceTypeIdentifierHint.

On success the handle value is not zero.

Available in Mac OS X version 10.4 and later.

Options can be a Dictionary or CFDictionaryMBS object.

58.23.16 kCGComputeHDRStats as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the keys for the options dictionary.
Notes: HDR statistics

58.23.17 kCGImageAuxiliaryDataInfoColorSpace as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the auxiliary properties.
Notes: the color space associated with the aux image

58.23.18 kCGImageAuxiliaryDataInfoData as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the auxiliary properties.
Notes: the depth data

58.23.19 kCGImageAuxiliaryDataInfoDataDescription as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the auxiliary properties.
Notes: the depth data description

58.23.20 kCGImageAuxiliaryDataInfoMetadata as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the auxiliary properties.
Notes: metadata

58.23.21 kCGImageAuxiliaryDataTypeDepth as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the auxiliary properties.

58.23.22 kCGImageAuxiliaryDataTypeDisparity as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the auxiliary properties.

58.23.23 kCGImageAuxiliaryDataTypeHDRGainMap as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the auxiliary properties.

58.23.24 kCGImageAuxiliaryDataTypeISOGainMap as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the auxiliary properties.

58.23.25 kCGImageAuxiliaryDataTypePortraitEffectsMatte as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the auxiliary properties.

58.23.26 kCGImageAuxiliaryDataTypeSemanticSegmentationGlassesMatte as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the auxiliary properties.

58.23.27 kCGImageAuxiliaryDataTypeSemanticSegmentationHairMatte as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the auxiliary properties.

58.23.28 kCGImageAuxiliaryDataTypeSemanticSegmentationSkinMatte as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the auxiliary properties.

58.23.29 kCGImageAuxiliaryDataTypeSemanticSegmentationSkyMatte as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the auxiliary properties.

58.23.30 kCGImageAuxiliaryDataTypeSemanticSegmentationTeethMatte as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the auxiliary properties.

58.23.31 kCGImageProperty8BIMDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: A dictionary of key-value pairs for an Adobe Photoshop image.

58.23.32 kCGImageProperty8BIMLayerNames as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The layer names for an Adobe Photoshop file.

58.23.33 kCGImageProperty8BIMVersion as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.34 kCGImagePropertyAPNGCanvasPixelHeight as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.35 kCGImagePropertyAPNGCanvasPixelWidth as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.36 kCGImagePropertyAPNGDelayTime as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.37 kCGImagePropertyAPNGFrameInfoArray as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.38 kCGImagePropertyAPNGLoopCount as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.39 kCGImagePropertyAPNGUnclampedDelayTime as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.40 kCGImagePropertyAuxiliaryData as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.41 kCGImagePropertyAuxiliaryDataType as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.42 kCGImagePropertyAVISDictionary as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.43 kCGImagePropertyBytesPerRow as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.44 kCGImagePropertyCIFFCameraSerialNumber as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The camera serial number.

58.23.45 kCGImagePropertyCIFFContinuousDrive as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The continuous drive mode.

58.23.46 kCGImagePropertyCIFFDescription as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The camera description.

58.23.47 kCGImagePropertyCIFFDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: A dictionary of key-value pairs for an image that uses Camera Image File Format (CIFF).

Available in Mac OS X v10.5 and later.

58.23.48 kCGImagePropertyCIFFFirmware as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The firmware version.

58.23.49 kCGImagePropertyCIFFFlashExposureComp as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The flash exposure compensation.

58.23.50 kCGImagePropertyCIFFFocusMode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The focus mode.

58.23.51 kCGImagePropertyCIFFImageFileName as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The image file name.

58.23.52 kCGImagePropertyCIFFImageName as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The image name.

58.23.53 kCGImagePropertyCIFFImageSerialNumber as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The image serial number.

58.23.54 kCGImagePropertyCIFFLensMaxMM as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The maximum lens length.

58.23.55 kCGImagePropertyCIFFLensMinMM as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The minimum lens length.

58.23.56 kCGImagePropertyCIFFLensModel as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The lens model.

58.23.57 kCGImagePropertyCIFFMeasuredEV as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The measured EV.

58.23.58 kCGImagePropertyCIFFMeteringMode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The metering mode.

58.23.59 kCGImagePropertyCIFFOwnerName as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The owner name.

58.23.60 kCGImagePropertyCIFFRecordID as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The record ID

58.23.61 kCGImagePropertyCIFFReleaseMethod as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The release method.

58.23.62 kCGImagePropertyCIFFReleaseTiming as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The release timing.

58.23.63 kCGImagePropertyCIFFSelfTimingTime as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The self timing time.

58.23.64 kCGImagePropertyCIFFShootingMode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The shooting mode.

58.23.65 kCGImagePropertyCIFFWhiteBalanceIndex as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The white balance index.

58.23.66 kCGImagePropertyColorModel as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The color model of the image such as, "RGB", "CMYK", "Gray", or "Lab". The value of this key is CFStringRef.

A color model describes how color values are represented mathematically. A color space is a color model combined with a definition of how to interpret values within the model.

58.23.67 kCGImagePropertyColorModelCMYK as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Values for the color model property.
Notes: A CMYK color model.

58.23.68 kCGImagePropertyColorModelGray as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Values for the color model property.
Notes: A Gray color model.

58.23.69 kCGImagePropertyColorModelLab as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Values for the color model property.
Notes: A Lab color model.

58.23.70 kCGImagePropertyColorModelRGB as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Values for the color model property.
Notes: An RGB color model.

58.23.71 kCGImagePropertyDepth as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The number of bits in each color sample of each pixel. If present, this key is a CFNumber value.

58.23.72 kCGImagePropertyDNGActiveArea as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.73 kCGImagePropertyDNGAnalogBalance as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.74 kCGImagePropertyDNGAntiAliasStrength as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.75 kCGImagePropertyDNGAsShotICCProfile as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.76 kCGImagePropertyDNGAsShotNeutral as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.77 kCGImagePropertyDNGAsShotPreProfileMatrix as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.78 kCGImagePropertyDNGAsShotProfileName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.79 kCGImagePropertyDNGAsShotWhiteXY as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.80 kCGImagePropertyDNGBackwardVersion as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses the Digital Negative (DNG) archival format.
Notes: The oldest version for which a file is compatible.

58.23.81 kCGImagePropertyDNGBaselineExposure as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.82 kCGImagePropertyDNGBaselineExposureOffset as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.83 kCGImagePropertyDNGBaselineNoise as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.84 kCGImagePropertyDNGBaselineSharpness as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.85 kCGImagePropertyDNGBayerGreenSplit as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.86 kCGImagePropertyDNGBestQualityScale as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.87 kCGImagePropertyDNGBlackLevel as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.88 kCGImagePropertyDNGBlackLevelDeltaH as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.89 kCGImagePropertyDNGBlackLevelDeltaV as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.90 kCGImagePropertyDNGBlackLevelRepeatDim as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.91 kCGImagePropertyDNGCalibrationIlluminant1 as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.92 kCGImagePropertyDNGCalibrationIlluminant2 as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.93 kCGImagePropertyDNGCameraCalibration1 as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.94 kCGImagePropertyDNGCameraCalibration2 as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.95 kCGImagePropertyDNGCameraCalibrationSignature as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.96 kCGImagePropertyDNGCameraSerialNumber as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses the Digital Negative (DNG) archival format.
Notes: The camera serial number.

58.23.97 kCGImagePropertyDNGCFALayout as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.98 kCGImagePropertyDNGCFAPlaneColor as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.99 kCGImagePropertyDNGChromaBlurRadius as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.100 kCGImagePropertyDNGColorimetricReference as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.101 kCGImagePropertyDNGColorMatrix1 as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.102 kCGImagePropertyDNGColorMatrix2 as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.103 kCGImagePropertyDNGCurrentICCProfile as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.104 kCGImagePropertyDNGCurrentPreProfileMatrix as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.105 kCGImagePropertyDNGDefaultBlackRender as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.106 kCGImagePropertyDNGDefaultCropOrigin as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.107 kCGImagePropertyDNGDefaultCropSize as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.108 kCGImagePropertyDNGDefaultScale as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.109 kCGImagePropertyDNGDefaultUserCrop as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.110 kCGImagePropertyDNGDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: A dictionary of key-value pairs for an image that uses the Digital Negative (DNG) archival format.

58.23.111 kCGImagePropertyDNGExtraCameraProfiles as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.112 kCGImagePropertyDNGFixVignetteRadial as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.113 kCGImagePropertyDNGForwardMatrix1 as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.114 kCGImagePropertyDNGForwardMatrix2 as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.115 kCGImagePropertyDNGLensInfo as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses the Digital Negative (DNG) archival format.
Notes: Information about the lens used for the image.

58.23.116 kCGImagePropertyDNGLinearizationTable as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.117 kCGImagePropertyDNGLinearResponseLimit as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.118 kCGImagePropertyDNGLocalizedCameraModel as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses the Digital Negative (DNG) archival format.
Notes: The localized camera model name.

58.23.119 kCGImagePropertyDNGMakerNoteSafety as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.120 kCGImagePropertyDNGMaskedAreas as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.121 kCGImagePropertyDNGNewRawImageDigest as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.122 kCGImagePropertyDNGNoiseProfile as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.123 kCGImagePropertyDNGNoiseReductionApplied as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.124 kCGImagePropertyDNGOpcodeList1 as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.125 kCGImagePropertyDNGOpcodeList2 as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.126 kCGImagePropertyDNGOpcodeList3 as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.127 kCGImagePropertyDNGOriginalBestQualityFinalSize as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.128 kCGImagePropertyDNGOriginalDefaultCropSize as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.129 kCGImagePropertyDNGOriginalDefaultFinalSize as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.130 kCGImagePropertyDNGOriginalRawFileData as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.131 kCGImagePropertyDNGOriginalRawFileDigest as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.132 kCGImagePropertyDNGOriginalRawFileName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.133 kCGImagePropertyDNGPreviewApplicationName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.134 kCGImagePropertyDNGPreviewApplicationVersion as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.135 kCGImagePropertyDNGPreviewColorSpace as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.136 kCGImagePropertyDNGPreviewDateTime as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.137 kCGImagePropertyDNGPreviewSettingsDigest as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.138 kCGImagePropertyDNGPreviewSettingsName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.139 kCGImagePropertyDNGPrivateData as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.140 kCGImagePropertyDNGProfileCalibrationSignature as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.141 kCGImagePropertyDNGProfileCopyright as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.142 kCGImagePropertyDNGProfileEmbedPolicy as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.143 kCGImagePropertyDNGProfileHueSatMapData1 as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.144 kCGImagePropertyDNGProfileHueSatMapData2 as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.145 kCGImagePropertyDNGProfileHueSatMapDims as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.146 kCGImagePropertyDNGProfileHueSatMapEncoding as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.147 kCGImagePropertyDNGProfileLookTableData as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.148 kCGImagePropertyDNGProfileLookTableDims as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.149 kCGImagePropertyDNGProfileLookTableEncoding as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.150 kCGImagePropertyDNGProfileName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.151 kCGImagePropertyDNGProfileToneCurve as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.152 kCGImagePropertyDNGRawDataUniqueID as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.153 kCGImagePropertyDNGRawImageDigest as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.154 kCGImagePropertyDNGRawToPreviewGain as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.155 kCGImagePropertyDNGReductionMatrix1 as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.156 kCGImagePropertyDNGReductionMatrix2 as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.157 kCGImagePropertyDNGRowInterleaveFactor as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.158 kCGImagePropertyDNGShadowScale as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.159 kCGImagePropertyDNGSubTileBlockSize as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.160 kCGImagePropertyDNGUniqueCameraModel as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses the Digital Negative (DNG) archival format.
Notes: A unique, nonlocalized name for the camera mode.

58.23.161 kCGImagePropertyDNGVersion as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses the Digital Negative (DNG) archival format.
Notes: An encoding of the four-tier version number.

58.23.162 kCGImagePropertyDNGWarpFisheye as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.163 kCGImagePropertyDNGWarpRectilinear as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.164 kCGImagePropertyDNGWhiteLevel as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.165 kCGImagePropertyDPIHeight as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The resolution, in dots per inch, in the x dimension. If present, this key is a CFNumber value.

58.23.166 kCGImagePropertyDPIWidth as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The resolution, in dots per inch, in the y dimension. If present, this key is a CFNumber value.

58.23.167 kCGImagePropertyExifApertureValue as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The aperture value.

58.23.168 kCGImagePropertyExifAuxDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: An auxiliary dictionary of key-value pairs for an image that uses Exchangeable Image File Format

(EXIF).

58.23.169 kCGImagePropertyExifAuxFirmware as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the Exif Auxiliary dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: Firmware information.

58.23.170 kCGImagePropertyExifAuxFlashCompensation as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the Exif Auxiliary dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: Flash compensation.

58.23.171 kCGImagePropertyExifAuxImageNumber as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the Exif Auxiliary dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The image number.

58.23.172 kCGImagePropertyExifAuxLensID as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the Exif Auxiliary dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The lens ID.

58.23.173 kCGImagePropertyExifAuxLensInfo as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the Exif Auxiliary dictionary for an image that uses Exchangeable Image File Format (EXIF).

Notes: Lens information.

58.23.174 kCGImagePropertyExifAuxLensModel as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the Exif Auxiliary dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The lens model.

58.23.175 kCGImagePropertyExifAuxLensSerialNumber as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the Exif Auxiliary dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The lens serial number.

58.23.176 kCGImagePropertyExifAuxOwnerName as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the Exif Auxiliary dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The owner name.

58.23.177 kCGImagePropertyExifAuxSerialNumber as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the Exif Auxiliary dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The serial number.

58.23.178 kCGImagePropertyExifBodySerialNumber as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.179 kCGImagePropertyExifBrightnessValue as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The brightness value.

58.23.180 kCGImagePropertyExifCameraOwnerName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.181 kCGImagePropertyExifCFAPattern as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The color filter array (CFA) pattern, which is the geometric patter of the image sensor for a 1-chip color sensor area.

58.23.182 kCGImagePropertyExifColorSpace as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The color space.

58.23.183 kCGImagePropertyExifComponentsConfiguration as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The components configuration. For compressed data, specifies that the channels of each component are arranged in increasing numeric order (from first component to the fourth).

58.23.184 kCGImagePropertyExifCompositeImage as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.185 kCGImagePropertyExifCompressedBitsPerPixel as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The compressed bits per pixel.

58.23.186 kCGImagePropertyExifContrast as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The contrast applied to the image.

58.23.187 kCGImagePropertyExifCustomRendered as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: Special rendering performed on the image data.

58.23.188 kCGImagePropertyExifDateTimeDigitized as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The digitized date and time.

58.23.189 kCGImagePropertyExifDateTimeOriginal as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The original date and time.

58.23.190 kCGImagePropertyExifDeviceSettingDescription as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: For a particular camera mode, indicates the conditions for taking the picture.

58.23.191 kCGImagePropertyExifDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: A dictionary of key-value pairs for an image that uses Exchangeable Image File Format (EXIF).

58.23.192 kCGImagePropertyExifDigitalZoomRatio as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The digital zoom ratio.

58.23.193 kCGImagePropertyExifExposureBiasValue as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The exposure bias value.

58.23.194 kCGImagePropertyExifExposureIndex as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The selected exposure index.

58.23.195 kCGImagePropertyExifExposureMode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The exposure mode setting.

58.23.196 kCGImagePropertyExifExposureProgram as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The exposure program.

58.23.197 kCGImagePropertyExifExposureTime as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The exposure time.

58.23.198 kCGImagePropertyExifFileSource as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The image source.

58.23.199 kCGImagePropertyExifFlash as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The flash status when the image was shot.

58.23.200 kCGImagePropertyExifFlashEnergy as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The strobe energy when the image was captures, in beam candle power seconds.

58.23.201 kCGImagePropertyExifFlashPixVersion as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The FlashPix version supported by an FPXR file. FlashPix is a format for multi-resolution, tiled images, that facilitates fast onscreen viewing.

58.23.202 kCGImagePropertyExifFNumber as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The F number.

58.23.203 kCGImagePropertyExifFocalLength as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The focal length.

58.23.204 kCGImagePropertyExifFocalLenIn35mmFilm as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The equivalent focal length in 35 mm film.

58.23.205 kCGImagePropertyExifFocalPlaneResolutionUnit as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The unit of measurement for the focal plane x and y tags.

58.23.206 kCGImagePropertyExifFocalPlaneXResolution as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The number of image-width pixels (x) per focal plane resolution unit.

58.23.207 kCGImagePropertyExifFocalPlaneYResolution as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The number of image-height pixels (y)per focal plane resolution unit.

58.23.208 kCGImagePropertyExifGainControl as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The gain adjustment applied to the image.

58.23.209 kCGImagePropertyExifGamma as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The gamma setting.

58.23.210 kCGImagePropertyExifImageUniqueID as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The unique ID of the image.

58.23.211 kCGImagePropertyExifISOSpeed as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.212 kCGImagePropertyExifISOSpeedLatitudeyyy as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.213 kCGImagePropertyExifISOSpeedLatitudezzz as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.214 kCGImagePropertyExifISOSpeedRatings as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: ISO speed ratings.

58.23.215 kCGImagePropertyExifLensMake as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.216 kCGImagePropertyExifLensModel as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.217 kCGImagePropertyExifLensSerialNumber as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.218 kCGImagePropertyExifLensSpecification as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.219 kCGImagePropertyExifLightSource as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The light source.

58.23.220 kCGImagePropertyExifMakerNote as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: A maker note.

58.23.221 kCGImagePropertyExifMaxApertureValue as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The maximum aperture value.

58.23.222 kCGImagePropertyExifMeteringMode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The metering mode.

58.23.223 kCGImagePropertyExifOECF as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The opto-electrical conversion function (OECF), which defines the relationship between the optical input of the camera and the image values.

58.23.224 kCGImagePropertyExifOffsetTime as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.225 kCGImagePropertyExifOffsetTimeDigitized as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.226 kCGImagePropertyExifOffsetTimeOriginal as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.227 kCGImagePropertyExifPixelXDimension as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The pixel x dimension.

58.23.228 kCGImagePropertyExifPixelYDimension as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The pixel y dimension.

58.23.229 kCGImagePropertyExifRecommendedExposureIndex as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.230 kCGImagePropertyExifRelatedSoundFile as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: A related sound file.

58.23.231 kCGImagePropertyExifSaturation as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The saturation applied to the image.

58.23.232 kCGImagePropertyExifSceneCaptureType as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The scene capture type (standard, landscape, portrait, night).

58.23.233 kCGImagePropertyExifSceneType as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The scene type.

58.23.234 kCGImagePropertyExifSensingMethod as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The sensor type of the camera or input device.

58.23.235 kCGImagePropertyExifSensitivityType as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.236 kCGImagePropertyExifSharpness as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The sharpness applied to the image.

58.23.237 kCGImagePropertyExifShutterSpeedValue as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The shutter speed value.

58.23.238 kCGImagePropertyExifSourceExposureTimesOfCompositeImage as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.239 kCGImagePropertyExifSourceImageNumberOfCompositeImage as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.240 kCGImagePropertyExifSpatialFrequencyResponse as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The spatial frequency table and spatial frequency response values in the direction of image width, image height, and diagonal directions. See ISO 12233.

58.23.241 kCGImagePropertyExifSpectralSensitivity as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The spectral sensitivity of each channel.

58.23.242 kCGImagePropertyExifStandardOutputSensitivity as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.243 kCGImagePropertyExifSubjectArea as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The subject area.

58.23.244 kCGImagePropertyExifSubjectDistance as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The distance to the subject, in meters.

58.23.245 kCGImagePropertyExifSubjectDistRange as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The subject distance range.

58.23.246 kCGImagePropertyExifSubjectLocation as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The location of the scene's primary subject.

58.23.247 kCGImagePropertyExifSubsecTime as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The fraction of seconds for the date and time tag.

58.23.248 kCGImagePropertyExifSubsecTimeDigitized as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The fraction of seconds for the digitized time tag.

58.23.249 kCGImagePropertyExifSubsecTimeOriginal as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The fraction of seconds for the original date and time tag.

58.23.250 kCGImagePropertyExifUserComment as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: A user comment.

58.23.251 kCGImagePropertyExifVersion as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The version.

58.23.252 kCGImagePropertyExifWhiteBalance as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The white balance mode.

58.23.253 kCGImagePropertyFileContentsDictionary as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.254 kCGImagePropertyFileSize as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The size of the image file in bytes, if known. If present, this key is a CFNumber value.

Available in Mac OS X v10.4 and later.

This key is used in the image source properties.

58.23.255 kCGImagePropertyGIFCanvasPixelHeight as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.256 kCGImagePropertyGIFCanvasPixelWidth as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.257 kCGImagePropertyGIFDelayTime as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Graphics Interchange Format (GIF).
Notes: The delay time.

58.23.258 kCGImagePropertyGIFDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: A dictionary of key-value pairs for an image that uses Graphics Interchange Format (GIF).

58.23.259 kCGImagePropertyGIFFrameInfoArray as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.260 kCGImagePropertyGIFHasGlobalColorMap as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Graphics Interchange Format (GIF).
Notes: Whether or not the GIF has a global color map.

58.23.261 kCGImagePropertyGIFImageColorMap as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Graphics Interchange Format (GIF).
Notes: The image color map.

58.23.262 kCGImagePropertyGIFLoopCount as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Graphics Interchange Format (GIF).
Notes: The loop count.

58.23.263 kCGImagePropertyGIFUnclampedDelayTime as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: The unclamped delay time.
Available in OS X v10.7 and later.

58.23.264 kCGImagePropertyGPSAltitude as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The altitude.

58.23.265 kCGImagePropertyGPSAltitudeRef as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The reference altitude.

58.23.266 kCGImagePropertyGPSAreaInformation as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The name of the GPS area.

58.23.267 kCGImagePropertyGPSDateStamp as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The data and time information relative to Coordinated Universal Time (UTC).

58.23.268 kCGImagePropertyGPSDestBearing as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The bearing to the destination point.

58.23.269 kCGImagePropertyGPSDestBearingRef as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The reference for giving the bearing to the destination point.

58.23.270 kCGImagePropertyGPSDestDistance as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The distance to the destination point.

58.23.271 kCGImagePropertyGPSDestDistanceRef as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The units for expressing the distance to the destination point.

58.23.272 kCGImagePropertyGPSDestLatitude as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The latitude of the destination point.

58.23.273 kCGImagePropertyGPSDestLatitudeRef as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: Whether the latitude of the destination point is northern or southern.

58.23.274 kCGImagePropertyGPSDestLongitude as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The longitude of the destination point.

58.23.275 kCGImagePropertyGPSDestLongitudeRef as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: Whether the longitude of the destination point is east or west.

58.23.276 kCGImagePropertyGPSDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: A dictionary of key-value pairs for an image that has Global Positioning System (GPS) information.

58.23.277 kCGImagePropertyGPSDifferental as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: Whether differential correction is applied to the GPS receiver.

58.23.278 kCGImagePropertyGPSDOP as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The data degree of precision (DOP).

58.23.279 kCGImagePropertyGPSHPositioningError as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.280 kCGImagePropertyGPSImgDirection as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The direction of the image.

58.23.281 kCGImagePropertyGPSImgDirectionRef as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The reference for the direction of the image.

58.23.282 kCGImagePropertyGPSLatitude as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The latitude.

58.23.283 kCGImagePropertyGPSLatitudeRef as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: Whether the latitude is northern or southern.

58.23.284 kCGImagePropertyGPSLongitude as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The longitude.

58.23.285 kCGImagePropertyGPSLongitudeRef as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: Whether the longitude is east or west.

58.23.286 kCGImagePropertyGPSMapDatum as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The geodetic survey data used by the GPS receiver.

58.23.287 kCGImagePropertyGPSMeasureMode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The measurement mode.

58.23.288 kCGImagePropertyGPSProcessingMethod as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The name of the method used for finding a location.

58.23.289 kCGImagePropertyGPSSatellites as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The satellites used for GPS measurements.

58.23.290 kCGImagePropertyGPSSpeed as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The GPS receiver speed of movement.

58.23.291 kCGImagePropertyGPSSpeedRef as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The unit for expressing the GPS receiver speed of movement.

58.23.292 kCGImagePropertyGPSStatus as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The status of the GPS receiver.

58.23.293 kCGImagePropertyGPSTimeStamp as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The time as UTC (Coordinated Universal Time).

58.23.294 kCGImagePropertyGPSTrack as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The direction of GPS receiver movement.

58.23.295 kCGImagePropertyGPSTrackRef as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The reference for the direction of GPS receiver movement.

58.23.296 kCGImagePropertyGPSVersion as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The version.

58.23.297 kCGImagePropertyGroupImageBaseline as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.298 kCGImagePropertyGroupImageDisparityAdjustment as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.299 kCGImagePropertyGroupImageIndexLeft as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.300 kCGImagePropertyGroupImageIndexMonoscopic as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.301 kCGImagePropertyGroupImageIndexRight as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.302 kCGImagePropertyGroupImageIsAlternateImage as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.303 kCGImagePropertyGroupImageIsLeftImage as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.304 kCGImagePropertyGroupImageIsMonoscopicImage as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.305 kCGImagePropertyGroupImageIsRightImage as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.306 kCGImagePropertyGroupImagesAlternate as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.307 kCGImagePropertyGroupImageStereoAggressors as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.308 kCGImagePropertyGroupIndex as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.309 kCGImagePropertyGroupMonoscopicImageLocation as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.310 kCGImagePropertyGroups as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.311 kCGImagePropertyGroupType as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.312 kCGImagePropertyGroupTypeAlternate as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.313 kCGImagePropertyGroupTypeStereoPair as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.314 kCGImagePropertyHasAlpha as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: Whether or not the image has an alpha channel. The value of this key is kCFBooleanTrue if the image contains an alpha channel.

58.23.315 kCGImagePropertyHEICSCanvasPixelHeight as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.316 kCGImagePropertyHEICSCanvasPixelWidth as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.317 kCGImagePropertyHEICSDelayTime as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.318 kCGImagePropertyHEICSDictionary as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.319 kCGImagePropertyHEICSFrameInfoArray as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.320 kCGImagePropertyHEICSLoopCount as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.321 kCGImagePropertyHEICSUnclampedDelayTime as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.322 kCGImagePropertyHEIFDictionary as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.323 kCGImagePropertyHeight as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.324 kCGImagePropertyImageCount as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.325 kCGImagePropertyImageIndex as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.326 kCGImagePropertyImages as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.327 kCGImagePropertyIPTCActionAdvised as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The advised action.

58.23.328 kCGImagePropertyIPTCByline as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The byline.

58.23.329 kCGImagePropertyIPTCBylineTitle as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The byline title.

58.23.330 kCGImagePropertyIPTCCaptionAbstract as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The caption abstract.

58.23.331 kCGImagePropertyIPTCCategory as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The category.

58.23.332 kCGImagePropertyIPTCCity as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The city.

58.23.333 kCGImagePropertyIPTCContact as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: Contact information.

58.23.334 kCGImagePropertyIPTCContactInfoAddress as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: The address portion of the contact information.
Available in OS X v10.6 and later.

58.23.335 kCGImagePropertyIPTCContactInfoCity as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: The city portion of the contact information.
Available in OS X v10.6 and later.

58.23.336 kCGImagePropertyIPTCContactInfoCountry as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: The country portion of the contact information.
Available in OS X v10.6 and later.

58.23.337 kCGImagePropertyIPTCContactInfoEmails as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: Email addresses for the contact.

Available in OS X v10.6 and later.

58.23.338 kCGImagePropertyIPTCContactInfoPhones as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: Phone numbers for the contact.
Available in OS X v10.6 and later.

58.23.339 kCGImagePropertyIPTCContactInfoPostalCode as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: The postal code portion of the contact information.
Available in OS X v10.6 and later.

58.23.340 kCGImagePropertyIPTCContactInfoStateProvince as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: The state or province for the contact.
Available in OS X v10.6 and later.

58.23.341 kCGImagePropertyIPTCContactInfoWebURLs as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: Web addresses for the contact.
Available in OS X v10.6 and later.

58.23.342 kCGImagePropertyIPTCContentLocationCode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The content location code.

58.23.343 kCGImagePropertyIPTCContentLocationName as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The content location name.

58.23.344 kCGImagePropertyIPTCCopyrightNotice as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The copyright notice.

58.23.345 kCGImagePropertyIPTCCountryPrimaryLocationCode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The country primary location code.

58.23.346 kCGImagePropertyIPTCCountryPrimaryLocationName as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The country primary location name.

58.23.347 kCGImagePropertyIPTCCreatorContactInfo as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: The creator's contact info. See "IPTC Creator Contact Info Dictionary Keys."
Available in OS X v10.6 and later.

58.23.348 kCGImagePropertyIPTCCredit as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: Credit information.

58.23.349 kCGImagePropertyIPTCDateCreated as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The date created.

58.23.350 kCGImagePropertyIPTCDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Example:

```
// Change rotation in an image file

// files
Var dpath as folderitem = SpecialFolder.Desktop.Child("test.jpg")
Var opath as folderitem = dpath.parent.Child("output.jpg")

// open source
Var imageSource as new cgimagesourcembs(dpath)

// read image
Var img as cgimagembs = imageSource.createimageatindex(0)

// global properties
Var globalprop as dictionary = imageSource.properties
// per image properties
Var p as Dictionary = imageSource.PropertiesAtIndex(0)

Var imageDest as new CGImageDestinationMBS(opath,"public.jpeg",1)

'const orientation = 1 // top left
const orientation = 3 // bottom right

// set globals
imageDest.SetProperties(globalprop)
```

```
// now set new orientation
p.value(imageDest.kCGImageDestinationOrientation) = orientation
p.value(imageDest.kCGImageDestinationMergeMetadata) = true

// change tiff dictionary, if present
Var dTIFF as Dictionary = p.lookup(imageSource.kCGImagePropertyTIFFDictionary, nil)
if dTIFF <>nil then
dTIFF.value(imageSource.kCGImagePropertyTIFFOrientation) = orientation
end if

// change iptc dictionary, if present
Var dIPTC as Dictionary = p.lookup(imageSource.kCGImagePropertyIPTCDictionary, nil)
if dIPTC <>nil then
dIPTC.value(imageSource.kCGImagePropertyIPTCImageOrientation) = orientation
end if

// write out image
imageDest.AddImage(img,p)
call imageDest.Finalize
```

Notes: A dictionary of key-value pairs for an image that uses International Press Telecommunications Council (IPTC) metadata.

IPTC constants are metadata elements of the Information Interchange Model (IIM) used to provide information about images. The IIM was developer by the Newspaper Association of America (NAA) and the International Press Telecommunications Council (IPTC).

58.23.351 kCGImagePropertyIPTCDigitalCreationDate as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The digital creation date.

58.23.352 kCGImagePropertyIPTCDigitalCreationTime as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The digital creation time.

58.23.353 kCGImagePropertyIPTCEditorialUpdate as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: An editorial update.

58.23.354 kCGImagePropertyIPTCEditStatus as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The edit status.

58.23.355 kCGImagePropertyIPTCExpirationDate as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The expiration date.

58.23.356 kCGImagePropertyIPTCExpirationTime as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The expiration time.

58.23.357 kCGImagePropertyIPTCExtAboutCvTerm as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.358 kCGImagePropertyIPTCExtAboutCvTermCvId as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.359 kCGImagePropertyIPTCExtAboutCvTermId as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.360 kCGImagePropertyIPTCExtAboutCvTermName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.361 kCGImagePropertyIPTCExtAboutCvTermRefinedAbout as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.362 kCGImagePropertyIPTCExtAddlModelInfo as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.363 kCGImagePropertyIPTCExtArtworkCircaDateCreated as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.364 kCGImagePropertyIPTCExtArtworkContentDescription as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.365 kCGImagePropertyIPTCExtArtworkContributionDescription as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.366 kCGImagePropertyIPTCExtArtworkCopyrightNotice as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.367 kCGImagePropertyIPTCExtArtworkCopyrightOwnerID as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.368 kCGImagePropertyIPTCExtArtworkCopyrightOwnerName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.369 kCGImagePropertyIPTCExtArtworkCreator as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.370 kCGImagePropertyIPTCExtArtworkCreatorID as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.371 kCGImagePropertyIPTCExtArtworkDateCreated as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.372 kCGImagePropertyIPTCExtArtworkLicensorID as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.373 kCGImagePropertyIPTCExtArtworkLicensorName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.374 kCGImagePropertyIPTCExtArtworkOrObject as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.375 kCGImagePropertyIPTCExtArtworkPhysicalDescription as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.376 kCGImagePropertyIPTCExtArtworkSource as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.377 kCGImagePropertyIPTCExtArtworkSourceInventoryNo as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.378 kCGImagePropertyIPTCExtArtworkSourceInvURL as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.379 kCGImagePropertyIPTCExtArtworkStylePeriod as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.380 kCGImagePropertyIPTCExtArtworkTitle as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.381 kCGImagePropertyIPTCExtAudioBitrate as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.382 kCGImagePropertyIPTCExtAudioBitrateMode as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.383 kCGImagePropertyIPTCExtAudioChannelCount as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.384 kCGImagePropertyIPTCExtCircaDateCreated as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.385 kCGImagePropertyIPTCExtContainerFormat as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.386 kCGImagePropertyIPTCExtContainerFormatIdentifier as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.387 kCGImagePropertyIPTCExtContainerFormatName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.388 kCGImagePropertyIPTCExtContributor as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.389 kCGImagePropertyIPTCExtContributorIdentifier as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.390 kCGImagePropertyIPTCExtContributorName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.391 kCGImagePropertyIPTCExtContributorRole as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.392 kCGImagePropertyIPTCExtControlledVocabularyTerm as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.393 kCGImagePropertyIPTCExtCopyrightYear as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.394 kCGImagePropertyIPTCExtCreator as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.395 kCGImagePropertyIPTCExtCreatorIdentifier as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.396 kCGImagePropertyIPTCExtCreatorName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.397 kCGImagePropertyIPTCExtCreatorRole as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.398 kCGImagePropertyIPTCExtDataOnScreen as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.399 kCGImagePropertyIPTCExtDataOnScreenRegion as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.400 kCGImagePropertyIPTCExtDataOnScreenRegionD as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.401 kCGImagePropertyIPTCExtDataOnScreenRegionH as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.402 kCGImagePropertyIPTCExtDataOnScreenRegionText as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.403 kCGImagePropertyIPTCExtDataOnScreenRegionUnit as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.404 kCGImagePropertyIPTCExtDataOnScreenRegionW as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.405 kCGImagePropertyIPTCExtDataOnScreenRegionX as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.406 kCGImagePropertyIPTCExtDataOnScreenRegionY as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.407 kCGImagePropertyIPTCExtDigitalImageGUID as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.408 kCGImagePropertyIPTCExtDigitalSourceFileType as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.409 kCGImagePropertyIPTCExtDigitalSourceType as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.410 kCGImagePropertyIPTCExtDopesheet as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.411 kCGImagePropertyIPTCExtDopesheetLink as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.412 kCGImagePropertyIPTCExtDopesheetLinkLink as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.413 kCGImagePropertyIPTCExtDopesheetLinkLinkQualifier as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.414 kCGImagePropertyIPTCExtEmbdEncRightsExpr as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.415 kCGImagePropertyIPTCExtEmbeddedEncodedRightsExpr as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.416 kCGImagePropertyIPTCExtEmbeddedEncodedRightsExprLangID as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.417 kCGImagePropertyIPTCExtEmbeddedEncodedRightsExprType as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.418 kCGImagePropertyIPTCExtEpisode as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.419 kCGImagePropertyIPTCExtEpisodeIdentifier as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.420 kCGImagePropertyIPTCExtEpisodeName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.421 kCGImagePropertyIPTCExtEpisodeNumber as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.422 kCGImagePropertyIPTCExtEvent as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.423 kCGImagePropertyIPTCExtExternalMetadataLink as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.424 kCGImagePropertyIPTCExtFeedIdentifier as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.425 kCGImagePropertyIPTCExtGenre as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.426 kCGImagePropertyIPTCExtGenreCvId as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.427 kCGImagePropertyIPTCExtGenreCvTermId as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.428 kCGImagePropertyIPTCExtGenreCvTermName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.429 kCGImagePropertyIPTCExtGenreCvTermRefinedAbout as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.430 kCGImagePropertyIPTCExtHeadline as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.431 kCGImagePropertyIPTCExtIPTCLastEdited as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.432 kCGImagePropertyIPTCExtLinkedEncodedRightsExpr as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.433 kCGImagePropertyIPTCExtLinkedEncodedRightsExprLangID as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.434 kCGImagePropertyIPTCExtLinkedEncodedRightsExprType as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.435 kCGImagePropertyIPTCExtLinkedEncRightsExpr as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.436 kCGImagePropertyIPTCExtLocationCity as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.437 kCGImagePropertyIPTCExtLocationCountryCode as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.438 kCGImagePropertyIPTCExtLocationCountryName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.439 kCGImagePropertyIPTCExtLocationCreated as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.440 kCGImagePropertyIPTCExtLocationGPSAltitude as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.441 kCGImagePropertyIPTCExtLocationGPSLatitude as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.442 kCGImagePropertyIPTCExtLocationGPSLongitude as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.443 kCGImagePropertyIPTCExtLocationIdentifier as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.444 kCGImagePropertyIPTCExtLocationLocationId as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.445 kCGImagePropertyIPTCExtLocationLocationName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.446 kCGImagePropertyIPTCExtLocationProvinceState as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.447 kCGImagePropertyIPTCExtLocationShown as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.448 kCGImagePropertyIPTCExtLocationSublocation as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.449 kCGImagePropertyIPTCExtLocationWorldRegion as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.450 kCGImagePropertyIPTCExtMaxAvailHeight as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.451 kCGImagePropertyIPTCExtMaxAvailWidth as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.452 kCGImagePropertyIPTCExtModelAge as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.453 kCGImagePropertyIPTCExtOrganisationInImageCode as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.454 kCGImagePropertyIPTCExtOrganisationInImageName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.455 kCGImagePropertyIPTCExtPersonHeard as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.456 kCGImagePropertyIPTCExtPersonHeardIdentifier as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.457 kCGImagePropertyIPTCExtPersonHeardName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.458 kCGImagePropertyIPTCExtPersonInImage as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.459 kCGImagePropertyIPTCExtPersonInImageCharacteristic as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.460 kCGImagePropertyIPTCExtPersonInImageCvTermCvId as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.461 kCGImagePropertyIPTCExtPersonInImageCvTermId as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.462 kCGImagePropertyIPTCExtPersonInImageCvTermName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.463 kCGImagePropertyIPTCExtPersonInImageCvTermRefinedAbout as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.464 kCGImagePropertyIPTCExtPersonInImageDescription as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.485 kCGImagePropertyIPTCExtRatingRegionLocationId as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.486 kCGImagePropertyIPTCExtRatingRegionLocationName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.487 kCGImagePropertyIPTCExtRatingRegionProvinceState as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.488 kCGImagePropertyIPTCExtRatingRegionSublocation as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.489 kCGImagePropertyIPTCExtRatingRegionWorldRegion as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.490 kCGImagePropertyIPTCExtRatingScaleMaxValue as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.491 kCGImagePropertyIPTCExtRatingScaleMinValue as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.492 kCGImagePropertyIPTCExtRatingSourceLink as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.493 kCGImagePropertyIPTCExtRatingValue as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.494 kCGImagePropertyIPTCExtRatingValueLogoLink as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.495 kCGImagePropertyIPTCExtRegistryEntryRole as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.496 kCGImagePropertyIPTCExtRegistryID as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.497 kCGImagePropertyIPTCExtRegistryItemID as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.498 kCGImagePropertyIPTCExtRegistryOrganisationID as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.499 kCGImagePropertyIPTCExtReleaseReady as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.500 kCGImagePropertyIPTCExtSeason as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.501 kCGImagePropertyIPTCExtSeasonIdentifier as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.502 kCGImagePropertyIPTCExtSeasonName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.503 kCGImagePropertyIPTCExtSeasonNumber as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.504 kCGImagePropertyIPTCExtSeries as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.505 kCGImagePropertyIPTCExtSeriesIdentifier as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.506 kCGImagePropertyIPTCExtSeriesName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.507 kCGImagePropertyIPTCExtShownEvent as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.508 kCGImagePropertyIPTCExtShownEventIdentifier as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.509 kCGImagePropertyIPTCExtShownEventName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.510 kCGImagePropertyIPTCExtStorylineIdentifier as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.511 kCGImagePropertyIPTCExtStreamReady as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.512 kCGImagePropertyIPTCExtStylePeriod as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.513 kCGImagePropertyIPTCExtSupplyChainSource as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.514 kCGImagePropertyIPTCExtSupplyChainSourceIdentifier as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.515 kCGImagePropertyIPTCExtSupplyChainSourceName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.516 kCGImagePropertyIPTCExtTemporalCoverage as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.517 kCGImagePropertyIPTCExtTemporalCoverageFrom as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.518 kCGImagePropertyIPTCExtTemporalCoverageTo as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.519 kCGImagePropertyIPTCExtTranscript as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.520 kCGImagePropertyIPTCExtTranscriptLink as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.521 kCGImagePropertyIPTCExtTranscriptLinkLink as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.522 kCGImagePropertyIPTCExtTranscriptLinkLinkQualifier as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.523 kCGImagePropertyIPTCExtVideoBitrate as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.524 kCGImagePropertyIPTCExtVideoBitrateMode as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.525 kCGImagePropertyIPTCExtVideoDisplayAspectRatio as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.526 kCGImagePropertyIPTCExtVideoEncodingProfile as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.527 kCGImagePropertyIPTCExtVideoShotType as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.528 kCGImagePropertyIPTCExtVideoShotTypeIdentifier as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.529 kCGImagePropertyIPTCExtVideoShotTypeName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.530 kCGImagePropertyIPTCExtVideoStreamsCount as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.531 kCGImagePropertyIPTCExtVisualColor as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.532 kCGImagePropertyIPTCExtWorkflowTag as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.533 kCGImagePropertyIPTCExtWorkflowTagCvId as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.534 kCGImagePropertyIPTCExtWorkflowTagCvTermId as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.535 kCGImagePropertyIPTCExtWorkflowTagCvTermName as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.536 kCGImagePropertyIPTCExtWorkflowTagCvTermRefinedAbout as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.537 kCGImagePropertyIPTCFixtureIdentifier as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: A fixture identifier.

58.23.538 kCGImagePropertyIPTCHeadline as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The headline.

58.23.539 kCGImagePropertyIPTCImageOrientation as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The image orientation.

58.23.540 kCGImagePropertyIPTCImageType as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The image type.

58.23.541 kCGImagePropertyIPTCKeywords as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: Keywords

58.23.542 kCGImagePropertyIPTCLanguageIdentifier as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The language identifier.

58.23.543 kCGImagePropertyIPTCObjectAttributeReference as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The object attribute.

58.23.544 kCGImagePropertyIPTCObjectCycle as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The object cycle.

58.23.545 kCGImagePropertyIPTCObjectName as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The object name.

58.23.546 kCGImagePropertyIPTCObjectTypeReference as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The object type.

58.23.547 kCGImagePropertyIPTCOriginalTransmissionReference as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The original transmission reference.

58.23.548 kCGImagePropertyIPTCOriginatingProgram as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The originating program.

58.23.549 kCGImagePropertyIPTCProgramVersion as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The program version.

58.23.550 kCGImagePropertyIPTCProvinceState as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The province or state.

58.23.551 kCGImagePropertyIPTCReferenceDate as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The reference date.

58.23.552 kCGImagePropertyIPTCReferenceNumber as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The reference number.

58.23.553 kCGImagePropertyIPTCReferenceService as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The reference service.

58.23.554 kCGImagePropertyIPTCReleaseDate as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The release date.

58.23.555 kCGImagePropertyIPTCReleaseTime as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The release time.

58.23.556 kCGImagePropertyIPTCRightsUsageTerms as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: The usage rights for the image.
Available in OS X v10.6 and later.

58.23.557 kCGImagePropertyIPTCScene as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: The scene codes for the image; a scene code is a six-digit string.
Available in OS X v10.6 and later.

58.23.558 kCGImagePropertyIPTCSource as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The source.

58.23.559 kCGImagePropertyIPTCSpecialInstructions as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: Special instructions.

58.23.560 kCGImagePropertyIPTCStarRating as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The star rating.

58.23.561 kCGImagePropertyIPTCSubjectReference as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The subject.

58.23.562 kCGImagePropertyIPTCSubLocation as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The sublocation.

58.23.563 kCGImagePropertyIPTCSupplementalCategory as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: A supplemental category.

58.23.564 kCGImagePropertyIPTCTimeCreated as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The time created.

58.23.565 kCGImagePropertyIPTCUrgency as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The urgency level.

58.23.566 kCGImagePropertyIPTCWriterEditor as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The writer or editor.

58.23.567 kCGImagePropertyIsFloat as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: Whether or not the image contains floating-point pixel samples. The value of this key is kCFBooleanTrue if the image contains them.

58.23.568 kCGImagePropertyIsIndexed as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: Whether or not the image contains indexed pixel samples (sometimes called paletted samples). The value of this key is kCFBooleanTrue if the image contains them.

58.23.569 kCGImagePropertyJFIFDensityUnit as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses JPEG File Interchange Format (JFIF).
Notes: The density unit.

58.23.570 kCGImagePropertyJFIFDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: A dictionary of key-value pairs for an image that uses JPEG File Interchange Format (JFIF).

58.23.571 kCGImagePropertyJFIFIsProgressive as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses JPEG File Interchange Format (JFIF).
Notes: Whether or not the image is progressive.

58.23.572 kCGImagePropertyJFIFVersion as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses JPEG File Interchange Format (JFIF).
Notes: The version.

58.23.573 kCGImagePropertyJFIFXDensity as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses JPEG File Interchange Format (JFIF).
Notes: The x density.

58.23.574 kCGImagePropertyJFIFYDensity as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses JPEG File Interchange Format (JFIF).
Notes: The y density.

58.23.575 kCGImagePropertyMakerAppleDictionary as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.576 kCGImagePropertyMakerCanonAspectRatioInfo as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The image aspect ratio.

58.23.577 kCGImagePropertyMakerCanonCameraSerialNumber as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The camera serial number.

58.23.578 kCGImagePropertyMakerCanonContinuousDrive as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The presence of a continuous drive.

58.23.579 kCGImagePropertyMakerCanonDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: A dictionary of key-value pairs for an image from a Canon camera.
Available in Mac OS X v10.5 and later.

58.23.580 kCGImagePropertyMakerCanonFirmware as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The firmware version.

58.23.581 kCGImagePropertyMakerCanonFlashExposureComp as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The flash exposure compensation.

58.23.582 kCGImagePropertyMakerCanonImageSerialNumber as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The image serial number.

58.23.583 kCGImagePropertyMakerCanonLensModel as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The lens model.

58.23.584 kCGImagePropertyMakerCanonOwnerName as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The owner name.

58.23.585 kCGImagePropertyMakerFujiDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: A dictionary of key-value pairs for an image from a Fuji camera.
Available in Mac OS X v10.5 and later.

58.23.586 kCGImagePropertyMakerMinoltaDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: A dictionary of key-value pairs for an image from a Minolta camera.
Available in Mac OS X v10.5 and later.

58.23.587 kCGImagePropertyMakerNikonCameraSerialNumber as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The camera serial number.

58.23.588 kCGImagePropertyMakerNikonColorMode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The color mode.

58.23.589 kCGImagePropertyMakerNikonDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: A dictionary of key-value pairs for an image from a Nikon camera.
Available in Mac OS X v10.5 and later.

58.23.590 kCGImagePropertyMakerNikonDigitalZoom as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The digital zoom setting.

58.23.591 kCGImagePropertyMakerNikonFlashExposureComp as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The flash exposure compensation.

58.23.592 kCGImagePropertyMakerNikonFlashSetting as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The flash setting.

58.23.593 kCGImagePropertyMakerNikonFocusDistance as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The focus distance.

58.23.594 kCGImagePropertyMakerNikonFocusMode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The focus mode.

58.23.595 kCGImagePropertyMakerNikonImageAdjustment as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: Image adjustment setting.

58.23.596 kCGImagePropertyMakerNikonISOSelection as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The ISO selection.

58.23.597 kCGImagePropertyMakerNikonISOSetting as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The ISO setting.

58.23.598 kCGImagePropertyMakerNikonLensAdapter as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The lens adapter.

58.23.599 kCGImagePropertyMakerNikonLensInfo as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: Lens information.

58.23.600 kCGImagePropertyMakerNikonLensType as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The lens type.

58.23.601 kCGImagePropertyMakerNikonQuality as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The quality setting.

58.23.602 kCGImagePropertyMakerNikonSharpenMode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The sharpening mode.

58.23.603 kCGImagePropertyMakerNikonShootingMode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The shooting mode.

58.23.604 kCGImagePropertyMakerNikonShutterCount as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The shutter count.

58.23.605 kCGImagePropertyMakerNikonWhiteBalanceMode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The white balance mode.

58.23.606 kCGImagePropertyMakerOlympusDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: A dictionary of key-value pairs for an image from a Olympus camera.
Available in Mac OS X v10.5 and later.

58.23.607 kCGImagePropertyMakerPentaxDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: A dictionary of key-value pairs for an image from a Pentax camera.
Available in Mac OS X v10.5 and later.

58.23.608 kCGImagePropertyNamedColorSpace as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.609 kCGImagePropertyOpenEXRAspectRatio as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.610 kCGImagePropertyOpenEXRCompression as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.611 kCGImagePropertyOpenEXRDictionary as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.612 kCGImagePropertyOrientation as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The intended display orientation of the image. If present, this key is a CFNumber value with the same value as defined by the TIFF and EXIF specifications. The value specifies where the origin (0,0) of the image is locates, as shown in Table 1. If not present, a value of 1 is assumed.

58.23.613 kCGImagePropertyPixelFormat as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.614 kCGImagePropertyPixelHeight as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Value	Location of the origin of the image
1	Top, left
2	Top, right
3	Bottom, right
4	Bottom, left
5	Left, top
6	Right, top
7	Right, bottom
8	Left, bottom

Function: One of the keys for the properties dictionary.
Example:

```
// open an image file
Var path as string = "/Library/Desktop Pictures/Galaxy.jpg"
Var f as FolderItem = New FolderItem(path, FolderItem.PathModes.Native)
Var c As New CGImageSourceMBS(f)

// properties for first image
Var p as Dictionary = c.PropertiesAtIndex(0)
Var w as Integer = p.Value(c.kCGImagePropertyPixelWidth)
Var h as Integer = p.Value(c.kCGImagePropertyPixelHeight)

// show size
MessageBox str(w)+" x "+str(h)
```

Notes: The number of pixels in the y dimension. If present, this key is a CFNumber value.

58.23.615 kCGImagePropertyPixelWidth as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Example:

```
// open an image file
Var path as string = "/Library/Desktop Pictures/Galaxy.jpg"
Var f as FolderItem = New FolderItem(path, FolderItem.PathModes.Native)
Var c As New CGImageSourceMBS(f)

// properties for first image
Var p as Dictionary = c.PropertiesAtIndex(0)
Var w as Integer = p.Value(c.kCGImagePropertyPixelWidth)
```

```
Var h as Integer = p.Value(c.kCGImagePropertyPixelHeight)

// show size
MessageBox str(w)+" x "+str(h)
```

Notes: The number of pixels in the x dimension. If present, this key is a CFNumber value.

58.23.616 kCGImagePropertyPNGAuthor as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: The content is a string that identifies the author of the image.
Available in OS X v10.7 and later.

58.23.617 kCGImagePropertyPNGChromaticities as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Portable Network Graphics (PNG) format.
Notes: The chromaticities.

58.23.618 kCGImagePropertyPNGComment as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.619 kCGImagePropertyPNGCompressionFilter as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.620 kCGImagePropertyPNGCopyright as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: The content is a string that identifies the copyright of the image.
Available in OS X v10.7 and later.

58.23.621 kCGImagePropertyPNGCreationTime as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: The content is a string that identifies the date and time the image was created.
Available in OS X v10.7 and later.

58.23.622 kCGImagePropertyPNGDescription as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: The content is a string that describes the image.
Available in OS X v10.7 and later.

58.23.623 kCGImagePropertyPNGDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: A dictionary of key-value pairs for an image that uses Portable Network Graphics (PNG) format.

58.23.624 kCGImagePropertyPNGDisclaimer as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.625 kCGImagePropertyPNGGamma as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Portable Network Graphics (PNG) format.
Notes: The gamma value.

58.23.626 kCGImagePropertyPNGInterlaceType as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Portable Network Graphics (PNG) format.
Notes: The interlace type.

58.23.627 kCGImagePropertyPNGModificationTime as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: The content is a string that identifies the last date and time the image was modified.
Available in OS X v10.7 and later.

58.23.628 kCGImagePropertyPNGPixelsAspectRatio as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.629 kCGImagePropertyPNGSoftware as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: The content is a string that identifies the software used to create the image.
Available in OS X v10.7 and later.

58.23.630 kCGImagePropertyPNGSource as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.631 kCGImagePropertyPNGsRGBIntent as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Portable Network Graphics (PNG) format.
Notes: The sRGB intent.

58.23.632 kCGImagePropertyPNGTitle as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: The content is a string that holds the image's title.
Available in OS X v10.7 and later.

58.23.633 kCGImagePropertyPNGTransparency as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.634 kCGImagePropertyPNGWarning as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.635 kCGImagePropertyPNGXPixelsPerMeter as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Portable Network Graphics (PNG) format.
Notes: The number of x pixels per meter.

58.23.636 kCGImagePropertyPNGYPixelsPerMeter as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Portable Network Graphics (PNG) format.
Notes: The number of y pixels per meter.

58.23.637 kCGImagePropertyPrimaryImage as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.638 kCGImagePropertyProfileName as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The name of the optional ICC profile embedded in the image, if known. If present, the value of this key is a CFStringRef.

58.23.639 kCGImagePropertyRawDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: A dictionary of key-value pairs for an image that contains minimally processed, or raw, data.

58.23.640 kCGImagePropertyTGACompression as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.641 kCGImagePropertyTGADictionary as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.642 kCGImagePropertyThumbnailImages as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.643 kCGImagePropertyTIFFArtist as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The artist.

58.23.644 kCGImagePropertyTIFFCompression as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The compression scheme used on the image data.

58.23.645 kCGImagePropertyTIFFCopyright as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: Copyright information.

58.23.646 kCGImagePropertyTIFFDateTime as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The date and time.

58.23.647 kCGImagePropertyTIFFDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Example:

```
// Change rotation in an image file

// files
Var dpath as folderitem = SpecialFolder.Desktop.Child("test.jpg")
Var opath as folderitem = dpath.parent.Child("output.jpg")

// open source
```

```
Var imageSource as new cgimagesourcembs(dpath)

// read image
Var img as cgimagembs = imageSource.createimageatindex(0)

// global properties
Var globalprop as dictionary = imageSource.properties
// per image properties
Var p as Dictionary = imageSource.PropertiesAtIndex(0)

Var imageDest as new CGImageDestinationMBS(opath,"public.jpeg",1)

'const orientation = 1 // top left
const orientation = 3 // bottom right

// set globals
imageDest.SetProperties(globalprop)

// now set new orientation
p.value(imageDest.kCGImageDestinationOrientation) = orientation
p.value(imageDest.kCGImageDestinationMergeMetadata) = true

// change tiff dictionary, if present
Var dTIFF as Dictionary = p.lookup(imageSource.kCGImagePropertyTIFFDictionary, nil)
if dTIFF <>nil then
dTIFF.value(imageSource.kCGImagePropertyTIFFOrientation) = orientation
end if

// change iptc dictionary, if present
Var dIPTC as Dictionary = p.lookup(imageSource.kCGImagePropertyIPTCDictionary, nil)
if dIPTC <>nil then
dIPTC.value(imageSource.kCGImagePropertyIPTCImageOrientation) = orientation
end if

// write out image
imageDest.AddImage(img,p)
call imageDest.Finalize
```

Notes: A dictionary of key-value pairs for an image that uses Tagged Image File Format (TIFF).

58.23.648 kCGImagePropertyTIFFDocumentName as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The document name.

58.23.649 kCGImagePropertyTIFFHostComputer as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The computer or operating system used when the image was created.

58.23.650 kCGImagePropertyTIFFImageDescription as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The image description.

58.23.651 kCGImagePropertyTIFFMake as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The camera or input device make.

58.23.652 kCGImagePropertyTIFFModel as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: A camera or input device model.

58.23.653 kCGImagePropertyTIFFOrientation as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Example:

```
// Change rotation in an image file

// files
Var dpath as folderitem = SpecialFolder.Desktop.Child("test.jpg")
```

```
Var opath as folderitem = dpath.parent.Child("output.jpg")

// open source
Var imageSource as new cgimagesourcembs(dpath)

// read image
Var img as cgimagembs = imageSource.createimageatindex(0)

// global properties
Var globalprop as dictionary = imageSource.properties
// per image properties
Var p as Dictionary = imageSource.PropertiesAtIndex(0)

Var imageDest as new CGImageDestinationMBS(opath,"public.jpeg",1)

'const orientation = 1 // top left
const orientation = 3 // bottom right

// set globals
imageDest.SetProperties(globalprop)

// now set new orientation
p.value(imageDest.kCGImageDestinationOrientation) = orientation
p.value(imageDest.kCGImageDestinationMergeMetadata) = true

// change tiff dictionary, if present
Var dTIFF as Dictionary = p.lookup(imageSource.kCGImagePropertyTIFFDictionary, nil)
if dTIFF <>nil then
dTIFF.value(imageSource.kCGImagePropertyTIFFOrientation) = orientation
end if

// change iptc dictionary, if present
Var dIPTC as Dictionary = p.lookup(imageSource.kCGImagePropertyIPTCDictionary, nil)
if dIPTC <>nil then
dIPTC.value(imageSource.kCGImagePropertyIPTCImageOrientation) = orientation
end if

// write out image
imageDest.AddImage(img,p)
call imageDest.Finalize
```

Notes: The image orientation.

58.23.654 kCGImagePropertyTIFFPhotometricInterpretation as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The color space of the image data.

58.23.655 kCGImagePropertyTIFFPrimaryChromaticities as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The chromaticities of the primaries of the image.

58.23.656 kCGImagePropertyTIFFResolutionUnit as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The units of resolution.

58.23.657 kCGImagePropertyTIFFSoftware as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The name and version of the software used for image creation.

58.23.658 kCGImagePropertyTIFFTileLength as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.659 kCGImagePropertyTIFFTileWidth as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.660 kCGImagePropertyTIFFTransferFunction as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The transfer function, in tabular format, used to map pixel components from a nonlinear form into a linear form.

58.23.661 kCGImagePropertyTIFFWhitePoint as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The white point.

58.23.662 kCGImagePropertyTIFFXPosition as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.663 kCGImagePropertyTIFFXResolution as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The number of pixels per resolution unit in the image width direction.

58.23.664 kCGImagePropertyTIFFYPosition as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.665 kCGImagePropertyTIFFYResolution as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The number of pixels per resolution unit in the image height direction.

58.23.666 kCGImagePropertyWebPCanvasPixelHeight as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.667 kCGImagePropertyWebPCanvasPixelWidth as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.668 kCGImagePropertyWebPDelayTime as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.669 kCGImagePropertyWebPDictionary as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.670 kCGImagePropertyWebPFrameInfoArray as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.671 kCGImagePropertyWebPLoopCount as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.672 kCGImagePropertyWebPUnclampedDelayTime as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.673 kCGImagePropertyWidth as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.674 kCGImageProviderPreferredTileHeight as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the options for the provider.
Notes: Tile height

58.23.675 kCGImageProviderPreferredTileWidth as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the options for the provider.
Notes: Tile width

58.23.676 kCGImageSourceCreateThumbnailFromImageAlways as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: Specifies whether a thumbnail should be created from the full image even if a thumbnail is present in the image source file. The thumbnail will be created from the full image, subject to the limit specified by kCGImageSourceThumbnailMaxPixelSize — if a maximum pixel size isn't specified, then the thumbnail will be the size of the full image, which probably isn't what you want. The value of this key must be a Boolean; the default value of this key is False.

58.23.677 kCGImageSourceCreateThumbnailFromImageIfAbsent as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: Specifies whether a thumbnail should be automatically created for an image if a thumbnail isn't present in the image source file. The thumbnail will be created from the full image, subject to the limit specified by kCGImageSourceThumbnailMaxPixelSize—if a maximum pixel size isn't specified, then the thumbnail will be the size of the full image, which probably isn't what you want. The value of this key must be a Boolean; the default value of this key is False.

58.23.678 kCGImageSourceCreateThumbnailWithTransform as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: Specifies whether the thumbnail should be rotated and scaled according to the orientation and pixel aspect ratio of the full image. The value of this key must be a Boolean; the default value of this key is False.

58.23.679 kCGImageSourceDecodeRequest as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the keys for the options dictionary.

58.23.680 kCGImageSourceDecodeRequestOptions as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the keys for the options dictionary.

58.23.681 kCGImageSourceDecodeToHDR as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the keys for the options dictionary.

58.23.682 kCGImageSourceDecodeToSDR as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the keys for the options dictionary.

58.23.683 kCGImageSourceGenerateImageSpecificLumaScaling as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the keys for the options dictionary.

58.23.684 kCGImageSourceShouldAllowFloat as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: Specifies whether the image should be returned as a floating point CGImage if supported by the file format. Extended range floating point CGImage may require additional processing to render pleasingly. The value of this key must be a Boolean; the default value is False.

58.23.685 kCGImageSourceShouldCache as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: Specifies whether the image should be cached in a decoded form. The value of this key must be a Boolean; the default value is False.

58.23.686 kCGImageSourceShouldCacheImmediately as string

MBS MacCG Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

Function: One of the keys for the options dictionary.
Notes: Specifies whether image decoding and caching should happen at image creation time.
The value of this key must be a boolean. The default value is kCFBooleanFalse (image decoding will happen at rendering time).

58.23.687 kCGImageSourceSubsampleFactor as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the keys for the options dictionary.

58.23.688 kCGImageSourceThumbnailMaxPixelSize as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: Specifies the maximum width and height in pixels of a thumbnail. If this this key is not specified, the width and height of a thumbnail is not limited and thumbnails may be as big as the image itself. If present, this value of this key must be an Integer.

58.23.689 kCGImageSourceTypeIdentifierHint as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: Specifies the "best guess" of the type identifier for the format of the image source file. If specified, the value of this key must be a String. For more information about type identifiers, see "UTType.h" in the Application Services framework.

58.23.690 kIIOCameraExtrinsics_CoordinateSystemID as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.691 kIIOCameraExtrinsics_Position as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.692 kIIOCameraExtrinsics_Rotation as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.693 kIIOCameraModelType_GenericPinhole as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.694 kIIOCameraModelType_SimplifiedPinhole as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.695 kIIOCameraModel_Intrinsics as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.696 kIIOCameraModel_ModelType as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.697 kIIOMetadata_CameraExtrinsicsKey as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.698 kIIOMetadata_CameraModelKey as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.699 kIIOMonoscopicImageLocation_Center as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.700 kIIOMonoscopicImageLocation_Left as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.701 kIIOMonoscopicImageLocation_Right as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.702 kIIOMonoscopicImageLocation_Unspecified as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.703 kIIOStereoAggressors_Severity as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.704 kIIOStereoAggressors_SubTypeURI as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.705 kIIOStereoAggressors_Type as string

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: One of the key names for the properties.

58.23.706 Properties(options as Variant = nil, returnCFDictionary as Boolean = False) as Variant

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns the properties of the image source.
Example:

```
Var inputfile as FolderItem = SpecialFolder.Desktop.Child("test.jpg")

// reading the picture
Var c as new CGImageSourceMBS(inputfile)
Var img as CGImageMBS = c.CreateImageAtIndex(0)
Var propertiesGlobal as Dictionary = c.Properties
Var propertiesImage as Dictionary = c.PropertiesAtIndex(0)

Var outputFile as FolderItem = SpecialFolder.Desktop.Child("output.jpg")
Var d as new CGImageDestinationMBS(outputFile, "public.jpeg", 1)

// writing the picture and include metadata
d.SetProperties(propertiesGlobal)
d.AddImage(img, propertiesImage)
if d.FinalizeMT then
outputFile.Launch
else
```

```
MessageBox "Failed to write jpeg."
end if
```

Notes: options: A dictionary you can use to request additional options.
Returns a dictionary that contains the properties associated with the image source container.
These properties apply to the container in general but not necessarily to any individual image contained in the image source.
Available in Mac OS X version 10.4 and later.

Options can be a Dictionary or CFDictionaryMBS object.

Returns a Dictionary or optional a CFDictionaryMBS object.

