Function: Provides an object with a property bag in which the object can save its properties persistently.
Notes: used for Monikers to store properties like description and user friendly name.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- News from the MBS Xojo Plugins Version 22.0
- MBS Xojo Plugins, version 21.6pr1
- MBS Real Studio Plugins, version 12.1pr2

71.29.2 Methods

71.29.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.29.4 CountProperties as Integer

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the number of properties in the property bag.
Notes: Sets lasterror.
This fails if the underlaying object doesn't implement the IPropertyBag2 protocol.

71.29.5 Description as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Convenience method to read description.
Notes: Lasterror is set.

71.29.6 DevicePath as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Convenience method to read device path.
Notes: Lasterror is set.

71.29.7 FriendlyName as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Convenience method to read friendly name.
Notes: Lasterror is set.

71.29.8 PropertyName(index as Integer) as string

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries name of a property.
Notes: Sets lasterror.
This fails if the underlaying object doesn't implement the IPropertyBag2 protocol.

71.29.9 Read(name as string) as Variant

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads one of the properties into a variant.
Notes: As we only need 3 properties for DirectShowMonikerMBS.Properties, we have direct accessors.
Lasterror is set.

71.29.10 Properties

71.29.11 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Points to an IPropertyBag interface.
(Read and Write property)

71.29.12 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

71.29.13 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.30 class DirectShowSampleGrabberMBS

71.30.1 class DirectShowSampleGrabberMBS

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a sample grabber.
Notes: The Sample Grabber filter provides a way to retrieve samples as they pass through the filter graph. It is a transform filter with one input pin and one output pin. It passes all samples downstream unchanged, so you can insert it into a filter graph without altering the data stream. Your application can then retrieve individual samples from the filter by calling methods on the ISampleGrabber interface.
If you want to retrieve samples without rendering the data, connect the Sample Grabber filter to the Null Renderer filter.

- MBS Real Studio Plugins, version 12.3pr8

71.30.2 Methods

71.30.3 BaseFilter as DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the filter for this grabber.
Notes: So you can add it to a graph builder.

71.30.4 ConnectedMediaType as DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetConnectedMediaType method retrieves the media type for the connection on the input pin of the Sample Grabber.
Notes: Lasterror is set.

71.30.5 Constructor

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new instance of the sample grabber.

71.30.6 Current as Picture

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: Queries current picture.
Notes: This actually makes a copy of the internal buffer into a new picture object.
Lasterror is set.

71.30.7 Destructor

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

71.30.8 SetOneShot(OneShot as boolean)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The SetOneShot method specifies whether the Sample Grabber filter halts after the filter receives a sample.

71.30.9 Properties

71.30.10 Handle as Integer

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Points to an ISampleGrabber interface.
(Read and Write property)

71.30.11 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

71.30.12 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.30.13 Events

71.30.14 NewFrame(Time as Double)

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event for a new video frame.
Notes: time is the starting time of the sample, in seconds.
Use the Current method to get the picture.

71.31 class DirectShowVideoInfoHeader2MBS

71.31.1 class DirectShowVideoInfoHeader2MBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Describes the bitmap and color information for a video image, including interlace, copy protection, and pixel aspect ratio information.
Notes: see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd407326(v=vs.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

71.31.2 Methods

71.31.3 Constructor

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.31.4 Properties

71.31.5 AvgTimePerFrame as Int64

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The desired average display time of the video frames, in 100-nanosecond units.
Notes: The actual time per frame may be longer.
see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd407326(v=vs.85).aspx
(Read and Write property)

71.31.6 BitErrorRate as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Data error rate, in bit errors per second.
Notes: (Read and Write property)

71.31.7 BitRate as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Approximate data rate of the video stream, in bits per second.
Notes: (Read and Write property)

71.31.8 ControlFlags as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Control flags.
Notes: see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd407326(v=vs.85).aspx
(Read and Write property)

71.31.9 CopyProtectFlags as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Flag set with the AMCOPYPROTECT_RestrictDuplication value (0x00000001) to indicate that the duplication of the stream should be restricted.
Notes: If undefined, specify zero or else the connection will be rejected.
(Read and Write property)

71.31.10 Height as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bitmap height.
Notes: (Read and Write property)

71.31.11 InterlaceFlags as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Flags that specify how the video is interlaced.
Notes: see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd407326(v=vs.85).aspx
(Read and Write property)

71.31.12 PictAspectRatioX as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The X dimension of picture aspect ratio. For example, 16 for a 16-inch x 9-inch display.
Notes: (Read and Write property)

71.31.13 PictAspectRatioY as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Y dimension of picture aspect ratio. For example, 9 for a 16-inch x 9-inch display.
Notes: (Read and Write property)

71.31.14 SourceBottom as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes: This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

71.31.15 SourceLeft as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes: This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

71.31.16 SourceRight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes: This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

71.31.17 SourceTop as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes: This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

71.31.18 TargetBottom as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

71.31.19 TargetLeft as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

71.31.20 TargetRight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

71.31.21 TargetTop as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

71.31.22 Width as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bitmap width.
Notes: (Read and Write property)

71.32 class DirectShowVideoInfoHeaderMBS

71.32.1 class DirectShowVideoInfoHeaderMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Describes the bitmap and color information for a video image.
Notes: see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd407325(v=vs.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

http://msdn.microsoft.com/en-us/library/windows/desktop/dd407325(v=vs.85).aspx
(Read and Write property)

71.32.6 BitCount as Integer

MBS Win Plugin, Plugin Version: 16.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bitmap bit count value.
Notes: The number of bits-per-pixel. Determines the number of bits that define each pixel and the maximum number of colors in the bitmap. This member must be one of the following values.

Can be 0 for PNG/JPEG images, 1 for B/W, 4 for 16 colors, 8 for 256 colors, 16 for thousands of colors, 24 for millions of colors or 32 for millions of colors with alpha.
(Read and Write property)

71.32.7 BitErrorRate as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Data error rate, in bit errors per second.
Notes: (Read and Write property)

71.32.8 BitRate as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Approximate data rate of the video stream, in bits per second.
Notes: (Read and Write property)

71.32.9 BMIHeaderPtr as Ptr

MBS Win Plugin, Plugin Version: 16.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns pointer to BITMAPINFOHEADER structure.
Notes: You can use this to modify any field directly.
You need to know what you do and know the exact offset. (which can be different in 32-bit vs. 64-bit)
(Read only property)

71.32.10 Height as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bitmap height.
Notes: (Read and Write property)

71.32.11 SourceBottom as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes: This rectangle can be a clipping rectangle, to select a portion of the source video stream.

(Read and Write property)

71.32.12 SourceLeft as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes: This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

71.32.13 SourceRight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes: This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

71.32.14 SourceTop as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes: This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

71.32.15 TargetBottom as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

71.32.16 TargetLeft as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

71.32.17 TargetRight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

71.32.18 TargetTop as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

71.32.19 VideoInfoHeaderPtr as Ptr

MBS Win Plugin, Plugin Version: 16.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns pointer to VIDEOINFOHEADER structure.
Notes: You can use this to modify any field directly.
You need to know what you do and know the exact offset. (which can be different in 32-bit vs. 64-bit)
(Read only property)

71.32.20 Width as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bitmap width.
Notes: (Read and Write property)

71.33 class DirectShowVideoStreamConfigCapsMBS

71.33.1 class DirectShowVideoStreamConfigCapsMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Describes a range of video formats.
Notes: Video compression and video capture filters use this structure to describe what formats they can produce.
Microsoft deprecated this strucutre some time ago in favor of DirectShowMediaTypeMBS class.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd407352(v=vs.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr7

71.33.2 Methods

71.33.3 Constructor

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.33.4 Properties

71.33.5 CropAlignX as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Required horizontal alignment of the source rectangle.
Notes: Deprecated.
(Read only property)

71.33.6 CropAlignY as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Required vertical alignment of the source rectangle.
Notes: Deprecated.

(Read only property)

71.33.7 CropGranularityX as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Horizontal granularity of the source rectangle.
Notes: This value specifies the increments that are valid between MinCroppingSize and MaxCroppingSize.
Deprecated.
(Read only property)

71.33.8 CropGranularityY as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Vertical granularity of the source rectangle.
Notes: This value specifies the increments that are valid between MinCroppingSize and MaxCroppingSize.
Note Deprecated.
(Read only property)

71.33.9 InputSizeHeight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Native size of the incoming video signal.
Notes: For a compressor, the size is taken from the input pin. For a capture filter, the size is the largest signal the filter can digitize with every pixel remaining unique.
Deprecated.
(Read only property)

71.33.10 InputSizeWidth as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Native size of the incoming video signal.
Notes: For a compressor, the size is taken from the input pin. For a capture filter, the size is the largest signal the filter can digitize with every pixel remaining unique.
Deprecated.
(Read only property)

71.33.11 MaxBitsPerSecond as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum data rate this pin can produce.
Notes: Deprecated
(Read only property)

71.33.12 MaxCroppingSizeHeight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Largest source rectangle allowed.
Notes: Deprecated.
(Read only property)

71.33.13 MaxCroppingSizeWidth as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Largest source rectangle allowed.
Notes: Deprecated.
(Read only property)

71.33.14 MaxFrameInterval as Int64

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The maximum frame duration, in 100-nanosecond units.
Notes: This value applies only to capture filters.
(Read and Write property)

71.33.15 MaxOutputSizeHeight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum output size.
Notes: Deprecated.
(Read only property)

71.33.16 MaxOutputSizeWidth as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum output size.
Notes: Deprecated.
(Read only property)

71.33.17 MinBitsPerSecond as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Minimum data rate this pin can produce.
Notes: Deprecated.
(Read only property)

71.33.18 MinCroppingSizeHeight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Smallest source rectangle allowed.
Notes: The source rectangle is defined in the Source rectangle of the DirectShowVideoInfoHeader2MBS or DirectShowVideoInfoHeaderMBS classes.
Note Deprecated.
(Read only property)

71.33.19 MinCroppingSizeWidth as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Smallest source rectangle allowed.
Notes: The source rectangle is defined in the Source rectangle of the DirectShowVideoInfoHeader2MBS or DirectShowVideoInfoHeaderMBS classes.
Note Deprecated.
(Read only property)

71.33.20 MinFrameInterval as Int64

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The minimum frame duration, in 100-nanosecond units. This value applies only to capture filters.

Notes: (Read and Write property)

71.33.21 MinOutputSizeHeight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Minimum output size.
Notes: Deprecated.
(Read only property)

71.33.22 MinOutputSizeWidth as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Minimum output size.
Notes: Deprecated.
(Read only property)

71.33.23 OutputGranularityX as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Granularity of the output width.
Notes: This value specifies the increments that are valid between MinOutputSize and MaxOutputSize.
Deprecated.
(Read only property)

71.33.24 OutputGranularityY as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Granularity of output height.
Notes: This value specifies the increments that are valid between MinOutputSize and MaxOutputSize.
Deprecated.
(Read only property)

71.33.25 ShrinkTapsX as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates how well the filter can shrink the image horizontally.
Notes: Deprecated.

Value	Meaning
0	Does not support stretching/shrinking.
1	Uses pixel doubling (stretching) or eliminates pixels (shrinking)
2	Uses interpolation (2 taps)
3 and higher	Uses interpolation (>2 taps)

(Read only property)

71.33.26 ShrinkTapsY as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates how well the filter can shrink the image vertically.
Notes: Deprecated.

Value	Meaning
0	Does not support stretching/shrinking.
1	Uses pixel doubling (stretching) or eliminates pixels (shrinking)
2	Uses interpolation (2 taps)
3 and higher	Uses interpolation (>2 taps)

(Read only property)

71.33.27 StretchTapsX as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates how well the filter can stretch the image horizontally.
Notes: Deprecated.

(Read only property)

Value	Meaning
0	Does not support stretching/shrinking.
1	Uses pixel doubling (stretching) or eliminates pixels (shrinking)
2	Uses interpolation (2 taps)
3 and higher	Uses interpolation (>2 taps)

71.33.28 StretchTapsY as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates how well the filter can stretch the image vertically.
Notes: Deprecated.

Value	Meaning
0	Does not support stretching/shrinking.
1	Uses pixel doubling (stretching) or eliminates pixels (shrinking)
2	Uses interpolation (2 taps)
3 and higher	Uses interpolation (>2 taps)

(Read only property)

71.33.29 VideoStandard as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The analog video standard supported.
Notes: The value is a bitwise combination of flags from the AnalogVideoStandard enumeration type, or zero.
(Read only property)

71.34 class DirectShowVideoWindowMBS

71.34.1 class DirectShowVideoWindowMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The direct show class for a video window.
Notes: The DirectShowVideoWindowMBS interface sets properties on the video window. Applications can use it to set the window owner, the position and dimensions of the window, and other properties.

The Video Renderer filter and the Filter Graph Manager both expose this interface. The Filter Graph Manager forwards all method calls to the Video Renderer. It also forwards certain window messages that the Video Renderer needs to receive, such as WM_DISPLAYCHANGE. Because the video window is usually a child of an application window, the filter would not otherwise receive these messages. Therefore it relies on the Filter Graph Manager to forward them.

In most cases, an application should query the Filter Graph Manager for this interface, and not call the filter directly, because of the messaging issue just described. However, if the filter graph has more than one Video Renderer, the Filter Graph Manager only communicates with one of them, selected arbitrarily. Therefore, if your application uses multiple video windows, use the DirectShowVideoWindowMBS interface directly on the filters. In that case, you must forward window messages to each Video Renderer instance, using the NotifyOwnerMessage method.

Properties set on a video renderer persist between successive connections and disconnections.

Error codes: If the video renderer filter is not connected to another filter, all methods return the error code VFW_E_NOT_CONNECTED. For the Filter Graph Manager's implementation, if the graph does not contain a video renderer filter, all methods return E_NOINTERFACE. Note that the Filter Graph Manager exposes the interface even when the graph does not contain a video renderer, so an application can query for the interface before it builds the graph.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

71.34.2 Methods

71.34.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor to create a new video window.

71.34.4 GetMaxIdealImageSize(byref width as Integer, byref height as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetMaxIdealImageSize method retrieves the maximum ideal image size for the video image.
Notes: Width: Receives the maximum ideal width, in pixels.
Height: Receives the maximum ideal height, in pixels.
Lasterror is set.

The maximum ideal size may differ from the native video size, because the video hardware might have specific stretching requirements.

71.34.5 GetMinIdealImageSize(byref width as Integer, byref height as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetMinIdealImageSize method retrieves the minimum ideal size for the video image.
Notes: Width: Receives the minimum ideal width, in pixels.
Height: Receives the minimum ideal height, in pixels.
Lasterror is set.

The maximum ideal size may differ from the native video size, because the video hardware might have specific stretching requirements.

71.34.6 GetRestorePosition(byref left as Integer, byref top as Integer, byref width as Integer, byref height as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetRestorePosition method retrieves the restored window position.
Notes: Left: Receives the x-coordinate, in pixels.
Top: Receives the y-coordinate, in pixels.
Width: Receives the width of the window, in pixels.
Height: Receives the height of the window, in pixels.
Lasterror is set.

If the video window is minimized or maximized, you can use this method to get the window's restored position.

71.34.7 GetWindowPosition(byref left as Integer, byref top as Integer, byref width as Integer, byref height as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetWindowPosition method retrieves the position of the video window.
Notes: Left: Receives the x-coordinate, in pixels.
Top: Receives the y-coordinate, in pixels.
Width: Receives the width of the window, in pixels.
Height: Receives the height of the window, in pixels.

Lasterror is set.
This method has the same effect as querying left, top, width and height methods.

71.34.8 HideCursor(hide as boolean)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The HideCursor method shows or hides the cursor when the mouse is positioned over the video window.
Notes: Hide: Whether to hide or show the cursor.
Lasterror is set.

71.34.9 IsCursorHidden as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IsCursorHidden method queries whether the cursor is hidden.
Notes: Lasterror is set.

71.34.10 SetWindowForeground(Focus as Boolean)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The SetWindowForeground method places the video window at the top of the Z order.
Notes: Focus: whether to give the window focus.
Lasterror is set.

71.34.11 SetWindowPosition(left as Integer, top as Integer, width as Integer, height as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The SetWindowPosition method sets the position of the video window.
Notes: Left: The x-coordinate, in pixels.
Top: The y-coordinate, in pixels.
Width: The width, in pixels.
Height: The height, in pixels.
Lasterror is set.

This method has the same effect as setting the Left, Top, Width, and Height methods.
If resizing the window to the specified dimensions is impossible, this method modifies the window's size and location to make the window fit. Call the GetWindowPosition method to determine the result.

71.34.12 Properties

71.34.13 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Points to an IVideoWindow interface.
(Read and Write property)

71.34.14 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

71.34.15 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.34.16 MessageDrain as Variant

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The window to receive mouse and keyboard messages from the video window.
Notes: Lasterror is set.
This method enables an application to respond to mouse and keyboard events generated within the video window.
If Drain is non-nil, the video renderer forwards certain messages to the specified window, using the PostMessage function. Which messages are forwarded might depend on the video renderer in use.

Can reference a Window or DesktopWindow object.
(Read and Write property)

71.34.17 messageDrainControl as Variant

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop only.

Function: The control to receive mouse and keyboard messages from the video window.
Notes: Lasterror is set.
This method enables an application to respond to mouse and keyboard events generated within the video window.
If Drain is non-nil, the video renderer forwards certain messages to the specified window, using the PostMessage function. Which messages are forwarded might depend on the video renderer in use.

Can reference a Control or DesktopControl object.
(Read and Write property)

71.34.18 Owner as Variant

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The parent window for the video window.
Notes: Lasterror is set.
Use this method to display videos in a compound document. This method changes the parent of the video window and sets the WS_CHILD style for the video window.
Reset the owner to nil before releasing the Filter Graph Manager. Otherwise, messages will continue to be sent to this window and errors will likely occur when the application is terminated.

Can reference a Window or DesktopWindow object.
(Read and Write property)

71.34.19 OwnerControl as Variant

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop only.

Function: The parent control for the video window.
Notes: Lasterror is set.
Use this method to display videos in a compound document. This method changes the parent of the video window and sets the WS_CHILD style for the video window.
Reset the owner to nil before releasing the Filter Graph Manager. Otherwise, messages will continue to be sent to this window and errors will likely occur when the application is terminated.

Can reference a Control or DesktopControl object.
(Read and Write property)

71.34.20 AutoShow as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the video renderer automatically shows the video window when it receives video data.
Notes: Lasterror is set.
By default, when the filter graph changes state to paused or running, the video renderer shows the video window and moves it to the foreground. If the user closes the window, it will not automatically reappear.
(Read and Write computed property)

71.34.21 BackgroundPalette as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the video window realizes its palette in the background.
Notes: Lasterror is set.
If BackgroundPalette is true and the video image requires a palette, the video renderer will realize that palette in the background. Any colors that the palette uses will change to their closest match in the display palette prior to drawing. This ensures that an application will not have its palette disturbed. However, it imposes severe performance penalties on the video.
(Read and Write computed property)

71.34.22 BorderColor as color

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The color that appears around the edges of the destination rectangle.
Notes: Lasterror is set.
If the destination rectangle is smaller than the client area of the video window, a border is exposed around

the edges of the video. The default color is black. Use this method to override the default color. If a palette is in use, a nonsystem color is converted to its closest match.
(Read and Write computed property)

71.34.23 Caption as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The video window caption.
Notes: Lasterror is set.
(Read and Write computed property)

71.34.24 FullScreenMode as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enables or disables full-screen video rendering.
Notes: Set to true to switch to full-screen mode. Set to false to disable full-screen mode. (Default.)
Lasterror is set.

Depending on the video renderer, the switch to full-screen mode may not be visible until the application runs or pauses the graph. In full-screen mode, if the user switches away from the application (for example, using ALT + TAB), the Filter Graph Manager sends an EC_FULLSCREEN_LOST event.
The following remarks describe how the Filter Graph Manager implements full-screen mode. Application developers can probably ignore this information, but it may be useful if you are writing a custom video renderer.
When an application switches to full-screen mode, the Filter Graph Manager searches for a video renderer that will function most efficiently. In order of preference, these are:

- Any video renderer in the filter graph that natively supports full-screen mode.
- Any video renderer in the filter graph that can stretch the video to full-screen without a significant performance cost.
- The Full Screen Renderer filter.
- Any video renderer in the filter graph that supports DirectShowVideoWindowMBS.

For the first option, the Filter Graph Manager sets FullScreenMode on every video renderer in the graph. Most renderers return E_NOTIMPL, indicating the filter does not natively support full-screen mode. If any renderer returns a value not equal to E_NOTIMPL, the Filter Graph Manager uses that one.
For the second option, the Filter Graph Manager calls GetMaxIdealImageSize and GetMinIdealImageSize on every video renderer in the graph. If the size of the display falls within the filter's reported range, it

indicates that the filter can stretch the video without a significant performance cost.
Note If the graph is stopped, the Filter Graph Manager pauses each renderer before calling these methods. This gives the renderer an opportunity to initialize any resources it needs, because many renderers cannot determine these values while they are stopped.
Except on older hardware, the second option will generally succeed. The third option is to use the Full Screen Renderer filter, adding it to the graph if necessary. The fourth option is simply to find the first renderer in the graph that supports DirectShowVideoWindowMBS, and stretch the video regardless of performance.
(Read and Write computed property)

71.34.25 Height as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height of the video window.
Notes: Lasterror is set.
(Read and Write computed property)

71.34.26 Left as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The x-coordinate of the video window.
Notes: Lasterror is set.
(Read and Write computed property)

71.34.27 Top as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The y-coordinate of the video window.
Notes: Lasterror is set.
(Read and Write computed property)

71.34.28 Visible as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Shows or hides the video window.
Notes: Set to true to show the window or set to false to hide the window.
Lasterror is set.

(Read and Write computed property)

71.34.29 Width as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width of the video window.
Notes: (Read and Write computed property)

71.34.30 WindowState as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Shows, hides, minimizes, or maximizes the video window.
Notes: Lasterror is set.

See MSDN page for ShowWindow for SW_* constants:
http://msdn.microsoft.com/en-us/library/windows/desktop/ms633548(v=vs.85).aspx
(Read and Write computed property)

71.34.31 WindowStyle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The window styles on the video window.
Notes: Lasterror is set.
See MSDN for SetWindowLong for details on the WS_* constants.
(Read and Write computed property)

71.34.32 WindowStyleEx as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The window extended styles on the video window.
Notes: Lasterror is set.
See MSDN for SetWindowLong for details on the WS_EX_* constants.
(Read and Write computed property)

71.34.33 Constants

Window Show Modes

Constant	Value	Description

71.35 class DirectShowWaveFormatMBS

71.35.1 class DirectShowWaveFormatMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Defines the format of waveform-audio data.
Notes: Only format information common to all waveform-audio data formats is included in this structure. For formats that require additional information, this structure is included as the first member in another structure, along with the additional information.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr7

71.35.2 Methods

71.35.3 Constructor

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.35.4 Properties

71.35.5 AvgBytesPerSec as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Required average data-transfer rate, in bytes per second, for the format tag.
Notes: If wFormatTag is WAVE_FORMAT_PCM, nAvgBytesPerSec must equal nSamplesPerSec x nBlockAlign. For non-PCM formats, this member must be computed according to the manufacturer's specification of the format tag.
(Read and Write property)

71.35.6 BitsPerSample as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Bits per sample for the FormatTag format type.
Notes: If wFormatTag is WAVE_FORMAT_PCM, then BitsPerSample should be equal to 8 or 16. For non-PCM formats, this member must be set according to the manufacturer's specification of the format tag. If FormatTag is WAVE_FORMAT_EXTENSIBLE, this value can be any integer multiple of 8.