58.23.707 PropertiesAtIndex(index as integer, options as Variant = nil, returnCFDictionary as Boolean = False) as Variant

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns the properties of the image at a specified location in an image source.
Example:

```
Var file as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var c as new CGImageSourceMBS(file)

Var d as Dictionary = c.PropertiesAtIndex(0)

Var e as Dictionary
e=d.Value(c.kCGImagePropertyExifDictionary)

if e<>Nil then
Var keys(-1) as Variant = e.Keys
Var lines(-1) as string

for each key as string in keys
lines.Add key+": "+e.Value(key)
next

MessageBox "Exif: "+EndOfLine+EndOfLine+Join(lines,EndOfLine)
end if

e=d.Value(c.kCGImagePropertyGPSDictionary)

if e<>Nil then
Var keys(-1) as Variant = e.Keys
Var lines(-1) as string
```

```
for each key as string in keys
lines.Add key+": "+e.Value(key)
next

MessageBox "GPS: "+EndOfLine+EndOfLine+Join(lines,EndOfLine)
end if
```

Notes: index: The index of the image whose properties you want to obtain. The index is zero-based.
options: A dictionary you can use to request additional options.
Returns a dictionary that contains the properties associated with the image.
Available in Mac OS X version 10.4 and later.

Options can be a Dictionary or CFDictionaryMBS object.

Returns a Dictionary or optional a CFDictionaryMBS object.

58.23.708 RemoveCacheAtIndex(Index as Integer)

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: Remove the cached decoded image data for the image at index in the image source.
Notes: The index is zero-based.

58.23.709 StatusAtIndex(index as Integer) as Integer

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns the current status of an image that is at a specified location in an image source.
Notes: index: The index of the image whose status you want to obtain. The index is zero-based.

Returns the current status of the image.

The status is particularly informative for incremental image sources, but may also be used by clients that provide non-incremental data.

Available in Mac OS X version 10.4 and later.

58.23.710 TypeIdentifiers as string()

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns an array of uniform type identifiers (UTIs) that are supported for image sources.
Example:

```
Var s(-1) as string = CGImageSourceMBS.TypeIdentifiers

MessageBox Join(s,EndOfLine)

// shows:
//
// public.png
// public.jpeg
// com.compuserve.gif
// public.jpeg-2000
// com.adobe.raw-image
// com.leafamerica.raw-image
// com.hasselblad.fff-raw-image
// com.hasselblad.3fr-raw-image
// com.nikon.raw-image
// com.nikon.nrw-raw-image
// com.pentax.raw-image
// com.sony.sr2-raw-image
// com.sony.arw-raw-image
// com.epson.raw-image
// com.kodak.raw-image
// public.tiff
// com.apple.icns
// com.canon.tif-raw-image
// com.canon.cr2-raw-image
// com.canon.crw-raw-image
// com.fuji.raw-image
// com.panasonic.raw-image
// com.panasonic.rw2-raw-image
// com.panasonic.rwl-raw-image
// com.leica.pwl-raw-image
// com.konicaminolta.raw-image
// com.olympus.raw-image
// com.olympus.raw-image
// com.sony.raw-image
// com.adobe.photoshop-image
// com.adobe.pdf
// com.adobe.illustrator.ai-image
// com.microsoft.ico
// com.microsoft.bmp
// public.xbitmap-image
// com.microsoft.cur
```

```
// com.apple.pict
// com.truevision.tga-image
// com.sgi.sgi-image
// com.apple.quicktime-image
// com.kodak.flashpix-image
// com.apple.macpaint-image
// com.ilm.openexr-image
// public.radiance
```

Notes: Returns an array of the UTIs that are supported for image sources.

See Uniform Type Identifiers Overview for a list of system-declared and third-party UTIs.

Available in Mac OS X version 10.4 and later.

58.23.711 UpdateData(data as string, final as boolean)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Updates an incremental image source with new data.
Notes: data: The data to add to the image source. Each time you call the function UpdateData, the data parameter must contain all of the image file data accumulated so far.

final: A value that specifies whether the data is the final set. Pass true if it is, false otherwise.

Available in Mac OS X version 10.4 and later.

58.23.712 Properties

58.23.713 Count as Integer

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns the number of images (not including thumbnails) in the image source.
Example:

```
Var file as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var c as new CGImageSourceMBS(file)

MessageBox str(c.Count)+" images in this file."
```

Notes: The number of images. If the image source is a multilayered PSD file, the function returns 1.

This function does not extract the layers of a PSD file.

Available in Mac OS X version 10.4 and later.
(Read only property)

58.23.714 Handle as Integer

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The internal reference.
Notes: (Read and Write property)

58.23.715 PrimaryImageIndex as Integer

MBS MacCG Plugin, Plugin Version: 25.5, Platform: macOS, Targets: All.

Function: Return the primary image index for HEIF images.
Notes: Zero for all other formats.
(Read only property)

58.23.716 Status as Integer

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Return the status of an image source.
Notes: Returns the current status of the image source.

The status is particularly informative for incremental image sources, but may also be used by clients that provide non-incremental data.

Available in Mac OS X version 10.4 and later.
(Read only property)

58.23.717 Type as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns the uniform type identifier of the source container.
Notes: The uniform type identifier of the image.

The uniform type identifier (UTI) of the source container can be different from the type of the images in the container. For example, the .icns format supports embedded JPEG2000. The type of the source container is "com.apple.icns" but type of the images is JPEG2000.

Available in Mac OS X version 10.4 and later.
(Read only property)

58.23.718 Constants

Constants

Constant	Value	Description
kCGImageStatusComplete	0	One of the status constants. The operation is complete.
kCGImageStatusIncomplete	-1	One of the status constants. The operation is not complete.
kCGImageStatusInvalidData	-4	One of the status constants. The data is not valid.
kCGImageStatusReadingHeader	-2	One of the status constants. In the process of reading the header.
kCGImageStatusUnexpectedEOF	-5	One of the status constants. The end of the file was encountered unexpectedly.
kCGImageStatusUnknownType	-3	One of the status constants. The image is an unknown type.

58.24 class CGLayerMBS

58.24.1 class CGLayerMBS

MBS MacCG Plugin, Plugin Version: 12.2, Platform: macOS, Targets: All.

Function: The CoreGraphics layer class, similar to a template.
Notes: CGLayer objects are useful for offscreen drawing and can be used in much the same way that a bitmap context can be used. In fact, a CGLayer object is a much better representation than a bitmap context.

Using CGLayer objects can improve performance, particularly when you need to capture a piece of drawing that you stamp repeatedly (using the same scale factor and orientation). Quartz can cache CGLayer objects to the video card, making drawing a CGLayer to a destination much faster than rendering the equivalent image constructed from a bitmap context.

A CGLayer object is created relative to a graphics context. Although layer uses this graphics context as a reference for initialization, you are not restricted to drawing the layer to this graphics context. You can draw the layer to other graphics contexts, although any limitations of the original context are imposed. For example, if you create a CGLayer object using a bitmap context, the layer is rendered as a bitmap when drawn to any other graphics context.

You can use a CGLayer when you want to apply a shadow to a group of objects (such as a group of circles) rather than to individual objects.

Use these layers in your code whenever you can, especially when:

- You need to reuse a filled or stroked shape.
- You are building a scene and at least some of it can be reused. Put the reusable drawing in its own CGLayer.

Any CG object that you draw repeatedly—including CGPath, CGShading, and CGPDFPage—benefit from improved performance if you draw it to a CGLayer object.

- MBS Real Studio Plugins, version 12.2pr3

58.24.2 Methods

58.24.3 Constructor(context as CGContextMBS, size as CGSizeMBS, auxiliaryInfo as dictionary = nil)

MBS MacCG Plugin, Plugin Version: 12.2, Platform: macOS, Targets: All.

Function: Creates a CGLayer object that is associated with a graphics context.
Notes: context: The graphics context you want to create the layer relative to. The layer uses this graphics context as a reference for initialization.
size: The size, in default user space units, of the layer relative to the graphics context.
auxiliaryInfo: Reserved for future use. Pass nil.

On Success the handle property is not nil.

After you create a CGLayer object, you should reuse it whenever you can to facilitate the Quartz caching strategy. Quartz caches any objects that are reused, including CGLayer objects. Objects that are reused frequently remain in the cache. In contrast, objects that are used once in a while may be moved in and out of the cache according to their frequency of use. If you don't reuse CGLayer objects, Quartz won't cache them. This means that you lose an opportunity to improve the performance of your application.

Available in Mac OS X version 10.4 and later.
See also:

- 58.24.4 Constructor(context as CGContextMBS, width as Double, height as Double, auxiliaryInfo as dictionary = nil) 9778

58.24.4 Constructor(context as CGContextMBS, width as Double, height as Double, auxiliaryInfo as dictionary = nil)

MBS MacCG Plugin, Plugin Version: 12.2, Platform: macOS, Targets: All.

Function: Creates a CGLayer object that is associated with a graphics context.
Notes: context: The graphics context you want to create the layer relative to. The layer uses this graphics context as a reference for initialization.
width/height: The size, in default user space units, of the layer relative to the graphics context.
auxiliaryInfo: Reserved for future use. Pass nil.

On Success the handle property is not nil.

After you create a CGLayer object, you should reuse it whenever you can to facilitate the Quartz caching strategy. Quartz caches any objects that are reused, including CGLayer objects. Objects that are reused frequently remain in the cache. In contrast, objects that are used once in a while may be moved in and out of the cache according to their frequency of use. If you don't reuse CGLayer objects, Quartz won't cache

them. This means that you lose an opportunity to improve the performance of your application.

Available in Mac OS X version 10.4 and later.
See also:

- 58.24.3 Constructor(context as CGContextMBS, size as CGSizeMBS, auxiliaryInfo as dictionary = nil) 9778

58.24.5 Context as CGContextMBS

MBS MacCG Plugin, Plugin Version: 12.2, Platform: macOS, Targets: All.

Function: Returns the graphics context associated with a CGLayer object.
Notes: The context that's returned is the context for the layer itself, not the context that you specified when you created the layer.

58.24.6 Size as CGSizeMBS

MBS MacCG Plugin, Plugin Version: 12.2, Platform: macOS, Targets: All.

Function: Returns the width and height of a CGLayer object.

58.24.7 Properties

58.24.8 Handle as Integer

MBS MacCG Plugin, Plugin Version: 12.2, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

58.25 class CGMutableImageMetadataMBS

58.25.1 class CGMutableImageMetadataMBS

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The class for a mutable tag container.
Example:

```
// create XMP metadata with title and creator
Var meta As New CGMutableImageMetadataMBS
Call meta.SetValueWithPath(Nil, "dc:title", "Sunset at the beach")
Call meta.SetValueWithPath(Nil, "dc:creator", "John Smith")
Call meta.SetValueWithPath(Nil, "xmp:Rating", 5)

Var xmp As MemoryBlock = meta.CreateXMPData
MessageBox xmp.StringValue(0, xmp.Size)
```

Notes: Subclass of the CGImageMetadataMBS class.
Blog Entries

- MBS Xojo Plugins, version 18.5pr8

58.25.2 Methods

58.25.3 Constructor

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Creates an empty metadata object.
See also:

- 58.25.4 Constructor(metadata as CGImageMetadataMBS) 9780

58.25.4 Constructor(metadata as CGImageMetadataMBS)

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Copy constructor.
Notes: Creates a copy of the metadata.
See also:

- 58.25.3 Constructor 9780

58.25.5 RegisterNamespaceForPrefix(parent as CGImageMetadataTagMBS = nil, xmlns as String, prefix as String, byref error as CFErrorMBS) as Boolean

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Associates an XMP namespace URI with a prefix string.
Notes: This allows ImageIO to create custom metadata when it encounters an unrecognized prefix in a path (see TagWithPath for more information about path syntax). A namespace must be registered before it can be used to add custom metadata. All namespaces found in the image's metadata, or defined as a constant above, will be pre-registered. Namespaces and prefixes must be unique.

Returns true if successful. Returns false and sets 'error' if an error or conflict occurs.

58.25.6 RemoveTagWithPath(parent as CGImageMetadataTagMBS = nil, path as string) as Boolean

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Sets the tag at a specific path in a CGMutableImageMetadataMBS container or a parent tag
Notes: This is the primary function for adding new metadata tags to a metadata container, or updating existing tags. All tags required to reach the final tag (at the end of the path) will be created, if needed. Tags will created with default types (ordered arrays). Creating tags will fail if a prefix is encountered that has not been registered. Use RegisterNamespaceForPrefix to associate a prefix with a namespace prior to using a path-based CGImageMetadataMBS function.

Note that if a parent tag is provided, the children of that tag reference will be modified, which may be a different reference from the tag stored in the metadata container. Since tags are normally obtained as a copy, it is typically neccesary to use SetTagWithPath to commit the changed parent object back to the metadata container (using the parent's path and nil for the parent).

metadata: A mutable collection of metadata tags.
parent: A parent tag. If nil, the path is relative to the root of the metadata (i.e. it is not a child of another property).
Note that if a parent tag is provided, the children of that tag reference will be modified, which may be a different reference from the tag stored in the metadata container. Since tags are normally obtained as a copy, it is typically neccesary to use SetTagWithPath to commit the changed parent object back to the metadata container (using the parent's path and nil for the parent).
path: A string with the path to the desired tag. Please consult the documentation of TagWithPath for information about path syntax.
Value: The CGImageMetadataTagMBS object to be added to the metadata. The tag will be retained.

Returns true if successful, false otherwise.

58.25.7 SetTagWithPath(parent as CGImageMetadataTagMBS = nil, path as string, value as CGImageMetadataTagMBS) as Boolean

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Sets the value of the tag at a specific path in a CGMutableImageMetadataMBS container or a parent tag.
Notes: This function is used to add new metadata values to a metadata container, or update existing tag values. All tags required to reach the final tag (at the end of the path) are created, if needed. Tags are created with default types (i.e. arrays will be ordered). Creating tags will fail if a prefix is encountered that has not been registered. Use RegisterNamespaceForPrefix to associate a prefix with a namespace prior to using a path-based CGImageMetadata function.

Examples

- 'path' = "xmp:CreateDate", 'value' = "2011-09-20T14:54:47-08:00")
- 'path' = "dc:subject [0] ", 'value' = "San Francisco")
- 'path' = "dc:subject [1] ", 'value' = "Golden Gate Bridge")
- 'path' = "dc:description [en] " 'value' = "my image description")
- 'path' = "dc:description [de] " 'value' = "meine bildbeschreibung")

Note that if a parent tag is provided, the children of that tag reference will be modified, which may be a different reference from the tag stored in the metadata container. Since tags are normally obtained as a copy, it is typically neccesary to use SetTagWithPath to commit the changed parent object back to the metadata container (using the parent's path and "" for the parent).

parent: A parent tag. If nil, the path is relative to the root of the metadata (i.e. it is not a child of another property).
path: A string with the path to the desired tag. Please consult the documentation of TagWithPath for information about path syntax.
value: The value to be added to the CGImageMetadataTag matching the path.

The tag will be retained. The restrictions for the value are the same as in Create.
Returns true if successful, false otherwise.

58.25.8 SetValueMatchingImageProperty(dictionaryName as String, propertyName as String, value as CGImageMetadataTagMBS) as Boolean

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Sets the value of the CGImageMetadataTag matching a kCGImageProperty constant.
Notes: Provides a bridge for values from CGImageCopyPropertiesAtIndex, simplifying changing property values defined in EXIF and IPTC standards, which have no notion of namespaces, prefixes, or XMP property types.
Metadata Working Group guidance is factored into the mapping of CGImageProperties to XMP compatible CGImageMetadataTags.

For example, setting kCGImagePropertyExifDateTimeOriginal will set the value of the corresponding XMP tag, which is photoshop:DateCreated. Note that property values should still be in their XMP forms, such as "YYYY-MM-DDThh:mm:ss" for DateTime, rather than the EXIF or IPTC DateTime formats. Although this function will allow the caller to set custom values for these properties, you should consult the appropriate specifications for details about property value formats for EXIF and IPTC tags in XMP.

dictionaryName the metadata subdictionary to which the image property belongs, such as kCGImagePropertyExifDictionary or kCGImagePropertyIPTCDictionary. Not all dictionaries and properties are supported at this time.
propertyName the name of the property. This must be a defined property constant corresponding to the 'dictionaryName'. For example, kCGImagePropertyTIFFOrientation, kCGImagePropertyExifDateTimeOriginal, or kCGImagePropertyIPTCKeywords. A warning will be logged if the CGImageProperty is unsupported by CGImageMetadata.
value: A variant with the value for the tag. The same value restrictions apply as in Create.

Returns true if successful, false otherwise.

58.25.9 SetValueWithPath(parent as CGImageMetadataTagMBS = nil, path as string, value as Variant) as Boolean

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Sets the value of the tag at a specific path in a CGMutableImageMetadataMBS container or a parent tag.
Notes: This function is used to add new metadata values to a metadata container, or update existing tag values. All tags required to reach the final tag (at the end of the path) are created, if needed. Tags are created with default types (i.e. arrays will be ordered). Creating tags will fail if a prefix is encountered that has not been registered. Use RegisterNamespaceForPrefix to associate a prefix with a namespace prior to using a path-based CGImageMetadata function.

Examples

- 'path' = "xmp:CreateDate", 'value' = "2011-09-20T14:54:47-08:00")
- 'path' = "dc:subject [0] ", 'value' = "San Francisco")
- 'path' = "dc:subject [1] ", 'value' = "Golden Gate Bridge")

- 'path' = "dc:description [en] " 'value' = "my image description")
- 'path' = "dc:description [de] " 'value' = "meine bildbeschreibung")

Note that if a parent tag is provided, the children of that tag reference will be modified, which may be a different reference from the tag stored in the metadata container. Since tags are normally obtained as a copy, it is typically neccesary to use SetTagWithPath to commit the changed parent object back to the metadata container (using the parent's path and "" for the parent).

parent: A parent tag. If nil, the path is relative to the root of the metadata (i.e. it is not a child of another property).
path: A string with the path to the desired tag. Please consult the documentation of TagWithPath for information about path syntax.
value: The value to be added to the CGImageMetadataTag matching the path.

The tag will be retained. The restrictions for the value are the same as in Create.
Returns true if successful, false otherwise.

58.26 class CGMutablePathMBS

58.26.1 class CGMutablePathMBS

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: A class for a CoreGraphics mutable path.
Example:

```
// build a path with a triangle and a circle and fill it into a picture
Var path As New CGMutablePathMBS
path.MoveToPoint(Nil, 20, 20)
path.AddLineToPoint(Nil, 180, 20)
path.AddLineToPoint(Nil, 100, 160)
path.CloseSubpath
path.AddEllipseInRect(Nil, CGRectMBS.Make(200, 40, 80, 80))

Var pic As New Picture(300, 200)
Var ctx As CGBitmapContextMBS = CGBitmapContextMBS.CreateWithPicture(pic)
ctx.SetRGBFillColor(0.2, 0.4, 0.8)
ctx.AddPath path
ctx.FillPath

Var result As Picture = ctx.CreateImage.Picture
// show result in a Canvas or ImageViewer
```

Notes: Subclass of the CGPathMBS class.

58.26.2 Methods

58.26.3 AddArc(transform as CGAffineTransformMBS, x as Double, y as Double, radius as Double, startAngle as Double, endAngle as Double, clockwise as boolean)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Add an arc of a circle to path, possibly preceded by a straight line segment.
Notes: The arc is approximated by a sequence of cubic Bezier curves. (x, y) is the center of the arc; radius is its radius; startAngle is the angle to the first endpoint of the arc; endAngle is the angle to the second endpoint of the arc; and clockwise is true if the arc is to be drawn clockwise, false otherwise. startAngle and endAngle are measured in radians. If m is not nil, then the constructed Bezier curves representing the arc will be transformed by the matrix before they are added to path.

58.26.4 AddArcToPoint(transform as CGAffineTransformMBS, x as Double, y as Double, x2 as Double, y2 as Double, radius as Double)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Add an arc of a circle to path, possibly preceded by a straight line segment.
Notes: The arc is approximated by a sequence of cubic Bezier curves. (x, y) is the center of the arc; radius is its radius; startAngle is the angle to the first endpoint of the arc; endAngle is the angle to the second endpoint of the arc; and clockwise is true if the arc is to be drawn clockwise, false otherwise. startAngle and endAngle are measured in radians. If m is not nil, then the constructed Bezier curves representing the arc will be transformed by the matrix before they are added to path.

58.26.5 AddCurveToPoint(transform as CGAffineTransformMBS, cpx1 as Double, cpy1 as Double, cpx2 as Double, cpy2 as Double, x as Double, y as Double)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Append a cubic Bezier curve from the current point to (x,y) with control points (cp1x, cp1y) and (cp2x, cp2y) in path and move the current point to (x, y).
Notes: If transform is not nil, then transform all points by the matrix first.

58.26.6 AddEllipseInRect(transform as CGAffineTransformMBS, r as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Add an ellipse (an oval) inside rect to path.
Notes: The ellipse is approximated by a sequence of Bezier curves. The center of the ellipse is the midpoint of rect. If rect is square, then the ellipse will be circular with radius equal to one-half the width (equivalently, one-half the height) of rect. If rect is rectangular, then the major- and minor-axes will be the width and height of rect. The ellipse forms a complete subpath of path — that is, it begins with a "move to" and ends with a "close subpath" — oriented in the clockwise direction. If transform is not nil, then the constructed Bezier curves representing the ellipse will be transformed by m before they are added to path.

58.26.7 AddLineToPoint(transform as CGAffineTransformMBS, x as Double, y as Double)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Append a straight line segment from the current point to (x, y) in the path and move the current point to (x, y).
Notes: If transform is not nil, then transform (x, y) by the matrix first.

58.26.8 AddPath(transform as CGAffineTransformMBS, path as CGPathMBS)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Add a path to the path.
Notes: If m is not nil, then the points in the new path will be transformed by the matrix before they are added to path1.

58.26.9 AddQuadCurveToPoint(transform as CGAffineTransformMBS, cpx as Double, cpy as Double, x as Double, y as Double)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Append a quadratic curve from the current point to (x, y) with control point (cpx, cpy) in path and move the current point to (x, y'.
Notes: If transform is not nil, then transform all points by the matrix first.

58.26.10 AddRect(transform as CGAffineTransformMBS, r as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Add rect to path.
Notes: If transform is not nil, then transform the rectangle by the matrix first.

58.26.11 CloseSubpath

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Append a line from the current point to the starting point of the current subpath of path and end the subpath.

58.26.12 Constructor

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Create a mutable path.

58.26.13 ContainsPoint(transform as CGAffineTransformMBS, point as CGPointMBS, eoFill as boolean) as boolean

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Return true if point is contained in path; false otherwise.
Notes: A point is contained in a path if it is inside the painted region when the path is filled; if eoFill is true, then the even-odd fill rule is used to evaluate the painted region of the path, otherwise, the winding-number fill rule is used. If m is not nil, then the point is transformed by m before determining whether the path contains it.

58.26.14 MoveToPoint(transform as CGAffineTransformMBS, x as Double, y as Double)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Move the current point to (x, y) in path and begin a new subpath.
Notes: If transform is not nil, then transform (x, y) by the matrix first.

58.27 class CGPathElementMBS

58.27.1 class CGPathElementMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: All.

Function: The class for CGPath elements.
Example:

```
Var m as new CGMutablePathMBS

m.MoveToPoint nil, 10, 10
m.AddLineToPoint nil, 20, 30

Var e() as CGPathElementMBS = m.Elements
Break // see in debugger
```

58.27.2 Methods

58.27.3 Point(Index as Integer) as CGPointMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: All.

Function: Returns point with given index.

58.27.4 PointX(Index as Integer) as Double

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: All.

Function: Returns point x with given index.

58.27.5 PointY(Index as Integer) as Double

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: All.

Function: Returns point y with given index.

58.27.6 Properties

58.27.7 PointCount as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: All.

Function: Returns number of points in this element.
Notes: (Read and Write property)

58.27.8 Type as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: All.

Function: The type of this element.
Notes: (Read and Write property)

58.27.9 Constants

Type Constants

Constant	Value	Description
kTypeAddCurveToPoint	3	The path element that adds a cubic curve from the current point to the specified point. The element holds two control points and a destination point.
kTypeAddLineToPoint	1	The path element that adds a line from the current point to a new point. The element holds a single point for the destination.
kTypeAddQuadCurveToPoint	2	The path element that adds a quadratic curve from the current point to the specified point. The element holds a control point and a destination point.
kTypeCloseSubpath	4	The path element that closes and completes a subpath. The element does not contain any points.
kTypeMoveToPoint	0	The path element that starts a new subpath. The element holds a single point for the destination.

58.28 class CGPathMBS

58.28.1 class CGPathMBS

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: A class for a CoreGraphics path.

58.28.2 Methods

58.28.3 BoundingBox as CGRectMBS

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Return the bounding box of path.
Notes: The bounding box is the smallest rectangle completely enclosing all points in the path, including control points for Bezier and quadratic curves. If the path is empty, then return (0,0,0,0).

58.28.4 Copy as CGPathMBS

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Creates a copy of the path.
Notes: Returns nil on any error.

58.28.5 CurrentPoint as CGPointMBS

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Return the current point of the current subpath of path.
Notes: If there is no current point, then return (0,0).

58.28.6 Elements as CGPathElementMBS()

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: All.

Function: Queries all the elements in a CGPath.
Example:

```
Var m as new CGMutablePathMBS

m.MoveToPoint nil, 10, 10
m.AddLineToPoint nil, 20, 30

Var e() as CGPathElementMBS = m.Elements
Break // see in debugger
```

58.28.7 EqualToPath(path as CGPathMBS) as boolean

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Return true if the path self is equal to path; false otherwise.
Notes: Returns false if the path is nil.

58.28.8 IsEmpty as boolean

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Return true if path contains no elements, false otherwise.

58.28.9 IsRect(byref rect as CGRectMBS) as boolean

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Return true if path represents a rectangle, false otherwise.

58.28.10 MutableCopy as CGMutablePathMBS

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Create a mutable copy of path.
Notes: Returns nil on any error.

58.28.11 Properties

58.28.12 Handle as Integer

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The handle to the internal used object.
Notes: (Read and Write property)

58.29 class CGPDFArrayMBS

58.29.1 class CGPDFArrayMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class for a pdf array.

58.29.2 Methods

58.29.3 ArrayValue(index as Integer, byref value as CGPDFArrayMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given index is a pdf array, this function will return it.
Notes: Returns true on success and false on failure.

58.29.4 BooleanValue(index as Integer, byref value as boolean) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given index is a boolean value, this function will return it.
Notes: Returns true on success and false on failure.

58.29.5 Count as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the count of items in this array.

58.29.6 DictionaryValue(index as Integer, byref value as CGPDFDictionaryMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given index is a pdf dictionary, this function will return it.
Notes: Returns true on success and false on failure.

58.29.7 IntegerValue(index as Integer, byref value as Integer) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given index is an integer value, this function will return it.
Notes: Returns true on success and false on failure.
Is function will return double and integer values. Conversion is done automatically.

58.29.8 NameValue(index as Integer, byref value as string) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given index is a name string, this function will return it.
Notes: Returns true on success and false on failure.

58.29.9 NullValue(index as Integer) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given index is a nil value, this function will return it.
Notes: Returns true on success and false on failure.

58.29.10 ObjectValue(index as Integer, byref value as CGPDFObjectMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given index is a pdf object, this function will return it.
Notes: Returns true on success and false on failure.

58.29.11 SingleValue(index as Integer, byref value as Double) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given index is a floating point value, this function will return it.
Notes: Returns true on success and false on failure.
Is function will return double and integer values. Conversion is done automatically.

58.29.12 StreamValue(index as Integer, byref value as CGPDFStreamMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given index is a pdf stream, this function will return it.
Notes: Returns true on success and false on failure.

58.29.13 StringValue(index as Integer, byref value as CGPDFStringMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given index is a pdf string, this function will return it.
Notes: Returns true on success and false on failure.

58.29.14 Properties

58.29.15 Document as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The document this PDF Array belongs to.
Notes: (Read only property)

58.29.16 Handle as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The handle of the pdf array.
Notes: (Read and Write property)

58.30 class CGPDFContextMBS

58.30.1 class CGPDFContextMBS

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: A CoreGraphics context for PDF specific functions.
Example:

```
// create pdf
Var file as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var r as new CGRectMBS(0,0,500,500)
Var c as CGContextMBS = file.NewCGPDFDocumentMBS(r, "My Title", "My Author", "My Creator")

if c<>Nil then

// create page
c.BeginPage r

// draw something
c.SetRGBFillColor(1.0, 0.0, 0.0, 1.0)
c.FillRect CGMakeRectMBS(100,100,100,100)

// close page
c.EndPage

// flush and show in PDF viewer
c = nil
file.Launch
end if
```

Notes: This class defines functions to create and get information about a Quartz PDF context. A CGPDFContext object is a type of CGContext that is used for drawing PDF content. The functions in this reference operate only on Quartz PDF graphics contexts created using the functions CGPDFContextCreate or CGPDFContextCreateWithURL.

When you draw to the PDF context using CGContext functions the drawing operations are recorded in PDF format. The PDF commands that represent the drawing are written to the destination specified when you create the PDF graphics context.
Subclass of the CGContextMBS class.
Blog Entries

- MBS Xojo Plugins, version 19.1pr5
- MBS Real Studio Plugins, version 12.0pr6

58.30.2 Methods

58.30.3 AddDestinationAtPoint(name as string, x as Double, y as Double)

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Sets a destination to jump to when a point in the current page of a PDF graphics context is clicked.
Notes: name: A destination name.
x/y: A location in the current page of the PDF graphics context.
Available in Mac OS X v10.4 and later.

58.30.4 BeginPage(pageInfo as dictionary)

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Begins a new page in a PDF graphics context.
Notes: pageInfo: A dictionary that contains key-value pairs that define the page properties.

You must call the function EndPage to signal the end of the page.
Available in Mac OS X v10.4 and later.

58.30.5 Close

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Closes a PDF document.
Notes: After closing the context, all pending data is written to the context destination, and the PDF file is completed. No additional data can be written to the destination context after the PDF document is closed.

58.30.6 EndPage

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Ends the current page in the PDF graphics context.
Notes: You can call EndPage only after you call the function BeginPage.

58.30.7 kCGPDFContextAllowsCopying as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that used to set up a PDF context.
Notes: Whether the document allows copying when unlocked with the user password. The value of this key must be a Boolean object. The default value of this key is true.
Available in Mac OS X v10.4 and later.

58.30.8 kCGPDFContextAllowsPrinting as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that used to set up a PDF context.
Notes: Whether the document allows printing when unlocked with the user password. The value of this key must be a boolean value. The default value of this key is true.
Available in Mac OS X v10.4 and later.

58.30.9 kCGPDFContextArtBox as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that specify various PDF boxes.
Notes: The art box for the document or for a given page. This key is optional. If present, the value of this key must be a CGRectMBS.
Available in Mac OS X v10.4 and later.

58.30.10 kCGPDFContextAuthor as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that used to set up a PDF context.
Notes: The corresponding value is a string that represents the name of the person who created the document. This key is optional.
Available in Mac OS X v10.4 and later.

58.30.11 kCGPDFContextBleedBox as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that specify various PDF boxes.
Notes: The bleed box for the document or for a given page. This key is optional. If present, the value of this key must be a CGRectMBS object.
Available in Mac OS X v10.4 and later.

58.30.12 kCGPDFContextCreator as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that used to set up a PDF context.
Notes: The corresponding value is a string that represents the name of the application used to produce the document. This key is optional.
Available in Mac OS X v10.4 and later.

58.30.13 kCGPDFContextCropBox as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that specify various PDF boxes.
Notes: The crop box for the document or for a given page. This key is optional. If present, the value of this key must be a CGRect object.
Available in Mac OS X v10.4 and later.

58.30.14 kCGPDFContextEncryptionKeyLength as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that used to set up a PDF context.
Notes: The encryption key length in bits; see Table 3.18 "Entries common to all encryption dictionaries", PDF Reference: Adobe PDF version 1.5 (4th ed.) for more information. Optional; if present, the value of this key must be a number with value which is a multiple of 8 between 40 and 128, inclusive. If this key is absent or invalid, the encryption key length defaults to 40 bits.
Available in Mac OS X v10.5 and later.

58.30.15 kCGPDFContextKeywords as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that used to set up a PDF context.
Notes: The keywords for this document. This key is optional. If the value of this key is a string, the /Keywords entry will be the specified string. If the value of this key is a array, then it must be an array of variants with strings. The /Keywords entry will, in this case, be the concatenation of the specified strings separated by commas (","). In addition, an entry with the key "/AAPL:Keywords" is stored in the document information dictionary; its value is an array consisting of each of the specified strings. The value of this key must be in one of the above forms; otherwise, this key is ignored.
Available in Mac OS X v10.5 and later.

58.30.16 kCGPDFContextMediaBox as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that specify various PDF boxes.
Notes: The media box for the document or for a given page. This key is optional. If present, the value of this key must be a CGRectMBS object.
Available in Mac OS X v10.4 and later.

58.30.17 kCGPDFContextOutputIntent as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that used to set up a PDF context.
Notes: The output intent PDF/X. This key is optional. If present, the value of this key must be a dictionary. The dictionary is added to the /OutputIntents entry in the PDF file document catalog. The keys and values contained in the dictionary must match those specified in section 9.10.4 of the PDF 1.4 specification, ISO/DIS 15930-3 document published by ISO/TC 130, and Adobe Technical Note #5413.
Available in Mac OS X v10.4 and later.

58.30.18 kCGPDFContextOutputIntents as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that used to set up a PDF context.
Notes: Output intent dictionaries. This key is optional. If present, the value must be an array of one or more kCGPDFContextOutputIntent dictionaries. The array is added to the PDF document in the /OutputIntents entry in the PDF file's document catalog. Each dictionary in the array must be of form specified for the kCGPDFContextOutputIntent key, except that only the first dictionary in the array is required to contain the "S" key with a value of GTS_PDFX. If both the kCGPDFContextOutputIntent and kCGPDFContextOutputIntents keys are specified, the former is ignored.
Available in Mac OS X v10.4 and later.

58.30.19 kCGPDFContextOwnerPassword as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that used to set up a PDF context.
Notes: The owner password of the PDF document. If this key is specified, the document is encrypted using the value as the owner password; otherwise, the document will not be encrypted. The value of this key must be a string that can be represented in ASCII encoding. Only the first 32 bytes are used for the password. There is no default value for this key. If the value of this key cannot be represented in ASCII, the document is not created and the creation function returns nil.

Available in Mac OS X v10.4 and later.

58.30.20 kCGPDFContextSubject as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that used to set up a PDF context.
Notes: The subject of a document. Optional; if present, the value of this key must be a string.
Available in Mac OS X v10.5 and later.

58.30.21 kCGPDFContextTitle as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that used to set up a PDF context.
Notes: The corresponding value is a string that represents the title of the document. This key is optional.
Available in Mac OS X v10.4 and later.

58.30.22 kCGPDFContextTrimBox as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that specify various PDF boxes.
Notes: The trim box for the document or for a given page. This key is optional. If present, the value of this key must be a memoryblock that contains a CGRect (stored by value, not by reference).
Available in Mac OS X v10.4 and later.

58.30.23 kCGPDFContextUserPassword as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that used to set up a PDF context.
Notes: The user password of the PDF document. If the document is encrypted, then the value of this key will be the user password for the document. If not specified, the user password is the empty string. The value of this key must be a string that can be represented in ASCII encoding; only the first 32 bytes will be used for the password. If the value of this key cannot be represented in ASCII, the document is not created and the creation function returns nil.
Available in Mac OS X v10.4 and later.

58.30.24 kCGPDFXDestinationOutputProfile as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Output Intent Dictionary Keys.
Notes: An ICC profile stream defining the transformation from the PDF document's source colors to output device colorants. This key is required if the value of kCGPDFXOutputConditionIdentifier does not specify a standard production condition. It is optional otherwise. If present, the value of this key must be an ICC-based color space specified as a CGColorSpaceMBS object.
Available in Mac OS X v10.4 and later.

58.30.25 kCGPDFXInfo as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Output Intent Dictionary Keys.
Notes: A human-readable text string containing additional information or comments about the intended target device or production condition. This key is required if the value of kCGPDFXOutputConditionIdentifier does not specify a standard production condition. It is optional otherwise. If present, the value of this key must be a string.
Available in Mac OS X v10.4 and later.

58.30.26 kCGPDFXOutputCondition as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Output Intent Dictionary Keys.
Notes: A text string identifying the intended output device or production condition in a human- readable form. This key is optional. If present, the value of this key must be a string.
Available in Mac OS X v10.4 and later.

58.30.27 kCGPDFXOutputConditionIdentifier as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Output Intent Dictionary Keys.
Notes: A string identifying the intended output device or production condition in a human- or machine-readable form. This key is required. The value of this key must be a string. For best results, the string should be restricted to characters in the ASCII character set.
Available in Mac OS X v10.4 and later.

58.30.28 kCGPDFXOutputIntentSubtype as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Output Intent Dictionary Keys.

58.30.29 kCGPDFXRegistryName as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Output Intent Dictionary Keys.
Notes: The output intent subtype. This key is required. The value of this key must be a String object equal to "GTS_PDFX"; otherwise, the dictionary is ignored.
Available in Mac OS X v10.4 and later.

58.30.30 SetDestinationForRect(name as string, x as Double, y as Double, w as Double, h as Double)

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Sets a destination to jump to when a rectangle in the current PDF page is clicked.
Notes: name: A destination name.
x,y,w,h: A rectangle that specifies an area of the current page of a PDF graphics context. The rectangle is specified in default user space (not device space).
Available in Mac OS X v10.4 and later.

58.30.31 SetURLForRect(url as string, x as Double, y as Double, w as Double, h as Double)

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Sets the URL associated with a rectangle in a PDF graphics context.
Example:

```
Var c as CGPDFContextMBS // your pdf context
c.SetURLForRect("http://www.apple.com/", 100, 100, 100, 100)
```

Notes: url: A string that specifies the destination of the contents associated with the rectangle.
rect: A rectangle specified in default user space (not device space).
Available in Mac OS X v10.4 and later.

58.31 class CGPDFDictionaryListMBS

58.31.1 class CGPDFDictionaryListMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class for a pdf dictionary list.

58.31.2 Methods

58.31.3 Close

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

58.31.4 Key(index as Integer) as string

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the key with the give index.
Notes: Returns "" on any error.

58.31.5 Value(index as Integer) as CGPDFObjectMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The value with the given index.
Notes: Returns nil on any error.

58.31.6 Properties

58.31.7 Count as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the number of key&value pairs.
Notes: Returns 0 on any error.

(Read only property)

58.31.8 Document as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The document this PDF Dictionary belongs to.
Notes: (Read only property)

58.32 class CGPDFDictionaryMBS

58.32.1 class CGPDFDictionaryMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class for a pdf dictionary.
Example:

```
// read title, author and creator from the info dictionary of a PDF
Var doc As New CGPDFDocumentMBS(SpecialFolder.Desktop.Child("test.pdf"))
Var info As CGPDFDictionaryMBS = doc.GetInfo
If info = Nil Then Return

Var lines() As String
For Each key As String In Array("Title", "Author", "Creator", "Producer")
Var s As CGPDFStringMBS
If info.StringValue(key, s) Then lines.Add key + ": " + s.Text
Next
MessageBox info.Count.ToString + " entries" + EndOfLine + String.FromArray(lines, EndOfLine)
```

58.32.2 Methods

58.32.3 ArrayValue(key as string, byref value as CGPDFArrayMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given key is a pdf array, this function will return it.
Notes: Returns true on success and false on failure.

58.32.4 BooleanValue(key as string, byref value as boolean) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given key is a boolean value, this function will return it.
Notes: Returns true on success and false on failure.

58.32.5 Count as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The number of keys in this dictionary.

58.32.6 DictionaryValue(key as string, byref value as CGPDFDictionaryMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given key is a pdf dictionary, this function will return it.
Notes: Returns true on success and false on failure.

58.32.7 IntegerValue(key as string, byref value as Integer) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given key is an integer value, this function will return it.
Notes: Returns true on success and false on failure.
Is function will return double and integer values. Conversion is done automatically.

58.32.8 List as CGPDFDictionaryListMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns a list of all key&value pairs in the dictionary.
Notes: Returns nil on any error.

58.32.9 NameValue(key as string, byref value as string) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given key is a name string, this function will return it.
Notes: Returns true on success and false on failure.

58.32.10 ObjectValue(key as string, byref value as CGPDFObjectMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given key is a pdf object, this function will return it.
Notes: Returns true on success and false on failure.

58.32.11 SingleValue(key as string, byref value as Double) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given key is a floating point value, this function will return it.
Notes: Returns true on success and false on failure.
Is function will return double and integer values. Conversion is done automatically.

58.32.12 StreamValue(key as string, byref value as CGPDFStreamMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given key is a pdf stream, this function will return it.
Notes: Returns true on success and false on failure.

58.32.13 StringValue(key as string, byref value as CGPDFStringMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given key is a pdf string, this function will return it.
Notes: Returns true on success and false on failure.

58.32.14 Properties

58.32.15 Document as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The document this PDF Dictionary belongs to.
Notes: (Read only property)

58.32.16 Handle as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The handle of the pdf dictionary.
Notes: (Read and Write property)

58.33 class CGPDFDocumentMBS

58.33.1 class CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: A class for a core graphics pdf document.
Example:

```
Var f as FolderItem
Var input as CGPDFDocumentMBS
Var output as CGContextMBS
Var r,c as CGRectMBS

f=SpecialFolder.Desktop.Child("test.pdf")
input=f.OpenAsCGPDFDocumentMBS

r=CGMakeRectMBS(0,0,200,200) // 200 by 200 Pixel page

f=SpecialFolder.Desktop.Child("output.pdf")
output=f.NewCGPDFDocumentMBS(r,"SomeTitle","SomeAuthor","SomeCreator")

// Create a new page
output.BeginPage r

// get size of input page one
c=input.CropBox(1)

// clip to a part of the new page leaving a border
r=CGMakeRectMBS(20,20,160,160)
output.ClipToRect r

// draw old pdf on a different position
c.top=-100
c.left=-100

// do the drawing of page one of input at new new output
output.DrawCGPDFDocument(input,c,1)

// cleanup
output.EndPage
output.Flush
```

Notes: If the release property is true, the destructor of this class will release the pdfdocument reference.

58.33.2 Methods

58.33.3 ArtBox(page as Integer) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns the ArtBox of this page.
Notes: Returns nil on any error.
This function is deprecated by Apple in favor of using the CGPDFPageMBS class.

58.33.4 BleedBox(page as Integer) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns the BleedBox of this page.
Notes: Returns nil on any error.
This function is deprecated by Apple in favor of using the CGPDFPageMBS class.

58.33.5 Catalog as CGPDFDictionaryMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Return the document catalog of 'document'.

58.33.6 Constructor(dataProvider as CGDataProviderMBS)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a Quartz PDF document using a data provider.
Notes: Distributing individual pages of a PDF document to separate threads is not supported. If you want to use threads, consider creating a separate document for each thread and operating on a block of pages per

thread.
See also:

- 58.33.7 Constructor(file as folderitem) 9812
- 58.33.8 Constructor(Handle as Integer) 9812
- 58.33.9 Constructor(url as string) 9812

58.33.7 Constructor(file as folderitem)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a Quartz PDF document using data specified by a file.
Notes: Distributing individual pages of a PDF document to separate threads is not supported. If you want to use threads, consider creating a separate document for each thread and operating on a block of pages per thread.
See also:

- 58.33.6 Constructor(dataProvider as CGDataProviderMBS) 9811
- 58.33.8 Constructor(Handle as Integer) 9812
- 58.33.9 Constructor(url as string) 9812

58.33.8 Constructor(Handle as Integer)

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Creates a Quartz PDF document object based on the given handle value.
Notes: Handle must not be zero and should be a valid CGPDFDocumentRef casted to integer.
See also:

- 58.33.6 Constructor(dataProvider as CGDataProviderMBS) 9811
- 58.33.7 Constructor(file as folderitem) 9812
- 58.33.9 Constructor(url as string) 9812

58.33.9 Constructor(url as string)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a Quartz PDF document using data specified by a URL.
Notes: Distributing individual pages of a PDF document to separate threads is not supported. If you want to use threads, consider creating a separate document for each thread and operating on a block of pages per thread.
See also:

- 58.33.6 Constructor(dataProvider as CGDataProviderMBS) 9811
- 58.33.7 Constructor(file as folderitem) 9812
- 58.33.8 Constructor(Handle as Integer) 9812

58.33.10 CreateWithData(data as Memoryblock) as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a Quartz PDF document using a data.
Notes: Distributing individual pages of a PDF document to separate threads is not supported. If you want to use threads, consider creating a separate document for each thread and operating on a block of pages per thread.
See also:

- 58.33.11 CreateWithData(data as string) as CGPDFDocumentMBS 9813

58.33.11 CreateWithData(data as string) as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Creates a Quartz PDF document using a data.
Notes: Distributing individual pages of a PDF document to separate threads is not supported. If you want to use threads, consider creating a separate document for each thread and operating on a block of pages per thread.
See also:

- 58.33.10 CreateWithData(data as Memoryblock) as CGPDFDocumentMBS 9813

58.33.12 CreateWithFile(file as folderitem) as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Creates a Quartz PDF document using data specified by a file.
Notes: Distributing individual pages of a PDF document to separate threads is not supported. If you want to use threads, consider creating a separate document for each thread and operating on a block of pages per thread.

58.33.13 CreateWithProvider(dataProvider as CGDataProviderMBS) as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Creates a Quartz PDF document using a data provider.
Notes: Distributing individual pages of a PDF document to separate threads is not supported. If you want to use threads, consider creating a separate document for each thread and operating on a block of pages per thread.

58.33.14 CreateWithURL(url as string) as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Creates a Quartz PDF document using data specified by a URL.
Notes: Distributing individual pages of a PDF document to separate threads is not supported. If you want to use threads, consider creating a separate document for each thread and operating on a block of pages per thread.

58.33.15 CropBox(page as Integer) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns the CropBox of this page.
Notes: Returns nil on any error.
This function is deprecated by Apple in favor of using the CGPDFPageMBS class.

58.33.16 GetID as CGPDFArrayMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Gets the file identifier for a PDF document.
Notes: A PDF file identifier is defined in the PDF specification as an array of two strings, the first of which is a permanent identifier that doesn't change even when the file is updated. The second string changes each time the file is updated. For more information, see PDF Reference: Version 1.3 (Second Edition), Adobe Systems Incorporated.

Available in Mac OS X v10.4 and later.

58.33.17 GetInfo as CGPDFDictionaryMBS

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: All.

Function: Queries the PDF info dictionary.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var p as cgpdfdocumentMBS=f.OpenAsCGPDFDocumentMBS

Var Co as CGPDFStringMBS
Var info as CGPDFDictionaryMBS = p.GetInfo
if info.StringValue("Subject",co) then
MessageBox co.Text // shows subject
end if
```

Notes: Returns nil on any error.

58.33.18 MediaBox(page as Integer) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns the MediaBox of this page.
Notes: Returns nil on any error.
This function is deprecated by Apple in favor of using the CGPDFPageMBS class.

58.33.19 Page(index as Integer) as CGPDFPageMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns a page of the document.

58.33.20 RotationAngle(page as Integer) as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns the rotation of a page in degrees.
Notes: Returns 0 on any error.

58.33.21 TrimBox(page as Integer) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns the TrimBox of this page.
Notes: Returns nil on any error.
This function is deprecated by Apple in favor of using the CGPDFPageMBS class.

58.33.22 UnlockWithPassword(name as string) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Return true if 'document' is unlocked; false otherwise.
Notes: A document is unlocked if it isn't encrypted, or if it is encrypted and a valid password was previously specified with CGPDFDocumentUnlockWithPassword.

58.33.23 Properties

58.33.24 AllowsCopying as Boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Return true if 'document' allows copying; false otherwise.
Notes: Typically, this function returns false only if the document is encrypted and the document's current password doesn't grant permission to perform copying.
(Read only property)

58.33.25 AllowsPrinting as Boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Return true if 'document' allows printing; false otherwise.
Notes: Typically, this function returns false only if the document is encrypted and the document's current password doesn't grant permission to perform printing.
(Read only property)

58.33.26 handle as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The handle for this pdfdocument.
Notes: Handle is a CGPDFDocumentRef.
(Read and Write property)

58.33.27 IsEncrypted as Boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Return true if the PDF file associated with 'document' is encrypted; false otherwise.

Notes: If the PDF file is encrypted, then a password must be supplied before certain operations are enabled; different passwords may enable different operations.
(Read only property)

58.33.28 IsUnlocked as Boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Return true if 'document' is unlocked; false otherwise.
Notes: A document is unlocked if it isn't encrypted, or if it is encrypted and a valid password was previously specified with CGPDFDocumentUnlockWithPassword.
(Read only property)

58.33.29 MajorVersion as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the major version of the pdf document.
Notes: (Read only property)

58.33.30 MinorVersion as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the minor version of the pdf document.
Notes: (Read only property)

58.33.31 PageCount as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Counts the pages inside the PDF document.
Example:

```
Var f as FolderItem
Var d as CGPDFDocumentMBS

f=SpecialFolder.Desktop.Child("test.pdf")
d=f.OpenAsCGPDFDocumentMBS

MessageBox str(d.PageCount)
```

Notes: Returns 0 on any error.
(Read only property)

58.34 class CGPDFObjectMBS

58.34.1 class CGPDFObjectMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class for a pdf object.

58.34.2 Methods

58.34.3 ArrayValue(byref value as CGPDFArrayMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object contains a pdf array, this function will return it.
Notes: Returns true on success and false on failure.

58.34.4 BooleanValue(byref value as boolean) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object contains a boolean, this function will return it.
Notes: Returns true on success and false on failure.

58.34.5 DictionaryValue(byref value as CGPDFDictionaryMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object contains a pdf dictionary, this function will return it.
Notes: Returns true on success and false on failure.

58.34.6 IntegerValue(byref value as Integer) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object contains an integer, this function will return it.
Notes: Returns true on success and false on failure.
Is function will return double and integer values. Conversion is done automatically.

58.34.7 NameValue(byref value as string) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object contains a name string, this function will return it.
Notes: Returns true on success and false on failure.

58.34.8 SingleValue(byref value as Double) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object contains a floating point number, this function will return it.
Notes: Returns true on success and false on failure.
Is function will return double and integer values. Conversion is done automatically.

58.34.9 StreamValue(byref value as CGPDFStreamMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object contains a pdf stream, this function will return it.
Notes: Returns true on success and false on failure.

58.34.10 StringValue(byref value as CGPDFStringMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object contains a pdfstring, this function will return it.
Notes: Returns true on success and false on failure.

58.34.11 Type as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the type of the object content.
Notes: Some useful constants:

kCGPDFObjectTypeNull = 1
kCGPDFObjectTypeBoolean = 2
kCGPDFObjectTypeInteger = 3
kCGPDFObjectTypeReal = 4
kCGPDFObjectTypeName = 5

kCGPDFObjectTypeString = 6
kCGPDFObjectTypeArray = 7
kCGPDFObjectTypeDictionary = 8
kCGPDFObjectTypeStream = 9

58.34.12 Properties

58.34.13 Document as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The document this PDF Object belongs to.
Notes: (Read only property)

58.34.14 Handle as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The handle of the pdf object.
Notes: (Read and Write property)

58.34.15 Constants

Constants

Constant	Value	Description
kCGPDFObjectTypeArray	7	One of the type constants for a PDF object type. Type for a PDF array.
kCGPDFObjectTypeBoolean	2	One of the type constants for a PDF object type. The type for a PDF Boolean.
kCGPDFObjectTypeDictionary	8	One of the type constants for a PDF object type. The type for a PDF dictionary.
kCGPDFObjectTypeInteger	3	One of the type constants for a PDF object type. The type for a PDF integer.
kCGPDFObjectTypeName	5	One of the type constants for a PDF object type. Type for a PDF name.
kCGPDFObjectTypeNull	1	One of the type constants for a PDF object type. The type for a PDF null.
kCGPDFObjectTypeReal	4	One of the type constants for a PDF object type. The type for a PDF real.
kCGPDFObjectTypeStream	9	One of the type constants for a PDF object type. The type for a PDF stream.
kCGPDFObjectTypeString	6	One of the type constants for a PDF object type. The type for a PDF string.

58.35 class CGPDFPageMBS

58.35.1 class CGPDFPageMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class for a pdf page.
Example:

```
// show size and rotation of all pages of a PDF with Quartz
Var doc As New CGPDFDocumentMBS(SpecialFolder.Desktop.Child("test.pdf"))
Var lines() As String
For i As Integer = 1 To doc.PageCount
Var page As CGPDFPageMBS = doc.Page(i)
Var box As CGRectMBS = page.MediaBox
lines.Add "Page " + page.PageNumber.ToString + ": " + Format(box.Width, "0") + " x " + Format(box.Height,
"0") + " pt, rotated " + page.RotationAngle.ToString
Next
MessageBox String.FromArray(lines, EndOfLine)
```

58.35.2 Methods

58.35.3 ArtBox as CGRectMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the ArtBox of this page.
Notes: Returns nil on any error.
This is the value of the corresponding entry in the page's dictionary.

58.35.4 BleedBox as CGRectMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the BleedBox of this page.
Notes: Returns nil on any error.
This is the value of the corresponding entry in the page's dictionary.

58.35.5 CropBox as CGRectMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the BleedBox of this page.
Notes: Returns nil on any error.
This is the value of the corresponding entry in the page's dictionary.

58.35.6 Dictionary as CGPDFDictionaryMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The information dictionary of this page.
Notes: Returns nil on any error.

58.35.7 MediaBox as CGRectMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the MediaBox of this page.
Notes: Returns nil on any error.
This is the value of the corresponding entry in the page's dictionary.

58.35.8 PageNumber as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The page number of this page.

58.35.9 RotationAngle as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the rotation of a page in degrees.
Notes: This is the value of the /Rotate entry in the page's dictionary.

58.35.10 TrimBox as CGRectMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the TrimBox of this page.
Notes: Returns nil on any error.
This is the value of the corresponding entry in the page's dictionary.

58.35.11 Properties

58.35.12 Document as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The document this PDF Page belongs to.
Notes: (Read only property)

58.35.13 Handle as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The handle of the pdf page.
Notes: (Read and Write property)

58.35.14 Constants

Constants

Constant	Value	Description
kCGPDFArtBox	4	One of the box types for a PDF page. The page art box—a rectangle, expressed in default user space units, defining the extent of the page's meaningful content (including potential white space) as intended by the page's creator. Available in Mac OS X v10.3 and later.
kCGPDFBleedBox	2	One of the box types for a PDF page. The page bleed box—a rectangle, expressed in default user space units, that defines the region to which the contents of the page should be clipped when output in a production environment Available in Mac OS X v10.3 and later.
kCGPDFCropBox	1	One of the box types for a PDF page. The page crop box—a rectangle, expressed in default user space units, that defines the visible region of default user space. When the page is displayed or printed, its contents are to be clipped to this rectangle. Available in Mac OS X v10.3 and later.
kCGPDFMediaBox	0	One of the box types for a PDF page. The page media box—a rectangle, expressed in default user space units, that defines the boundaries of the physical medium on which the page is intended to be displayed or printed Available in Mac OS X v10.3 and later.
kCGPDFTrimBox	3	One of the box types for a PDF page. The page trim box—a rectangle, expressed in default user space units, that defines the intended dimensions of the finished page after trimming. Available in Mac OS X v10.3 and later.

58.36 class CGPDFStreamMBS

58.36.1 class CGPDFStreamMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class for a pdf stream.

58.36.2 Methods

58.36.3 Data(byref format as Integer) as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The data of this pdf stream.
Notes: Format is set to one of the following constants:

CGPDFDataFormatRaw	0
CGPDFDataFormatJPEGEncoded	1
CGPDFDataFormatJPEG2000	2

Returns nil on any error.

58.36.4 Dictionary as CGPDFDictionaryMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The information dictionary for this stream.
Notes: Returns nil on any error.

58.36.5 Properties

58.36.6 Document as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The document this PDF Stream belongs to.
Notes: (Read only property)

58.36.7 Handle as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The handle of the pdf stream.
Notes: (Read and Write property)

58.36.8 Constants

Constants

Constant	Value	Description
CGPDFDataFormatJPEG2000	2	One of the data format constants.
CGPDFDataFormatJPEGEncoded	1	One of the data format constants.
CGPDFDataFormatRaw	0	One of the data format constants.

58.37 class CGPDFStringMBS

58.37.1 class CGPDFStringMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class for a pdf string.

58.37.2 Methods

58.37.3 Bytes as MemoryBlock

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The bytes of this pdf string.
Notes: Returns nil on any error.
This memoryblock is not encoding safe!

58.37.4 Length as Integer

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The length of the text.

58.37.5 Text as string

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The text of the pdf string as a string.
Notes: In contrast to the bytes in the memoryblock, this String is encoding save.
Returns nil on any error.

58.37.6 Properties

58.37.7 Document as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The document this PDF String belongs to.
Notes: (Read only property)

58.37.8 Handle as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The handle of the pdf string.
Notes: (Read and Write property)

58.38 class CGPointMBS

58.38.1 class CGPointMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: A class for a core graphics point.
Example:

```
// create points, scale and rotate them
Var p As New CGPointMBS(10, 20)
Var scaled As CGPointMBS = p.multiply(2.0)

Var rotation As CGAffineTransformMBS = CGAffineTransformMBS.MakeRotation(3.14159265358979 / 2)
// 90 degrees in radians
Var rotated As CGPointMBS = p.ApplyAffineTransform(rotation)

MessageBox "Scaled: " + scaled.x.ToString + ", " + scaled.y.ToString + EndOfLine + _
"Rotated: " + Format(rotated.x, "0.0") + ", " + Format(rotated.y, "0.0") + EndOfLine + _
"Equal to zero: " + p.Equal(CGPointMBS.Zero).ToString
```

Blog Entries

- MBS Xojo Plugins, version 24.5pr3
- Basic Forms in MBS Xojo SceneKit Plugin
- MBS Real Studio Plugins, version 12.0pr6
- MBS REALbasic plug-ins version 9.5

58.38.2 Methods

58.38.3 ApplyAffineTransform(p as CGAffineTransformMBS) as CGPointMBS

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Transform 'point' by 't' and return the result: p' = p * t where p = [x y 1] .

58.38.4 Binary as MemoryBlock

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns the internal data of the object as a CGPoint for use on Toolbox calls.
Example:

```
Var c as CGPointMBS
Var m as MemoryBlock

c=CGMakePointMBS(10,20)

m=c.Binary

MessageBox str(m.Size) // 8
MessageBox str(m.doubleValue( 0)) // 10
MessageBox str(m.doubleValue( 4)) // 20
```

58.38.5 Constructor

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new point object with the given values.
See also:

- 58.38.6 Constructor(p as Ptr) 9832
- 58.38.7 Constructor(source as CGPointMBS) 9832
- 58.38.8 Constructor(x as Double, y as Double) 9833

58.38.6 Constructor(p as Ptr)

MBS MacCG Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: Creates a new instance using data at the pointer.
Notes: Make sure the pointer is valid and has the right data and size.
See also:

- 58.38.5 Constructor 9832
- 58.38.7 Constructor(source as CGPointMBS) 9832
- 58.38.8 Constructor(x as Double, y as Double) 9833

58.38.7 Constructor(source as CGPointMBS)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new point object with the given values.
See also:

- 58.38.5 Constructor 9832

- 58.38.6 Constructor(p as Ptr) 9832
- 58.38.8 Constructor(x as Double, y as Double) 9833

58.38.8 Constructor(x as Double, y as Double)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new point object with the given values.
See also:

- 58.38.5 Constructor 9832
- 58.38.6 Constructor(p as Ptr) 9832
- 58.38.7 Constructor(source as CGPointMBS) 9832

58.38.9 Equal(p as CGPointMBS) as boolean

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns true if both points are equal.

58.38.10 Make(x as Double, y as Double) as CGPointMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns a new CGPointMBS object.

58.38.11 multiply(factor as double) as CGPointMBS

MBS MacCG Plugin, Plugin Version: 24.5, Platform: macOS, Targets: All.

Function: Multiplies the point with this factors.
See also:

- 58.38.12 multiply(x as double, y as double) as CGPointMBS 9833

58.38.12 multiply(x as double, y as double) as CGPointMBS

MBS MacCG Plugin, Plugin Version: 24.5, Platform: macOS, Targets: All.

Function: Multiplies the point with this factors.
See also:

• 58.38.11 multiply(factor as double) as CGPointMBS 9833

58.38.13 Zero as CGPointMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns the zero point.
Notes: The "zero" point – equivalent to CGMakePointMBS(0, 0).

58.38.14 Properties

58.38.15 x as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The X property of the point.
Notes: (Read and Write property)

58.38.16 y as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The Y property of the point.
Notes: (Read and Write property)

58.39 class CGPSConverterMBS

58.39.1 class CGPSConverterMBS

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** The class in CoreGraphics to convert Postscript code to PDF data.
Notes: Requires Mac OS X 10.3.
Won't work in macOS Sonoma since Apple removed the feature from the OS.
Blog Entries

- MBS Xojo Plugins, version 23.3pr2
- EPS support deprecated in macOS Sonoma
- MBS Real Studio Plugins, version 12.1pr10

58.39.2 Methods

58.39.3 Abort as boolean

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Tell the converter to abort conversion at the next possible opportunity.
Notes: Returns false on any error and true on success.

58.39.4 Constructor(options as Dictionary = nil)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Create a CGPSConverter.
Notes: Currently you should pass nil for options. (Mac OS X 10.3)
On failure the handle property is zero.

58.39.5 Convert(provider as CGDataProviderMBS, consumer as CGDataConsumerMBS, options as Dictionary = nil) as boolean

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Converts PostScript data to PDF data.
Notes: The PostScript data is supplied by provider; the resulting PDF is written to consumer. Returns true if the conversion succeeded; false otherwise.

58.39.6 IsConverting as boolean

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns true if the converter is currently converting data.
Notes: False on any error.

58.39.7 Properties

58.39.8 Handle as Integer

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The hande to the CGPSConverter object.
Notes: Datatype is CGPSConverterRef.
(Read and Write property)

58.39.9 Events

58.39.10 BeginDocument

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Is called at the beginning of the conversion of the PostScript document.

58.39.11 BeginPage(PageNumber as Integer, PageInfo as Dictionary)

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Called at the start of the conversion of each page in the PostScript document.

58.39.12 EndDocument(success as boolean)

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Called at the end of conversion of the PostScript document.

58.39.13 EndPage(PageNumber as Integer, PageInfo as Dictionary)

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Called at the end of the conversion of each page in the PostScript document.

58.39.14 Finished

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Called when the converter is no longer needed.

58.39.15 Message(message as string)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Called to pass any messages that might result during the conversion.

58.39.16 Progress

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Called periodically during the conversion to indicate that conversion is proceeding.

58.40 class CGRectMBS

58.40.1 class CGRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: A class for a core graphics rectangle.
Example:

```
// calculate with rectangles
Var a As New CGRectMBS(0, 0, 200, 100)
Var b As New CGRectMBS(150, 50, 100, 100)

Var common As CGRectMBS = a.Intersection(b)
Var both As CGRectMBS = a.Union(b)
Var smaller As CGRectMBS = a.Inset(10, 10)

MessageBox "Intersects: " + a.IntersectsRect(b).ToString + EndOfLine + _
"Intersection: " + common.Width.ToString + " x " + common.Height.ToString + EndOfLine + _
"Union: " + both.Width.ToString + " x " + both.Height.ToString + EndOfLine + _
"Inset: " + smaller.Left.ToString + ", " + smaller.Top.ToString + ", " + smaller.Width.ToString + " x "
+ smaller.Height.ToString + EndOfLine + _
"Center: " + a.MidX.ToString + ", " + a.MidY.ToString
```

58.40.2 Methods

58.40.3 ApplyAffineTransform(a as CGAffineTransformMBS) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: All.

Function: Applies an affine transform to the rectangle and returns the result.
Example:

```
Var af as CGAffineTransformMBS = CGAffineTransformMBS.Identity

MessageBox str(af.A)+" "+str(af.b)+" "+str(af.c)+" "+str(af.d)+" "+str(af.tx)+" "+str(af.ty)

af = af.Scale( 1, -1 )

MessageBox str(af.A)+" "+str(af.b)+" "+str(af.c)+" "+str(af.d)+" "+str(af.tx)+" "+str(af.ty)

af = af.Translate( 0, 100 )

MessageBox str(af.A)+" "+str(af.b)+" "+str(af.c)+" "+str(af.d)+" "+str(af.tx)+" "+str(af.ty)

Var r1 as CGRectMBS
Var r2 as CGRectMBS

r1=CGMakeRectMBS(100,100,100,100)

r2=r1.ApplyAffineTransform(af)

MessageBox "("+str(r1.Left)+", "+str(r1.top)+", "+str(r1.width)+", "+str(r1.height)+") =>("+str(r2.Left)+",
"+str(r2.top)+", "+str(r2.width)+", "+str(r2.height)+")"
```

Notes: Returns nil on any error.

58.40.4 Binary as MemoryBlock

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns the internal data of the object as a CGRect for use on Toolbox calls.
Example:

```
Var c as CGRectMBS
Var m as MemoryBlock

c=CGMakeRectMBS(10,20,30,40)

m=c.Binary

MessageBox str(m.Size) // 16
MessageBox str(m.doubleValue( 0)) // 10
MessageBox str(m.doubleValue( 4)) // 20
MessageBox str(m.doubleValue( 8)) // 30
MessageBox str(m.doubleValue(12)) // 40
```

58.40.5 Constructor

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The constructor to create a zero rectangle.
See also:

- 58.40.6 Constructor(p as Ptr) 9840
- 58.40.7 Constructor(source as CGRectMBS) 9840
- 58.40.8 Constructor(x as Double, y as Double, width as Double, height as Double) 9840

58.40.6 Constructor(p as Ptr)

MBS MacCG Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: Creates a new instance using data at the pointer.
Notes: Make sure the pointer is valid and has the right data and size.
See also:

- 58.40.5 Constructor 9840
- 58.40.7 Constructor(source as CGRectMBS) 9840
- 58.40.8 Constructor(x as Double, y as Double, width as Double, height as Double) 9840

58.40.7 Constructor(source as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new CGRectMBS object by copying the values.
See also:

- 58.40.5 Constructor 9840
- 58.40.6 Constructor(p as Ptr) 9840
- 58.40.8 Constructor(x as Double, y as Double, width as Double, height as Double) 9840

58.40.8 Constructor(x as Double, y as Double, width as Double, height as Double)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new CGRectMBS object with the given values.
See also:

- 58.40.5 Constructor 9840
- 58.40.6 Constructor(p as Ptr) 9840
- 58.40.7 Constructor(source as CGRectMBS) 9840

58.40.9 ContainsPoint(r as CGPointMBS) as boolean

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return true if 'point' is contained in the rect, false otherwise.

58.40.10 ContainsRect(r as CGRectMBS) as boolean

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return true if 'rect2' is contained in 'rect1', false otherwise.
Notes: 'rect2' is contained in 'rect1' if the union of 'rect1' and 'rect2' is equal to 'rect1'.
(rect1 is the current rect and rect2 the rect you pass to this function)

58.40.11 Divide(byref slice as CGRectMBS, byref remainder as CGRectMBS, amount as Double, edge as Integer)

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Divides the rectangle.
Notes: Make two new rectangles, 'slice' and 'remainder', by dividing the rect with a line that's parallel to one of its sides, specified by 'edge' – either 'CGRectMinXEdge', 'CGRectMinYEdge', 'CGRectMaxXEdge', or 'CGRectMaxYEdge'. The size of 'slice' is determined by 'amount', which measures the distance from the specified edge.

58.40.12 Equal(r as CGRectMBS) as boolean

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns true if both rectangles are equal.

58.40.13 Infinite as CGRectMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: A rectangle that has infinite extent.
Example:

```
Var r as CGRectMBS = CGRectMBS.Infinite
MessageBox str(r.Left)+" "+str(R.Top)+" "+str(R.Width)+" "+str(r.Height)
```

Notes: Available in Mac OS X v10.4 and later.

58.40.14 Inset(dx as Double, dy as Double) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Inset the rect by '(dx, dy)' – i.e., offset its origin by '(dx, dy)', and decrease its size by '(2*dx, 2*dy)'

58.40.15 Integral as CGRectMBS

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Expand the rect to the smallest rect containing it with integral origin and size.

58.40.16 Intersection(r as CGRectMBS) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the intersection of both rectangles.
Notes: This may return a null rect.

58.40.17 IntersectsRect(r as CGRectMBS) as boolean

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return true if 'rect1' intersects 'rect2', false otherwise.
Notes: 'rect1' intersect 'rect2' if the intersection of 'rect1' and 'rect2' is not the null rect.

58.40.18 IsEmpty as boolean

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return true if the rect is empty – i.e., if it has zero width or height.
Notes: A null rect is defined to be empty.

58.40.19 IsInfinite as boolean

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns whether a rectangle is infinite.
Notes: Returns true if the specified rectangle is infinite, false otherwise.

An infinite rectangle is one that has no defined bounds. Infinite rectangles can be created as output from a tiling filter. For example, the Core Image framework perspective tile filter creates an image whose extent is described by an infinite rectangle.

58.40.20 IsNull as boolean

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return true if the rect is null – e.g., the result of intersecting two disjoint rectangles is a null rect.

58.40.21 Make(x as Double, y as Double, width as Double, height as Double) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns a new CGRectMBS object with the given values.
Example:

```
Var r as CGRectMBS = CGRectMBS.Make(1,2,3,4)
MessageBox str(r.Left)+" "+str(R.Top)+" "+str(R.Width)+" "+str(r.Height)
```

58.40.22 MaxX as Double

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the rightmost x-value of the rect.
Example:

```
Var r as CGRectMBS = CGMakeRectMBS(10, 20, 30, 40)
MessageBox str(r.MaxX) // 40
```

58.40.23 MaxY as Double

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the topmost y-value of the rect.
Example:

```
Var r as CGRectMBS = CGMakeRectMBS(10, 20, 30, 40)
MessageBox str(r.MaxY) // 60
```

58.40.24 MidX as Double

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the midpoint x-value of the rect.
Example:

```
Var r as CGRectMBS = CGMakeRectMBS(10, 20, 30, 40)
MessageBox str(r.MidX) // 25
```

58.40.25 MidY as Double

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the midpoint y-value of the rect.
Example:

```
Var r as CGRectMBS = CGMakeRectMBS(10, 20, 30, 40)
MessageBox str(r.MidY) // 40
```

58.40.26 MinX as Double

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the leftmost x-value of the rect.
Example:

```
Var r as CGRectMBS = CGMakeRectMBS(10, 20, 30, 40)
MessageBox str(r.MinX) // 10
```

58.40.27 MinY as Double

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the bottommost y-value of the rect.
Example:

```
Var r as CGRectMBS = CGMakeRectMBS(10, 20, 30, 40)
MessageBox str(r.MinY) // 20
```

58.40.28 multiply(factor as double) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 24.5, Platform: macOS, Targets: All.

Function: Multiplies the rect with this factors.
See also:

- 58.40.29 multiply(x as double, y as double) as CGRectMBS 9845

58.40.29 multiply(x as double, y as double) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 24.5, Platform: macOS, Targets: All.

Function: Multiplies the rect with this factors.
See also:

- 58.40.28 multiply(factor as double) as CGRectMBS 9845

58.40.30 Null as CGRectMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns the null rect.
Example:

```
Var r as CGRectMBS = CGRectMBS.Null
MessageBox str(r.Left)+" "+str(R.Top)+" "+str(R.Width)+" "+str(r.Height)
```

Notes: The "empty" rect. This is the rectangle returned when, for example, we intersect two disjoint rectangles.
Note that the null rect is not the same as the zero rect.

58.40.31 Offset(dx as Double, dy as Double) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Offset the rect by '(dx, dy)'.

58.40.32 Standardize as CGRectMBS

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Standardize the rect – i.e., convert it to an equivalent rect which has positive width and height.
Example:

```
Var r as CGRectMBS = CGRectMBS.Make(5, 6, -3, -2)
MessageBox str(r.Left)+" "+str(R.Top)+" "+str(R.Width)+" "+str(r.Height)
r = r.Standardize
MessageBox str(r.Left)+" "+str(R.Top)+" "+str(R.Width)+" "+str(r.Height)
```

58.40.33 Union(r as CGRectMBS) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the union of both rectangles.
Example:

```
Var r as CGRectMBS = CGRectMBS.Infinite
MessageBox str(r.Left)+" "+str(R.Top)+" "+str(R.Width)+" "+str(r.Height)
```

58.40.34 Zero as CGRectMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: A rectangle constant with location (0,0), and width and height of 0.
Example:

```
Var r as CGRectMBS = CGRectMBS.Zero
MessageBox str(r.Left)+" "+str(R.Top)+" "+str(R.Width)+" "+str(r.Height)
```

Notes: The zero rectangle is equivalent to CGRectMBS.Make(0,0,0,0).

58.40.35 Properties

58.40.36 height as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The height property of the rectangle.
Example:

```
Var r as CGRectMBS = CGMakeRectMBS(10, 20, 30, 40)
MessageBox str(r.Left)+" "+str(R.Top)+" "+str(R.Width)+" "+str(r.Height)
```

Notes: (Read and Write property)

58.40.37 left as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The left property of the rectangle.
Notes: (Read and Write property)

58.40.38 Origin as CGPointMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The origin of the rectangle.
Example:

```
Var r as CGRectMBS = CGRectMBS.Make(5, 6, 3, 2)
Var s as CGPointMBS = r.Origin
MessageBox str(s.x)+" x "+str(s.y)
```

Notes: (Read and Write property)

58.40.39 Size as CGSizeMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The size of the rectangle.
Example:

```
Var r as CGRectMBS = CGRectMBS.Make(5, 6, 3, 2)
Var s as CGSizeMBS = r.Size
```

```
MessageBox str(s.Width)+" x "+str(s.Height)
```

Notes: (Read and Write property)

58.40.40 top as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The top property of the rectangle.
Example:

```
Var r as CGRectMBS = CGMakeRectMBS(10, 20, 30, 40)
MessageBox str(r.Left)+" "+str(R.Top)+" "+str(R.Width)+" "+str(r.Height)
```

Notes: (Read and Write property)

58.40.41 width as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The width property of the rectangle.
Example:

```
Var r as CGRectMBS = CGMakeRectMBS(10, 20, 30, 40)
MessageBox str(r.Left)+" "+str(R.Top)+" "+str(R.Width)+" "+str(r.Height)
```

Notes: (Read and Write property)

58.41 class CGSConnectionMBS

58.41.1 class CGSConnectionMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a connection to the CoreGraphics System.
Example:

```
Var c as new CGSConnectionMBS
Var list as CGSWindowListMBS = c.GetWindowList

Var names() as string
Var u as Integer = List.Count-1
for i as Integer = 0 to u
Var w as CGSWindowMBS = List.Item(i)
names.Add w.Title
next

MessageBox str(List.Count)+" windows: "+Join(names, ", ")
```

Notes: Requires Mac OS X 10.4.
All functions used by the CGS classes are private APIs, so Apple does not guarantee that they work in future Mac OS X versions.
Blog Entries

- MBS REALbasic Plugins, version 11.0fc1
- MonkeyBread Software Releases the MBS Plugins 8.1

58.41.2 Methods

58.41.3 CGSWindow(w as window) as CGSWindowMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns a CGSWindow reference to a normal RB window.
Notes: Can be used for the CGSTransitionRequestMBS.Win property.

58.41.4 CGSWindowbyHandle(windowhandle as Integer) as CGSWindowMBS

MBS MacCG Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop only.

Function: Returns a CGSWindow reference to any window where you can have a handle.
Notes: WindowHandle must be of C type WindowRef. Not a CGS Window Handle.

Can be used for the handle from an OverlayWindowMBS.

58.41.5 FlushAllWindows

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop only.

Function: Flushes all windows.
Notes: Walks over the window list (of the current process) and does a flush on each window.
Lasterror is set.

58.41.6 FlushAllWindowsForAllOtherProceses

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop only.

Function: Flushes all windows.
Notes: Walks over the list of processes asking each for its window list and doing a flush on each window.
The own process is ignored.
Lasterror is set.

58.41.7 FlushAllWindowsForAllProceses

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop only.

Function: Flushes all windows.
Notes: Walks over the list of processes asking each for its window list and doing a flush on each window.
Lasterror is set.

58.41.8 GetOnScreenWindowList as CGSWindowListMBS

MBS MacCG Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: Returns the list of windows on screen for the current process.
Notes: Returns nil on any error.

58.41.9 GetOnScreenWindowListForProcess(PID as Integer) as CGSWindowListMBS

MBS MacCG Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: Returns the list of windows on screen for the process with the given Process ID.
Notes: Returns nil on any error.

58.41.10 GetWindowList as CGSWindowListMBS

MBS MacCG Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: Returns the list of windows for the current process.
Notes: Returns nil on any error.

58.41.11 GetWindowListForProcess(PID as Integer) as CGSWindowListMBS

MBS MacCG Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: Returns the list of windows for the process with the given Process ID.
Notes: Returns nil on any error.

58.41.12 NewTransition(request as CGSTransitionRequestMBS) as CGSTransitionMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new transition.
Notes: Lasterror is set.
Request must be a valid object reference.
Transitions seem not to work in Carbon PEF builds. MachO works.

58.41.13 RunTransition(request as CGSTransitionRequestMBS, duration as single)

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: A method to run a transition for the given request and given time.
Example:

```
Var r as CGSTransitionRequestMBS
Var co as CGSConnectionMBS // global property
Var cw as CGSWindowMBS

co=new CGSConnectionMBS

cw=co.CGSWindow(Window1)
```

```
r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSFlip
r.TransitionOption=r.CGSLeft
r.HasBackGround=false
r.HasBackColor=false
r.Win=cw
co.RunTransition(r,2)
```

Notes: Lasterror is set.
Transitions seem not to work in Carbon PEF builds. MachO works.

58.41.14 SetWorkspaceWithTransition(workspace as CGSWorkspaceMBS, transition as Integer, type as Integer, time as single)

MBS MacCG Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: Performs a transition with a workspace specified by the workspace object.
Notes: The values for the parameters are not documented on the web except that the transition and type property may use the same transition constants as for the other transitions.
Lasterror is set.
See also:

- 58.41.15 SetWorkspaceWithTransition(workspace as Integer, transition as Integer, type as Integer, time as single) 9852

58.41.15 SetWorkspaceWithTransition(workspace as Integer, transition as Integer, type as Integer, time as single)

MBS MacCG Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: Performs a transition with a workspace specified by the workspace number.
Example:

```
Var c as new CGSConnectionMBS
Var t as new CGSTransitionRequestMBS

// from space 1 to 2
c.SetWorkspaceWithTransition(2,t.CGSFade, t.CGSInOut, 5)

// but transition and time are ignored on testing Mac.

MessageBox str(c.Lasterror)
```

Notes: The values for the parameters are not documented on the web except that the transition and type property may use the same transition constants as for the other transitions.

Lasterror is set.
See also:

- 58.41.14 SetWorkspaceWithTransition(workspace as CGSWorkspaceMBS, transition as Integer, type as Integer, time as single) 9852

58.41.16 Properties

58.41.17 Handle as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal handle for this connection.
Notes: (Read and Write property)

58.41.18 Lasterror as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Last error code reported.
Notes: The list of CoreGraphics error (from Mac OS X 10.4)

kCGErrorSuccess	= 0	Success
kCGErrorFailure	= 1000	Failure
kCGErrorIllegalArgument	= 1001	Illegal Argument
kCGErrorInvalidConnection	= 1002	Invalid Connection
kCGErrorInvalidContext	= 1003	Invalid Context
kCGErrorCannotComplete	= 1004	Cannot complete
kCGErrorNameTooLong	= 1005	Name is too long
kCGErrorNotImplemented	= 1006	Not implemented
kCGErrorRangeCheck	= 1007	Out of bounds
kCGErrorTypeCheck	= 1008	Type error
kCGErrorNoCurrentPoint	= 1009	No current point
kCGErrorInvalidOperation	= 1010	Invalid Operation
kCGErrorNoneAvailable	= 1011	internal errors have taken 1012 1013 and 1014
kCGErrorApplicationRequiresNewerSystem	= 1015	the application being launched says in it's bundle info that it requires a newer version of the system than is currently running.
kCGErrorApplicationNotPermittedToExecute	= 1016	Macintosh Manager is active and this application is not permitted to run
kCGErrorApplicationIncorrectExecutableFormatFound	= 1023	the application being launched does not have any executable code for the current system.
kCGErrorApplicationIsLaunching	= 1024	The application is in the process of launching but hasn't checked in yet. Any launch data provided will be given to the application when it does check in.
kCGErrorApplicationAlreadyRunning	= 1025	The application being launched was already running (and had already checked in) and so any launch data provided can not be delivered to in by CPS
kCGErrorApplicationCanOnlyBeRunInOneSessionAtATime	= 1026	The application being launched is incompatible with multiple user sessions and is already running in another session by another user.
kCGErrorClassicApplicationsMustBeLaunchedByClassic	= 1027	To avoid deadlock Classic can't launch another Classic application by going thru CPS. This error gets returned in that case and it signals TruBlueEnvironment that it must handle this launch on its own.
kCGErrorForkFailed	= 1028	CPS was unable to fork a new process in order to launch an application.

(Read and Write property)

58.41.19 Workspace as CGSWorkspaceMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The workspace this connection is pointing to.
Notes: (Read and Write computed property)

58.42 class CGScreenRefreshEventMBS

58.42.1 class CGScreenRefreshEventMBS

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class to receive events for screen updates.

58.42.2 Properties

58.42.3 Initialized as Boolean

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether object is initialized correctly.
Notes: Should be true on OS X if initializing was done.
(Read only property)

58.42.4 Events

58.42.5 ScreenRefresh(rectCount as Integer, rects() as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The event to inform you about a screen refresh.
Notes: When an area of the display is modified or refreshed, this event function will be invoked with a count of the number of rectangles in the refreshed areas, and a list of the refreshed rectangles. The rectangles are in global coordinates.

Quartz invokes this event when operations such as drawing, window movement, scrolling, or display reconfiguration occur on local displays.

Note that a single rectangle may occupy multiple displays, either by overlapping the displays or by residing on coincident displays when mirroring is active. You can use the function CGDisplayMBS.GetDisplaysWithRect to determine the displays a rectangle occupies.

58.43 class CGScreenUpdateMoveEventMBS

58.43.1 class CGScreenUpdateMoveEventMBS

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class to get event when something on screen changes.

58.43.2 Properties

58.43.3 Initialized as Boolean

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether object is initialized correctly.
Notes: This should be true on Mac after calling constructor.
(Read only property)

58.43.4 Events

58.43.5 ScreenMove(deltaX as Integer, deltaY as Integer, rectCount as Integer, rects() as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The event invoked when an area of the display is moved.
Notes: When an area of the display is moved, your callback function will be invoked with a count of the number of rectangles in the moved area, and a list of the moved rectangles. The rectangles are in global coordinates, and describe the area prior to the move operation.

A single rectangle may occupy multiple displays, either by overlapping the displays or by residing on coincident displays when mirroring is active. Use CGDisplayMBS.GetDisplaysWithRect to determine the displays a rectangle occupies.

DeltaX/DeltaY: The distance a region on the screen moves in pixel units.

The fields deltaX and deltaY describe the direction of movement. Positive values of deltaX indicate movement to the right; negative values indicate movement to the left. Positive values of deltaY indicate movement downward; negative values indicate movement upward.

58.44 class CGSessionMBS

58.44.1 class CGSessionMBS

MBS MacOSX Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class to hold some values about the current CoreGraphics session.
Example:

```
Var c as CGSessionMBS = CGSessionMBS
MessageBox c.UserName
```

Notes: You need to call the CGSessionMBS global method to get a valid object of this class (with values).

58.44.2 Properties

58.44.3 ConsoleSet as Integer

MBS MacOSX Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Value is a 32 bit unsigned integer value representing a set of hardware composing a console.
Example:

```
Var c as CGSessionMBS = CGSessionMBS

MessageBox str(c.ConsoleSet)
```

Notes: (Read only property)

58.44.4 LoginDone as Boolean

MBS MacOSX Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: True if login operation has been done, otherwise False.
Example:

```
Var c as CGSessionMBS = CGSessionMBS

MessageBox str(c.LoginDone)
```

Notes: (Read only property)

58.44.5 OnConsole as Boolean

MBS MacOSX Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: True if the session is on a console, otherwise False.
Example:

```
Var c as CGSessionMBS = CGSessionMBS

MessageBox str(c.OnConsole)
```

Notes: (Read only property)

58.44.6 UserID as Integer

MBS MacOSX Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The user id for the session's current user.
Example:

```
Var c as CGSessionMBS = CGSessionMBS

MessageBox str(c.UserID)
```

Notes: (Read only property)

58.44.7 UserName as String

MBS MacOSX Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The session's short user name as set by loginwindow.
Example:

```
Var usr as CGSessionMBS
usr=CGSessionMBS
MessageBox usr.UserName
```

Notes: (Read only property)

58.45 class CGShadingMBS

58.45.1 class CGShadingMBS

MBS MacCG Plugin, Plugin Version: 6.2, Platform: macOS, Targets: All.

Function: To shade means to fill using a smooth transition between colors across an area. Quartz shadings simplify several common shading operations. Quartz shadings currently support radial and axial gradient fills.
Notes: To paint with a Quartz shading, you call CGContextMBS.DrawShading. This function fills the current clipping path using the specified color gradient, calling your parametric function repeatedly as it draws.
Blog Entries

- MBS Real Studio Plugins, version 13.1fc1

58.45.2 Properties

58.45.3 Handle as Integer

MBS MacCG Plugin, Plugin Version: 6.2, Platform: macOS, Targets: All.

Function: Handle to the CGShadingRef.
Notes: (Read and Write property)

58.46 class CGSizeMBS

58.46.1 class CGSizeMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: A class for a core graphics size.
Example:

```
// calculate the size of a thumbnail keeping the aspect ratio
Var original As New CGSizeMBS(4032, 3024)
Var maxSide As Double = 400
Var factor As Double = maxSide / Max(original.width, original.height)
Var thumbnail As CGSizeMBS = original.multiply(factor)

MessageBox "Thumbnail: " + Round(thumbnail.width).ToString + " x " + Round(thumbnail.height).ToString
```

- 12.2, page 45: Moving to AVFoundation, Leaving QuickTime behind by Christian Schmitz

58.46.2 Methods

58.46.3 ApplyAffineTransform(p as CGAffineTransformMBS) as CGSizeMBS

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Transform 'size' by 't' and return the result: s' = s * t where s = [width height 0] .

58.46.4 Binary as MemoryBlock

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns the internal data of the object as a CGSize for use on Toolbox calls.
Example:

```
Var c as CGSizeMBS
Var m as MemoryBlock
```

```
c=CGMakeSizeMBS(10,20)

m=c.Binary

MessageBox str(m.Size) // 8
MessageBox str(m.doubleValue( 0)) // 10
MessageBox str(m.doubleValue( 4)) // 20
```

58.46.5 Constructor

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an zero size object.
See also:

- 58.46.6 Constructor(p as Ptr) 9861
- 58.46.7 Constructor(source as CGSizeMBS) 9861
- 58.46.8 Constructor(width as Double, height as Double) 9862

58.46.6 Constructor(p as Ptr)

MBS MacCG Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: Creates a new instance using data at the pointer.
Notes: Make sure the pointer is valid and has the right data and size.
See also:

- 58.46.5 Constructor 9861
- 58.46.7 Constructor(source as CGSizeMBS) 9861
- 58.46.8 Constructor(width as Double, height as Double) 9862

58.46.7 Constructor(source as CGSizeMBS)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The constructor which copies the values from the other size object.
See also:

- 58.46.5 Constructor 9861
- 58.46.6 Constructor(p as Ptr) 9861
- 58.46.8 Constructor(width as Double, height as Double) 9862

58.46.8 Constructor(width as Double, height as Double)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a size object with the given values.
See also:

- 58.46.5 Constructor 9861
- 58.46.6 Constructor(p as Ptr) 9861
- 58.46.7 Constructor(source as CGSizeMBS) 9861

58.46.9 Equal(p as CGSizeMBS) as boolean

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns true if two CGSize objects are equal.

58.46.10 Make(width as Double, height as Double) as CGSizeMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns a new CGSizeMBS object with the given values.

58.46.11 multiply(factor as double) as CGSizeMBS

MBS MacCG Plugin, Plugin Version: 24.5, Platform: macOS, Targets: All.

Function: Multiplies the size with this factors.
See also:

- 58.46.12 multiply(x as double, y as double) as CGSizeMBS 9862

58.46.12 multiply(x as double, y as double) as CGSizeMBS

MBS MacCG Plugin, Plugin Version: 24.5, Platform: macOS, Targets: All.

Function: Multiplies the size with this factors.
See also:

- 58.46.11 multiply(factor as double) as CGSizeMBS 9862

58.46.13 Zero as CGSizeMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns the zero size.
Notes: The "zero" size – equivalent to CGSizeMBS.Make(0, 0).

58.46.14 Properties

58.46.15 height as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The height property of the point.
Notes: (Read and Write property)

58.46.16 width as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The width property of the point.
Notes: (Read and Write property)

58.47 class CGSTransitionMBS

58.47.1 class CGSTransitionMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** A class for a transition to the CoreGraphics System.
Notes: Requires Mac OS X 10.4.
All functions used by the CGS classes are private APIs, so Apple does not guarantee that they work in future Mac OS X versions.
Blog Entries

- MBS Xojo Plugins, version 23.3pr7

58.47.2 Methods

58.47.3 Invoke(duration as single)

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Performs the transition.
Example:

```
// cube transition for the whole screen
Var r as CGSTransitionRequestMBS
Var co as CGSConnectionMBS // global property
Var ct as CGSTransitionMBS // global property

co=new CGSConnectionMBS

r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSCube
r.TransitionOption=r.CGSLeft
r.HasBackGround=true
r.HasBackColor=false

ct=co.NewTransition(r)
if ct<>Nil then
Window1.refresh // draw new screen
ct.invoke 5
ct.wait 5
ct.release
else
MessageBox "Error creating the transition."
end if
```

Notes: duration is the time in seconds the duration will need to complete.
Lasterror is set.

58.47.4 Release

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Releases the transaction.
Example:

```
Var r as CGSTransitionRequestMBS
Var co as CGSConnectionMBS // global property
Var ct as CGSTransitionMBS // global property
Var cw as CGSWindowMBS

co=new CGSConnectionMBS

cw=co.CGSWindow(Window1)

r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSCube
r.TransitionOption=r.CGSLeft
r.HasBackGround=false
r.HasBackColor=false
r.Win=cw

ct=co.NewTransition(r)
if ct<>Nil then
Window1.refresh // draw new screen
ct.invoke 5
ct.wait 5
ct.release
else
MessageBox "Error creating the transition."
end if
```

Notes: Lasterror is set.
Must be called after performing a transition, but not before the transition is finished.

58.47.5 Run(duration as single)

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Runs a transition effect for the given duration.
Example:

```
Var r as CGSTransitionRequestMBS
Var co as CGSConnectionMBS // global property
Var ct as CGSTransitionMBS // global property
Var cw as CGSWindowMBS

co=new CGSConnectionMBS

cw=co.CGSWindow(Window1)

r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSCube
r.TransitionOption=r.CGSLeft
r.HasBackGround=false
r.HasBackColor=false
r.Win=cw

ct=co.NewTransition(r)
if ct<>Nil then
Window1.Refresh // draw new window

ct.run(2)
else
MessageBox "Error creating the transition."
end if
```

Notes: Same as calling Invoke, Wait and Release.

58.47.6 Wait(duration as single)

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Waits the given time in second.
Example:

```
// instead of wait(5) you can do this to give time to other threads and timers of your application:

Var ct as CGSTransitionMBS
Var t as Integer

t=ticks+300 // 60th of a second * 300 = 5 seconds

while ticks<t
ct.wait(0.1)
```

```
app.YieldToNextThread
wend
```

Notes: All the CPU time is given away to other applications to give maximum performance to the transition.

58.47.7 Properties

58.47.8 Connection as CGSConnectionMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The reference to the connection used.
Notes: Every CGS class has a reference to the connection so the connection object stays in memory as long as one of the depending objects is being used.
(Read only property)

58.47.9 ConnectionHandle as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The handle to the CGS connection being used.
Notes: Most of the functions need this value and it needs to be not zero.
(Read and Write property)

58.47.10 Handle as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal handle for this transition.
Notes: (Read and Write property)

58.47.11 Screenshots

58.47.12 CGS1.jpg

Function: A cube transition running on the whole desktop with black background.

58.47.13 CGS2.jpg

Function: A flip transition running on a window. (like Dashboard)

58.47.14 CGS3.jpg

Function:

A wrap transition running on the window.

58.47.15 CGS4.jpg

Function: A cube transition running on a window with black background.

58.47.16 CGS5.jpg

Function: A cube transition running on the whole desktop with blue background.

58.47.17 CGS6.jpg

Function: A cube transition running on the whole desktop.

58.48 class CGSTransitionRequestMBS

58.48.1 class CGSTransitionRequestMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** A class for a transition request to the CoreGraphics System.
Notes: Requires Mac OS X 10.4.
All functions used by the CGS classes are private APIs, so Apple does not guarantee that they work in future Mac OS X versions.
Blog Entries

- MBS Xojo Plugins, version 23.3pr7

58.48.2 Methods

58.48.3 Run(duration as single) as boolean

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Runs a transition.
Example:

```
Var r as CGSTransitionRequestMBS
Var co as CGSConnectionMBS // global property
Var cw as CGSWindowMBS // global property

co=new CGSConnectionMBS

cw=co.CGSWindow(Window1)

r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSCube
r.TransitionOption=r.CGSLeft
r.HasBackGround=false
r.HasBackColor=false
r.Win=cw
call r.run(5)
```

Notes: Lasterror is set.
Transitions seem not to work in Carbon PEF builds. MachO works.

58.48.4 Properties

58.48.5 Blue as Single

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Blue part of the backcolor.
Notes: Range is from 0.0 (no color) to 1.0 (full color).
(Read and Write property)

58.48.6 Green as Single

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Green part of the backcolor.
Notes: Range is from 0.0 (no color) to 1.0 (full color).
(Read and Write property)

58.48.7 HasBackColor as Boolean

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether the background on the transition has a color.
Example:

```
Var r as CGSTransitionRequestMBS
Var co as CGSConnectionMBS // global property
Var ct as CGSTransitionMBS // global property

r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSWarpSwitch
r.TransitionOption=r.CGSLeft
r.HasBackGround=true
r.HasBackColor=true
r.red=0 // all zero is black, all one is white
r.Blue=0
r.Green=0

ct=co.NewTransition(r)
if ct<>Nil then
Window1.Refresh
ct.Invoke(2)
ct.Wait(2)
ct.Release
else
```

```
MessageBox "Error creating the transition."
end if
```

Notes: (Read and Write property)

58.48.8 HasBackGround as Boolean

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether you want to use the background or not.
Example:

```
Var r as new CGSTransitionRequestMBS
r.HasBackGround=false // best for a window in place transition
```

Notes: If HasBackGround is true, a background is drawn behind the transition which may have a background color.
(Read and Write property)

58.48.9 Red as Single

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Red part of the backcolor.
Notes: Range is from 0.0 (no color) to 1.0 (full color).
(Read and Write property)

58.48.10 TransitionOption as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The transition options to use.
Example:

```
Var r as CGSTransitionRequestMBS
r.TransitionOption=r.CGSLeft
```

Notes: One of the constants:

(Read and Write property)

CGSDown	= 0	Old desktop moves down.
CGSLeft	= 1	Old desktop moves left.
CGSRight	= 2	Old desktop moves right.
CGSInRight	= 3	CGSSwap: Old desktop moves into screen, new comes from right.
CGSBottomLeft	= 5	CGSSwap: Old desktop moves to bottom left, new comes from top right.
CGSBottomRight	= 6	Old desktop to bottom right, New from top left.
CGSDownTopRight	= 7	CGSSwap: Old desktop moves down, new from top right.
CGSUp	= 8	Old desktop moves up.
CGSTopLeft	= 9	Old desktop moves top left.
CGSTopRight	= 10	CGSSwap: old to top right. new from bottom left.
CGSUpBottomRight	= 11	CGSSwap: old desktop up, new from bottom right.
CGSInBottom	= 12	CGSSwap: old in, new from bottom.
CGSLeftBottomRight	= 13	CGSSwap: old one moves left, new from bottom right.
CGSRightBottomLeft	= 14	CGSSwap: old one moves right, new from bottom left.
CGSInBottomRight	= 15	CGSSwap: onl one in, new from bottom right.
CGSInOut	= 16	CGSSwap: old in, new out.

58.48.11 TransitionType as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The transition to use.
Notes: One of the constants:

CGSNone	= 0	No transition effect.
CGSFade	= 1	Cross-fade.
CGSZoom	= 2	Zoom/fade towards us.
CGSReveal	= 3	Reveal new desktop under old.
CGSSlide	= 4	Slide old out and new in.
CGSWarpFade	= 5	Warp old and fade out revealing new.
CGSSwap	= 6	Swap desktops over graphically.
CGSCube	= 7	The well-known cube effect.
CGSWarpSwitch	= 8	Warp old, switch and un-warp.
CGSFlip	= 9	The flip effect known from Dashboard

(Read and Write property)

58.48.12 Win as CGSWindowMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The window to use for the transition.
Notes: Set to nil to do a full screen transition.
(Read and Write property)

58.48.13 Constants

Constants

Constant	Value	Description
CGSBottomLeft	5	CGSSwap: Old desktop moves to bottom left, new comes from top right.
CGSBottomRight	6	Old desktop to bottom right, New from top left.
CGSCube	7	The well-known cube effect.
CGSDown	0	Old desktop moves down.
CGSDownTopRight	7	CGSSwap: Old desktop moves down, new from top right.
CGSFade	1	Cross-fade effect.
CGSFlip	9	The flip transition effect. (like Dashboard)
CGSInBottom	12	CGSSwap: old in, new from bottom.
CGSInBottomRight	15	CGSSwap: onl one in, new from bottom right.
CGSInOut	16	CGSSwap: old in, new out.
CGSInRight	3	CGSSwap: Old desktop moves into screen, new comes from right.
CGSLeft	1	Old desktop moves left.
CGSLeftBottomRight	13	CGSSwap: old one moves left, new from bottom right.
CGSNone	0	No transition effect.
CGSReveal	3	Reveal new desktop under old.
CGSRight	2	Old desktop moves right.
CGSRightBottomLeft	14	CGSSwap: old one moves right, new from bottom left.
CGSSlide	4	Slide old out and new in.
CGSSwap	6	Swap desktops over graphically.
CGSTopLeft	9	Old desktop moves top left.
CGSTopRight	10	CGSSwap: old to top right. new from bottom left.
CGSUp	8	Old desktop moves up.
CGSUpBottomRight	11	CGSSwap: old desktop up, new from bottom right.
CGSWarpFade	5	Warp old and fade out revealing new.
CGSWarpSwitch	8	Warp old, switch and un-warp.
CGSZoom	2	Zoom/fade towards us.

58.49 class CGSValueMBS

58.49.1 class CGSValueMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a value to the CoreGraphics System.
Notes: Requires Mac OS X 10.4.
All functions used by the CGS classes are private APIs, so Apple does not guarantee that they work in future Mac OS X versions.

58.49.2 Methods

58.49.3 IntegerValue as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The integer value of this object.

58.49.4 StringValue as string

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The string value of this object.

58.49.5 Properties

58.49.6 Connection as CGSConnectionMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The reference to the connection used.
Notes: Every CGS class has a reference to the connection so the connection object stays in memory as long as one of the depending objects is being used.
(Read only property)

58.49.7 ConnectionHandle as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The handle to the CGS connection being used.
Notes: Most of the functions need this value and it needs to be not zero.
(Read and Write property)

58.49.8 Handle as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal used handle.
Notes: (Read and Write property)

58.50 class CGSWindowListMBS

58.50.1 class CGSWindowListMBS

MBS MacCG Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: An array of CGSWindowMBS objects.
Example:

```
Var c as new CGSConnectionMBS
Var list as CGSWindowListMBS = c.GetWindowList

Var names() as string
Var u as Integer = List.Count-1
for i as Integer = 0 to u
Var w as CGSWindowMBS = List.Item(i)
names.Add w.Title
next

MessageBox str(List.Count)+" windows: "+Join(names, ", ")
```

- MBS Xojo Plugins, version 23.1pr3
- MBS Xojo / Real Studio Plugins, version 15.1pr1
- MonkeyBread Software Releases the MBS Plugins 8.1

58.50.2 Methods

58.50.3 Item(index as Integer) as CGSWindowMBS

MBS MacCG Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the window with the given index.
Notes: Index is from 0 to count-1.

58.50.4 PreflightScreenCaptureAccess as Boolean

MBS MacCG Plugin, Plugin Version: 23.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Checks whether the current process already has screen capture access.
Notes: For macOS 10.15 and newer.
Always returns false on other targets.

58.50.5 RequestScreenCaptureAccess as Boolean

MBS MacCG Plugin, Plugin Version: 23.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Requests event listening access if absent, potentially prompting.
Notes: For macOS 10.15 and newer.
Always returns false on other targets.

58.50.6 Properties

58.50.7 Connection as CGSConnectionMBS

MBS MacCG Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The reference to the connection used.
Notes: Every CGS class has a reference to the connection so the connection object stays in memory as long as one of the depending objects is being used.
(Read only property)

58.50.8 ConnectionHandle as Integer

MBS MacCG Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The handle to the CGS connection being used.
Notes: Most of the functions need this value and it needs to be not zero.
(Read and Write property)

58.50.9 Count as Integer

MBS MacCG Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The number of CGSWindow objects in that array.
Notes: (Read and Write property)

58.50.10 Handle as Integer

MBS MacCG Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The handle to the window list.
Notes: (Read and Write property)

58.51 class CGSWindowMBS

58.51.1 class CGSWindowMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a window in the CoreGraphics System.
Notes: Requires Mac OS X 10.4.
All functions used by the CGS classes are private APIs, so Apple does not guarantee that they work in future Mac OS X versions.

To find all processes on Mac, use the ProcessMBS class.
To find all windows on Windows, use the WindowsListMBS class.

Not official supported by Apple and some effects don't work well on latest OS X versions!
Blog Entries

- New in MBS Xojo Plugins in version 23.1
- MonkeyBread Software Releases the MBS Plugins 8.1

58.51.2 Methods

58.51.3 Flush

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Flushes this window.
Example:

```
Var co as CGSConnectionMBS
Var cw as CGSWindowMBS

co=new CGSConnectionMBS
cw=co.CGSWindow(Window1)

cw.Flush
```

Notes: Lasterror is set.

58.51.4 Height as Double

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The height of this window.
Example:

```
Var co as CGSConnectionMBS
Var cw as CGSWindowMBS

co=new CGSConnectionMBS
cw=co.CGSWindow(Window1)

MessageBox str(cw.height)
```

58.51.5 Left as Double

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The left position of this window.
Example:

```
Var co as CGSConnectionMBS
Var cw as CGSWindowMBS

co=new CGSConnectionMBS
cw=co.CGSWindow(Window1)

MessageBox str(cw.left)
```

58.51.6 Level as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The window level of this window.
Notes: See WindowGroupMBS.level or OverlayWindow.Level for details.

58.51.7 Move(byref x as single, byref y as single)

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Moves the window.

58.51.8 Order(mode as Integer, relativeToWindow as CGSWindowMBS=nil)

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Reorders the window.
Notes: Lasterror is set.
Mode must be kCGSOrderAbove, kCGSOrderBelow or kCGSOrderOut.

58.51.9 Title as string

MBS MacCG Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The window title.

58.51.10 Top as Double

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The top position of this window.
Example:

```
Var co as CGSConnectionMBS
Var cw as CGSWindowMBS

co=new CGSConnectionMBS
cw=co.CGSWindow(Window1)

MessageBox str(cw.top)
```

Notes: In Pixel from the top of the screen.

58.51.11 Uncover

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Uncovers the window.
Notes: Lasterror is set.

58.51.12 Warp(w as Integer, h as Integer, value as memoryblock)

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the wrap of a window.
Example:

```
Var w,h as Integer
Var m as memoryblock
Var localx,localy, gobalx,gobaly as Integer
Var offset as Integer

m=newmemoryblock(w*h*16)
// for each row
// for each point in row
m.SingleValue(offset)=localx
offset=offset+4
m.SingleValue(offset)=localy
offset=offset+4
m.SingleValue(offset)=gobalx
offset=offset+4
m.SingleValue(offset)=gobaly
offset=offset+4
```

Notes: the memoryblock must be of size w*h*sizeof(single)*4.
a single is 4 bytes, so this is 16*w*h
w is the number of horizontal points you define.
h is the number of vertical points you define.

Basicly you define for a local point in the window the point onscreen where it is moved to. See the example project for more details.

58.51.13 Width as Double

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The width of this window.
Example:

```
Var co as CGSConnectionMBS
Var cw as CGSWindowMBS

co=new CGSConnectionMBS
cw=co.CGSWindow(Window1)

MessageBox str(cw.width)
```

58.51.14 Workspace as CGSWorkspaceMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The workspace where this window is part of.

58.51.15 Properties

58.51.16 Connection as CGSConnectionMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The reference to the connection used.
Notes: Every CGS class has a reference to the connection so the connection object stays in memory as long as one of the depending objects is being used.
(Read only property)

58.51.17 ConnectionHandle as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The handle to the CGS connection being used.
Notes: Most of the functions need this value and it needs to be not zero.
(Read and Write property)

58.51.18 Handle as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The window handle.
Notes: This is not a WindowRef or a NSWindow pointer!
(Read and Write property)

58.51.19 LastError as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Last error code reported.
Notes: The list of CoreGraphics error (from Mac OS X 10.4)

(Read and Write property)

kCGErrorSuccess	= 0	Success
kCGErrorFailure	= 1000	Failure
kCGErrorIllegalArgument	= 1001	Illegal Argument
kCGErrorInvalidConnection	= 1002	Invalid Connection
kCGErrorInvalidContext	= 1003	Invalid Context
kCGErrorCannotComplete	= 1004	Cannot complete
kCGErrorNameTooLong	= 1005	Name is too long
kCGErrorNotImplemented	= 1006	Not implemented
kCGErrorRangeCheck	= 1007	Out of bounds
kCGErrorTypeCheck	= 1008	Type error
kCGErrorNoCurrentPoint	= 1009	No current point
kCGErrorInvalidOperation	= 1010	Invalid Operation
kCGErrorNoneAvailable	= 1011	internal errors have taken 1012 1013 and 1014
kCGErrorApplicationRequiresNewerSystem	= 1015	the application being launched says in it's bundle info that it requires a newer version of the system than is currently running.
kCGErrorApplicationNotPermittedToExecute	= 1016	Macintosh Manager is active and this application is not permitted to run
kCGErrorApplicationIncorrectExecutableFormatFound	= 1023	the application being launched does not have any executable code for the current system.
kCGErrorApplicationIsLaunching	= 1024	The application is in the process of launching but hasn't checked in yet. Any launch data provided will be given to the application when it does check in.
kCGErrorApplicationAlreadyRunning	= 1025	The application being launched was already running (and had already checked in) and so any launch data provided can not be delivered to in by CPS
kCGErrorApplicationCanOnlyBeRunInOneSessionAtATime	= 1026	The application being launched is incompatible with multiple user sessions and is already running in another session by another user.
kCGErrorClassicApplicationsMustBeLaunchedByClassic	= 1027	To avoid deadlock Classic can't launch another Classic application by going thru CPS. This error gets returned in that case and it signals TruBlueEnvironment that it must handle this launch on its own.
kCGErrorForkFailed	= 1028	CPS was unable to fork a new process in order to launch an application.

58.51.20 AffineTransform as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The transformation of this window.
Example:

```
// rotates the window.
Var a as CGAffineTransformMBS

a=CGAffineTransformMBS.MakeRotation(1)

a=a.Translate(-Width,-Height)

Var co as CGSConnectionMBS
Var cw as CGSWindowMBS

co=new CGSConnectionMBS
cw=co.CGSWindow(Window1)

cw.AffineTransform=a
```

Notes: Lasterror is set.
(Read and Write computed property)

58.51.21 Alpha as single

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The alpha value for this window.
Example:

```
Var cw as CGSWindowMBS
Var co as new CGSConnectionMBS

cw=co.CGSWindow(Window1)
cw.Alpha=0.2

// same as:

// self.TransparencyMBS=0.2
```

Notes: 0 is invisible and 1.0 is visible.

You may prefer to use the window TransparencyMBS property instead as it uses documented APIs.
(Read and Write computed property)

58.51.22 EventMask as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The event mask of this window.
Notes: (Read and Write computed property)

58.51.23 Constants

Constants

Constant	Value	Description
kCGSOrderAbove	1	Window is ordered above target.
kCGSOrderBelow	-1	Window is ordered below target.
kCGSOrderOut	0	Window is removed from the on-screen.

58.52 class CGSWorkspaceMBS

58.52.1 class CGSWorkspaceMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a workspace to the CoreGraphics System.
Notes: Requires Mac OS X 10.4.
All functions used by the CGS classes are private APIs, so Apple does not guarantee that they work in future Mac OS X versions.

Not official supported by Apple and some effects don't work well on latest OS X versions!

58.52.2 Methods

58.52.3 GetWorkspaceWindowList as CGSWindowListMBS

MBS MacCG Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: Returns the list of windows for this workspace.
Notes: Returns nil on any error.

58.52.4 MoveWindows(target as CGSWorkspaceMBS)

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Moves all windows from one workspace to another.
Notes: Lasterror is set.

58.52.5 Properties

58.52.6 Connection as CGSConnectionMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The reference to the connection used.
Notes: Every CGS class has a reference to the connection so the connection object stays in memory as long as one of the depending objects is being used.
(Read only property)

58.52.7 ConnectionHandle as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The handle to the CGS connection being used.
Notes: Most of the functions need this value and it needs to be not zero.
(Read and Write property)

58.52.8 Handle as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal used handle to the workspace.
Notes: (Read and Write property)

58.52.9 LastError as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Last error code reported.
Notes: The list of CoreGraphics error (from Mac OS X 10.4)

kCGErrorSuccess	= 0	Success
kCGErrorFailure	= 1000	Failure
kCGErrorIllegalArgument	= 1001	Illegal Argument
kCGErrorInvalidConnection	= 1002	Invalid Connection
kCGErrorInvalidContext	= 1003	Invalid Context
kCGErrorCannotComplete	= 1004	Cannot complete
kCGErrorNameTooLong	= 1005	Name is too long
kCGErrorNotImplemented	= 1006	Not implemented
kCGErrorRangeCheck	= 1007	Out of bounds
kCGErrorTypeCheck	= 1008	Type error
kCGErrorNoCurrentPoint	= 1009	No current point
kCGErrorInvalidOperation	= 1010	Invalid Operation
kCGErrorNoneAvailable	= 1011	internal errors have taken 1012 1013 and 1014
kCGErrorApplicationRequiresNewerSystem	= 1015	the application being launched says in it's bundle info that it requires a newer version of the system than is currently running.
kCGErrorApplicationNotPermittedToExecute	= 1016	Macintosh Manager is active and this application is not permitted to run
kCGErrorApplicationIncorrectExecutableFormatFound	= 1023	the application being launched does not have any executable code for the current system.
kCGErrorApplicationIsLaunching	= 1024	The application is in the process of launching but hasn't checked in yet. Any launch data provided will be given to the application when it does check in.
kCGErrorApplicationAlreadyRunning	= 1025	The application being launched was already running (and had already checked in) and so any launch data provided can not be delivered to in by CPS
kCGErrorApplicationCanOnlyBeRunInOneSessionAtATime	= 1026	The application being launched is incompatible with multiple user sessions and is already running in another session by another user.
kCGErrorClassicApplicationsMustBeLaunchedByClassic	= 1027	To avoid deadlock Classic can't launch another Classic application by going thru CPS. This error gets returned in that case and it signals TruBlueEnvironment that it must handle this launch on its own.
kCGErrorForkFailed	= 1028	CPS was unable to fork a new process in order to launch an application.

(Read and Write property)

58.53 module CGWindowMBS

58.53.1 module CGWindowMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: This module contains CoreGraphics functions related to windows.
Example:

```
// screenshot of all windows on screens
Backdrop = CGWindowMBS.CreateWindowListImage(0, 0, 0, 0, 0, 0, 0)
```

Blog Entries

- MBS Real Studio Plugins, version 11.2pr3

58.53.2 Methods

58.53.3 CreateWindowList(windowOption as Integer, WindowID as Integer = 0) as UInt32()

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns the list of window IDs associated with the specified windows in the current user session.
Example:

```
Var a(-1) as UInt32 = CGWindowMBS.CreateWindowList(0,0)

MessageBox str(a.Count) + " windows"
```

Notes: windowOption: The options describing which window IDs to return. Typical options let you obtain IDs for all windows or for windows above or below the window specified in the relativeToWindow parameter.

WindowID: The ID of the window to use as a reference point when determining which other windows to return. For options that do not require a reference window, this parameter can be kCGNullWindowID.

Returns an array of CGWindowID values corresponding to the desired windows. If there are no windows matching the desired criteria, the function returns an empty array. If you call this function from outside of a GUI security session or when no window server is running, this function returns nil.

Available in Mac OS X v10.5 and later.

May fail and cause a consent prompt on MacOS 10.15 to ask user whether he/she allows your app to take the picture.

58.53.4 CreateWindowListCGImage(left as Double, top as Double, width as Double, height as Double, windowOption as Integer, WindowID as Integer = 0, ImageOption as Integer = 0) as Variant

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Takes a screenshot from a list of windows.
Notes: Same as CreateWindowListImage, but returns a CGImageMBS. Declared as Variant to reduce plugin interdependencies.

May fail and cause a consent prompt on MacOS 10.15 to ask user whether he/she allows your app to take the picture.

58.53.5 CreateWindowListImage(left as Double, top as Double, width as Double, height as Double, windowOption as Integer, WindowID as Integer = 0, ImageOption as Integer = 0) as picture

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Takes a screenshot from a list of windows.
Example:

```
Var p as Picture

// Screenshot of everything:
p = CGWindowMBS.CreateWindowListImage(0, 0, 0, 0, CGWindowMBS.kCGWindowListOptionAll,0,
CGWindowMBS.kCGWindowImageDefault)

// Screenshot of everything behind a window:
p = CGWindowMBS.CreateWindowListImage(0, 0, 0, 0, CGWindowMBS.kCGWindowListOptionOnScreen-
BelowWindow, CGWindowMBS.GetWindowID(Window1), CGWindowMBS.kCGWindowImageDefault)

// Screenshot of everything in front of a window (dock and menu bar):
p = CGWindowMBS.CreateWindowListImage(0, 0, 0, 0, CGWindowMBS.kCGWindowListOptionOnScreen-
AboveWindow, CGWindowMBS.GetWindowID(Window1), CGWindowMBS.kCGWindowImageDefault)

// screenshot of a window
p = CGWindowMBS.CreateWindowListImage(0, 0, 0, 0, CGWindowMBS.kCGWindowListOptionInclud-
ingWindow, CGWindowMBS.GetWindowID(Window1), CGWindowMBS.kCGWindowImageDefault)

// only shadow of a window (will be in the mask)
p = CGWindowMBS.CreateWindowListImage(0, 0, 0, 0, CGWindowMBS.kCGWindowListOptionInclud-
ingWindow, CGWindowMBS.GetWindowID(Window1), CGWindowMBS.kCGWindowImageOnlyShadows)
```

```
// desktop decoration is white
p = CGWindowMBS.CreateWindowListImage(0, 0, 0, 0, CGWindowMBS.kCGWindowListExcludeDesktopElements, CGWindowMBS.GetWindowID(Window1), CGWindowMBS.kCGWindowImageShouldBeOpaque)
```

Notes: Parameters:

left	Left coordinate rectangle
top	Top coordinate rectangle
width	Width of rectangle
height	Height of rectangle
windowOption	A combination of kCGWindowListOption* flags
WindowID	The window ID or 0.
ImageOption	A combination of kCGWindowImage* flags

If you pass a rectangle with all values zero, you select the whole screen.
Returns the screenshot as picture or nil on any error.

Window Options:

kCGWindowListOptionAll	0	List all windows in this user session, including both on and off-screen windows. relativeToWindow should be kCGNullWindowID=0.
kCGWindowListOptionOnScreenOnly	1	List all on-screen windows in this user session, ordered from front to back. relativeToWindow should be kCGNullWindowID=0.
kCGWindowListOptionOnScreenAboveWindow	2	List all on-screen windows above the specified window ordered from front to back. relativeToWindow should be the window number.
kCGWindowListOptionOnScreenBelowWindow	4	List all on-screen windows below the specified window ordered from front to back. relativeToWindow should be the window number.
kCGWindowListOptionIncludingWindow	8	Include the named window in any list, effectively creating 'at-or-above' or 'at-or-below' lists. relativeToWindow should be the window number.
kCGWindowListExcludeDesktopElements	16	Exclude any windows from the list that are elements of the desktop, including the background picture and icons on the desktop.

Image Options:

kCGWindowImageDefault	0	Default behavior: If a rect of CGRectNull is used bounds computation includes the framing effects, such as a shadow.
kCGWindowImageBoundsIgnoreFraming	1	If a rect of CGRectNull is used, ignore framing effects for bounds computation
kCGWindowImageShouldBeOpaque	2	The captured image should be opaque. Empty areas are white
kCGWindowImageOnlyShadows	4	Capture only shadows.

May fail and cause a consent prompt on MacOS 10.15 to ask user whether he/she allows your app to take the picture.

58.53.6 GetWindowID(w as DesktopWindow) as integer

MBS MacFrameworks Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop only.

Function: Queries the CoreGraphics Window ID for the given window.
Notes: Returns 0 on any error.
This ID can be used for CreateWindowListImage.
See also:

- 58.53.7 GetWindowID(w as window) as Integer 9897

58.53.7 GetWindowID(w as window) as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Queries the CoreGraphics Window ID for the given window.
Notes: Returns 0 on any error.
This ID can be used for CreateWindowListImage.
See also:

- 58.53.6 GetWindowID(w as DesktopWindow) as integer 9897

58.53.8 GetWindowListInfo(windowOption as Integer, WindowID as Integer = 0) as dictionary()

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Generates and returns information about the selected windows in the current user session.
Example:

```
Var a(-1) as Dictionary = CGWindowMBS.GetWindowListInfo(0,0)

Var u as Integer = a.LastIndex
if u >10 then u = 10 // show only 10 times

Var lines(-1) as string
for i as Integer = 0 to u
Var d as Dictionary = a(i)

lines.Add d.Value(CGWindowMBS.kCGWindowName)+" of "+d.Value(CGWindowMBS.kCGWindowOwnerName)

next

// shows 11 windows with names. Not all windows have names.
MessageBox Join(lines, EndOfLine)
```

Notes: option: The options describing which window dictionaries to return. Typical options let you return dictionaries for all windows or for windows above or below the window specified in the relativeToWindow parameter. For more information, see "Window List Option Constants."

WindowID: The ID of the window to use as a reference point when determining which other window dictionaries to return. For options that do not require a reference window, this parameter can be 0.

Returns an array of CFDictionaryRef types, each of which contains information about one of the windows in the current user session. If there are no windows matching the desired criteria, the function returns an empty array. If you call this function from outside of a GUI security session or when no window server is running, this function returns nil.

You can use this function to get detailed information about the configuration of one or more windows in the current user session. For example, you can use this function to get the bounds of the window, its window ID, and information about how it is managed by the window server. For the list of keys and values that may be present in the dictionary, see kCGWindow* constants.

Generating the dictionaries for system windows is a relatively expensive operation. As always, you should profile your code and adjust your usage of this function appropriately for your needs.

Available in Mac OS X v10.5 and later.

58.53.9 Constants

Constants

Constant	Value	Description
kCGNullWindowID	0	The number for an invalid window ID.

Backing Store Constants

Constant	Value	Description
kCGBackingStoreBuffered	2	
kCGBackingStoreNonretained	1	
kCGBackingStoreRetained	0	

Window Info Dictionary Key Constants

Constant	Value	Description
kCGWindowAlpha	"kCGWindowAlpha"	The alpha fade of the wind The value 1.0 is normal (op
kCGWindowBackingLocationVideoMemory	"kCGWindowBackingLocationVideoMemory"	Optional. If present, true if otherwise. If the key is not memory. The value of this
kCGWindowBounds	"kCGWindowBounds"	The bounds of the window corner of the main display.
kCGWindowIsOnscreen	"kCGWindowIsOnscreen"	Optional. If present, true i If the key is not present, th of this key is a boolean.
kCGWindowLayer	"kCGWindowLayer"	The window layer number signed integer value.
kCGWindowMemoryUsage	"kCGWindowMemoryUsage"	An estimate of the memor supporting data structures value.
kCGWindowName	"kCGWindowName"	Optional. If present, the na
kCGWindowNumber	"kCGWindowNumber"	The window ID, a unique va The value of this key is a 3
kCGWindowOwnerName	"kCGWindowOwnerName"	Optional. If present, the window. The value of this
kCGWindowOwnerPID	"kCGWindowOwnerPID"	The process ID of the proc a 32-bit signed integer valu
kCGWindowSharingState	"kCGWindowSharingState"	The sharing state of the wi dowSharingReadOnly, or k key is a 32-bit signed integ
kCGWindowStoreType	"kCGWindowStoreType"	The backing store type of th BackingStoreNonretained, is a 32-bit signed integer va
kCGWindowWorkspace	"kCGWindowWorkspace"	Optional. If present, the w window. The value of this

Image Options Constants

Constant	Value	Description
kCGWindowImageBoundsIgnoreFraming	1	If null rect is passed as the screen bounds, then then bounds com excludes window frame ornamentation, such as a shadow.
kCGWindowImageDefault	0	If null rectangle is passed as the screen bounds, then then bounds com includes window frame ornamentation, such as a shadow.
kCGWindowImageOnlyShadows	4	Only draw the windows' shadows, not the windows themselves.
kCGWindowImageShouldBeOpaque	2	Force the created image to be opaque. Empty areas are white.

Window list option Constants

Constant	Value	Description
kCGWindowListExcludeDesktopElements	16	Exclude any windows from the list that are elements of the des
kCGWindowListOptionAll	0	List all windows in this user session, including both on- and off-s The parameter WindowID should be kCGNullWindowID.
kCGWindowListOptionIncludingWindow	8	Include the window specified by WindowID in any list, effective or-above' or 'at-or-below' lists.
kCGWindowListOptionOnScreenAboveWindow	2	List all on-screen windows above the window specified by Win from front to back.
kCGWindowListOptionOnScreenBelowWindow	4	List all on-screen windows below the window specified by Win from front to back.
kCGWindowListOptionOnScreenOnly	1	List all on-screen windows in this user session, ordered from fro parameter WindowID should be kCGNullWindowID.

Sharing State Constants

Constant	Value	Description
kCGWindowSharingNone	0	No sharing.
kCGWindowSharingReadOnly	1	Read only.
kCGWindowSharingReadWrite	2	Read and Write

58.54 class QDPictMBS

58.54.1 class QDPictMBS

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** A class to draw QuickDraw PICT data to a CoreGraphics context.
Notes: Note: QuickDraw picture data typically comes in two forms: a PICT resource that begins the picture header data at the beginning of the resource and PICT files that begin with 512 bytes of arbitrary data, followed by the picture header data. For this reason, the routines that create a QTPict object attempt to find the picture header data beginning at either the first byte of the data provided or at byte 513 of the data provided.

Additionally the Picture Bounds must not be an empty rect.
This class has been deprecated by Apple.
Blog Entries

- MBS Real Studio Plugins, version 12.1pr10

58.54.2 Methods

58.54.3 Constructor(dataProvider as CGDataProviderMBS)

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new QTPictMBS object based on a data provider.
Notes: Create a QDPict object, using dataProvider to obtain the QDPict's data.
It is assumed that either the first byte or the 513th byte of data in the file referenced by the URL is the first byte of the picture header. If the URL does not begin PICT data at one of these places in the data fork then the handle property will be 0.
See also:

- 58.54.4 Constructor(file as folderitem) 9901
- 58.54.5 Constructor(url as string) 9902

58.54.4 Constructor(file as folderitem)

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new QTPictMBS object based on a file.
See also:

- 58.54.3 Constructor(dataProvider as CGDataProviderMBS) 9901
- 58.54.5 Constructor(url as string) 9902

58.54.5 Constructor(url as string)

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new QTPictMBS object based on an url.
Notes: Create a QDPict from an url.
It is assumed that either the first byte or the 513th byte of data in the file referenced by the URL is the first byte of the picture header. If the URL does not begin PICT data at one of these places in the data fork then the handle property will be 0.
See also:

- 58.54.3 Constructor(dataProvider as CGDataProviderMBS) 9901
- 58.54.4 Constructor(file as folderitem) 9901

58.54.6 DrawToCGContext(context as CGContextMBS, r as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Draws the picture into the given context.
Notes: You can increase the drawing resolution by passing a bigger rectangle.
Lasterror is set. -1 if context or rectangle are invalid.

Draw picture in the rectangular area specified by r. The PICT bounds of the page is scaled, if necessary, to fit into the rectangle. To get unscaled results, supply a rect the size of the rect returned by GetBounds.

58.54.7 GetBounds as CGRectMBS

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries the bounds of the picture.
Notes: This are the bounds in pixel for 72 dpi.

Return the Picture Bounds of the QuickDraw picture represented by the picture. This rectangle is in the default user space with one unit = 1/72 inch.

58.54.8 GetResolution(byref xRes as single, byref yRes as single)

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries the resolution of the picture.
Notes: Return the resolution of the QuickDraw picture represented by the picture.
This data, together with the CGRect returned by GetBounds, can be used to compute the size of the picture

in pixels, which is what QuickDraw really records into pictures.

58.54.9 Height as Double

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The height of the picture.
Notes: This value is using 72 dpi.

58.54.10 HorizontalResolution as Double

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The horizontal resolution.

58.54.11 VerticalResolution as Double

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The vertical resolution.

58.54.12 Width as Double

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The width of the picture.
Notes: This value is using 72 dpi.

58.54.13 Properties

58.54.14 Handle as Integer

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal handle.
Notes: (Read and Write property)

58.54.15 LastError as Integer

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Set by DrawToCGContext.
(Read and Write property)

58.55 class QuartzFilterManagerMBS

58.55.1 class QuartzFilterManagerMBS

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class to manage the quartz filters on the system.
Example:

```
// list the Quartz filters installed on the Mac, e.g. for PDF export
Var lines() As String
For Each f As QuartzFilterMBS In QuartzFilterManagerMBS.filters
lines.Add f.localizedName
Next
MessageBox lines.Count.ToString + " filters:" + EndOfLine + String.FromArray(lines, EndOfLine)
```

Blog Entries

- MBS Real Studio Plugins, version 11.2pr9

58.55.2 Methods

58.55.3 filterPanel as NSPanelMBS

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns the panel where users can select a filter.
Example:

```
Var m as QuartzFiltermanagerMBS
Var p as NSPanelMBS

m=new QuartzFiltermanagerMBS
p=m.filterPanel
p.Show
```

Notes: Returns nil on any error.

58.55.4 filters as QuartzFilterMBS()

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array with all filters.
Example:

```
Var q as new QuartzFilterManagerMBS
Var a() as QuartzFilterMBS

a=q.filters

MessageBox str(a.Count)+" filters found."
```

58.55.5 filtersInDomains(domains() as string) as QuartzFilterMBS()

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array with all filters in the given domains.
Example:

```
Var domains() as string = array(QuartzFilterManagerMBS.kQuartzFilterPrintingDomain)
Var a() as QuartzFilterMBS = QuartzFilterManagerMBS.filtersInDomains(domains)

MessageBox str(a.Count)+" filters found."
```

58.55.6 filterView as QuartzFilterViewMBS

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The view which you can use to select views.
Notes: You can use the panel as an extra window or add this view to one of your settings windows.

58.55.7 selectedFilter as QuartzFilterMBS

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The currently selected filter.

58.55.8 selectFilter(filter as QuartzFilterMBS) as boolean

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Selects a filter.
Notes: Returns true on success.

58.55.9 Properties

58.55.10 Handle as Integer

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal used handle to the filter manager.
Notes: (Read and Write property)

58.55.11 Events

58.55.12 didAddFilter(filter as QuartzFilterMBS)

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The given filter was added to the filter list.

58.55.13 didModifyFilter(filter as QuartzFilterMBS)

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The given filter was modified.

58.55.14 didRemoveFilter(filter as QuartzFilterMBS)

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The given filter was removed.

58.55.15 didSelectFilter(filter as QuartzFilterMBS)

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The selection changed to the new filter.

58.55.16 Constants

Filter Domain Constants

Constant	Value	Description
kQuartzFilterApplicationDomain	"kQuartzFilterApplicationDomain"	
kQuartzFilterPDFWorkflowDomain	"kQuartzFilterPDFWorkflowDomain"	
kQuartzFilterPrintingDomain	"kQuartzFilterPrintingDomain"	

58.56 class QuartzFilterMBS

58.56.1 class QuartzFilterMBS

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The Quartz filter class.
Example:

```
// Create a couple of PDF files to test different Quartz filters

// get some picture
Var pic as Picture = LogoMBS(500)
Var image as new NSImageMBS(pic)

// create page with picture
Var page as new PDFPageMBS(image)

// create new document
Var doc as new PDFDocumentMBS

// add page
doc.insertPage(page,0)

// get filters
Var manager as new QuartzFilterManagerMBS
Var filters() as QuartzFilterMBS = Manager.filters

for each filter as QuartzFilterMBS in filters

// save PDF with this filter
Var file as FolderItem = SpecialFolder.Desktop.Child(filter.localizedName+".pdf")

call doc.write(file, filter)

next
```

Notes: This filters can be used to change PDFs on writing like to reduce the file size.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Real Studio Plugins, version 11.2pr7

58.56.2 Methods

58.56.3 applyToContext(CGContextHandle as Integer) as boolean

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Applies a filter to a given context.
Example:

```
Var c as CGContextMBS // your context
Var fi as QuartzFilterMBS

fi=QuartzFilterMBS.quartzFilterWithFile(SpecialFolder.Desktop.Child("Reduce File Size.qfilter"))

call fi.applyToContext(c.Handle)
```

Notes: Returns true on success.

58.56.4 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.

58.56.5 localizedName as string

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The localized name of the filter.
Example:

```
Var q as new QuartzFilterManagerMBS
Var s(-1) as string

Var a() as QuartzFilterMBS = q.filters

for each f as QuartzFilterMBS in a
s.Add f.localizedName
next

MessageBox Join(s,EndOfLine)
```

58.56.6 quartzFilterWithFile(file as folderitem) as QuartzFilterMBS

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Loads a quartz filter from the given folderitem.
Example:

```
Var c as CGContextMBS // your context
Var fi as QuartzFilterMBS
Var file as folderitem

file=SpecialFolder.Desktop.Child("Reduce File Size.qfilter")
fi=QuartzFilterMBS.quartzFilterWithFile(file)

call fi.applyToContext(c.Handle)
```

Notes: Returns nil on any error.
Requires Mac OS X 10.5.

58.56.7 quartzFilterWithURL(url as string) as QuartzFilterMBS

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Loads the quartz filter from the given URL.
Notes: Returns nil on any error.
Requires Mac OS X 10.5.

58.56.8 removeFromContext(CGContextHandle as Integer)

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Removes a filter from a CGContext.
Notes: Pass CGContextMBS.handle and make sure it is not 0.

58.56.9 url as string

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The URL where this filter is located.
Example:

```
Var q as new QuartzFilterManagerMBS
Var s(-1) as string
```

```
Var a() as QuartzFilterMBS = q.filters

for each f as QuartzFilterMBS in a
s.Add f.url
next

MessageBox Join(s,EndOfLine)
```

58.56.10 Properties

58.56.11 Handle as Integer

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal handle to the filter object.
Notes: (Read and Write property)

58.57 class QuartzFilterViewMBS

58.57.1 class QuartzFilterViewMBS

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The view to select quartz filters.
Notes: You can embed this view in a CustomNSViewMBS to get more events for mouse and keyboard.
Subclass of the NSViewMBS class.
Blog Entries

- MBS Real Studio Plugins, version 12.1pr5

58.57.2 Methods

58.57.3 Constructor

MBS MacControls Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: Creates a new Quartz Filter View with size 100/100 and position 0/0
Example:

```
Var t as new QuartzFilterViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 58.57.4 Constructor(Handle as Integer) 9913
- 58.57.5 Constructor(left as Double, top as Double, width as Double, height as Double) 9914

58.57.4 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: Creates an object based on the given QuartzFilterViewMBS handle.
Example:

```
Var t as new QuartzFilterViewMBS(0, 0, 100, 100)
Var v as new QuartzFilterViewMBS(t.handle)

MessageBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a QuartzFilterView and the plugin retains this handle.
See also:

- 58.57.3 Constructor 9913
- 58.57.5 Constructor(left as Double, top as Double, width as Double, height as Double) 9914

58.57.5 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: Creates a new Quartz Filter View with the given size and position.
Example:

```
Var x as new QuartzFilterViewMBS(0, 0, 100, 100)
```

Notes: On success the handle property is not zero.
The new movie view object must be inserted into the view hierarchy of an NSWindow before it can be used.
This method is the designated initializer for the QuartzFilterView class.
See also:

- 58.57.3 Constructor 9913
- 58.57.4 Constructor(Handle as Integer) 9913

58.57.6 sizeToFit

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Resizes the view to the best size.

Chapter 59

CoreGraphics Events

59.1 class CGEventMBS

59.1.1 class CGEventMBS

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The class for a CoreGraphics event.
Example:

```
// log key presses in all apps with an event tap (needs input monitoring permission)
// MyEventTap is a subclass of CGEventTapMBS with the GotEvent event implemented.
// Tap is a property of the app: Tap As MyEventTap
Var mask As Integer = Bitwise.ShiftLeft(1, CGEventMBS.kCGEventKeyDown)
Tap = New MyEventTap(CGEventTapMBS.kCGSessionEventTap, CGEventTapMBS.kCGHeadInsertEvent-
Tap, CGEventTapMBS.kCGEventTapOptionListenOnly, mask)
Tap.Enabled = True

// in MyEventTap:
Function GotEvent(Proxy As Ptr, type As Integer, e As CGEventMBS) As CGEventMBS Handles GotEvent
If type = CGEventMBS.kCGEventKeyDown Then
Var keyCode As Int64 = e.IntegerValueField(9) // 9 = kCGKeyboardEventKeycode
System.DebugLog "Key " + keyCode.ToString + ": " + e.UnicodeString + ", flags " + Hex(e.Flags)
End If
Return e
End Function
```

Notes: Subclass of the CFObjectMBS class.
Blog Entries

- MBS Xojo Plugins, version 17.4pr5

59.1.2 Methods

59.1.3 available as boolean

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on macOS 10.4 or newer.

59.1.4 Constructor(Handle as Integer)

MBS MacCF Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor taking a CGEventRef value.
Notes: The object is retained and should not be zero.

59.1.5 Copy as CGEventMBS

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Return a copy of event.

59.1.6 Properties

59.1.7 EventSource as CGEventSourceMBS

MBS MacCF Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The event source.
Notes: (Read and Write property)

59.1.8 Flags as Integer

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The event flags of an event.
Notes: (Read and Write property)

59.1.9 Timestamp as UInt64

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The timestamp of an event.
Notes: (Read and Write property)

59.1.10 Type as Integer

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The event type of an event (left mouse down, for example).
Notes: See constants like kCGMouseButtonLeft.
(Read and Write property)

59.1.11 UnicodeString as String

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Unicode string associated with a keyboard event.
Notes: By default, the system translates the virtual key code in a keyboard event into a Unicode string based on the keyboard ID in the event source. This function allows you to manually override this string. Note that application frameworks may ignore the Unicode string in a keyboard event and do their own translation based on the virtual keycode and perceived event state.
(Read and Write property)

59.1.12 UnicodeStringLength as Integer

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Return the length of the unicode string associated with a keyboard event.
Notes: (Read only property)

59.1.13 DoubleValueField(field as Integer) as Double

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The floating-point value of a field in an event.
Notes: Before setting a value, the event type must be set using a typed event creation function such as CGEventCreateMouseEvent, or by setting type property.

If you are creating a mouse event generated by a tablet, call this function and specify the field kCG-MouseEventSubtype with a value of kCGEventMouseSubtypeTabletPoint or kCGEventMouseSubtypeTablet-Proximity before setting other parameters.
(Read and Write computed property)

59.1.14 IntegerValueField(field as Integer) as Int64

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The integer value of a field in an event.
Notes: Before calling this function, the event type must be set using a typed event creation function such as CGEventCreateMouseEvent, or by setting type property.

In cases where the field value is represented within the event by a fixed point number or an integer, the result is scaled to the appropriate range as part of creating the floating-point representation.
(Read and Write computed property)

59.1.15 Constants

Event Types

Constant	Value	Description
kCGEventFlagsChanged	12	Key flags changed, e.g. modifier keys pressed.
kCGEventKeyDown	10	Key Down
kCGEventKeyUp	11	Key up.
kCGEventLeftMouseDown	1	left mouse-down event
kCGEventLeftMouseDragged	6	left mouse-dragged event
kCGEventLeftMouseUp	2	left mouse-up event
kCGEventMouseMoved	5	mouse-moved event
kCGEventNull	0	The null event. (not defined)
kCGEventOtherMouseDown	25	other mouse-down event
kCGEventOtherMouseDragged	27	other mouse-dragged event
kCGEventOtherMouseUp	26	other mouse-up event
kCGEventRightMouseDown	3	right mouse-down event
kCGEventRightMouseDragged	7	right mouse-dragged event
kCGEventRightMouseUp	4	right mouse-up event
kCGEventScrollWheel	22	Scroll Wheel event.
kCGEventTabletPointer	23	Tablet pointer event.
kCGEventTabletProximity	24	Tablet Proximity event.
kCGEventTapDisabledByTimeout	&hFFFFFFFE	Out of band event types. These are delivered to the event tap callb it of unusual conditions that disable the event tap.
kCGEventTapDisabledByUserInput	&hFFFFFFFF	Out of band event types. These are delivered to the event tap callb it of unusual conditions that disable the event tap.

Mouse Buttons

Constant	Value	Description
kCGMouseButtonCenter	2	Center
kCGMouseButtonLeft	0	Left
kCGMouseButtonRight	1	Right

Scroll Event Units

Constant	Value	Description
kCGScrollEventUnitLine	1	Line
kCGScrollEventUnitPixel	0	Pixel

59.2 class CGEventSourceMBS

59.2.1 class CGEventSourceMBS

MBS MacCF Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The class for CGEventSource class.
Notes: Subclass of the CFObjectMBS class.
Blog Entries

- MBS Xojo Plugins, version 18.5pr8

59.2.2 Methods

59.2.3 Constructor(Handle as Integer)

MBS MacCF Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor taking a CGEventSourceRef value.
Notes: The object is retained and should not be zero.

59.2.4 Properties

59.2.5 KeyboardType as Integer

MBS MacCF Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The keyboard type.
Notes: e.g. 198 for Touchbar or 59 for Macbook Pro keyboard.
(Read only property)

59.2.6 UserData as Int64

MBS MacCF Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Custom user data to associate with event source.
Notes: (Read and Write property)

59.3 class CGEventTapMBS

59.3.1 class CGEventTapMBS

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The class for a Event taps.
Example:

```
// watch key presses and mouse clicks in all applications on macOS
// Your app needs accessibility permission for this.
// MyEventTap is a subclass of CGEventTapMBS with the GotEvent event implemented.
// Tap is a property of the app: Tap As MyEventTap
Var mask As Integer = CGEventTapMBS.kCGEventMaskKeyDown + CGEventTapMBS.kCGEventMaskLeft-
MouseDown
Tap = New MyEventTap(CGEventTapMBS.kCGSessionEventTap, CGEventTapMBS.kCGHeadInsertEvent-
Tap, CGEventTapMBS.kCGEventTapOptionListenOnly, mask)
Tap.Enabled = True

// in MyEventTap:
Function GotEvent(Proxy As Ptr, type As Integer, e As CGEventMBS) As CGEventMBS Handles GotEvent
If type = CGEventMBS.kCGEventKeyDown Then
System.DebugLog "key down"
ElseIf type = CGEventMBS.kCGEventLeftMouseDown Then
System.DebugLog "mouse down"
End If
Return e // pass the event on
End Function
```

Notes: Taps may be placed at the point where HIDSystem events enter the server, at the point where HIDSystem and remote control events enter a session, at the point where events have been annotated to flow to a specific application, or at the point where events are delivered to the application. Taps may be inserted at a specified point at the head of pre-existing filters, or appended after any pre-existing filters.

Taps may be passive event listeners, or active filters. An active filter may pass an event through unmodified, modify an event, or discard an event. When a tap is registered, it identifies the set of events to be observed with a mask, and indicates if it is a passive or active event filter. Multiple event type bitmasks may be ORed together.
Taps may only be placed at kCGHIDEventTap by a process running as the root user. An exception is raised for other users.

Taps placed at kCGHIDEventTap, kCGSessionEventTap, kCGAnnotatedSessionEventTap, or on a specific process may only receive key up and down events if access for assistive devices is enabled (Preferences Accessibility panel, Keyboard view) or the caller is enabled for assistive device access, as by AXMakeProcessTrusted. If the tap is not permitted to monitor these events when the tap is created, then the appropriate bits in the mask are cleared. If that results in an empty mask, then an exception is raised.

For MacOS 10.15 using CGEventTap to track other applications may result in a dialog asking for permissions. This may not happen if you track your own process' events.

59.3.2 Methods

59.3.3 available as boolean

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true for macOS 10.4 or newer.

59.3.4 Constructor(tapLocation as Integer, Place as Integer, Options as Integer, EventMask as Integer, PID as Integer = -1)

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Creates an event tap.
Notes: If you pass PID >0, we will create an event tap for a specified process. tapLocation is then ignored. PID parameter added for plugin version 19.4.

59.3.5 Properties

59.3.6 Enabled as Boolean

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Whether this tap is enabled.
Notes: (Read and Write property)

59.3.7 Events

59.3.8 GotEvent(Proxy as Ptr, type as Integer, e as CGEventMBS) as CGEventMBS

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The event called when you can process an event.
Notes: For an active tap, please return the event back.

59.3.9 Constants

Constants

Constant	Value	Description
kCGEventTapOptionDefault	0	One of the constants that specify whether a new event tap is an active filter or a passive listener. Default, active filter.
kCGEventTapOptionListenOnly	1	One of the constants that specify whether a new event tap is an active filter or a passive listener. Listen only.
kCGHeadInsertEventTap	0	One of the constants that specify where a new event tap is inserted into the list of active event taps. Insert in front.
kCGTailAppendEventTap	1	One of the constants that specify where a new event tap is inserted into the list of active event taps. Append to the tail.

Tapping Points

Constant	Value	Description
kCGAnnotatedSessionEventTap	2	At the point where events have been annotated to flow to a specific application, or at the point where events are delivered to the application.
kCGHIDEventTap	0	When HIDSystem events enter the server.
kCGSessionEventTap	1	At the point where HIDSystem and remote control events enter a session.

Event Masks

Constant	Value	Description
kCGEventMaskFlagsChanged	4096	Key flags changed, e.g. modifier keys pressed.
kCGEventMaskForAllEvents	-1	Listen for all events.
kCGEventMaskKeyDown	1024	Key Down
kCGEventMaskKeyUp	2048	Key up.
kCGEventMaskLeftMouseDown	2	left mouse-down event
kCGEventMaskLeftMouseDragged	64	left mouse-dragged event
kCGEventMaskLeftMouseUp	4	left mouse-up event
kCGEventMaskMouseMoved	32	mouse-moved event
kCGEventMaskOtherMouseDown	&h2000000	other mouse-down event
kCGEventMaskOtherMouseDragged	&h8000000	other mouse-dragged event
kCGEventMaskOtherMouseUp	&h4000000	other mouse-up event
kCGEventMaskRightMouseDown	8	right mouse-down event
kCGEventMaskRightMouseDragged	128	right mouse-dragged event
kCGEventMaskRightMouseUp	16	right mouse-up event
kCGEventMaskScrollWheel	&h400000	Scroll Wheel event.
kCGEventMaskTabletPointer	&h800000	Tablet pointer event.
kCGEventMaskTabletProximity	&h1000000	Tablet Proximity event.

Chapter 60

CoreImage

60.1 class CIAttributeMBS

60.1.1 class CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: A class for attributes of CoreImage Filters.
Example:

```
// read range and default value of a Core Image filter parameter, e.g. to set up a slider
Var blur As New CIFilterGaussianBlurMBS
Var radius As CIAttributeMBS = blur.AttributeinputRadius

MessageBox radius.DisplayName + ": " + radius.LlocalizedDescription + EndOfLine + _
"Default: " + radius.DefaultNumber.ToString + EndOfLine + _
"Slider range: " + radius.SliderMinNumber.ToString + " to " + radius.SliderMaxNumber.ToString
```

60.1.2 Properties

60.1.3 ClassName as string

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Class name of the filter.
Notes: (Read only property)

60.1.4 DefaultAffineTransform as NSAffineTransformMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The default value for this color.
Notes: Only valid for affine transformations.
(Read only property)

60.1.5 DefaultColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The default value for this color.
Notes: Only valid for colors.
(Read only property)

60.1.6 DefaultNumber as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The default value for this color.
Notes: Only valid for numbers.
(Read only property)

60.1.7 DefaultValue as Variant

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The default value.
Notes: (Read only property)

60.1.8 DefaultVector as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The default value for this color.
Notes: Only valid for vectors.
(Read only property)

60.1.9 description as string

MBS MacCI Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The description of this attribute.
Notes: (Read only property)

60.1.10 DisplayName as string

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The localized display name for the attribute.
Notes: Not all attributes do have a localized name and not all do have a name at all.
(e.g. outputImage normally has no display name)
(Read only property)

60.1.11 HasMaxNumber as Boolean

MBS MacCI Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Whether this attribute has a defined maximum value.
Notes: (Read only property)

60.1.12 HasMinNumber as Boolean

MBS MacCI Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Whether this attribute has a defined minimum value.
Notes: (Read only property)

60.1.13 HasSliderMaxNumber as Boolean

MBS MacCI Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Whether this attribute has a defined slider maximum value.
Notes: (Read only property)

60.1.14 HasSliderMinNumber as Boolean

MBS MacCI Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Whether this attribute has a defined slider minimum value.
Notes: (Read only property)

60.1.15 IdentityAffineTransform as NSAffineTransformMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The value to be used to keep the filter doing nothing.
Notes: Only valid for affine transformations.
(Read only property)

60.1.16 IdentityNumber as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The value to be used to keep the filter doing nothing.
Notes: Only valid for numbers.
(Read only property)

60.1.17 IdentityValue as Variant

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The identity value.
Notes: (Read only property)

60.1.18 IdentityVector as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The value to be used to keep the filter doing nothing.
Notes: Only valid for vectors.
(Read only property)

60.1.19 LocalizedDescription as string

MBS MacCI Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Description of the filter intended for UI display (eg. localized)
Notes: (Read only property)

60.1.20 MaxNumber as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Maximum value for the attribute.
Notes: Only valid for numbers.
If no value is defined, this property is zero and HasMaxNumber returns false.
(Read only property)

60.1.21 MinNumber as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Minimum value for the attribute.
Notes: Only valid for numbers.
If no value is defined, this property is zero and HasMinNumber returns false.
(Read only property)

60.1.22 Name as string

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The name of this attribute.
Notes: (Read only property)

60.1.23 SliderMaxNumber as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Maximum value for the slider.
Example:

```
Var f as CIFilterEdgesMBS
Var a as CIAttributeMBS

f=new CIFilterEdgesMBS
f.inputImage=NewCIImagewithFileMBS(SpecialFolder.Desktop.Child("Paris.jpg"))

a=f.AttributeinputIntensity
Title=str(a.SliderMinNumber)+" "+str(a.SliderMaxNumber)
f.inputIntensity=a.SliderMaxNumber
```

Backdrop=f.outputImage.RenderPicture

Notes: Only valid for numbers.
If no value is defined, this property is zero and HasSliderMaxNumber returns false.
(Read only property)

60.1.24 SliderMinNumber as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Minimum value for the slider.
Notes: Only valid for numbers.
If no value is defined, this property is zero and HasSliderMinNumber returns false.
(Read only property)

60.1.25 Type as string

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The type of this attribute.
Notes: Types for numbers:
kCIAttributeTypeDistance
kCIAttributeTypeBoolean
kCIAttributeTypeTime
kCIAttributeTypeAngle
kCIAttributeTypeScalar

Types for vectors:
kCIAttributeTypePosition (2 Dimensions)
kCIAttributeTypeOffset (2 Dimensions)
kCIAttributeTypePosition3 (3 Dimensions)
kCIAttributeTypeRectangle (4 Dimensions)

Types for colors:
kCIAttributeTypeOpaqueColor

Types for images:
kCIAttributeTypeGradient
(Read only property)

60.1.26 Values as Dictionary

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Queries all values as dictionary.
Notes: (Read only property)

60.2 class CIAztecCodeDescriptorMBS

60.2.1 class CIAztecCodeDescriptorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: CIAztecCodeDescriptor is a concrete subclass of CIBarcodeDescriptor that defines an abstract representation of an Aztec Code symbol.
Notes: CIAztecCodeDescriptor may not be instantiated directly.
Subclass of the CIBarcodeDescriptorMBS class.

60.2.2 Methods

60.2.3 Constructor(errorCorrectedPayload as MemoryBlock, isCompact as Boolean, layerCount as Integer, dataCodewordCount as Integer)

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Initializes a descriptor that can be used as input to CIBarcodeGenerator.

60.2.4 descriptorWithPayload(errorCorrectedPayload as MemoryBlock, isCompact as Boolean, layerCount as Integer, dataCodewordCount as Integer) as CIAztecCodeDescriptorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Construct a descriptor that can be used as input to CIBarcodeGenerator.

60.2.5 Properties

60.2.6 dataCodewordCount as Integer

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The number of non-error-correction codewords carried by the Aztec code symbol.
Notes: Used to determine the level of error correction in conjunction with the number of data layers. Valid values are 1...2048. Compact symbols can have up to 64 message codewords.

Note that this value can exceed the number of message codewords allowed by the number of data layers in this symbol. In this case, the actual number of message codewords is 1024 fewer than this value and the message payload is to be interpreted in an application-defined manner.

(Read only property)

60.2.7 errorCorrectedPayload as MemoryBlock

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The error-corrected codewords that comprise the Aztec code symbol.
Notes: Aztec Codes are formally specified in ISO/IEC 24778:2008(E).

The error corrected payload consists of the 6-, 8-, 10-, or 12-bit message codewords produced at the end of the step described in section 7.3.1.2 "Formation of data codewords", which exists immediately prior to adding error correction. These codewords have dummy bits inserted to ensure that an entire codeword isn't all 0's or all 1's. Clients will need to remove these extra bits as part of interpreting the payload.
(Read only property)

60.2.8 isCompact as Boolean

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: A boolean indicating whether the symbol is compact.
Notes: Compact Aztec symbols use one-fewer ring in the central finder pattern than full-range Aztec symbols of the same number of data layers.
(Read only property)

60.2.9 layerCount as Integer

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The number of data layers in the Aztec code symbol.
Notes: Combined with the isCompact property, the number of data layers determines the number of modules in the Aztec Code symbol. Valid values range from 1 to 32. Compact symbols can have up to 4 data layers.

The number of data layers also determines the number of bits in each data codeword of the message carried by the Aztec Code symbol.
(Read only property)

60.3 class CIBarcodeDescriptorMBS

60.3.1 class CIBarcodeDescriptorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: CIBarcodeDescriptor is an abstract base class that defines an abstract representation of a machine readable code's symbol attributes.
Notes: Each subclass is sufficient to recreate the symbol exactly as seen or to be used with a custom parser. Subclasses of CIBarcodeDescriptor are defined for each code type to contain the formal specification of each symbology.
Available on macOS 10.13.

60.3.2 Methods

60.3.3 Constructor(Handle as Integer)

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor with passing in a handle to an existing object.
Notes: Handle must be of type CIBarcodeDescriptor and will be retained.

60.3.4 copy as CIBarcodeDescriptorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Creates a copy of this barcode description.

60.3.5 Properties

60.3.6 description as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The description string to debug.
Notes: (Read only property)

60.3.7 Handle as Integer

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

60.4 class CIColorMBS

60.4.1 class CIColorMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: A class for a color in CoreImage.
Example:

```
// create Core Image colors and use one in a filter
Var red As CIColorMBS = CIColorMBS.colorWithRGB(1.0, 0.0, 0.0)
Var transparentBlue As New CIColorMBS(0.0, 0.0, 1.0, 0.5)
Var gray As CIColorMBS = CIColorMBS.colorWithString("0.5 0.5 0.5 1.0")

MessageBox "Red: " + red.StringRepresentation + EndOfLine + _
"Blue alpha: " + transparentBlue.Alpha.ToString + EndOfLine + _
"Gray components: " + gray.NumberOfComponents.ToString

// create a picture filled with a color
Var generator As New CIFilterConstantColorGeneratorMBS
generator.inputColor = red
Var crop As New CIFilterCropMBS
crop.inputImage = generator.outputImage
crop.inputRectangle = New CIVectorMBS(0, 0, 100, 100)
Var pic As Picture = crop.outputImage.RenderPicture
```

60.4.2 Methods

60.4.3 blackColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns stock black color with sRGB color space.
Notes: Available in macOS 10.12 or newer.

60.4.4 blueColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns stock blue color with sRGB color space.
Notes: Available in macOS 10.12 or newer.

60.4.5 clearColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns stock clear color with sRGB color space.
Notes: Transparent color.
Available in macOS 10.12 or newer.

60.4.6 colorWithCGColor(ColorValue as CGColorMBS) as CIColorMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Creates a new color based on a CoreGraphics color.

60.4.7 colorWithRGB(Red as Double, Green as Double, Blue as Double) as CIColorMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Creates a color object using the specified RGB color component values
Notes: r: The value of the red component.
g: The value of the green component.
b: The value of the blue component.

Initializes Core Image color object that represents an RGB color in the color space specified by the Quartz 2D constant kCGColorSpaceGenericRGB.
See also:

- 60.4.8 colorWithRGB(Red as Double, Green as Double, Blue as Double, Alpha as Double) as CIColorMBS 9938
- 60.4.9 colorWithRGB(Red as Double, Green as Double, Blue as Double, Alpha as Double, ColorSpace as CGColorSpaceMBS) as CIColorMBS 9938
- 60.4.10 colorWithRGB(Red as Double, Green as Double, Blue as Double, ColorSpace as CGColorSpaceMBS) as CIColorMBS 9938

60.4.8 colorWithRGB(Red as Double, Green as Double, Blue as Double, Alpha as Double) as CIColorMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Creates a color object using the specified RGBA color component values.
Notes: r: The value of the red component.
g: The value of the green component.
b: The value of the blue component.
a: The value of the alpha component.

Initializes a Core Image color object that represents an RGB color in the color space specified by the Quartz 2D constant kCGColorSpaceGenericRGB and an alpha value.
See also:

- 60.4.7 colorWithRGB(Red as Double, Green as Double, Blue as Double) as CIColorMBS 9937
- 60.4.9 colorWithRGB(Red as Double, Green as Double, Blue as Double, Alpha as Double, ColorSpace as CGColorSpaceMBS) as CIColorMBS 9938
- 60.4.10 colorWithRGB(Red as Double, Green as Double, Blue as Double, ColorSpace as CGColorSpaceMBS) as CIColorMBS 9938

60.4.9 colorWithRGB(Red as Double, Green as Double, Blue as Double, Alpha as Double, ColorSpace as CGColorSpaceMBS) as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Create a new color object in a given colorspace.
Notes: Will return nil if the colorspace is not kCGColorSpaceModelRGB.
Available in macOS 10.12 or newer.
See also:

- 60.4.7 colorWithRGB(Red as Double, Green as Double, Blue as Double) as CIColorMBS 9937
- 60.4.8 colorWithRGB(Red as Double, Green as Double, Blue as Double, Alpha as Double) as CIColorMBS 9938
- 60.4.10 colorWithRGB(Red as Double, Green as Double, Blue as Double, ColorSpace as CGColorSpaceMBS) as CIColorMBS 9938

60.4.10 colorWithRGB(Red as Double, Green as Double, Blue as Double, ColorSpace as CGColorSpaceMBS) as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Create a new color object in a given colorspace.
Notes: Will return nil if the colorspace is not kCGColorSpaceModelRGB.
Available in macOS 10.12 or newer.
See also:

- 60.4.7 colorWithRGB(Red as Double, Green as Double, Blue as Double) as CIColorMBS 9937
- 60.4.8 colorWithRGB(Red as Double, Green as Double, Blue as Double, Alpha as Double) as CIColorMBS 9938
- 60.4.9 colorWithRGB(Red as Double, Green as Double, Blue as Double, Alpha as Double, ColorSpace as CGColorSpaceMBS) as CIColorMBS 9938

60.4.11 colorWithString(representation as String) as CIColorMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Creates a color from a color string representation.

60.4.12 Component(index as UInt32) as Double

MBS MacCI Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: The color component with the given index.
Notes: Index is from 0 to NumberOfComponents - 1.

60.4.13 Constructor(ColorValue as CGColorMBS)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new CIColor based on the given CoreGraphics color.
Notes: On success, the handle is not zero.
See also:

- 60.4.14 Constructor(Handle as Integer) 9940
- 60.4.15 Constructor(Red as Double, Green as Double, Blue as Double) 9940
- 60.4.16 Constructor(Red as Double, Green as Double, Blue as Double, Alpha as Double) 9941
- 60.4.17 Constructor(Red as double, Green as Double, Blue as double, Alpha as Double, ColorSpace as CGColorSpaceMBS) 9941
- 60.4.18 Constructor(Red as double, Green as Double, Blue as double, ColorSpace as CGColorSpaceMBS) 9942

60.4.14 Constructor(Handle as Integer)

MBS MacCI Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Initializes object with given object reference.
Notes: ref should be a CIColor* and the object is retained.
Raises UnsupportedOperationException if object is not a CIColor.
See also:

- 60.4.13 Constructor(ColorValue as CGColorMBS) 9939
- 60.4.15 Constructor(Red as Double, Green as Double, Blue as Double) 9940
- 60.4.16 Constructor(Red as Double, Green as Double, Blue as Double, Alpha as Double) 9941
- 60.4.17 Constructor(Red as double, Green as Double, Blue as double, Alpha as Double, ColorSpace as CGColorSpaceMBS) 9941
- 60.4.18 Constructor(Red as double, Green as Double, Blue as double, ColorSpace as CGColorSpaceMBS) 9942

60.4.15 Constructor(Red as Double, Green as Double, Blue as Double)

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a color object using the specified RGB color component values
Notes: r: The value of the red component.
g: The value of the green component.
b: The value of the blue component.

Initializes Core Image color object that represents an RGB color in the color space specified by the Quartz 2D constant kCGColorSpaceGenericRGB.
See also:

- 60.4.13 Constructor(ColorValue as CGColorMBS) 9939
- 60.4.14 Constructor(Handle as Integer) 9940
- 60.4.16 Constructor(Red as Double, Green as Double, Blue as Double, Alpha as Double) 9941
- 60.4.17 Constructor(Red as double, Green as Double, Blue as double, Alpha as Double, ColorSpace as CGColorSpaceMBS) 9941
- 60.4.18 Constructor(Red as double, Green as Double, Blue as double, ColorSpace as CGColorSpaceMBS) 9942

60.4.16 Constructor(Red as Double, Green as Double, Blue as Double, Alpha as Double)

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a color object using the specified RGBA color component values.
Notes: r: The value of the red component.
g: The value of the green component.
b: The value of the blue component.
a: The value of the alpha component.

Initializes a Core Image color object that represents an RGB color in the color space specified by the Quartz 2D constant kCGColorSpaceGenericRGB and an alpha value.
See also:

- 60.4.13 Constructor(ColorValue as CGColorMBS) 9939

- 60.4.18 Constructor(Red as double, Green as Double, Blue as double, ColorSpace as CGColorSpaceMBS) 9942

60.4.17 Constructor(Red as double, Green as Double, Blue as double, Alpha as Double, ColorSpace as CGColorSpaceMBS)

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Create a new color object in a given colorspace.
Notes: Will fail if the colorspace is not kCGColorSpaceModelRGB.
Available in macOS 10.12 or newer.
See also:

- 60.4.13 Constructor(ColorValue as CGColorMBS) 9939
- 60.4.14 Constructor(Handle as Integer) 9940

- 60.4.16 Constructor(Red as Double, Green as Double, Blue as Double, Alpha as Double) 9941
- 60.4.18 Constructor(Red as double, Green as Double, Blue as double, ColorSpace as CGColorSpaceMBS) 9942

60.4.18 Constructor(Red as double, Green as Double, Blue as double, ColorSpace as CGColorSpaceMBS)

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Create a new color object in a given colorspace.
Notes: Will fail if the colorspace is not kCGColorSpaceModelRGB.
Available in macOS 10.12 or newer.
See also:

- 60.4.13 Constructor(ColorValue as CGColorMBS) 9939
- 60.4.14 Constructor(Handle as Integer) 9940

- 60.4.16 Constructor(Red as Double, Green as Double, Blue as Double, Alpha as Double) 9941
- 60.4.17 Constructor(Red as double, Green as Double, Blue as double, Alpha as Double, ColorSpace as CGColorSpaceMBS) 9941

60.4.19 copy as CIColorMBS

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Creates a copy of the color object.

60.4.20 cyanColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns stock cyan color with sRGB color space.
Notes: Available in macOS 10.12 or newer.

60.4.21 grayColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns stock gray color with sRGB color space.
Notes: Available in macOS 10.12 or newer.

60.4.22 greenColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns stock green color with sRGB color space.
Notes: Available in macOS 10.12 or newer.

60.4.23 magentaColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns stock magenta color with sRGB color space.
Notes: Available in macOS 10.12 or newer.

60.4.24 redColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns stock red color with sRGB color space.
Notes: Available in macOS 10.12 or newer.

60.4.25 whiteColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns stock white color with sRGB color space.
Notes: Available in macOS 10.12 or newer.

60.4.26 yellowColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns stock yellow color with sRGB color space.
Notes: Available in macOS 10.12 or newer.

60.4.27 Properties

60.4.28 Alpha as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The alpha value of the color.
Notes: Values range between 0.0 to 1.0.

(Read only property)

60.4.29 Blue as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The (unpremultiplied) blue component of the color.
Notes: Values range between 0.0 to 1.0.
(Read only property)

60.4.30 ColorSpace as CGColorSpaceMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The color space object associated with the color.
Notes: nil on any error.
(Read only property)

60.4.31 description as String

MBS MacCI Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the textual description for this color.
Notes: (Read only property)

60.4.32 Green as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The (unpremultiplied) green component of the color.
Notes: Values range between 0.0 to 1.0.
(Read only property)

60.4.33 Handle as Integer

MBS MacCI Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: The handle to the CIColor object used internally.
Notes: (Read only property)

60.4.34 NumberOfComponents as Integer

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The number of color components (including alpha).
Notes: (Read only property)

60.4.35 Red as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The (unpremultiplied) red component of the color.
Notes: Values range between 0.0 to 1.0.
(Read only property)

60.4.36 StringRepresentation as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Returns a formatted string with the components of the color.
Example:

```
Var c as CIColorMBS

c=NewCIColorMBS(1,0,0)

MessageBox c.stringRepresentation // shows "1 0 0 1"
```

Notes: Returns "" on any error.
(Read only property)

60.5 class CIContextMBS

60.5.1 class CIContextMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: A class for a drawing context for CoreImage.
Example:

```
// render a Core Image image to a CGImage and to PNG data
Var image As New CIImageMBS(SpecialFolder.Desktop.Child("test.jpg"))
Var context As New CIContextMBS

Var cg As CGImageMBS = context.CreateCGImage(image, image.Extent)
If cg <>Nil Then
Var pic As Picture = cg.Picture
// show pic in a Canvas or ImageViewer
End If

Var png As MemoryBlock = context.PNGRepresentationOfImage(image)
MessageBox "PNG has " + png.Size.ToString + " bytes."
```

60.5.2 Methods

60.5.3 ClearCaches

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Frees any cached data (such as temporary images) associated with the context.
Notes: This also runs the garbage collector.

60.5.4 Constructor

MBS MacCI Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Creates a new CIContext without a specific target.
Notes: Great to create a context and render something inside.
See also:

- 60.5.5 Constructor(cgcontext as CGContextMBS) 9947
- 60.5.6 Constructor(cgcontext as CGContextMBS, OutputColorSpace as CGColorSpaceMBS, WorkingColorSpace as CGColorSpaceMBS, UseSoftwareRenderer as Boolean) 9947
- 60.5.7 Constructor(Handle as Integer) 9948
- 60.5.8 Constructor(Pic as Picture) 9948

60.5.5 Constructor(cgcontext as CGContextMBS)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Create a new CoreImage context object, all output will be drawn into the CG context.
Notes: On success, the handle is not zero.
See also:

- 60.5.4 Constructor 9947
- 60.5.6 Constructor(cgcontext as CGContextMBS, OutputColorSpace as CGColorSpaceMBS, WorkingColorSpace as CGColorSpaceMBS, UseSoftwareRenderer as Boolean) 9947
- 60.5.7 Constructor(Handle as Integer) 9948
- 60.5.8 Constructor(Pic as Picture) 9948

60.5.6 Constructor(cgcontext as CGContextMBS, OutputColorSpace as CGColorSpaceMBS, WorkingColorSpace as CGColorSpaceMBS, UseSoftwareRenderer as Boolean)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Create a new CoreImage context object with options, all output will be drawn into the CG context.
Notes: OutputColorSpace: A CGColorSpaceMBS object defining the color space in which all intermediate operations are performed.
WorkingColorSpace: A CGColorSpaceRef object defining the color space that images are converted to before rendering into the context.
UseSoftwareRenderer: Whether you want software renderer only.

On success, the handle is not zero.
See also:

- 60.5.4 Constructor 9947
- 60.5.5 Constructor(cgcontext as CGContextMBS) 9947
- 60.5.7 Constructor(Handle as Integer) 9948
- 60.5.8 Constructor(Pic as Picture) 9948

60.5.7 Constructor(Handle as Integer)

MBS MacCI Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Initializes object with given object reference.
Notes: ref should be a CIContext* and the object is retained.
Raises UnsupportedOperationException if object is not a CIContext.
See also:

- 60.5.4 Constructor 9947
- 60.5.5 Constructor(cgcontext as CGContextMBS) 9947
- 60.5.6 Constructor(cgcontext as CGContextMBS, OutputColorSpace as CGColorSpaceMBS, WorkingColorSpace as CGColorSpaceMBS, UseSoftwareRenderer as Boolean) 9947
- 60.5.8 Constructor(Pic as Picture) 9948

60.5.8 Constructor(Pic as Picture)

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a context targeting the picture.
Notes: Works only on Cocoa target.
See also:

- 60.5.4 Constructor 9947
- 60.5.5 Constructor(cgcontext as CGContextMBS) 9947
- 60.5.6 Constructor(cgcontext as CGContextMBS, OutputColorSpace as CGColorSpaceMBS, WorkingColorSpace as CGColorSpaceMBS, UseSoftwareRenderer as Boolean) 9947
- 60.5.7 Constructor(Handle as Integer) 9948

60.5.9 CreateCGImage(image as CIImageMBS, r as CGRectMBS = nil) as CGImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new image with the content of the CIImage.
Notes: Render the region 'r' of image 'im' into a temporary buffer using the context, then create and return a new CoreGraphics image with the results.
If r is nil, the whole image extent is used.
See also:

- 60.5.10 CreateCGImage(image as CIImageMBS, r as CGRectMBS, ColorSpace as CGColorSpaceMBS) as CGImageMBS 9949

60.5.10 CreateCGImage(image as CIImageMBS, r as CGRectMBS, ColorSpace as CGColorSpaceMBS) as CGImageMBS

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a new image with the content of the CIImage.
Notes: Render the region 'r' of image 'im' into a temporary buffer using the context, then create and return a new CoreGraphics image with the results.
If r is nil, the whole image extent is used.
See also:

- 60.5.9 CreateCGImage(image as CIImageMBS, r as CGRectMBS = nil) as CGImageMBS 9949

60.5.11 createCGLayer(size as CGSizeMBS, info as dictionary = nil) as CGLayerMBS

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a CGLayer object from the provided parameters.
Notes: size: The size, in default user space units, of the layer relative to the graphics context.
ifno: A dictionary, which is passed to CGLayerCreateWithContext as the auxiliaryInfo parameter. Pass nil because this parameter is reserved for future use.

Returns a CGLayer object.

After calling this method, Core Image draws content into the CGLayer object. Core Image creates a CGLayer object by calling the Quartz 2D function CGLayerCreateWithContext, whose prototype is:

CGLayerRef CGLayerCreateWithContext (
CGContextRef context,

CGSize size,
CFDictionaryRef auxiliaryInfo
);
Core Image passes the CIContext object as the context parameter, the size as the size parameter, and the dictionary as the auxiliaryInfo parameter. For more information on CGLayer objects, see Quartz 2D Programming Guide and CGLayer Reference.

Available in OS X v10.4 and later.

60.5.12 Destructor

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The destructor.

60.5.13 DrawImage(ciImage as CIImageMBS)

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Render the ciImage to the context's destination.
Notes: Rendering the image will cause the calculations to be done so this call is quite expensive.

60.5.14 DrawImagePoint(ciImage as CIImageMBS, DestPoint as CGPointMBS, SourceRect as CGRectMBS = nil)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use DrawImageRect instead.
Function: Render the subregion 'SourceRect' of 'ciImage' to point 'DestPoint' in the context's destination.
Notes: Rendering the image will cause the calculations to be done so this call is quite expensive.
If SourceRect is nil, we use the extent from image.

60.5.15 DrawImageRect(ciImage as CIImageMBS, DestRect as CGRectMBS, SourceRect as CGRectMBS = nil)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Render the rectangle 'SourceRect' of 'ciImage' to the rectangle 'DestRect' in the context's destination.
Notes: Rendering the image will cause the calculations to be done so this call is quite expensive.

If SourceRect is nil, we use the extent from image.

60.5.16 Flush

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Flushes drawings to CGContext and target picture (if any).

60.5.17 HEIFRepresentationOfImage(Image as CIImageMBS, format as Integer = 24, colorSpace as CGColorSpaceMBS = nil, options as dictionary = nil) as MemoryBlock

MBS MacCI Plugin, Plugin Version: 19.2, Platform: macOS, Targets: All.

Function: Render a CIImage to HEIF data.
Example:

```
Var f As FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var i As New CIImageMBS(f)
Var c As New CIContextMBS

Var heifData As MemoryBlock = c.HEIFRepresentationOfImage(i)

Break // see debugger
```

Notes: Image must have a finite non-empty extent.
The CGColorSpace must be kCGColorSpaceModelRGB or kCGColorSpaceModelMonochrome and must match the specified format.
No options keys are supported at this time.
If colorspace is nil, we use generic RGB colorspace.
Available on macOS 10.13 or later.

60.5.18 JPEGRepresentationOfImage(Image as CIImageMBS, colorSpace as CGColorSpaceMBS = nil, options as dictionary = nil) as MemoryBlock

MBS MacCI Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Render a CIImage to JPEG data.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.png")
Var i as new CIImageMBS(f)
Var c as new CIContextMBS
```

```
Var jpegData as MemoryBlock = c.JPEGRepresentationOfImage(i)

Break // see debugger
```

Notes: Image must have a finite non-empty extent.
The CGColorSpace must be kCGColorSpaceModelRGB or kCGColorSpaceModelMonochrome.
Supported options keys are kCGImageDestinationLossyCompressionQuality, kCIImageRepresentationAVDepthData, kCIImageRepresentationDepthImage, kCIImageRepresentationDisparityImage.
If colorspace is nil, we use generic RGB colorspace.
Available on macOS 10.12 or later.

60.5.19 kCIContextCacheIntermediates as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the keys that may be passed in the dictionary while creating contexts.
Notes: A boolean NSNumber controlling how intermediate buffers are cached.
If false, the context will empty intermediates during and after renders.
The default value is true.

60.5.20 kCIContextHighQualityDownsample as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the option keys.
Notes: A boolean controlling the quality of affine downsample operations.
True imply that more quality is desired.
On iOS the default value is false.
On OSX the default value is true.

60.5.21 kCIContextOutputColorSpace as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: A key for the color space to use for images before they are rendered to the context.
Notes: By default, Core Image uses the GenericRGB color space, which leaves color matching to the system. You can specify a different output color space by providing a Quartz 2D CGColorSpace object (CGColorSpaceRef). (See Quartz 2D Programming Guide for information on creating and using CGColorSpace objects.)

To request that Core Image perform no color management, specify the NSNull object as the value for this

key. Use this option for images that don,Äôt contain color data (such as elevation maps, normal vector maps, and sampled function tables).

Available in OS X v10.6 and later.

60.5.22 kCIContextOutputPremultiplied as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the keys that may be passed in the dictionary while creating contexts.
Notes: A boolean controlling whether output renders produce alpha-premultiplied pixels.
The default value is true.

60.5.23 kCIContextPriorityRequestLow as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the keys that may be passed in the dictionary while creating contexts.
Notes: An number with a boolean value. When @YES the context will use low priority rendering on the GPU.

60.5.24 kCIContextUseSoftwareRenderer as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: A key for enabling software renderer use. If the associated NSNumber object is true, then the software renderer is required.
Notes: Available in OS X v10.6 and later.

60.5.25 kCIContextWorkingColorSpace as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: A key for the color space to use for image operations.
Notes: By default, Core Image assumes that processing nodes are 128 bits-per-pixel, linear light, premultiplied RGBA floating-point values that use the GenericRGB color space. You can specify a different working color space by providing a Quartz 2D CGColorSpace object (CGColorSpaceRef). Note that the working color space must be RGB-based. If you have YUV data as input (or other data that is not RGB-based), you can use ColorSync functions to convert to the working color space. (See Quartz 2D Programming Guide for information on creating and using CGColorSpace objects.)

To request that Core Image perform no color management, specify the NSNull object as the value for this key. Use this option for images that don,Äôt contain color data (such as elevation maps, normal vector maps, and sampled function tables).

Available in OS X v10.6 and later.

60.5.26 kCIContextWorkingFormat as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: An option for the color format to use for intermediate results when rendering with the context.
Notes: The value for this key is an NSNumber object containing a CIFormat value. The default working format is kCIFormatRGBA8 for CPU rendering and kCIFormatRGBAf for GPU rendering. GPU rendering also supports the kCIFormatRGBAh format for greater color precision, but this format requires twice as much memory and can be used only with color management enabled.

Available in OS X v10.4 and later.

60.5.27 kCIImageRepresentationAVDepthData as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the representation name.
Notes: For the raw depth data.

60.5.28 kCIImageRepresentationDepthImage as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the representation name.
Notes: For the depth image.

60.5.29 kCIImageRepresentationDisparityImage as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the representation name.
Notes: For the disparity image.

60.5.30 PNGRepresentationOfImage(Image as CIImageMBS, format as Integer = 24, colorSpace as CGColorSpaceMBS = nil, options as dictionary = nil) as MemoryBlock

MBS MacCI Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Render a CIImage to PNG data.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.png")
Var i as new CIImageMBS(f)
Var c as new CIContextMBS

Var pngData as MemoryBlock = c.PNGRepresentationOfImage(i)

Break // see debugger
```

Notes: Image must have a finite non-empty extent.
The CGColorSpace must be kCGColorSpaceModelRGB or kCGColorSpaceModelMonochrome and must match the specified format.
No options keys are supported at this time.
If colorspace is nil, we use generic RGB colorspace.
Available on macOS 10.13 or later.

60.5.31 ReclaimResources

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Frees temporary memory.
Notes: Runs the context's garbage collector to reclaim any resources that are no longer required (e.g. removes textures from the texture cache that reference deleted images.) This method is called automatically after every rendering operation.

60.5.32 TIFFRepresentationOfImage(Image as CIImageMBS, format as Integer = 24, colorSpace as CGColorSpaceMBS = nil, options as dictionary = nil) as MemoryBlock

MBS MacCI Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Render a CIImage to TIFF data.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.png")
Var i as new CIImageMBS(f)
```

```
Var c as new CIContextMBS

Var tiffData as MemoryBlock = c.TIFFRepresentationOfImage(i)

Break // see debugger
```

Notes: Image must have a finite non-empty extent.
The CGColorSpace must be kCGColorSpaceModelRGB or kCGColorSpaceModelMonochrome and must match the specified format.
No options keys are supported at this time.
If colorspace is nil, we use generic RGB colorspace.
Available on macOS 10.12 or later.

60.5.33 writeHEIFRepresentationOfImage(Image as CIImageMBS, file as FolderItem, format as Integer = 24, colorSpace as CGColorSpaceMBS = nil, options as dictionary = nil, byref error as NSErrorMBS) as Boolean

MBS MacCI Plugin, Plugin Version: 19.2, Platform: macOS, Targets: All.

Function: Render a CIImage to HEIF file.
Example:

```
Var f As FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var i As New CIImageMBS(f)
Var c As New CIContextMBS
Var d As FolderItem = SpecialFolder.Desktop.Child("output.heif")

Var e As NSErrorMBS
Var b As Boolean = c.writePNGRepresentationOfImage(i, d, e)
If b Then
MessageBox "OK"
Else
MessageBox "Failed"+EndOfLine+e.LocalizedDescription
End If
```

Notes: Image must have a finite non-empty extent.
The CGColorSpace must be kCGColorSpaceModelRGB or kCGColorSpaceModelMonochrome and must match the specified format.
No options keys are supported at this time.
If colorspace is nil, we use generic RGB colorspace.
Available on macOS 10.13 or later.

60.5.34 writeJPEGRepresentationOfImage(Image as CIImageMBS, file as FolderItem, colorSpace as CGColorSpaceMBS = nil, options as dictionary = nil, byref error as NSErrorMBS) as Boolean

MBS MacCI Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Render a CIImage to JPEG file.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.png")
Var i as new CIImageMBS(f)
Var c as new CIContextMBS
Var d as FolderItem = SpecialFolder.Desktop.Child("output.jpg")

Var e as NSErrorMBS
Var b as Boolean = c.writeJPEGRepresentationOfImage(i, d, e)
if b then
MessageBox "OK"
else
MessageBox "Failed"+EndOfLine+e.LocalizedDescription
end if
```

Notes: Image must have a finite non-empty extent.
The CGColorSpace must be kCGColorSpaceModelRGB or kCGColorSpaceModelMonochrome.
Supported options keys are kCGImageDestinationLossyCompressionQuality, kCIImageRepresentationAVDepthData, kCIImageRepresentationDepthImage, kCIImageRepresentationDisparityImage.
If colorspace is nil, we use generic RGB colorspace.
Available on macOS 10.12 or later.

60.5.35 writePNGRepresentationOfImage(Image as CIImageMBS, file as FolderItem, format as Integer = 24, colorSpace as CGColorSpaceMBS = nil, options as dictionary = nil, byref error as NSErrorMBS) as Boolean

MBS MacCI Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Render a CIImage to PNG file.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.png")
Var i as new CIImageMBS(f)
Var c as new CIContextMBS
Var d as FolderItem = SpecialFolder.Desktop.Child("output.png")

Var e as NSErrorMBS
Var b as Boolean = c.writePNGRepresentationOfImage(i, d, e)
if b then
```

```
MessageBox "OK"
else
MessageBox "Failed"+EndOfLine+e.LocalizedDescription
end if
```

Notes: Image must have a finite non-empty extent.
The CGColorSpace must be kCGColorSpaceModelRGB or kCGColorSpaceModelMonochrome and must match the specified format.
No options keys are supported at this time.
If colorspace is nil, we use generic RGB colorspace.
Available on macOS 10.13 or later.

60.5.36 writeTIFFRepresentationOfImage(Image as CIImageMBS, file as FolderItem, format as Integer = 24, colorSpace as CGColorSpaceMBS = nil, options as dictionary = nil, byref error as NSErrorMBS) as Boolean

MBS MacCI Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Render a CIImage to TIFF file.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.png")
Var i as new CIImageMBS(f)
Var c as new CIContextMBS
Var d as FolderItem = SpecialFolder.Desktop.Child("output.tif")

Var e as NSErrorMBS
Var b as Boolean = c.writeTIFFRepresentationOfImage(i, d, e)
if b then
MessageBox "OK"
else
MessageBox "Failed"+EndOfLine+e.LocalizedDescription
end if
```

Notes: Image must have a finite non-empty extent.
The CGColorSpace must be kCGColorSpaceModelRGB or kCGColorSpaceModelMonochrome and must match the specified format.
No options keys are supported at this time.
If colorspace is nil, we use generic RGB colorspace.
Available on macOS 10.12 or later.

60.5.37 Properties

60.5.38 CGContext as CGContextMBS

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The CGContextMBS targeted by this CIContext.
Notes: (Read and Write property)

60.5.39 description as String

MBS MacCI Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the textual description for this context.
Notes: (Read only property)

60.5.40 Handle as Integer

MBS MacCI Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: The handle to the CIContext object used internally.
Notes: (Read only property)

60.5.41 Picture as Picture

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The picture used in the constructor (if any).
Notes: (Read and Write property)

60.5.42 Constants

Formats

Constant	Value	Description
kCIFormatA16	4	Alpha with 16-bit. Available in macOS 10.11 or newer.
kCIFormatA8	3	Alpha with 8-bit. Available in macOS 10.11 or newer.
kCIFormatABGR8	46	ABGR with 8-bit. Available in macOS 10.11 or newer.
kCIFormatAf	6	Alpha with float values. Available in macOS 10.11 or newer.
kCIFormatAh	5	Alpha with half floating point. Available in macOS 10.11 or newer.
kCIFormatARGB8	23	ARGB with 8-bit.
kCIFormatBGRA8	22	BGRA with 8-bit.
kCIFormatR16	37	Red with 16-bit. Available in macOS 10.11 or newer.
kCIFormatR8	36	Red with 8-bit. Available in macOS 10.11 or newer.
kCIFormatRf	39	Red with floating point. Available in macOS 10.11 or newer.
kCIFormatRG16	41	Red and green with 16-bit. Available in macOS 10.11 or newer.
kCIFormatRG8	40	Red and green with 8-bit. Available in macOS 10.11 or newer.
kCIFormatRGBA16	27	RGBA with 16-bit.
kCIFormatRGBA8	24	RGBA with 8-bit.
kCIFormatRGBAf	34	RGBA with floating point.
kCIFormatRGBAh	31	RGBA values that are IEEE 754-2008 half float compliant.
kCIFormatRGf	43	Red and green with floating point values. Available in macOS 10.11 or newer.
kCIFormatRGh	42	Red and green with half precision floating point values. Available in macOS 10.11 or newer.
kCIFormatRh	38	Red with half precision floating point. Available in macOS 10.11 or newer.

60.6 class CIDataMatrixCodeDescriptorMBS

60.6.1 class CIDataMatrixCodeDescriptorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: CIDataMatrixCodeDescriptor is a concrete subclass of CIBarcodeDescriptor that defines an abstract representation of a Data Matrix code symbol.
Notes: Subclass of the CIBarcodeDescriptorMBS class.

60.6.2 Methods

60.6.3 Constructor(errorCorrectedPayload as MemoryBlock, rowCount as Integer, columnCount as Integer, eccVersion as integer)

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Initializes a descriptor that can be used as input to CIBarcodeGenerator.

60.6.4 descriptorWithPayload(errorCorrectedPayload as MemoryBlock, rowCount as Integer, columnCount as Integer, eccVersion as integer) as CIDataMatrixCodeDescriptorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Construct a descriptor that can be used as input to CIBarcodeGenerator.

60.6.5 Properties

60.6.6 columnCount as Integer

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The number of module columns.
Notes: Refer to ISO/IEC 16022:2006(E) for valid module row and column count combinations.
(Read only property)

60.6.7 eccVersion as Integer

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Data Matrix code ECC version.
Notes: Valid values are 000, 050, 080, 100, 140, and 200. Any symbol with an even number of rows and columns will be ECC 200.

ECC 000 - 140 symbols offer five levels of error correction using convolutional code error correction. Each successive level of error correction offers more protection for the message data and increases the size of the symbol required to carry a specific message. ECC 000 symbols offer no data protection. The other modes are described in ISO/IEC 16022:2006 and enumerated in this list only for completeness.

ECC 200 symbols utilize Reed-Solomon error correction. The error correction capacity for any given Data Matrix symbol is fixed by the size (in rows and columns) of the symbol. See Table 7 of ISO/IEC 16022:2006(E) for more details.
(Read only property)

60.6.8 errorCorrectedPayload as MemoryBlock

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The error corrected payload that comprise the Data Matrix code symbol.
Notes: DataMatrix symbols are specified bn ISO/IEC 16022:2006(E). ECC 200-type symbols will always have an even number of rows and columns.

For ECC 200-type symbols, the phases of encoding data into a symbol are described in section 5.1 – Encode procedure overview. The error corrected payload comprises the de-interleaved bits of the message described at the end of Step 1: Data encodation.
(Read only property)

60.6.9 rowCount as Integer

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The number of module rows.
Notes: Refer to ISO/IEC 16022:2006(E) for valid module row and column count combinations.
(Read only property)

60.6.10 Constants

ECC Versions

Constant	Value	Description
ECCVersion000	0	Indicates error correction using convolutional code error correction with no data protection.
ECCVersion050	50	Indicates 1/4 of the symbol is dedicated to convolutional code error correction.
ECCVersion080	80	Indicates 1/3 of the symbol is dedicated to convolutional code error correction.
ECCVersion100	100	Indicates 1/2 of the symbol is dedicated to convolutional code error correction.
ECCVersion140	140	Indicates 3/4 of the symbol is dedicated to convolutional code error correction.
ECCVersion200	200	Indicates error correction using Reed-Solomon error correction. Data protection overhead varies based on symbol size.

60.7 class CIDetectorMBS

60.7.1 class CIDetectorMBS

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The Core Image class to detect features in images.
Example:

```
// find QR codes in a picture file and show their text
Var image As New CIImageMBS(SpecialFolder.Desktop.Child("qrcode.png"))

Var options As New Dictionary
options.Value(CIDetectorMBS.CIDetectorAccuracy) = CIDetectorMBS.CIDetectorAccuracyHigh

Var detector As New CIDetectorMBS(CIDetectorMBS.CIDetectorTypeQRCode, Nil, options)
Var features() As CIFeatureMBS = detector.featuresInImage(image, Nil)

For Each feature As CIFeatureMBS In features
If feature IsA CIQRCodeFeatureMBS Then
MessageBox CIQRCodeFeatureMBS(feature).messageString
End If
Next
```

Notes: This class potentially holds onto a lot of state. Hence it may be beneficial from a performance perspective to re-use the same CIDetector instance. Specifying a CIContext when creating a detector may have an impact on performance since this context may be used when analyzing an image.

60.7.2 Methods

60.7.3 CIDetectorAccuracy as string

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The key in the options dictionary used to specify a accuracy / performance tradeoff to be used.

60.7.4 CIDetectorAccuracyHigh as string

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: One of the values for use with the CIDetectorAccuracy key.
Notes: Lower performance, higher accuracy

60.7.5 CIDetectorAccuracyLow as string

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: One of the values for use with the CIDetectorAccuracy key.
Notes: Lower accuracy, higher performance

60.7.6 CIDetectorAspectRatio as string

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the keys used in the options dictionary for featuresInImage.
Notes: An option specifying the aspect ratio (width divided by height) of rectangles to search for.

The value of this key is an NSNumber object whose value is a positive floating-point number. Use this option with the CIDetectorTypeRectangle detector type to fine-tune the accuracy of the detector. For example, to more accurately find a business card (3.5 x 2 inches) in an image, specify an aspect ratio of 1.75 (3.5 / 2).

60.7.7 CIDetectorEyeBlink as string

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: An option for whether Core Image will perform additional processing to recognize closed eyes in detected faces.
Notes: Available in OS X v10.9 and later.

60.7.8 CIDetectorFocalLength as string

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the keys used in the options dictionary for featuresInImage.
Notes: An option identifying the focal length used in capturing images to be processed by the detector.

The value of this key is an NSNumber object whose value is a floating-point number between -1.0 and 1.0. Use this option with the CIDetectorTypeRectangle detector type to fine-tune the accuracy of the detector.

60.7.9 CIDetectorImageOrientation as string

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: An option for the display orientation of the image whose features you want to detect.
Notes: The value of this key is an NSNumber object whose value is an integer between 1 and 8. The TIFF and EXIF specifications define these values to indicate where the pixel coordinate origin (0,0) of the image should appear when it is displayed. The default value is 1, indicating that the origin is in the top left corner of the image. For further details, see kCGImagePropertyOrientation.
Core Image only detects faces whose orientation matches that of the image. You should provide a value for this key if you want to detect faces in a different orientation.
Available in OS X v10.8 and later.

60.7.10 CIDetectorMaxFeatureCount as string

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for featuresInImage.
Notes: For rectangle detector, the value for this key is an integer number from 1 ... 256 that represents the maximum number of features to return.
valid value range: 1 <= CIDetectorMaxFeatureCount <= 256. The default value is 1.

60.7.11 CIDetectorMinFeatureSize as string

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: A key used to specify the minimum size that the detector will recognize as a feature.
Notes: The value for this key is an NSNumber object ranging from 0.0 through 1.0 that represents a fraction of the minor dimension of the image.
Available in OS X v10.8 and later.

60.7.12 CIDetectorNumberOfAngles as string

MBS MacCI Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: One of the configuration keys.
Notes: The number of perspectives to use for detecting a face in video input.

The value for this key is a number 1, 3, 5, 7, 9, or 11. At higher numbers of angles, face detection in video becomes more accurate, but at a higher computational cost.

Available in OS X 10.11 and later.

60.7.13 CIDetectorReturnSubFeatures as string

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for featuresInImage.
Notes: The value for this key is a bool. Controls whether the text detector should detect subfeatures or not. The default value is false. Requires 64-bit.

60.7.14 CIDetectorSmile as string

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: An option for whether Core Image will perform additional processing to recognize smiles in detected faces.
Notes: Available in OS X v10.9 and later.

60.7.15 CIDetectorTracking as string

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: A key used to enable or disable face tracking for the detector.
Notes: Use this option when you want to track faces across frames in a video.
Available in OS X v10.8 and later.

60.7.16 CIDetectorTypeFace as string

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Specifies a detector type for face recognition.

60.7.17 CIDetectorTypeQRCode as string

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the strings used to declare the detector for which you are interested.
Notes: A detector that searches for Quick Response codes (a type of 2D barcode) in a still image or video, returning CIQRCodeFeature objects that provide information about detected barcodes.
This is Mac 64-bit only.

60.7.18 CIDetectorTypeRectangle as string

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the strings used to declare the detector for which you are interested.
Notes: A detector that searches for rectangular areas in a still image or video, returning CIRectangleFeature objects that provide information about detected regions.

The rectangle detector finds areas that are likely to represent rectangular objects that appear in perspective in the image, such as papers or books seen on a desktop.

60.7.19 CIDetectorTypeText as string

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the strings used to declare the detector for which you are interested.
Notes: A detector that searches for text in a still image or video, returning CITextFeature objects that provide information about detected regions.

The text detector finds areas that are likely to contain upright text, but does not perform optical character recognition.

60.7.20 Constructor(Handle as Integer)

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Creates a new CIDetectorMBS object for the given handle.
See also:

- 60.7.21 Constructor(type as string, context as CIContextMBS = nil, options as dictionary = nil) 9969

60.7.21 Constructor(type as string, context as CIContextMBS = nil, options as dictionary = nil)

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Returns a new detector instance of the given type.
Notes: The type is used to specify the usage intent.
The context argument specifies the CIContext to be used to operate on the image. May be nil.

If the input image to featuresInImage is the output of a CoreImage operation, it may improve performance to specify the same context that was used to operate on that image.

The detector may do image processing in this context and if the image is on the GPU and the specified context is a GPU context this may avoid additional upload to / download from the GPU. If the input image is on the CPU (or the output from a CPU based context) specifying a GPU based context (or vice versa) may reduce performance.

The options parameter lets you optinally specify a accuracy / performance tradeoff. Can be nil or an empty dictionary.
See also:

- 60.7.20 Constructor(Handle as Integer) 9969

60.7.22 detectorOfType(type as string, context as CIContextMBS = nil, options as dictionary = nil) as CIDetectorMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Returns a new detector instance of the given type.
Notes: The type is used to specify the usage intent.
The context argument specifies the CIContext to be used to operate on the image. May be nil.

If the input image to featuresInImage is the output of a CoreImage operation, it may improve performance to specify the same context that was used to operate on that image.

The detector may do image processing in this context and if the image is on the GPU and the specified context is a GPU context this may avoid additional upload to / download from the GPU. If the input image is on the CPU (or the output from a CPU based context) specifying a GPU based context (or vice versa) may reduce performance.

The options parameter lets you optinally specify a accuracy / performance tradeoff. Can be nil or an empty dictionary.

60.7.23 featuresInImage(image as CIImageMBS) as CIFeatureMBS()

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Returns an array of CIFeature instances in the given image.
Notes: The array is sorted by confidence, highest confidence first.
See also:

- 60.7.24 featuresInImage(image as CIImageMBS, options as dictionary) as CIFeatureMBS() 9970

60.7.24 featuresInImage(image as CIImageMBS, options as dictionary) as CIFeatureMBS()

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Returns an array of CIFeature instances in the given image.
Notes: The array is sorted by confidence, highest confidence first.
The options dictionary can contain a CIDetectorImageOrientation key value.
See also:

- 60.7.23 featuresInImage(image as CIImageMBS) as CIFeatureMBS() 9970

60.7.25 Properties

60.7.26 Handle as Integer

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

60.8 class CIFaceFeatureMBS

60.8.1 class CIFaceFeatureMBS

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: A CIFaceFeature object describes a face detected in a picture.
Example:

```
// find faces in a photo and check for smiles and closed eyes
Var image As New CIImageMBS(SpecialFolder.Desktop.Child("photo.jpg"))
Var options As New Dictionary
options.Value(CIDetectorMBS.CIDetectorAccuracy) = CIDetectorMBS.CIDetectorAccuracyHigh
Var detector As CIDetectorMBS = CIDetectorMBS.detectorOfType(CIDetectorMBS.CIDetectorTypeFace,
Nil, options)

Var lines() As String
For Each feature As CIFeatureMBS In detector.featuresInImage(image)
If feature IsA CIFaceFeatureMBS Then
Var face As CIFaceFeatureMBS = CIFaceFeatureMBS(feature)
Var line As String = "Face at " + Format(face.bounds.left, "0") + ", " + Format(face.bounds.top, "0")
If face.hasSmile Then line = line + ", smiling"
If face.leftEyeClosed Or face.rightEyeClosed Then line = line + ", eye closed"
lines.Add line
End If
Next