Some compression schemes do not define a value for BitsPerSample, so this member can be zero.
(Read and Write property)

71.35.7 BlockAlign as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Block alignment, in bytes.
Notes: The block alignment is the minimum atomic unit of data for the wFormatTag format type. If wFormatTag is WAVE_FORMAT_PCM, nBlockAlign must equal (nChannels √ó wBitsPerSample) / 8. For non-PCM formats, this member must be computed according to the manufacturer's specification of the format tag.
Software must process a multiple of nBlockAlign bytes of data at a time. Data written to and read from a device must always start at the beginning of a block. For example, it is illegal to start playback of PCM data in the middle of a sample (that is, on a non-block-aligned boundary).
(Read and Write property)

71.35.8 Channels as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of channels in the waveform-audio data.
Notes: Monaural data uses one channel and stereo data uses two channels.
(Read and Write property)

71.35.9 Data as Ptr

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Pointer to raw data of WAVEFORMATEX structure.
Notes: (Read only property)

71.35.10 FormatTag as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Waveform-audio format type.
Notes: Format tags are registered with Microsoft Corporation for many compression algorithms. A complete list of format tags can be found in the Mmreg.h header file. For one- or two-channel Pulse Code Modulation (PCM) data, this value should be WAVE_FORMAT_PCM.

- If FormatTag equals WAVE_FORMAT_EXTENSIBLE, the structure is interpreted as a WAVEFORMATEXTENSIBLE structure.
- If FormatTag equals WAVE_FORMAT_MPEG, the structure is interpreted as an MPEG1WAVEFORMAT structure.
- If FormatTag equals WAVE_FORMAT_MPEGLAYER3, the structure is interpreted as an MPEGLAYER3WAVEFORMAT structure.

Before reinterpreting a WAVEFORMATEX structure as one of these extended structures, verify that the actual structure size is sufficiently large and that the cbSize member indicates a valid size.

Please contact MBS if you need the above structures as classes in Xojo.
(Read and Write property)

71.35.11 SamplesPerSec as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sample rate, in samples per second (hertz).
Notes: If FormatTag is WAVE_FORMAT_PCM, then common values for SamplesPerSec are 8.0 kHz, 11.025 kHz, 22.05 kHz, and 44.1 kHz. For non-PCM formats, this member must be computed according to the manufacturer's specification of the format tag.
(Read and Write property)

71.35.12 Size as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Size, in bytes, of extra format information appended to the end of the WAVEFORMATEX structure.
Notes: This information can be used by non-PCM formats to store extra attributes for the wFormatTag. If no extra information is required by the wFormatTag, this member must be set to zero. For WAVE_FORMAT_PCM formats (and only WAVE_FORMAT_PCM formats), this member is ignored. However it is still recommended to set the value.
(Read and Write property)

Chapter 72

DiscRecording

72.1 class DRBurnMBS

72.1.1 class DRBurnMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A class to perform and monitor the burning of a CD or DVD disc.
Example:

```
// burn a folder to a CD or DVD in the first burner
Var devices() As DRDeviceMBS = DRDeviceMBS.devices
If devices.Count = 0 Then Return

Var track As DRTrackMBS = DRTrackMBS.trackForRootFolder(SpecialFolder.Desktop.Child("Backup"))
Var burn As DRBurnMBS = DRBurnMBS.burnForDevice(devices(0))
burn.verifyDisc = True
burn.completionAction = DRBurnMBS.DRBurnCompletionActionEject
burn.writeLayout track

// check burn.status regularly, e.g. in a timer, to show the progress
```

Notes: Each time you want to burn to a disc, an instance of DRBurnMBS needs to be created.

When an instance is created, you pass in an instance of DRDevice to let the DRBurn object know what device to use. This object is retained for the life of the DRBurn instance. Before burning, you can set several options that control the behavior of the burn and the handling of the disc once the burn completes.

A DRBurn object will send out notifications through the DRNotificationCenter mechanism to broadcast the burn state to any interested observers. However, if for some reason you don't want to use notifications,

you can poll the burn object at any time for the current status using the status properties. This is not recommended in any application using a run loop, because it involves polling.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

72.1.2 Methods

72.1.3 abort

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Stops the burn.
Notes: When this method returns the burn might not actually be fully stopped but it has been cancelled and only cleanup is going on. If a burn has not completed writing data to disc, you just made a coaster.

Typically this method is only used as a result of the user hitting a cancel/stop button somewhere in the user interface.

72.1.4 burnForDevice(device as DRDeviceMBS) as DRBurnMBS

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Creates an autoreleased burn object.
Notes: Once a burn is created with this method, the object is ready to write data to the disc.

72.1.5 Constructor(device as DRDeviceMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a burn object.
Notes: Once a burn is created with this method, the object is ready to write data to the disc.

72.1.6 device as DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the device being used for the burn.
Notes: Returns nil on any error.

72.1.7 DRBurnAppendableKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a boolean indicating if the disc will still be appendable after the burn. If this key is not present, the burn will default to a value of false and the disc will be marked as not appendable.

72.1.8 DRBurnCompletionActionEject as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: An string value for the CompletionAction indicating that the burn object should eject the disc from the drive when the burn completes.

72.1.9 DRBurnCompletionActionKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a String containing one of the completion actions possible for the disc handling. If this key is not present, the burn will default to a value of DRBurnCompletionActionEject and the disc will be ejected.

72.1.10 DRBurnCompletionActionMount as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: An string value for the CompletionAction property indicating that the burn object should mount the disc on the desktop when the burn completes.

72.1.11 DRBurnDoubleLayerL0DataZoneBlocksKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property key whose value is an double containing the number of blocks desired for the layer 0 data zone on a double layer writable disc.

The size of the layer 0 data zone dictates where the transition point is from layer 0 to layer 1. If this key is present, the data zone size will be set prior to the start of the burn using the value for this key. If it is not present, the default layer 0 data zone will be used (half the available blocks on an empty disc).

The transition point can be specified two ways. If the value specified in this key is greater than 1.0, then it will designate an absolute block number for the transition point. In this case, the block number should be a multiple of 16 and at least 40000h per specification. If the value is less than 1.0, it will specify the percentage of the burn that should reside on layer 0. A typical value is 0.5, designating half the burn for each layer. A value of 0.0 or 1.0 will not change the layer 0 transition point.

72.1.12 DRBurnFailureActionEject as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: An string constant for FailureAction indicating that the burn object should eject the disc from the drive if the burn fails.

72.1.13 DRBurnFailureActionKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a string containing a one of the failure actions possible for the disc handling.

If this key is not present, the burn will default to a value of DRBurnFailureActionEject and the disc will be ejected.

72.1.14 DRBurnFailureActionNone as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: An string constant for FailureAction indicating that the burn object should do nothing with the

disc if the burn fails.

72.1.15 DRBurnOverwriteDiscKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a boolean indicating if the disc will be overwritten from block zero for the burn. If this key is not present, the burn will default to a value of false and the disc will be appended.

72.1.16 DRBurnRequestedSpeedKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a number containing the speed at which the burn should run, expressed as a float value of kilobytes per second. If this key is not present, the speed will default to DRDeviceBurnSpeedMax.

72.1.17 DRBurnStatusChangedNotification as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: The notification name for a status update on a burn operation.
Notes: See the "DataBurn with Events and Notification" example project.

72.1.18 DRBurnStrategyBDDAO as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the string constants for the burn strategy.
Notes: An string value for DRBurnStrategyKey representing the DAO (disc-at-once) burn strategy for BD (Blu-ray). This strategy applies only to BDs.

72.1.19 DRBurnStrategyCDSAO as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the string constants for the burn strategy.
Notes: An String value for DRBurnStrategyKey representing the SAO (session-at-once) burn strategy for CD.

72.1.20 DRBurnStrategyCDTAO as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the string constants for the burn strategy.
Notes: An String value for DRBurnStrategyKey representing the TAO (track-at-once) burn strategy for CD.

72.1.21 DRBurnStrategyDVDDAO as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the string constants for the burn strategy.
Notes: An String value for DRBurnStrategyKey representing the DAO (disc-at-once) burn strategy for DVD. This strategy applies only to DVDs; it is invalid when burning to CD media.

72.1.22 DRBurnStrategyIsRequiredKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a BOOL indicating whether the burn strategy/strategies listed for DRBurnStrategyKey are the only strategies allowed. If this key is not present, the burn will default to a value of false.

If this value is set to true, and the device does not support the type(s) of burn requested, the burn will fail with kDRDeviceBurnStrategyNotAvailableErr .

If this value is set to false, and the device does not support the type(s) of burn requested, the engine will choose an alternate burn strategy automatically - one that will provide an equivalent disc.

72.1.23 DRBurnStrategyKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a string, or array of strings, indicating the burn strategy or

strategies that are suggested. If this key is not present, the burn engine picks an appropriate burn strategy automatically. Most clients will not need to specify a specific burn strategy.

When more than one strategy is suggested, the burn engine will attempt to use the first strategy in the list which is available. A burn strategy will never be used if it cannot write the required data: for example, TAO cannot be used to write CD-Text.

The presence of this key by itself is just a suggestion, and if the burn engine cannot fulfill the request it will burn using whatever strategy is available. To make the suggestion into a requirement, add DRBurnStrategyIsRequiredKey with a value of true.

72.1.24 DRBurnTestingKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a boolean indicating if the burn will run as a test burn.

When this is set and the burn object is sent writeLayout, the entire burn process proceeds as if data would be written to the disc, but the laser is not turned on to full power, so the physical disc is not modified.

If this key is not present or the selected burning device does not support test burning, the burn will default to a value of false and a normal burn will occur.

72.1.25 DRBurnUnderrunProtectionKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a boolean indicating if burn underrun protection will be on or off for devices which support it.

For those devices which support it, burn underrun protection is enabled by default.

If the device supports burn underrun protection and this key is not present, the burn will default to a value of true and burn underrun protection will be enabled.

72.1.26 DRBurnVerifyDiscKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a boolean indicating if the disc will be verified after being burned. If this key is not present, the burn will default to a value of true and the disc will be verified.

72.1.27 DRCDTextKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: This key points to a DRCDTextBlockMBS, or array of DRCDTextBlockMBS objects containing the CD-Text information for the disc. If this key is not present, the burn will not write CD-Text.

Before using this key, you should to make sure that the device supports CD-Text by checking the value of DRDeviceCanWriteCDTextKey in the device's write capabilities dictionary.

If this value is set to true, and the device does not support writing CD-Text, the burn will fail with kDRDeviceCantWriteCDTextErr.

72.1.28 DRErrorStatusAdditionalSenseStringKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: String describing the RBC additional sense code and additional sense code qualifier pair returned by the device. If no sense is reported, this key will not be present.

72.1.29 DRErrorStatusErrorInfoStringKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: String describing extended error information in a user appropriate manner.

72.1.30 DRErrorStatusErrorKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number containing the OS error code for the error.

72.1.31 DRErrorStatusErrorStringKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: String describing the error in a user appropriate manner.

72.1.32 DRErrorStatusKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: The key in the status dictionary for the error dictionary.

72.1.33 DRErrorStatusSenseCodeStringKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: String describing the RBC sense code returned by the device. If no sense is reported, this key will not be present.

72.1.34 DRErrorStatusSenseKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: String containing the raw RBC sense information structure reported by the device. If no sense is reported, this key will not be present.

72.1.35 DRMediaCatalogNumberKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a memoryblock containing exactly 13 bytes of data, which will be written to the disc as the Media Catalog Number. If this key is not present, it will default to all zeroes,

indicating that a MCN is not supplied.

This value is the UPC/EAN product number, and should conform to the specifications of the UCC and EAN. See ean-int.org and uc-council.org for more details on the UPC/EAN standard.

http://www.ean-int.org/
http://www.uc-council.org/

72.1.36 DRStatusCurrentSessionKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number indicating the current session being burned.

72.1.37 DRStatusCurrentSpeedKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number indicating the current burn speed.

72.1.38 DRStatusCurrentTrackKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number indicating the current track being burned.

72.1.39 DRStatusEraseTypeKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: String indicating the type of erase operation.

72.1.40 DRStatusPercentCompleteKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: A key for the status dictionaries.
Number containing the percent complete of the operation expressed as a floating point number from 0 to 1.

72.1.41 DRStatusProgressCurrentKPS as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: The current burn speed in kilobytes per second.
Notes: This is an optional key within the DRStatusProgressInfoKey dictionary. The value of this key, if present, is a Number containing the write speed of the burn.

72.1.42 DRStatusProgressCurrentXFactor as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: The current burn speed in a media appropriate x-factor
Notes: This is an optional key within the DRStatusProgressInfoKey dictionary. The value of this key, if present, is a number containing the appropriate x-factor for the media.

72.1.43 DRStatusProgressInfoKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: A dictionary of extended progress information.
A key for the status dictionary. The value of this key is a reference to a Dictionary object containing extended progress information.

72.1.44 DRStatusStateDone as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey. Indicates the operation is finished and it succeeded.

72.1.45 DRStatusStateErasing as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the erase status dictionary.
Notes: Indicates the erase is currently in progress.

72.1.46 DRStatusStateFailed as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey. Indicates the operation is finished and it failed.

72.1.47 DRStatusStateFinishing as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is finishing up (closing the last session, writing the TOC, etc).

72.1.48 DRStatusStateKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: A key for the status dictionaries.
String indicating the current state of the operation.

72.1.49 DRStatusStateNone as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey. Indicates the operation has not yet begun.

72.1.50 DRStatusStatePreparing as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey. Indicates the operation is preparing to begin.

72.1.51 DRStatusStateSessionClose as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is closing a session on disc. The exact session being closing is contained in DRStatusCurrentSessionKey.

72.1.52 DRStatusStateSessionOpen as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is opening a session on disc. The exact session being opened is contained in DRStatusCurrentSessionKey.

72.1.53 DRStatusStateTrackClose as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is closing a track on disc. The exact track being closed is contained in DRStatusCurrentTrackKey.

72.1.54 DRStatusStateTrackOpen as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is opening a track on disc. The exact track being opened is contained in DRStatusCurrentTrackKey.

72.1.55 DRStatusStateTrackWrite as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is writing a track on disc. The exact track being written is contained in DRStatusCurrentTrackKey.

72.1.56 DRStatusStateVerifying as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey. Indicates the operation is verifying what it did.

72.1.57 DRStatusTotalSessionsKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number indicating the total number of sessions being burned.

72.1.58 DRStatusTotalTracksKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number indicating the total number of tracks in the current session being burned.

72.1.59 DRSynchronousBehaviorKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a BOOL indicating if burn operations will behave synchronously. If this key is not present, it will default to a value of false and burn operations will behave asynchronously.

Synchronous operations do not post status notifications, and will not return until they are completed. Status can still be queried at any time, and will remain valid even after the burn operation has finished.

72.1.60 status as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns a dictionary describing the status of the burn.
Notes: The same dictionary is returned through the DRBurnStatusChangedNotification notification.

72.1.61 writeImageFile(ImageFile as FolderItem) as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Writes the image tracks to the disc.
Notes: Requires Mac OS X 10.4.

ImageFile: The path to the image file. This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.

Returns true on success and false on failure.
See also:

- 72.1.62 writeImageFile(ImagePath as String) as boolean 12469

72.1.62 writeImageFile(ImagePath as String) as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Writes the image tracks to the disc.
Notes: Requires Mac OS X 10.4.

ImageFile: The path to the image file. This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.

Returns true on success and false on failure.
See also:

- 72.1.61 writeImageFile(ImageFile as FolderItem) as boolean 12469

72.1.63 writeLayout(track as DRTrackMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Writes the track to the disc.
Notes: A single session disc will be created with the given track.
See also:

- 72.1.64 writeLayout(tracks() as DRTrackMBS) 12470

72.1.64 writeLayout(tracks() as DRTrackMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Writes the tracks to the disc.
Notes: A multi session disc will be created with the given tracks.
See also:

- 72.1.63 writeLayout(track as DRTrackMBS) 12469

72.1.65 Properties

72.1.66 appendable as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Indicates whether the burn is appendable.
Example:

```
Var b as DRBurnMBS // get a burn object
b.appendable=true
```

Notes: When a burn completes, it can mark the disc so that no more data can be written to it. This creates a closed or non-appendable disc (which is the most compatible with audio CD players). If this method returns false, then the disc will be marked as closed and no data can be appended to it. A return value of true indicates further burns can be appended to the disc.
(Read and Write computed property)

72.1.67 BurnFailureAction as string

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: What to do on a failure.
Notes: The burn property whose value is a string containing a one of the failure actions possible for the disc handling.

If this key is not present, the burn will default to a value of DRBurnFailureActionEject and the disc will be ejected.
(Read and Write computed property)

72.1.68 completionAction as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The action to be performed at the end of the burn.
Notes: Value must be DRBurnCompletionActionEject, DRBurnCompletionActionMount or empty for default.
(Read and Write computed property)

72.1.69 DoubleLayerL0DataZoneBlocks as Double

MBS MacControls Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: A double containing the number of blocks desired for the layer 0 data zone on a double layer writable disc.
Notes: The size of the layer 0 data zone dictates where the transition point is from layer 0 to layer 1. If this key is present, the data zone size will be set prior to the start of the burn using the value for this key. If it is not present, the default layer 0 data zone will be used (half the available blocks on an empty disc).
The transition point can be specified two ways. If the value specified in this key is greater than 1.0, then it will designate an absolute block number for the transition point. In this case, the block number should be a multiple of 16 and at least &h40000 per specification. If the value is less than 1.0, it will specify the percentage of the burn that should reside on layer 0. A typical value is 0.5, designating half the burn for each layer. A value of 0.0 or 1.0 will not change the layer 0 transition point.
(Read and Write computed property)

72.1.70 MediaCatalogNumber as memoryblock

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: The media catalog number as a binary data string.
Notes: The burn property whose value is a memoryblock containing exactly 13 bytes of data, which will be written to the disc as the Media Catalog Number. If this key is not present, it will default to all zeroes, indicating that a MCN is not supplied.

This value is the UPC/EAN product number, and should conform to the specifications of the UCC and EAN. See
http://www.ean-int.org/
and
http://www.uc-council.org/
for more details on the UPC/EAN standard.
(Read and Write computed property)

72.1.71 Overwrite as boolean

MBS MacControls Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: The burn property whose value is a boolean indicating if the disc will be overwritten from block zero for the burn.
Notes: If this key is not present, the burn will default to a value of false and the disc will be appended.
(Read and Write computed property)

72.1.72 properties as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The properties dictionary of the burn.
Notes: (Read and Write computed property)

72.1.73 requestedBurnSpeed as single

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The speed at which this burn will attempt to write data.
Notes: The actual speed also depends on the capabilities of the bus the device is on, the maximum speed of the device itself, and the media used.

Value is a float indicating the speed the burn should run at in kilobytes per second.
(Read and Write computed property)

72.1.74 Testing as boolean

MBS MacControls Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: Whether the burn will run as a test burn.
Notes: When this is set and the burn starts, the entire burn process proceeds as if data would be written to the disc, but the laser is not turned on to full power, so the physical disc is not modified.

If this key is not present or the selected burning device does not support test burning, the burn will default to a value of false and a normal burn will occur.
(Read and Write computed property)

72.1.75 UnderrunProtection as boolean

MBS MacControls Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: A boolean indicating if burn underrun protection will be on or off for devices which support it.

Notes: For those devices which support it, burn underrun protection is enabled by default.
If the device supports burn underrun protection and this key is not present, the burn will default to a value of trueand burn underrun protection will be enabled.
(Read and Write computed property)

72.1.76 verifyDisc as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Indicates whether the resulting disc will be verified.
Example:

```
Var b as DRBurnMBS // get a burn object
b.verifyDisc=true
```

Notes: After data is written to disc, the data can be verified. The verification process will read the data on the disc back into memory and compare it to the data originally used to write to disc. The type of verification is determined by a track property on a track-by-track basis. See the DRTrackMBS documentation for more information on verification types.
(Read and Write computed property)

72.2 class DRBurnProgressPanelMBS

72.2.1 class DRBurnProgressPanelMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Run and display progress while burning data to media.
Example:

```
Var track as DRTrackMBS
Var bsp as DRBurnSetupPanelMBS
Var bpp as DRBurnProgressPanelMBS

// we need a track
track=CreateTrack

if track<>nil then
bsp=new DRBurnSetupPanelMBS

// set a few options
bsp.setCanSelectAppendableMedia true
bsp.setCanSelectTestBurn true

if bsp.runSetupPanel=bsp.NSOKButton then
bpp=new DRBurnProgressPanelMBS

// And start off the burn itself. This will put up the progress dialog
// and do all the nice pretty things that a happy app does.
bpp.beginProgressPanelForBurn bsp.burnObject, track

else
MessageBox "You pressed cancel."
end if
end if
```

Notes: All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the NSPanelMBS class.

72.2.2 Methods

72.2.3 beginProgressPanelForBurn(burn as DRBurnMBS, track as DRTrackMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel on screen and begins the burn process.
Notes: This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns a single session disc with one track.
See also:

- 72.2.4 beginProgressPanelForBurn(burn as DRBurnMBS, tracks() as DRTrackMBS) 12475

72.2.4 beginProgressPanelForBurn(burn as DRBurnMBS, tracks() as DRTrackMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel on screen and begins the burn process.
Notes: This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns a multi session disc with several tracks.
See also:

- 72.2.3 beginProgressPanelForBurn(burn as DRBurnMBS, track as DRTrackMBS) 12475

72.2.5 beginProgressPanelForImageFile(burn as DRBurnMBS, file as folderitem) as boolean

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel on screen and begins the burn process.
Notes: This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns the image file located on the given position.

This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and

correctly referenced in the .cue/.toc file.
See also:

- 72.2.6 beginProgressPanelForImageFile(burn as DRBurnMBS, file as string) as boolean 12476

72.2.6 beginProgressPanelForImageFile(burn as DRBurnMBS, file as string) as boolean

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel on screen and begins the burn process.
Notes: This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns the image file located on the given position.

This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.
See also:

- 72.2.5 beginProgressPanelForImageFile(burn as DRBurnMBS, file as folderitem) as boolean 12475

72.2.7 beginProgressSheetForBurn(burn as DRBurnMBS, track as DRTrackMBS, docWindow as NSWindowMBS)

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel as a sheet and begins the burn process.
Notes: docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns a single session disc with one track.
See also:

- 72.2.8 beginProgressSheetForBurn(burn as DRBurnMBS, tracks() as DRTrackMBS, docWindow as NSWindowMBS) 12477

72.2.8 beginProgressSheetForBurn(burn as DRBurnMBS, tracks() as DRTrackMBS, docWindow as NSWindowMBS)

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel as a sheet and begins the burn process.
Notes: docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns a multi session disc with several tracks.
See also:

- 72.2.7 beginProgressSheetForBurn(burn as DRBurnMBS, track as DRTrackMBS, docWindow as NSWindowMBS) 12476

72.2.9 beginProgressSheetForImageFile(burn as DRBurnMBS, file as folderitem, docWindow as NSWindowMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel as a sheet and begins the burn process.
Notes: docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns the image file located on the given position.