MessageBox lines.Count.ToString + " faces" + EndOfLine + String.FromArray(lines, EndOfLine)
```

Notes: Its properties provide locations for the face's eyes and mouth.
All positions are relative to the original image.
Subclass of the CIFeatureMBS class.
Blog Entries

- MBS Real Studio Plugins, version 12.4pr7

60.8.2 Methods

60.8.3 Constructor(Handle as Integer)

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Creates a new CIFaceFeature object from a handle value.

60.8.4 Properties

60.8.5 faceAngle as Double

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: The rotation of the face. (read-only)
Notes: Rotation is measured counterclockwise in radians, with zero indicating that a line drawn between the eyes is horizontal relative to the image orientation.

Available in OS X v10.9 and later.
(Read only property)

60.8.6 hasFaceAngle as boolean

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether information about face rotation is available. (read-only)
Notes: Available in OS X v10.9 and later.
(Read only property)

60.8.7 hasLeftEyePosition as boolean

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: A Boolean that indicates whether the detector found the face's left eye. (read-only)
Notes: (Read only property)

60.8.8 hasMouthPosition as boolean

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: A Boolean that indicates whether the detector found the face's mouth. (read-only)
Notes: (Read only property)

60.8.9 hasRightEyePosition as boolean

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: A Boolean that indicates whether the detector found the face's right eye. (read-only)
Notes: (Read only property)

60.8.10 hasSmile as boolean

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether a smile is detected in the face. (read-only)
Notes: Available in OS X v10.9 and later.
For smiles to be detected, the key CIDetectorSmile must be present with a value of true in the dictionary passed to a detector's featuresInImage method.
(Read only property)

60.8.11 hasTrackingFrameCount as boolean

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Whether there is a tracking frame count.
Notes: (Read only property)

60.8.12 hasTrackingID as boolean

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Whether the tracking ID is set.
Notes: (Read only property)

60.8.13 leftEyeClosed as boolean

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the a closed left eye is detected in the face. (read-only)
Notes: "Left" is relative to the original (non-mirrored) image orientation, not to the owner of the eye.

For closed eyes to be detected, the key CIDetectorEyeBlink must be present with a value of true in the dictionary passed to a detector's featuresInImage method.
Available in OS X v10.9 and later.
(Read only property)

60.8.14 leftEyePosition as CGPointMBS

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The coordinates of the left eye, in image coordinates. (read-only)
Notes: (Read only property)

60.8.15 mouthPosition as CGPointMBS

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The coordinates of the mouth eye, in image coordinates (read-only)
Notes: (Read only property)

60.8.16 rightEyeClosed as boolean

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the a closed left eye is detected in the face. (read-only)
Notes: "Right" is relative to the original (non-mirrored) image orientation, not to the owner of the eye.

For closed eyes to be detected, the key CIDetectorEyeBlink must be present with a value of true in the dictionary passed to a detector's featuresInImage method.
Available in OS X v10.9 and later.
(Read only property)

60.8.17 rightEyePosition as CGPointMBS

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The coordinates of the right eye, in image coordinates (read-only)
Notes: (Read only property)

60.8.18 trackingFrameCount as Integer

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The tracking frame count.
Notes: (Read only property)

60.8.19 trackingID as Integer

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The tracking ID.
Notes: (Read only property)

60.9 class CIFeatureMBS

60.9.1 class CIFeatureMBS

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Generic feature found by a CIDetector.
Example:

```
// find rectangles in a picture and show their positions
Var image As New CIImageMBS(SpecialFolder.Desktop.Child("document.jpg"))
Var detector As CIDetectorMBS = CIDetectorMBS.detectorOfType(CIDetectorMBS.CIDetectorTypeRectangle)

Var lines() As String
For Each feature As CIFeatureMBS In detector.featuresInImage(image)
Var r As CGRectMBS = feature.bounds
lines.Add feature.type + " at " + Format(r.Left, "0") + "/" + Format(r.Top, "0") + ", " + Format(r.Width, "0") + " x " + Format(r.Height, "0")
Next
MessageBox String.FromArray(lines, EndOfLine)
```

Blog Entries

- MBS Real Studio Plugins, version 12.4pr7

60.9.2 Methods

60.9.3 CIFeatureTypeFace as string

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: One of the keys that define specific kinds of findable features.
Notes: The discovered feature is a person,Äôs face.
Use the CIFaceFeatureMBS class to find more information about the detected feature.
Available in OS X v10.7 and later.

60.9.4 CIFeatureTypeQRCode as string

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the keys that define specific kinds of findable features.
Notes: The discovered feature is a Quick Response code (2D barcode).
Use the CIQRCodeFeature class to find more information about the detected feature.

Available in OS X v10.11 and later.

60.9.5 CIFeatureTypeRectangle as string

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the keys that define specific kinds of findable features.
Notes: The discovered feature is a rectangular object, though it might appear in perspective in the image.
Use the CIRectangleFeatureMBS class to find more information about the detected feature.
Available in OS X v10.10 and later.

60.9.6 CIFeatureTypeText as string

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the keys that define specific kinds of findable features.
Notes: The discovered feature is a region likely to contain upright text.
Use the CITextFeature class to find more information about the detected feature.
Available in OS X v10.11 and later.

60.9.7 Constructor(Handle as Integer)

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Creates a new CIFeature object from a handle value.

60.9.8 Properties

60.9.9 bounds as CGRectMBS

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The bounds of the feature in the image it was detected in.
Notes: (Read only property)

60.9.10 Handle as Integer

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

60.9.11 type as string

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The type of the feature.
Notes: (Read only property)

60.10 class CIFilterAccordionFoldTransitionMBS

60.10.1 class CIFilterAccordionFoldTransitionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Accordion Fold Transition filter.
Example:

```
// apply the Accordion Fold Transition filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterAccordionFoldTransitionMBS
filter.inputImage = image
filter.inputTargetImage = image
filter.inputBottomHeight = 0
filter.inputFoldShadowAmount = 0.1 // range 0 to 1
filter.inputNumberOfFolds = 3 // range 1 to 10
filter.inputTime = 0.5 // range 0 to 1

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIAccordionFoldTransition
DisplayName English:	Accordion Fold Transition
DisplayName German:	Leporello-√úbergang
DisplayName French:	Transition de type accord√©on
DisplayName Italian:	Transizione foglio a fisarmonica
DisplayName Spanish:	Transici√n con pliegues a modo de acorde√n

Categories:

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputTargetImage: Target Image
- inputBottomHeight: Bottom Height
- inputNumberOfFolds: Number of Folds
- inputFoldShadowAmount: Fold Shadow Amount
- inputTime: Time

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.10.2 Methods

60.10.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.10.4 Properties

60.10.5 AttributeinputBottomHeight as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Accordion Fold Transition attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputBottomHeight
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Bottom Height
DisplayName German:	Abstand unten
DisplayName French:	Hauteur du bas
DisplayName Italian:	Altezza inferiore
DisplayName Spanish:	Altura inferior
DefaultNumber:	0
IdentityNumber:	0

60.10.6 AttributeinputFoldShadowAmount as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Accordion Fold Transition attribute.
Notes: This attribute should have this content:

Name:	inputFoldShadowAmount
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Fold Shadow Amount
DisplayName German:	Faltschattenumfang
DisplayName French:	Degr√© d,Äôombre des plis
DisplayName Italian:	Quantit√† d,Äôombreggiatura
DisplayName Spanish:	Cantidad de sombreado por doblado
DefaultNumber:	0.1
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

60.10.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Accordion Fold Transition attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.10.8 AttributeinputNumberOfFolds as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Accordion Fold Transition attribute.
Notes: This attribute should have this content:

Name:	inputNumberOfFolds
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Number of Folds
DisplayName German:	Anzahl der Falzungen:
DisplayName French:	Nombre de plis
DisplayName Italian:	Numero di campi
DisplayName Spanish:	N√mero de dobleces
DefaultNumber:	3
IdentityNumber:	0
MaxNumber:	50
MinNumber:	1
SliderMaxNumber:	10
SliderMinNumber:	1

(Read only property)

60.10.9 AttributeinputTargetImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Accordion Fold Transition attribute.
Notes: This attribute should have this content:

Name:	inputTargetImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.10.10 AttributeinputTime as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Accordion Fold Transition attribute.
Notes: This attribute should have this content:

Name:	inputTime
Class:	double
Type:	CIAttributeTypeTime
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

60.10.11 inputBottomHeight as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Bottom Height
Notes:

Name:	inputBottomHeight
Class:	double (NSNumber)
DisplayName English:	Bottom Height
DisplayName German:	Abstand unten
DisplayName French:	Hauteur du bas
DisplayName Italian:	Altezza inferiore
DisplayName Spanish:	Altura inferior
Type:	CIAttributeTypeDistance

See AttributeinputBottomHeight for more details.
(Read and Write property)

60.10.12 inputFoldShadowAmount as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Fold Shadow Amount
Notes:

Name:	inputFoldShadowAmount
Class:	double (NSNumber)
DisplayName English:	Fold Shadow Amount
DisplayName German:	Faltschattenumfang
DisplayName French:	Degr√© d,Äôombre des plis
DisplayName Italian:	Quantit√† d,Äôombreggiatura
DisplayName Spanish:	Cantidad de sombreado por doblado
Type:	CIAttributeTypeScalar

See AttributeinputFoldShadowAmount for more details.
(Read and Write property)

60.10.13 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.10.14 inputNumberOfFolds as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Number of Folds
Notes:

Name:	inputNumberOfFolds
Class:	double (NSNumber)
DisplayName English:	Number of Folds
DisplayName German:	Anzahl der Falzungen:
DisplayName French:	Nombre de plis
DisplayName Italian:	Numero di campi
DisplayName Spanish:	N√mero de dobleces
Type:	CIAttributeTypeScalar

See AttributeinputNumberOfFolds for more details.
(Read and Write property)

60.10.15 inputTargetImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Target Image
Notes:

See AttributeinputTargetImage for more details.
(Read and Write property)

Name:	inputTargetImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
Type:	CIAttributeTypeImage

60.10.16 inputTime as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Time
Notes:

Name:	inputTime
Class:	double (NSNumber)
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
Type:	CIAttributeTypeTime

See AttributeinputTime for more details.
(Read and Write property)

60.11 class CIFilterAdditionCompositingMBS

60.11.1 class CIFilterAdditionCompositingMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Addition filter.
Notes: Details for this filter:

FilterName:	CIAdditionCompositing
DisplayName English:	Addition
DisplayName German:	Addition
DisplayName French:	Addition
DisplayName Italian:	Aggiunta
DisplayName Spanish:	Adici√n

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.11.2 Methods

60.11.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.11.4 Properties

60.11.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Addition attribute.
Notes: This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.11.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Addition attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.11.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

60.11.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.12 class CIFilterAffineClampMBS

60.12.1 class CIFilterAffineClampMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Affine Clamp filter.
Notes: Details for this filter:

FilterName:	CIAffineClamp
DisplayName English:	Affine Clamp
DisplayName German:	Rand erweitern
DisplayName French:	Attache affine
DisplayName Italian:	Distanza affine
DisplayName Spanish:	Fijaci√n af√n

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputTransform: Transform

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.12.2 Methods

60.12.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.12.4 Properties

60.12.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Affine Clamp attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.12.6 AttributeinputTransform as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Affine Clamp attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputTransform
Class:	NSAffineTransformMBS
Type:	CIAttributeTypeTransform
DisplayName English:	Transform
DisplayName German:	Transformation
DisplayName French:	Transformer
DisplayName Italian:	Trasforma
DisplayName Spanish:	Transformaci√n
DefaultAffineTransform:	[0.4, 0, 0, 0.4, 0, 0]
IdentityAffineTransform:	[1, 0, 0, 1, 0, 0]

60.12.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.12.8 inputTransform as NSAffineTransformMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Transform
Notes:

See AttributeinputTransform for more details.
(Read and Write property)

Name:	inputTransform
Class:	NSAffineTransformMBS (NSAffineTransform)
DisplayName English:	Transform
DisplayName German:	Transformation
DisplayName French:	Transformer
DisplayName Italian:	Trasforma
DisplayName Spanish:	Transformaci√n
Type:	CIAttributeTypeTransform

60.13 class CIFilterAffineTileMBS

60.13.1 class CIFilterAffineTileMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Affine Tile filter.
Notes: Details for this filter:

FilterName:	CIAffineTile
DisplayName English:	Affine Tile
DisplayName German:	Affin kacheln
DisplayName French:	Mosa√Øque affine
DisplayName Italian:	Mosaico affine
DisplayName Spanish:	Mosaico af√n

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputTransform: Transform

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.13.2 Methods

60.13.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.13.4 Properties

60.13.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Affine Tile attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.13.6 AttributeinputTransform as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Affine Tile attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputTransform
Class:	NSAffineTransformMBS
Type:	CIAttributeTypeTransform
DisplayName English:	Transform
DisplayName German:	Transformation
DisplayName French:	Transformer
DisplayName Italian:	Trasforma
DisplayName Spanish:	Transformaci√n
DefaultAffineTransform:	[0.4, 0, 0, 0.4, 0, 0]
IdentityAffineTransform:	[1, 0, 0, 1, 0, 0]

60.13.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.13.8 inputTransform as NSAffineTransformMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Transform
Notes:

See AttributeinputTransform for more details.
(Read and Write property)

Name:	inputTransform
Class:	NSAffineTransformMBS (NSAffineTransform)
DisplayName English:	Transform
DisplayName German:	Transformation
DisplayName French:	Transformer
DisplayName Italian:	Trasforma
DisplayName Spanish:	Transformaci√n
Type:	CIAttributeTypeTransform

60.14 class CIFilterAffineTransformMBS

60.14.1 class CIFilterAffineTransformMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Affine Transform filter.
Example:

```
// Rotate image with CoreImage

// load image
Var f as FolderItem = SpecialFolder.Desktop.Child("test.png")
Var image as new CIImageMBS(f)

// rotate 45 degree
Var n as new NSAffineTransformMBS
n.rotateByDegrees(45)

Var TransformFilter as new CIFilterAffineTransformMBS
TransformFilter.inputImage = image
TransformFilter.inputTransform = n

// get result
Var resultImage as CIImageMBS = TransformFilter.outputImage

// for saving to file
Var outputImage as NSImageMBS = resultImage.RenderNSImage(false)

f = SpecialFolder.Desktop.Child("output.png")
Var b as BinaryStream = BinaryStream.Create(f, true)
b.Write outputImage.PNGRepresentation

// as Real Studio picture object for display
Var pic as Picture = outputImage.CopyPictureWithMask

Backdrop = pic
```

Notes: Details for this filter:

Categories:

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image

FilterName:	CIAffineTransform
DisplayName English:	Affine Transform
DisplayName German:	Affin transformieren
DisplayName French:	Transformation affine
DisplayName Italian:	Trasformazione affine
DisplayName Spanish:	Transformaci√n af√n

- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputTransform: Transform

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.16 class CIFilterAreaHistogramMBS

60.16.1 class CIFilterAreaHistogramMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Area Histogram filter.
Example:

```
// apply the Area Histogram filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterAreaHistogramMBS
filter.inputImage = image
filter.inputCount = 64 // range 10 to 1000
Var inputExtentValues() As Double = Array(0.0, 0.0, 640.0, 80.0)
filter.inputExtent = New CIVectorMBS(inputExtentValues)
filter.inputScale = 1 // range 0 to 1

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIAreaHistogram
DisplayName English:	Area Histogram
DisplayName German:	Bereichs-Histogramm
DisplayName French:	Histogramme de la zone
DisplayName Italian:	Istogramma area
DisplayName Spanish:	Histograma del √°rea

Categories:

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputExtent: Extent
- inputScale: Scale
- inputCount: Count

Output:

- outputImage
- outputData
- outputImageMPS
- outputImageNonMPS

Subclass of the CIFilterMBS class.

60.16.2 Methods

60.16.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.16.4 Properties

60.16.5 AttributeinputCount as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Histogram attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputCount

DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

60.16.9 inputCount as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Count
Notes:

Name:	inputCount
Class:	double (NSNumber)
DisplayName English:	Count
DisplayName German:	Anzahl
DisplayName French:	Compte
DisplayName Italian:	Conteggio
DisplayName Spanish:	Recuento
Type:	CIAttributeTypeScalar

See AttributeinputCount for more details.
(Read and Write property)

60.16.10 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

60.16.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.16.12 inputScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale
Notes:

Name:	inputScale
Class:	double (NSNumber)
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
Type:	CIAttributeTypeScalar

See AttributeinputScale for more details.
(Read and Write property)

60.17 class CIFilterAreaLogarithmicHistogramMBS

60.17.1 class CIFilterAreaLogarithmicHistogramMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Area Logarithmic Histogram filter.
Example:

```
// apply the Area Logarithmic Histogram filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterAreaLogarithmicHistogramMBS
filter.inputImage = image
filter.inputCount = 64 // range 10 to 1000
Var inputExtentValues() As Double = Array(0.0, 0.0, 640.0, 80.0)
filter.inputExtent = New CIVectorMBS(inputExtentValues)
filter.inputMaximumStop = 4 // range 0 to 8
filter.inputMinimumStop = -10 // range -12 to -4
filter.inputScale = 1 // range 0 to 1

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIAreaLogarithmicHistogram
DisplayName English:	Area Logarithmic Histogram
DisplayName German:	Logarithmisches Fl√§chenhistogramm
DisplayName French:	Histogramme logarithmique de la zone
DisplayName Italian:	Istogramma logaritmico area
DisplayName Spanish:	Histograma logar√tmico del √°rea

Categories:

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputExtent: Extent
- inputScale: Scale
- inputCount: Count
- inputMinimumStop: Minimum Stop
- inputMaximumStop: Maximum Stop

Output:

- outputData
- outputImageMPS
- outputImageNonMPS
- outputImage

Subclass of the CIFilterMBS class.
Blog Entries

- MBS Xojo Plugins, version 23.0pr5

60.17.2 Methods

60.17.3 Constructor

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.17.4 Properties

60.17.5 AttributeinputCount as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Name:	inputCount
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Count
DisplayName German:	Anzahl
DisplayName French:	Compte
DisplayName Italian:	Conteggio
DisplayName Spanish:	Recuento
DefaultNumber:	64
IdentityNumber:	0
MaxNumber:	2048
MinNumber:	1
SliderMaxNumber:	1000
SliderMinNumber:	10

Function: Details about the Area Logarithmic Histogram attribute.
Notes: This attribute should have this content:

(Read only property)

60.17.6 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Area Logarithmic Histogram attribute.
Notes: This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 640 80]
IdentityVector:	n/a

(Read only property)

60.17.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Area Logarithmic Histogram attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.17.8 AttributeinputMaximumStop as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Area Logarithmic Histogram attribute.
Notes: This attribute should have this content:

Name:	inputMaximumStop
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Maximum Stop
DisplayName German:	Obere Grenze
DisplayName French:	Valeur maximale
DisplayName Italian:	Valore massimo
DisplayName Spanish:	Parada m√°xima
DefaultNumber:	4
IdentityNumber:	0
SliderMaxNumber:	8
SliderMinNumber:	0

(Read only property)

60.17.9 AttributeinputMinimumStop as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Area Logarithmic Histogram attribute.
Notes: This attribute should have this content:

Name:	inputMinimumStop
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Minimum Stop
DisplayName German:	Untere Grenze
DisplayName French:	Valeur minimale
DisplayName Italian:	Valore minimo
DisplayName Spanish:	Parada m√nima
DefaultNumber:	-10
IdentityNumber:	0
SliderMaxNumber:	-4
SliderMinNumber:	-12

(Read only property)

60.17.10 AttributeinputScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Area Logarithmic Histogram attribute.
Notes: This attribute should have this content:

Name:	inputScale
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

60.17.11 inputCount as double

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Count
Notes:

Name:	inputCount
Class:	double (NSNumber)
DisplayName English:	Count
DisplayName German:	Anzahl
DisplayName French:	Compte
DisplayName Italian:	Conteggio
DisplayName Spanish:	Recuento
Type:	CIAttributeTypeScalar

See AttributeinputCount for more details.
(Read and Write property)

60.17.12 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

60.17.13 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.17.14 inputMaximumStop as double

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Maximum Stop
Notes:

Name:	inputMaximumStop
Class:	double (NSNumber)
DisplayName English:	Maximum Stop
DisplayName German:	Obere Grenze
DisplayName French:	Valeur maximale
DisplayName Italian:	Valore massimo
DisplayName Spanish:	Parada m√°xima
Type:	CIAttributeTypeScalar

See AttributeinputMaximumStop for more details.
(Read and Write property)

60.17.15 inputMinimumStop as double

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Minimum Stop
Notes:

Name:	inputMinimumStop
Class:	double (NSNumber)
DisplayName English:	Minimum Stop
DisplayName German:	Untere Grenze
DisplayName French:	Valeur minimale
DisplayName Italian:	Valore minimo
DisplayName Spanish:	Parada m√nima
Type:	CIAttributeTypeScalar

See AttributeinputMinimumStop for more details.
(Read and Write property)

60.17.16 inputScale as double

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Scale
Notes:

Name:	inputScale
Class:	double (NSNumber)
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
Type:	CIAttributeTypeScalar

See AttributeinputScale for more details.
(Read and Write property)

60.18 class CIFilterAreaMaximumAlphaMBS

60.18.1 class CIFilterAreaMaximumAlphaMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Area Maximum Alpha filter.
Notes: Details for this filter:

FilterName:	CIAreaMaximumAlpha
DisplayName English:	Area Maximum Alpha
DisplayName German:	Bereichsmaximum im Alpha-Kanal
DisplayName French:	Alpha maximum de la zone
DisplayName Italian:	Alfa massimo area
DisplayName Spanish:	Alfa m√°ximo del √°rea

Categories:

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputExtent: Extent

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.18.2 Methods

60.18.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.18.4 Properties

60.18.5 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Maximum Alpha attribute.
Notes: This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 640 80]
IdentityVector:	n/a

(Read only property)

60.18.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Maximum Alpha attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.18.7 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

60.18.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.19 class CIFilterAreaMaximumMBS

60.19.1 class CIFilterAreaMaximumMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Area Maximum filter.
Notes: Details for this filter:

FilterName:	CIAreaMaximum
DisplayName English:	Area Maximum
DisplayName German:	Bereichsmaximum
DisplayName French:	Maximum de la zone
DisplayName Italian:	Massimo area
DisplayName Spanish:	M√°ximo del √°rea

Categories:

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputExtent: Extent

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.19.2 Methods

60.19.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.19.4 Properties

60.19.5 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Maximum attribute.
Notes: This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 640 80]
IdentityVector:	n/a

(Read only property)

60.19.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Maximum attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image

DefaultNumber:	0
IdentityNumber:	0

60.19.7 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

60.19.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.20 class CIFilterAreaMinimumAlphaMBS

60.20.1 class CIFilterAreaMinimumAlphaMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Area Minimum Alpha filter.
Notes: Details for this filter:

FilterName:	CIAreaMinimumAlpha
DisplayName English:	Area Minimum Alpha
DisplayName German:	Bereichsminimum im Alpha-Kanal
DisplayName French:	Alpha minimum de la zone
DisplayName Italian:	Alfa minimo area
DisplayName Spanish:	Alfa m√nimo del √°rea

Categories:

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputExtent: Extent

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.20.2 Methods

60.20.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.20.4 Properties

60.20.5 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Minimum Alpha attribute.
Notes: This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 640 80]
IdentityVector:	n/a

(Read only property)

60.20.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Minimum Alpha attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image

See AttributeinputExtent for more details.
(Read and Write property)

60.20.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.21 class CIFilterAreaMinimumMBS

60.21.1 class CIFilterAreaMinimumMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Area Minimum filter.
Notes: Details for this filter:

FilterName:	CIAreaMinimum
DisplayName English:	Area Minimum
DisplayName German:	Bereichsminimum
DisplayName French:	Minimum de la zone
DisplayName Italian:	Minimo area
DisplayName Spanish:	M√nimo del √°rea

Categories:

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputExtent: Extent

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.21.2 Methods

60.21.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.21.4 Properties

60.21.5 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Minimum attribute.
Notes: This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 640 80]
IdentityVector:	n/a

(Read only property)

60.21.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Minimum attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.21.7 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

60.21.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.22 class CIFilterAreaMinMaxMBS

60.22.1 class CIFilterAreaMinMaxMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Area Min and Max filter.
Notes: Details for this filter:

FilterName:	CIAreaMinMax
DisplayName English:	Area Min and Max
DisplayName German:	Fl√§che f√º r min. und max.
DisplayName French:	Min. et max. de la zone
DisplayName Italian:	Min e max area
DisplayName Spanish:	M√nimo y m√°ximo del √°rea

Categories:

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputExtent: Extent

Output:

- outputImage
- outputImageNonMPS
- outputImageMPS:

Subclass of the CIFilterMBS class.

60.22.2 Methods

60.22.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.22.4 Properties

60.22.5 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Min and Max attribute.
Notes: This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 640 80]
IdentityVector:	n/a

(Read only property)

60.22.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Min and Max attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image

DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.22.7 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

60.22.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.23 class CIFilterAreaMinMaxRedMBS

60.23.1 class CIFilterAreaMinMaxRedMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Area Min and Max Red filter.
Notes: Details for this filter:

FilterName:	CIAreaMinMaxRed
DisplayName English:	Area Min and Max Red
DisplayName German:	Fl√§che f√º r min. und max. Rot
DisplayName French:	Rouge min. et max. de la zone
DisplayName Italian:	Minimo e massimo di rosso nell,Äôarea
DisplayName Spanish:	M√nimo y m√°ximo de rojo en el √°rea

Categories:

- CICategoryReduction: Reduction

- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputExtent: Extent

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.23.2 Methods

60.23.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.23.4 Properties

60.23.5 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Min and Max Red attribute.
Notes: This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 640 80]
IdentityVector:	n/a

(Read only property)

60.23.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Min and Max Red attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.23.7 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

60.23.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.24 class CIFilterAttributedTextImageGeneratorMBS

60.24.1 class CIFilterAttributedTextImageGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Attributed Text Image Generator filter.
Example:

```
// generate an image with the Attributed Text Image Generator filter
Var filter As New CIFilterAttributedTextImageGeneratorMBS
filter.inputPadding = 0 // range 0 to 50
filter.inputScaleFactor = 1 // range 1 to 4

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture(300, 300)
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIAttributedTextImageGenerator
DisplayName English:	Attributed Text Image Generator
DisplayName German:	Attributtextbildgenerator
DisplayName French:	G√©n√©rateur d,Äôimage de texte attribu√©
DisplayName Italian:	Generatore immagine di testo attribuita
DisplayName Spanish:	Generador de im√°genes con texto con atributos

Categories:

- CICategoryGenerator: Generator
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputText: Text
- inputScaleFactor: Scale Factor
- inputPadding: Padding

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.24.2 Methods

60.24.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.24.4 Properties

60.24.5 AttributeinputPadding as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Attributed Text Image Generator attribute.
Notes: This attribute should have this content:

Name:	inputPadding
Class:	double
Type:	CIAttributeTypeInteger
DisplayName:	Padding
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	200
MinNumber:	0
SliderMaxNumber:	50
SliderMinNumber:	0

(Read only property)

60.24.6 AttributeinputScaleFactor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Attributed Text Image Generator attribute.
Notes: This attribute should have this content:

Name:	inputScaleFactor
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Scale Factor
DisplayName German:	Skalierungsfaktor
DisplayName French:	Facteur d,Äô√©chelle
DisplayName Italian:	Fattore di scala
DisplayName Spanish:	Factor de escala
DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	4
SliderMinNumber:	1

(Read only property)

60.24.7 AttributeinputText as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Attributed Text Image Generator attribute.
Notes: This attribute should have this content:

Name:	inputText
Class:	NSAttributedStringMBS
DisplayName:	Text

(Read only property)

60.24.8 inputPadding as double

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Padding
Notes:

Name:	inputPadding
Class:	double (NSNumber)
DisplayName English:	Padding
DisplayName German:	Padding
DisplayName French:	Padding
DisplayName Italian:	Padding
DisplayName Spanish:	Padding
Type:	CIAttributeTypeInteger

See AttributeinputPadding for more details.
(Read and Write property)

60.24.9 inputScaleFactor as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale Factor
Notes:

Name:	inputScaleFactor
Class:	double (NSNumber)
DisplayName English:	Scale Factor
DisplayName German:	Skalierungsfaktor
DisplayName French:	Facteur d,Äô√©chelle
DisplayName Italian:	Fattore di scala
DisplayName Spanish:	Factor de escala
Type:	CIAttributeTypeScalar

See AttributeinputScaleFactor for more details.
(Read and Write property)

60.24.10 inputText as NSAttributedStringMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Text
Notes:

See AttributeinputText for more details.
(Read and Write property)

Name:	inputText
Class:	NSAttributedStringMBS (NSAttributedString)
DisplayName English:	Text
DisplayName German:	Text
DisplayName French:	Text
DisplayName Italian:	Text
DisplayName Spanish:	Text

60.25 class CIFilterAztecCodeGeneratorMBS

60.25.1 class CIFilterAztecCodeGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Aztec Code Generator filter.
Example:

```
// generate an image with the Aztec Code Generator filter
Var filter As New CIFilterAztecCodeGeneratorMBS
filter.inputCompactStyle = 0 // range 0 to 1
filter.inputCorrectionLevel = 23 // range 5 to 95
filter.inputLayers = 0 // range 1 to 32
filter.inputMessage = "Hello World"

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture(300, 300)
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIAztecCodeGenerator
DisplayName English:	Aztec Code Generator
DisplayName German:	Aztec-Code-Generator
DisplayName French:	G√©n√©rateur de code Aztec
DisplayName Italian:	Generatore codice Aztec
DisplayName Spanish:	Generador de c√digo Aztec

Categories:

- CICategoryGenerator: Generator
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputMessage: Message
- inputCorrectionLevel: Correction Level
- inputLayers: Layers

- inputCompactStyle: Compact Style

Output:

- outputImage
- outputCGImage

Subclass of the CIFilterMBS class.

60.25.2 Methods

60.25.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.25.4 Properties

60.25.5 AttributeinputCompactStyle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Aztec Code Generator attribute.
Notes: This attribute should have this content:

(Read only property)

60.25.6 AttributeinputCorrectionLevel as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Aztec Code Generator attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputCompactStyle
Class:	double
Type:	CIAttributeTypeBoolean
DisplayName English:	Compact Style
DisplayName German:	Komprimierungsstil
DisplayName French:	Style compact
DisplayName Italian:	Stile compatto
DisplayName Spanish:	Estilo compacto
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

Name:	inputCorrectionLevel
Class:	double
Type:	CIAttributeTypeInteger
DisplayName English:	Correction Level
DisplayName German:	Korrekturstufe
DisplayName French:	Niveau de correction
DisplayName Italian:	Livello di correzione
DisplayName Spanish:	Nivel de correcci√n
DefaultNumber:	23
IdentityNumber:	0
MaxNumber:	95
MinNumber:	5
SliderMaxNumber:	95
SliderMinNumber:	5

60.25.7 AttributeinputLayers as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Aztec Code Generator attribute.
Notes: This attribute should have this content:

(Read only property)

60.25.8 AttributeinputMessage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputLayers
Class:	double
Type:	CIAttributeTypeInteger
DisplayName English:	Layers
DisplayName German:	Ebenen
DisplayName French:	Couches
DisplayName Italian:	Livelli
DisplayName Spanish:	Capas
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	32
MinNumber:	1
SliderMaxNumber:	32
SliderMinNumber:	1

Function: Details about the Aztec Code Generator attribute.
Notes: This attribute should have this content:

Name:	inputMessage
Class:	Memoryblock
DisplayName English:	Message
DisplayName German:	Nachricht
DisplayName French:	Message
DisplayName Italian:	Messaggio
DisplayName Spanish:	Mensaje
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.25.9 inputCompactStyle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Compact Style
Notes:

See AttributeinputCompactStyle for more details.
(Read and Write property)

Name:	inputCompactStyle
Class:	double (NSNumber)
DisplayName English:	Compact Style
DisplayName German:	Komprimierungsstil
DisplayName French:	Style compact
DisplayName Italian:	Stile compatto
DisplayName Spanish:	Estilo compacto
Type:	CIAttributeTypeBoolean

60.25.10 inputCorrectionLevel as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Correction Level
Notes:

Name:	inputCorrectionLevel
Class:	double (NSNumber)
DisplayName English:	Correction Level
DisplayName German:	Korrekturstufe
DisplayName French:	Niveau de correction
DisplayName Italian:	Livello di correzione
DisplayName Spanish:	Nivel de correcci√n
Type:	CIAttributeTypeInteger

See AttributeinputCorrectionLevel for more details.
(Read and Write property)

60.25.11 inputLayers as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Layers
Notes:

Name:	inputLayers
Class:	double (NSNumber)
DisplayName English:	Layers
DisplayName German:	Ebenen
DisplayName French:	Couches
DisplayName Italian:	Livelli
DisplayName Spanish:	Capas
Type:	CIAttributeTypeInteger

See AttributeinputLayers for more details.
(Read and Write property)

60.25.12 inputMessage as Memoryblock

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Message
Notes:

Name:	inputMessage
Class:	Memoryblock (NSData)
DisplayName English:	Message
DisplayName German:	Nachricht
DisplayName French:	Message
DisplayName Italian:	Messaggio
DisplayName Spanish:	Mensaje

See AttributeinputMessage for more details.
(Read and Write property)

60.26 class CIFilterBarcodeGeneratorMBS

60.26.1 class CIFilterBarcodeGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Barcode Generator filter.
Notes: Details for this filter:

FilterName:	CIBarcodeGenerator
DisplayName English:	Barcode Generator
DisplayName German:	Barcode-Generator
DisplayName French:	G√©n√©rateur de code-barres
DisplayName Italian:	Generatore codice a barre
DisplayName Spanish:	Generador de c√digos de barras

Categories:

- CICategoryGenerator: Generator
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputBarcodeDescriptor: Barcode Descriptor

Output:

- outputCGImageForQRCodeDescriptor
- outputCGImageForAztecCodeDescriptor
- outputCGImageForPDF417CodeDescriptor
- outputCGImageForDataMatrixCodeDescriptor
- outputCGImage
- outputImage

Subclass of the CIFilterMBS class.
Videos

- Presentation from Munich conference about MBS Plugins.

60.26.2 Methods

60.26.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.26.4 Properties

60.26.5 AttributeinputBarcodeDescriptor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Barcode Generator attribute.
Notes: This attribute should have this content:

Name:	inputBarcodeDescriptor
Class:	CIBarcodeDescriptorMBS
DisplayName English:	Barcode Descriptor
DisplayName German:	Barcodebeschreibung
DisplayName French:	Descripteur du code-barres
DisplayName Italian:	Descrittore codice a barre
DisplayName Spanish:	Descriptor de c√digo de barras

(Read only property)

60.26.6 inputBarcodeDescriptor as CIBarcodeDescriptorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Barcode Descriptor
Notes:

See AttributeinputBarcodeDescriptor for more details.
(Read and Write property)

Name:	inputBarcodeDescriptor
Class:	CIBarcodeDescriptorMBS (CIBarcodeDescriptor)
DisplayName English:	Barcode Descriptor
DisplayName German:	Barcodebeschreibung
DisplayName French:	Descripteur du code-barres
DisplayName Italian:	Descrittore codice a barre
DisplayName Spanish:	Descriptor de c√digo de barras

60.27 class CIFilterBarsSwipeTransitionMBS

60.27.1 class CIFilterBarsSwipeTransitionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Bars Swipe Transition filter.
Example:

```
// apply the Bars Swipe Transition filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterBarsSwipeTransitionMBS
filter.inputImage = image
filter.inputTargetImage = image
filter.inputAngle = 3.141593 // range 0 to 6.283185
filter.inputBarOffset = 10 // range 1 to 100
filter.inputTime = 0.5 // range 0 to 1
filter.inputWidth = 30 // range 2 to 300

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIBarsSwipeTransition
DisplayName English:	Bars Swipe Transition
DisplayName German:	Balken-Swipe-√úbergang
DisplayName French:	Transition de type balayage
DisplayName Italian:	Transizione colpi a barre
DisplayName Spanish:	Transici√n de barrido de barras

Categories:

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputTargetImage: Target Image
- inputAngle: Angle
- inputWidth: Width
- inputBarOffset: Bar Offset
- inputTime: Time

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.27.2 Methods

60.27.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.27.4 Properties

60.27.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bars Swipe Transition attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	3.141593
IdentityNumber:	0
SliderMaxNumber:	6.283185
SliderMinNumber:	0

60.27.6 AttributeinputBarOffset as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bars Swipe Transition attribute.
Notes: This attribute should have this content:

Name:	inputBarOffset
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Bar Offset
DisplayName German:	Balkenversatz
DisplayName French:	D√©calage de la barre
DisplayName Italian:	Scarto della barra
DisplayName Spanish:	Desviaci√n barra
DefaultNumber:	10
IdentityNumber:	0
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	100
SliderMinNumber:	1

(Read only property)

60.27.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bars Swipe Transition attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.27.8 AttributeinputTargetImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bars Swipe Transition attribute.
Notes: This attribute should have this content:

Name:	inputTargetImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.27.9 AttributeinputTime as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bars Swipe Transition attribute.
Notes: This attribute should have this content:

Name:	inputTime
Class:	double
Type:	CIAttributeTypeTime
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

60.27.10 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bars Swipe Transition attribute.
Notes: This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	30
IdentityNumber:	0
MaxNumber:	0
MinNumber:	2
SliderMaxNumber:	300
SliderMinNumber:	2

(Read only property)

60.27.11 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

60.27.12 inputBarOffset as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Bar Offset
Notes:

Name:	inputBarOffset
Class:	double (NSNumber)
DisplayName English:	Bar Offset
DisplayName German:	Balkenversatz
DisplayName French:	D√©calage de la barre
DisplayName Italian:	Scarto della barra
DisplayName Spanish:	Desviaci√n barra
Type:	CIAttributeTypeScalar

See AttributeinputBarOffset for more details.
(Read and Write property)

60.27.13 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.27.14 inputTargetImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Target Image
Notes:

Name:	inputTargetImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
Type:	CIAttributeTypeImage

See AttributeinputTargetImage for more details.
(Read and Write property)

60.27.15 inputTime as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Time
Notes:

See AttributeinputTime for more details.
(Read and Write property)

Name:	inputTime
Class:	double (NSNumber)
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
Type:	CIAttributeTypeTime

60.27.16 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

60.28 class CIFilterBicubicScaleTransformMBS

60.28.1 class CIFilterBicubicScaleTransformMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Bicubic Scale Transform filter.
Example:

```
// apply the Bicubic Scale Transform filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterBicubicScaleTransformMBS
filter.inputImage = image
filter.inputAspectRatio = 1 // range 0.5 to 2
filter.inputB = 0 // range 0 to 1
filter.inputC = 0.75 // range 0 to 1
filter.inputScale = 1 // range 0.05 to 100

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIBicubicScaleTransform
DisplayName English:	Bicubic Scale Transform
DisplayName German:	Bikubische Skalierungstransformation
DisplayName French:	Transformation d,Äô√©chelle bicubique
DisplayName Italian:	Trasforma scala bicubica
DisplayName Spanish:	Transformar mediante escala bic√bica

Categories:

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputScale: Scale
- inputAspectRatio: Aspect Ratio
- inputB: B
- inputC: C

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.28.2 Methods

60.28.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.28.4 Properties

60.28.5 AttributeinputAspectRatio as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bicubic Scale Transform attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputAspectRatio
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Aspect Ratio
DisplayName German:	Seitenverh√§ltnis
DisplayName French:	Proportions
DisplayName Italian:	Proporzioni
DisplayName Spanish:	Proporciones
DefaultNumber:	1
IdentityNumber:	1
SliderMaxNumber:	2
SliderMinNumber:	0.5

60.28.6 AttributeinputB as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bicubic Scale Transform attribute.
Notes: This attribute should have this content:

Name:	inputB
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	B
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

60.28.7 AttributeinputC as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bicubic Scale Transform attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputC
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	C
DefaultNumber:	0.75
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

60.28.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bicubic Scale Transform attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.28.9 AttributeinputScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bicubic Scale Transform attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputScale
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
DefaultNumber:	1
IdentityNumber:	1
SliderMaxNumber:	100
SliderMinNumber:	0.05

60.28.10 inputAspectRatio as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Aspect Ratio
Notes:

Name:	inputAspectRatio
Class:	double (NSNumber)
DisplayName English:	Aspect Ratio
DisplayName German:	Seitenverh√§ltnis
DisplayName French:	Proportions
DisplayName Italian:	Proporzioni
DisplayName Spanish:	Proporciones
Type:	CIAttributeTypeScalar

See AttributeinputAspectRatio for more details.
(Read and Write property)

60.28.11 inputB as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute B
Notes:

See AttributeinputB for more details.
(Read and Write property)

Name:	inputB
Class:	double (NSNumber)
DisplayName English:	B
DisplayName German:	B
DisplayName French:	B
DisplayName Italian:	B
DisplayName Spanish:	B
Type:	CIAttributeTypeScalar

60.28.12 inputC as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute C
Notes:

Name:	inputC
Class:	double (NSNumber)
DisplayName English:	C
DisplayName German:	C
DisplayName French:	C
DisplayName Italian:	C
DisplayName Spanish:	C
Type:	CIAttributeTypeScalar

See AttributeinputC for more details.
(Read and Write property)

60.28.13 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.28.14 inputScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale
Notes:

Name:	inputScale
Class:	double (NSNumber)
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
Type:	CIAttributeTypeScalar

See AttributeinputScale for more details.
(Read and Write property)

60.29 class CIFilterBlendWithAlphaMaskMBS

60.29.1 class CIFilterBlendWithAlphaMaskMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Blend With Alpha Mask filter.
Example:

```
// apply the Blend With Alpha Mask filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterBlendWithAlphaMaskMBS
filter.inputImage = image
filter.inputBackgroundImage = image
filter.inputMaskImage = image

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIBlendWithAlphaMask
DisplayName English:	Blend With Alpha Mask
DisplayName German:	Mit Alpha-Maske √ºberblenden
DisplayName French:	Fusion avec masque Alpha
DisplayName Italian:	Sfumatura con maschera alfa
DisplayName Spanish:	Fusionar con la m√°scara alfa

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image
- inputMaskImage: Mask Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.29.2 Methods

60.29.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.29.4 Properties

60.29.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Blend With Alpha Mask attribute.
Notes: This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.29.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Blend With Alpha Mask attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.29.7 AttributeinputMaskImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Blend With Alpha Mask attribute.
Notes: This attribute should have this content:

Name:	inputMaskImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de m√°scara
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.29.8 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

60.29.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.29.10 inputMaskImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Mask Image
Notes:

Name:	inputMaskImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de m√°scara
Type:	CIAttributeTypeImage

See AttributeinputMaskImage for more details.
(Read and Write property)

60.30 class CIFilterBlendWithBlueMaskMBS

60.30.1 class CIFilterBlendWithBlueMaskMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Blend With Blue Mask filter.
Example:

```
// apply the Blend With Blue Mask filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterBlendWithBlueMaskMBS
filter.inputImage = image
filter.inputBackgroundImage = image
filter.inputMaskImage = image

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIBlendWithBlueMask
DisplayName English:	Blend With Blue Mask
DisplayName German:	Mit blauer Maske
DisplayName French:	Fusion avec masque de bleu
DisplayName Italian:	Sfumatura con maschera blu
DisplayName Spanish:	Fusionar con la m√°scara azul

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image
- inputMaskImage: Mask Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.30.2 Methods

60.30.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.30.4 Properties

60.30.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Blend With Blue Mask attribute.
Notes: This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.30.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Blend With Blue Mask attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.30.7 AttributeinputMaskImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Blend With Blue Mask attribute.
Notes: This attribute should have this content:

Name:	inputMaskImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de m√°scara
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.30.8 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

60.30.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.30.10 inputMaskImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Mask Image
Notes:

Name:	inputMaskImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de m√°scara
Type:	CIAttributeTypeImage

See AttributeinputMaskImage for more details.
(Read and Write property)

60.31 class CIFilterBlendWithMaskMBS

60.31.1 class CIFilterBlendWithMaskMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Blend With Mask filter.
Example:

```
// apply the Blend With Mask filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterBlendWithMaskMBS
filter.inputImage = image
filter.inputBackgroundImage = image
filter.inputMaskImage = image

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIBlendWithMask
DisplayName English:	Blend With Mask
DisplayName German:	Mit Bild maskieren
DisplayName French:	Fusion avec masque
DisplayName Italian:	Sfumatura con maschera
DisplayName Spanish:	Fusionar con la m√°scara

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image
- inputMaskImage: Mask Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.31.2 Methods

60.31.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.31.4 Properties

60.31.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Blend With Mask attribute.
Notes: This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.31.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Blend With Mask attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.31.7 AttributeinputMaskImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Blend With Mask attribute.
Notes: This attribute should have this content:

Name:	inputMaskImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de m√°scara
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.31.8 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

60.31.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.31.10 inputMaskImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Mask Image
Notes:

Name:	inputMaskImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de m√°scara
Type:	CIAttributeTypeImage

See AttributeinputMaskImage for more details.
(Read and Write property)

60.32 class CIFilterBlendWithRedMaskMBS

60.32.1 class CIFilterBlendWithRedMaskMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Blend With Red Mask filter.
Example:

```
// apply the Blend With Red Mask filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterBlendWithRedMaskMBS
filter.inputImage = image
filter.inputBackgroundImage = image
filter.inputMaskImage = image

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIBlendWithRedMask
DisplayName English:	Blend With Red Mask
DisplayName German:	Mit roter Maske
DisplayName French:	Fusion avec masque de rouge
DisplayName Italian:	Sfumatura con maschera rossa
DisplayName Spanish:	Fusionar con la m√°scara roja

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image
- inputMaskImage: Mask Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.32.2 Methods

60.32.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.32.4 Properties

60.32.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Blend With Red Mask attribute.
Notes: This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.32.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Blend With Red Mask attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.32.7 AttributeinputMaskImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Blend With Red Mask attribute.
Notes: This attribute should have this content:

Name:	inputMaskImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque

DisplayName Spanish:	Imagen de m√°scara
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.32.8 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

60.32.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.32.10 inputMaskImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Mask Image
Notes:

Name:	inputMaskImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de m√°scara
Type:	CIAttributeTypeImage

See AttributeinputMaskImage for more details.
(Read and Write property)

60.33 class CIFilterBloomMBS

60.33.1 class CIFilterBloomMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Bloom filter.
Example:

```
// apply the Bloom filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterBloomMBS
filter.inputImage = image
filter.inputIntensity = 0.5 // range 0 to 1
filter.inputRadius = 10 // range 0 to 100

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIBloom
DisplayName English:	Bloom
DisplayName German:	√überstrahlen
DisplayName French:	Floraison
DisplayName Italian:	Velatura
DisplayName Spanish:	Veladura

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRadius: Radius
- inputIntensity: Intensity

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.33.2 Methods

60.33.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.33.4 Properties

60.33.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bloom attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.33.6 AttributeinputIntensity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bloom attribute.
Notes: This attribute should have this content:

Name:	inputIntensity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Intensity
DisplayName German:	Intensit√§t
DisplayName French:	Intensit√©
DisplayName Italian:	Intensit√†
DisplayName Spanish:	Intensidad
DefaultNumber:	0.5
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

60.33.7 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bloom attribute.
Notes: This attribute should have this content:

(Read only property)

60.33.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	10
IdentityNumber:	0
SliderMaxNumber:	100
SliderMinNumber:	0

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.33.9 inputIntensity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Intensity
Notes:

Name:	inputIntensity
Class:	double (NSNumber)
DisplayName English:	Intensity
DisplayName German:	Intensit√§t
DisplayName French:	Intensit√©
DisplayName Italian:	Intensit√†
DisplayName Spanish:	Intensidad
Type:	CIAttributeTypeScalar

See AttributeinputIntensity for more details.
(Read and Write property)

60.33.10 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

60.34 class CIFilterBokehBlurMBS

60.34.1 class CIFilterBokehBlurMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Bokeh Blur filter.
Example:

```
// apply the Bokeh Blur filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterBokehBlurMBS
filter.inputImage = image
filter.inputRadius = 20 // range 0 to 100
filter.inputRingAmount = 0 // range 0 to 1
filter.inputRingSize = 0.1 // range 0 to 0.2
filter.inputSoftness = 1 // range 0.25 to 0.4

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIBokehBlur
DisplayName English:	Bokeh Blur
DisplayName German:	Bokeh unscharf
DisplayName French:	Bokeh (flou)
DisplayName Italian:	Sfocatura bokeh
DisplayName Spanish:	Desenfoque bokeh

Categories:

- CICategoryBlur: Blur
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputRadius: Radius
- inputRingAmount: Ring Amount
- inputRingSize: Ring Size
- inputSoftness: Softness

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.34.2 Methods

60.34.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.34.4 Properties

60.34.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bokeh Blur attribute.
Notes: This attribute should have this content:

(Read only property)

60.34.6 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine

SliderMinNumber:	0

(Read only property)

60.34.9 AttributeinputSoftness as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bokeh Blur attribute.
Notes: This attribute should have this content:

Name:	inputSoftness
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Softness
DefaultNumber:	1
IdentityNumber:	0
MaxNumber:	10
MinNumber:	0
SliderMaxNumber:	0.4
SliderMinNumber:	0.25

(Read only property)

60.34.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.34.11 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

60.34.12 inputRingAmount as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Ring Amount
Notes:

Name:	inputRingAmount
Class:	double (NSNumber)
DisplayName English:	Ring Amount
DisplayName German:	Ringst√§rke
DisplayName French:	Intensit√© de l,Äôanneau
DisplayName Italian:	Intensit√† anello
DisplayName Spanish:	N√mero de anillos
Type:	CIAttributeTypeScalar

See AttributeinputRingAmount for more details.
(Read and Write property)

60.34.13 inputRingSize as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Ring Size
Notes:

See AttributeinputRingSize for more details.
(Read and Write property)

Name:	inputRingSize
Class:	double (NSNumber)
DisplayName English:	Ring Size
DisplayName German:	Ringgr√√üe
DisplayName French:	Taille de l,Äôanneau
DisplayName Italian:	Dimensioni anello
DisplayName Spanish:	Tama√±o del anillo
Type:	CIAttributeTypeScalar

60.34.14 inputSoftness as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Softness
Notes:

Name:	inputSoftness
Class:	double (NSNumber)
DisplayName English:	Softness
DisplayName German:	Softness
DisplayName French:	Softness
DisplayName Italian:	Softness
DisplayName Spanish:	Softness
Type:	CIAttributeTypeScalar

See AttributeinputSoftness for more details.
(Read and Write property)

60.35 class CIFilterBoxBlurMBS

60.35.1 class CIFilterBoxBlurMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Box Blur filter.
Notes: Details for this filter:

FilterName:	CIBoxBlur
DisplayName English:	Box Blur
DisplayName German:	Quadratische Unsch√§rfe
DisplayName French:	Flou (Box blur)
DisplayName Italian:	Sfocatura riquadro
DisplayName Spanish:	Caja difuminada

Categories:

- CICategoryBlur: Blur
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.35.2 Methods

60.35.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.35.4 Properties

60.35.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Box Blur attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.35.6 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Box Blur attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	10
IdentityNumber:	0
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	100
SliderMinNumber:	1

60.35.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.35.8 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

See AttributeinputRadius for more details.
(Read and Write property)

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

60.36 class CIFilterBumpDistortionLinearMBS

60.36.1 class CIFilterBumpDistortionLinearMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Bump Distortion Linear filter.
Example:

```
// apply the Bump Distortion Linear filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterBumpDistortionLinearMBS
filter.inputImage = image
filter.inputAngle = 0 // range 0 to 6.283185
filter.inputCenter = New CIVectorMBS(150, 150)
filter.inputRadius = 300 // range 0 to 600
filter.inputScale = 0.5 // range 0 to 1

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIBumpDistortionLinear
DisplayName English:	Bump Distortion Linear
DisplayName German:	Verzerrung ,ÄûBump,Äú (Linear)
DisplayName French:	D√©formation Bosse lin√©aire
DisplayName Italian:	Lineare distorsione urto
DisplayName Spanish:	Distorsi√n linear suplementaria

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputRadius: Radius
- inputAngle: Angle
- inputScale: Scale

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.36.2 Methods

60.36.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.36.4 Properties

60.36.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bump Distortion Linear attribute.
Notes: This attribute should have this content:

(Read only property)

60.36.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	6.283185
SliderMinNumber:	0

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

Function: Details about the Bump Distortion Linear attribute.
Notes: This attribute should have this content:

(Read only property)

60.36.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bump Distortion Linear attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.36.8 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bump Distortion Linear attribute.
Notes: This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	300
IdentityNumber:	0
SliderMaxNumber:	600
SliderMinNumber:	0

(Read only property)

60.36.9 AttributeinputScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bump Distortion Linear attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputScale
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
DefaultNumber:	0.5
IdentityNumber:	1
MaxNumber:	0
MinNumber:	-1
SliderMaxNumber:	1
SliderMinNumber:	0

60.36.10 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

60.36.11 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

See AttributeinputCenter for more details.
(Read and Write property)

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

60.36.12 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.36.13 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

60.36.14 inputScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale
Notes:

Name:	inputScale
Class:	double (NSNumber)
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
Type:	CIAttributeTypeScalar

See AttributeinputScale for more details.
(Read and Write property)

60.37 class CIFilterBumpDistortionMBS

60.37.1 class CIFilterBumpDistortionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Bump Distortion filter.
Example:

```
// apply the Bump Distortion filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterBumpDistortionMBS
filter.inputImage = image
filter.inputCenter = New CIVectorMBS(150, 150)
filter.inputRadius = 300 // range 0 to 600
filter.inputScale = 0.5 // range -1 to 1

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIBumpDistortion
DisplayName English:	Bump Distortion
DisplayName German:	Verzerrung ,ÄûBump,Äú
DisplayName French:	D√©formation Bosse
DisplayName Italian:	Distorsione urto
DisplayName Spanish:	Distorsi√n suplementaria

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputRadius: Radius
- inputScale: Scale

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.37.2 Methods

60.37.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.37.4 Properties

60.37.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bump Distortion attribute.
Notes: This attribute should have this content:

(Read only property)

60.37.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bump Distortion attribute.
Notes: This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.37.7 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bump Distortion attribute.
Notes: This attribute should have this content:

(Read only property)

60.37.8 AttributeinputScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bump Distortion attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	300
IdentityNumber:	0
SliderMaxNumber:	600
SliderMinNumber:	0

Name:	inputScale
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
DefaultNumber:	0.5
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	-1

60.37.9 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

See AttributeinputCenter for more details.
(Read and Write property)

60.37.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.37.11 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

60.37.12 inputScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale
Notes:

Name:	inputScale
Class:	double (NSNumber)
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
Type:	CIAttributeTypeScalar

See AttributeinputScale for more details.
(Read and Write property)

60.38 class CIFilterCameraCalibrationLensCorrectionMBS

60.38.1 class CIFilterCameraCalibrationLensCorrectionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Lens Correction for AVC filter.
Example:

```
// apply the Camera Calibration Lens Correction filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterCameraCalibrationLensCorrectionMBS
filter.inputImage = image
filter.inputUseInverseLookUpTable = 0

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CICameraCalibrationLensCorrection
DisplayName English:	Lens Correction for AVC
DisplayName German:	Objektivkorrektur: AVC
DisplayName French:	Correction d,Äôobjectif pour AVC
DisplayName Italian:	Correzione lente AVC
DisplayName Spanish:	Correcci√n de lente para AVC

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image

- inputAVCameraCalibrationData: AVCameraCalibrationData
- inputUseInverseLookUpTable: Use Inverse Lookup Table

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.38.2 Methods

60.38.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.38.4 Properties

60.38.5 AttributeinputAVCameraCalibrationData as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lens Correction for AVC attribute.
Notes: This attribute should have this content:

Name:	inputAVCameraCalibrationData
Class:	Variant
DisplayName:	AVCameraCalibrationData

(Read only property)

60.38.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lens Correction for AVC attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.38.7 AttributeinputUseInverseLookUpTable as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lens Correction for AVC attribute.
Notes: This attribute should have this content:

Name:	inputUseInverseLookUpTable
Class:	double
Type:	CIAttributeTypeBoolean
DisplayName English:	Use Inverse Lookup Table
DisplayName German:	Invertierte Lookup-Tabelle verwenden
DisplayName French:	Utiliser la table de conversion invers√©e
DisplayName Italian:	Utilizza la tabella di ricerca inversa
DisplayName Spanish:	Usar tabla de consulta inversa
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.38.8 inputAVCameraCalibrationData as Variant

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute AVCameraCalibrationData
Notes:

Name:	inputAVCameraCalibrationData
Class:	Variant (AVCameraCalibrationData)
DisplayName English:	AVCameraCalibrationData
DisplayName German:	AVCameraCalibrationData
DisplayName French:	AVCameraCalibrationData
DisplayName Italian:	AVCameraCalibrationData
DisplayName Spanish:	AVCameraCalibrationData

See AttributeinputAVCameraCalibrationData for more details.
(Read and Write property)

60.38.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.38.10 inputUseInverseLookUpTable as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Use Inverse Lookup Table
Notes:

See AttributeinputUseInverseLookUpTable for more details.
(Read and Write property)

Name:	inputUseInverseLookUpTable
Class:	double (NSNumber)
DisplayName English:	Use Inverse Lookup Table
DisplayName German:	Invertierte Lookup-Tabelle verwenden
DisplayName French:	Utiliser la table de conversion invers√©e
DisplayName Italian:	Utilizza la tabella di ricerca inversa
DisplayName Spanish:	Usar tabla de consulta inversa
Type:	CIAttributeTypeBoolean

60.39 class CIFilterCheckerboardGeneratorMBS

60.39.1 class CIFilterCheckerboardGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Checkerboard filter.
Example:

```
// generate an image with the Checkerboard Generator filter
Var filter As New CIFilterCheckerboardGeneratorMBS
filter.inputCenter = New CIVectorMBS(150, 150)
filter.inputColor0 = New CIColorMBS(1, 1, 1, 1)
filter.inputColor1 = New CIColorMBS(0, 0, 0, 1)
filter.inputSharpness = 1 // range 0 to 1
filter.inputWidth = 80 // range 0 to 800

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture(300, 300)
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CICheckerboardGenerator
DisplayName English:	Checkerboard
DisplayName German:	Schachbrettmuster
DisplayName French:	Damier
DisplayName Italian:	Scacchiera
DisplayName Spanish:	Tablero

Categories:

- CICategoryGenerator: Generator
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputCenter: Center

- inputColor0: Color 1
- inputColor1: Color 2
- inputWidth: Width
- inputSharpness: Sharpness

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.39.2 Methods

60.39.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.39.4 Properties

60.39.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Checkerboard attribute.
Notes: This attribute should have this content:

(Read only property)

60.39.6 AttributeinputColor0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Checkerboard attribute.
Notes: This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

Name:	inputColor0
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color 1
DisplayName German:	Farbe 1
DisplayName French:	Couleur 1
DisplayName Italian:	Colore 1
DisplayName Spanish:	Color 1
DefaultColor:	Red = 1, Green = 1, Blue = 1, Alpha = 1
IdentityNumber:	0

(Read only property)

60.39.7 AttributeinputColor1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Checkerboard attribute.
Notes: This attribute should have this content:

Name:	inputColor1
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color 2
DisplayName German:	Farbe 2
DisplayName French:	Couleur 2
DisplayName Italian:	Colore 2
DisplayName Spanish:	Color 2
DefaultColor:	Red = 0, Green = 0, Blue = 0, Alpha = 1
IdentityNumber:	0

(Read only property)

60.39.8 AttributeinputSharpness as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Checkerboard attribute.
Notes: This attribute should have this content:

Name:	inputSharpness

(Read only property)

60.39.9 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Checkerboard attribute.
Notes: This attribute should have this content:

(Read only property)

60.39.10 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	80
IdentityNumber:	0
SliderMaxNumber:	800
SliderMinNumber:	0

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

60.39.11 inputColor0 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color 1
Notes:

Name:	inputColor0
Class:	CIColorMBS (CIColor)
DisplayName English:	Color 1
DisplayName German:	Farbe 1
DisplayName French:	Couleur 1
DisplayName Italian:	Colore 1
DisplayName Spanish:	Color 1
Type:	CIAttributeTypeColor

See AttributeinputColor0 for more details.
(Read and Write property)

60.39.12 inputColor1 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color 2
Notes:

Name:	inputColor1
Class:	CIColorMBS (CIColor)
DisplayName English:	Color 2
DisplayName German:	Farbe 2
DisplayName French:	Couleur 2
DisplayName Italian:	Colore 2
DisplayName Spanish:	Color 2
Type:	CIAttributeTypeColor

See AttributeinputColor1 for more details.
(Read and Write property)

60.39.13 inputSharpness as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Sharpness
Notes:

Name:	inputSharpness
Class:	double (NSNumber)
DisplayName English:	Sharpness
DisplayName German:	Sch√§rfe
DisplayName French:	Nettet√©
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
Type:	CIAttributeTypeScalar

See AttributeinputSharpness for more details.
(Read and Write property)

60.39.14 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

60.40 class CIFilterCircleSplashDistortionMBS

60.40.1 class CIFilterCircleSplashDistortionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Circle Splash Distortion filter.
Example:

```
// apply the Circle Splash Distortion filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterCircleSplashDistortionMBS
filter.inputImage = image
filter.inputCenter = New CIVectorMBS(150, 150)
filter.inputRadius = 150 // range 0 to 1000

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CICircleSplashDistortion
DisplayName English:	Circle Splash Distortion
DisplayName German:	Verzerrung ,ÄûKreisf√rmiger Platscher,Äú
DisplayName French:	D√©formation √âclaboussure circulaire
DisplayName Italian:	Distorsione spruzzo circolare
DisplayName Spanish:	Distorsi√n a modo de salpicadura en c√rculo

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.40.2 Methods

60.40.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.40.4 Properties

60.40.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Circle Splash Distortion attribute.
Notes: This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

60.40.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Circle Splash Distortion attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.40.7 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Circle Splash Distortion attribute.
Notes: This attribute should have this content:

(Read only property)

60.40.8 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

See AttributeinputCenter for more details.
(Read and Write property)

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	150
IdentityNumber:	0
SliderMaxNumber:	1000
SliderMinNumber:	0

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

60.40.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.40.10 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

60.41 class CIFilterCircularScreenMBS

60.41.1 class CIFilterCircularScreenMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Circular Screen filter.
Example:

```
// apply the Circular Screen filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterCircularScreenMBS
filter.inputImage = image
filter.inputCenter = New CIVectorMBS(150, 150)
filter.inputSharpness = 0.7 // range 0 to 1
filter.inputWidth = 6 // range 2 to 50

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CICircularScreen
DisplayName English:	Circular Screen
DisplayName German:	Konzentrisches Halbtonraster
DisplayName French:	√âcran circulaire
DisplayName Italian:	Schermo circolare
DisplayName Spanish:	Pantalla circular

Categories:

- CICategoryHalftoneEffect: Halftone Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image

- inputCenter: Center
- inputWidth: Width
- inputSharpness: Sharpness

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.41.2 Methods

60.41.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.41.4 Properties

60.41.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Circular Screen attribute.
Notes: This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

60.41.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Circular Screen attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.41.7 AttributeinputSharpness as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Circular Screen attribute.
Notes: This attribute should have this content:

(Read only property)

60.41.8 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Circular Screen attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputSharpness
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Sharpness
DisplayName German:	Sch√§rfe
DisplayName French:	Nettet√©
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
DefaultNumber:	0.7
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	6
IdentityNumber:	0
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	50
SliderMinNumber:	2

60.41.9 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

See AttributeinputCenter for more details.
(Read and Write property)

60.41.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.41.11 inputSharpness as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Sharpness
Notes:

Name:	inputSharpness
Class:	double (NSNumber)
DisplayName English:	Sharpness
DisplayName German:	Sch√§rfe
DisplayName French:	Nettet√©
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
Type:	CIAttributeTypeScalar

See AttributeinputSharpness for more details.
(Read and Write property)

60.41.12 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

60.42 class CIFilterCircularWrapMBS

60.42.1 class CIFilterCircularWrapMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Circular Wrap Distortion filter.
Example:

```
Var p as Picture = LogoMBS(500)
Var data as string = PictureToPNGStringMBS(p,80)
Var i as new CIImageMBS(data)

Var c as new CIFilterCircularWrapMBS
c.inputImage = i

Var o as CIImageMBS = c.outputImage
Backdrop = o.RenderPicture
```

Notes: Details for this filter:

FilterName:	CICircularWrap
DisplayName English:	Circular Wrap Distortion
DisplayName German:	Kreisf√rmig kr√ºmmen
DisplayName French:	D√©formation Bouclage circulaire
DisplayName Italian:	Distorsione involucro circolare
DisplayName Spanish:	Distorsi√n a modo de envoltura circular

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center

- inputRadius: Radius
- inputAngle: Angle

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.42.2 Methods

60.42.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.42.4 Properties

60.42.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Circular Wrap Distortion attribute.
Notes: This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

60.42.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Circular Wrap Distortion attribute.
Notes: This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

60.42.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Circular Wrap Distortion attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.42.8 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Circular Wrap Distortion attribute.
Notes: This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	150
IdentityNumber:	0
SliderMaxNumber:	600
SliderMinNumber:	0

(Read only property)

60.42.9 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Example:

```
Var p as Picture = LogoMBS(500)
Var data as string = PictureToPNGStringMBS(p,80)
Var i as new CIImageMBS(data)

Var c as new CIFilterCircularWrapMBS
c.inputImage = i
c.inputAngle = 0.1

Var o as CIImageMBS = c.outputImage
Backdrop = o.RenderPicture
```

Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

60.42.10 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

60.42.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Example:

```
Var p as Picture = LogoMBS(500)
Var data as string = PictureToPNGStringMBS(p,80)
Var i as new CIImageMBS(data)
```

```
Var c as new CIFilterCircularWrapMBS
c.inputImage = i

Var o as CIImageMBS = c.outputImage
Backdrop = o.RenderPicture
```

Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.42.12 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

60.43 class CIFilterClampMBS

60.43.1 class CIFilterClampMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Clamp filter.
Notes: Details for this filter:

FilterName:	CIClamp
DisplayName English:	Clamp
DisplayName German:	Arretieren
DisplayName French:	Attacher
DisplayName Italian:	Morsetto
DisplayName Spanish:	Fijar

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputExtent: Extent

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.43.2 Methods

60.43.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.43.4 Properties

60.43.5 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Clamp attribute.
Notes: This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 640 80]
IdentityVector:	n/a

(Read only property)

60.43.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Clamp attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.43.7 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

60.43.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.44 class CIFilterCMYKHalftoneMBS

60.44.1 class CIFilterCMYKHalftoneMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage CMYK Halftone filter.
Example:

```
// apply the CMYKHalftone filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterCMYKHalftoneMBS
filter.inputImage = image
filter.inputAngle = 0 // range -3.141593 to 3.141593
filter.inputCenter = New CIVectorMBS(150, 150)
filter.inputGCR = 1 // range 0 to 1
filter.inputSharpness = 0.7 // range 0 to 1
filter.inputUCR = 0.5 // range 0 to 1
filter.inputWidth = 6 // range 2 to 100

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CICMYKHalftone
DisplayName English:	CMYK Halftone
DisplayName German:	CMYK-Halbton
DisplayName French:	Demi-teinte CMJN
DisplayName Italian:	Mezzitoni CMYK
DisplayName Spanish:	Semitono CMYK

Categories:

- CICategoryHalftoneEffect: Halftone Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputWidth: Width
- inputAngle: Angle
- inputSharpness: Sharpness
- inputGCR: Gray Component Replacement
- inputUCR: Under Color Removal

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.44.2 Methods

60.44.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.44.4 Properties

60.44.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the CMYK Halftone attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

60.44.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the CMYK Halftone attribute.
Notes: This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro

60.44.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the CMYK Halftone attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.44.9 AttributeinputSharpness as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the CMYK Halftone attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputSharpness
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Sharpness
DisplayName German:	Sch√§rfe
DisplayName French:	Nettet√©
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
DefaultNumber:	0.7
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

60.44.10 AttributeinputUCR as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the CMYK Halftone attribute.
Notes: This attribute should have this content:

Name:	inputUCR
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Under Color Removal
DisplayName German:	Unterfarben-Korrektur
DisplayName French:	√âlimination des sous-couleurs
DisplayName Italian:	Rimozione colore inferiore
DisplayName Spanish:	Bajo supresi√n de color
DefaultNumber:	0.5
IdentityNumber:	0.5
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

60.44.11 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the CMYK Halftone attribute.
Notes: This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	6
IdentityNumber:	6
MaxNumber:	0
MinNumber:	-2
SliderMaxNumber:	100
SliderMinNumber:	2

(Read only property)

60.44.12 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

60.44.13 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

60.44.14 inputGCR as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Gray Component Replacement
Notes:

Name:	inputGCR
Class:	double (NSNumber)
DisplayName English:	Gray Component Replacement
DisplayName German:	Graukomponente ersetzen
DisplayName French:	Remplacement de la composante grise
DisplayName Italian:	Sostituzione componente grigio
DisplayName Spanish:	Sustituci√n de componente gris
Type:	CIAttributeTypeScalar

See AttributeinputGCR for more details.
(Read and Write property)

60.44.15 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.44.16 inputSharpness as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Sharpness
Notes:

Name:	inputSharpness
Class:	double (NSNumber)
DisplayName English:	Sharpness
DisplayName German:	Sch√§rfe
DisplayName French:	Nettet√©
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
Type:	CIAttributeTypeDistance

See AttributeinputSharpness for more details.
(Read and Write property)

60.44.17 inputUCR as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Under Color Removal
Notes:

Name:	inputUCR
Class:	double (NSNumber)
DisplayName English:	Under Color Removal
DisplayName German:	Unterfarben-Korrektur
DisplayName French:	√âlimination des sous-couleurs
DisplayName Italian:	Rimozione colore inferiore
DisplayName Spanish:	Bajo supresi√n de color
Type:	CIAttributeTypeScalar

See AttributeinputUCR for more details.
(Read and Write property)

60.44.18 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

60.45 class CIFilterCode128BarcodeGeneratorMBS

60.45.1 class CIFilterCode128BarcodeGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Code 128 Barcode Generator filter.
Example:

```
// generate an image with the Code128Barcode Generator filter
Var filter As New CIFilterCode128BarcodeGeneratorMBS
filter.inputBarcodeHeight = 32 // range 1 to 50
filter.inputMessage = "Hello World"
filter.inputQuietSpace = 7 // range 0 to 20

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture(300, 300)
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CICode128BarcodeGenerator
DisplayName English:	Code 128 Barcode Generator
DisplayName German:	Code 128 Barcode-Generator
DisplayName French:	G√©n√©rateur de code-barres Code¬†128
DisplayName Italian:	Generatore codice a barre Code128
DisplayName Spanish:	Generador de c√digos de barras Code128

Categories:

- CICategoryGenerator: Generator
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputMessage: Message
- inputQuietSpace: Quiet Space
- inputBarcodeHeight: Barcode Height

Output:

- outputImage
- outputCGImage

Subclass of the CIFilterMBS class.