This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.
See also:

- 72.2.10 beginProgressSheetForImageFile(burn as DRBurnMBS, file as string, docWindow as NSWindowMBS) as boolean 12478

72.2.10 beginProgressSheetForImageFile(burn as DRBurnMBS, file as string, docWindow as NSWindowMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel as a sheet and begins the burn process.
Notes: docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns the image file located on the given position.

This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.
See also:

- 72.2.9 beginProgressSheetForImageFile(burn as DRBurnMBS, file as folderitem, docWindow as NSWindowMBS) as boolean 12477

72.2.11 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The constructor to create a new burn progress panel.

72.2.12 DRBurnProgressPanelDidFinishNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names for use with a burn progress panel.
Notes: Posted when the DRBurnProgressPanel has finished and is about to go away.
This notification contains a notification object but no userInfo dictionary. The notification object is the DRBurnProgressPanel that will be closed.

72.2.13 DRBurnProgressPanelWillBeginNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names for use with a burn progress panel.

Notes: Posted when the DRBurnProgressPanel is about to begin displaying progress.
This notification contains a notification object but no userInfo dictionary. The notification object is the DRBurnProgressPanel that will be displayed.

72.2.14 stopBurn

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's stop button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

72.2.15 Properties

72.2.16 Description as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The description string displayed in the panel.
Notes: If no description is explicitly set, this method will return the standard text string.

The panel's description is typically a short text string that gives an indication to the user what operation is being performed. If no description is explicitly set, the progress panel uses a standard text string suitable to the burn.
(Read and Write computed property)

72.2.17 VerboseProgressStatus as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The vebosity of the progress feedback.
Notes: If verbose is true, the panel will update status for every change. If verbose is false, the panel will filter some status messages and only update for major changes. The default for the panel is filter the status messages.
(Read and Write computed property)

72.2.18 Events

72.2.19 burnProgressPanelBurnDidFinish(burn as DRBurnMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Allows the delegate to handle the end-of-burn feedback.
Notes: This method allows the delegate to handle or modify the end-of-burn feedback performed by the progress panel. Return true to indicate the delegate handled the burn completion and the standard feedback should be supressed. If this method returns false, the normal end-of-burn handling is performed (displaying an error if appropriate, playing an "I'm done" sound, etc). The delegate is messaged before the progress panel is ordered out so a sheet may be displayed on a progress panel displayed as a window.

72.2.20 burnProgressPanelDidFinish

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Notification sent by the panel after ordering out.
Notes: If the delegate implements this method it will receive the message after the panel is removed from display.

72.2.21 burnProgressPanelWillBegin

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Notification sent by the panel before display.
Notes: If the delegate implements this method it will receive the message immediately before the panel is displayed.

72.2.22 Screenshots

72.2.23 DiscRecording2.jpg

Function: The burn progress panel running.

72.3 class DRBurnSetupPanelMBS

72.3.1 class DRBurnSetupPanelMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Manages a panel that allows users to specify the parameters of an burn.
Example:

```
Var track as DRTrackMBS
Var bsp as DRBurnSetupPanelMBS
Var bpp as DRBurnProgressPanelMBS

// we need a track
track=CreateTrack

if track<>nil then
bsp=new DRBurnSetupPanelMBS

// set a few options
bsp.setCanSelectAppendableMedia true
bsp.setCanSelectTestBurn true

if bsp.runSetupPanel=bsp.NSOKButton then
bpp=new DRBurnProgressPanelMBS

// And start off the burn itself. This will put up the progress dialog
// and do all the nice pretty things that a happy app does.
bpp.beginProgressPanelForBurn bsp.burnObject, track

else
MessageBox "You pressed cancel."
end if
end if
```

Notes: This class supports choosing the device to use, whether or not to verify the burned data and how to handle the burned disc when it completes.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DRSetupPanelMBS class.

Xojo Developer Magazine

- 6.1, pages 29 to 30: DiscRecording, How to burn a CD from REALbasic on Mac OS X by Christian Schmitz

72.3.2 Methods

72.3.3 appendable

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's appendable checkbox.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

72.3.4 burnObject as DRBurnMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates and returns a new DRBurn object that's configured to write data to the currently selected device.
Notes: The new DRBurn object is configured based on the settings in the setup panel when the user clicks the OK button.

Do not invoke this method within a modal session because the burn object information is only updated just before the modal session ends.

Returns nil on any error.

72.3.5 burnSpeed

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's burn speed popup button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

72.3.6 completionAction

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks one of the panel's completion action radio buttons.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

72.3.7 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The constructor to create a new burn setup panel.

72.3.8 DRBurnSetupPanelDefaultButtonDefaultTitle as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The constant to use for the build title so it is replaced by the real default title string.

72.3.9 expand

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's expand button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

72.3.10 setCanSelectAppendableMedia(flag as boolean)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Specifies whether the user can choose to leave the disc appendable.
Notes: This method controls whether the appendable checkbox is enabled.

If the data being writen to disc does not lend itself to having more data appended on to it, you can disable the ability of the user to leave the disc open.

This method must be called before the panel is displayed.

Set to yes to enable the appendable checkbox, false to disable.

72.3.11 setCanSelectTestBurn(flag as boolean)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Specifies whether the user can choose to make a test burn.
Notes: This method controls whether a checkbox should be added to the receiver that allows the user to set the burn to be a test burn. By default, the test burn button is not displayed.

This method must be called before the panel is displayed.

Set to yes to show the test burn checkbox, false to hide it.

72.3.12 setDefaultButtonTitle(title as string)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Sets the title for the receiver's default button to title.
Example:

```
Var panel as new DRBurnSetupPanelMBS

panel.setDefaultButtonTitle "Do Burn"
```

Notes: Normally, the default button is "Burn".

72.3.13 testBurn

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's test burn checkbox.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

72.3.14 verifyBurn

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's verify burn checkbox.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

72.3.15 Screenshots

72.3.16 DiscRecording1.jpg

Function: The burn setup panel running.

72.4 class DRCDTextBlockMBS

72.4.1 class DRCDTextBlockMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A class for a Text block.
Notes: All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

72.4.2 Methods

72.4.3 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

72.4.4 encoding as Integer

MBS MacControls Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: The text encoding to use.

72.4.5 language as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The language of this text block.

72.5 class DRDeviceMBS

72.5.1 class DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Represents a physical CD/DVD drive connected to the computer.
Example:

```
// list the CD/DVD burners and whether a disc is inserted
Var lines() As String
For Each device As DRDeviceMBS In DRDeviceMBS.devices
lines.Add device.displayName + ": disc inserted " + device.mediaIsPresent.ToString + ", writes CD " +
device.writesCD.ToString
Next
If lines.Count = 0 Then
MessageBox "No burner found."
Else
MessageBox String.FromArray(lines, EndOfLine)
End If
```

Notes: All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

Xojo Developer Magazine

- 6.1, page 30: DiscRecording, How to burn a CD from REALbasic on Mac OS X by Christian Schmitz

72.5.2 Methods

72.5.3 acquireExclusiveAccess as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Attempts to acquire an exclusive access session with the device.
Notes: Acquiring exclusive access to the device prevents any process other than the one acquiring access from communicating with the device. So once exclusive access is granted, the device is unusable by any other process. Because of this all volumes mounted from media in the drive must be unmounted before exclusive

access can be granted.

Exclusive access can be acquired multiple times. Each time this method is called, a call to releaseExclusiveAccess must be made at a later time, otherwise the process will never release its exclusive access.

Returns true if the exclusinve access is acquired and false if not.

72.5.4 acquireMediaReservation

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Indicate an interest in the blank media reservation.
Example:

```
Var d as DRDeviceMBS // get a device
d.AcquireMediaReservation
```

Notes: Blank media participates in a reservation system thats allows applications to express their claim on blank media to other applications. Indicating an interest in the reservation isn't enough to assume its been acquired, as there are likely to be other applications in the system whom have also indicated an interest in the blank media reservation.

72.5.5 bsdName as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the bsd /dev node name.

72.5.6 closeTray as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Commands the device to close its tray.
Notes: Does nothing if the device does not have a tray (slotload).
Returns true if the tray could be closed and false if not.

72.5.7 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

72.5.8 device(index as UInt32) as DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Queries the device with the given index.
Notes: Index from 0 to deviceCount-1.

Same as devices(), but if you only need one, this method is more efficient.

72.5.9 deviceCount as UInt32

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Queries the number of devices on this computer.

72.5.10 deviceForBSDName(bsdName as string) as DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Obtains a DRDevice for the device corresponding to the bsd /dev node.
Notes: If the device is not an authoring device (i.e., CDR, CDRW, DVR-R, etc), returns nil.

72.5.11 deviceForIORegistryEntryPath(path as string) as DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Obtains a DRDevice for the device at the path.
Notes: If the device is not an authoring device (i.e., CDR, CDRW, DVR-R, etc), returns nil.

72.5.12 devices as DRDeviceMBS()

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Obtains a static list of devices connected to the computer.
Example:

```
// shows all devices with their product names:
Var devices() as DRDeviceMBS = DRDeviceMBS.devices
```

```
for each dd as DRDeviceMBS in devices
MessageBox dd.info.lookup(DRDeviceMBS.DRDeviceProductNameKey, "?")
next
```

Notes: Returns all CD/DVD devices connected to the computer at the time this method is called. Since devices can come and go at any time, the output of this method is simply a snapshot of the set of devices connected.

72.5.13 displayName as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns a string suitable for display in the user interface.

72.5.14 DRDeviceAppearedNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names used with a DRBurn object.
Notes: Posted by a DRNotificationCenter when a device is added to the system.

This notification is registered for only by name.

The object associated with this notification is the device that has appeared. The userInfo is the same dictionary returned by info for that device.

72.5.15 DRDeviceBurnSpeedBD1x as single

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible burn speed values.
Notes: 4496.0 KB/sec.

72.5.16 DRDeviceBurnSpeedCD1x as single

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible burn speed values.

Notes: 176.4 KB/sec.

72.5.17 DRDeviceBurnSpeedDVD1x as single

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible burn speed values.
Notes: 1385.0 KB/sec.

72.5.18 DRDeviceBurnSpeedHDDVD1x as single

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible burn speed values.
Notes: 4568.0 KB/sec.

72.5.19 DRDeviceBurnSpeedMax as single

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible burn speed values.
Notes: A value representing the maximum speed at which a device can burn. The actual speed will vary from device to device.

72.5.20 DRDeviceBurnSpeedsKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: An array containing the possible burn speeds available to use. This key may not be present if no media is inserted.

72.5.21 DRDeviceCanTestWriteCDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Value for this key is a boolean value indicating whether the device can perform a test burn to CD media.

72.5.22 DRDeviceCanTestWriteDVDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: A boolean value indicating whether the device can perform a test burn to DVD media.

72.5.23 DRDeviceCanUnderrunProtectCDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports burn underrun protection when writing to CD media.

72.5.24 DRDeviceCanUnderrunProtectDVDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports burn underrun protection when writing to DVD media.

72.5.25 DRDeviceCanWriteBDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to some type of BD (Blu-ray) based media.

72.5.26 DRDeviceCanWriteBDREKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to BD-RE media.

72.5.27 DRDeviceCanWriteBDRKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to BD-R media.

72.5.28 DRDeviceCanWriteCDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to some type of CD based media.

72.5.29 DRDeviceCanWriteCDRawKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports a raw mode burn strategy for CD. Raw mode is sometimes incorrectly referred to as DAO (disc-at-once).

72.5.30 DRDeviceCanWriteCDRKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to CD-R media.

72.5.31 DRDeviceCanWriteCDRWKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to CD-RW media.

72.5.32 DRDeviceCanWriteCDSAOKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports a SAO (session-at-once) burn strategy for CD.

72.5.33 DRDeviceCanWriteCDTAOKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports a TAO (track-at-once) burn strategy for CD.

72.5.34 DRDeviceCanWriteCDTextKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write CD-Text information to media.

72.5.35 DRDeviceCanWriteDVDDAOKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports a DAO (disc-at-once) burn strategy on DVD media.

72.5.36 DRDeviceCanWriteDVDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to some type of DVD based media.

72.5.37 DRDeviceCanWriteDVDPlusRDoubleLayerKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD+R DL media.

72.5.38 DRDeviceCanWriteDVDPlusRKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD+R media.

72.5.39 DRDeviceCanWriteDVDPlusRWDoubleLayerKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD+RW DL media.

72.5.40 DRDeviceCanWriteDVDPlusRWKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD+RW media.

72.5.41 DRDeviceCanWriteDVDRAMKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD-RAM media.

72.5.42 DRDeviceCanWriteDVDRDualLayerKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD-R DL media.

72.5.43 DRDeviceCanWriteDVDRKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD-R media.

72.5.44 DRDeviceCanWriteDVDRWDualLayerKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD-RW DL media.

72.5.45 DRDeviceCanWriteDVDRWKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD-RW media.

72.5.46 DRDeviceCanWriteHDDVDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to some type of HDDVD based media.

72.5.47 DRDeviceCanWriteHDDVDRAMKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to HD DVD-RAM media.

72.5.48 DRDeviceCanWriteHDDVDRDualLayerKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to HD DVD-R DL media.

72.5.49 DRDeviceCanWriteHDDVDRKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to HD DVD-R media.

72.5.50 DRDeviceCanWriteHDDVDRWDualLayerKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to HD DVD-RW DL media.

72.5.51 DRDeviceCanWriteHDDVDRWKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to HD DVD-RW media.

72.5.52 DRDeviceCanWriteIndexPointsKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write index points to CD media.

72.5.53 DRDeviceCanWriteISRCKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write ISRC to CD media.

72.5.54 DRDeviceCanWriteKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to some type of media.

72.5.55 DRDeviceCurrentWriteSpeedKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: Number containing the current burning speed of this device.

72.5.56 DRDeviceDisappearedNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names used with a DRBurn object.
Notes: Posted by a DRNotificationCenter when a device is removed from the system.

The object associated with this notification is the device that has disappeared. The userInfo is the same dictionary returned by info for that device.

72.5.57 DRDeviceFirmwareRevisionKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: String containing the firmeware revision extracted from the device.

72.5.58 DRDeviceIORegistryEntryPathKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: String containing the path of the device in the IO Registry.
Notes: One of the keys in the dictionary returned by the info method.

72.5.59 DRDeviceIsBusyKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: Number containing a boolean value indicating whether the device is busy or not.

72.5.60 DRDeviceIsTrayOpenKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: Number containing a boolean value indicating whether the device's tray is open or not.

72.5.61 DRDeviceLoadingMechanismCanEjectKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: Number describing if the loading mechanism of the drive can eject.

72.5.62 DRDeviceLoadingMechanismCanInjectKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: Number describing if the loading mechanism of the drive can inject.

72.5.63 DRDeviceLoadingMechanismCanOpenKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: Number describing if the loading mechanism of the drive can open.

72.5.64 DRDeviceMaximumWriteSpeedKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: Number containing the maximum burning speed of this device.

72.5.65 DRDeviceMediaBlocksFreeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the amount of space available (in blocks) on the media to be written to. If the media already contains data and this value will be less than the normal maximum size of the disc. This value will normally only be used if the intent is to append data onto an open disc.

72.5.66 DRDeviceMediaBlocksOverwritableKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the total amount of writable space available (in blocks) on the media to be written to - if that media can be overwritten. Media that can be overwitten is designated through the DRDeviceMediaIsOverwritableKey .

The overwritable space is the amount of space on the disc that would be available if any data currently on the disc is first erased.

72.5.67 DRDeviceMediaBlocksUsedKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the amount of space currently used (in blocks) for exising data.

72.5.68 DRDeviceMediaBSDNameKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: String containing the BSD /dev node name assigned to the media in the device.

72.5.69 DRDeviceMediaClassBD as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media is some type of BD (Blu-ray) based media.

72.5.70 DRDeviceMediaClassCD as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media is some type of CD based media.

72.5.71 DRDeviceMediaClassDVD as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media is some type of DVD based media.

72.5.72 DRDeviceMediaClassHDDVD as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media is some type of HD DVD based media.

72.5.73 DRDeviceMediaClassKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: String containing the class of media present in the drive.

72.5.74 DRDeviceMediaClassUnknown as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media class is unknown.

72.5.75 DRDeviceMediaDoubleLayerL0DataZoneBlocksKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the amount of space available (in blocks) on layer 0 of a double layer piece of media.

72.5.76 DRDeviceMediaFreeSpaceKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: MSF value of the amount of space available on the media to be written to. If the media already contains data and this value will be less than the normal maximum size of the disc. This value will normally only be used if the intent is to append data onto an open disc.

72.5.77 DRDeviceMediaInfoKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: Dictionary of information describing the media currently in the device. This key may not be present if no media is inserted.

72.5.78 DRDeviceMediaIsAppendableKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing a boolean value indicating that data can be appended to the exisiting data (if any).

72.5.79 DRDeviceMediaIsBlankKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing a boolean value indicating whether data has previously been written to the media.

72.5.80 DRDeviceMediaIsErasableKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing a boolean value indicating whether this media can be erased.

72.5.81 DRDeviceMediaIsOverwritableKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing a boolean value indicating that the data on the disc (if any) can be overwritten. Rewritable media can always be erased, and then rewritten in its entirety, so it is always considered overwritable.

Write-once media, if its blank, can also be written in its entirety and is also considered overwritable.

Write-once media, that has been partially written, can never again enter a state where it is entirely writable and will have lost its overwritable designation.

72.5.82 DRDeviceMediaIsReservedKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing a boolean value indicating whether the media is reserved for exclusive use by the current process.

72.5.83 DRDeviceMediaOverwritableSpaceKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: MSF value of the amount of writable space available on the media to be written to - if that media can be overwritten. Media that can be overwitten is designated through the DRDeviceMediaIsOverwritableKey .

The overwritable space is the amount of space on the disc that would be available if any data currently on the disc is first erased.

72.5.84 DRDeviceMediaSessionCountKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the current number of sessions present on the media.

72.5.85 DRDeviceMediaStateInTransition as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values for the DRDeviceMediaStateKey.
Notes: The media is transitioning from one state to another (i.e., being spun up/down).

72.5.86 DRDeviceMediaStateKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: String describing the state of the media.

72.5.87 DRDeviceMediaStateMediaPresent as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values for the DRDeviceMediaStateKey.
Notes: Device contains media of some type.

72.5.88 DRDeviceMediaStateNone as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values for the DRDeviceMediaStateKey.
Notes: No media is present in the device.

72.5.89 DRDeviceMediaTrackCountKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the number of tracks present on the media.

72.5.90 DRDeviceMediaTypeBDR as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a BD-R.

72.5.91 DRDeviceMediaTypeBDRE as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a BD-RE.

72.5.92 DRDeviceMediaTypeBDROM as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a BD-ROM.

72.5.93 DRDeviceMediaTypeCDR as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a CD-R.

72.5.94 DRDeviceMediaTypeCDROM as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a CD-ROM.

72.5.95 DRDeviceMediaTypeCDRW as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a CD-RW.

72.5.96 DRDeviceMediaTypeDVDPlusR as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD+R.

72.5.97 DRDeviceMediaTypeDVDPlusRDoubleLayer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD+R Double Layer.

72.5.98 DRDeviceMediaTypeDVDPlusRW as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD+RW.

72.5.99 DRDeviceMediaTypeDVDPlusRWDoubleLayer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD+RW Double Layer.

72.5.100 DRDeviceMediaTypeDVDR as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD+RW.

72.5.101 DRDeviceMediaTypeDVDRAM as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD-RAM.

72.5.102 DRDeviceMediaTypeDVDRDualLayer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD-R DL.

72.5.103 DRDeviceMediaTypeDVDROM as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD-ROM.

72.5.104 DRDeviceMediaTypeDVDRW as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD-RW.

72.5.105 DRDeviceMediaTypeDVDRWDualLayer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD-RW DL.

72.5.106 DRDeviceMediaTypeHDDVDR as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-R.

72.5.107 DRDeviceMediaTypeHDDVDRAM as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-RAM.

72.5.108 DRDeviceMediaTypeHDDVDRDualLayer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-R DL.

72.5.109 DRDeviceMediaTypeHDDVDROM as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-ROM.

72.5.110 DRDeviceMediaTypeHDDVDRW as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-RW.

72.5.111 DRDeviceMediaTypeHDDVDRWDualLayer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-RW DL.

72.5.112 DRDeviceMediaTypeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: String containing the type of media inserted in the device.

72.5.113 DRDeviceMediaTypeUnknown as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: The type of the media cannot be determined.

72.5.114 DRDeviceMediaUsedSpaceKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: MSF value of the amount of space currently used for exising data.

72.5.115 DRDevicePhysicalInterconnectATAPI as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectKey.
Notes: Device is connected on an ATAPI interface.

72.5.116 DRDevicePhysicalInterconnectFibreChannel as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectKey.
Notes: Device is connected through a Fibre Channel interface.

72.5.117 DRDevicePhysicalInterconnectFireWire as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectKey.
Notes: Device is connected through a Firewire interface.

72.5.118 DRDevicePhysicalInterconnectKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: String describing the connection of the device to the computer.

72.5.119 DRDevicePhysicalInterconnectLocationExternal as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectLocationKey.
Notes: Device is connected to the machine externally.

72.5.120 DRDevicePhysicalInterconnectLocationInternal as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectLocationKey.
Notes: Device is connected to the machine internally.

72.5.121 DRDevicePhysicalInterconnectLocationKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: String describing the location of the device (e.g. internal/external).

72.5.122 DRDevicePhysicalInterconnectLocationUnknown as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectLocationKey.
Notes: It's not known how the device is connected.

72.5.123 DRDevicePhysicalInterconnectSCSI as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectKey.
Notes: Device is connected on a SCSI interface.

72.5.124 DRDevicePhysicalInterconnectUSB as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectKey.
Notes: Device is connected through a USB interface.

72.5.125 DRDeviceProductNameKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Example:

```
// shows all devices with their product names:
Var devices() as DRDeviceMBS = DRDeviceMBS.devices

for each dd as DRDeviceMBS in devices
MessageBox dd.info.lookup(DRDeviceMBS.DRDeviceProductNameKey, "?")
next
```

Notes: String containing the product name extracted from the device.

72.5.126 DRDeviceStatusChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names used with a DRBurn object.
Notes: Posted by a DRNotificationCenter when the media in a device changes state. This can include being ejected, inserted, becoming busy, etc.

The object for this notification is the device who's media is changing state. The userInfo for this notification is the same dictionary returned by status for that device.

72.5.127 DRDeviceSupportLevelAppleShipping as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates this device is shipping in some Apple machine.

72.5.128 DRDeviceSupportLevelAppleSupported as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates this device has been tested by Apple for support.

72.5.129 DRDeviceSupportLevelKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: String describing the support level the device enjoys from the engine.

72.5.130 DRDeviceSupportLevelNone as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates this device is not supported.

72.5.131 DRDeviceSupportLevelUnsupported as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates the device is unsupported, but the engine will try to use it anyway.

72.5.132 DRDeviceSupportLevelVendorSupported as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates this device has been tested by a third party for support.

72.5.133 DRDeviceTrackInfoKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: Dictionary containing dictionaries describing the tracks. DRTracks from the DRDeviceTrackRefsKey are used as keys into this dictionary.

72.5.134 DRDeviceTrackRefsKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: An array containing a list of DRTrack objects describing any tracks that are already on the disc.

72.5.135 DRDeviceVendorNameKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: String containing the vendor name extracted from the device.

72.5.136 DRDeviceWriteBufferSizeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: Number containing the size of the write buffer of the device.

72.5.137 DRDeviceWriteCapabilitiesKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: Dictionary containing the capabilities of the device for writing different kinds of media.

72.5.138 ejectMedia as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Commands the device to eject the media.
Notes: This command first unmounts any volumes associated with the media and then eject the media from the drive. If the media could not be ejected, most likely this is because a volume associated with the media could not be unmounted.

Returns true if the media could be ejected and false if not.

72.5.139 info as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns a dictionary of information describing the device.
Notes: The information returned include the types of media the device can write to, how it's connected and its identifying information such as the vendor and product name.

72.5.140 ioRegistryEntryPath as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the path to the device in the IO Registry.

72.5.141 isEqualToDevice(value as DRDeviceMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Compares the receiver to another device.
Notes: Returns true if the receiver is equal to otherDevice.

72.5.142 isValid as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns whether or not the device represented by the receiver is still attached to the computer.
Notes: Because of the way some physical interconnects work, a device which is unplugged and replugged in does not necessarily look like the same device to the computer and would be invalid in that instance.

Returns true if the device is valid and false if not.

72.5.143 mediaIsAppendable as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true if the media in the device can have more data appended to any existing data.

72.5.144 mediaIsBlank as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true the media in the device is blank.

72.5.145 mediaIsBusy as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true if the media is in use by some process - even the one making this call.

72.5.146 mediaIsErasable as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true if the media can be erased (i.e., CD-RW, DVD-RW, etc).

72.5.147 mediaIsOverwritable as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true if the media in the device can be fully (re)written.

72.5.148 mediaIsPresent as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Reports the presence of the media.

72.5.149 mediaIsReserved as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true if the application calling this method currently holds the reservation on the media.

72.5.150 mediaIsTransitioning as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true if the media is in transition (spinning up or down for example).

72.5.151 mediaSpaceFree as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the amount of free space on the media.

72.5.152 mediaSpaceOverwritable as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the amount of writable space on the media.

72.5.153 mediaSpaceUsed as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the amount of used space on the media.

72.5.154 mediaType as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the type of media currently inserted into the device.

72.5.155 openTray as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Commands the device to open it's tray.
Notes: Does nothing if the device does not have a tray (slotload). If there is media in the drive this method will do nothing and return false. In this case use ejectMedia to eject the media and open the tray.

Returns true if the tray could be opened and false if not.

72.5.156 PhysicalInterconnect as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The connection of the device to the computer.

72.5.157 PhysicalInterconnectLocation as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The location of the device (internal/external/unknown).
Notes: Use the DRDevicePhysicalInterconnectLocation* constants.

72.5.158 releaseExclusiveAccess

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Releases the latest exclusive access request for the device.
Notes: A call to this method must be made for every call to acquireExclusiveAccess, otherwise the process will never release its exclusive access.

72.5.159 releaseMediaReservation

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Releases any media reservation that might be in place for the device.
Notes: If media is inserted and reserved, then the reservation will be passed on to the next process with a reservation request.

72.5.160 status as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns a dictionary of information describing the media in the device.
Notes: In addition to information about the media (type, space available/used, etc), the dictionary returned includes those pieces of information about the device itself which are in part determined by the media (i.e., maximum burn speed).

72.5.161 trayIsOpen as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Reports the tray state of the device.
Notes: Returns true if the device has a tray and it is open.

72.5.162 writesCD as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Reports the device's ability to burn to CD-type media.
Notes: Returns true if the device has the ability to write to CD-R media.

72.5.163 writesDVD as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Reports the device's ability to burn to DVD-type media.
Notes: Returns true if the device has the ability to write to DVD-R media.

72.6 class DREraseMBS

72.6.1 class DREraseMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Perform and monitor the erasing a rewritable CD or DVD disc.
Example:

```
// quickly erase a rewritable disc and show the progress panel
Var devices() As DRDeviceMBS = DRDeviceMBS.devices
If devices.Count = 0 Then Return

Var erase As DREraseMBS = DREraseMBS.eraseForDevice(devices(0))
erase.eraseType = DREraseMBS.DREraseTypeQuick

Var panel As New DREraseProgressPanelMBS
panel.beginProgressPanelForErase erase // starts erasing and shows the progress
```

Notes: All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

- MBS REALbasic Plugins, version 10.4pr7

72.6.2 Methods

72.6.3 Constructor(device as DRDeviceMBS)

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Initializes an erase object.

72.6.4 device as DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the device being used for the erase.

72.6.5 DREraseStatusChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names you can use to register notifications on the erase status.

72.6.6 DREraseTypeComplete as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: A constant to be used for the eraseType property.
Notes: Configures the erase object to perform a complete erase, erasing every byte on the disk. This operation is slow (on the order of 30 minutes) to complete.

72.6.7 DREraseTypeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property names in the properties dictionary of the erase object.

72.6.8 DREraseTypeQuick as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: A constant to be used for the eraseType property.
Notes: Configures the erase object to perform a quick erase, doing the minimal amount of work to make the disc appear blank. This operation typically takes only a minute or two.

72.6.9 eraseForDevice(device as DRDeviceMBS) as DREraseMBS

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Creates and returns an erase object.
Notes: Returns nil on any error.

72.6.10 start

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Begin the process of erasing media.
Notes: This method only kicks off the erase. Once the erasure starts, control returns to the caller.

72.6.11 status as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns a dictionary containing the status of the erase.
Notes: The same dictionary is returned through the DREraseStatusChangedNotification notification.

72.6.12 Properties

72.6.13 eraseType as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The type of erase to be performed.
Notes: (Read and Write computed property)

72.6.14 properties as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The properties dictionary of the erase.
Notes: (Read and Write computed property)

72.7 class DREraseProgressPanelMBS

72.7.1 class DREraseProgressPanelMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Panel to display progress while erasing media.
Example:

```
// erase a disc with the standard progress panel and get notified when done
// MyErasePanel is a subclass of DREraseProgressPanelMBS with the eraseProgressPanelDidFinish event implemented.
// Panel is a property of the window: Panel As MyErasePanel
Var devices() As DRDeviceMBS = DRDeviceMBS.devices
If devices.Count = 0 Then Return

Panel = New MyErasePanel
Panel.Description = "Erasing the disc for the new backup"
Panel.beginProgressPanelForErase DREraseMBS.eraseForDevice(devices(0))

// in MyErasePanel:
Sub eraseProgressPanelDidFinish() Handles eraseProgressPanelDidFinish
System.DebugLog "Erase finished."
End Sub
```

Notes: All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the NSPanelMBS class.

- MBS REALbasic Plugins, version 10.4pr7

72.7.2 Methods

72.7.3 beginProgressPanelForErase(erase as DREraseMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel on screen and begins the erase process.
Notes: This method returns control to the caller after it has displayed the progress sheet and begun the erase. Once the method has returned the caller can perform other operations while the erase continues.

72.7.4 beginProgressSheetForErase(erase as DREraseMBS, docWindow as NSWindowMBS)

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel as a sheet and begins the erase process.
Notes: erase: The object performing the erase.
docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the erase. Once the method has returned the caller can perform other operations while the erase continues.

72.7.5 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The constructor which creates the erase progress panel.

72.7.6 DREraseProgressPanelDidFinishNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names for use with an erase progress panel.
Notes: Posted when the DREraseProgressPanel has finished and is about to go away.

This notification contains a notification object but no userInfo dictionary. The notification object is the DREraseProgressPanel that will be closed.

72.7.7 DREraseProgressPanelWillBeginNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names for use with an erase progress panel.
Notes: Posted when the DREraseProgressPanel is about to begin displaying progress.

This notification contains a notification object but no userInfo dictionary. The notification object is the DREraseProgressPanel thatwill be displayed.

72.7.8 Properties

72.7.9 Description as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The description string displayed in the panel.
Notes: If no description is explicitly set, this method will return the standard text string.

The panel's description is typically a short text string that gives an indication to the user what operation is being performed. If no description is explicitly set, the progress panel uses a standard text string suitable to the erase.
(Read and Write computed property)

72.7.10 Events

72.7.11 eraseProgressPanelDidFinish

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Notification sent by the panel after ordering out.

72.7.12 eraseProgressPanelEraseDidFinish(erase as DREraseMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Allows the delegate to handle the end-of-erase feedback.
Notes: This method allows the delegate to handle or modify the end-of-erase feedback performed by the progress panel. Return true to indicate the delegate handled the erase completion and the standard feedback should be supressed. If this method returns false, the normal end-of-erase handling is performed (displaying an error if appropriate, playing an "I'm done" sound, etc). The delegate is messaged before the progress panel is ordered out so a sheet may be displayed on a progress panel displayed as a window.

72.7.13 eraseProgressPanelWillBegin

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Notification sent by the panel before display.

72.8 class DREraseSetupPanelMBS

72.8.1 class DREraseSetupPanelMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Manages a panel that allows users to specify the parameters of an erase.
Notes: This class supports choosing the device to use and what sort of erase to perform. When the panel is closed by the user choosing to erase the media in the device, the device is exclusively held by the application for its own use to prevent possible bad or corrupt media from causing problem for the rest of the system. This means that if the erase object obtained from the panel is not used to do an erase, the device will remain unavailable to other applications until the exclusive access is released.
Subclass of the DRSetupPanelMBS class.

72.8.2 Methods

72.8.3 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The constructor to create the erase setup panel.
Example:

```
Var d as DREraseSetupPanelMBS

d=new DREraseSetupPanelMBS
call d.runSetupPanel
```

72.8.4 eraseObject as DREraseMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates and returns a new DRErase object that's configured to erase the disc in the currently selected device.
Notes: The new DRErase object is configured based on the settings in the setup panel when the user clicks the OK button.

Do not invoke this method within a modal session runSetupPanel because the erase object information is only updated just before the modal session ends.

Returns a new DRErase object.

72.9 class DRFileMBS

72.9.1 class DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Represents a file to be created on the disc.
Example:

```
// add a real file and a file created from memory to a disc layout
Var photo As DRFileMBS = DRFileMBS.fileWithPath(SpecialFolder.Desktop.Child("photo.jpg"))
Var info As DRFileMBS = DRFileMBS.virtualFileWithName("info.txt", "Created " + DateTime.Now.ToString)

Var root As DRFolderMBS = DRFolderMBS.virtualFolderWithName("Disc")
root.addChild photo
root.addChild info
MessageBox "Files: " + photo.baseName + ", " + info.baseName
```

Notes: A file can be either a pointer to an exiting file (residing on a hard drive for example) or can be created at burn time from data passed into the file object as requested. DRFiles can only exist inside of DRFolder objects.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DRFSObjectMBS class.

- 6.1, page 31: DiscRecording, How to burn a CD from REALbasic on Mac OS X by Christian Schmitz

72.9.2 Methods

72.9.3 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Dummy constructor.
See also:

- 72.9.4 Constructor(name as string) 12529
- 72.9.5 Constructor(name as string, data as memoryblock) 12529
- 72.9.6 Constructor(path as folderitem) 12529

72.9.4 Constructor(name as string)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "virtual" file object.
Notes: This type of DRFile burns the data produced to the output disc, creating a file with the passed in name.

You need to subclass the DRFileMBS class and handle the events.
See also:

- 72.9.3 Constructor 12528
- 72.9.5 Constructor(name as string, data as memoryblock) 12529
- 72.9.6 Constructor(path as folderitem) 12529

72.9.5 Constructor(name as string, data as memoryblock)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "virtual" file object.
Notes: This type of DRFile burns the data passed in to disc, creating a file with the passed in name.
See also:

- 72.9.3 Constructor 12528
- 72.9.4 Constructor(name as string) 12529
- 72.9.6 Constructor(path as folderitem) 12529

72.9.6 Constructor(path as folderitem)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Initializes a "real" file object
Notes: This type of DRFile reads in data from an existing file located at path and burns that data to disc.
See also:

- 72.9.3 Constructor 12528
- 72.9.4 Constructor(name as string) 12529
- 72.9.5 Constructor(name as string, data as memoryblock) 12529

72.9.7 DRLinkTypeFinderAlias as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The constant used with linkWithLinkType to create a Finder alias.

72.9.8 DRLinkTypeHardLink as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The constant used with linkWithLinkType to create a hard link.

72.9.9 DRLinkTypeSymbolicLink as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The constant used with linkWithLinkType to create a symbolic link.

72.9.10 fileWithPath(path as folderitem) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "real" file object.
Example:

```
Var file as FolderItem = New FolderItem("/System/Library/Fonts/Helvetica.dfont", FolderItem.PathModes.Shell)
Var f as DRFileMBS = DRFileMBS.fileWithPath(file)

MessageBox f.baseName
```

Notes: This type of DRFile reads in data from an existing file located at path and burns that data to disc.
See also:

- 72.9.11 fileWithPath(path as string) as DRFileMBS 12531

72.9.11 fileWithPath(path as string) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "real" file object.
Example:

```
Var f as DRFileMBS = DRFileMBS.fileWithPath("/System/Library/Fonts/Helvetica.dfont")

MessageBox f.baseName
```

Notes: This type of DRFile reads in data from an existing file located at path and burns that data to disc.
See also:

- 72.9.10 fileWithPath(path as folderitem) as DRFileMBS 12530

72.9.12 finderAliasPointingTo(original as DRFSObjectMBS, filesystem as string) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a Finder alias to another file on the output disc.
Notes: original: The file to point he hard link to
filesystem: The filesystem this link will exist on.

As with Mac OS X 10.6.4 this method seems to create an empty file only (no alias).

72.9.13 hardLinkPointingTo(original as DRFileMBS, filesystem as string) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a hard link to another file on the output disc.
Notes: original: The file to point he hard link to
filesystem: The filesystem this link will exist on.

As with Mac OS X 10.6.4 this method seems to crash always.

72.9.14 linkWithLinkType(linkType as string, original as DRFSObjectMBS, filesystem as string) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Initializes a file object to point to another file on the output disc.
Example:

```
Var SomeFolder as new DRFolderMBS("Some new folder")

// Let's have a file to test

Var data as string = "Hello World" // file content
Var name as string = "test.txt" // file name
Var testfile as DRFileMBS = DRFileMBS.virtualFileWithName(name, data)

// and create a sym link for it
Var SymLink as DRFileMBS = DRFileMBS.linkWithLinkType(DRFileMBS.DRLinkTypeSymbolicLink, testfile, DRFileMBS.DRHFSPlus)
if SymLink = nil then
MessageBox "SymLink is nil!?"
else
SomeFolder.addChild SymLink
end if
```

Notes: linkType: The type of link that will be created.
original: The file to point he hard link to
filesystem: The filesystem this link will exist on.

72.9.15 symLinkPointingTo(original as DRFSObjectMBS, filesystem as string) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a symbolic link to another file on the output disc.
Example:

```
Var SomeFolder as new DRFolderMBS("Some new folder")

// Let's have a file to test

Var data as string = "Hello World" // file content
Var name as string = "test.txt" // file name
Var testfile as DRFileMBS = DRFileMBS.virtualFileWithName(name, data)

// and create a sym link for it
Var SymLink as DRFileMBS = DRFileMBS.symLinkPointingTo(testfile, DRFileMBS.DRHFSPlus)
if SymLink = nil then
MessageBox "SymLink is nil!?"
else
```

```
SomeFolder.addChild SymLink
end if
```

Notes: original: The file to point he hard link to
filesystem: The filesystem this link will exist on.

As with Mac OS X 10.6.4 this method seems to work just fine.

72.9.16 virtualFileWithName(name as string, data as memoryblock) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "virtual" file object.
Example:

```
Var data as string = "Hello World" // file content
Var name as string = "test.txt" // file name

Var f as DRFileMBS = DRFileMBS.virtualFileWithName(name, data)

MessageBox f.baseName
```

Notes: This type of DRFile burns the data passed in to disc, creating a file with the passed in name.

72.9.17 Events

72.9.18 calculateSizeOfFile(fork as Integer, estimating as boolean) as uint64

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Calculates the size of a file's fork.
Notes: This method may be sent at any time after the file object has been instantiated. Requests that the recevier calculate the file size of file fork (for instance data or resource).

If estimate is true, you are being asked for an estimate of the final fork size, perhaps to provide an estimate of the track size, and do not have to be exact. Estimates should err on the high side; it's better to overestimate than underestimate.

An estimate call may be made at any time.

If estimate is false, you are being asked for the actual fork size, to be used in the burn. This call is only made in the burn phase.

fork: The fork of the file whose size is to be calculated.
estimate: If the file size should be estimated or exact.

Return the length of the file's fork.

72.9.19 cleanupFileAfterBurn

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Cleanup the file once the burn is complete.
Notes: Sent to the receiver after the burn completes. This would be an appropriate place to close files, or do any other teardown work needed. This message will always be sent regardless of whether the burn succeeded or failed.

72.9.20 prepareFileForBurn as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Prepare the file object for burning.
Notes: Sent to the recevier before the burn begins. This would be an appropriate method to open files, or do any other prep work needed. The disc's entire hierarchy is completely in place and can be queried if needed.

After this call, the burn's content is locked down, and you should be able to respond to the calculateSizeOfFile messages with exact values.

72.9.21 prepareFileForVerification as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Prepare the file object for verification.
Notes: Called during the burn (after production, before the cleanupFileAfterBurn event is called) to indicate that verification is about to begin. Now would be a good time to rewind to the start of the file, reset state machines, or do whatever else is needed to prepare to produce again.

72.9.22 produceFile(fork as Integer, buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32) as uint32

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Calculates the size of a file's fork.
Notes: Sent during the burn (after the prepareFileForBurn message) requesting that the receiver produce the data fork contents.

The recevier should fill up the buffer passed in as full as possible and then return control to the caller. Since while burning, keeping the drive's buffer full is of utmost importance, you should not perform lengthy operations or block for data in this method. This method should return the number of bytes actually in the buffer or 0 to indicate that there was an error producing the data.

You may be asked to produce twice, once during the actual burn and once during verification.

fork: The fork of the file to produce.
buffer: The buffer to produce data into.
bufferLength: The length of the buffer to produce data into
blockSize: The size of the track blocks

Return the number of bytes produced.

72.9.23 Constants

Constants

Constant	Value	Description
DRFileForkData	0	The constant which specifies which fork is currently needed. The data fork contains the primary information for the file and is the fork used for files such as JPEGs, text files, etc. The resource fork contains secondary meta-data, which is not important to the primary content of the file and may safely be ignored when the file is sent to a filesystem or OS which does not support multiple forks.
DRFileForkResource	1	The constant which specifies which fork is currently needed. The data fork contains the primary information for the file and is the fork used for files such as JPEGs, text files, etc. The resource fork contains secondary meta-data, which is not important to the primary content of the file and may safely be ignored when the file is sent to a filesystem or OS which does not support multiple forks.

72.10 class DRFolderMBS

72.10.1 class DRFolderMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A class for folder objects used in filesystem creation.
Example:

```
// build a virtual disc layout with a folder from disk and a generated text file
Var root As DRFolderMBS = DRFolderMBS.virtualFolderWithName("MyDisc")
root.addChild DRFolderMBS.folderWithPath(SpecialFolder.Documents.Child("Photos"))
root.addChild DRFileMBS.virtualFileWithName("readme.txt", "Burned with MyApp")

Var track As DRTrackMBS = DRTrackMBS.trackForRootFolder(root)
// pass track to DRBurnMBS.writeLayout
```

Notes: A DRFile object is a subclass of DRFSObject and represents a folder on the finished disc. DRFolders can be either a pointer to an existing folder (residing on a hard drive for example) or can be a "virtual" folder which existsonly on the resulting burned disc. A DRFolder pointing to an existing folder ("real" folder) cannot have it's contents changed - only those files/folders which are children of the actual folder on disk will be included on the resulting disc. "Virtual" folders are entirely created programatically and any virtual folder structure can exist and be burned to disc. It is possible to convert a "real" folder to a "virtual" folder using the makeVirtual method.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DRFSObjectMBS class.
Xojo Developer Magazine

- 6.1, pages 29 to 31: DiscRecording, How to burn a CD from REALbasic on Mac OS X by Christian Schmitz

72.10.2 Methods

72.10.3 addChild(child as DRFSObjectMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Adds an object reference (either a file or folder) as a child of a virtual folder object.
Notes: This method only applies to virtual folders. Real folders are considered "leaf nodes" and cannot have children.

72.10.4 children as DRFSObjectMBS()

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Returns an array containing the children of a virtual folder.
Notes: The order of children in the array is arbitrary – since the various filesystems being generated may have different sorting requirements, there is no one true way to sort the children. The ordering will change only when children are added or removed. You should sort the children according to the needs of your display, and in a consistent manner. This function only applies to virtual folders. Real folders are considered "leaf nodes" and should not be passed into this call.

72.10.5 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The dummy constructor.
See also:

- 72.10.6 Constructor(name as string) 12537
- 72.10.7 Constructor(path as folderitem) 12537

72.10.6 Constructor(name as string)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "virtual" folder object with a name.
See also:

- 72.10.5 Constructor 12537
- 72.10.7 Constructor(path as folderitem) 12537

72.10.7 Constructor(path as folderitem)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Initializes a DRFolder object that will use the folder contents of the folder located at path as a source.
See also:

- 72.10.5 Constructor 12537
- 72.10.6 Constructor(name as string) 12537

72.10.8 count as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the number of children of a virtual folder.
Notes: This method returns a "shallow" count of only those children that are immediately contained within the virtual folder. This method only applies to virtual folders. Real folders are considered "leaf nodes" and should not be passed into this call.

72.10.9 folderWithPath(path as folderitem) as DRFolderMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Initializes a DRFolder object that will use the folder contents of the folder located at path as a source.
See also:

- 72.10.10 folderWithPath(path as string) as DRFolderMBS 12538

72.10.10 folderWithPath(path as string) as DRFolderMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Initializes a DRFolder object that will use the folder contents of the folder located at path as a source.
See also:

- 72.10.9 folderWithPath(path as folderitem) as DRFolderMBS 12538

72.10.11 makeVirtual

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Changes the real DRFolder object into a "virtual" DRFolder object.
Notes: The virtual folder created in this way is a snapshot of the on-disk folder at the moment of the call. The newly created virtual folder will contain real folder and file objects corresponding to the on-disk children of the original on-disk folder. If the on-disk folder is modified (eg, if the folder attributes change, or if children are added to or removed from the on-disk tree): during this call, the virtual folder may or may not reflect the changes. If modified after this call, the virtual folder will not reflect the changes.