60.45.2 Methods

60.45.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.45.4 Properties

60.45.5 AttributeinputBarcodeHeight as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Code 128 Barcode Generator attribute.
Notes: This attribute should have this content:

(Read only property)

60.45.6 AttributeinputMessage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Code 128 Barcode Generator attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputBarcodeHeight
Class:	double
Type:	CIAttributeTypeInteger
DisplayName English:	Barcode Height
DisplayName German:	Barcodeh√he
DisplayName French:	Hauteur du code-barres
DisplayName Italian:	Altezza codice a barre
DisplayName Spanish:	Altura del c√digo de barras
DefaultNumber:	32
IdentityNumber:	0
MaxNumber:	500
MinNumber:	1
SliderMaxNumber:	50
SliderMinNumber:	1

Name:	inputMessage
Class:	Memoryblock
DisplayName English:	Message
DisplayName German:	Nachricht
DisplayName French:	Message
DisplayName Italian:	Messaggio
DisplayName Spanish:	Mensaje
DefaultNumber:	0
IdentityNumber:	0

60.45.7 AttributeinputQuietSpace as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Code 128 Barcode Generator attribute.
Notes: This attribute should have this content:

(Read only property)

60.45.8 inputBarcodeHeight as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Barcode Height
Notes:

See AttributeinputBarcodeHeight for more details.
(Read and Write property)

Name:	inputQuietSpace
Class:	double
Type:	CIAttributeTypeInteger
DisplayName English:	Quiet Space
DisplayName German:	Ruheraum
DisplayName French:	Marge
DisplayName Italian:	Area non interattiva
DisplayName Spanish:	Espacio sin modificaciones
DefaultNumber:	7
IdentityNumber:	0
MaxNumber:	100
MinNumber:	0
SliderMaxNumber:	20
SliderMinNumber:	0

Name:	inputBarcodeHeight
Class:	double (NSNumber)
DisplayName English:	Barcode Height
DisplayName German:	Barcodeh√he
DisplayName French:	Hauteur du code-barres
DisplayName Italian:	Altezza codice a barre
DisplayName Spanish:	Altura del c√digo de barras
Type:	CIAttributeTypeInteger

60.45.9 inputMessage as Memoryblock

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Message
Notes:

Name:	inputMessage
Class:	Memoryblock (NSData)
DisplayName English:	Message
DisplayName German:	Nachricht
DisplayName French:	Message
DisplayName Italian:	Messaggio
DisplayName Spanish:	Mensaje

See AttributeinputMessage for more details.
(Read and Write property)

60.45.10 inputQuietSpace as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Quiet Space
Notes:

Name:	inputQuietSpace
Class:	double (NSNumber)
DisplayName English:	Quiet Space
DisplayName German:	Ruheraum
DisplayName French:	Marge
DisplayName Italian:	Area non interattiva
DisplayName Spanish:	Espacio sin modificaciones
Type:	CIAttributeTypeInteger

See AttributeinputQuietSpace for more details.
(Read and Write property)

60.46 class CIFilterColorAbsoluteDifferenceMBS

60.46.1 class CIFilterColorAbsoluteDifferenceMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Absolute Difference filter.
Notes: Details for this filter:

FilterName:	CIColorAbsoluteDifference
DisplayName English:	Color Absolute Difference
DisplayName German:	Absolute Farbdifferenz
DisplayName French:	Diff√©rence absolute des couleurs
DisplayName Italian:	Differenza assoluta colore
DisplayName Spanish:	Diferencia absoluta de color

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputImage2: Image2

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.47 class CIFilterColorBlendModeMBS

60.47.1 class CIFilterColorBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Blend Mode filter.
Notes: Details for this filter:

FilterName:	CIColorBlendMode
DisplayName English:	Color Blend Mode
DisplayName German:	Mischmethode ,ÄûFarbe,Äú
DisplayName French:	Mode de fusion des couleurs
DisplayName Italian:	Modalit√† sfumatura colore
DisplayName Spanish:	Modo de mezcla de color

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.47.2 Methods

60.47.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.47.4 Properties

60.47.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Blend Mode attribute.
Notes: This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage

60.49 class CIFilterColorClampMBS

60.49.1 class CIFilterColorClampMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Clamp filter.
Example:

```
// apply the Color Clamp filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterColorClampMBS
filter.inputImage = image
Var inputMaxComponentsValues() As Double = Array(1.0, 1.0, 1.0, 1.0)
filter.inputMaxComponents = New CIVectorMBS(inputMaxComponentsValues)
Var inputMinComponentsValues() As Double = Array(0.0, 0.0, 0.0, 0.0)
filter.inputMinComponents = New CIVectorMBS(inputMinComponentsValues)

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIColorClamp
DisplayName English:	Color Clamp
DisplayName German:	Color Clamp
DisplayName French:	Limitation de la couleur
DisplayName Italian:	Fissaggio colore
DisplayName Spanish:	Fijaci√n del color

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputMinComponents: Min Components
- inputMaxComponents: Max Components

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.49.2 Methods

60.49.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.49.4 Properties

60.49.5 AttributeinputImage as CIAttributeMBS

60.49.9 inputMaxComponents as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Max Components
Notes:

Name:	inputMaxComponents
Class:	CIVectorMBS (CIVector)
DisplayName English:	Max Components
DisplayName German:	Max. Komponenten
DisplayName French:	Composantes max.
DisplayName Italian:	Componenti Max
DisplayName Spanish:	M√°x. de componentes

See AttributeinputMaxComponents for more details.
(Read and Write property)

60.49.10 inputMinComponents as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Min Components
Notes:

Name:	inputMinComponents
Class:	CIVectorMBS (CIVector)
DisplayName English:	Min Components
DisplayName German:	Min. Komponenten
DisplayName French:	Composantes min.
DisplayName Italian:	Componenti Min
DisplayName Spanish:	M√n. de componentes

See AttributeinputMinComponents for more details.
(Read and Write property)

60.50 class CIFilterColorControlsMBS

60.50.1 class CIFilterColorControlsMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Controls filter.
Example:

```
// apply the Color Controls filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterColorControlsMBS
filter.inputImage = image
filter.inputBrightness = 0 // range -1 to 1
filter.inputContrast = 1 // range 0.25 to 4
filter.inputSaturation = 1 // range 0 to 2

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIColorControls
DisplayName English:	Color Controls
DisplayName German:	Farbsteuerung
DisplayName French:	Contr√¥le des couleurs
DisplayName Italian:	Controlli colore
DisplayName Spanish:	Controles de color

Categories:

60.50.6 AttributeinputContrast as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputBrightness
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Brightness
DisplayName German:	Helligkeit
DisplayName French:	Luminosit√©
DisplayName Italian:	Luminosit√†
DisplayName Spanish:	Brillo
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	0
MinNumber:	-1
SliderMaxNumber:	1
SliderMinNumber:	-1

Function: Details about the Color Controls attribute.
Notes: This attribute should have this content:

Name:	inputContrast
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Contrast
DisplayName German:	Kontrast
DisplayName French:	Contraste
DisplayName Italian:	Contrasto
DisplayName Spanish:	Contraste
DefaultNumber:	1
IdentityNumber:	1
SliderMaxNumber:	4
SliderMinNumber:	0.25

(Read only property)

60.50.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Controls attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.50.8 AttributeinputSaturation as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Controls attribute.
Notes: This attribute should have this content:

Name:	inputSaturation
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Saturation
DisplayName German:	S√§ttigung
DisplayName French:	Saturation
DisplayName Italian:	Saturazione
DisplayName Spanish:	Saturaci√n
DefaultNumber:	1
IdentityNumber:	1
SliderMaxNumber:	2
SliderMinNumber:	0

(Read only property)

60.50.9 inputBrightness as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Brightness
Notes:

See AttributeinputBrightness for more details.
(Read and Write property)

Name:	inputBrightness
Class:	double (NSNumber)
DisplayName English:	Brightness
DisplayName German:	Helligkeit
DisplayName French:	Luminosit√©
DisplayName Italian:	Luminosit√†
DisplayName Spanish:	Brillo
Type:	CIAttributeTypeScalar

60.50.10 inputContrast as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Contrast
Notes:

Name:	inputContrast
Class:	double (NSNumber)
DisplayName English:	Contrast
DisplayName German:	Kontrast
DisplayName French:	Contraste
DisplayName Italian:	Contrasto
DisplayName Spanish:	Contraste
Type:	CIAttributeTypeScalar

See AttributeinputContrast for more details.
(Read and Write property)

60.50.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.50.12 inputSaturation as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Saturation
Notes:

Name:	inputSaturation
Class:	double (NSNumber)
DisplayName English:	Saturation
DisplayName German:	S√§ttigung
DisplayName French:	Saturation
DisplayName Italian:	Saturazione
DisplayName Spanish:	Saturaci√n
Type:	CIAttributeTypeScalar

See AttributeinputSaturation for more details.
(Read and Write property)

60.51 class CIFilterColorCrossPolynomialMBS

60.51.1 class CIFilterColorCrossPolynomialMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Cross Polynomial filter.
Example:

```
// apply the Color Cross Polynomial filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterColorCrossPolynomialMBS
filter.inputImage = image
Var inputBlueCoefficientsValues() As Double = Array(0.0, 0.0, 1.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0)
filter.inputBlueCoefficients = New CIVectorMBS(inputBlueCoefficientsValues)
Var inputGreenCoefficientsValues() As Double = Array(0.0, 1.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0)
filter.inputGreenCoefficients = New CIVectorMBS(inputGreenCoefficientsValues)
Var inputRedCoefficientsValues() As Double = Array(1.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0)
filter.inputRedCoefficients = New CIVectorMBS(inputRedCoefficientsValues)

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIColorCrossPolynomial
DisplayName English:	Color Cross Polynomial
DisplayName German:	Farb√ºberblend-Polynom
DisplayName French:	Fonction polynomiale crois√©e de couleur
DisplayName Italian:	Polinomio cromatico incrociato
DisplayName Spanish:	Polinomio cruzado crom√°tico

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image

- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRedCoefficients: Red Coefficients
- inputGreenCoefficients: Green Coefficients
- inputBlueCoefficients: Blue Coefficients

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.51.2 Methods

60.51.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.51.4 Properties

60.51.5 AttributeinputBlueCoefficients as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cross Polynomial attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputBlueCoefficients
Class:	CIVectorMBS
DisplayName English:	Blue Coefficients
DisplayName German:	Blau-Koeffizienten
DisplayName French:	Coefficients Bleu
DisplayName Italian:	Coefficienti colore blu
DisplayName Spanish:	Coeficientes de azul
DefaultVector:	[0 0 1 0 0 0 0 0 0 0]
IdentityVector:	[0 0 1 0 0 0 0 0 0 0]

60.51.6 AttributeinputGreenCoefficients as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cross Polynomial attribute.
Notes: This attribute should have this content:

Name:	inputGreenCoefficients
Class:	CIVectorMBS
DisplayName English:	Green Coefficients
DisplayName German:	Gr√ºn-Koeffizienten
DisplayName French:	Coefficients Vert
DisplayName Italian:	Coefficienti colore verde
DisplayName Spanish:	Coeficientes de verde
DefaultVector:	[0 1 0 0 0 0 0 0 0 0]
IdentityVector:	[0 1 0 0 0 0 0 0 0 0]

(Read only property)

60.51.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cross Polynomial attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.51.8 AttributeinputRedCoefficients as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cross Polynomial attribute.
Notes: This attribute should have this content:

Name:	inputRedCoefficients
Class:	CIVectorMBS
DisplayName English:	Red Coefficients
DisplayName German:	Rot-Koeffizienten
DisplayName French:	Coefficients Rouge
DisplayName Italian:	Coefficienti colore rosso
DisplayName Spanish:	Coeficientes de rojo
DefaultVector:	[1 0 0 0 0 0 0 0 0 0]
IdentityVector:	[1 0 0 0 0 0 0 0 0 0]

(Read only property)

60.51.9 inputBlueCoefficients as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Blue Coefficients
Notes:

See AttributeinputBlueCoefficients for more details.
(Read and Write property)

Name:	inputBlueCoefficients
Class:	CIVectorMBS (CIVector)
DisplayName English:	Blue Coefficients
DisplayName German:	Blau-Koeffizienten
DisplayName French:	Coefficients Bleu
DisplayName Italian:	Coefficienti colore blu
DisplayName Spanish:	Coeficientes de azul

60.51.10 inputGreenCoefficients as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Green Coefficients
Notes:

Name:	inputGreenCoefficients
Class:	CIVectorMBS (CIVector)
DisplayName English:	Green Coefficients
DisplayName German:	Gr√ºn-Koeffizienten
DisplayName French:	Coefficients Vert
DisplayName Italian:	Coefficienti colore verde
DisplayName Spanish:	Coeficientes de verde

See AttributeinputGreenCoefficients for more details.
(Read and Write property)

60.51.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.

(Read and Write property)

60.51.12 inputRedCoefficients as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Red Coefficients
Notes:

Name:	inputRedCoefficients
Class:	CIVectorMBS (CIVector)
DisplayName English:	Red Coefficients
DisplayName German:	Rot-Koeffizienten
DisplayName French:	Coefficients Rouge
DisplayName Italian:	Coefficienti colore rosso
DisplayName Spanish:	Coeficientes de rojo

See AttributeinputRedCoefficients for more details.
(Read and Write property)

60.52 class CIFilterColorCubeMBS

60.52.1 class CIFilterColorCubeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Cube filter.
Example:

```
// apply the Color Cube filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterColorCubeMBS
filter.inputImage = image
filter.inputCubeDimension = 2
filter.inputExtrapolate = 0

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIColorCube
DisplayName English:	Color Cube
DisplayName German:	Farbw√ºrfel
DisplayName French:	Cube de couleur
DisplayName Italian:	Cubo colore
DisplayName Spanish:	Cubo de color

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCubeDimension: Cube Dimension
- inputCubeData: Cube Data
- inputExtrapolate: Extrapolate

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.52.2 Methods

60.52.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.52.4 Properties

60.52.5 AttributeinputCubeData as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cube attribute.
Notes: This attribute should have this content:

(Read only property)

60.52.6 AttributeinputCubeDimension as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputCubeData
Class:	Memoryblock
DisplayName English:	Cube Data
DisplayName German:	W√ºrfeldaten
DisplayName French:	Donn√©es du cube
DisplayName Italian:	Dati cubo
DisplayName Spanish:	Datos del cubo
DefaultNumber:	0
IdentityNumber:	0

Function: Details about the Color Cube attribute.
Notes: This attribute should have this content:

Name:	inputCubeDimension
Class:	double
Type:	CIAttributeTypeCount
DisplayName English:	Cube Dimension
DisplayName German:	W√ºrfelma√üe
DisplayName French:	Dimension du cube
DisplayName Italian:	Dimensione cubo
DisplayName Spanish:	Dimensi√n del cubo
DefaultNumber:	2
IdentityNumber:	2
MaxNumber:	128
MinNumber:	2

(Read only property)

60.52.7 AttributeinputExtrapolate as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Color Cube attribute.
Notes: This attribute should have this content:

(Read only property)

60.52.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputExtrapolate
Class:	double
Type:	CIAttributeTypeBoolean
DisplayName English:	Extrapolate
DisplayName German:	Extrapolieren
DisplayName French:	Extrapoler
DisplayName Italian:	Estrapola
DisplayName Spanish:	Extrapolar
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0

Function: Details about the Color Cube attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.52.9 inputCubeData as Memoryblock

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Cube Data
Notes:

See AttributeinputCubeData for more details.
(Read and Write property)

Name:	inputCubeData
Class:	Memoryblock (NSData)
DisplayName English:	Cube Data
DisplayName German:	W√ºrfeldaten
DisplayName French:	Donn√©es du cube
DisplayName Italian:	Dati cubo
DisplayName Spanish:	Datos del cubo

60.52.10 inputCubeDimension as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Cube Dimension
Notes:

Name:	inputCubeDimension
Class:	double (NSNumber)
DisplayName English:	Cube Dimension
DisplayName German:	W√ºrfelma√üe
DisplayName French:	Dimension du cube
DisplayName Italian:	Dimensione cubo
DisplayName Spanish:	Dimensi√n del cubo
Type:	CIAttributeTypeCount

See AttributeinputCubeDimension for more details.
(Read and Write property)

60.52.11 inputExtrapolate as double

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Extrapolate
Notes:

Name:	inputExtrapolate
Class:	double (NSNumber)
DisplayName English:	Extrapolate
DisplayName German:	Extrapolieren
DisplayName French:	Extrapoler
DisplayName Italian:	Estrapola
DisplayName Spanish:	Extrapolar
Type:	CIAttributeTypeBoolean

See AttributeinputExtrapolate for more details.
(Read and Write property)

60.52.12 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.53 class CIFilterColorCubesMixedWithMaskMBS

60.53.1 class CIFilterColorCubesMixedWithMaskMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Cubes Mixed With Mask filter.
Example:

```
// apply the Color Cubes Mixed With Mask filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterColorCubesMixedWithMaskMBS
filter.inputImage = image
filter.inputMaskImage = image
filter.inputCubeDimension = 2
filter.inputExtrapolate = 0

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIColorCubesMixedWithMask
DisplayName English:	Color Cubes Mixed With Mask
DisplayName German:	Mit Maske gemischte Farbw√ºrfel
DisplayName French:	Cubes de couleur m√©lang√©s avec masque
DisplayName Italian:	Cubi di colori misti con maschera
DisplayName Spanish:	Cubos de color mezclados con la m√°scara

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputMaskImage: Mask Image
- inputCubeDimension: Cube Dimension
- inputCube0Data: Cube 0 Data
- inputCube1Data: Cube 1 Data
- inputColorSpace: Color Space
- inputExtrapolate: Extrapolate

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.53.2 Methods

60.53.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.53.4 Properties

60.53.5 AttributeinputColorSpace as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cubes Mixed With Mask attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputColorSpace
Class:	CGColorSpaceMBS
DisplayName English:	Color Space
DisplayName German:	Farbraum
DisplayName French:	Espace colorim√©trique
DisplayName Italian:	Spazio colore
DisplayName Spanish:	Espacio de color
DefaultNumber:	0
IdentityNumber:	0

60.53.6 AttributeinputCube0Data as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cubes Mixed With Mask attribute.
Notes: This attribute should have this content:

Name:	inputCube0Data
Class:	Memoryblock
DisplayName English:	Cube 0 Data
DisplayName German:	Daten W√ºrfel 0
DisplayName French:	Donn√©es du cube¬†0
DisplayName Italian:	Dati 0 cubo
DisplayName Spanish:	Datos del cubo 0
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.53.7 AttributeinputCube1Data as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cubes Mixed With Mask attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputCube1Data
Class:	Memoryblock
DisplayName English:	Cube 1 Data
DisplayName German:	Daten W√ºrfel 1
DisplayName French:	Donn√©es du cube¬†1
DisplayName Italian:	Dati 1 cubo
DisplayName Spanish:	Datos del cubo 1
DefaultNumber:	0
IdentityNumber:	0

60.53.8 AttributeinputCubeDimension as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cubes Mixed With Mask attribute.
Notes: This attribute should have this content:

Name:	inputCubeDimension
Class:	double
Type:	CIAttributeTypeCount
DisplayName English:	Cube Dimension
DisplayName German:	W√ºrfelma√üe
DisplayName French:	Dimension du cube
DisplayName Italian:	Dimensione cubo
DisplayName Spanish:	Dimensi√n del cubo
DefaultNumber:	2
IdentityNumber:	2
MaxNumber:	128
MinNumber:	2

(Read only property)

60.53.9 AttributeinputExtrapolate as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Color Cubes Mixed With Mask attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputExtrapolate
Class:	double
Type:	CIAttributeTypeBoolean
DisplayName English:	Extrapolate
DisplayName German:	Extrapolieren
DisplayName French:	Extrapoler
DisplayName Italian:	Estrapola
DisplayName Spanish:	Extrapolar
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0

60.53.10 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cubes Mixed With Mask attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.53.11 AttributeinputMaskImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cubes Mixed With Mask attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputMaskImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de m√°scara
DefaultNumber:	0
IdentityNumber:	0

60.53.12 inputColorSpace as CGColorSpaceMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color Space
Notes:

Name:	inputColorSpace
Class:	CGColorSpaceMBS (NSObject)
DisplayName English:	Color Space
DisplayName German:	Farbraum
DisplayName French:	Espace colorim√©trique
DisplayName Italian:	Spazio colore
DisplayName Spanish:	Espacio de color

See AttributeinputColorSpace for more details.
(Read and Write property)

60.53.13 inputCube0Data as Memoryblock

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Cube 0 Data
Notes:

Name:	inputCube0Data
Class:	Memoryblock (NSData)
DisplayName English:	Cube 0 Data
DisplayName German:	Daten W√°rfel 0
DisplayName French:	Donn√©es du cube¬†0
DisplayName Italian:	Dati 0 cubo
DisplayName Spanish:	Datos del cubo 0

See AttributeinputCube0Data for more details.
(Read and Write property)

60.53.14 inputCube1Data as Memoryblock

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Cube 1 Data
Notes:

Name:	inputCube1Data
Class:	Memoryblock (NSData)
DisplayName English:	Cube 1 Data
DisplayName German:	Daten W√ºrfel 1
DisplayName French:	Donn√©es du cube¬†1
DisplayName Italian:	Dati 1 cubo
DisplayName Spanish:	Datos del cubo 1

See AttributeinputCube1Data for more details.
(Read and Write property)

60.53.15 inputCubeDimension as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Cube Dimension
Notes:

Name:	inputCubeDimension
Class:	double (NSNumber)
DisplayName English:	Cube Dimension
DisplayName German:	W√ºrfelma√üe
DisplayName French:	Dimension du cube
DisplayName Italian:	Dimensione cubo
DisplayName Spanish:	Dimensi√n del cubo
Type:	CIAttributeTypeCount

See AttributeinputCubeDimension for more details.
(Read and Write property)

60.53.16 inputExtrapolate as double

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Extrapolate
Notes:

Name:	inputExtrapolate
Class:	double (NSNumber)
DisplayName English:	Extrapolate
DisplayName German:	Extrapolieren
DisplayName French:	Extrapoler
DisplayName Italian:	Estrapola
DisplayName Spanish:	Extrapolar
Type:	CIAttributeTypeBoolean

See AttributeinputExtrapolate for more details.
(Read and Write property)

60.53.17 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.53.18 inputMaskImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Mask Image
Notes:

Name:	inputMaskImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de m√°scara
Type:	CIAttributeTypeImage

See AttributeinputMaskImage for more details.
(Read and Write property)

60.54 class CIFilterColorCubeWithColorSpaceMBS

60.54.1 class CIFilterColorCubeWithColorSpaceMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Cube with ColorSpace filter.
Example:

```
// apply the Color Cube With Color Space filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterColorCubeWithColorSpaceMBS
filter.inputImage = image
filter.inputCubeDimension = 2
filter.inputExtrapolate = 0

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIColorCubeWithColorSpace
DisplayName English:	Color Cube with ColorSpace
DisplayName German:	Farbw√ºrfel mit ColorSpace
DisplayName French:	Cube de couleur avec ColorSpace
DisplayName Italian:	Cubo colore con spazio colore
DisplayName Spanish:	Cubo de color con espacio de color

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCubeDimension: Cube Dimension
- inputCubeData: Cube Data
- inputExtrapolate: Extrapolate
- inputColorSpace: Color Space

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.54.2 Methods

60.54.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.54.4 Properties

60.54.5 AttributeinputColorSpace as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cube with ColorSpace attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputColorSpace
Class:	CGColorSpaceMBS
DisplayName English:	Color Space
DisplayName German:	Farbraum
DisplayName French:	Espace colorim√©trique
DisplayName Italian:	Spazio colore
DisplayName Spanish:	Espacio de color
DefaultNumber:	0
IdentityNumber:	0

60.54.6 AttributeinputCubeData as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cube with ColorSpace attribute.
Notes: This attribute should have this content:

Name:	inputCubeData
Class:	Memoryblock
DisplayName English:	Cube Data
DisplayName German:	W√ºrfeldaten
DisplayName French:	Donn√©es du cube
DisplayName Italian:	Dati cubo
DisplayName Spanish:	Datos del cubo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.54.7 AttributeinputCubeDimension as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cube with ColorSpace attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputCubeDimension
Class:	double
Type:	CIAttributeTypeCount
DisplayName English:	Cube Dimension
DisplayName German:	W√ºrfelma√üe
DisplayName French:	Dimension du cube
DisplayName Italian:	Dimensione cubo
DisplayName Spanish:	Dimensi√n del cubo
DefaultNumber:	2
IdentityNumber:	2
MaxNumber:	128
MinNumber:	2

60.54.8 AttributeinputExtrapolate as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Color Cube with ColorSpace attribute.
Notes: This attribute should have this content:

Name:	inputExtrapolate
Class:	double
DisplayName English:	Extrapolate
DisplayName German:	Extrapolieren
DisplayName French:	Extrapoler
DisplayName Italian:	Estrapola
DisplayName Spanish:	Extrapolar
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.54.9 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cube with ColorSpace attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.54.10 inputColorSpace as CGColorSpaceMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color Space
Notes:

Name:	inputColorSpace
Class:	CGColorSpaceMBS (NSObject)
DisplayName English:	Color Space
DisplayName German:	Farbraum
DisplayName French:	Espace colorim√©trique
DisplayName Italian:	Spazio colore
DisplayName Spanish:	Espacio de color

See AttributeinputColorSpace for more details.
(Read and Write property)

60.54.11 inputCubeData as Memoryblock

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Cube Data
Notes:

Name:	inputCubeData
Class:	Memoryblock (NSData)
DisplayName English:	Cube Data
DisplayName German:	W√ºrfeldaten
DisplayName French:	Donn√©es du cube
DisplayName Italian:	Dati cubo
DisplayName Spanish:	Datos del cubo

See AttributeinputCubeData for more details.
(Read and Write property)

60.54.12 inputCubeDimension as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Cube Dimension
Notes:

Name:	inputCubeDimension
Class:	double (NSNumber)
DisplayName English:	Cube Dimension
DisplayName German:	W√ºrfelma√üe
DisplayName French:	Dimension du cube
DisplayName Italian:	Dimensione cubo
DisplayName Spanish:	Dimensi√n del cubo
Type:	CIAttributeTypeCount

See AttributeinputCubeDimension for more details.
(Read and Write property)

60.54.13 inputExtrapolate as double

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Extrapolate
Notes:

Name:	inputExtrapolate
Class:	double (NSNumber)
DisplayName English:	Extrapolate
DisplayName German:	Extrapolieren
DisplayName French:	Extrapoler
DisplayName Italian:	Estrapola
DisplayName Spanish:	Extrapolar

See AttributeinputExtrapolate for more details.
(Read and Write property)

60.54.14 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.55 class CIFilterColorCurvesMBS

60.55.1 class CIFilterColorCurvesMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Curves filter.
Example:

```
// apply the Color Curves filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterColorCurvesMBS
filter.inputImage = image
filter.inputCurvesDomain = New CIVectorMBS(0, 1)

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIColorCurves
DisplayName English:	Color Curves
DisplayName German:	Farbkurven
DisplayName French:	Courbes de couleur
DisplayName Italian:	Curve colore
DisplayName Spanish:	Curvas de colores

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCurvesData: Curves Data
- inputCurvesDomain: Curves Domain
- inputColorSpace: Color Space

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.55.2 Methods

60.55.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.55.4 Properties

60.55.5 AttributeinputColorSpace as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Curves attribute.
Notes: This attribute should have this content:

Name:	inputColorSpace
Class:	CGColorSpaceMBS
DisplayName English:	Color Space
DisplayName German:	Farbraum
DisplayName French:	Espace colorim√©trique
DisplayName Italian:	Spazio colore
DisplayName Spanish:	Espacio de color
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.55.6 AttributeinputCurvesData as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Curves attribute.
Notes: This attribute should have this content:

Name:	inputCurvesData
Class:	Memoryblock
DisplayName English:	Curves Data
DisplayName German:	Kurvendaten
DisplayName French:	Donn√©es des courbes
DisplayName Italian:	Dati curve
DisplayName Spanish:	Datos de las curvas
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.55.7 AttributeinputCurvesDomain as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Curves attribute.
Notes: This attribute should have this content:

Name:	inputCurvesDomain
Class:	CIVectorMBS
DisplayName English:	Curves Domain
DisplayName German:	Kurven-Domain
DisplayName French:	Domaine des courbes
DisplayName Italian:	Dominio curve
DisplayName Spanish:	Dominio de curvas
DefaultVector:	[0 1]
IdentityVector:	n/a

(Read only property)

60.55.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Curves attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.55.9 inputColorSpace as CGColorSpaceMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color Space
Notes:

Name:	inputColorSpace
Class:	CGColorSpaceMBS (NSObject)
DisplayName English:	Color Space
DisplayName German:	Farbraum
DisplayName French:	Espace colorim√©trique
DisplayName Italian:	Spazio colore
DisplayName Spanish:	Espacio de color

See AttributeinputColorSpace for more details.
(Read and Write property)

60.55.10 inputCurvesData as Memoryblock

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Curves Data
Notes:

Name:	inputCurvesData
Class:	Memoryblock (NSData)
DisplayName English:	Curves Data
DisplayName German:	Kurvendaten
DisplayName French:	Donn√©es des courbes
DisplayName Italian:	Dati curve
DisplayName Spanish:	Datos de las curvas

See AttributeinputCurvesData for more details.
(Read and Write property)

60.55.11 inputCurvesDomain as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Curves Domain
Notes:

Name:	inputCurvesDomain
Class:	CIVectorMBS (CIVector)
DisplayName English:	Curves Domain
DisplayName German:	Kurven-Domain
DisplayName French:	Domaine des courbes
DisplayName Italian:	Dominio curve
DisplayName Spanish:	Dominio de curvas

See AttributeinputCurvesDomain for more details.
(Read and Write property)

60.55.12 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.56 class CIFilterColorDodgeBlendModeMBS

60.56.1 class CIFilterColorDodgeBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Dodge Blend Mode filter.
Notes: Details for this filter:

FilterName:	CIColorDodgeBlendMode
DisplayName English:	Color Dodge Blend Mode
DisplayName German:	Mischmethode ,ÄûFarbig abwedeln,Äú
DisplayName French:	Mode de fusion Densit√© couleur n√©gative
DisplayName Italian:	Modalit√† sfumatura colore schermato
DisplayName Spanish:	Modo de mezcla por evasi√n de color

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.56.2 Methods

60.56.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.56.4 Properties

60.56.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Dodge Blend Mode attribute.
Notes: This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.56.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Dodge Blend Mode attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.56.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

60.56.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.57 class CIFilterColorInvertMBS

60.57.1 class CIFilterColorInvertMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Invert filter.
Notes: Details for this filter:

FilterName:	CIColorInvert
DisplayName English:	Color Invert
DisplayName German:	Farbe umkehren
DisplayName French:	Inversion de couleur
DisplayName Italian:	Inversione colore
DisplayName Spanish:	Inversi√n de color

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.57.2 Methods

60.57.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.57.4 Properties

60.57.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Invert attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.57.6 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.58 class CIFilterColorMapMBS

60.58.1 class CIFilterColorMapMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Map filter.
Notes: Details for this filter:

FilterName:	CIColorMap
DisplayName English:	Color Map
DisplayName German:	Farbkarte
DisplayName French:	Carte de couleurs
DisplayName Italian:	Mappa colore
DisplayName Spanish:	Mapa de color

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputGradientImage: Gradient Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.58.2 Methods

60.58.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.58.4 Properties

60.58.5 AttributeinputGradientImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Map attribute.
Notes: This attribute should have this content:

Name:	inputGradientImage
Class:	CIImageMBS
Type:	CIAttributeTypeGradient
DisplayName English:	Gradient Image
DisplayName German:	Bild f√ºr Verlauf
DisplayName French:	Image du d√©grad√©
DisplayName Italian:	Immagine gradiente
DisplayName Spanish:	Imagen degradada
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.58.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Map attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.58.7 inputGradientImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Gradient Image
Notes:

Name:	inputGradientImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Gradient Image
DisplayName German:	Bild f√ºr Verlauf
DisplayName French:	Image du d√©grad√©
DisplayName Italian:	Immagine gradiente
DisplayName Spanish:	Imagen degradada
Type:	CIAttributeTypeGradient

See AttributeinputGradientImage for more details.
(Read and Write property)

60.58.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.59 class CIFilterColorMatrixMBS

60.59.1 class CIFilterColorMatrixMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Matrix filter.
Example:

```
// apply the Color Matrix filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterColorMatrixMBS
filter.inputImage = image
Var inputAVectorValues() As Double = Array(0.0, 0.0, 0.0, 1.0)
filter.inputAVector = New CIVectorMBS(inputAVectorValues)
Var inputBVectorValues() As Double = Array(0.0, 0.0, 1.0, 0.0)
filter.inputBVector = New CIVectorMBS(inputBVectorValues)
Var inputBiasVectorValues() As Double = Array(0.0, 0.0, 0.0, 0.0)
filter.inputBiasVector = New CIVectorMBS(inputBiasVectorValues)
Var inputGVectorValues() As Double = Array(0.0, 1.0, 0.0, 0.0)
filter.inputGVector = New CIVectorMBS(inputGVectorValues)
Var inputRVectorValues() As Double = Array(1.0, 0.0, 0.0, 0.0)
filter.inputRVector = New CIVectorMBS(inputRVectorValues)

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIColorMatrix
DisplayName English:	Color Matrix
DisplayName German:	Farbmatrix
DisplayName French:	Matrice de couleurs
DisplayName Italian:	Matrice colore
DisplayName Spanish:	Matriz de color

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image

- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRVector: Red Vector
- inputGVector: Green Vector
- inputBVector: Blue Vector
- inputAVector: Alpha Vector
- inputBiasVector: Bias Vector

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.59.2 Methods

60.59.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.59.4 Properties

60.59.5 AttributeinputAVector as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputAVector
Class:	CIVectorMBS
DisplayName English:	Alpha Vector
DisplayName German:	Alpha-Vektor
DisplayName French:	Vecteur alpha
DisplayName Italian:	Vettore alfa
DisplayName Spanish:	Vector alfa
DefaultVector:	[0 0 0 1]
IdentityVector:	[0 0 0 1]

Function: Details about the Color Matrix attribute.
Notes: This attribute should have this content:

(Read only property)

60.59.6 AttributeinputBiasVector as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Matrix attribute.
Notes: This attribute should have this content:

Name:	inputBiasVector
Class:	CIVectorMBS
DisplayName English:	Bias Vector
DisplayName German:	Bias-Vektor
DisplayName French:	Vecteur de biais
DisplayName Italian:	Vettore BIAS
DisplayName Spanish:	Vector oblicuo
DefaultVector:	[0 0 0 0]
IdentityVector:	[0 0 0 0]

(Read only property)

60.59.7 AttributeinputBVector as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Matrix attribute.
Notes: This attribute should have this content:

Name:	inputBVector
Class:	CIVectorMBS
DisplayName English:	Blue Vector
DisplayName German:	Blau-Vektor
DisplayName French:	Vecteur bleu
DisplayName Italian:	Vettore blu
DisplayName Spanish:	Vector azul
DefaultVector:	[0 0 1 0]
IdentityVector:	[0 0 1 0]

(Read only property)

60.59.8 AttributeinputGVector as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Matrix attribute.
Notes: This attribute should have this content:

Name:	inputGVector
Class:	CIVectorMBS
DisplayName English:	Green Vector
DisplayName German:	Gr√ºn-Vektor
DisplayName French:	Vecteur vert
DisplayName Italian:	Vettore verde
DisplayName Spanish:	Vector verde
DefaultVector:	[0 1 0 0]
IdentityVector:	[0 1 0 0]

(Read only property)

60.59.9 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Matrix attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild

DefaultNumber:	0
IdentityNumber:	0

60.59.10 AttributeinputRVector as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Matrix attribute.
Notes: This attribute should have this content:

Name:	inputRVector
Class:	CIVectorMBS
DisplayName English:	Red Vector
DisplayName German:	Rot-Vektor
DisplayName French:	Vecteur rouge
DisplayName Italian:	Vettore rosso
DisplayName Spanish:	Vector rojo
DefaultVector:	[1 0 0 0]
IdentityVector:	[1 0 0 0]

(Read only property)

60.59.11 inputAVector as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Alpha Vector
Notes:

See AttributeinputAVector for more details.
(Read and Write property)

Name:	inputAVector
Class:	CIVectorMBS (CIVector)
DisplayName English:	Alpha Vector
DisplayName German:	Alpha-Vektor
DisplayName French:	Vecteur alpha
DisplayName Italian:	Vettore alfa
DisplayName Spanish:	Vector alfa

60.59.12 inputBiasVector as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Bias Vector
Notes:

Name:	inputBiasVector
Class:	CIVectorMBS (CIVector)
DisplayName English:	Bias Vector
DisplayName German:	Bias-Vektor
DisplayName French:	Vecteur de biais
DisplayName Italian:	Vettore BIAS
DisplayName Spanish:	Vector oblicuo

See AttributeinputBiasVector for more details.
(Read and Write property)

60.59.13 inputBVector as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Blue Vector
Notes:

Name:	inputBVector
Class:	CIVectorMBS (CIVector)
DisplayName English:	Blue Vector
DisplayName German:	Blau-Vektor
DisplayName French:	Vecteur bleu
DisplayName Italian:	Vettore blu
DisplayName Spanish:	Vector azul

See AttributeinputBVector for more details.
(Read and Write property)

60.59.14 inputGVector as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Green Vector
Notes:

Name:	inputGVector
Class:	CIVectorMBS (CIVector)
DisplayName English:	Green Vector
DisplayName German:	Gr√ºn-Vektor
DisplayName French:	Vecteur vert
DisplayName Italian:	Vettore verde
DisplayName Spanish:	Vector verde

See AttributeinputGVector for more details.
(Read and Write property)

60.59.15 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.59.16 inputRVector as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Red Vector
Notes:

Name:	inputRVector
Class:	CIVectorMBS (CIVector)
DisplayName English:	Red Vector
DisplayName German:	Rot-Vektor
DisplayName French:	Vecteur rouge
DisplayName Italian:	Vettore rosso
DisplayName Spanish:	Vector rojo

See AttributeinputRVector for more details.
(Read and Write property)

60.60 class CIFilterColorMonochromeMBS

60.60.1 class CIFilterColorMonochromeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Monochrome filter.
Example:

```
// apply the Color Monochrome filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterColorMonochromeMBS
filter.inputImage = image
filter.inputColor = New CIColorMBS(0.6, 0.45, 0.3, 1)
filter.inputIntensity = 1 // range 0 to 1

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIColorMonochrome
DisplayName English:	Color Monochrome
DisplayName German:	Einfarbig
DisplayName French:	Couleur monochrome
DisplayName Italian:	Colore monocromo
DisplayName Spanish:	Color monocromo

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputColor: Color
- inputIntensity: Intensity

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.60.2 Methods

60.60.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.60.4 Properties

60.60.5 AttributeinputColor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Monochrome attribute.
Notes: This attribute should have this content:

(Read only property)

60.60.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Monochrome attribute.
Notes: This attribute should have this content:

Name:	inputColor
Class:	CIColorMBS
Type:	CIAttributeTypeOpaqueColor
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
DefaultColor:	Red = 0.6, Green = 0.45, Blue = 0.3, Alpha = 1
IdentityNumber:	0

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.60.7 AttributeinputIntensity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Monochrome attribute.
Notes: This attribute should have this content:

(Read only property)

60.60.8 inputColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color
Notes:

See AttributeinputColor for more details.
(Read and Write property)

Name:	inputIntensity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Intensity
DisplayName German:	Intensit√§t
DisplayName French:	Intensit√©
DisplayName Italian:	Intensit√†
DisplayName Spanish:	Intensidad
DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

Name:	inputColor
Class:	CIColorMBS (CIColor)
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
Type:	CIAttributeTypeOpaqueColor

60.60.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.60.10 inputIntensity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Intensity
Notes:

Name:	inputIntensity
Class:	double (NSNumber)
DisplayName English:	Intensity
DisplayName German:	Intensit√§t
DisplayName French:	Intensit√©
DisplayName Italian:	Intensit√†
DisplayName Spanish:	Intensidad
Type:	CIAttributeTypeScalar

See AttributeinputIntensity for more details.
(Read and Write property)

60.61 class CIFilterColorPolynomialMBS

60.61.1 class CIFilterColorPolynomialMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Polynomial filter.
Example:

```
// apply the Color Polynomial filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterColorPolynomialMBS
filter.inputImage = image
Var inputAlphaCoefficientsValues() As Double = Array(0.0, 1.0, 0.0, 0.0)
filter.inputAlphaCoefficients = New CIVectorMBS(inputAlphaCoefficientsValues)
Var inputBlueCoefficientsValues() As Double = Array(0.0, 1.0, 0.0, 0.0)
filter.inputBlueCoefficients = New CIVectorMBS(inputBlueCoefficientsValues)
Var inputGreenCoefficientsValues() As Double = Array(0.0, 1.0, 0.0, 0.0)
filter.inputGreenCoefficients = New CIVectorMBS(inputGreenCoefficientsValues)
Var inputRedCoefficientsValues() As Double = Array(0.0, 1.0, 0.0, 0.0)
filter.inputRedCoefficients = New CIVectorMBS(inputRedCoefficientsValues)

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIColorPolynomial
DisplayName English:	Color Polynomial
DisplayName German:	Farb-Polynom
DisplayName French:	Fonction polynomiale de la couleur
DisplayName Italian:	Polinomio cromatico
DisplayName Spanish:	Polinomio crom√°tico

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels

- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRedCoefficients: Red Coefficients
- inputGreenCoefficients: Green Coefficients
- inputBlueCoefficients: Blue Coefficients
- inputAlphaCoefficients: Alpha Coefficients

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.61.2 Methods

60.61.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.61.4 Properties

60.61.5 AttributeinputAlphaCoefficients as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Polynomial attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputAlphaCoefficients
Class:	CIVectorMBS
DisplayName English:	Alpha Coefficients
DisplayName German:	Alpha-Koeffizienten
DisplayName French:	Coefficients Alpha
DisplayName Italian:	Coefficienti alfa
DisplayName Spanish:	Coeficientes alfa
DefaultVector:	[0 1 0 0]
IdentityVector:	[0 1 0 0]

60.61.6 AttributeinputBlueCoefficients as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Polynomial attribute.
Notes: This attribute should have this content:

Name:	inputBlueCoefficients
Class:	CIVectorMBS
DisplayName English:	Blue Coefficients
DisplayName German:	Blau-Koeffizienten
DisplayName French:	Coefficients Bleu
DisplayName Italian:	Coefficienti colore blu
DisplayName Spanish:	Coeficientes de azul
DefaultVector:	[0 1 0 0]
IdentityVector:	[0 1 0 0]

(Read only property)

60.61.7 AttributeinputGreenCoefficients as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Polynomial attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputGreenCoefficients
Class:	CIVectorMBS
DisplayName English:	Green Coefficients
DisplayName German:	Gr√ºn-Koeffizienten
DisplayName French:	Coefficients Vert
DisplayName Italian:	Coefficienti colore verde
DisplayName Spanish:	Coeficientes de verde
DefaultVector:	[0 1 0 0]
IdentityVector:	[0 1 0 0]

60.61.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Polynomial attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.61.9 AttributeinputRedCoefficients as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Polynomial attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputRedCoefficients
Class:	CIVectorMBS
DisplayName English:	Red Coefficients
DisplayName German:	Rot-Koeffizienten
DisplayName French:	Coefficients Rouge
DisplayName Italian:	Coefficienti colore rosso
DisplayName Spanish:	Coeficientes de rojo
DefaultVector:	[0 1 0 0]
IdentityVector:	[0 1 0 0]

60.61.10 inputAlphaCoefficients as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Alpha Coefficients
Notes:

Name:	inputAlphaCoefficients
Class:	CIVectorMBS (CIVector)
DisplayName English:	Alpha Coefficients
DisplayName German:	Alpha-Koeffizienten
DisplayName French:	Coefficients Alpha
DisplayName Italian:	Coefficienti alfa
DisplayName Spanish:	Coeficientes alfa

See AttributeinputAlphaCoefficients for more details.
(Read and Write property)

60.61.11 inputBlueCoefficients as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Blue Coefficients
Notes:

Name:	inputBlueCoefficients
Class:	CIVectorMBS (CIVector)
DisplayName English:	Blue Coefficients
DisplayName German:	Blau-Koeffizienten
DisplayName French:	Coefficients Bleu
DisplayName Italian:	Coefficienti colore blu
DisplayName Spanish:	Coeficientes de azul

See AttributeinputBlueCoefficients for more details.
(Read and Write property)

60.61.12 inputGreenCoefficients as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Green Coefficients
Notes:

Name:	inputGreenCoefficients
Class:	CIVectorMBS (CIVector)
DisplayName English:	Green Coefficients
DisplayName German:	Gr√ºn-Koeffizienten
DisplayName French:	Coefficients Vert
DisplayName Italian:	Coefficienti colore verde
DisplayName Spanish:	Coeficientes de verde

See AttributeinputGreenCoefficients for more details.
(Read and Write property)

60.61.13 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.61.14 inputRedCoefficients as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Red Coefficients
Notes:

Name:	inputRedCoefficients
Class:	CIVectorMBS (CIVector)
DisplayName English:	Red Coefficients
DisplayName German:	Rot-Koeffizienten
DisplayName French:	Coefficients Rouge
DisplayName Italian:	Coefficienti colore rosso
DisplayName Spanish:	Coeficientes de rojo

See AttributeinputRedCoefficients for more details.
(Read and Write property)

60.62 class CIFilterColorPosterizeMBS

60.62.1 class CIFilterColorPosterizeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Posterize filter.
Notes: Details for this filter:

FilterName:	CIColorPosterize
DisplayName English:	Color Posterize
DisplayName German:	Farbe aufl√sen
DisplayName French:	Post√©riser la couleur
DisplayName Italian:	Posterizzazione colore
DisplayName Spanish:	Posterizaci√n de color

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputLevels: Levels

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.62.2 Methods

60.62.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.62.4 Properties

60.62.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Posterize attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.62.6 AttributeinputLevels as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Posterize attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputLevels
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Levels
DisplayName German:	Werte
DisplayName French:	Niveaux
DisplayName Italian:	Livelli
DisplayName Spanish:	Niveles
DefaultNumber:	6
IdentityNumber:	300
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	30
SliderMinNumber:	2

60.62.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.62.8 inputLevels as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Levels
Notes:

See AttributeinputLevels for more details.
(Read and Write property)

Name:	inputLevels
Class:	double (NSNumber)
DisplayName English:	Levels
DisplayName German:	Werte
DisplayName French:	Niveaux
DisplayName Italian:	Livelli
DisplayName Spanish:	Niveles
Type:	CIAttributeTypeScalar

60.63 class CIFilterColorThresholdMBS

60.63.1 class CIFilterColorThresholdMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Threshold filter.
Notes: Details for this filter:

FilterName:	CIColorThreshold
DisplayName English:	Color Threshold
DisplayName German:	Farbschwellenwert
DisplayName French:	Seuil de coloration
DisplayName Italian:	Soglia colore
DisplayName Spanish:	Umbral de color

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputThreshold: Threshold

Output:

- outputImage

Subclass of the CIFilterMBS class.
Blog Entries

- MBS Xojo Plugins, version 23.0pr5

60.63.2 Methods

60.63.3 Constructor

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.63.4 Properties

60.63.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Color Threshold attribute.
Notes: This attribute should have this content:

Name:	inputImage

IdentityNumber:	0

(Read only property)

60.66.6 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.67 class CIFilterConstantColorGeneratorMBS

60.67.1 class CIFilterConstantColorGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Constant Color filter.
Notes: Details for this filter:

FilterName:	CIConstantColorGenerator
DisplayName English:	Constant Color
DisplayName German:	Farbfl√§che
DisplayName French:	Couleur constante
DisplayName Italian:	Colore costante
DisplayName Spanish:	Color constante

Categories:

- CICategoryGenerator: Generator
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputColor: Color

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.67.2 Methods

60.67.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.67.4 Properties

60.67.5 AttributeinputColor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Constant Color attribute.
Notes: This attribute should have this content:

Name:	inputColor
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
DefaultColor:	Red = 1, Green = 0, Blue = 0, Alpha = 1
IdentityNumber:	0

(Read only property)

60.67.6 inputColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color
Notes:

Name:	inputColor
Class:	CIColorMBS (CIColor)
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
Type:	CIAttributeTypeColor

See AttributeinputColor for more details.
(Read and Write property)

60.68 class CIFilterConvertLabToRGBMBS

60.68.1 class CIFilterConvertLabToRGBMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Convert Lab to RGB filter.
Notes: Details for this filter:

FilterName:	CIConvertLabToRGB
DisplayName English:	Convert Lab to RGB
DisplayName German:	Lab in RGB konvertieren
DisplayName French:	Convertir Lab en RVB
DisplayName Italian:	Converti Lab in RGB
DisplayName Spanish:	Convertir Lab en RGB

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputNormalize: Normalize

Output:

- outputImage

Subclass of the CIFilterMBS class.
Blog Entries

- MBS Xojo Plugins, version 23.0pr5

60.68.2 Methods

60.68.3 Constructor

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.68.4 Properties

60.68.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Convert Lab to RGB attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.68.6 AttributeinputNormalize as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Convert Lab to RGB attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputNormalize
Class:	double
Type:	CIAttributeTypeBoolean
DisplayName:	Normalize
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0

60.68.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.68.8 inputNormalize as double

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Normalize
Notes:

See AttributeinputNormalize for more details.
(Read and Write property)

Name:	inputNormalize
Class:	double (NSNumber)
DisplayName English:	Normalize
DisplayName German:	Normalize
DisplayName French:	Normalize
DisplayName Italian:	Normalize
DisplayName Spanish:	Normalize
Type:	CIAttributeTypeBoolean

60.69 class CIFilterConvertRGBtoLabMBS

60.69.1 class CIFilterConvertRGBtoLabMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Convert RGB to Lab filter.
Notes: Details for this filter:

FilterName:	CIConvertRGBtoLab
DisplayName English:	Convert RGB to Lab
DisplayName German:	RGB in Lab konvertieren
DisplayName French:	Convertir RVB en Lab
DisplayName Italian:	Converti RGB in Lab
DisplayName Spanish:	Convertir RGB en Lab

- MBS Xojo Plugins, version 23.0pr5

60.69.2 Methods

60.69.3 Constructor

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.69.4 Properties

60.69.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Convert RGB to Lab attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.69.6 AttributeinputNormalize as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Convert RGB to Lab attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputNormalize
Class:	double
Type:	CIAttributeTypeBoolean
DisplayName:	Normalize
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0

60.69.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.69.8 inputNormalize as double

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Normalize
Notes:

See AttributeinputNormalize for more details.
(Read and Write property)

Name:	inputNormalize
Class:	double (NSNumber)
DisplayName English:	Normalize
DisplayName German:	Normalize
DisplayName French:	Normalize
DisplayName Italian:	Normalize
DisplayName Spanish:	Normalize
Type:	CIAttributeTypeBoolean

60.70 class CIFilterConvolution3X3MBS

60.70.1 class CIFilterConvolution3X3MBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage 3 by 3 Convolution filter.
Example:

```
// apply the Convolution3X3 filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterConvolution3X3MBS
filter.inputImage = image
filter.inputBias = 0
Var inputWeightsValues() As Double = Array(0.0, 0.0, 0.0, 0.0, 1.0, 0.0, 0.0, 0.0, 0.0)
filter.inputWeights = New CIVectorMBS(inputWeightsValues)

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIConvolution3X3
DisplayName English:	3 by 3 Convolution
DisplayName German:	3 x 3-Faltung
DisplayName French:	Convolution¬†3 par¬†3
DisplayName Italian:	Convoluzione 3 per 3
DisplayName Spanish:	Convoluci√n de 3x3

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputWeights: Weights
- inputBias: Bias

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.70.2 Methods

60.70.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.70.4 Properties

60.70.5 AttributeinputBias as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the 3 by 3 Convolution attribute.
Notes: This attribute should have this content:

Name:	inputBias
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Bias
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.70.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the 3 by 3 Convolution attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.70.7 AttributeinputWeights as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the 3 by 3 Convolution attribute.
Notes: This attribute should have this content:

Name:	inputWeights
Class:	CIVectorMBS
DisplayName:	Weights
DefaultVector:	[0 0 0 0 1 0 0 0 0]
IdentityVector:	[0 0 0 0 1 0 0 0 0]

(Read only property)

60.70.8 inputBias as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Bias
Notes:

Name:	inputBias
Class:	double (NSNumber)
DisplayName English:	Bias
DisplayName German:	Bias
DisplayName French:	Bias
DisplayName Italian:	Bias
DisplayName Spanish:	Bias
Type:	CIAttributeTypeScalar

See AttributeinputBias for more details.
(Read and Write property)

60.70.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.70.10 inputWeights as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Weights
Notes:

See AttributeinputWeights for more details.
(Read and Write property)

Name:	inputWeights
Class:	CIVectorMBS (CIVector)
DisplayName English:	Weights
DisplayName German:	Weights
DisplayName French:	Weights
DisplayName Italian:	Weights
DisplayName Spanish:	Weights

60.71 class CIFilterConvolution5X5MBS

60.71.1 class CIFilterConvolution5X5MBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage 5 by 5 Convolution filter.
Example:

```
// apply the Convolution5X5 filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterConvolution5X5MBS
filter.inputImage = image
filter.inputBias = 0
Var inputWeightsValues() As Double = Array(0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 1.0, 0.0,
0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0)
filter.inputWeights = New CIVectorMBS(inputWeightsValues)

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIConvolution5X5
DisplayName English:	5 by 5 Convolution
DisplayName German:	5 x 5-Faltung
DisplayName French:	Convolution¬†5 par¬†5
DisplayName Italian:	Convoluzione 5 per 5
DisplayName Spanish:	Convoluci√n de 5x5

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image

(Read only property)

60.71.8 inputBias as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Bias
Notes:

Name:	inputBias
Class:	double (NSNumber)
DisplayName English:	Bias
DisplayName German:	Bias
DisplayName French:	Bias
DisplayName Italian:	Bias
DisplayName Spanish:	Bias
Type:	CIAttributeTypeScalar

See AttributeinputBias for more details.
(Read and Write property)

60.71.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.71.10 inputWeights as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Weights
Notes:

See AttributeinputWeights for more details.
(Read and Write property)

Name:	inputWeights
Class:	CIVectorMBS (CIVector)
DisplayName English:	Weights
DisplayName German:	Weights
DisplayName French:	Weights
DisplayName Italian:	Weights
DisplayName Spanish:	Weights

60.72 class CIFilterConvolution7X7MBS

60.72.1 class CIFilterConvolution7X7MBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage 7 by 7 Convolution filter.
Example:

```
// apply the Convolution7X7 filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterConvolution7X7MBS
filter.inputImage = image
filter.inputBias = 0
Var inputWeightsValues() As Double = Array(0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0,
0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 1.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0,
0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0)
filter.inputWeights = New CIVectorMBS(inputWeightsValues)

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIConvolution7X7
DisplayName English:	7 by 7 Convolution
DisplayName German:	7 x 7-Faltung
DisplayName French:	Convolution¬†7 par¬†7
DisplayName Italian:	Convoluzione 7 per 7

60.73 class CIFilterConvolution9HorizontalMBS

60.73.1 class CIFilterConvolution9HorizontalMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Horizontal 9 Convolution filter.
Example:

```
// apply the Convolution9Horizontal filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterConvolution9HorizontalMBS
filter.inputImage = image
filter.inputBias = 0
Var inputWeightsValues() As Double = Array(0.0, 0.0, 0.0, 0.0, 1.0, 0.0, 0.0, 0.0, 0.0)
filter.inputWeights = New CIVectorMBS(inputWeightsValues)

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIConvolution9Horizontal
DisplayName English:	Horizontal 9 Convolution
DisplayName German:	Horizontale 9-Faltung
DisplayName French:	Convolution¬†9 horizontale
DisplayName Italian:	Convoluzione orizzontale 9
DisplayName Spanish:	Convoluci√n horizontal con 9 valores

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputWeights: Weights
- inputBias: Bias

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.73.2 Methods

60.73.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.73.4 Properties

60.73.5 AttributeinputBias as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Horizontal 9 Convolution attribute.
Notes: This attribute should have this content:

Name:	inputBias
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Bias
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.73.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Horizontal 9 Convolution attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine

IdentityVector:	[0 0 0 0 1 0 0 0 0]

(Read only property)

60.73.8 inputBias as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Bias
Notes:

Name:	inputBias
Class:	double (NSNumber)
DisplayName English:	Bias
DisplayName German:	Bias
DisplayName French:	Bias
DisplayName Italian:	Bias
DisplayName Spanish:	Bias
Type:	CIAttributeTypeScalar

See AttributeinputBias for more details.
(Read and Write property)

60.73.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.73.10 inputWeights as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Weights
Notes:

See AttributeinputWeights for more details.
(Read and Write property)

Name:	inputWeights
Class:	CIVectorMBS (CIVector)
DisplayName English:	Weights
DisplayName German:	Weights
DisplayName French:	Weights
DisplayName Italian:	Weights
DisplayName Spanish:	Weights

60.74 class CIFilterConvolution9VerticalMBS

60.74.1 class CIFilterConvolution9VerticalMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Vertical 9 Convolution filter.
Example:

```
// apply the Convolution9Vertical filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterConvolution9VerticalMBS
filter.inputImage = image
filter.inputBias = 0
Var inputWeightsValues() As Double = Array(0.0, 0.0, 0.0, 0.0, 1.0, 0.0, 0.0, 0.0, 0.0)
filter.inputWeights = New CIVectorMBS(inputWeightsValues)

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIConvolution9Vertical
DisplayName English:	Vertical 9 Convolution
DisplayName German:	Vertikale 9-Faltung
DisplayName French:	Convolution¬†9 verticale
DisplayName Italian:	Convoluzione verticale 9
DisplayName Spanish:	Convoluci√n vertical con 9 valores

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputWeights: Weights
- inputBias: Bias

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.74.2 Methods

60.74.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.74.4 Properties

60.74.5 AttributeinputBias as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Vertical 9 Convolution attribute.
Notes: This attribute should have this content:

Name:	inputBias
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Bias
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.74.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Vertical 9 Convolution attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.74.7 AttributeinputWeights as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Vertical 9 Convolution attribute.
Notes: This attribute should have this content:

Name:	inputWeights
Class:	CIVectorMBS
DisplayName:	Weights
DefaultVector:	[0 0 0 0 1 0 0 0 0]
IdentityVector:	[0 0 0 0 1 0 0 0 0]

(Read only property)

60.74.8 inputBias as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Bias
Notes:

Name:	inputBias
Class:	double (NSNumber)
DisplayName English:	Bias
DisplayName German:	Bias
DisplayName French:	Bias
DisplayName Italian:	Bias
DisplayName Spanish:	Bias
Type:	CIAttributeTypeScalar

See AttributeinputBias for more details.
(Read and Write property)

60.74.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.74.10 inputWeights as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Weights
Notes:

See AttributeinputWeights for more details.
(Read and Write property)

Name:	inputWeights
Class:	CIVectorMBS (CIVector)
DisplayName English:	Weights
DisplayName German:	Weights
DisplayName French:	Weights
DisplayName Italian:	Weights
DisplayName Spanish:	Weights

60.75 class CIFilterConvolutionRGB3X3MBS

60.75.1 class CIFilterConvolutionRGB3X3MBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage 3 by 3 RGB Convolution filter.
Example:

```
// apply the Convolution RGB3X3 filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterConvolutionRGB3X3MBS
filter.inputImage = image
filter.inputBias = 0
Var inputWeightsValues() As Double = Array(0.0, 0.0, 0.0, 0.0, 1.0, 0.0, 0.0, 0.0, 0.0)
filter.inputWeights = New CIVectorMBS(inputWeightsValues)

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIConvolutionRGB3X3
DisplayName English:	3 by 3 RGB Convolution
DisplayName German:	3 x 3-RGB-Faltung
DisplayName French:	Convolution¬†RVB 3 par¬†3
DisplayName Italian:	Convoluzione RGB 3 per 3
DisplayName Spanish:	Convoluci√n RGB de 3x3

- MBS Xojo Plugins, version 23.0pr5

60.79.2 Methods

60.79.3 Constructor

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.79.4 Properties

60.79.5 AttributeinputBias as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Vertical 9 RGB Convolution attribute.
Notes: This attribute should have this content:

Name:	inputBias
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Bias
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.79.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Vertical 9 RGB Convolution attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.79.7 AttributeinputWeights as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Vertical 9 RGB Convolution attribute.
Notes: This attribute should have this content:

Name:	inputWeights
Class:	CIVectorMBS
DisplayName:	Weights
DefaultVector:	[0 0 0 0 1 0 0 0 0]
IdentityVector:	[0 0 0 0 1 0 0 0 0]

(Read only property)

60.79.8 inputBias as double

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Bias
Notes:

Name:	inputBias
Class:	double (NSNumber)
DisplayName English:	Bias
DisplayName German:	Bias
DisplayName French:	Bias
DisplayName Italian:	Bias
DisplayName Spanish:	Bias
Type:	CIAttributeTypeScalar

See AttributeinputBias for more details.
(Read and Write property)

60.79.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.79.10 inputWeights as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Weights
Notes:

See AttributeinputWeights for more details.
(Read and Write property)

Name:	inputWeights
Class:	CIVectorMBS (CIVector)
DisplayName English:	Weights
DisplayName German:	Weights
DisplayName French:	Weights
DisplayName Italian:	Weights
DisplayName Spanish:	Weights

60.80 class CIFilterCopyMachineTransitionMBS

60.80.1 class CIFilterCopyMachineTransitionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Copy Machine filter.
Example:

```
// apply the Copy Machine Transition filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterCopyMachineTransitionMBS
filter.inputImage = image
filter.inputTargetImage = image
filter.inputAngle = 0 // range 0 to 6.283185
filter.inputColor = New CIColorMBS(0.6, 1, 0.8, 1)
Var inputExtentValues() As Double = Array(0.0, 0.0, 300.0, 300.0)
filter.inputExtent = New CIVectorMBS(inputExtentValues)
filter.inputOpacity = 1.3 // range 0 to 3
filter.inputTime = 0.5 // range 0 to 1
filter.inputWidth = 200 // range 0.1 to 500

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CICopyMachineTransition
DisplayName English:	Copy Machine
DisplayName German:	Kopieren
DisplayName French:	Photocopieur
DisplayName Italian:	Fotocopiatrice
DisplayName Spanish:	Copiar m√°quina

Categories:

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputTargetImage: Target Image
- inputExtent: Extent
- inputColor: Color
- inputTime: Time
- inputAngle: Angle
- inputWidth: Width
- inputOpacity: Opacity

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.80.2 Methods

60.80.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.80.4 Properties

60.80.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Copy Machine attribute.
Notes: This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	6.283185
SliderMinNumber:	0

(Read only property)

60.80.6 AttributeinputColor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Copy Machine attribute.
Notes: This attribute should have this content:

Name:	inputColor
Class:	CIColorMBS
Type:	CIAttributeTypeOpaqueColor
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
DefaultColor:	Red = 0.6, Green = 1, Blue = 0.8, Alpha = 1
IdentityNumber:	0

(Read only property)

60.80.7 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Copy Machine attribute.
Notes: This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 300 300]
IdentityVector:	n/a

(Read only property)

60.80.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Copy Machine attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.80.9 AttributeinputOpacity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Copy Machine attribute.
Notes: This attribute should have this content:

Name:	inputOpacity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Opacity
DisplayName German:	Deckkraft
DisplayName French:	Opacit√©
DisplayName Italian:	Opacit√†
DisplayName Spanish:	Opacidad
DefaultNumber:	1.3
IdentityNumber:	1.3
SliderMaxNumber:	3
SliderMinNumber:	0

(Read only property)

60.80.10 AttributeinputTargetImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Copy Machine attribute.
Notes: This attribute should have this content:

Name:	inputTargetImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.80.11 AttributeinputTime as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Copy Machine attribute.
Notes: This attribute should have this content:

Name:	inputTime
Class:	double
Type:	CIAttributeTypeTime
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

60.80.12 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Copy Machine attribute.
Notes: This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	200
IdentityNumber:	200
MaxNumber:	0
MinNumber:	0.1
SliderMaxNumber:	500
SliderMinNumber:	0.1

(Read only property)

60.80.13 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

60.80.14 inputColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color
Notes:

Name:	inputColor
Class:	CIColorMBS (CIColor)
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
Type:	CIAttributeTypeOpaqueColor

See AttributeinputColor for more details.
(Read and Write property)

60.80.15 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

60.80.16 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.80.17 inputOpacity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Opacity
Notes:

See AttributeinputOpacity for more details.
(Read and Write property)

Name:	inputOpacity
Class:	double (NSNumber)
DisplayName English:	Opacity
DisplayName German:	Deckkraft
DisplayName French:	Opacit√©
DisplayName Italian:	Opacit√†
DisplayName Spanish:	Opacidad
Type:	CIAttributeTypeScalar

60.80.18 inputTargetImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Target Image
Notes:

Name:	inputTargetImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
Type:	CIAttributeTypeImage

See AttributeinputTargetImage for more details.
(Read and Write property)

60.80.19 inputTime as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Time
Notes:

Name:	inputTime
Class:	double (NSNumber)
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
Type:	CIAttributeTypeTime

See AttributeinputTime for more details.
(Read and Write property)

60.80.20 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

60.81 class CIFilterCoreMLModelFilterMBS

60.81.1 class CIFilterCoreMLModelFilterMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage CoreML Model Filter filter.
Example:

```
// apply the Core MLModel Filter filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterCoreMLModelFilterMBS
filter.inputImage = image
filter.inputHeadIndex = 0
filter.inputSoftmaxNormalization = 0

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CICoreMLModelFilter
DisplayName English:	CoreML Model Filter
DisplayName German:	CoreML-Modellfilter
DisplayName French:	Filtre de mod√®le CoreML
DisplayName Italian:	Filtro modello CoreML
DisplayName Spanish:	Filtro de modelo CoreML

Categories:

- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryStylize: Stylize

Input:

- inputImage: Image
- inputModel: Model

- inputHeadIndex: Head Index
- inputSoftmaxNormalization: Softmax Normalization

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.83 class CIFilterCrystallizeMBS

60.83.1 class CIFilterCrystallizeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Crystallize filter.
Example:

```
// apply the Crystallize filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterCrystallizeMBS
filter.inputImage = image
filter.inputCenter = New CIVectorMBS(150, 150)
filter.inputRadius = 20 // range 1 to 100

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CICrystallize
DisplayName English:	Crystallize
DisplayName German:	Kristallisieren
DisplayName French:	Cristalliser
DisplayName Italian:	Cristallizzazione
DisplayName Spanish:	Cristalizaci√n

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRadius: Radius
- inputCenter: Center

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.83.2 Methods

60.83.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

MinNumber:	1
SliderMaxNumber:	100
SliderMinNumber:	1

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

60.83.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.83.10 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

60.84 class CIFilterDarkenBlendModeMBS

60.84.1 class CIFilterDarkenBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Darken Blend Mode filter.
Notes: Details for this filter:

FilterName:	CIDarkenBlendMode
DisplayName English:	Darken Blend Mode
DisplayName German:	Mischmethode ‚ÄûAbdunkeln‚Äú
DisplayName French:	Mode de fusion Assombrir
DisplayName Italian:	Modalit√† sfumatura scura
DisplayName Spanish:	Oscurecer modo de mezcla

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.84.2 Methods

60.84.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.84.4 Properties

60.84.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Darken Blend Mode attribute.
Notes: This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.84.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Darken Blend Mode attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.84.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

60.84.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.85 class CIFilterDepthBlurEffectMBS

60.85.1 class CIFilterDepthBlurEffectMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Depth Blur Effect filter.
Example:

```
// apply the Depth Blur Effect filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterDepthBlurEffectMBS
filter.inputImage = image
filter.inputDisparityImage = image
filter.inputGainMap = image
filter.inputGlassesImage = image
filter.inputHairImage = image
filter.inputMatteImage = image
filter.inputAperture = 0 // range 1 to 22
filter.inputChinPositions = New CIVectorMBS(-1, -1)
filter.inputLeftEyePositions = New CIVectorMBS(-1, -1)
filter.inputLumaNoiseScale = 0 // range 0 to 0.1
filter.inputNosePositions = New CIVectorMBS(-1, -1)
filter.inputRightEyePositions = New CIVectorMBS(-1, -1)
filter.inputScaleFactor = 1 // range 0 to 1

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIDepthBlurEffect
DisplayName English:	Depth Blur Effect
DisplayName German:	Tiefenweichzeichneneffekt
DisplayName French:	Effet de flou de profondeur
DisplayName Italian:	Effetto sfocatura profondit√†
DisplayName Spanish:	Efecto de profundidad desenfocado

Categories:

- CICategoryBlur: Blur

- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputDisparityImage: Disparity Image
- inputMatteImage: Matte Image
- inputHairImage: Hair Image
- inputGlassesImage: Glasses Image
- inputGainMap: Gain Map
- inputAperture: Aperture
- inputLeftEyePositions: Left Eye Positions
- inputRightEyePositions: Right Eye Positions
- inputChinPositions: Chin Positions
- inputNosePositions: Nose Positions
- inputFocusRect: Focus Rectangle
- inputLumaNoiseScale: Luma Noise Scale
- inputScaleFactor: Scale Factor
- inputCalibrationData: Calibration Data
- inputAuxDataMetadata: Aux Data Metadata
- inputShape: Shape

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.85.2 Methods

60.85.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.85.4 Properties

60.85.5 AttributeinputAperture as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes: This attribute should have this content:

Name:	inputAperture
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Aperture
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	22
MinNumber:	0
SliderMaxNumber:	22
SliderMinNumber:	1

(Read only property)

60.85.6 AttributeinputAuxDataMetadata as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputAuxDataMetadata
Class:	CGImageMetadataMBS
DisplayName English:	Aux Data Metadata
DisplayName German:	Hilfsdaten –Metadaten
DisplayName French:	M√©tadonn√©es des donn√©es auxiliaires
DisplayName Italian:	Metadati dati canale
DisplayName Spanish:	Metadatos auxiliares
DefaultNumber:	0
IdentityNumber:	0

60.85.7 AttributeinputCalibrationData as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes: This attribute should have this content:

Name:	inputCalibrationData
Class:	Variant
DisplayName English:	Calibration Data
DisplayName German:	Kalibrierungsdaten
DisplayName French:	Donn√©es d,Äô√©talonnage
DisplayName Italian:	Dati di calibrazione
DisplayName Spanish:	Datos de calibraci√n

(Read only property)

60.85.8 AttributeinputChinPositions as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes: This attribute should have this content:

(Read only property)

60.85.9 AttributeinputDisparityImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.

Name:	inputChinPositions
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Chin Positions
DisplayName German:	Kinnpositionen
DisplayName French:	Positions du menton
DisplayName Italian:	Posizioni mento
DisplayName Spanish:	Posiciones de barbilla
DefaultVector:	[-1 -1]

(Read only property)

60.85.22 inputAperture as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Aperture
Notes:

See AttributeinputAperture for more details.
(Read and Write property)

60.85.23 inputAuxDataMetadata as CGImageMetadataMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputAperture
Class:	double (NSNumber)
DisplayName English:	Aperture
DisplayName German:	Aperture
DisplayName French:	Aperture
DisplayName Italian:	Aperture
DisplayName Spanish:	Aperture
Type:	CIAttributeTypeScalar

Function: The attribute Aux Data Metadata
Notes:

Name:	inputAuxDataMetadata
Class:	CGImageMetadataMBS (CGImageMetadataRef)
DisplayName English:	Aux Data Metadata
DisplayName German:	Hilfsdaten –Metadaten
DisplayName French:	M√©tadonn√©es des donn√©es auxiliaires
DisplayName Italian:	Metadati dati canale
DisplayName Spanish:	Metadatos auxiliares

See AttributeinputAuxDataMetadata for more details.
(Read and Write property)

60.85.24 inputCalibrationData as Variant

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Calibration Data
Notes:

Name:	inputCalibrationData
Class:	Variant (AVCameraCalibrationData)
DisplayName English:	Calibration Data
DisplayName German:	Kalibrierungsdaten
DisplayName French:	Donn√©es d,Äô√©talonnage
DisplayName Italian:	Dati di calibrazione
DisplayName Spanish:	Datos de calibraci√n

See AttributeinputCalibrationData for more details.
(Read and Write property)

60.85.25 inputChinPositions as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Chin Positions
Notes:

Name:	inputChinPositions
Class:	CIVectorMBS (CIVector)
DisplayName English:	Chin Positions
DisplayName German:	Kinnpositionen
DisplayName French:	Positions du menton
DisplayName Italian:	Posizioni mento
DisplayName Spanish:	Posiciones de barbilla
Type:	CIAttributeTypePosition

See AttributeinputChinPositions for more details.
(Read and Write property)

60.85.26 inputDisparityImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Disparity Image
Notes:

Name:	inputDisparityImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Disparity Image
DisplayName German:	Abweichungsbild
DisplayName French:	Image de disparit√©
DisplayName Italian:	Immagine di disparit√†
DisplayName Spanish:	Imagen de disparidad
Type:	CIAttributeTypeImage

See AttributeinputDisparityImage for more details.
(Read and Write property)

60.85.27 inputFocusRect as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Focus Rectangle
Notes:

Name:	inputFocusRect
Class:	CIVectorMBS (CIVector)
DisplayName English:	Focus Rectangle
DisplayName German:	Fokusrechteck
DisplayName French:	Rectangle de mise au point
DisplayName Italian:	Rettangolo di messa a fuoco
DisplayName Spanish:	Rect√°ngulo focal
Type:	CIAttributeTypeRectangle

See AttributeinputFocusRect for more details.
(Read and Write property)

60.85.28 inputGainMap as CIImageMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Gain Map
Notes:

Name:	inputGainMap
Class:	CIImageMBS (CIImage)
DisplayName English:	Gain Map
DisplayName German:	St√§rkeverteilung
DisplayName French:	Carte des gains
DisplayName Italian:	Mappa guadagno
DisplayName Spanish:	Mapa de ganancia
Type:	CIAttributeTypeImage

See AttributeinputGainMap for more details.
(Read and Write property)

60.85.29 inputGlassesImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Glasses Image
Notes:

See AttributeinputGlassesImage for more details.
(Read and Write property)

Name:	inputGlassesImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Glasses Image
DisplayName German:	Bild einer Brille
DisplayName French:	Image de lunettes
DisplayName Italian:	Immagine degli occhiali
DisplayName Spanish:	Imagen de las gafas
Type:	CIAttributeTypeImage

60.85.30 inputHairImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Hair Image
Notes:

Name:	inputHairImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Hair Image
DisplayName German:	Haareffekt
DisplayName French:	Image de cheveu
DisplayName Italian:	Immagine capelli
DisplayName Spanish:	Imagen del cabello
Type:	CIAttributeTypeImage

See AttributeinputHairImage for more details.
(Read and Write property)

60.85.31 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.85.32 inputLeftEyePositions as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Left Eye Positions
Notes:

Name:	inputLeftEyePositions
Class:	CIVectorMBS (CIVector)
DisplayName English:	Left Eye Positions
DisplayName German:	Positionen der linken Augen
DisplayName French:	Positions de l,Äôìil gauche
DisplayName Italian:	Posizioni occhio sinistro
DisplayName Spanish:	Posiciones de ojo izquierdo
Type:	CIAttributeTypePosition

See AttributeinputLeftEyePositions for more details.
(Read and Write property)

60.85.33 inputLumaNoiseScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Luma Noise Scale
Notes:

Name:	inputLumaNoiseScale
Class:	double (NSNumber)
DisplayName English:	Luma Noise Scale
DisplayName German:	Luma-Rauschen-Skalierung
DisplayName French:	√âchelle de bruit de luminance
DisplayName Italian:	Scala rumore di luminanza
DisplayName Spanish:	Escala de ruido de luminancia
Type:	CIAttributeTypeScalar

See AttributeinputLumaNoiseScale for more details.
(Read and Write property)

60.85.34 inputMatteImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Matte Image
Notes:

Name:	inputMatteImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Matte Image
DisplayName German:	Bild mit Maske
DisplayName French:	Image de cache
DisplayName Italian:	Immagine opaca
DisplayName Spanish:	Imagen mate
Type:	CIAttributeTypeImage

See AttributeinputMatteImage for more details.
(Read and Write property)

60.85.35 inputNosePositions as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Nose Positions
Notes:

Name:	inputNosePositions
Class:	CIVectorMBS (CIVector)
DisplayName English:	Nose Positions
DisplayName German:	Nasenpositionen
DisplayName French:	Positions du nez
DisplayName Italian:	Posizioni naso
DisplayName Spanish:	Posiciones de nariz
Type:	CIAttributeTypePosition

See AttributeinputNosePositions for more details.
(Read and Write property)

60.85.36 inputRightEyePositions as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Right Eye Positions
Notes:

Name:	inputRightEyePositions
Class:	CIVectorMBS (CIVector)
DisplayName English:	Right Eye Positions
DisplayName German:	Positionen der rechten Augen
DisplayName French:	Positions de l,Äôìil droit
DisplayName Italian:	Posizioni occhio destro
DisplayName Spanish:	Posiciones de ojo derecho
Type:	CIAttributeTypePosition

See AttributeinputRightEyePositions for more details.
(Read and Write property)

60.85.37 inputScaleFactor as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale Factor
Notes:

Name:	inputScaleFactor
Class:	double (NSNumber)
DisplayName English:	Scale Factor
DisplayName German:	Skalierungsfaktor
DisplayName French:	Facteur d,Äô√©chelle
DisplayName Italian:	Fattore di scala
DisplayName Spanish:	Factor de escala
Type:	CIAttributeTypeScalar

See AttributeinputScaleFactor for more details.
(Read and Write property)

60.85.38 inputShape as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Shape
Notes:

See AttributeinputShape for more details.
(Read and Write property)

Name:	inputShape
Class:	String (NSString)
DisplayName English:	Shape
DisplayName German:	Shape
DisplayName French:	Shape
DisplayName Italian:	Shape
DisplayName Spanish:	Shape

60.86 class CIFilterDepthOfFieldMBS

60.86.1 class CIFilterDepthOfFieldMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Depth of Field filter.
Example:

```
// apply the Depth Of Field filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterDepthOfFieldMBS
filter.inputImage = image
filter.inputPoint0 = New CIVectorMBS(0, 300)
filter.inputPoint1 = New CIVectorMBS(300, 300)
filter.inputRadius = 6 // range 0 to 30
filter.inputSaturation = 1.5 // range 0 to 10
filter.inputUnsharpMaskIntensity = 0.5 // range 0 to 10
filter.inputUnsharpMaskRadius = 2.5 // range 0 to 10

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIDepthOfField
DisplayName English:	Depth of Field
DisplayName German:	Sch√§rfentiefe
DisplayName French:	Profondeur de champ
DisplayName Italian:	Profondit√† di campo
DisplayName Spanish:	Profundidad de campo

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputPoint0: Point 0
- inputPoint1: Point 1
- inputSaturation: Saturation
- inputUnsharpMaskRadius: Unsharp Mask Radius
- inputUnsharpMaskIntensity: Unsharp Mask Intensity
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.
Blog Entries

- MBS Real Studio Plugins, version 13.1pr5

60.86.2 Methods

60.86.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.86.4 Properties

60.86.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth of Field attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.86.6 AttributeinputPoint0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth of Field attribute.
Notes: This attribute should have this content:

Name:	inputPoint0
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Point 0
DisplayName German:	Punkt 0
DisplayName French:	Point¬†0
DisplayName Italian:	Punto 0
DisplayName Spanish:	Punto 0
DefaultVector:	[0 300]
IdentityVector:	n/a

(Read only property)

60.86.7 AttributeinputPoint1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth of Field attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputPoint1
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Point 1
DisplayName German:	Punkt 1
DisplayName French:	Point 1
DisplayName Italian:	Punto 1
DisplayName Spanish:	Punto 1
DefaultVector:	[300 300]
IdentityVector:	n/a

60.86.8 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth of Field attribute.
Notes: This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	6
IdentityNumber:	0
SliderMaxNumber:	30
SliderMinNumber:	0

(Read only property)

60.86.9 AttributeinputSaturation as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth of Field attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputSaturation
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Saturation
DisplayName German:	S√§ttigung
DisplayName French:	Saturation
DisplayName Italian:	Saturazione
DisplayName Spanish:	Saturaci√n
DefaultNumber:	1.5
IdentityNumber:	0
SliderMaxNumber:	10
SliderMinNumber:	0

60.86.10 AttributeinputUnsharpMaskIntensity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth of Field attribute.
Notes: This attribute should have this content:

Name:	inputUnsharpMaskIntensity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Unsharp Mask Intensity
DisplayName German:	Intensit√§t von ‚ÄûUnscharf maskieren‚Äú
DisplayName French:	Intensit√© du masque flou
DisplayName Italian:	Intensit√† maschera di contrasto
DisplayName Spanish:	Intensidad de la m√°scara de desenfoque
DefaultNumber:	0.5
IdentityNumber:	0
SliderMaxNumber:	10
SliderMinNumber:	0

(Read only property)

60.86.11 AttributeinputUnsharpMaskRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth of Field attribute.
Notes: This attribute should have this content:

Name:	inputUnsharpMaskRadius
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Unsharp Mask Radius
DisplayName German:	Radius von ‚ÄûUnscharf maskieren‚Äú
DisplayName French:	Rayon du masque flou
DisplayName Italian:	Raggio maschera di contrasto
DisplayName Spanish:	Radio de la m√°scara de desenfoque
DefaultNumber:	2.5
IdentityNumber:	0
SliderMaxNumber:	10
SliderMinNumber:	0

(Read only property)

60.86.12 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.86.13 inputPoint0 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Point 0
Notes:

See AttributeinputPoint0 for more details.

Name:	inputPoint0
Class:	CIVectorMBS (CIVector)
DisplayName English:	Point 0
DisplayName German:	Punkt 0
DisplayName French:	Point¬†0
DisplayName Italian:	Punto 0
DisplayName Spanish:	Punto 0
Type:	CIAttributeTypePosition

(Read and Write property)

60.86.14 inputPoint1 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Point 1
Notes:

Name:	inputPoint1
Class:	CIVectorMBS (CIVector)
DisplayName English:	Point 1
DisplayName German:	Punkt 1
DisplayName French:	Point 1
DisplayName Italian:	Punto 1
DisplayName Spanish:	Punto 1
Type:	CIAttributeTypePosition

See AttributeinputPoint1 for more details.
(Read and Write property)

60.86.15 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

See AttributeinputRadius for more details.
(Read and Write property)

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeScalar

60.86.16 inputSaturation as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Saturation
Notes:

Name:	inputSaturation
Class:	double (NSNumber)
DisplayName English:	Saturation
DisplayName German:	S√§ttigung
DisplayName French:	Saturation
DisplayName Italian:	Saturazione
DisplayName Spanish:	Saturaci√n
Type:	CIAttributeTypeScalar

See AttributeinputSaturation for more details.
(Read and Write property)

60.86.17 inputUnsharpMaskIntensity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Unsharp Mask Intensity
Notes:

Name:	inputUnsharpMaskIntensity
Class:	double (NSNumber)
DisplayName English:	Unsharp Mask Intensity
DisplayName German:	Intensit√§t von ‚ÄûUnscharf maskieren‚Äú
DisplayName French:	Intensit√© du masque flou
DisplayName Italian:	Intensit√† maschera di contrasto
DisplayName Spanish:	Intensidad de la m√°scara de desenfoque
Type:	CIAttributeTypeScalar

See AttributeinputUnsharpMaskIntensity for more details.
(Read and Write property)

60.86.18 inputUnsharpMaskRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Unsharp Mask Radius
Notes:

Name:	inputUnsharpMaskRadius
Class:	double (NSNumber)
DisplayName English:	Unsharp Mask Radius
DisplayName German:	Radius von ‚ÄûUnscharf maskieren‚Äú
DisplayName French:	Rayon du masque flou
DisplayName Italian:	Raggio maschera di contrasto
DisplayName Spanish:	Radio de la m√°scara de desenfoque
Type:	CIAttributeTypeScalar

See AttributeinputUnsharpMaskRadius for more details.
(Read and Write property)

60.87 class CIFilterDepthToDisparityMBS

60.87.1 class CIFilterDepthToDisparityMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Depth To Disparity filter.
Notes: Details for this filter:

FilterName:	CIDepthToDisparity
DisplayName English:	Depth To Disparity
DisplayName German:	Tiefe zu Abweichung
DisplayName French:	Profondeur en disparit√©
DisplayName Italian:	Da profondit√† a disparit√†
DisplayName Spanish:	De profundidad a disparidad

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.87.2 Methods

60.87.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.87.4 Properties

60.87.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth To Disparity attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.87.6 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.88 class CIFilterDifferenceBlendModeMBS

60.88.1 class CIFilterDifferenceBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Difference Blend Mode filter.
Notes: Details for this filter:

FilterName:	CIDifferenceBlendMode
DisplayName English:	Difference Blend Mode
DisplayName German:	Mischmethode ‚ÄûDifferenz‚Äú
DisplayName French:	Mode de fusion Diff√©rence
DisplayName Italian:	Modalit√† sfumatura differenza
DisplayName Spanish:	Diferenciar modo de mezcla

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.88.2 Methods

60.88.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.88.4 Properties

60.88.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Difference Blend Mode attribute.
Notes: This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.88.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Difference Blend Mode attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.88.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

60.88.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.89 class CIFilterDiscBlurMBS

60.89.1 class CIFilterDiscBlurMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Disc Blur filter.
Notes: Details for this filter:

FilterName:	CIDiscBlur
DisplayName English:	Disc Blur
DisplayName German:	Kreisf√rmige Unsch√§rfe
DisplayName French:	Flou (Disc Blur)
DisplayName Italian:	Effetto disco
DisplayName Spanish:	Disco difuminado

Categories:

- CICategoryBlur: Blur
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.89.2 Methods

60.89.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.89.4 Properties

60.89.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disc Blur attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.89.6 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disc Blur attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	8
IdentityNumber:	0
SliderMaxNumber:	100
SliderMinNumber:	0

60.89.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.89.8 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

See AttributeinputRadius for more details.
(Read and Write property)

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

60.90 class CIFilterDisintegrateWithMaskTransitionMBS

60.90.1 class CIFilterDisintegrateWithMaskTransitionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Disintegrate With Mask filter.
Example:

```
// apply the Disintegrate With Mask Transition filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterDisintegrateWithMaskTransitionMBS
filter.inputImage = image
filter.inputMaskImage = image
filter.inputTargetImage = image
filter.inputShadowDensity = 0.65 // range 0 to 1
filter.inputShadowOffset = New CIVectorMBS(0, -10)
filter.inputShadowRadius = 8 // range 0 to 50
filter.inputTime = 0.5 // range 0 to 1

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIDisintegrateWithMaskTransition
DisplayName English:	Disintegrate With Mask
DisplayName German:	√übergang mit Maske
DisplayName French:	D√©sint√©grer avec masque
DisplayName Italian:	Disintegra con maschera
DisplayName Spanish:	Desintegrar con m√°scara

Categories:

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputTargetImage: Target Image
- inputMaskImage: Mask Image
- inputTime: Time
- inputShadowRadius: Shadow Radius
- inputShadowDensity: Shadow Density
- inputShadowOffset: Shadow Offset

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.90.2 Methods

60.90.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.90.4 Properties

60.90.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disintegrate With Mask attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.90.6 AttributeinputMaskImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disintegrate With Mask attribute.
Notes: This attribute should have this content:

Name:	inputMaskImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de m√°scara
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.90.7 AttributeinputShadowDensity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disintegrate With Mask attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputShadowDensity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Shadow Density
DisplayName German:	Schattendichte
DisplayName French:	Densit√© de l,Äôombre
DisplayName Italian:	Densit√† ombra
DisplayName Spanish:	Densidad del sombreado
DefaultNumber:	0.65
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

60.90.8 AttributeinputShadowOffset as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disintegrate With Mask attribute.
Notes: This attribute should have this content:

Name:	inputShadowOffset
Class:	CIVectorMBS
Type:	CIAttributeTypeOffset
DisplayName English:	Shadow Offset
DisplayName German:	Schattenabstand
DisplayName French:	D√©calage de l,Äôombre
DisplayName Italian:	Offset ombra
DisplayName Spanish:	Proyecci√n del sombreado
DefaultVector:	[0 -10]
IdentityVector:	[0 0]

(Read only property)

60.90.9 AttributeinputShadowRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disintegrate With Mask attribute.
Notes: This attribute should have this content:

Name:	inputShadowRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Shadow Radius
DisplayName German:	Schattenradius
DisplayName French:	Rayon de l,Äôombre
DisplayName Italian:	Raggio dell'ombra
DisplayName Spanish:	Radio del sombreado
DefaultNumber:	8
IdentityNumber:	0
SliderMaxNumber:	50
SliderMinNumber:	0

(Read only property)

60.90.10 AttributeinputTargetImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disintegrate With Mask attribute.
Notes: This attribute should have this content:

Name:	inputTargetImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.90.11 AttributeinputTime as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disintegrate With Mask attribute.
Notes: This attribute should have this content:

Name:	inputTime
Class:	double
Type:	CIAttributeTypeTime
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

60.90.12 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.90.13 inputMaskImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Mask Image
Notes:

Name:	inputMaskImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de m√°scara
Type:	CIAttributeTypeImage

See AttributeinputMaskImage for more details.
(Read and Write property)

60.90.14 inputShadowDensity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Shadow Density
Notes:

Name:	inputShadowDensity
Class:	double (NSNumber)
DisplayName English:	Shadow Density
DisplayName German:	Schattendichte
DisplayName French:	Densit√© de l,Äôombre
DisplayName Italian:	Densit√† ombra
DisplayName Spanish:	Densidad del sombreado
Type:	CIAttributeTypeScalar

See AttributeinputShadowDensity for more details.
(Read and Write property)

60.90.15 inputShadowOffset as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Shadow Offset
Notes:

See AttributeinputShadowOffset for more details.
(Read and Write property)

Name:	inputShadowOffset
Class:	CIVectorMBS (CIVector)
DisplayName English:	Shadow Offset
DisplayName German:	Schattenabstand
DisplayName French:	D√©calage de l,Äôombre
DisplayName Italian:	Offset ombra
DisplayName Spanish:	Proyecci√n del sombreado
Type:	CIAttributeTypeOffset

60.90.16 inputShadowRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Shadow Radius
Notes:

Name:	inputShadowRadius
Class:	double (NSNumber)
DisplayName English:	Shadow Radius
DisplayName German:	Schattenradius
DisplayName French:	Rayon de l,Äôombre
DisplayName Italian:	Raggio dell'ombra
DisplayName Spanish:	Radio del sombreado
Type:	CIAttributeTypeDistance

See AttributeinputShadowRadius for more details.
(Read and Write property)

60.90.17 inputTargetImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Target Image
Notes:

Name:	inputTargetImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
Type:	CIAttributeTypeImage

See AttributeinputTargetImage for more details.
(Read and Write property)

60.90.18 inputTime as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Time
Notes:

Name:	inputTime
Class:	double (NSNumber)
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
Type:	CIAttributeTypeTime

See AttributeinputTime for more details.
(Read and Write property)

60.91 class CIFilterDisparityToDepthMBS

60.91.1 class CIFilterDisparityToDepthMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Disparity To Depth filter.
Notes: Details for this filter:

FilterName:	CIDisparityToDepth
DisplayName English:	Disparity To Depth
DisplayName German:	Abweichung zu Tiefe
DisplayName French:	Disparit√© en profondeur
DisplayName Italian:	Da disparit√† a profondit√†
DisplayName Spanish:	De disparidad a profundidad

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.91.2 Methods

60.91.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.91.4 Properties

60.91.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disparity To Depth attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.91.6 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.92 class CIFilterDisplacementDistortionMBS

60.92.1 class CIFilterDisplacementDistortionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Displacement Distortion filter.
Example:

```
// apply the Displacement Distortion filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterDisplacementDistortionMBS
filter.inputImage = image
filter.inputDisplacementImage = image
filter.inputScale = 50 // range 0 to 200

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIDisplacementDistortion
DisplayName English:	Displacement Distortion
DisplayName German:	Verzerrung ,ÄûVerdr√§ngung,Äú
DisplayName French:	D√©formation D√©placement
DisplayName Italian:	Distorsione spostamento
DisplayName Spanish:	Distorsi√n de desplazamiento

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputDisplacementImage: Displacement Image
- inputScale: Scale

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.92.2 Methods

60.92.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.92.4 Properties

60.92.5 AttributeinputDisplacementImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Displacement Distortion attribute.
Notes: This attribute should have this content:

Name:	inputDisplacementImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Displacement Image
DisplayName German:	Bildverschiebung
DisplayName French:	Image du d√©placement
DisplayName Italian:	Immagine spostamento
DisplayName Spanish:	Imagen de desplazamiento
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.92.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Displacement Distortion attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.92.7 AttributeinputScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Displacement Distortion attribute.
Notes: This attribute should have this content:

(Read only property)

60.92.8 inputDisplacementImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Displacement Image
Notes:

See AttributeinputDisplacementImage for more details.
(Read and Write property)

Name:	inputScale
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
DefaultNumber:	50
IdentityNumber:	0
SliderMaxNumber:	200
SliderMinNumber:	0

Name:	inputDisplacementImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Displacement Image
DisplayName German:	Bildverschiebung
DisplayName French:	Image du d√©placement
DisplayName Italian:	Immagine spostamento
DisplayName Spanish:	Imagen de desplazamiento
Type:	CIAttributeTypeImage

60.92.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.92.10 inputScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale
Notes:

Name:	inputScale
Class:	double (NSNumber)
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
Type:	CIAttributeTypeDistance

See AttributeinputScale for more details.
(Read and Write property)

60.93 class CIFilterDissolveTransitionMBS

60.93.1 class CIFilterDissolveTransitionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Dissolve filter.
Example:

```
// apply the Dissolve Transition filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterDissolveTransitionMBS
filter.inputImage = image
filter.inputTargetImage = image
filter.inputTime = 0.5 // range 0 to 1

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIDissolveTransition
DisplayName English:	Dissolve
DisplayName German:	√überblenden
DisplayName French:	Dissoudre
DisplayName Italian:	Dissolvenza
DisplayName Spanish:	Disoluci√n

Categories:

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputTargetImage: Target Image
- inputTime: Time

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.93.2 Methods

60.93.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.93.4 Properties

60.93.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dissolve attribute.
Notes: This attribute should have this content:

(Read only property)

60.93.6 AttributeinputTargetImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dissolve attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

Name:	inputTargetImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.93.7 AttributeinputTime as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dissolve attribute.
Notes: This attribute should have this content:

(Read only property)

60.93.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputTime
Class:	double
Type:	CIAttributeTypeTime
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.93.9 inputTargetImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Target Image
Notes:

Name:	inputTargetImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
Type:	CIAttributeTypeImage

See AttributeinputTargetImage for more details.
(Read and Write property)

60.93.10 inputTime as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Time
Notes:

Name:	inputTime
Class:	double (NSNumber)
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
Type:	CIAttributeTypeTime

See AttributeinputTime for more details.
(Read and Write property)

60.94 class CIFilterDitherMBS

60.94.1 class CIFilterDitherMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Dither filter.
Notes: Details for this filter:

FilterName:	CIDither
DisplayName English:	Dither
DisplayName German:	Dither
DisplayName French:	Tramage
DisplayName Italian:	Dithering
DisplayName Spanish:	Tramar

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputIntensity: Intensity

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.94.2 Methods

60.94.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.94.4 Properties

60.94.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dither attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.94.6 AttributeinputIntensity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dither attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputIntensity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Intensity
DisplayName German:	Intensit√§t
DisplayName French:	Intensit√©
DisplayName Italian:	Intensit√†
DisplayName Spanish:	Intensidad
DefaultNumber:	0.1
IdentityNumber:	0
MaxNumber:	5
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

60.94.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.94.8 inputIntensity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Intensity
Notes:

See AttributeinputIntensity for more details.
(Read and Write property)

Name:	inputIntensity
Class:	double (NSNumber)
DisplayName English:	Intensity
DisplayName German:	Intensit√§t
DisplayName French:	Intensit√©
DisplayName Italian:	Intensit√†
DisplayName Spanish:	Intensidad
Type:	CIAttributeTypeScalar

60.95 class CIFilterDivideBlendModeMBS

60.95.1 class CIFilterDivideBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Divide Blend Mode filter.
Notes: Details for this filter:

FilterName:	CIDivideBlendMode
DisplayName English:	Divide Blend Mode
DisplayName German:	Mischmethode ‚ÄûTeilen‚Äú
DisplayName French:	Mode de fusion Diviser
DisplayName Italian:	Modalit√† sfumatura dissolvenza
DisplayName Spanish:	Dividir modo de mezcla

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.95.2 Methods

60.95.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.95.4 Properties

60.95.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Divide Blend Mode attribute.
Notes: This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.95.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Divide Blend Mode attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS

DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.95.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

60.95.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.96 class CIFilterDocumentEnhancerMBS

60.96.1 class CIFilterDocumentEnhancerMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Document Enhancer filter.
Notes: Details for this filter:

FilterName:	CIDocumentEnhancer
DisplayName English:	Document Enhancer
DisplayName German:	Dokumentverbesserung
DisplayName French:	Am√©lioration du document
DisplayName Italian:	Migliora documento
DisplayName Spanish:	Mejorar documentos

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputAmount: Amount

Output:

- outputImage

Subclass of the CIFilterMBS class.
Blog Entries

- MBS Xojo Plugins, version 23.0pr5

60.96.2 Methods

60.96.3 Constructor

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.96.4 Properties

60.96.5 AttributeinputAmount as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Document Enhancer attribute.
Notes: This attribute should have this content:

Name:	inputAmount
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Amount
DisplayName German:	St√§rke

Type:	CIAttributeTypeImage

60.97 class CIFilterDotScreenMBS

60.97.1 class CIFilterDotScreenMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Dot Screen filter.
Example:

```
// apply the Dot Screen filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterDotScreenMBS
filter.inputImage = image
filter.inputAngle = 0 // range -3.141593 to 3.141593
filter.inputCenter = New CIVectorMBS(150, 150)
filter.inputSharpness = 0.7 // range 0 to 1
filter.inputWidth = 6 // range 2 to 50

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIDotScreen
DisplayName English:	Dot Screen
DisplayName German:	Punktf√rmiges Halbtonraster
DisplayName French:	√âcran en pointill√©
DisplayName Italian:	Schermo a punti
DisplayName Spanish:	Pantalla punteada

Categories:

- CICategoryHalftoneEffect: Halftone Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width
- inputSharpness: Sharpness

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.97.2 Methods

60.97.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

(Read and Write property)

60.98 class CIFilterDrosteMBS

60.98.1 class CIFilterDrosteMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Droste filter.
Example:

```
// apply the Droste filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterDrosteMBS
filter.inputImage = image
filter.inputInsetPoint0 = New CIVectorMBS(200, 200)
filter.inputInsetPoint1 = New CIVectorMBS(400, 400)
filter.inputPeriodicity = 1 // range 1 to 5
filter.inputRotation = 0 // range 0 to 6.283185
filter.inputStrands = 1 // range -2 to 2
filter.inputZoom = 1 // range 0.01 to 5

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIDroste
DisplayName English:	Droste
DisplayName German:	Droste
DisplayName French:	Droste
DisplayName Italian:	Droste
DisplayName Spanish:	Droste

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputInsetPoint0: Inset Point 0
- inputInsetPoint1: Inset Point 1
- inputStrands: Strands
- inputPeriodicity: Periodicity
- inputRotation: Rotation
- inputZoom: Zoom

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.98.2 Methods

60.98.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.98.4 Properties

60.98.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Droste attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.98.6 AttributeinputInsetPoint0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Droste attribute.
Notes: This attribute should have this content:

Name:	inputInsetPoint0
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Inset Point 0
DisplayName German:	Abstandspunkt 0
DisplayName French:	Point d,Äôinsertion¬†0
DisplayName Italian:	Punto di inserimento 0
DisplayName Spanish:	Punto de inserci√n 0
DefaultVector:	[200 200]
IdentityVector:	n/a

(Read only property)

60.98.7 AttributeinputInsetPoint1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Droste attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputInsetPoint1
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Inset Point 1
DisplayName German:	Abstandspunkt 1
DisplayName French:	Point d,Äôinsertion¬†1
DisplayName Italian:	Punto di inserimento 1
DisplayName Spanish:	Punto de inserci√n 1
DefaultVector:	[400 400]
IdentityVector:	n/a

60.98.8 AttributeinputPeriodicity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Droste attribute.
Notes: This attribute should have this content:

Name:	inputPeriodicity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Periodicity
DefaultNumber:	1
IdentityNumber:	0
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	5
SliderMinNumber:	1

(Read only property)

60.98.9 AttributeinputRotation as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Droste attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputRotation
Class:	double
Type:	CIAttributeTypeAngle
DisplayName:	Rotation
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	6.283185
SliderMinNumber:	0

60.98.10 AttributeinputStrands as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Droste attribute.
Notes: This attribute should have this content:

Name:	inputStrands
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Strands
DefaultNumber:	1
IdentityNumber:	0
MaxNumber:	10
MinNumber:	-10
SliderMaxNumber:	2
SliderMinNumber:	-2

(Read only property)

60.98.11 AttributeinputZoom as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Droste attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputZoom
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Zoom
DefaultNumber:	1
IdentityNumber:	0
MaxNumber:	0
MinNumber:	0.01
SliderMaxNumber:	5
SliderMinNumber:	0.01

60.98.12 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.98.13 inputInsetPoint0 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Inset Point 0
Notes:

See AttributeinputInsetPoint0 for more details.
(Read and Write property)

Name:	inputInsetPoint0
Class:	CIVectorMBS (CIVector)
DisplayName English:	Inset Point 0
DisplayName German:	Abstandspunkt 0
DisplayName French:	Point d,Äôinsertion¬†0
DisplayName Italian:	Punto di inserimento 0
DisplayName Spanish:	Punto de inserci√n 0
Type:	CIAttributeTypePosition

60.98.14 inputInsetPoint1 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Inset Point 1
Notes:

Name:	inputInsetPoint1
Class:	CIVectorMBS (CIVector)
DisplayName English:	Inset Point 1
DisplayName German:	Abstandspunkt 1
DisplayName French:	Point d,Äôinsertion¬†1
DisplayName Italian:	Punto di inserimento 1
DisplayName Spanish:	Punto de inserci√n 1
Type:	CIAttributeTypePosition

See AttributeinputInsetPoint1 for more details.
(Read and Write property)

60.98.15 inputPeriodicity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Periodicity
Notes:

Name:	inputPeriodicity
Class:	double (NSNumber)
DisplayName English:	Periodicity
DisplayName German:	Periodicity
DisplayName French:	Periodicity
DisplayName Italian:	Periodicity
DisplayName Spanish:	Periodicity
Type:	CIAttributeTypeScalar

See AttributeinputPeriodicity for more details.
(Read and Write property)

60.98.16 inputRotation as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Rotation
Notes:

Name:	inputRotation
Class:	double (NSNumber)
DisplayName English:	Rotation
DisplayName German:	Rotation
DisplayName French:	Rotation
DisplayName Italian:	Rotation
DisplayName Spanish:	Rotation
Type:	CIAttributeTypeAngle

See AttributeinputRotation for more details.
(Read and Write property)

60.98.17 inputStrands as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Strands
Notes:

Name:	inputStrands
Class:	double (NSNumber)
DisplayName English:	Strands
DisplayName German:	Strands
DisplayName French:	Strands
DisplayName Italian:	Strands
DisplayName Spanish:	Strands
Type:	CIAttributeTypeScalar

See AttributeinputStrands for more details.
(Read and Write property)

60.98.18 inputZoom as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Zoom
Notes:

Name:	inputZoom
Class:	double (NSNumber)
DisplayName English:	Zoom
DisplayName German:	Zoom
DisplayName French:	Zoom
DisplayName Italian:	Zoom
DisplayName Spanish:	Zoom
Type:	CIAttributeTypeScalar

See AttributeinputZoom for more details.
(Read and Write property)

60.99 class CIFilterEdgePreserveUpsampleFilterMBS

60.99.1 class CIFilterEdgePreserveUpsampleFilterMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Edge Preserve Upsample Filter filter.
Example:

```
// apply the Edge Preserve Upsample Filter filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterEdgePreserveUpsampleFilterMBS
filter.inputImage = image
filter.inputSmallImage = image
filter.inputLumaSigma = 0.15
filter.inputSpatialSigma = 3

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIEdgePreserveUpsampleFilter
DisplayName English:	Edge Preserve Upsample Filter
DisplayName German:	Kantenerhaltender Upsample-Filter
DisplayName French:	Filtre de sur√©chantillonnage pour la pr√©servation des contours
DisplayName Italian:	Filtro di ricampionamento per la conservazione dei bordi
DisplayName Spanish:	Filtro de interpolaci√n con preservaci√n de bordes

Categories:

Function: Details about the Edge Work attribute.
Notes: This attribute should have this content:

(Read only property)

60.101.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	3
IdentityNumber:	0
SliderMaxNumber:	20
SliderMinNumber:	0

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.101.8 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

60.102 class CIFilterEightfoldReflectedTileMBS

60.102.1 class CIFilterEightfoldReflectedTileMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Eightfold Reflected Tile filter.
Example:

```
// apply the Eightfold Reflected Tile filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterEightfoldReflectedTileMBS
filter.inputImage = image
filter.inputAngle = 0 // range -3.141593 to 3.141593
filter.inputCenter = New CIVectorMBS(150, 150)
filter.inputWidth = 100 // range 1 to 200

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIEightfoldReflectedTile
DisplayName English:	Eightfold Reflected Tile
DisplayName German:	8-fach reflektierte Kachel
DisplayName French:	Mosa√Øque r√©fl√©chie 8 fois
DisplayName Italian:	Mosaico riflesso in otto direzioni
DisplayName Spanish:	Mosaico reflejado ocho veces

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.102.2 Methods

60.102.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.102.4 Properties

60.102.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Eightfold Reflected Tile attribute.
Notes: This attribute should have this content:

(Read only property)

60.102.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Eightfold Reflected Tile attribute.
Notes: This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center

Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.102.12 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

60.103 class CIFilterExclusionBlendModeMBS

60.103.1 class CIFilterExclusionBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Exclusion Blend Mode filter.
Notes: Details for this filter:

FilterName:	CIExclusionBlendMode
DisplayName English:	Exclusion Blend Mode
DisplayName German:	Mischmethode ‚ÄûAusschluss‚Äú
DisplayName French:	Mode de fusion Exclusion
DisplayName Italian:	Modalit√† sfumatura esclusione
DisplayName Spanish:	Modo de mezcla por exclusi√n

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.103.2 Methods

60.103.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.103.4 Properties

60.103.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Exclusion Blend Mode attribute.
Notes: This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.103.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Exclusion Blend Mode attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.103.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

60.103.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.104 class CIFilterExposureAdjustMBS

60.104.1 class CIFilterExposureAdjustMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Exposure Adjust filter.
Notes: Details for this filter:

FilterName:	CIExposureAdjust
DisplayName English:	Exposure Adjust
DisplayName German:	Belichtung anpassen
DisplayName French:	Ajustement d,Äôexposition
DisplayName Italian:	Regolazione esposizione
DisplayName Spanish:	Ajuste de exposici√n

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In
- CICategoryXMPSerializable: CICategoryXMPSerializable

Input:

- inputImage: Image
- inputEV: EV

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.104.2 Methods

60.104.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.104.4 Properties

60.104.5 AttributeinputEV as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Exposure Adjust attribute.
Notes: This attribute should have this content:

Name:	inputEV
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	EV
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	10
SliderMinNumber:	-10

(Read only property)

60.104.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Exposure Adjust attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.104.7 inputEV as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute EV
Notes:

Name:	inputEV
Class:	double (NSNumber)
DisplayName English:	EV
DisplayName German:	EV
DisplayName French:	EV
DisplayName Italian:	EV
DisplayName Spanish:	EV
Type:	CIAttributeTypeScalar

See AttributeinputEV for more details.
(Read and Write property)

60.104.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.105 class CIFilterFalseColorMBS

60.105.1 class CIFilterFalseColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage False Color filter.
Example:

```
// apply the False Color filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterFalseColorMBS
filter.inputImage = image
filter.inputColor0 = New CIColorMBS(0.3, 0, 0, 1)
filter.inputColor1 = New CIColorMBS(1, 0.9, 0.8, 1)

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIFalseColor
DisplayName English:	False Color
DisplayName German:	Falschfarbendarstellung
DisplayName French:	Fausse couleur
DisplayName Italian:	Colore falso
DisplayName Spanish:	Color falso

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputColor0: Color 1
- inputColor1: Color 2

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.105.2 Methods

60.105.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.105.4 Properties

60.105.5 AttributeinputColor0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the False Color attribute.
Notes: This attribute should have this content:

(Read only property)

60.105.6 AttributeinputColor1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the False Color attribute.
Notes: This attribute should have this content:

Name:	inputColor0
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color 1
DisplayName German:	Farbe 1
DisplayName French:	Couleur 1
DisplayName Italian:	Colore 1
DisplayName Spanish:	Color 1
DefaultColor:	Red = 0.3, Green = 0, Blue = 0, Alpha = 1
IdentityNumber:	0

Name:	inputColor1
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color 2
DisplayName German:	Farbe 2
DisplayName French:	Couleur 2
DisplayName Italian:	Colore 2
DisplayName Spanish:	Color 2
DefaultColor:	Red = 1, Green = 0.9, Blue = 0.8, Alpha = 1
IdentityNumber:	0

(Read only property)

60.105.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the False Color attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.105.8 inputColor0 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color 1
Notes:

Name:	inputColor0
Class:	CIColorMBS (CIColor)
DisplayName English:	Color 1
DisplayName German:	Farbe 1
DisplayName French:	Couleur 1
DisplayName Italian:	Colore 1
DisplayName Spanish:	Color 1
Type:	CIAttributeTypeColor

See AttributeinputColor0 for more details.
(Read and Write property)

60.105.9 inputColor1 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color 2
Notes:

Name:	inputColor1
Class:	CIColorMBS (CIColor)
DisplayName English:	Color 2
DisplayName German:	Farbe 2
DisplayName French:	Couleur 2
DisplayName Italian:	Colore 2
DisplayName Spanish:	Color 2
Type:	CIAttributeTypeColor

See AttributeinputColor1 for more details.
(Read and Write property)

60.105.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.106 class CIFilterFlashTransitionMBS

60.106.1 class CIFilterFlashTransitionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Flash filter.
Example:

```
// apply the Flash Transition filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterFlashTransitionMBS
filter.inputImage = image
filter.inputTargetImage = image
filter.inputCenter = New CIVectorMBS(150, 150)
filter.inputColor = New CIColorMBS(1, 0.8, 0.6, 1)
Var inputExtentValues() As Double = Array(0.0, 0.0, 300.0, 300.0)
filter.inputExtent = New CIVectorMBS(inputExtentValues)
filter.inputFadeThreshold = 0.85 // range 0 to 1
filter.inputMaxStriationRadius = 2.58 // range 0 to 10
filter.inputStriationContrast = 1.375 // range 0 to 5
filter.inputStriationStrength = 0.5 // range 0 to 3
filter.inputTime = 0.5 // range 0 to 1

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIFlashTransition
DisplayName English:	Flash
DisplayName German:	Blinken
DisplayName French:	Flash
DisplayName Italian:	Flash
DisplayName Spanish:	Flash

Categories:

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image

- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputTargetImage: Target Image
- inputCenter: Center
- inputExtent: Extent
- inputColor: Color
- inputTime: Time
- inputMaxStriationRadius: Maximum Striation Radius
- inputStriationStrength: Striation Strength
- inputStriationContrast: Striation Contrast
- inputFadeThreshold: Fade Threshold

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.106.2 Methods

60.106.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.106.4 Properties

60.106.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes: This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

60.106.6 AttributeinputColor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes: This attribute should have this content:

Name:	inputColor
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
DefaultColor:	Red = 1, Green = 0.8, Blue = 0.6, Alpha = 1
IdentityNumber:	0

(Read only property)

60.106.7 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes: This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 300 300]
IdentityVector:	n/a

(Read only property)

60.106.8 AttributeinputFadeThreshold as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes: This attribute should have this content:

Name:	inputFadeThreshold
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Fade Threshold
DisplayName German:	Schwellenwert f√ºr √úberblenden
DisplayName French:	Seuil de d√©coloration
DisplayName Italian:	Soglia dissolvenza
DisplayName Spanish:	Umbral de desvanecimiento
DefaultNumber:	0.85
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

60.106.9 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.106.10 AttributeinputMaxStriationRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes: This attribute should have this content:

Name:	inputMaxStriationRadius
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Maximum Striation Radius
DisplayName German:	Maximaler Radius f√ºr Riffelung
DisplayName French:	Rayon maximum des stries
DisplayName Italian:	Raggio di massima striatura
DisplayName Spanish:	Radio de estriaci√n m√°ximo
DefaultNumber:	2.58
IdentityNumber:	0
SliderMaxNumber:	10
SliderMinNumber:	0

(Read only property)

60.106.11 AttributeinputStriationContrast as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes: This attribute should have this content:

Name:	inputStriationContrast
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Striation Contrast
DisplayName German:	Kontrast f√ºr Riffelung
DisplayName French:	Contraste des stries
DisplayName Italian:	Contrasto striatura
DisplayName Spanish:	Contraste de la estriaci√n
DefaultNumber:	1.375
IdentityNumber:	0
SliderMaxNumber:	5
SliderMinNumber:	0

(Read only property)

60.106.12 AttributeinputStriationStrength as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes: This attribute should have this content:

(Read only property)

60.106.13 AttributeinputTargetImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes: This attribute should have this content:

Name:	inputStriationStrength
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Striation Strength
DisplayName German:	St√§rke der Riffelung
DisplayName French:	Force des stries
DisplayName Italian:	Livello striatura
DisplayName Spanish:	Intensidad de la estriaci√n
DefaultNumber:	0.5
IdentityNumber:	0
SliderMaxNumber:	3
SliderMinNumber:	0

Name:	inputTargetImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.106.14 AttributeinputTime as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes: This attribute should have this content:

(Read only property)

60.106.15 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputTime
Class:	double
Type:	CIAttributeTypeTime
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

60.106.16 inputColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color
Notes:

Name:	inputColor
Class:	CIColorMBS (CIColor)
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
Type:	CIAttributeTypeColor

See AttributeinputColor for more details.
(Read and Write property)

60.106.17 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

60.106.18 inputFadeThreshold as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Fade Threshold
Notes:

Name:	inputFadeThreshold
Class:	double (NSNumber)
DisplayName English:	Fade Threshold
DisplayName German:	Schwellenwert f√ºr √úberblenden
DisplayName French:	Seuil de d√©coloration
DisplayName Italian:	Soglia dissolvenza
DisplayName Spanish:	Umbral de desvanecimiento
Type:	CIAttributeTypeScalar

See AttributeinputFadeThreshold for more details.
(Read and Write property)

60.106.19 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.106.20 inputMaxStriationRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Maximum Striation Radius
Notes:

Name:	inputMaxStriationRadius
Class:	double (NSNumber)
DisplayName English:	Maximum Striation Radius
DisplayName German:	Maximaler Radius f√ºr Riffelung
DisplayName French:	Rayon maximum des stries
DisplayName Italian:	Raggio di massima striatura
DisplayName Spanish:	Radio de estriaci√n m√°ximo
Type:	CIAttributeTypeScalar

See AttributeinputMaxStriationRadius for more details.
(Read and Write property)

60.106.21 inputStriationContrast as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Striation Contrast
Notes:

Name:	inputStriationContrast
Class:	double (NSNumber)
DisplayName English:	Striation Contrast
DisplayName German:	Kontrast f√ºr Riffelung
DisplayName French:	Contraste des stries
DisplayName Italian:	Contrasto striatura
DisplayName Spanish:	Contraste de la estriaci√n
Type:	CIAttributeTypeScalar

See AttributeinputStriationContrast for more details.
(Read and Write property)

60.106.22 inputStriationStrength as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Striation Strength
Notes:

Name:	inputStriationStrength
Class:	double (NSNumber)
DisplayName English:	Striation Strength
DisplayName German:	St√§rke der Riffelung
DisplayName French:	Force des stries
DisplayName Italian:	Livello striatura
DisplayName Spanish:	Intensidad de la estriaci√n
Type:	CIAttributeTypeScalar

See AttributeinputStriationStrength for more details.
(Read and Write property)

60.106.23 inputTargetImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Target Image
Notes:

See AttributeinputTargetImage for more details.
(Read and Write property)

Name:	inputTargetImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
Type:	CIAttributeTypeImage

60.106.24 inputTime as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Time
Notes:

Name:	inputTime
Class:	double (NSNumber)
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
Type:	CIAttributeTypeTime

See AttributeinputTime for more details.
(Read and Write property)

60.107 class CIFilterFourfoldReflectedTileMBS

60.107.1 class CIFilterFourfoldReflectedTileMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Fourfold Reflected Tile filter.
Example:

```
// apply the Fourfold Reflected Tile filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterFourfoldReflectedTileMBS
filter.inputImage = image
filter.inputAcuteAngle = 1.570796 // range -3.141593 to 3.141593
filter.inputAngle = 0 // range -3.141593 to 3.141593
filter.inputCenter = New CIVectorMBS(150, 150)
filter.inputWidth = 100 // range 1 to 200

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIFourfoldReflectedTile
DisplayName English:	Fourfold Reflected Tile
DisplayName German:	4-fach reflektierte Kachel
DisplayName French:	Mosa√Øque r√©fl√©chie 4 fois
DisplayName Italian:	Mosaico riflesso in quattro direzioni
DisplayName Spanish:	Mosaico reflejado cuatro veces

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width
- inputAcuteAngle: Acute Angle

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.107.2 Methods

60.107.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.107.4 Properties

60.107.5 AttributeinputAcuteAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Reflected Tile attribute.
Notes: This attribute should have this content:

(Read only property)

60.107.6 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputAcuteAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Acute Angle
DisplayName German:	Spitzer Winkel
DisplayName French:	Angle aigu
DisplayName Italian:	Angolo acuto
DisplayName Spanish:	√Ångulo agudo
DefaultNumber:	1.570796
IdentityNumber:	1.570796
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

Function: Details about the Fourfold Reflected Tile attribute.
Notes: This attribute should have this content:

(Read only property)

60.107.7 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Reflected Tile attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

60.107.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Reflected Tile attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.107.9 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Reflected Tile attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	100
IdentityNumber:	100
SliderMaxNumber:	200
SliderMinNumber:	1

60.107.10 inputAcuteAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Acute Angle
Notes:

Name:	inputAcuteAngle
Class:	double (NSNumber)
DisplayName English:	Acute Angle
DisplayName German:	Spitzer Winkel
DisplayName French:	Angle aigu
DisplayName Italian:	Angolo acuto
DisplayName Spanish:	√Ångulo agudo
Type:	CIAttributeTypeAngle

See AttributeinputAcuteAngle for more details.
(Read and Write property)

60.107.11 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

See AttributeinputAngle for more details.
(Read and Write property)

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

60.107.12 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

60.107.13 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.107.14 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

60.108 class CIFilterFourfoldRotatedTileMBS

60.108.1 class CIFilterFourfoldRotatedTileMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Fourfold Rotated Tile filter.
Example:

```
// apply the Fourfold Rotated Tile filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterFourfoldRotatedTileMBS
filter.inputImage = image
filter.inputAngle = 0 // range -3.141593 to 3.141593
filter.inputCenter = New CIVectorMBS(150, 150)
filter.inputWidth = 100 // range 1 to 200

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIFourfoldRotatedTile
DisplayName English:	Fourfold Rotated Tile
DisplayName German:	4-fach gedrehte Kachel
DisplayName French:	Mosa√Øque pivot√©e 4 fois
DisplayName Italian:	Mosaico ruotato in quattro direzioni
DisplayName Spanish:	Mosaico rotado cuatro veces

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.108.2 Methods

60.108.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.108.4 Properties

60.108.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Rotated Tile attribute.
Notes: This attribute should have this content:

(Read only property)

60.108.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Rotated Tile attribute.
Notes: This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

60.108.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Rotated Tile attribute.
Notes: This attribute should have this content:

(Read only property)

60.108.8 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Rotated Tile attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	100
IdentityNumber:	100
SliderMaxNumber:	200
SliderMinNumber:	1

(Read only property)

60.108.9 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

See AttributeinputAngle for more details.
(Read and Write property)

60.108.10 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

60.108.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.108.12 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

60.109 class CIFilterFourfoldTranslatedTileMBS

60.109.1 class CIFilterFourfoldTranslatedTileMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Fourfold Translated Tile filter.
Example:

```
// apply the Fourfold Translated Tile filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterFourfoldTranslatedTileMBS
filter.inputImage = image
filter.inputAcuteAngle = 1.570796 // range -3.141593 to 3.141593
filter.inputAngle = 0 // range -3.141593 to 3.141593
filter.inputCenter = New CIVectorMBS(150, 150)
filter.inputWidth = 100 // range 1 to 200

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIFourfoldTranslatedTile
DisplayName English:	Fourfold Translated Tile
DisplayName German:	4-fach √ºbersetzte Kachel
DisplayName French:	Mosa√Øque d√©plac√©e 4 fois
DisplayName Italian:	Mosaico traslato in quattro direzioni
DisplayName Spanish:	Mosaico desplazado cuatro veces

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width
- inputAcuteAngle: Acute Angle

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.109.2 Methods

60.109.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.109.4 Properties

60.109.5 AttributeinputAcuteAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Translated Tile attribute.
Notes: This attribute should have this content:

(Read only property)

60.109.6 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputAcuteAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Acute Angle
DisplayName German:	Spitzer Winkel
DisplayName French:	Angle aigu
DisplayName Italian:	Angolo acuto
DisplayName Spanish:	√Ångulo agudo

60.112 class CIFilterGaussianBlurMBS

60.112.1 class CIFilterGaussianBlurMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Gaussian Blur filter.
Example:

```
Var CIFilter as new CIFilterGaussianBlurMBS
Var ROIpic as Picture = LogoMBS(500)
Var CGImage as CGImageMBS = CGCreateImageMBS(ROIpic)
Var ciimage as CIImageMBS = NewCIImagewithCGImageMBS(CGImage)

CIFilter.inputImage = CIImage
cifilter.inputRadius = 10 //the property which holds the blur radius

Var result as CIImageMBS = cifilter.outputImage

Var r as Picture = result.RenderPicture

Window1.Backdrop = r
```

Notes: Details for this filter:

FilterName:	CIGaussianBlur
DisplayName English:	Gaussian Blur
DisplayName German:	Gau√ü,Äôsche Unsch√§rfe
DisplayName French:	Flou gaussien
DisplayName Italian:	Sfumatura gaussiana
DisplayName Spanish:	Difuminado gaussiano

Categories:

- CICategoryBlur: Blur
- CICategoryStillImage: Still Image
- CICategoryVideo: Video
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputRadius: Radius

Output:

- outputImage

Warning: Due to the blur, the output image may be bigger, so you need to crop space on the border to get back to old size.
Subclass of the CIFilterMBS class.

60.112.2 Methods

60.112.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.112.4 Properties

60.112.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Gaussian Blur attribute.

DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.112.8 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeScalar

See AttributeinputRadius for more details.
(Read and Write property)

60.113 class CIFilterGaussianGradientMBS

60.113.1 class CIFilterGaussianGradientMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Gaussian Gradient filter.
Example:

```
// generate an image with the Gaussian Gradient filter
Var filter As New CIFilterGaussianGradientMBS
filter.inputCenter = New CIVectorMBS(150, 150)
filter.inputColor0 = New CIColorMBS(1, 1, 1, 1)
filter.inputColor1 = New CIColorMBS(0, 0, 0, 0)
filter.inputRadius = 300 // range 0 to 800

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture(300, 300)
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIGaussianGradient
DisplayName English:	Gaussian Gradient
DisplayName German:	Gau√ü,Äôscher Verlauf
DisplayName French:	D√©grad√© gaussien
DisplayName Italian:	Gradiente gaussiano
DisplayName Spanish:	Degradado gaussiano

Categories:

- CICategoryGradient: Gradient
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputCenter: Center

- inputColor0: Color 1
- inputColor1: Color 2
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.113.2 Methods

60.113.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.113.4 Properties

60.113.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Gaussian Gradient attribute.
Notes: This attribute should have this content:

(Read only property)

60.113.6 AttributeinputColor0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Gaussian Gradient attribute.
Notes: This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

Name:	inputColor0
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color 1
DisplayName German:	Farbe 1
DisplayName French:	Couleur 1
DisplayName Italian:	Colore 1
DisplayName Spanish:	Color 1
DefaultColor:	Red = 1, Green = 1, Blue = 1, Alpha = 1
IdentityNumber:	0

(Read only property)

60.113.7 AttributeinputColor1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Gaussian Gradient attribute.
Notes: This attribute should have this content:

Name:	inputColor1
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color 2
DisplayName German:	Farbe 2
DisplayName French:	Couleur 2
DisplayName Italian:	Colore 2
DisplayName Spanish:	Color 2
DefaultColor:	Red = 0, Green = 0, Blue = 0, Alpha = 0
IdentityNumber:	0

(Read only property)

60.113.8 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Gaussian Gradient attribute.
Notes: This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	300
IdentityNumber:	0
SliderMaxNumber:	800
SliderMinNumber:	0

(Read only property)

60.113.9 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

60.113.10 inputColor0 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color 1
Notes:

Name:	inputColor0
Class:	CIColorMBS (CIColor)
DisplayName English:	Color 1
DisplayName German:	Farbe 1
DisplayName French:	Couleur 1
DisplayName Italian:	Colore 1
DisplayName Spanish:	Color 1
Type:	CIAttributeTypeColor

See AttributeinputColor0 for more details.
(Read and Write property)

60.113.11 inputColor1 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color 2
Notes:

Name:	inputColor1
Class:	CIColorMBS (CIColor)
DisplayName English:	Color 2
DisplayName German:	Farbe 2
DisplayName French:	Couleur 2
DisplayName Italian:	Colore 2
DisplayName Spanish:	Color 2
Type:	CIAttributeTypeColor

See AttributeinputColor1 for more details.
(Read and Write property)

60.113.12 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

60.114 class CIFilterGeneratorMBS

60.114.1 class CIFilterGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: An object that creates and configures chains of individual image filters.
Example:

```
// chain two Core Image filters into one and save it as reusable filter file
Var generator As CIFilterGeneratorMBS = CIFilterGeneratorMBS.filterGenerator
Var blur As CIFilterMBS = generator.filterWithName("CIGaussianBlur")
Var sepia As CIFilterMBS = generator.filterWithName("CISepiaTone")

generator.connectObject(blur, "outputImage", sepia, "inputImage") // blur first, then sepia
generator.exportKey("inputImage", blur, "inputImage")
generator.exportKey("outputImage", sepia, "outputImage")
generator.exportKey("inputRadius", blur, "inputRadius")

Call generator.writeToURL(NSFileCoordinatorMBS.FileURL(SpecialFolder.Desktop.Child("BlurSepia.cifilter")))
```

Notes: The CIFilterGenerator class provides methods for creating a CIFilter object by chaining together existing CIFilter objects to create complex effects. (A filter chain refers to the CIFilter objects that are connected in the CIFilterGenerator object.) The complex effect can be encapsulated as a CIFilterGenerator object and saved as a file so that it can be used again. The filter generator file contains an archived instance of all the CIFilter objects that are chained together.