72.10.12 removeChild(child as DRFSObjectMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Removes an object reference (either a file or folder) as a child of a virtual folder object.
Notes: This method only applies to virtual folders. Real folders are considered "leaf nodes" and cannot have children.

72.10.13 virtualFolderWithName(name as string) as DRFolderMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "virtual" folder object with a name.

72.11 class DRFSObjectMBS

72.11.1 class DRFSObjectMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A class which defines common features of all filesystem content objects.
Notes: Please read Apples documentation for more details.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr7

72.11.2 Methods

72.11.3 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

72.11.4 DRAccessDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's last-accessed date.

72.11.5 DRAllFilesystems as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the name or properties for the file in all filesystems together.
Notes: When this key is used to refer to a name, it refers to the base name (which has no naming restrictions).

72.11.6 DRAttributeModificationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's attribute modification date.

72.11.7 DRBackupDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's backup date.

72.11.8 DRContentModificationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's content modification date.

72.11.9 DRCreationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's creation date.

72.11.10 DREffectiveDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's effective date.

72.11.11 DRExpirationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's expiration date.

72.11.12 DRHFSPlus as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the HFS+ name/properties for the file.
Notes: HFS+ names can be up to 255 decomposed unicode characters long.

72.11.13 DRHFSPlusCatalogNodeID as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing item's catalog node ID (HFS+ only). Currently, this value if set is only a suggestion. The burn engine will attempt to use this node ID, but may use another value if it needs to resolve conflicts. Default behavior is to allocate node IDs incrementally from kHFSFirstUserCatalogNodeID.

72.11.14 DRHFSPlusTextEncodingHint as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the item's text encoding hint (HFS+ only).

This value is used by the MacOS to help when converting the natively UTF-16 filename into an 8-bit-per-character representation (such as MacRoman, Shift-JIS, or UTF8). If not set, default behavior is to call CFStringGetMostCompatibleMacStringEncoding (CFStringGetSmallestEncoding()).

72.11.15 DRInvisible as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Boolean indicating whether the item is invisibile or not.

72.11.16 DRISO9660 as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the ISO-9660 properties for the file.
Notes: This key cannot be used to refer to the name of the file; it is ambiguous, since the name may be in either level 1 or level 2 format.

72.11.17 DRISO9660LevelOne as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the ISO-9660 level 1 name for the file.
Notes: This key is used to refer specifically to the name generated for ISO-9660 if the ISO level is set to 1. When used for a property, it is equivalent in use to the DRISO9660 key and acts as a synonym for that key.

ISO9660 level 1 names are in the form typically known as 8.3 - eight characters of name and three characters of extension (if it's a file; directories can't have extensions). Character set is limited to A-Z, 0-9, and _.

72.11.18 DRISO9660LevelTwo as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the ISO-9660 level 2 name for the file.
Notes: This key is used to refer specifically to the name generated for ISO-9660 if the ISO level is set to 2. When used for a property, it is equivalent in use to the DRISO9660 key and acts as a synonym for that key.

ISO9660 level 2 names can be 32 chars long, are limited to a subset of the 7-bit ASCII chars (capital letters, numbers, space, punctuation), and are only allowed one "." character.

72.11.19 DRISO9660VersionNumber as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the ISO9660 version number for the object. Default value is 1.

72.11.20 DRJoliet as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the Joliet name/properties for the file.
Notes: Joliet names can be 64 precomposed unicode characters long, but are only allowed one "." character and many punctuation characters are illegal.

72.11.21 DRMacExtendedFinderFlags as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the item's extended Finder flags (MacOS only).

72.11.22 DRMacFileCreator as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: A binary string containing the OSType for the file creator (MacOS only).

72.11.23 DRMacFileType as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: A binary string containing the OSType for the file type (MacOS only).

72.11.24 DRMacFinderFlags as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the item's Finder flags (MacOS only). The invisible bit is ignored - use DRInvisible instead.

72.11.25 DRMacFinderHideExtension as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: A boolean indicating whether the extension should be hidden in the Finder or not. The default is

false and only applies to files.

72.11.26 DRMacIconLocation as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: A binary string containing a Point (not NSPoint) for the item's icon location in its parent folder (MacOS only).

72.11.27 DRMacScrollPosition as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Binary string containing a Point (not NSPoint) for the folder's scroll position (MacOS only).

72.11.28 DRMacWindowBounds as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Binary string containing a Rect (not NSRect) for the window bounds for a folder (MacOS only).

72.11.29 DRMacWindowView as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the folder's window view type (MacOS only).

72.11.30 DRPosixFileMode as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the item's POSIX file mode.

72.11.31 DRPosixGID as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the item's POSIX GID.

72.11.32 DRPosixUID as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the item's POSIX UID.

72.11.33 DRRecordingDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's recording date.

72.11.34 DRUDF as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the UDF name/properties for the file.

72.11.35 DRUDFApplicationIdentifierSuffix as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. Binary string of up to 8 bytes in length, for application use. The presence of this key requires the DRApplicationIdentifier key.

72.11.36 DRUDFExtendedFilePermissions as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number indicating the extended UDF file permissions of this file.

Bit 0: Change attributes for others (low order bit) Bit 1: Delete permissions for others Bit 2: Change attributes for group Bit 3: Delete permissions for group Bit 4: Change attributes for owner Bit 5: Delete permissions for owner Bit 6 & 7: Reserved If this key is not present, DRPosixFileMode will be used with the above bits being set to the corresponding write bit for owner, group, and others. If DRPosixFileMode is not present, the file mode from the file on disc will be used, again using the write bit for these permissions.

72.11.37 DRUDFInterchangeLevel as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. Number containing the volume interchange level. See the UDF specs for details.

72.11.38 DRUDFMaxInterchangeLevel as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. Number containing the maximum volume interchange level number. See the UDF specs for details.

72.11.39 DRUDFMaxVolumeSequenceNumber as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. Number containing the maximum volume sequence number. See the UDF specs for details.

72.11.40 DRUDFPrimaryVolumeDescriptorNumber as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. Number containing the primary volume sequence number. See the UDF specs for details.

72.11.41 DRUDFRealTimeFile as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number indicating whether the file is a UDF Real-Time file.

72.11.42 DRUDFVersion102 as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: This value is used in DRUDFWriteVersion.

72.11.43 DRUDFVersion150 as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: This value is used in DRUDFWriteVersion.

72.11.44 DRUDFVolumeSequenceNumber as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. Number containing the volume sequence number. See the UDF specs for details.

72.11.45 DRUDFVolumeSetIdentifier as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. The Volume Set Identifier for the UDF volume set. If this key is not present, DRVolumeSet will be used if present. The Volume Set Identifier is composed of the Volume Set Timestamp, the Implementation Use, and a the string contained in this property.

72.11.46 DRUDFVolumeSetImplementationUse as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. A binary string (8 bytes in length) for implementation use data. See the UDF specs for details.

72.11.47 DRUDFVolumeSetTimestamp as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. A date object for the volume set timestamp. See the UDF specs for details.

72.11.48 DRUDFWriteVersion as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. This property key defines the version for the UDF structures written to disk. Values are definde in UDF Version types.

72.11.49 effectiveFilesystemMask as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The effective filesystem mask set for the receiver.

72.11.50 isVirtual as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Indicates whether the receiver is real or virtual.
Notes:

True if the receiver is virtual and false if real.

72.11.51 mangledNameForFilesystem(filesystem as string) as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A single mangled filesystem-specific name for this fsobject.
Notes: Use DRISO9660LevelOne, DRISO9660, DRHFSPlus, DRUDF, DRJoliet, DRISO9660LevelTwo or

DRAllFilesystems for the filesystem parameter.

72.11.52 mangledNames as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns a dictionary containing all of the filesystem-specific names for the receiver, each one mangled for uniqueness.
Notes: The dictionary will return only the names which are indicated by the receiver's effective mask. If the receiver's effective mask is zero, an empty dictionary is returned.

72.11.53 parent as DRFolderMBS

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The parent object.

72.11.54 propertiesForFilesystem(filesystem as string, mergeWithOtherFilesystems as boolean) as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns all the filesystem properties set for the specified filesystem.
Notes: filesystem: The filesystem to look in.
merge: If true, also look for properties in the umbrella DRAllFilesystems .

Normally you would call this method with merge set to true since you are interested in the set of properties that will be used when writing the object to disc. But if you have a need to determine what properties are set just for a specific filesystem, then pass in false for merge. In this case only the specific filesystem is checked. So if filesystem is set to DRHFSPlus and merge is false then the properties dictionary contains the values set for the HFS+ filesytem only. If no properties have been directly set for HFS+ yet, then this properties dictionary will be empty.

72.11.55 propertyForKey(key as string, filesystem as string, mergeWithOtherFilesystems as boolean) as Variant

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns a file/folder property specified by key for the specified filesystem.
Notes: key: The property to return.

filesystem: The filesystem to look in.
merge: If true, also look for the property in the umbrella DRAllFilesystems .

Returs the value associated with the property.

Normally you would call this method with merge set to true since you are interested in the property that will be used when writing the object to disc. But if you have a need to determine what property is set just for a specific filesystem, then pass in false for merge. In this case only the specific filesystem is checked. So if DRHFSPlus is passed in for filesystem and merge is false then the property returned is the value set for the HFS+ filesytem only. If that property has not been directly set for HFS+ yet, then the returned value will be nil.

72.11.56 setProperties(Value as dictionary, filesystem as string)

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Sets the value of all the receiver's properties specified by the keys in properties for the specific filesystem.
Notes: properties: The value of the property.
filesystem: The filesystem to set the property in.

The properties are set only in the filesystem dictionary specified by filesystem. DRAllFilesystems may be specified as the filesystem in which case he umbrella property affecting all filesystems at once will be set. Setting properties for DRAllFilesystems does not preclude setting a filesystem specific property.

72.11.57 setProperty(Value as Variant, key as string, filesystem as string)

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Sets the value of the receiver's property specified by key for the specific filesystem.
Notes: property: The value of the property.
key: The property key.
filesystem: The filesystem to set the property in.

The property is set only in the filesystem dictionary specified by filesystem. DRAllFilesystems may be specified as the filesystem in which case the umbrella property affecting all filesystems at once will be set. Setting a property for DRAllFilesystems does not preclude setting a filesystem specific property.

72.11.58 sourcePath as string

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The source path.

72.11.59 Properties

72.11.60 baseName as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the base name for the receiver.
Notes: The base name is the name from which any necessary filesystem-specific names are automatically generated.

Because the content creation API is able to generate multiple filesystems which require multiple varied naming conventions, a sensible system for naming is required. Thus each file has a "base name" which corresponds to its default name in any filesystem.

Whenever possible, the "base name" will be used in the generated filesystem without modification. If the name cannot be used as-is (if, for example, it contains illegal characters, exceeds the length requirements, doesn't meet the required format, or a name collision is detected) then an acceptable name that meets the filesystem's criteria will be generated automatically from the base name.

The default base name for a real file or folder is the actual on-disk name of the item.
(Read and Write computed property)

72.11.61 explicitFilesystemMask as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The explicit filesystem mask set for the receiver.
Notes: (Read and Write computed property)

72.11.62 specificNameForFilesystem(filesystem as string) as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A single filesystem-specific name for this fsobject.
Notes: Use DRISO9660LevelOne, DRISO9660, DRHFSPlus, DRUDF, DRJoliet, DRISO9660LevelTwo or

DRAllFilesystems for the filesystem parameter.
(Read and Write computed property)

72.11.63 specificNames as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The names used for the receiver in the different filesystems all at once.
Notes: An Dictionary of filesystem keys with corresponding name strings as their values for each specific filesystem name that should be set.

Every effort will be made to use the names passed in. However, if a name is illegal, it will be modified to fit the rules for that filesystem's names. Because of this, you should always call specificNames after setSpecificNames: to ensure that you are always displaying the most current names to the user.
(Read and Write computed property)

72.11.64 Constants

Constants

Constant	Value	Description
DRFilesystemInclusionMaskHFSPlus	8	The value which indicates the object should be included in the HFS+ filesy
DRFilesystemInclusionMaskISO9660	1	The value which indicates the object should be included in the ISO filesytem.
DRFilesystemInclusionMaskJoliet	2	The value which indicates the object should be included in the Joliet filesy
DRFilesystemInclusionMaskUDF	4	The value which indicates the object should be included in the UDF filesy

72.12 class DRMSFMBS

72.12.1 class DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Minutes/Seconds/Frames handling.
Example:

```
// convert between CD frames and minutes:seconds:frames (75 frames per second)
Var length As DRMSFMBS = DRMSFMBS.msfWithFrames(75 * 60 * 74) // 74 minutes
Var start As DRMSFMBS = DRMSFMBS.msfWithString("02:30:00")

MessageBox "74 minutes: " + length.description + EndOfLine + _
"Start at " + start.description + " = " + start.frames.ToString + " frames, " + start.seconds.ToString + "
seconds"
```

Notes: On CDs, minutes/seconds/frames are used to identify positioning on a disc (which is most useful on an audio disc), but applies to any position on a disc no matter what type of data is present.

A frame is equivalent to a sector or block in normal disk parlance. 75 frames make up one second, so a 2 second pause (typical pregap size) is 150 frames.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

72.12.2 Methods

72.12.3 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The dummy constructor.
See also:

- 72.12.4 Constructor(frames as Integer) 12554
- 72.12.5 Constructor(s as string) 12555

72.12.4 Constructor(frames as Integer)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an msf object whose length is frames.
See also:

- 72.12.3 Constructor 12554
- 72.12.5 Constructor(s as string) 12555

72.12.5 Constructor(s as string)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an msf object initialized to the value represented by string
See also:

- 72.12.3 Constructor 12554
- 72.12.4 Constructor(frames as Integer) 12554

72.12.6 description as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns a textual representation.

72.12.7 descriptionWithFormat(format as string) as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns a textual representation of the receiver.
Notes: The format string is very similar to
A printf-style format string with %-escaped formatting characters.

%%	A "%" character
%m	Minutes as a decimal number
%s	Seconds as a decimal number
%f	Frames as a decimal number

In addition to these formatting characters an optional length specifier can come between then % and the formatting character. This length specifier will force the field in question to be at least that wide. For example a format specifier of "%02m:%02s" will cause a DRMSF object representing 3 minutes 9 seconds to be formatted as "03:09".

A formatter is aware of and respects rounding. If a bit of the msf is no zero, but the format does not display that value, the next higher value will be increased by one to reflect that. Extending our example above, an DRMSF with a value of 3 minutes, 9 seconds, 15 frames using a format specfier of "%02m:%02s", will be formatted as "03:10" since the 15 frames rounds up the seconds to the next value

Returns a string containing a textual representation of the object utilizing the specified format.

72.12.8 frames as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the number of frames represented by the receiver.
Notes: This method differs from sectors in that it returns to the caller the number of frames remaining in the current second. For example an DRMSF value of 5:30:72 will return 72 from frames.

72.12.9 isEqualToMSF(value as DRMSFMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Compares on emsf to another.
Notes: True if the two object are equal, false otherwise.

72.12.10 minutes as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the number of minutes represented by the receiver.
Notes: If the receiver represents a non integral number of minutes, only the whole minute value is returned. For example an DRMSF value of 5:30:72 will return 5 from a minutes.

72.12.11 msf as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an msf object with no length/time.
Notes: Returns nil on any error.

72.12.12 msfByAdding(value as DRMSFMBS) as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Adds an msf to the receiver.
Notes: Returns nil on any error.

72.12.13 msfBySubtracting(value as DRMSFMBS) as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Subtracts an msf to the receiver.
Notes: Returns nil on any error.

72.12.14 msfWithFrames(frames as Integer) as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an msf object whose length is frames.
Notes: Returns nil on any error.

72.12.15 msfWithString(s as string) as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an msf object initialized to the value represented by string.
Notes: Returns nil on any error.

72.12.16 seconds as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the number of seconds represented by the receiver.
Notes: If the receiver represents a non integral number of seconds, only the whole second value is returned. For example an DRMSF value of 5:30:72 will return 30 from seconds.

72.12.17 sectors as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the total number of frames/sectors represented by the receiver.
Notes: This method differs from frames in that it returns to the caller the total number of frames/sectors represented by the object.
For example an DRMSF value of 5:30:72 will return 24822 from sectors.

72.13 class DRNotificationCenterMBS

72.13.1 class DRNotificationCenterMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A class for notifications.
Notes: All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

72.13.2 Methods

72.13.3 addObserver(observer as NSNotificationObserverMBS, name as string="", theObject as Variant=nil)

MBS MacBase Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Adds an entry to the receiver's dispatch table with an observer and optional criteria: notification name and sender.
Notes: observer: Object registering as an observer. This value must not be nil.
name: The name of the notification for which to register the observer; that is, only notifications with this name are delivered to the observer. If you pass nil, the notification center doesn't use a notification's name to decide whether to deliver it to the observer.
theObject: The object whose notifications the observer wants to receive; that is, only notifications sent by this sender are delivered to the observer. If you pass nil, the notification center doesn't use a notification's sender to decide whether to deliver it to the observer.

72.13.4 Constructor

MBS MacBase Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The constructor to create a new instance of notification center pointing to the default notification center.
Notes: A DRNotificationCenter object (or simply, notification center) is essentially a notification dispatch table. It notifies all observers of notifications meeting specific criteria. This information is encapsulated in NSNotification objects, also known as notifications. Client objects register themselves with the notification center as observers of specific notifications posted by DiscRecording. When an event occurs, DiscRecording posts an appropriate notification to the notification center. The notification center dispatches a message to each registered observer, passing the notification as the sole argument.

There are two main differences between a DRNotificationCenter and the NSNotificationCenter from Foundation. First is that only Disc Recording posts notifications received through this mechanism. You use this to

obtain device plug/unplug events, burn status, etc. Second, there can be multple notification centers active at once. Each run loop of your application will have it's own notification center and notifications from that notification center will be posted to the runloop it was created on.

72.13.5 removeObserver(observer as NSNotificationObserverMBS, name as string, theObject as Variant=nil)

MBS MacBase Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Removes matching entries from the receiver's dispatch table.
Notes: notificationObserver: Observer to remove from the dispatch table. Specify an observer to remove only entries for this observer. Must not be nil, or message will have no effect.
notificationName: Name of the notification to remove from dispatch table. Specify a notification name to remove only entries that specify this notification name. When nil, the receiver does not use notification names as criteria for removal.
notificationSender: Sender to remove from the dispatch table. Specify a notification sender to remove only entries that specify this sender. When nil, the receiver does not use notification senders as criteria for removal.

Be sure to invoke this method before the observer object or any object specified in addObserver is deallocated.

72.14 class DRSetupPanelMBS

72.14.1 class DRSetupPanelMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Base class for the DiscRecordingUI setup panels.
Notes: Provides a base framework for handling device selection, media ejection and confirming or cancelling the panel.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the NSPanelMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS REALbasic Plugins, version 10.4pr7

72.14.2 Methods

72.14.3 cancel

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's cancel button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

72.14.4 close

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's close button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

72.14.5 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

72.14.6 eject

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's eject button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

72.14.7 ok

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's default button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

72.14.8 open

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's open button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

72.14.9 runSetupPanel as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Displays the panel and begins its event loop.
Notes: Returns NSOKButton (if the user clicks the default button) or NSCancelButton (if the user clicks the Cancel button).

72.14.10 Events

72.14.11 determineBestDevice(deviceA as DRDeviceMBS, deviceB as DRDeviceMBS) as DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Called to let you decide which device is better to use.
Notes: Default returns device A.

72.14.12 DeviceContainsSuitableMedia(device as DRDeviceMBS, byref prompt as string) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: This delegate method allows the delegate to determine if the media inserted in the device is suitable for whatever operation is to be performed.
Notes:

device:	The device that contains the media being asked about.
prompt:	Pass back a string object describing the media state.

Return false to disable the default button.

72.14.13 DeviceCouldBeTarget(device as DRDeviceMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Allows the delegate to determine if device can be used as a target.
Notes: This method is used to limit the menu to only those devices that you want to appear. For example, a DVD burning application might use this to limit the menu to only devices that are capable of writing DVD-Rs.

device: The candidate device.
Returns true if the device is acceptable, false if not.

72.14.14 DeviceSelectionChanged(device as DRDeviceMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Sent by the default notification center when the device selection in the panel has changed.

72.14.15 SetupPanelShouldHandleMediaReservations as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: This event allows the delegate to control how media reservations are handled.
Notes: Return false to indicate the delegate will handle media reservations. Return true to indicate the setupPanel should handle media reservations itself.

72.14.16 Constants

Constants

Constant	Value	Description
NSCancelButton	0	The value runSetupPanel returns if the Cancel button is clicked.
NSOKButton	1	The value runSetupPanel returns if the OK button is clicked.

72.15 class DRTrackMBS

72.15.1 class DRTrackMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The DRTrack class represents a track on the burned disc.
Example:

```
Var track as DRTrackMBS
Var bsp as DRBurnSetupPanelMBS
Var bpp as DRBurnProgressPanelMBS

// we need a track
track=CreateTrack

if track<>nil then
bsp=new DRBurnSetupPanelMBS

// set a few options
bsp.setCanSelectAppendableMedia true
bsp.setCanSelectTestBurn true

if bsp.runSetupPanel=bsp.NSOKButton then
bpp=new DRBurnProgressPanelMBS

// And start off the burn itself. This will put up the progress dialog
// and do all the nice pretty things that a happy app does.
bpp.beginProgressPanelForBurn bsp.burnObject, track

else
MessageBox "You pressed cancel."
end if
end if
```

Notes: A DRTrack provides data to the for the burn and contains a description of the track on disc (length, block type, data format, etc). Data is provided for the burn in a real-time thread. It is up to the track to provide this data in a timely manner, otherwise a burn underrun can occur and ruin a disc.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

72.15.2 Methods

72.15.3 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Dummy constructor.

72.15.4 DRAbstractFile as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: DRFileMBS object pointing to the abstract file for ISO and Joliet volumes. The file must be in the root directory.

72.15.5 DRApplicationIdentifier as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the application identifier for ISO, Joliet and UDF volumes.

72.15.6 DRAudioFourChannelKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For CD-DA audio tracks only. This key points to a boolean value indicating whether the track data has four channels, as opposed to the two channels of normal stereo. If this key is not present, the engine will use a default value of false and standard two-channel stereo is assumed.

Note that while four-channel is technically allowed in the Red Book, it never caught on and is probably being replaced by SACD, so you probably shouldn't attempt to use it.

On the media, this key corresponds to bit 3 of the control field in sub-channel Q.

72.15.7 DRAudioPreEmphasisKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For CD-DA audio tracks only. This key points to a boolean value indicating whether the track includes pre-emphasis of 50/15us. If this key is not present, the engine will use a default value of false. On the media, this key corresponds to bit 0 of the control field in sub-channel Q.

72.15.8 DRBibliographicFile as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: DRFile pointing to the bibliographic file for ISO and Joliet volumes. The file must be in the root directory.

72.15.9 DRBlockSize as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number indicating the block size of the track. Currently always 2048. Do not change.

72.15.10 DRBlockSizeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the size in bytes of each track block. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

72.15.11 DRBlockTypeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the type of each track block. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

72.15.12 DRCopyrightFile as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: DRFileMBS pointing to the copyright file for ISO and Joliet volumes. The file must be in the root directory.

72.15.13 DRDataFormKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the data form of each block in the track. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

72.15.14 DRDataPreparer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the data preparer for ISO and Joliet volumes.

72.15.15 DRDefaultDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Date containing the default date to use for any unspecified dates in the filesystem. The current date and time is used if unspecified.

72.15.16 DRDVDCopyrightInfoKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For DVD tracks only. A binary string containing the DVD copyright info structure sent through the SEND DVD STRUCTURE command. The contents of this will be sent directly to the drive.

72.15.17 DRDVDTimestampKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For DVD tracks only. Binary string containing the DVD timestamp structure sent through the SEND DVD STRUCTURE command. The contents of this will be sent directly to the drive.

72.15.18 DRFreeBlocksKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the length, in blocks, which is still available in a writable track.

72.15.19 DRIndexPointsKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For CD tracks only. This key points to an NSArray of NSNumbers, indicating the index points inside the track. Each index point is specified as a number of blocks (frames) relative to the start of the track. There are 75 blocks in one second of CD audio. No more than 98 index points may be specified for a track.

Not all drives are capable of writing index points, and not all consumer CD players report or use them. If this key is present in any track and the drive cannot write index points, the burn will fail with kDRDeviceCantWriteIndexPointsErr.

72.15.20 DRISOLevel as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the ISO level of the ISO-9660 filesystem on the track. Currently should be 1 or 2.

72.15.21 DRISOMacExtensions as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Boolean indicating whether the track should have Mac extensions.

72.15.22 DRISORockRidgeExtensions as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Boolean indicating whether the track should have RockRidge (POSIX) extensions.

72.15.23 DRMaxBurnSpeedKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the maximum burn speed at which data can be produced. The speed is represented in KB/s (1 KB = 1000 bytes). This key can only be used to limit the speed at which the burn runs.

72.15.24 DRNextWritableAddressKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the LBA of the next writable address in the track. This key is not present in closed tracks.

72.15.25 DRPreGapIsRequiredKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For CD tracks only. Number indicating whether the pregap listed for the track is required. If this

key is not present, the track will behave as though the key were false.

If this key's value is set to true and the device does not support the exact pregap length, the burn will fail with a return value of kDRDevicePregapLengthNotAvailableErr .

If this key's value is set to true and the device does not support any of the suggested pregap length, the engine will choose an alternate pregap length.

72.15.26 DRPreGapLengthKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For CD tracks only. Number containing the length of silence or data at the beginning of the track. This defaults to 2 seconds of silence. If this key is present, the track producer will be asked for the pregap data first. If the producer implements the proper selector, then it's the responsibility of the producer to provide data for the pregap, otherwise that length of silence will be produced by Disc Recording.

72.15.27 DRPublisher as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the publisher for ISO and Joliet volumes.

72.15.28 DRSCMSCopyrightFree as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: One possible value for the DRSerialCopyManagementStateKey. Indicates that the track has no copying restrictions. Copies of this track should also be copyright free.

72.15.29 DRSCMSCopyrightProtectedCopy as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: One possible value for the DRSerialCopyManagementStateKey. Indicates that the track is a first-generation copy of an original that was subject to copy protection. No further digital copying should be

allowed.

72.15.30 DRSCMSCopyrightProtectedOriginal as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: One possible value for the DRSerialCopyManagementStateKey. Indicates that the track is an original subject to copyright protection. Digital copying of this track should be allowed, but copies should be marked with SCMS.

72.15.31 DRSerialCopyManagementStateKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For CD tracks only. This key points to a string value indicating the SCMS state of the track. If this key is not present, no SCMS data is written.

Not all drives are capable of writing SCMS. If this key is present in any track and the drive cannot write SCMS, the burn will fail with kDRDeviceCantWriteSCMSErr.

72.15.32 DRSessionFormatKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the session format of the track. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

72.15.33 DRSessionNumberKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the physical session number of a track.

72.15.34 DRSubchannelDataFormKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: The property whose value is the data mode of the subchannel data sent to the drive. If this key is not present, the track will default to a value of DRSubchannelDataFormNone and no subchannel information will be requested from the producer.

Subchannel data is returned from the producer in the same production method that produces normal user data. Normally a producer returns user data in chunks of DRBlockSizeKey size. When subchannel data is also produced, the producer is expected to return user data of DRBlockSizeKey in length with an additional 96 bytes of subchannel data. Depending on the data form specified in this key, the format of this 96 bytes is either in raw or pack format. When subchannel data is requested from the producer, the DRFlagSubchannelDataRequested flag is set in the flags parameter of producePreGapForTrack or produceDataForTrack and blockSize is increased by 96 bytes.

72.15.35 DRSubchannelDataFormNone as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: A value for DRSubchannelDataFormKey indicating that the subchannel data will not be provided by the producer.

72.15.36 DRSubchannelDataFormPack as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: A value for DRSubchannelDataFormKey indicating that the producer will be asked to provide pack format subchannel data for the track. If this form is selected, the drive will perform P and Q parity calculations on each pack and interleave the packs before writing them to disc. This corresponds to a subchannel data form of 0xC0.

72.15.37 DRSubchannelDataFormRaw as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: A value for DRSubchannelDataFormKey indicating that the producer will be asked to provide raw format subchannel data for the track. If this form is selected, the producer must have performed P and Q parity calculations for each pack and done proper interleaving of the subchannel data. The drive will fill in the P-Q subchannel information and write the R-W subchannel data as is to the disc. This corresponds to

a subchannel data form of &h40.

72.15.38 DRSuppressMacSpecificFiles as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Boolean indicating whether the track should suppress Mac-specific files from non-HFS filesystems.

72.15.39 DRSystemIdentifier as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the system identifier for ISO and Joliet volumes.

72.15.40 DRTrackIsEmptyKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing a boolean value and indicates whether the track is empty.

72.15.41 DRTrackISRCKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For CD-DA audio tracks only. This key points to an memoryblock containing exactly 12 bytes, which will be written to the disc as the International Standard Recording Code (ISRC). If this key is not present, no ISRC is written.

The use of this value should conform to the specifications of the IFPI. More details:
http://www.ifpi.org/isrc/

Not all drives are capable of the write modes necessary to write the ISRC. If this key is present in any track and the drive cannot write the ISRC, the burn will fail with kDRDeviceCantWriteISRCErr.

72.15.42 DRTrackLengthKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number representing the length of the track.

72.15.43 DRTrackModeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the track mode of the track. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

72.15.44 DRTrackNumberKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the physical track number of a track.

72.15.45 DRTrackPacketSizeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the number of blocks per packet for the disc. It will only be present if the disc contains fixed packets. This key will contain 16 for DVD media, and typically contains either 16 or 32 for CD media.

72.15.46 DRTrackPacketTypeFixed as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: If this is the value of the DRTrackPacketTypeKey then the disc is writen with fixed sized packets. When this value is present the DRPacketSizeKey will also be present.

72.15.47 DRTrackPacketTypeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the kind of packets being written.

72.15.48 DRTrackPacketTypeVariable as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: If this is the value of the DRTrackPacketTypeKey then the disc is written with sequential variable sized packets. The presence of this value indicates the lack of the DRPacketSizeKey.

72.15.49 DRTrackStartAddressKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the LBA of the start address for the track.

72.15.50 DRTrackTypeClosed as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: If this is the value of the DRTrackTypeKey then the track has been written and is closed.

72.15.51 DRTrackTypeIncomplete as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: If this is the value of the DRTrackTypeKey then the track is not invisible or reserved and is available for writing.

72.15.52 DRTrackTypeInvisible as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: If this is the value of the DRTrackTypeKey then the track is invisible and available to writing. If

it is packet written and not closed, DRPacketTypeKey will be present, along with DRTrackPacketType and DRTrackPacketSize keys.

72.15.53 DRTrackTypeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the type of track. Possible values are: DRTrackTypeInvisible , DRTrackTypeIncomplete , DRTrackTypeReserved or DRTrackTypeClosed.

72.15.54 DRTrackTypeReserved as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: If this is the value of the DRTrackTypeKey then the track is reserved for writing.

72.15.55 DRVerificationTypeChecksum as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the VerificationType.
Notes: The engine will verify the track data with an internally calculated checksum.

72.15.56 DRVerificationTypeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the type of verification to be performed. If this is not present, the track will not be verified.

72.15.57 DRVerificationTypeNone as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the VerificationType property.
Notes: No verification is desired, so verification will be skipped.

72.15.58 DRVerificationTypeProduceAgain as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the VerificationType property.
Notes: The engine will simply begin another production cycle and start calling produceDataForTrack again.

72.15.59 DRVerificationTypeReceiveData as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the VerificationType property.
Notes: The engine will begin reading data from the disc and calling verifyDataForTrack.

72.15.60 DRVolumeCheckedDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Date containing the volume-checked date for HFS+ volumes. DRDefaultDate is used if unspecified.

72.15.61 DRVolumeCreationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Date containing the volume creation date. DRDefaultDate is used if unspecified.

72.15.62 DRVolumeEffectiveDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Date containing the date and time at which the volume is effective for ISO and Joliet volumes.

72.15.63 DRVolumeExpirationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Date containing the volume expiration date for ISO and Joliet volumes.

72.15.64 DRVolumeModificationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Date containing the volume modification date. DRDefaultDate is used if unspecified.

72.15.65 DRVolumeSet as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the volume set name for ISO and Joliet volumes.

72.15.66 estimateLength as UInt64

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Asks the track producer for a size estimate.
Notes: This method calls the track producer to ask it to estimate the size needed for its data.

For some types of track, this call may be very expensive. For example, a DRFilesystemTrack may need to iterate folders on disk to provide an accurate estimate, which (if a large number of files and folders are involved) can cause this call to take 30 seconds or more. Since your main thread should not be allowed to block for this long, you may wish to call this function on a separate thread.

Requires Mac OS X 10.3.

72.15.67 testProductionSpeedForInterval(seconds as Double) as Double

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Tests the production speed for a specified interval.
Notes: Runs a fake "production" cycle, repeatedly asking the receiver for data by calling it's producer's produceDataIntoBuffer for the specified time interval.

Use this function to verify that the production code can produce data fast enough to satisfy the data throughput requirements of the burn.

Returns the calculated maximum speed the at which the receiver can produce data. This value should be used when setting up a burn to limit the burn speed

72.15.68 testProductionSpeedForLength(length as Integer) as Double

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Tests the production speed for a specified byte count.
Notes: Runs a fake "production" cycle, repeatedly asking the receiver for data by calling it's producer's produceDataIntoBuffer:length:atAddress:blockSize:ioFlags: until the specified length number of bytes have been produced.

Use this function to verify that the production code can produce data fast enough to satisfy the data throughput requirements of the burn.

Returns the calculated maximum speed the at which the receiver can produce data. This value should be used when setting up a burn to limit the burn speed

Length: length of test in seconds.

72.15.69 trackForAudioFile(path as folderitem) as DRTrackMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an audio track capable of burning RedBook CD audio from a file.
Example:

```
Var f as FolderItem
f=SelectFolder
if f<>nil then
// Create tracks for the audio files
Var tracks(-1) as DRTrackMBS
Var c as Integer=f.Count
for i as Integer=1 to c
Var g as FolderItem=f.Item(i)
if g<>nil and g.visible then
Var track as DRTrackMBS=DRTrackMBS.trackForAudioFile(g)
if track<>nil then
tracks.Add track
end if
```

```
end if
next

// display gui
if tracks.LastIndex>=0 then
Var bsp as DRBurnSetupPanelMBS=new DRBurnSetupPanelMBS // you may want to use your own subclass to catch events
if bsp.runSetupPanel=bsp.NSOKButton then
Var bpp as new DRBurnProgressPanelMBS // you may want to use your own subclass to catch events
bpp.beginProgressPanelForBurn(bsp.burnObject, tracks)
end if
end if
end if
```

Notes: This function creates a track object configured and primed to output RedBook audio CD data. It accepts any file readable by QuickTime and extracts the audio data (if any) from the file, translating that into the correct format for output to the disc.

Returns nil on any error. Requires Mac OS X 10.3.
See also:

- 72.15.70 trackForAudioFile(path as string) as DRTrackMBS 12581

72.15.70 trackForAudioFile(path as string) as DRTrackMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an audio track capable of burning RedBook CD audio from a file.
Notes: This function creates a track object configured and primed to output RedBook audio CD data. It accepts any file readable by QuickTime and extracts the audio data (if any) from the file, translating that into the correct format for output to the disc.

Returns nil on any error. Requires Mac OS X 10.3.
See also:

- 72.15.69 trackForAudioFile(path as folderitem) as DRTrackMBS 12580

72.15.71 trackForRootFolder(folder as DRFolderMBS) as DRTrackMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a filesystem track capable of burning a folder.
Notes: Returns a track which contains the given folder as root.
See also:

• 72.15.72 trackForRootFolder(folder as folderitem) as DRTrackMBS 12582

72.15.72 trackForRootFolder(folder as folderitem) as DRTrackMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a filesystem track capable of burning a folder.
Notes: Returns a track which contains the given folder as root.
See also:

• 72.15.71 trackForRootFolder(folder as DRFolderMBS) as DRTrackMBS 12581

72.15.73 Properties

72.15.74 BlockSize as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The size in bytes of each track block.
Notes: (Read and Write computed property)

72.15.75 BlockType as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The type of each track block.
Notes: (Read and Write computed property)

72.15.76 DataForm as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The data form of each block in the track.
Notes: (Read and Write computed property)

72.15.77 length as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the length of the track data.
Notes: The length returned does not include the length of the pregap. Only the length of the track data

itself is returned.
(Read and Write computed property)

72.15.78 MaxBurnSpeed as Double

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: A number containing the maximum burn speed at which data can be produced.
Notes: The speed is represented in KB/s (1 KB = 1000 bytes). This value can only be used to limit the speed at which the burn runs.
(Read and Write computed property)

72.15.79 preGap as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The length of the pre gap.
Notes: (Read and Write computed property)

72.15.80 PreGapIsRequired as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: A boolean indicating whether the pregap listed for the track is required.
Notes: For CD tracks only.
If this value is not set, the track will behave as though the value were false.

If this value is set to true and the device does not support the exact pregap length, the burn will fail with a return value of kDRDevicePregapLengthNotAvailableErr.

If this value is set to true and the device does not support any of the suggested pregap length, the engine will choose an alternate pregap length.
(Read and Write computed property)

72.15.81 PreGapLength as Double

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: A number containing the length of silence or data at the beginning of the track.
Notes: For CD tracks only.

This defaults to 2 seconds of silence. If this value is set, the track producer will be asked for the pregap data first.
If the producer implements the proper event, then it's the responsibility of the producer to provide data for the pregap, otherwise that length of silence will be produced by Disc Recording.
(Read and Write computed property)

72.15.82 properties as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The properties dictionary of the track
Notes: (Read and Write computed property)

72.15.83 SessionFormat as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The session format of the track.
Notes: (Read and Write computed property)

72.15.84 TrackISRC as memoryblock

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: The property for the tracks ISRC data.
Notes: For CD-DA audio tracks only. This key points to a memoryblock containing exactly 12 bytes, which will be written to the disc as the International Standard Recording Code (ISRC). If this key is not present, no ISRC is written.

The use of this value should conform to the specifications of the IFPI. See http://www.ifpi.org/isrc/ for more details on the ISRC standard.

Not all drives are capable of the write modes necessary to write the ISRC.
If this key is present in any track and the drive cannot write the ISRC, the burn will fail with kDRDeviceCantWriteISRCErr.
(Read and Write computed property)

72.15.85 TrackMode as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The track mode of the track.
Notes: (Read and Write computed property)

72.15.86 VerificationType as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The type of verification requested.
Notes: Value should be DRVerificationTypeReceiveData, DRVerificationTypeProduceAgain, DRVerificationTypeNone or DRVerificationTypeChecksum.
(Read and Write computed property)

72.15.87 Events

72.15.88 cleanupTrackAfterBurn

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Cleans up the track after the burn completes.
Notes: Called after burning is complete. Typically you'll clean up what was setup is prepareTrackForBurn. Since this method is called after the laser is turned off and the burn is finished, this method can perform time consuming tasks.

True to indicate that the burn should proceed and false to indicate a failure occurred.

72.15.89 cleanupTrackAfterVerification as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Cleans up the track after the verification completes.
Notes: Once the verification phase is complete, this method is called. The class implementing the method has a chance to do anything up to and including failing the verification.

Return true to indicate success, false to indicate failure.

72.15.90 estimateLengthOfTrack as uint64

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Estimates the size of the track to be burned.
Notes: This message is sent outside of a burn cycle in response to a -estimateLength message sent to the track.

Returns the number of blocks of data that the track will occupy. The estimate should be reasonably accurate, and no smaller than the actual size that will be needed.

Only on Mac OS X 10.3 and newer.

72.15.91 prepareTrack(burn as DRBurnMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Prepares the track for burning.
Notes: Called before any burning starts. Do any sort of setup that needs to be performed (such as opening files). This method can calculate and update the exact track length that will be burned.

Since this method is called before the laser is turned on, this method can perform time consuming tasks.

burn: The burn object controlling the burn

Return true to indicate that the burn should proceed and false to indicate a failure occurred.

72.15.92 prepareTrackForVerification as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Prepare the track to be verified.
Notes: This method is called after the burn complets writing data to disc and before verification phase starts. Now would be a good time to prepare to produce data again by rewinding to the start of files, etc.

Return true to indicate that the verification should proceed and false to indicate a failure occurred.

72.15.93 produceDataForTrack(buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32, byref flags as uint32) as uint32

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Produces the track data.

Notes: This method is called many times over the course of a burn to obtain data for the track. The buffer passed in will be a multiple of blockSize (bufferLength == blockSize * N, where N >1) and should be filled as full as possible with data. address is the sector address on the disc from the start of the track that is the buffer will be written to.

Since while burning, keeping the drive's buffer full is of utmost importance, you should not perform lengthy operations or block for data in this method. This method should return the number of bytes actually in the buffer or 0 to indicate that there was an error producing the data..

buffer: The buffer to place data into
bufferLength: The length of buffer
address: The on-disc address of where data will be written
blockSize: the size of each block on the disc. It's best to return a multiple of this size.
flags: Some flags. Not yet used.

Return the number of bytes produced.

72.15.94 producePreGapForTrack(buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32, byref flags as uint32) as uint32

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Produces the pregap data.
Notes: This method is called to obtain data for the track's pregap. If the DRPreGapLengthKey key is present in the track properties, the track producer will be asked for the pregap data first. If the producer implements this selector, then it's the responsibility of the producer to provide data for the pregap, otherwise that length of silence will be produced by DiscRecording.

The buffer passed in will be a multiple of blockSize (bufferLength = blockSize * N, where N >1) and should be filled as full as possible with data. address is the sector address on the disc from the start of the track that is the buffer will be written to.

Since while burning, keeping the drive's buffer full is of utmost importance, you should not perform lengthy operations or block for data in this method. This method should return the number of bytes actually in the buffer or 0 to indicate that there was an error producing the data..

buffer: The buffer to place data into
bufferLength: The length of buffer
address: The on-disc address of where data will be written
blockSize the size of each block on the disc. It's best to return a multiple of this size.
flags: Some flags (not used).

Return the number of bytes produced.

72.15.95 verifyDataForTrack(buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32, byref flags as uint32) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Cleans up the track after the burn completes.
Notes: If the class implementing this method asks for a verification type of DRVerificationTypeReceiveData, then a series of calls to this method will start. It's up to the class to reproduce the data again and compare it to the data passed in buffer. The buffer passed in will be a multiple of blockSize (bufferLength == blockSize * N, where N >1). address is the sector address on the disc from the start of the track that is the buffer was written to.

buffer: The data read in from the track to compare with
bufferLength: The length of buffer
address: The on-disc address of where data will was read from.
blockSize: the size of each block on the disc. It's best to return a multiple of this size.
flags: Some flags. Not used.

Return true to indicate that the data compared successfully and false to indicate a failure occurred.

72.15.96 verifyPreGapForTrack(buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32, byref flags as uint32) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Checks the integrity track pregap after a burn.
Notes: If the class implementing this method asks for a verification type of DRVerificationTypeReceiveData, then a series of calls to this method will start. It's up to the class to reproduce the pregap again and compare it to the data passed in buffer. The buffer passed in will be a multiple of blockSize (bufferLength == blockSize * N, where N >1). address is the sector address on the disc from the start of the track that is the buffer was written to.

buffer: The data read in from the track to compare with
bufferLength: The length of buffer
address: The on-disc address of where data will was read from.
blockSize: the size of each block on the disc. It's best to return a multiple of this size.
flags: Some flags. (not used)

Return true to indicate that the data compared successfully and false to indicate a failure occurred.

72.15.97 Constants

Constants

Constant	Value	Description
DRFlagSubchannelDataRequested	2	A flag passed to producePreGapForTrack or produceDataForTrack. Indicates that the blockSize passed in includes room for subchannel data. Data producers should check this flag and perform subchannel data productio in addition to user fata production. Each block requested from the produc in this case will be formatted as [user data (as specified in track properties) [subchannel data(96 bytes)] . For example an audio producer callback should repeatedly produce 2352 byt of audio data into bytes 0-2351 of the block and an additional 96 bytes subchannel data into bytes 2352-2447.
kDRBlockSizeAudio	2352	One of the block size constants. Audio data.
kDRBlockSizeDVDData	2048	One of the block size constants. DVD data.
kDRBlockSizeMode1Data	2048	One of the block size constants. Mode 1 data.
kDRBlockSizeMode2Data	2332	One of the block size constants. Mode 2 data. Photo CD and CD-i use this.
kDRBlockSizeMode2Form1Data	2048	One of the block size constants. Mode 2 Form 1 data.
kDRBlockSizeMode2Form2Data	2324	One of the block size constants. Mode 2 Form 2 data.
kDRBlockTypeAudio	0	One of the block type constants. Audio data.
kDRBlockTypeDVDData	8	One of the block type constants. DVD data.
kDRBlockTypeMode1Data	8	One of the block type constants. Mode 1 data.
kDRBlockTypeMode2Data	13	One of the block type constants. Mode 2 data. Photo CD and CD-i use this.
kDRBlockTypeMode2Form1Data	10	One of the block type constants. Mode 2 Form 1 data.
kDRBlockTypeMode2Form2Data	12	One of the block type constants. Mode 2 Form 2 data.
kDRDataFormAudio	0	One of the data form constants. Audio data.
kDRDataFormDVDData	16	One of the data form constants. DVD data.
kDRDataFormMode1Data	16	One of the data form constants. Mode 1 data.
kDRDataFormMode2Data	32	One of the data form constants. Mode 2 data. Photo CD and CD-i use this.
kDRDataFormMode2Form1Data	32	One of the data form constants. Mode 2 Form 1 data.
kDRDataFormMode2Form2Data	32	One of the data form constants. Mode 2 Form 2 data.
kDRSessionFormatAudio	0	One of the constants for the session format. Audio data.
kDRSessionFormatCDI	16	One of the constants for the session format. CD-I disc.
kDRSessionFormatCDXA	32	One of the constants for the session format. CD-ROM XA disc.
kDRSessionFormatDVDData	0	One of the constants for the session format. DVD data.
kDRSessionFormatMode1Data	0	One of the constants for the session format. Mode 1 data.
kDRTrackMode1Data	4	One of the track mode constants. Mode 1 data.
kDRTrackMode2Data	4	One of the track mode constants.