Any filter generator files that you copy to /Library/Graphics/Image Units/ are loaded when any of the loading methods provided by the CIPlugIn class are invoked. A CIFilterGenerator object is registered by its filename or, if present, by a class attribute that you supply in its description.

You can create a CIFilterGenerator object programmatically, using the methods provided by the CIFilterGenerator class, or by using the editor view provided by Core Image (see CIFilter Image Kit Additions).
Blog Entries

- MBS Xojo Plugins, version 17.2pr3

60.114.2 Methods

60.114.3 connectObject(sourceObject as Variant, sourceKey as string, targetObject as Variant, targetKey as String)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds an object to the filter chain.
Notes: sourceObject: A CIFilterMBS object, a CIImageMBS object, or a the path (an string or folderitem object) to an image.
sourceKey: The key that specifies the source object. For example, if the source is the output image of a filter, pass the outputImage key. Pass nil if the source object is used directly.
targetObject: The object that to link the source object to.
targetKey: The key that specifies the target for the source. For example, if you are connecting the source to the input image of a CIFilterMBS object, you would pass the inputImage key.

60.114.4 Constructor

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates and returns an empty filter generator object.
Notes: You use the returned object to connect two or more CIFilter objects and input images. It is also valid to have only one CIFilter object in a filter generator.
See also:

- 60.114.5 Constructor(File as folderItem) 10539
- 60.114.6 Constructor(Handle as Integer) 10539
- 60.114.7 Constructor(URL as string) 10540

60.114.5 Constructor(File as folderItem)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates and returns a filter generator object and initializes it with the contents of a filter generator file.
Notes: Raises exception on failure.
See also:

- 60.114.4 Constructor 10539
- 60.114.6 Constructor(Handle as Integer) 10539
- 60.114.7 Constructor(URL as string) 10540

60.114.6 Constructor(Handle as Integer)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes Xojo object with given handle to CIFilterGenerator object.
See also:

- 60.114.4 Constructor 10539
- 60.114.5 Constructor(File as folderItem) 10539
- 60.114.7 Constructor(URL as string) 10540

60.114.7 Constructor(URL as string)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates and returns a filter generator object and initializes it with the contents of a filter generator file.
Notes: Raises exception on failure.
See also:

- 60.114.4 Constructor 10539
- 60.114.5 Constructor(File as folderItem) 10539
- 60.114.6 Constructor(Handle as Integer) 10539

60.114.8 copy as CIFilterGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a copy of the object.

60.114.9 disconnectObject(sourceObject as Variant, sourceKey as string, targetObject as Variant, targetKey as String)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Removes the connection between two objects in the filter chain.
Notes: sourceObject: A CIFilterMBS object, a CIImageMBS object, or a the path (an string or folderitem object) to an image.
sourceKey: The key that specifies the source object. Pass nil if the source object is used directly.
targetObject: The object that you want to disconnect the source object from.
targetKey: The key that specifies the target that the source object is currently connected to.

60.114.10 exportKey(key as string, targetObject as Variant, exportedKeyName as String)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Exports an input or output key of an object in the filter chain.
Notes: key: The key to export from the target object (for example, inputImage).
targetObject: The object associated with the key (for example, the filter).
exportedKeyName: A unique name to use for the exported key. Pass "" to use the original key name.

When you create a CIFilterMBS object from a CIFilterGeneratorMBS object, you might want the filter client to be able to set some of the parameters associated with the filter chain. You can make a parameter settable by exporting the key associated with the parameter. If the exported key represents an input parameter of the filter, the key is exported as an input key. If the key represents an output parameter, it is exported as an output key.

60.114.11 filterGenerator as CIFilterGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates and returns an empty filter generator object.
Notes: You use the returned object to connect two or more CIFilter objects and input images. It is also valid to have only one CIFilter object in a filter generator.

60.114.12 filterGeneratorWithContentsOfFile(File as folderItem) as CIFilterGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates and returns a filter generator object and initializes it with the contents of a filter generator file.
Notes: Returns a CIFilterGeneratorMBS object; returns nil if the file can,Äôt be read.

60.114.13 filterGeneratorWithContentsOfURL(URL as string) as CIFilterGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates and returns a filter generator object and initializes it with the contents of a filter generator file.
Notes: Returns a CIFilterGeneratorMBS object; returns nil if the file can,Äôt be read.

60.114.14 filterWithName(name as String) as CIFilterMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries filter based on it's name.
Notes: Returns nil in case of error.

60.114.15 kCIFilterGeneratorExportedKey as String

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the dictionary keys describing exports.
Notes: The key (CIFilterGeneratorExportedKey) for the exported parameter. The associated value is the key name of the parameter you are exporting, such as inputRadius.

60.114.16 kCIFilterGeneratorExportedKeyName as String

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the dictionary keys describing exports.
Notes: The key (CIFilterGeneratorExportedKey) for the exported parameter. The associated value is the key name of the parameter you are exporting, such as inputRadius.

60.114.17 kCIFilterGeneratorExportedKeyTargetObject as String

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the dictionary keys describing exports.
Notes: The target object (CIFilterGeneratorExportedKeyTargetObject) for the exported key. The associated value is the name of the object, such as CIMotionBlur.

60.114.18 registerFilterName(name as string)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Registers the name associated with a filter chain.
Notes: name: A unique name for the filter chain you want to register.

This method allows you to register the filter chain as a named filter in the Core Image filter repository. You can then create a CIFilterMBS object from it using the filterWithName method of the CIFilterMBS class.

60.114.19 removeExportedKey(exportedKeyName as string)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Removes a key that was previously exported.

60.114.20 setAttributes(attributes as dictionary, ExportedKey as string)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets a dictionary of attributes for an exported key.
Notes: attributes: A dictionary that describes the attributes associated with the specified key.
key: The exported key whose attributes you want to set.

By default, the exported key inherits the attributes from its original key and target object. You can use this method to change one or more of the existing attributes for the key, such as the default value or maximum value. For more information on attributes, see CIFilterMBS and Core Image Programming Guide.

60.114.21 writeToFile(File as FolderItem, atomically as Boolean = true) as Boolean

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Archives a filter generator object to a filter generator file.
Notes: File: A location for the file generator file.
atomically: Pass true to specify that Core Image should create an interim file to avoid overwriting an existing file.

Returns true if the object is successfully archived to the file.
Use this method to save your filter chain to a file for later use.

60.114.22 writeToURL(URL as String, atomically as Boolean = true) as Boolean

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Archives a filter generator object to a filter generator file.
Notes: URL: A location for the file generator file.
atomically: Pass true to specify that Core Image should create an interim file to avoid overwriting an existing file.

Returns true if the object is successfully archived to the file.

Use this method to save your filter chain to a file for later use.

60.114.23 Properties

60.114.24 classAttributes as Dictionary

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class attributes associated with the filter.
Notes: For more information about class attributes for a filter, see Core Image Programming Guide and the filter attributes key constants defined in CIFilterMBS.
(Read and Write property)

60.114.25 exportedKeys as Dictionary

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of the exported keys.
Notes: An array of dictionaries that describe the exported key and target object. See kCIFilterGenerator-ExportedKey, kCIFilterGeneratorExportedKeyTargetObject, and kCIFilterGeneratorExportedKey for keys used in the dictionary.

This method returns the keys that you exported using the exportKey method or that were exported before being written to the file from which you read the filter chain.
(Read only property)

60.114.26 filter as CIFilterMBS

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a filter object based on the filter chain.
Notes: The topology of the filter chain is immutable, meaning that any changes you make to the filter chain are not reflected in the filter. The returned filer has the input an output keys that are exported.
(Read only property)

60.114.27 Handle as Integer

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal reference to the object.

Notes: (Read only property)

60.115 class CIFilterGlassDistortionMBS

60.115.1 class CIFilterGlassDistortionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Glass Distortion filter.
Example:

```
// apply the Glass Distortion filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterGlassDistortionMBS
filter.inputImage = image
filter.inputTexture = image
filter.inputCenter = New CIVectorMBS(150, 150)
filter.inputScale = 200 // range 0.01 to 500

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIGlassDistortion
DisplayName English:	Glass Distortion
DisplayName German:	Verzerrung ,ÄûGlas,Äú
DisplayName French:	D√©formation Verre
DisplayName Italian:	Distorsione vetro
DisplayName Spanish:	Distorsi√n vidriosa

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputTexture: Texture
- inputCenter: Center
- inputScale: Scale

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.115.2 Methods

60.115.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.115.4 Properties

60.115.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glass Distortion attribute.
Notes: This attribute should have this content:

(Read only property)

60.115.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

60.115.9 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

60.115.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.115.11 inputScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale
Notes:

Name:	inputScale
Class:	double (NSNumber)
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala

60.115.12 inputTexture as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Texture
Notes:

Name:	inputTexture
Class:	CIImageMBS (CIImage)
DisplayName English:	Texture
DisplayName German:	Struktur
DisplayName French:	Texture
DisplayName Italian:	Trama
DisplayName Spanish:	Textura
Type:	CIAttributeTypeImage

See AttributeinputTexture for more details.
(Read and Write property)

60.116 class CIFilterGlassLozengeMBS

60.116.1 class CIFilterGlassLozengeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Glass Lozenge filter.
Example:

```
// apply the Glass Lozenge filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterGlassLozengeMBS
filter.inputImage = image
filter.inputPoint0 = New CIVectorMBS(150, 150)
filter.inputPoint1 = New CIVectorMBS(350, 150)
filter.inputRadius = 100 // range 0 to 1000
filter.inputRefraction = 1.7 // range 0 to 5

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIGlassLozenge
DisplayName English:	Glass Lozenge
DisplayName German:	Glasrhombus
DisplayName French:	Losange de verre
DisplayName Italian:	Losanga vetro
DisplayName Spanish:	Romboedro vidrioso

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputPoint0: Point 0
- inputPoint1: Point 1
- inputRadius: Radius
- inputRefraction: Refraction

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.116.2 Methods

60.116.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.116.4 Properties

60.116.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glass Lozenge attribute.
Notes: This attribute should have this content:

(Read only property)

60.116.6 AttributeinputPoint0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

Name:	inputPoint0

DisplayName English:	Point 0
DisplayName German:	Punkt 0
DisplayName French:	Point¬†0
DisplayName Italian:	Punto 0
DisplayName Spanish:	Punto 0
DefaultVector:	[150 150]
IdentityVector:	n/a

Function: Details about the Glass Lozenge attribute.
Notes: This attribute should have this content:

(Read only property)

60.116.7 AttributeinputPoint1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glass Lozenge attribute.
Notes: This attribute should have this content:

(Read only property)

60.116.8 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glass Lozenge attribute.

Name:	inputPoint1
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Point 1
DisplayName German:	Punkt 1
DisplayName French:	Point 1
DisplayName Italian:	Punto 1
DisplayName Spanish:	Punto 1
DefaultVector:	[350 150]
IdentityVector:	n/a

Notes: This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	100
IdentityNumber:	100
SliderMaxNumber:	1000
SliderMinNumber:	0

(Read only property)

60.116.9 AttributeinputRefraction as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glass Lozenge attribute.
Notes: This attribute should have this content:

(Read only property)

60.116.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputRefraction
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Refraction
DisplayName German:	Lichtbrechung
DisplayName French:	R√©fraction
DisplayName Italian:	Rifrazione
DisplayName Spanish:	Refracci√n
DefaultNumber:	1.7
IdentityNumber:	1
SliderMaxNumber:	5
SliderMinNumber:	0

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.116.11 inputPoint0 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Point 0
Notes:

See AttributeinputPoint0 for more details.
(Read and Write property)

60.116.12 inputPoint1 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputPoint0
Class:	CIVectorMBS (CIVector)
DisplayName English:	Point 0
DisplayName German:	Punkt 0
DisplayName French:	Point¬†0
DisplayName Italian:	Punto 0
DisplayName Spanish:	Punto 0
Type:	CIAttributeTypePosition

Function: The attribute Point 1
Notes:

Name:	inputPoint1
Class:	CIVectorMBS (CIVector)
DisplayName English:	Point 1
DisplayName German:	Punkt 1
DisplayName French:	Point 1
DisplayName Italian:	Punto 1
DisplayName Spanish:	Punto 1
Type:	CIAttributeTypePosition

See AttributeinputPoint1 for more details.
(Read and Write property)

60.116.13 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

60.116.14 inputRefraction as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Refraction
Notes:

Name:	inputRefraction
Class:	double (NSNumber)
DisplayName English:	Refraction
DisplayName German:	Lichtbrechung
DisplayName French:	R√©fraction
DisplayName Italian:	Rifrazione
DisplayName Spanish:	Refracci√n
Type:	CIAttributeTypeScalar

See AttributeinputRefraction for more details.
(Read and Write property)

60.117 class CIFilterGlideReflectedTileMBS

60.117.1 class CIFilterGlideReflectedTileMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Glide Reflected Tile filter.
Example:

```
// apply the Glide Reflected Tile filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterGlideReflectedTileMBS
filter.inputImage = image
filter.inputAngle = 0 // range -3.141593 to 3.141593
filter.inputCenter = New CIVectorMBS(150, 150)
filter.inputWidth = 100 // range 1 to 200

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIGlideReflectedTile
DisplayName English:	Glide Reflected Tile
DisplayName German:	Gleitende reflektierte Kachel
DisplayName French:	Mosa√Øque r√©fl√©chie ¬´¬†Glide¬†¬ª
DisplayName Italian:	Mosaico riflesso di scivolamento
DisplayName Spanish:	Mosaico de deslizamiento reflejado

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.117.2 Methods

60.117.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.117.4 Properties

60.117.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glide Reflected Tile attribute.
Notes: This attribute should have this content:

(Read only property)

60.117.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glide Reflected Tile attribute.
Notes: This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

60.117.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glide Reflected Tile attribute.
Notes: This attribute should have this content:

(Read only property)

60.117.8 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glide Reflected Tile attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	100
IdentityNumber:	100
SliderMaxNumber:	200
SliderMinNumber:	1

(Read only property)

60.117.9 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

See AttributeinputAngle for more details.
(Read and Write property)

60.117.10 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

60.117.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.117.12 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

60.118 class CIFilterGloomMBS

60.118.1 class CIFilterGloomMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Gloom filter.
Example:

```
// apply the Gloom filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterGloomMBS
filter.inputImage = image
filter.inputIntensity = 0.5 // range 0 to 1
filter.inputRadius = 10 // range 0 to 100

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIGloom
DisplayName English:	Gloom
DisplayName German:	D√ºster
DisplayName French:	T√©n√®bres
DisplayName Italian:	Oscurit√†
DisplayName Spanish:	Oscurecer

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRadius: Radius
- inputIntensity: Intensity

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.118.2 Methods

60.118.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.118.4 Properties

60.118.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Gloom attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.118.6 AttributeinputIntensity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Gloom attribute.
Notes: This attribute should have this content:

Name:	inputIntensity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Intensity
DisplayName German:	Intensit√§t
DisplayName French:	Intensit√©
DisplayName Italian:	Intensit√†
DisplayName Spanish:	Intensidad
DefaultNumber:	0.5
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

60.118.7 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Gloom attribute.
Notes: This attribute should have this content:

(Read only property)

60.118.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	10
IdentityNumber:	0
SliderMaxNumber:	100
SliderMinNumber:	0

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.118.9 inputIntensity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Intensity
Notes:

Name:	inputIntensity
Class:	double (NSNumber)
DisplayName English:	Intensity
DisplayName German:	Intensit√§t
DisplayName French:	Intensit√©
DisplayName Italian:	Intensit√†
DisplayName Spanish:	Intensidad
Type:	CIAttributeTypeScalar

See AttributeinputIntensity for more details.
(Read and Write property)

60.118.10 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

60.119 class CIFilterGuidedFilterMBS

60.119.1 class CIFilterGuidedFilterMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Guided Filter filter.
Example:

```
// apply the Guided Filter filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterGuidedFilterMBS
filter.inputImage = image
filter.inputGuideImage = image
filter.inputEpsilon = 0.0001 // range 0.0 to 0.1
filter.inputRadius = 1 // range 1 to 10

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIGuidedFilter
DisplayName English:	Guided Filter
DisplayName German:	Gef√ºhrter Filter
DisplayName French:	Filtre guid√©
DisplayName Italian:	Filtro guidato
DisplayName Spanish:	Filtro guiado

Categories:

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputGuideImage: A larger image to use as a guide.
- inputRadius: Radius
- inputEpsilon: Epsilon

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.119.2 Methods

60.119.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.119.4 Properties

60.119.5 AttributeinputEpsilon as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Guided Filter attribute.
Notes: This attribute should have this content:

(Read only property)

60.119.6 AttributeinputGuideImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Guided Filter attribute.
Notes: This attribute should have this content:

Name:	inputEpsilon
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Epsilon
DisplayName German:	Epsilon
DisplayName French:	Epsilon
DisplayName Italian:	Ipsilon
DisplayName Spanish:	√âpsilon
DefaultNumber:	0.0001
IdentityNumber:	0
SliderMaxNumber:	0.1
SliderMinNumber:	1.000000e-9

Name:	inputGuideImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	A larger image to use as a guide.
DisplayName German:	Gr√√üeres Bild, das als Richtwert verwendet wird.
DisplayName French:	Une image plus grande √† utiliser comme guide.
DisplayName Italian:	Immagine pi√ grande da utilizzare come guida.
DisplayName Spanish:	Una imagen mayor que se usar√° como gu√a.
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.119.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Guided Filter attribute.
Notes: This attribute should have this content:

(Read only property)

60.119.8 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Guided Filter attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine

SliderMinNumber:	1

(Read only property)

60.119.9 inputEpsilon as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Epsilon
Notes:

See AttributeinputEpsilon for more details.
(Read and Write property)

60.119.10 inputGuideImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputEpsilon
Class:	double (NSNumber)
DisplayName English:	Epsilon
DisplayName German:	Epsilon
DisplayName French:	Epsilon
DisplayName Italian:	Ipsilon
DisplayName Spanish:	√âpsilon
Type:	CIAttributeTypeScalar

Function: The attribute A larger image to use as a guide.
Notes:

Name:	inputGuideImage
Class:	CIImageMBS (CIImage)
DisplayName English:	A larger image to use as a guide.
DisplayName German:	Gr√√üeres Bild, das als Richtwert verwendet wird.
DisplayName French:	Une image plus grande √† utiliser comme guide.
DisplayName Italian:	Immagine pi√ grande da utilizzare come guida.
DisplayName Spanish:	Una imagen mayor que se usar√° como gu√a.
Type:	CIAttributeTypeImage

See AttributeinputGuideImage for more details.
(Read and Write property)

60.119.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.119.12 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeScalar

See AttributeinputRadius for more details.
(Read and Write property)

60.120 class CIFilterHardLightBlendModeMBS

60.120.1 class CIFilterHardLightBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Hard Light Blend Mode filter.
Notes: Details for this filter:

FilterName:	CIHardLightBlendMode
DisplayName English:	Hard Light Blend Mode
DisplayName German:	Mischmethode ,ÄûHartes Licht,Äú
DisplayName French:	Mode de fusion Lumi√®re crue
DisplayName Italian:	Modalit√† sfumatura luce intensa
DisplayName Spanish:	Modo de mezcla por luz directa

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.120.2 Methods

60.120.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.120.4 Properties

60.120.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hard Light Blend Mode attribute.
Notes: This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.120.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hard Light Blend Mode attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.120.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

60.120.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen

60.121 class CIFilterHatchedScreenMBS

60.121.1 class CIFilterHatchedScreenMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Hatched Screen filter.
Example:

```
// apply the Hatched Screen filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterHatchedScreenMBS
filter.inputImage = image
filter.inputAngle = 0 // range -3.141593 to 3.141593
filter.inputCenter = New CIVectorMBS(150, 150)
filter.inputSharpness = 0.7 // range 0 to 1
filter.inputWidth = 6 // range 2 to 50

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIHatchedScreen
DisplayName English:	Hatched Screen
DisplayName German:	Schraffierter Bereich
DisplayName French:	√âcran √† traits parall√®les
DisplayName Italian:	Schermo ombreggiato
DisplayName Spanish:	Pantalla tramada

Categories:

- CICategoryHalftoneEffect: Halftone Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width
- inputSharpness: Sharpness

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.121.2 Methods

60.121.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.121.4 Properties

60.121.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hatched Screen attribute.
Notes: This attribute should have this content:

(Read only property)

60.121.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0

Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

Function: Details about the Hatched Screen attribute.
Notes: This attribute should have this content:

(Read only property)

60.121.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hatched Screen attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.121.8 AttributeinputSharpness as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hatched Screen attribute.
Notes: This attribute should have this content:

Name:	inputSharpness
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Sharpness
DisplayName German:	Sch√§rfe
DisplayName French:	Nettet√©
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
DefaultNumber:	0.7
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

60.121.9 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hatched Screen attribute.
Notes: This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	6
IdentityNumber:	0
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	50
SliderMinNumber:	2

(Read only property)

60.121.10 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

60.121.11 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

60.121.12 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.121.13 inputSharpness as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Sharpness
Notes:

See AttributeinputSharpness for more details.
(Read and Write property)

Name:	inputSharpness
Class:	double (NSNumber)
DisplayName English:	Sharpness
DisplayName German:	Sch√§rfe
DisplayName French:	Nettet√©
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
Type:	CIAttributeTypeScalar

60.121.14 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

60.122 class CIFilterHeightFieldFromMaskMBS

60.122.1 class CIFilterHeightFieldFromMaskMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Height Field From Mask filter.
Notes: Details for this filter:

FilterName:	CIHeightFieldFromMask
DisplayName English:	Height Field From Mask
DisplayName German:	H√henwerte von Maske
DisplayName French:	Champ de hauteur du masque
DisplayName Italian:	Altezza campo dalla maschera
DisplayName Spanish:	Campo de altura a partir de m√°scara

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.122.2 Methods

60.122.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.122.4 Properties

60.122.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Height Field From Mask attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.122.6 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Height Field From Mask attribute.
Notes: This attribute should have this content:

(Read only property)

60.122.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	10
IdentityNumber:	10
SliderMaxNumber:	300
SliderMinNumber:	0

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.122.8 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

60.123 class CIFilterHexagonalPixellateMBS

60.123.1 class CIFilterHexagonalPixellateMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Hexagonal Pixelate filter.
Example:

```
// apply the Hexagonal Pixellate filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterHexagonalPixellateMBS
filter.inputImage = image
filter.inputCenter = New CIVectorMBS(150, 150)
filter.inputScale = 8 // range 1 to 100

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIHexagonalPixellate
DisplayName English:	Hexagonal Pixelate
DisplayName German:	Hexagonales Verpixeln
DisplayName French:	Pixellisation hexagonale
DisplayName Italian:	Effetto pixel esagonale
DisplayName Spanish:	Pixelado hexagonal

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputScale: Scale

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.123.2 Methods

60.123.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.123.4 Properties

60.123.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hexagonal Pixelate attribute.
Notes: This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

60.123.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hexagonal Pixelate attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.123.7 AttributeinputScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hexagonal Pixelate attribute.
Notes: This attribute should have this content:

(Read only property)

60.123.8 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

See AttributeinputCenter for more details.
(Read and Write property)

Name:	inputScale
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
DefaultNumber:	8
IdentityNumber:	1
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	100
SliderMinNumber:	1

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

60.123.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.123.10 inputScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale
Notes:

Name:	inputScale
Class:	double (NSNumber)
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
Type:	CIAttributeTypeDistance

See AttributeinputScale for more details.
(Read and Write property)

60.124 class CIFilterHighlightShadowAdjustMBS

60.124.1 class CIFilterHighlightShadowAdjustMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Highlight and Shadow Adjust filter.
Example:

```
// apply the Highlight Shadow Adjust filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterHighlightShadowAdjustMBS
filter.inputImage = image
filter.inputHighlightAmount = 1 // range 0.3 to 1
filter.inputRadius = 0 // range 0 to 10
filter.inputShadowAmount = 0 // range -1 to 1

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIHighlightShadowAdjust
DisplayName English:	Highlight and Shadow Adjust
DisplayName German:	Helle und dunkle Bereiche anpassen
DisplayName French:	Ajuster les lumi√®res et les ombres
DisplayName Italian:	Regolazione luce e ombre
DisplayName Spanish:	Ajuste de resaltados y sombras

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRadius: Radius
- inputShadowAmount: Shadow Amount
- inputHighlightAmount: Highlight Amount

Output:

- outputImage

Subclass of the CIFilterMBS class.
Blog Entries

- MBS Real Studio Plugins, version 13.1pr5

60.124.2 Methods

60.124.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.124.4 Properties

60.124.5 AttributeinputHighlightAmount as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Highlight and Shadow Adjust attribute.
Notes: This attribute should have this content:

(Read only property)

60.124.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputHighlightAmount
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Highlight Amount
DisplayName German:	St√§rke der Hervorhebung
DisplayName French:	Quantit√© de surbrillance
DisplayName Italian:	Quantit√† luci

60.126 class CIFilterHoleDistortionMBS

60.126.1 class CIFilterHoleDistortionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Hole Distortion filter.
Example:

```
// apply the Hole Distortion filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterHoleDistortionMBS
filter.inputImage = image
filter.inputCenter = New CIVectorMBS(150, 150)
filter.inputRadius = 150 // range 0.01 to 1000

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIHoleDistortion
DisplayName English:	Hole Distortion
DisplayName German:	Verzerrung ,ÄûLoch,Äú
DisplayName French:	D√©formation Orifice
DisplayName Italian:	Distorsione foro
DisplayName Spanish:	Distorsi√n de orificios

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.126.2 Methods

60.126.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.126.4 Properties

60.126.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hole Distortion attribute.
Notes: This attribute should have this content:

60.126.7 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hole Distortion attribute.
Notes: This attribute should have this content:

(Read only property)

60.126.8 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

See AttributeinputCenter for more details.
(Read and Write property)

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	150
IdentityNumber:	0.1
MaxNumber:	0
MinNumber:	0.01
SliderMaxNumber:	1000
SliderMinNumber:	0.01

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

60.126.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.126.10 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

60.127 class CIFilterHueAdjustMBS

60.127.1 class CIFilterHueAdjustMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Hue Adjust filter.
Notes: Details for this filter:

FilterName:	CIHueAdjust
DisplayName English:	Hue Adjust
DisplayName German:	Farbton anpassen
DisplayName French:	Ajustement de tonalit√©
DisplayName Italian:	Regolazione tonalit√†
DisplayName Spanish:	Ajuste de matiz

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputAngle: Angle

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.127.2 Methods

60.127.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.127.4 Properties

60.127.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hue Adjust attribute.
Notes: This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

60.127.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hue Adjust attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.127.7 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

60.127.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.128 class CIFilterHueBlendModeMBS

60.128.1 class CIFilterHueBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Hue Blend Mode filter.
Notes: Details for this filter:

FilterName:	CIHueBlendMode
DisplayName English:	Hue Blend Mode
DisplayName German:	Mischmethode ,ÄûFarbton,Äú
DisplayName French:	Mode de fusion Tonalit√©
DisplayName Italian:	Modalit√† sfumatura tonalit√†
DisplayName Spanish:	Modo de mezcla de matiz

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.128.2 Methods

60.128.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.128.4 Properties

60.128.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hue Blend Mode attribute.
Notes: This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.128.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hue Blend Mode attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.128.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

60.128.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.129 class CIFilterHueSaturationValueGradientMBS

60.129.1 class CIFilterHueSaturationValueGradientMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Hue/Saturation/Value Gradient filter.
Example:

```
// generate an image with the Hue Saturation Value Gradient filter
Var filter As New CIFilterHueSaturationValueGradientMBS
filter.inputDither = 1 // range 0 to 3
filter.inputRadius = 300 // range 0 to 800
filter.inputSoftness = 1 // range 0 to 1
filter.inputValue = 1 // range 0 to 1

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture(300, 300)
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIHueSaturationValueGradient
DisplayName English:	Hue/Saturation/Value Gradient
DisplayName German:	Farbton/S√§ttigung/Wertverlauf
DisplayName French:	D√©grad√© de teinte/saturation/valeur
DisplayName Italian:	Tonalit√†/saturazione/valore gradiente
DisplayName Spanish:	Degradado de matiz/saturaci√n/valor

Categories:

- CICategoryGradient: Gradient
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputValue: Value
- inputRadius: Radius

- inputSoftness: Softness
- inputDither: Dither
- inputColorSpace: Color Space

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.129.2 Methods

60.129.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.129.4 Properties

60.129.5 AttributeinputColorSpace as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hue/Saturation/Value Gradient attribute.
Notes: This attribute should have this content:

Name:	inputColorSpace
Class:	CGColorSpaceMBS
DisplayName English:	Color Space
DisplayName German:	Farbraum
DisplayName French:	Espace colorim√©trique
DisplayName Italian:	Spazio colore
DisplayName Spanish:	Espacio de color
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.129.6 AttributeinputDither as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hue/Saturation/Value Gradient attribute.
Notes: This attribute should have this content:

Name:	inputDither
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Dither
DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	3
SliderMinNumber:	0

(Read only property)

60.129.7 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hue/Saturation/Value Gradient attribute.
Notes: This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	300
IdentityNumber:	0
SliderMaxNumber:	800
SliderMinNumber:	0

(Read only property)

60.129.8 AttributeinputSoftness as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hue/Saturation/Value Gradient attribute.
Notes: This attribute should have this content:

Name:	inputSoftness
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Softness
DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

60.129.9 AttributeinputValue as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hue/Saturation/Value Gradient attribute.
Notes: This attribute should have this content:

Name:	inputValue
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Value
DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

60.129.10 inputColorSpace as CGColorSpaceMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color Space
Notes:

Name:	inputColorSpace
Class:	CGColorSpaceMBS (NSObject)
DisplayName English:	Color Space
DisplayName German:	Farbraum
DisplayName French:	Espace colorim√©trique
DisplayName Italian:	Spazio colore
DisplayName Spanish:	Espacio de color

See AttributeinputColorSpace for more details.
(Read and Write property)

60.129.11 inputDither as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Dither
Notes:

Name:	inputDither
Class:	double (NSNumber)
DisplayName English:	Dither
DisplayName German:	Dither
DisplayName French:	Dither
DisplayName Italian:	Dither
DisplayName Spanish:	Dither
Type:	CIAttributeTypeScalar

See AttributeinputDither for more details.
(Read and Write property)

60.129.12 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

See AttributeinputRadius for more details.
(Read and Write property)

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

60.129.13 inputSoftness as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Softness
Notes:

Name:	inputSoftness
Class:	double (NSNumber)
DisplayName English:	Softness
DisplayName German:	Softness
DisplayName French:	Softness
DisplayName Italian:	Softness
DisplayName Spanish:	Softness
Type:	CIAttributeTypeScalar

See AttributeinputSoftness for more details.
(Read and Write property)

60.129.14 inputValue as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Value
Notes:

Name:	inputValue
Class:	double (NSNumber)
DisplayName English:	Value
DisplayName German:	Value
DisplayName French:	Value
DisplayName Italian:	Value
DisplayName Spanish:	Value
Type:	CIAttributeTypeScalar

See AttributeinputValue for more details.
(Read and Write property)

60.130 class CIFilterKaleidoscopeMBS

60.130.1 class CIFilterKaleidoscopeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Kaleidoscope filter.
Example:

```
// apply the Kaleidoscope filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterKaleidoscopeMBS
filter.inputImage = image
filter.inputAngle = 0 // range -3.141593 to 3.141593
filter.inputCenter = New CIVectorMBS(150, 150)
filter.inputCount = 6 // range 1 to 64

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIKaleidoscope
DisplayName English:	Kaleidoscope
DisplayName German:	Kaleidoskop
DisplayName French:	Kal√©idoscope
DisplayName Italian:	Caleidoscopio
DisplayName Spanish:	Caleidoscopio

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCount: Count
- inputCenter: Center
- inputAngle: Angle

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.130.2 Methods

60.130.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.130.4 Properties

60.130.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Kaleidoscope attribute.
Notes: This attribute should have this content:

(Read only property)

60.130.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Kaleidoscope attribute.
Notes: This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo

60.131 class CIFilterKeystoneCorrectionCombinedMBS

60.131.1 class CIFilterKeystoneCorrectionCombinedMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Combined Keystone Correction filter.
Example:

```
// apply the Keystone Correction Combined filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterKeystoneCorrectionCombinedMBS
filter.inputImage = image
filter.inputFocalLength = 28

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIKeystoneCorrectionCombined
DisplayName English:	Combined Keystone Correction
DisplayName German:	Kombinierte Trapezkorrektur
DisplayName French:	Correction de trap√®ze combin√©e
DisplayName Italian:	Correzione trapezio combinata
DisplayName Spanish:	Correcci√n trapezoidal combinada

Categories:

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image

- inputFocalLength: Focal Length
- inputTopLeft: Top Left
- inputTopRight: Top Right
- inputBottomRight: Bottom Right
- inputBottomLeft: Bottom Left

Output:

- outputImage
- outputTransform
- outputRotationFilter

Subclass of the CIFilterMBS class.

60.131.13 inputFocalLength as double

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Focal Length
Notes:

Name:	inputFocalLength
Class:	double (NSNumber)
DisplayName English:	Focal Length
DisplayName German:	Brennweite
DisplayName French:	Longueur focale
DisplayName Italian:	Lunghezza focale
DisplayName Spanish:	Longitud focal
Type:	CIAttributeTypeScalar

See AttributeinputFocalLength for more details.
(Read and Write property)

60.131.14 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.131.15 inputTopLeft as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Top Left
Notes:

Name:	inputTopLeft
Class:	CIVectorMBS (CIVector)
DisplayName English:	Top Left
DisplayName German:	Oben links
DisplayName French:	En haut √† gauche
DisplayName Italian:	In alto a sinistra
DisplayName Spanish:	Arriba izquierda
Type:	CIAttributeTypePosition

See AttributeinputTopLeft for more details.
(Read and Write property)

60.131.16 inputTopRight as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Top Right
Notes:

Name:	inputTopRight
Class:	CIVectorMBS (CIVector)
DisplayName English:	Top Right
DisplayName German:	Oben rechts
DisplayName French:	En haut √† droite
DisplayName Italian:	In alto a destra
DisplayName Spanish:	Arriba derecha
Type:	CIAttributeTypePosition

See AttributeinputTopRight for more details.
(Read and Write property)

60.132 class CIFilterKeystoneCorrectionHorizontalMBS

60.132.1 class CIFilterKeystoneCorrectionHorizontalMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Horizontal Keystone Correction filter.
Example:

```
// apply the Keystone Correction Horizontal filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterKeystoneCorrectionHorizontalMBS
filter.inputImage = image
filter.inputFocalLength = 28

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIKeystoneCorrectionHorizontal
DisplayName English:	Horizontal Keystone Correction
DisplayName German:	Horizontale Trapezkorrektur
DisplayName French:	Correction de trap√®ze horizontale
DisplayName Italian:	Correzione trapezio orizzontale
DisplayName Spanish:	Correcci√n trapezoidal horizontal

Categories:

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image

- inputFocalLength: Focal Length
- inputTopLeft: Top Left
- inputTopRight: Top Right
- inputBottomRight: Bottom Right
- inputBottomLeft: Bottom Left

Output:

- outputImage
- outputTransform
- outputRotationFilter

Subclass of the CIFilterMBS class.

- MBS Xojo Plugins, version 23.0pr5

60.132.2 Methods

60.132.3 Constructor

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.132.4 Properties

60.132.5 AttributeinputBottomLeft as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Horizontal Keystone Correction attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputBottomLeft
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Bottom Left
DisplayName German:	Unten links
DisplayName French:	En bas √† gauche
DisplayName Italian:	In basso a sinistra
DisplayName Spanish:	Abajo izquierda
DefaultVector:	n/a
IdentityVector:	n/a

60.132.6 AttributeinputBottomRight as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Horizontal Keystone Correction attribute.
Notes: This attribute should have this content:

Name:	inputBottomRight
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Bottom Right
DisplayName German:	Unten rechts
DisplayName French:	En bas √† droite
DisplayName Italian:	In basso a destra
DisplayName Spanish:	Abajo derecha
DefaultVector:	n/a
IdentityVector:	n/a

(Read only property)

60.132.7 AttributeinputFocalLength as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Horizontal Keystone Correction attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputFocalLength
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Focal Length
DisplayName German:	Brennweite
DisplayName French:	Longueur focale
DisplayName Italian:	Lunghezza focale
DisplayName Spanish:	Longitud focal
DefaultNumber:	28
IdentityNumber:	0

60.132.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Horizontal Keystone Correction attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.132.9 AttributeinputTopLeft as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Horizontal Keystone Correction attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputTopLeft
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Top Left
DisplayName German:	Oben links
DisplayName French:	En haut √† gauche
DisplayName Italian:	In alto a sinistra
DisplayName Spanish:	Arriba izquierda
DefaultVector:	n/a
IdentityVector:	n/a

60.132.10 AttributeinputTopRight as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Horizontal Keystone Correction attribute.
Notes: This attribute should have this content:

Name:	inputTopRight
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Top Right
DisplayName German:	Oben rechts
DisplayName French:	En haut √† droite
DisplayName Italian:	In alto a destra
DisplayName Spanish:	Arriba derecha
DefaultVector:	n/a
IdentityVector:	n/a

(Read only property)

60.132.11 inputBottomLeft as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Bottom Left
Notes:

See AttributeinputBottomLeft for more details.
(Read and Write property)

Name:	inputBottomLeft
Class:	CIVectorMBS (CIVector)
DisplayName English:	Bottom Left
DisplayName German:	Unten links
DisplayName French:	En bas √† gauche
DisplayName Italian:	In basso a sinistra
DisplayName Spanish:	Abajo izquierda
Type:	CIAttributeTypePosition

60.132.12 inputBottomRight as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Bottom Right
Notes:

Name:	inputBottomRight
Class:	CIVectorMBS (CIVector)
DisplayName English:	Bottom Right
DisplayName German:	Unten rechts
DisplayName French:	En bas √† droite
DisplayName Italian:	In basso a destra
DisplayName Spanish:	Abajo derecha
Type:	CIAttributeTypePosition

See AttributeinputBottomRight for more details.
(Read and Write property)

60.132.13 inputFocalLength as double

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Focal Length
Notes:

Name:	inputFocalLength
Class:	double (NSNumber)
DisplayName English:	Focal Length
DisplayName German:	Brennweite
DisplayName French:	Longueur focale
DisplayName Italian:	Lunghezza focale
DisplayName Spanish:	Longitud focal
Type:	CIAttributeTypeScalar

See AttributeinputFocalLength for more details.
(Read and Write property)

60.132.14 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.132.15 inputTopLeft as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Top Left
Notes:

Name:	inputTopLeft
Class:	CIVectorMBS (CIVector)
DisplayName English:	Top Left
DisplayName German:	Oben links
DisplayName French:	En haut √† gauche
DisplayName Italian:	In alto a sinistra
DisplayName Spanish:	Arriba izquierda
Type:	CIAttributeTypePosition

See AttributeinputTopLeft for more details.
(Read and Write property)

60.132.16 inputTopRight as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Top Right
Notes:

Name:	inputTopRight
Class:	CIVectorMBS (CIVector)
DisplayName English:	Top Right
DisplayName German:	Oben rechts
DisplayName French:	En haut √† droite
DisplayName Italian:	In alto a destra
DisplayName Spanish:	Arriba derecha
Type:	CIAttributeTypePosition

See AttributeinputTopRight for more details.
(Read and Write property)

60.133 class CIFilterKeystoneCorrectionVerticalMBS

60.133.1 class CIFilterKeystoneCorrectionVerticalMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Vertical Keystone Correction filter.
Example:

```
// apply the Keystone Correction Vertical filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterKeystoneCorrectionVerticalMBS
filter.inputImage = image
filter.inputFocalLength = 28

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIKeystoneCorrectionVertical
DisplayName English:	Vertical Keystone Correction
DisplayName German:	Vertikale Trapezkorrektur
DisplayName French:	Correction de trap√®ze verticale
DisplayName Italian:	Correzione trapezio verticale
DisplayName Spanish:	Correcci√n trapezoidal vertical

Categories:

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image

- inputFocalLength: Focal Length
- inputTopLeft: Top Left
- inputTopRight: Top Right
- inputBottomRight: Bottom Right
- inputBottomLeft: Bottom Left

Output:

- outputImage
- outputTransform
- outputRotationFilter

Subclass of the CIFilterMBS class.

(Read only property)

60.135.6 AttributeinputImage2 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lab ,àÜE attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage2
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName:	Image2
DefaultNumber:	0
IdentityNumber:	0

60.135.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.135.8 inputImage2 as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image2
Notes:

Name:	inputImage2
Class:	CIImageMBS (CIImage)
DisplayName English:	Image2
DisplayName German:	Image2
DisplayName French:	Image2
DisplayName Italian:	Image2
DisplayName Spanish:	Image2
Type:	CIAttributeTypeImage

See AttributeinputImage2 for more details.

(Read and Write property)

60.136 class CIFilterLanczosScaleTransformMBS

60.136.1 class CIFilterLanczosScaleTransformMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Lanczos Scale Transform filter.
Example:

```
// apply the Lanczos Scale Transform filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterLanczosScaleTransformMBS
filter.inputImage = image
filter.inputAspectRatio = 1 // range 0.5 to 2
filter.inputScale = 1 // range 0.05 to 1.5

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CILanczosScaleTransform
DisplayName English:	Lanczos Scale Transform
DisplayName German:	Lanczos Skalierungstransformation
DisplayName French:	Transformation d,Äô√©chelle de Lanczos
DisplayName Italian:	Trasforma scala di Lanczos
DisplayName Spanish:	Transformar mediante escala Lanczos

Categories:

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputScale: Scale
- inputAspectRatio: Aspect Ratio

Output:

- outputImage
- outputImageNewScaleX:scaleY:
- outputImageOldScaleX:scaleY:

Subclass of the CIFilterMBS class.

60.136.2 Methods

60.136.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.136.4 Properties

60.136.5 AttributeinputAspectRatio as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lanczos Scale Transform attribute.
Notes: This attribute should have this content:

(Read only property)

60.136.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputAspectRatio
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Aspect Ratio
DisplayName German:	Seitenverh√§ltnis
DisplayName French:	Proportions
DisplayName Italian:	Proporzioni
DisplayName Spanish:	Proporciones
DefaultNumber:	1
IdentityNumber:	1

Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

Function: Details about the Lanczos Scale Transform attribute.
Notes: This attribute should have this content:

(Read only property)

60.136.7 AttributeinputScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lanczos Scale Transform attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputScale
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
DefaultNumber:	1
IdentityNumber:	1
SliderMaxNumber:	1.5
SliderMinNumber:	0.05

60.136.8 inputAspectRatio as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Aspect Ratio
Notes:

Name:	inputAspectRatio
Class:	double (NSNumber)
DisplayName English:	Aspect Ratio
DisplayName German:	Seitenverh√§ltnis
DisplayName French:	Proportions
DisplayName Italian:	Proporzioni
DisplayName Spanish:	Proporciones
Type:	CIAttributeTypeScalar

See AttributeinputAspectRatio for more details.
(Read and Write property)

60.136.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.136.10 inputScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale
Notes:

Name:	inputScale
Class:	double (NSNumber)
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
Type:	CIAttributeTypeScalar

See AttributeinputScale for more details.
(Read and Write property)

60.137 class CIFilterLenticularHaloGeneratorMBS

60.137.1 class CIFilterLenticularHaloGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Lenticular Halo filter.
Example:

```
// generate an image with the Lenticular Halo Generator filter
Var filter As New CIFilterLenticularHaloGeneratorMBS
filter.inputCenter = New CIVectorMBS(150, 150)
filter.inputColor = New CIColorMBS(1, 0.9, 0.8, 1)
filter.inputHaloOverlap = 0.77 // range 0 to 1
filter.inputHaloRadius = 70 // range 0 to 1000
filter.inputHaloWidth = 87 // range 0 to 300
filter.inputStriationContrast = 1 // range 0 to 5
filter.inputStriationStrength = 0.5 // range 0 to 3
filter.inputTime = 0 // range 0 to 1

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture(300, 300)
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CILenticularHaloGenerator
DisplayName English:	Lenticular Halo
DisplayName German:	Linsenf√rmiges Halo
DisplayName French:	Halo lenticulaire
DisplayName Italian:	Alone lenticolare
DisplayName Spanish:	Halo lenticular

Categories:

- CICategoryGenerator: Generator
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputCenter: Center
- inputColor: Color
- inputHaloRadius: Halo Radius
- inputHaloWidth: Halo Width
- inputHaloOverlap: Halo Overlap
- inputStriationStrength: Striation Strength
- inputStriationContrast: Striation Contrast
- inputTime: Time

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.137.2 Methods

60.137.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.137.4 Properties

60.137.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lenticular Halo attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

60.137.6 AttributeinputColor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lenticular Halo attribute.
Notes: This attribute should have this content:

Name:	inputColor
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore

DisplayName Spanish:	Superposici√n del halo
DefaultNumber:	0.77
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

60.137.8 AttributeinputHaloRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lenticular Halo attribute.
Notes: This attribute should have this content:

Name:	inputHaloRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Halo Radius
DisplayName German:	Radius des Halo
DisplayName French:	Rayon du halo
DisplayName Italian:	Raggio alone
DisplayName Spanish:	Radio del halo
DefaultNumber:	70
IdentityNumber:	0
SliderMaxNumber:	1000
SliderMinNumber:	0

(Read only property)

60.137.9 AttributeinputHaloWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lenticular Halo attribute.
Notes: This attribute should have this content:

Name:	inputHaloWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Halo Width
DisplayName German:	Breite des Halo
DisplayName French:	Largeur du halo
DisplayName Italian:	Larghezza alone
DisplayName Spanish:	Anchura del halo
DefaultNumber:	87
IdentityNumber:	0
SliderMaxNumber:	300
SliderMinNumber:	0

(Read only property)

60.137.10 AttributeinputStriationContrast as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lenticular Halo attribute.
Notes: This attribute should have this content:

Name:	inputStriationContrast
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Striation Contrast
DisplayName German:	Kontrast f√ºr Riffelung
DisplayName French:	Contraste des stries
DisplayName Italian:	Contrasto striatura
DisplayName Spanish:	Contraste de la estriaci√n

SliderMinNumber:	0

(Read only property)

60.137.11 AttributeinputStriationStrength as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lenticular Halo attribute.
Notes: This attribute should have this content:

Name:	inputStriationStrength
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Striation Strength
DisplayName German:	St√§rke der Riffelung
DisplayName French:	Force des stries
DisplayName Italian:	Livello striatura
DisplayName Spanish:	Intensidad de la estriaci√n
DefaultNumber:	0.5
IdentityNumber:	0
SliderMaxNumber:	3
SliderMinNumber:	0

(Read only property)

60.137.12 AttributeinputTime as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lenticular Halo attribute.
Notes: This attribute should have this content:

Name:	inputTime
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

60.137.13 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

60.137.14 inputColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color
Notes:

Name:	inputColor
Class:	CIColorMBS (CIColor)
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
Type:	CIAttributeTypeColor

See AttributeinputColor for more details.
(Read and Write property)

60.137.15 inputHaloOverlap as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Halo Overlap
Notes:

Name:	inputHaloOverlap
Class:	double (NSNumber)
DisplayName English:	Halo Overlap
DisplayName German:	Halo √ºberlappen
DisplayName French:	Superposition de halo
DisplayName Italian:	Sovrapposizione alone
DisplayName Spanish:	Superposici√n del halo
Type:	CIAttributeTypeScalar

See AttributeinputHaloOverlap for more details.
(Read and Write property)

60.137.16 inputHaloRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Halo Radius
Notes:

Name:	inputHaloRadius
Class:	double (NSNumber)
DisplayName English:	Halo Radius
DisplayName German:	Radius des Halo
DisplayName French:	Rayon du halo
DisplayName Italian:	Raggio alone
DisplayName Spanish:	Radio del halo
Type:	CIAttributeTypeDistance

See AttributeinputHaloRadius for more details.
(Read and Write property)

60.137.17 inputHaloWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Halo Width
Notes:

See AttributeinputHaloWidth for more details.
(Read and Write property)

Name:	inputHaloWidth
Class:	double (NSNumber)
DisplayName English:	Halo Width
DisplayName German:	Breite des Halo
DisplayName French:	Largeur du halo
DisplayName Italian:	Larghezza alone
DisplayName Spanish:	Anchura del halo
Type:	CIAttributeTypeDistance

60.137.18 inputStriationContrast as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Striation Contrast
Notes:

Name:	inputStriationContrast
Class:	double (NSNumber)
DisplayName English:	Striation Contrast
DisplayName German:	Kontrast f√ºr Riffelung
DisplayName French:	Contraste des stries
DisplayName Italian:	Contrasto striatura
DisplayName Spanish:	Contraste de la estriaci√n
Type:	CIAttributeTypeScalar

See AttributeinputStriationContrast for more details.
(Read and Write property)

60.137.19 inputStriationStrength as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Striation Strength
Notes:

Name:	inputStriationStrength
Class:	double (NSNumber)
DisplayName English:	Striation Strength
DisplayName German:	St√§rke der Riffelung
DisplayName French:	Force des stries
DisplayName Italian:	Livello striatura
DisplayName Spanish:	Intensidad de la estriaci√n
Type:	CIAttributeTypeScalar

See AttributeinputStriationStrength for more details.
(Read and Write property)

60.137.20 inputTime as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Time
Notes:

Name:	inputTime
Class:	double (NSNumber)
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
Type:	CIAttributeTypeScalar

See AttributeinputTime for more details.
(Read and Write property)

60.138 class CIFilterLightenBlendModeMBS

60.138.1 class CIFilterLightenBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Lighten Blend Mode filter.
Notes: Details for this filter:

FilterName:	CILightenBlendMode
DisplayName English:	Lighten Blend Mode
DisplayName German:	Mischmethode ,ÄûAufhellen,Äú
DisplayName French:	Mode de fusion √âclaircir
DisplayName Italian:	Modalit√† sfumatura chiara
DisplayName Spanish:	Aclarar modo de mezcla

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.138.2 Methods

60.138.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.138.4 Properties

60.138.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lighten Blend Mode attribute.
Notes: This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.138.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lighten Blend Mode attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.138.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

60.138.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.139 class CIFilterLightTunnelMBS

60.139.1 class CIFilterLightTunnelMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Light Tunnel Distortion filter.
Example:

```
// apply the Light Tunnel filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterLightTunnelMBS
filter.inputImage = image
filter.inputCenter = New CIVectorMBS(150, 150)
filter.inputRadius = 100 // range 1 to 500
filter.inputRotation = 0 // range 0 to 1.570796

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CILightTunnel
DisplayName English:	Light Tunnel Distortion
DisplayName German:	Lichttunnelverzerrung
DisplayName French:	D√©formation du tunnel lumineux
DisplayName Italian:	Distorsione tunnel di luce
DisplayName Spanish:	Distorsi√n del t√nel de luz

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputRotation: Rotation
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.139.2 Methods

60.139.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.139.4 Properties

60.139.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Light Tunnel Distortion attribute.
Notes: This attribute should have this content:

(Read only property)

60.139.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Light Tunnel Distortion attribute.
Notes: This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.140.2 Methods

60.140.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.140.4 Properties

60.140.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Linear Burn Blend Mode attribute.
Notes: This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.140.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Linear Burn Blend Mode attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.140.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

60.140.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.141 class CIFilterLinearDodgeBlendModeMBS

60.141.1 class CIFilterLinearDodgeBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Linear Dodge Blend Mode filter.
Notes: Details for this filter:

FilterName:	CILinearDodgeBlendMode
DisplayName English:	Linear Dodge Blend Mode
DisplayName German:	Mischmethode ,ÄûLinear abwedeln,Äú
DisplayName French:	Mode de fusion Assombrissement lin√©aire
DisplayName Italian:	Modalit√† sfumatura schermata lineare
DisplayName Spanish:	Modo de mezcla por evasi√n lineal

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.141.2 Methods

60.141.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.141.4 Properties

60.141.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Linear Dodge Blend Mode attribute.
Notes: This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.141.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Linear Dodge Blend Mode attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.141.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

60.141.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.142 class CIFilterLinearGradientMBS

60.142.1 class CIFilterLinearGradientMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Linear Gradient filter.
Example:

```
// create gradient
Var vektor1 as CIVectorMBS = CIVectorMBS.vectorWithXY(800,600)
Var vektor2 as CIVectorMBS = CIVectorMBS.vectorWithXY(0,0)

Var CiGradiantFilter as new CIFilterLinearGradientMBS
CiGradiantFilter.SetDefaults
CiGradiantFilter.inputPoint0 = vektor1
CiGradiantFilter.inputPoint1 = vektor2
CiGradiantFilter.inputColor0 = CIColorMBS.colorWithRGB(1,1,1)
CiGradiantFilter.inputColor1 = CIColorMBS.colorWithRGB(1,0.5,0.3)

Var r as CIImageMBS = CiGradiantFilter.outputImage

Backdrop = r.RenderPicture(800, 600)
```

Notes: Details for this filter:

FilterName:	CILinearGradient
DisplayName English:	Linear Gradient
DisplayName German:	Linearer Verlauf
DisplayName French:	D√©grad√© lin√©aire
DisplayName Italian:	Gradiente lineare
DisplayName Spanish:	Degradado lineal

Categories:

- CICategoryGradient: Gradient
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputPoint0: Point 0
- inputPoint1: Point 1
- inputColor0: Color 1
- inputColor1: Color 2

Output:

- outputImage

Subclass of the CIFilterMBS class.

Type:	CIAttributeTypeImage

60.145 class CIFilterLineOverlayMBS

60.145.1 class CIFilterLineOverlayMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Line Overlay filter.
Example:

```
// apply the Line Overlay filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterLineOverlayMBS
filter.inputImage = image
filter.inputContrast = 50 // range 0.25 to 200
filter.inputEdgeIntensity = 1 // range 0 to 200
filter.inputNRNoiseLevel = 0.07 // range 0 to 0.1
filter.inputNRSharpness = 0.71 // range 0 to 2
filter.inputThreshold = 0.1 // range 0 to 1

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CILineOverlay
DisplayName English:	Line Overlay
DisplayName German:	Linien√ºberlagerung
DisplayName French:	Incrustation de lignes
DisplayName Italian:	Sovrapposizione linea
DisplayName Spanish:	L√nea superpuesta

Categories:

See AttributeinputNRNoiseLevel for more details.
(Read and Write property)

60.145.15 inputNRSharpness as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute NR Sharpness
Notes:

Name:	inputNRSharpness
Class:	double (NSNumber)
DisplayName English:	NR Sharpness
DisplayName German:	NR Sch√§rfe
DisplayName French:	Nettet√© NR
DisplayName Italian:	Nitidezza NR
DisplayName Spanish:	Nitidez NR
Type:	CIAttributeTypeScalar

See AttributeinputNRSharpness for more details.
(Read and Write property)

60.145.16 inputThreshold as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Threshold
Notes:

Name:	inputThreshold
Class:	double (NSNumber)
DisplayName English:	Threshold
DisplayName German:	Schwellenwert
DisplayName French:	Seuil
DisplayName Italian:	Soglia
DisplayName Spanish:	Umbral
Type:	CIAttributeTypeScalar

See AttributeinputThreshold for more details.
(Read and Write property)

60.146 class CIFilterLineScreenMBS

60.146.1 class CIFilterLineScreenMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Line Screen filter.
Example:

```
// apply the Line Screen filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterLineScreenMBS
filter.inputImage = image
filter.inputAngle = 0 // range -3.141593 to 3.141593
filter.inputCenter = New CIVectorMBS(150, 150)
filter.inputSharpness = 0.7 // range 0 to 1
filter.inputWidth = 6 // range 2 to 50

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CILineScreen
DisplayName English:	Line Screen
DisplayName German:	Liniertes Halbtonraster
DisplayName French:	√âcran √† traits
DisplayName Italian:	Schermo lineare
DisplayName Spanish:	Pantalla de l√neas

Categories:

- CICategoryHalftoneEffect: Halftone Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width
- inputSharpness: Sharpness

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.146.2 Methods

60.146.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.146.4 Properties

60.146.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Line Screen attribute.
Notes: This attribute should have this content:

(Read only property)

60.146.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

Function: Details about the Line Screen attribute.
Notes: This attribute should have this content:

(Read only property)

60.146.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Line Screen attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.146.8 AttributeinputSharpness as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Line Screen attribute.
Notes: This attribute should have this content:

Name:	inputSharpness
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Sharpness
DisplayName German:	Sch√§rfe
DisplayName French:	Nettet√©
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
DefaultNumber:	0.7
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

60.146.9 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Line Screen attribute.
Notes: This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	6
IdentityNumber:	0
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	50
SliderMinNumber:	2

(Read only property)

60.146.10 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

60.146.11 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

60.146.12 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.146.13 inputSharpness as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Sharpness
Notes:

See AttributeinputSharpness for more details.
(Read and Write property)

Name:	inputSharpness
Class:	double (NSNumber)
DisplayName English:	Sharpness
DisplayName German:	Sch√§rfe
DisplayName French:	Nettet√©
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
Type:	CIAttributeTypeScalar

60.146.14 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

60.147 class CIFilterLuminosityBlendModeMBS

60.147.1 class CIFilterLuminosityBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Luminosity Blend Mode filter.
Notes: Details for this filter:

FilterName:	CILuminosityBlendMode
DisplayName English:	Luminosity Blend Mode
DisplayName German:	Mischmethode ,ÄûLeuchtkraft,Äú
DisplayName French:	Mode de fusion Luminosit√©
DisplayName Italian:	Modalit√† sfumatura luminosit√†
DisplayName Spanish:	Modo de mezcla por luminosidad

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.147.2 Methods

60.147.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.147.4 Properties

60.147.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Luminosity Blend Mode attribute.
Notes: This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.147.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Luminosity Blend Mode attribute.
Notes: This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

60.147.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

60.147.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.148 class CIFilterMaskedVariableBlurMBS

60.148.1 class CIFilterMaskedVariableBlurMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Masked Variable Blur filter.
Example:

```
// apply the Masked Variable Blur filter
Var pic As Picture = LogoMBS(500)
Var image As CIImageMBS = NewCIImagewithCGImageMBS(CGCreateImageMBS(pic))

Var filter As New CIFilterMaskedVariableBlurMBS
filter.inputImage = image
filter.inputMask = image
filter.inputRadius = 5 // range 0 to 10

Var result As CIImageMBS = filter.outputImage
Var output As Picture = result.RenderPicture
// show output in a Canvas or ImageViewer
```

Notes: Details for this filter:

FilterName:	CIMaskedVariableBlur
DisplayName English:	Masked Variable Blur
DisplayName German:	Maskierte variable Weichzeichnung
DisplayName French:	Flou variable masqu√©
DisplayName Italian:	Sfocatura variabile mascherata
DisplayName Spanish:	Desenfoque variable con m√°scara

Categories:

- CICategoryBlur: Blur
- CICategoryStillImage: Still Image
- CICategoryVideo: Video
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputMask: Mask
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.148.2 Methods

60.148.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.148.4 Properties

60.148.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Masked Variable Blur attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.148.6 AttributeinputMask as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Masked Variable Blur attribute.
Notes: This attribute should have this content:

Name:	inputMask
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName:	Mask
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.148.7 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Masked Variable Blur attribute.
Notes: This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	5
IdentityNumber:	0
SliderMaxNumber:	10
SliderMinNumber:	0

(Read only property)

60.148.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

60.148.9 inputMask as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Mask
Notes:

Name:	inputMask
Class:	CIImageMBS (CIImage)
DisplayName English:	Mask
DisplayName German:	Mask
DisplayName French:	Mask
DisplayName Italian:	Mask
DisplayName Spanish:	Mask
Type:	CIAttributeTypeImage

See AttributeinputMask for more details.
(Read and Write property)

60.148.10 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeScalar

See AttributeinputRadius for more details.
(Read and Write property)

60.149 class CIFilterMaskToAlphaMBS

60.149.1 class CIFilterMaskToAlphaMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Mask to Alpha filter.
Notes: Details for this filter:

FilterName:	CIMaskToAlpha
DisplayName English:	Mask to Alpha
DisplayName German:	Mit Alpha-Kanal maskieren
DisplayName French:	Masque vers alpha
DisplayName Italian:	Maschera ad alfa
DisplayName Spanish:	M√°scara a alfa

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.149.2 Methods

60.149.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.149.4 Properties

60.149.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Mask to Alpha attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.149.6 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.150 class CIFilterMaximumComponentMBS

60.150.1 class CIFilterMaximumComponentMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Maximum Component filter.
Notes: Details for this filter:

FilterName:	CIMaximumComponent
DisplayName English:	Maximum Component
DisplayName German:	Maximaler Kanal
DisplayName French:	Composante maximum
DisplayName Italian:	Componente massimo
DisplayName Spanish:	Componente m√°ximo

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.150.2 Methods

60.150.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.150.4 Properties

60.150.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Maximum Component attribute.
Notes: This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

60.150.6 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

60.151 class CIFilterMaximumCompositingMBS

60.151.1 class CIFilterMaximumCompositingMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Maximum filter.
Notes: Details for this filter:

FilterName:	CIMaximumCompositing
DisplayName English:	Maximum
DisplayName German:	Maximum
DisplayName French:	Maximum
DisplayName Italian:	Massima
DisplayName Spanish:	M√°ximo

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

60.151.2 Methods

60.151.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

60.151.4 Properties