72.16 class WindowsBurnMBS

72.16.1 class WindowsBurnMBS

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Exposes methods that determine whether a system has hardware for writing to CD, the drive letter of a CD writer device, and programmatically initiate a CD writing session.

72.16.2 Methods

72.16.3 CDBurn

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Instructs data to be copied from the staging area to a writable CD.
Notes: The staging area has a default location of %userprofile%\Local Settings\Application Data\Microsoft\CD Burning. Its actual path can be retrieved through WindowsBurnAreaFolderMBS.

This method returns when the CD is done or thre user cancelled.
See also:

- 72.16.4 CDBurn(hostwindow as DesktopWindow) 12591
- 72.16.5 CDBurn(hostwindow as window) 12592

72.16.4 CDBurn(hostwindow as DesktopWindow)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Instructs data to be copied from the staging area to a writable CD.
Notes: Hostwindow: parent window of the user interface (UI)

The staging area has a default location of %userprofile%\Local Settings\Application Data\Microsoft\CD Burning. Its actual path can be retrieved through WindowsBurnAreaFolderMBS.

This method returns when the CD is done or thre user cancelled.
See also:

- 72.16.3 CDBurn 12591
- 72.16.5 CDBurn(hostwindow as window) 12592

72.16.5 CDBurn(hostwindow as window)

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop only.

Function: Instructs data to be copied from the staging area to a writable CD.
Notes: Hostwindow: parent window of the user interface (UI)

The staging area has a default location of %userprofile%\Local Settings\Application Data\Microsoft\CD Burning. Its actual path can be retrieved through WindowsBurnAreaFolderMBS.

This method returns when the CD is done or thre user cancelled.
See also:

- 72.16.3 CDBurn 12591
- 72.16.4 CDBurn(hostwindow as DesktopWindow) 12591

72.16.6 HasRecordableDrive as boolean

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Scans the system for a CD drive with write-capability, returning true if one is found.
Notes: This search does not rely on the state of the Enable cd writing on this drive option found on the drive's property sheet. Instead, the determination is based on IMAPI.

72.16.7 RecorderDriveLetter as string

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the drive letter of a CD drive that has been marked as write-enabled.
Notes: The drive whose letter designation is returned by this method is the drive that has the Enable cd writing on this drive option selected. This option is found on the drive's property sheet. Only one drive on a system can have this option selected.

If a recordable CD drive is present but that option has been deselected, the method will return ane empty string.

72.16.8 Properties

72.16.9 Available as boolean

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the Shell extension on Windows for CD Burning is available.
Notes: Available should be true on Windows XP and newer.
(Read only property)

72.16.10 Lasterror as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code reported by one of the methods.
Notes: (Read and Write property)

Chapter 73

DispatchIO

73.1 class DispatchDataMBS

73.1.1 class DispatchDataMBS

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The class to wrap memory for dispatch I/O operations.
Example:

```
// make a memoryblock
Var m As New MemoryBlock(100)
m.StringValue(0,5) = "Hello"

// wrap into data object
Var d As New DispatchDataMBS(m)
Var size As Integer = d.Size

// copy back out
Var data As MemoryBlock = d.CopyData
// and check content
Var da As String = data.StringValue(0,5)

// release it
d = Nil
```

Notes: Dispatch data objects describe contiguous or sparse regions of memory that may be managed by the system or by the application.

Dispatch data objects are immutable, any direct access to memory regions represented by dispatch objects must not modify that memory.

We usually just wrap a MemoryBlock and avoid copying it for better performance.

- MBS Xojo Plugins, version 25.3pr1

73.1.2 Methods

73.1.3 Concat(other as DispatchDataMBS) as DispatchDataMBS

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Returns a new dispatch data object representing the concatenation of the specified data objects.
Example:

```
Var m1 As MemoryBlock = "Hello"
Var m2 As MemoryBlock = "World"

Var d1 As New DispatchDataMBS(m1)
Var d2 As New DispatchDataMBS(m2)

Var d As DispatchDataMBS = d1.Concat(d2)
Var m As MemoryBlock = d.CopyData

// shows HelloWorld
MessageBox m.StringValue(0, m.size)
```

Notes: Those objects may be released by the application after the call returns (however, the system might not deallocate the memory region(s) described by them until the newly created object has also been released).

73.1.4 Constructor(data as DispatchDataMBS)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The copy constructor.
Notes: Creates a new Xojo object referencing the same dispatch data.
See also:

- 73.1.5 Constructor(data as MemoryBlock, copy as boolean = false) 12597
- 73.1.6 Constructor(data as Ptr, Length as Integer) 12597

73.1.5 Constructor(data as MemoryBlock, copy as boolean = false)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Creates a dispatch data object from the given contiguous buffer of memory.
Notes: If copy is true, we make a copy of the content of the MemoryBlock.
If copy is false, we reference the MemoryBlock to avoid the copy.
See also:

- 73.1.4 Constructor(data as DispatchDataMBS) 12596
- 73.1.6 Constructor(data as Ptr, Length as Integer) 12597

73.1.6 Constructor(data as Ptr, Length as Integer)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Creates a new data object with the given memory.
Notes: If there is a parent object for the MemoryBlock, you can store it in ReferencedMemory property or any other thing in the tag property.
See also:

- 73.1.4 Constructor(data as DispatchDataMBS) 12596
- 73.1.5 Constructor(data as MemoryBlock, copy as boolean = false) 12597

73.1.7 CopyData as MemoryBlock

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Creates a copy of the data into a new MemoryBlock.

73.1.8 SubRange(offset as UInt64, length as UInt64) as DispatchDataMBS

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Creates a smaller data object for a given range.
Notes: Returns a new dispatch data object representing a subrange of the specified data object, which may be released by the application after the call returns (however, the system might not deallocate the memory region(s) described by that object until the newly created object has also been released).

offset: The offset into the data object where the subrange starts.
length: The length of the range.

Returns a newly created object representing the specified subrange of the data object.

73.1.9 Properties

73.1.10 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

73.1.11 ReferencedMemory as MemoryBlock

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The referenced MemoryBlock for this data object.
Notes: Only set if you initialized the data object with a MemoryBlock and without copying.
(Read and Write property)

73.1.12 SegementCount as Integer

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Queries the number of segments.
Notes: Usually data objects are stored in a continuous memory area, but that is not guaranteed.
(Read only property)

73.1.13 Size as Integer

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Returns the logical size of the memory region(s) represented by the specified dispatch data object.
Notes: (Read only property)

73.1.14 Tag as Variant

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The tag value.
Notes: Use this property to store whatever you like.
(Read and Write property)

73.2 class DispatchIOMBS

73.2.1 class DispatchIOMBS

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Dispatch I/O provides both stream and random access asynchronous read and write operations on file descriptors.
Notes: One or more dispatch I/O channels may be created from a file descriptor as either the kTypeStream type or kTypeRandom type. Once a channel has been created the application may schedule asynchronous read and write operations.

The application may set policies on the dispatch I/O channel to indicate the desired frequency of I/O handlers for long-running operations.

Dispatch I/O also provides a memory management model for I/O buffers that avoids unnecessary copying of data when pipelined between channels. Dispatch I/O monitors the overall memory pressure and I/O access patterns for the application to optimize resource utilization.

73.2.2 Methods

73.2.3 Barrier(theDelegate as DispatchIOBarrierMBS = nil)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Schedule a barrier operation on the specified I/O channel.
Notes: All previously scheduled operations on the channel will complete before the provided barrier block is enqueued onto the global queue determined by the channel's target queue, and no subsequently scheduled operations will start until the barrier block has returned.

If multiple channels are associated with the same file descriptor, a barrier operation scheduled on any of these channels will act as a barrier across all channels in question, i.e. all previously scheduled operations

on any of the channels will complete before the barrier block is enqueued, and no operations subsequently scheduled on any of the channels will start until the barrier block has returned.

While the barrier block is running, it may safely operate on the channel's underlying file descriptor with fsync, lseek etc. (but not close).

We call either the given delegate or the BarrierCompleted event.

73.2.4 Close(flags as Integer = 0)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Close the specified I/O channel to new read or write operations; scheduling operations on a closed channel results in their handler returning an error.
Notes: If the kCloseFlagStop flag is provided, the system will make a best effort to interrupt any outstanding read and write operations on the I/O channel, otherwise those operations will run to completion normally. Partial results of read and write operations may be returned even after a channel is closed with the kCloseFlagStop flag. The final invocation of an I/O handler of an interrupted operation will be passed an ECANCELED (89) error code, as will the I/O handler of an operation scheduled on a closed channel.

Flags: The flags for the close operation.

73.2.5 Constructor(type as Integer, File as FolderItem, OFlag as Integer = &h200, Mode as Integer = &o755)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Create a dispatch I/O channel associated with a folderitem.
Notes: Same as Constructor with path, just with a FolderItem.
See also:

- 73.2.6 Constructor(type as Integer, Other as DispatchIOMBS) 12601
- 73.2.7 Constructor(type as Integer, Path as String, OFlag as Integer = &h200, Mode as Integer = &o755) 12602
- 73.2.8 Constructor(type as Integer, Stream as BinaryStream) 12603

73.2.6 Constructor(type as Integer, Other as DispatchIOMBS)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Create a new dispatch I/O channel from an existing dispatch I/O channel.
Notes: The new channel inherits the file descriptor or path name associated with the existing channel, but not its channel type or policies.

If the existing channel is associated with a file descriptor, control by the system over that file descriptor is extended until the new channel is also closed, an error occurs on the file descriptor, or all references to both channels are released.

While a file descriptor is under the control of a dispatch I/O channel, file descriptor flags such as O_NONBLOCK will be modified by the system on behalf of the application. It is an error for the application to modify a file descriptor directly while it is under the control of a dispatch I/O channel, but it may create additional channels associated with that file descriptor.

type: The desired type of I/O channel (kTypeStream or kTypeRandom).
Other: The existing channel to create the new I/O channel from.
See also:

- 73.2.5 Constructor(type as Integer, File as FolderItem, OFlag as Integer = &h200, Mode as Integer = &o755) 12601
- 73.2.7 Constructor(type as Integer, Path as String, OFlag as Integer = &h200, Mode as Integer = &o755) 12602
- 73.2.8 Constructor(type as Integer, Stream as BinaryStream) 12603

73.2.7 Constructor(type as Integer, Path as String, OFlag as Integer = &h200, Mode as Integer = &o755)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Create a dispatch I/O channel associated with a path name.
Notes: The specified path, oflag and mode parameters will be passed to open when the first I/O operation on the channel is ready to execute and the resulting file descriptor will remain open and under the control of the system until the channel is closed, an error occurs on the file descriptor or all references to the channel are released. At that time the file descriptor will be closed.

Type: The desired type of I/O channel (kTypeStream or kTypeRandom).
path: The absolute path to associate with the I/O channel.
OFlag: The flags to pass to open when opening the file at path.
Mode: The mode to pass to open when creating the file at path (i.e. with flag kOFlagCreate), zero otherwise.
See also:

- 73.2.5 Constructor(type as Integer, File as FolderItem, OFlag as Integer = &h200, Mode as Integer = &o755) 12601
- 73.2.6 Constructor(type as Integer, Other as DispatchIOMBS) 12601

- 73.2.8 Constructor(type as Integer, Stream as BinaryStream) 12603

73.2.8 Constructor(type as Integer, Stream as BinaryStream)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Create a dispatch I/O channel associated with a stream.
See also:

- 73.2.5 Constructor(type as Integer, File as FolderItem, OFlag as Integer = &h200, Mode as Integer = &o755) 12601
- 73.2.6 Constructor(type as Integer, Other as DispatchIOMBS) 12601
- 73.2.7 Constructor(type as Integer, Path as String, OFlag as Integer = &h200, Mode as Integer = &o755) 12602

73.2.9 Read(offset as Int64, length as UInt64, theDelegate as DispatchIOReadMBS = nil)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Reads data from the file.
Example:

```
Const path = "/Users/cs/test.dmg"

// we copy asynchronous
DispatchIORead = New DispatchIOMBS(DispatchIOMBS.kTypeStream, path, 0)
DispatchIOWrite = New DispatchIOMBS(DispatchIOMBS.kTypeStream, "/tmp/test", DispatchIOMBS.kOFlagCreate + DispatchIOMBS.kOFlagTruncate)

// let's ask to read whole file
DispatchIORead.Read(0, 10000000000000, AddressOf ReadDone)
```

Notes: Schedule a read operation for asynchronous execution on the specified I/O channel. The I/O handler is enqueued one or more times depending on the general load of the system and the policy specified on the I/O channel.

Any data read from the channel is described by the dispatch data object passed to the I/O handler.

An invocation of the I/O handler with the done flag set indicates that the read operation is complete and that the handler will not be enqueued again.

If an unrecoverable error occurs on the I/O channel's underlying file descriptor, the I/O handler will be enqueued with the done flag set, the appropriate error code and a nil data object.

An invocation of the I/O handler with the done flag set, an error code of zero and an empty data object indicates that EOF was reached.

offset: The offset relative to the channel position from which to start reading (only for kTypeRandom).
length: The length of data to read from the I/O channel, or SIZE_MAX (-1) to indicate that data should be read until EOF is reached.

We either call the delegate if you provide one or the ReadCompleted event.

73.2.10 ReadStream(Stream as BinaryStream, Length as UInt64, theDelegate as DispatchIOReadStreamMBS)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Schedule a read operation for asynchronous execution on the specified stream.
Example:

```
Var file As FolderItem = SpecialFolder.Desktop.Child("mond.jpg")

stream = BinaryStream.Open(file)

System.DebugLog "ReadStream..."
DispatchIOMBS.ReadStream(stream, 10000000, AddressOf ReadDone)
System.DebugLog "ReadStream done."
```

Notes: The specified delegate is enqueued with the data read from the file descriptor when the operation has completed or an error occurs.

The data object passed to the handler will only contain as much data as is currently available from the file descriptor (up to the specified length).

If an unrecoverable error occurs on the file descriptor, the handler will be enqueued with the appropriate error code along with a data object of any data that could be read successfully.

An invocation of the handler with an error code of zero and an empty data object indicates that EOF was reached.

The system takes control of the file descriptor until the handler is enqueued, and during this time file descriptor flags such as O_NONBLOCK will be modified by the system on behalf of the application. It is an

error for the application to modify a file descriptor directly while it is under the control of the system, but it may create additional dispatch I/O convenience operations or dispatch I/O channels associated with that file descriptor.

length: The length of data to read from the file descriptor, or SIZE_MAX (-1) to indicate that all of the data currently available from the file descriptor should be read.

73.2.11 Write(offset as Int64, Data as DispatchDataMBS, theDelegate as DispatchIOWriteMBS = nil)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Schedule a write operation for asynchronous execution on the specified I/O channel.
Notes: The I/O handler is enqueued one or more times depending on the general load of the system and the policy specified on the I/O channel.

Any data remaining to be written to the I/O channel is described by the dispatch data object passed to the I/O handler.

An invocation of the I/O handler with the done flag set indicates that the write operation is complete and that the handler will not be enqueued again.

If an unrecoverable error occurs on the I/O channel's underlying file descriptor, the I/O handler will be enqueued with the done flag set, the appropriate error code and an object containing the data that could not be written.

An invocation of the I/O handler with the done flag set and an error code of zero indicates that the data was fully written to the channel.

offset: The offset relative to the channel position from which to start writing (only for kTypeRandom).
data: The data to write to the I/O channel. The data object will be retained by the system until the write operation is complete.

We call either the given delegate or the event of the class.

73.2.12 WriteStream(Stream as BinaryStream, Data as DispatchDataMBS, theDelegate as DispatchIOWriteStreamMBS)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Schedule a write operation for asynchronous execution on the specified stream.
Example:

```
Var file As FolderItem = SpecialFolder.Desktop.Child("test.txt")

stream = BinaryStream.Create(file, True)

Var mem As New MemoryBlock(10 * 1024 * 1024)
Var data As New DispatchDataMBS(mem)

System.DebugLog "WriteStream..."
DispatchIOMBS.WriteStream(stream, data, AddressOf WriteDone)
System.DebugLog "WriteStream done."

// later the WriteDone method is called
```

Notes: The specified delegate is enqueued when the operation has completed or an error occurs.

If an unrecoverable error occurs on the stream, the delegate will be enqueued with the appropriate error code along with the data that could not be successfully written.

An invocation of the delegate with an error code of zero indicates that the data was fully written to the channel.

The system takes control of the file descriptor until the delegate is enqueued, and during this time file descriptor flags such as O_NONBLOCK will be modified by the system on behalf of the application. It is an error for the application to modify a file descriptor directly while it is under the control of the system, but it may create additional dispatch I/O convenience operations or dispatch I/O channels associated with that file descriptor.

stream: The stream to which to write the data.
data: The data object to write to the file descriptor.
delegate: The method to call.

73.2.13 Properties

73.2.14 Descriptor as Integer

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Returns the file descriptor underlying a dispatch I/O channel.
Notes: Will return -1 for a channel closed with Close() and for a channel associated with a path name that has not yet been opened.

If called from a barrier block scheduled on a channel associated with a path name that has not yet been opened, this will trigger the channel open operation and return the resulting file descriptor.

Returns the file descriptor underlying the channel, or -1.
(Read only property)

73.2.15 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

73.2.16 HighWater as UInt64

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The high water mark on the I/O channel for all operations.
Notes: The system will make a best effort to enqueue I/O handlers with partial results as soon the number of bytes processed by an operation (i.e. read or written) reaches the high water mark.

The size of data objects passed to I/O handlers for this channel will never exceed the specified high water mark.

The default value for the high water mark is unlimited (i.e. SIZE_MAX).

Value is the number of bytes to use as a high water mark.
(Read and Write property)

73.2.17 Interval as UInt64

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The nanosecond interval at which I/O handlers are to be enqueued on the I/O channel for all operations.
Notes: This allows an application to receive periodic feedback on the progress of read and write operations, e.g. for the purposes of displaying progress bars.

If the amount of data ready to be delivered to an I/O handler at the interval is inferior to the channel low water mark, the handler will only be enqueued if the kIntervalFlagStrictInterval flag is set.

Note that the system may defer enqueueing interval I/O handlers by a small unspecified amount of leeway in order to align with other system activity for improved system performance or power consumption.
(Read and Write property)

73.2.18 IntervalFlags as Integer

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The flags for the interval.
Notes: (Read and Write property)

73.2.19 LowWater as UInt64

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The low water mark on the I/O channel for all operations.
Notes: The system will process (i.e. read or write) at least the low water mark number of bytes for an operation before enqueueing I/O handlers with partial results.

The size of data objects passed to intermediate I/O handler invocations for this channel (i.e. excluding the final invocation) will never be smaller than the specified low water mark, except if the channel has an interval with the kIntervalFlagStrictInterval flag set or if EOF or an error was encountered.

I/O handlers should be prepared to receive amounts of data significantly larger than the low water mark in general. If an I/O handler requires intermediate results of fixed size, set both the low and and the high water mark to that size.

The default value for the low water mark is unspecified, but must be assumed to be such that intermediate handler invocations may occur. If I/O handler invocations with partial results are not desired, set the low water mark to SIZE_MAX.

Value is the number of bytes to use as a low water mark.
(Read and Write property)

73.2.20 Path as String

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The file path.

Notes: (Read only property)

73.2.21 Tag as Variant

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The tag value.
Notes: Use this property to store whatever you like.
(Read and Write property)

73.2.22 Type as Integer

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The type of stream.
Notes: Either kTypeStream and kTypeRandom constants.
(Read only property)

73.2.23 Events

73.2.24 BarrierCompleted

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The event called when the barrier is reached.
Notes: Called by Barrier method if there is no delegate.

73.2.25 Closing(error as Integer)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The event called when stream is closing.
Notes: Error: An errno condition if control is relinquished because channel creation or opening of the specified file failed, zero otherwise.

73.2.26 ReadCompleted(offset as Int64, Data as DispatchDataMBS, done as Boolean, Error as Integer)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The event called when a Read method finished.
Notes: offset: The original offset requested.
done: A flag indicating whether the operation is complete.
data: An object with the data most recently read from the I/O channel as part of this read operation, or nil.
error: An errno condition for the read operation or zero if the read was successful.

73.2.27 WriteCompleted(offset as Int64, OriginalData as DispatchDataMBS, RemainingData as DispatchDataMBS, done as Boolean, Error as Integer)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The event called when Write() finished.
Notes: done: A flag indicating whether the operation is complete.
Data: An object of the data remaining to be written to the I/O channel as part of this write operation, or nil.
error: An errno condition for the write operation or zero if the write was successful.

73.2.28 Constants

Flags

Constant	Value	Description
kCloseFlagStop	1	If used, the system will make a best effort to interrupt any outstanding read and write operations on the I/O channel, otherwise those operations will run to completion normally. P
kIntervalFlagStrictInterval	1	Enqueue I/O handlers at a channel's interval setting even if the amount of data ready to be delivered is inferior to the low water mark (or zero).
kOFlagAppend	8	Append to existing file
kOFlagCreate	&h200	Create file if it doesn't exist.
kOFlagReadOnly	0	Open file read only.
kOFlagReadWrite	2	Open file read & write.
kOFlagTruncate	&h400	Truncate existing file.
kOFlagWriteOnly	1	Open file write only.
kTypeRandom	1	A dispatch I/O channel representing a random access file. Read and write operations on a channel of this type may be performed concurrently and read/write data at the specified offset. Offsets are interpreted relative to the file pointer position current at the time the I/O channel is created. Attempting to create a channel of this type for a file descriptor that is not seekable will result in an error.
kTypeStream	0	A dispatch I/O channel representing a stream of bytes. Read and write operations on a channel of this type are performed serially (in order of creation) and read/write data at the file pointer position that is current at the time the operation starts executing. Operations of different type (read vs. write) may be performed simultaneously. Offsets passed to operations on a channel of this type are ignored.

73.2.29 Delegates

73.2.30 DispatchIOBarrierMBS(DispatchIO as DispatchIOMBS)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The delegate called when the barrier is reached.
Notes: Called by Barrier method if there is a delegate given.

73.2.31 DispatchIOReadMBS(DispatchIO as DispatchIOMBS, offset as Int64, Data as DispatchDataMBS, done as Boolean, Error as Integer)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The delegate called when a Read method finished.
Example:

```
Public Sub ReadDone(DispatchIO as DispatchIOMBS, offset as Int64, Data as DispatchDataMBS, done as
Boolean, Error as Integer)
System.DebugLog CurrentMethodName
```

```
System.DebugLog "got " + data.Size.ToString + " at offset " + Offset.ToString

if Error <>0 then Break

WriteCounter = WriteCounter + 1
// let's output what we got to
DispatchIOWrite.Write(offset, data, AddressOf WriteDone)

If done Then
System.DebugLog "Done reading."
DispatchIORead.Close
End If
End Sub
```

Notes: offset: The original offset requested.
done: A flag indicating whether the operation is complete.
data: An object with the data most recently read from the I/O channel as part of this read operation, or nil.
error: An errno condition for the read operation or zero if the read was successful.

73.2.32 DispatchIOReadStreamMBS(Stream as BinaryStream, Length as UInt64, Data as DispatchDataMBS, Error as Integer)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The delegate to be called when the read operation finished.
Example:

```
Public Sub ReadDone(Stream as BinaryStream, Length as UInt64, Data as DispatchDataMBS, Error as Integer)
System.DebugLog CurrentMethodName
System.DebugLog "got "+data.Size.ToString+" of "+Length.ToString
End Sub
```

Notes: Length: The requested length.
Data: The data read.
Error: The error code.

73.2.33 DispatchIOWriteMBS(DispatchIO as DispatchIOMBS, offset as Int64, OriginalData as DispatchDataMBS, RemainingData as DispatchDataMBS, done as Boolean, Error as Integer)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The delegate called when Write() finished.
Example:

```
Public Sub WriteDone(DispatchIO as DispatchIOMBS, offset as Int64, OriginalData as DispatchDataMBS,
RemainingData as DispatchDataMBS, done as Boolean, Error as Integer)
System.DebugLog CurrentMethodName

if Error <>0 then Break

If done Then
System.DebugLog "wrote "+OriginalData.Size.ToString+" bytes"

WriteCounter = WriteCounter - 1

If WriteCounter = 0 Then
System.DebugLog "write done."
DispatchIOWrite.Close
End If
End If
End Sub
```

Notes: done: A flag indicating whether the operation is complete.
Data: An object of the data remaining to be written to the I/O channel as part of this write operation, or nil.
error: An errno condition for the write operation or zero if the write was successful.

73.2.34 DispatchIOWriteStreamMBS(Stream as BinaryStream, OriginalData as DispatchDataMBS, RemainingData as DispatchDataMBS, Error as Integer)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The delegate called when write finished.
Example:

```
Sub WriteDone(Stream as BinaryStream, OriginalData as DispatchDataMBS, RemainingData as Dispatch-
DataMBS, Error as Integer)
System.DebugLog CurrentMethodName

End Sub
```

Notes: data: The data that could not be written to the I/O channel, or nil.
error: An errno condition for the write operation or zero if the write was successful.

Chapter 74

DNS

74.1 class DNSAddressRecordMBS

74.1.1 class DNSAddressRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for an address record.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.six.heise.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
for each d as DNSResourceRecordMBS in r.Answers
if d.A<>Nil then
MessageBox d.A.address
end if
next
end if
```

74.1.2 Properties

74.1.3 address as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The IPv4 address.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.six.heise.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
for each d as DNSResourceRecordMBS in r.Answers
if d.A<>Nil then
MessageBox d.A.address
end if
next
end if
```

Notes: (Read and Write property)

74.2 class DNSAFSDBRecordMBS

74.2.1 class DNSAFSDBRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for an AFSDB record.

74.2.2 Properties

74.2.3 hostname as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The hostname.
Notes: (Read and Write property)

74.2.4 subtype as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The sub type.
Notes: (Read and Write property)

74.3 class DNSDomainNameRecordMBS

74.3.1 class DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a domain name record.

74.3.2 Properties

74.3.3 name as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The queried name.
Notes: (Read and Write property)

74.4 class DNSHeaderMBS

74.4.1 class DNSHeaderMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a header of a DNS query.

74.4.2 Properties

74.4.3 AdditionalCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of additional items.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MessageBox "AdditionalCount: "+str(r.Header.AdditionalCount)
end if
```

Notes: (Read and Write property)

74.4.4 AnswerCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of answers in this query.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MessageBox "AnswerCount: "+str(r.Header.AnswerCount)
end if
```

Notes: (Read and Write property)

74.4.5 AuthorityCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of authority records.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MessageBox "AuthorityCount: "+str(r.Header.AuthorityCount)
end if
```

Notes: (Read and Write property)

74.4.6 Flags as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The flags.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MessageBox "Flags: "+str(r.Header.Flags)
end if
```

Notes: (Read and Write property)

74.4.7 QuestionCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of questions in this query.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MessageBox "QuestionCount: "+str(r.Header.QuestionCount)
end if
```

Notes: (Read and Write property)

74.4.8 xid as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The xid value.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MessageBox "xid: "+str(r.Header.xid)
end if
```

Notes: (Read and Write property)

74.5 class DNSHINFORecordMBS

74.5.1 class DNSHINFORecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for the host information record.

74.5.2 Properties

74.5.3 CPU as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The CPU information string.
Notes: (Read and Write property)

74.5.4 OS as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The operating system name.
Notes: (Read and Write property)

74.6 class DNSIN6AddressRecordMBS

74.6.1 class DNSIN6AddressRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for an IPv6 address record.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.six.heise.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeAAAA)

if r<>Nil then
for each d as DNSResourceRecordMBS in r.Answers
if d.AAAA<>Nil then
MessageBox d.AAAA.address
end if
next
end if
```

74.6.2 Properties

74.6.3 address as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The IPv6 address.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.six.heise.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeAAAA)

if r<>Nil then
for each d as DNSResourceRecordMBS in r.Answers
if d.AAAA<>Nil then
MessageBox d.AAAA.address
end if
next
end if
```

Notes: (Read and Write property)

74.6.4 rawaddress as Memoryblock

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The raw address as a memoryblock.
Notes: (Read and Write property)

74.7 class DNSISDNRecordMBS

74.7.1 class DNSISDNRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for an ISDN record.

74.7.2 Properties

74.7.3 isdnAddress as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The ISDN address.
Notes: (Read and Write property)

74.7.4 subAddress as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The subaddress.
Notes: (Read and Write property)

74.8 class DNSLocRecordMBS

74.8.1 class DNSLocRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The location record class.

74.8.2 Properties

74.8.3 altitude as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The altitude value.
Notes: (Read and Write property)

74.8.4 horizontalPrecision as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The horizontal precision value.
Notes: (Read and Write property)

74.8.5 latitude as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The latitude value.
Notes: (Read and Write property)

74.8.6 longitude as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The longitude value.
Notes: (Read and Write property)

74.8.7 size as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The size value.
Notes: (Read and Write property)

74.8.8 version as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The version value.
Notes: (Read and Write property)

74.8.9 verticalPrecision as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The vertical precision value.
Notes: (Read and Write property)

74.9 class DNSMINFORecordMBS

74.9.1 class DNSMINFORecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The MINFO record class.

74.9.2 Properties

74.9.3 emailbx as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The emailbx value.
Notes: (Read and Write property)

74.9.4 rmailbx as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The rmailbx value.
Notes: (Read and Write property)

74.10 class DNSMXRecordMBS

74.10.1 class DNSMXRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a mx (mailbox) record.

74.10.2 Properties

74.10.3 name as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The name of this email server.
Notes: (Read and Write property)

74.10.4 preference as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The preference value for this email server.
Notes: (Read and Write property)

74.11 class DNSQuestionMBS

74.11.1 class DNSQuestionMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a DNS query question.

74.11.2 Properties

74.11.3 dnsclass as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The DNS class value.
Notes: See the Class* constants in DNSUtilMBS module.
(Read and Write property)

74.11.4 dnstype as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The DNS type value.
Notes: See the Type* constants in DNSUtilMBS module.
(Read and Write property)

74.11.5 name as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The query in the question.
Notes: (Read and Write property)

74.12 class DNSRawResourceRecordMBS

74.12.1 class DNSRawResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a raw resource record.

74.12.2 Properties

74.12.3 data as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The data as a string with no encoding set.
Notes: Just the raw bytes as string.
(Read and Write property)

74.12.4 length as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The length of the data.
Notes: (Read and Write property)

74.13 class DNSReplyMBS

74.13.1 class DNSReplyMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a DNS query reply.
Example:

```
// look up the mail servers of a domain and the address of a host
Var reply As DNSReplyMBS = DNSUtilMBS.Lookup("apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeMX)
Var lines() As String
lines.Add "Status: " + reply.Status.ToString + ", " + reply.answerCount.ToString + " answers"
For Each r As DNSResourceRecordMBS In reply.Answers
If r.MX <>Nil Then lines.Add "MX " + r.MX.preference.ToString + " " + r.MX.name
Next

reply = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)
For Each r As DNSResourceRecordMBS In reply.Answers
If r.A <>Nil Then lines.Add "A " + r.A.address
Next
MessageBox String.FromArray(lines, EndOfLine)
```

74.13.2 Methods

74.13.3 Additional(index as Integer) as DNSResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the additional record with the given index.
Notes: index is zero based.

74.13.4 Additionals as DNSResourceRecordMBS()

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns an array with the additional records.

74.13.5 Answer(index as Integer) as DNSResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the answer with the given index.
Notes: index is zero based.

74.13.6 Answers as DNSResourceRecordMBS()

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns an array with the answer records.

74.13.7 Authority(index as Integer) as DNSResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the authority with the given index.
Notes: index is zero based.

74.13.8 Authoritys as DNSResourceRecordMBS()

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns an array with the authority records.

74.13.9 Question(index as Integer) as DNSQuestionMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The question with the given index.
Notes: index is zero based.

74.13.10 Questions as DNSQuestionMBS()

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns an array with the question records.

74.13.11 Properties

74.13.12 additionalCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of additional records.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MessageBox "additionalCount: "+str(r.additionalCount)
end if
```

Notes: (Read and Write property)

74.13.13 answerCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of answer records.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MessageBox "answerCount: "+str(r.answerCount)
end if
```

Notes: (Read and Write property)

74.13.14 authorityCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of authority records.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
```

```
MessageBox "authorityCount: "+str(r.authorityCount)
end if
```

Notes: (Read and Write property)

74.13.15 Header as DNSHeaderMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The header values for this query.
Notes: (Read and Write property)

74.13.16 questionCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of questions.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MessageBox "questionCount: "+str(r.questionCount)
end if
```

Notes: (Read and Write property)

74.13.17 Server as DNSSocketAddressMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The server details from this query.
Notes: (Read and Write property)

74.13.18 Status as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The status of this query.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MessageBox "Status: "+str(r.Status)
end if
```

Notes: See the Status* constants.
(Read and Write property)

74.13.19 Constants

Constants

Constant	Value	Description
StatusBadHandle	1	One of the status constants for the status property.
StatusConnectionFailed	6	One of the status constants for the status property.
StatusMalformedQuery	2	One of the status constants for the status property.
StatusOK	0	One of the status constants for the status property.
StatusReceiveFailed	5	One of the status constants for the status property.
StatusSendFailed	4	One of the status constants for the status property.
StatusTimeout	3	One of the status constants for the status property.
StatusWrongQuestion	9	One of the status constants for the status property.
StatusWrongServer	7	One of the status constants for the status property.
StatusWrongXID	8	One of the status constants for the status property.

74.14 class DNSResourceRecordMBS

74.14.1 class DNSResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a resource record.
Example:

```
// show the TXT records of a domain, e.g. to check the SPF entry
Var reply As DNSReplyMBS = DNSUtilMBS.Lookup("apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeTEXT)
Var lines() As String
For Each r As DNSResourceRecordMBS In reply.Answers
If r.dnstype = DNSUtilMBS.TypeTEXT And r.TXT <>Nil Then
For i As Integer = 0 To r.TXT.Count - 1
lines.Add r.name + " (ttl " + r.ttl.ToString + "): " + r.TXT.Strings(i)
Next
End If
Next
MessageBox String.FromArray(lines, EndOfLine)
```

Notes: Data contained in unsupported or obsolete Resource Record types may be accessed via RAW as a DNSRawResourceRecordMBS.

74.14.2 Properties

74.14.3 A as DNSAddressRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.4 AAAA as DNSIN6AddressRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.5 AFSDB as DNSAFSDBRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.6 CNAME as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.7 dnsclass as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The DNS class value.
Notes: See the Class* constants in DNSUtilMBS module.
(Read and Write property)

74.14.8 dnstype as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The DNS type value.
Notes: See the Type* constants in DNSUtilMBS module.
(Read and Write property)

74.14.9 HINFO as DNSHINFORecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.10 ISDN as DNSISDNRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.11 LOC as DNSLocRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.12 MB as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.13 MD as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.14 MF as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.15 MG as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.16 MINFO as DNSMINFORecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.17 MR as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.18 MX as DNSMXRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.19 name as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The name.
Notes: (Read and Write property)

74.14.20 NS as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.21 PTR as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.22 RAW as DNSRawResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: Data contained in unsupported or obsolete Resource Record types may be accessed via RAW as a DNSRawResourceRecordMBS.
(Read and Write property)

74.14.23 Record as Variant

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content as a variant.
Notes: Each resource record contains only one subrecord. So this record property has a reference to it and the corresponding property.
(Read and Write property)

74.14.24 RP as DNSRPRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.25 RT as DNSRTRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.26 SOA as DNSSOARecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.27 SRV as DNSSRVRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.28 ttl as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The time to live value.
Notes: (Read and Write property)

74.14.29 TXT as DNSTXTRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.30 WKS as DNSWKSRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.31 X25 as DNSX25RecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.15 class DNSRPRecordMBS

74.15.1 class DNSRPRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a RP record.

74.15.2 Properties

74.15.3 mailbox as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The mailbox value.
Notes: (Read and Write property)

74.15.4 txtdname as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The txtdname value.
Notes: (Read and Write property)

74.16 class DNSRTRecordMBS

74.16.1 class DNSRTRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a RT record.

74.16.2 Properties

74.16.3 intermediate as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The intermediate value.
Notes: (Read and Write property)

74.16.4 preference as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The preference value.
Notes: (Read and Write property)

74.17 class DNSServiceQueryRecordMBS

74.17.1 class DNSServiceQueryRecordMBS

MBS Network Plugin, Plugin Version: 16.1, Platforms: macOS, Windows, Targets: All.

Function: The class to query for an arbitrary DNS record.
Notes: Subclass of the DNSServiceBaseMBS class.
Blog Entries

- MBS Releases the MBS Xojo / Real Studio plug-ins in version 16.1

74.17.2 Methods

74.17.3 QueryRecord(InterfaceIndex as Integer, FullName as string, rrType as Integer, rrClass as Integer, Flags as Integer = 0) as boolean

MBS Network Plugin, Plugin Version: 16.1, Platforms: macOS, Windows, Targets: All.

Function: Query for an arbitrary DNS record.
Notes: Flags: kFlagsForceMulticast or kFlagsLongLivedQuery. Pass kFlagsLongLivedQuery to create a "long-lived" unicast query to a unicast DNS server that implements the protocol. This flag has no effect on link-local multicast queries.
interfaceIndex: If non-zero, specifies the interface on which to issue the query (the index for a given interface is determined via the if_nametoindex() family of calls.) Passing 0 causes the name to be queried for on all interfaces. See "Constants for specifying an interface index" for more details.
fullname: The full domain name of the resource record to be queried for.
rrtype: The numerical type of the resource record to be queried for (e.g. kType_PTR, kType_SRV, etc)
rrclass: The class of the resource record (usually kClass_IN).

Lasterror is set: Returns kErr_NoError on success (any subsequent, asynchronous errors are delivered to the event), otherwise returns an error code indicating the error that occurred.
Returns false in case of error or true in case of success.

You can use DNSServiceBaseMBS.ConstructFullName to build the full name.

74.17.4 Events

74.17.5 ServiceQueryRecord(flags as Integer, InterfaceIndex as Integer, ErrorCode as Integer, Fullname as string, rrType as Integer, rrClass as Integer, Length as Integer, Data as string, ttl as Integer)

MBS Network Plugin, Plugin Version: 16.1, Platforms: macOS, Windows, Targets: All.

Function: The event called when data is received for DNS query.
Notes: flags: Possible values are kFlagsMoreComing and kFlagsAdd. The Add flag is NOT set for PTR records with a ttl of 0, i.e. "Remove" events.
InterfaceIndex: The interface on which the query was resolved.
errorCode: Will be kErr_NoError on success, otherwise will indicate the failure that occurred. Other parameters are undefined if errorCode is nonzero.
fullname: The resource record's full domain name.
rrtype: The resource record's type (e.g. kType_PTR, kType_SRV, etc)
rrclass: The class of the resource record (usually kClass_IN).
Length: The length, in bytes, of the resource record rdata.
Data: The raw record data of the resource record.
ttl: If the client wishes to cache the result for performance reasons, the TTL indicates how long the client may legitimately hold onto this result, in seconds. After the TTL expires, the client should consider the result no longer valid, and if it requires this data again, it should be re-fetched with a new query. Of course, this only applies to clients that cancel the asynchronous operation when they get a result. Clients that leave the asynchronous operation running can safely assume that the data remains valid until they get another callback telling them otherwise.

74.18 class DNSSOARecordMBS

74.18.1 class DNSSOARecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The SOA record class.
Notes: The Start of Authority (SOA) record contains information about the zone.

74.18.2 Properties

74.18.3 expire as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The expire value.
Notes: (Read and Write property)

74.18.4 minimum as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The minimum value.
Notes: (Read and Write property)

74.18.5 mname as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The mname value.
Notes: (Read and Write property)

74.18.6 refresh as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The refresh delay in seconds before the slave contacts the master.
Notes: (Read and Write property)

74.18.7 retry as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The retry delay in seconds before the slave contacts the master again.
Notes: (Read and Write property)

74.18.8 rname as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The name value.
Notes: (Read and Write property)

74.18.9 serial as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The serial value.
Notes: (Read and Write property)

74.19 class DNSSocketAddressMBS

74.19.1 class DNSSocketAddressMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The DNS socket address class.

74.19.2 Properties

74.19.3 address as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The address value.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MessageBox "Server.address: "+r.Server.address
end if
```

Notes: This is IPv4 or IPv6.
(Read and Write property)

74.19.4 data as Memoryblock

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The raw data of this socket address.
Notes: (Read and Write property)

74.19.5 Family as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The family value.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)
```

```
if r<>Nil then
MessageBox "Server.Family: "+str(r.Server.Family)
end if
```

Notes: (Read and Write property)

74.19.6 Port as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The port for this socket address.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MessageBox "Server.Port: "+str(r.Server.Port)
end if
```

Notes: (Read and Write property)

74.20 class DNSSRVRecordMBS

74.20.1 class DNSSRVRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a RV record.

74.20.2 Properties

74.20.3 port as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The port value.
Notes: (Read and Write property)

74.20.4 priority as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The priority value.
Notes: (Read and Write property)

74.20.5 target as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The target value.
Notes: (Read and Write property)

74.20.6 weight as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The weight value.
Notes: (Read and Write property)

74.21 class DNSTXTRecordMBS

74.21.1 class DNSTXTRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a text record.

74.21.2 Methods

74.21.3 Strings(index as Integer) as string

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The strings by index.
Notes: Index is zero based.

74.21.4 Properties

74.21.5 Count as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of strings in this text record.
Notes: (Read only property)

74.22 module DNSUtilMBS

74.22.1 module DNSUtilMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The module for DNS queries.
Example:

```
// look up the IPv4 addresses of a host name
Var reply As DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET,
DNSUtilMBS.TypeA)
Var lines() As String
For Each r As DNSResourceRecordMBS In reply.Answers
lines.Add DNSUtilMBS.TypeString(r.dnstype) + " " + r.name + If(r.A <>Nil, " " + r.A.address, "")
Next
MessageBox String.FromArray(lines, EndOfLine)
```

74.22.2 Methods

74.22.3 ClassNumber(dnsClass as string, byref n as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: One of the DNS class constants.
Example:

```
Var n as Integer

if DNSUtilMBS.ClassNumber("CH", n) then
MessageBox str(n) // shows 3
end if
```

Notes: Returns true on success.

74.22.4 ClassString(dnsclass as Integer) as string

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the string name of this class value.
Example:

```
MessageBox DNSUtilMBS.ClassString(DNSUtilMBS.ClassCHAOS) // shows "CH"
```

74.22.5 Lookup(name as string, dnsclass as Integer, dnsType as Integer) as DNSReplyMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Performs a DNS query.
Example:

```
// lookup MX record for email sending
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("macsw.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeMX)
if r <>nil then
MessageBox "macsw.de ->"+r.Answer(0).MX.name
end if
```

Notes: Use the Class* constants for the dnsclass parameter. And use the Type* constants for the dnsType parameter.

74.22.6 LookupMT(name as string, dnsclass as Integer, dnsType as Integer) as DNSReplyMBS

MBS MacOSX Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Performs a DNS query.
Notes: Use the Class* constants for the dnsclass parameter. And use the Type* constants for the dnsType parameter.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

74.22.7 TypeNumber(dnsType as string, byref n as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: One of the DNS type constants.
Example:

```
Var n as Integer

if DNSUtilMBS.TypeNumber("AAAA", n) then
MessageBox str(n) // shows 28
end if
```

Notes: Returns true on success.

74.22.8 TypeString(dnstype as Integer) as string

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the string name of this type value.
Example:

```
MessageBox DNSUtilMBS.TypeString(DNSUtilMBS.TypeMD) // shows "MD"
```

74.22.9 Constants

Constants

Constant	Value	Description
ClassALL	&hff	One of the DNS class constants.
ClassANY	&hff	One of the DNS class constants.
ClassCHAOS	3	One of the DNS class constants.
ClassCSNET	2	One of the DNS class constants.
ClassHESIOD	4	One of the DNS class constants.
ClassINTERNET	1	One of the DNS class constants.
ClassNONE	&hfe	One of the DNS class constants.
TypeA	1	One of the DNS type constants.
TypeAAAA	&h1c	One of the DNS type constants.
TypeAFSDB	&h12	One of the DNS type constants.
TypeALL	&hff	One of the DNS type constants.
TypeANY	&hff	One of the DNS type constants.
TypeATMA	&h22	One of the DNS type constants.
TypeAXFR	&hfc	One of the DNS type constants.
TypeCNAME	5	One of the DNS type constants.
TypeGPOS	&h1b	One of the DNS type constants.
TypeHINFO	&h0d	One of the DNS type constants.
TypeISDN	&h14	One of the DNS type constants.
TypeIXFR	&hfb	One of the DNS type constants.
TypeKEY	&h19	One of the DNS type constants.
TypeLOC	&h1d	One of the DNS type constants.
TypeMAILA	&hfe	One of the DNS type constants.
TypeMAILB	&hfd	One of the DNS type constants.
TypeMB	7	One of the DNS type constants.
TypeMD	3	One of the DNS type constants.
TypeMF	4	One of the DNS type constants.
TypeMG	8	One of the DNS type constants.
TypeMINFO	&h0e	One of the DNS type constants.
TypeMR	9	One of the DNS type constants.
TypeMX	&h0f	One of the DNS type constants.
TypeNS	2	One of the DNS type constants.
TypeNSAP	&h16	One of the DNS type constants.
TypeNSAPPTR	&h17	One of the DNS type constants.
TypeNULL	&h0a	One of the DNS type constants.
TypeNXT	&h1e	One of the DNS type constants.
TypePTR	&h0c	One of the DNS type constants.
TypePX	&h1a	One of the DNS type constants.
TypeRP	&h11	One of the DNS type constants.
TypeRT	&h15	One of the DNS type constants.
TypeSIG	&h18	One of the DNS type constants.
TypeSOA	6	One of the DNS type constants.
TypeSRV	&h21	One of the DNS type constants.
TypeTEXT	&h10	One of the DNS type constants.
TypeTKEY	&hf9	One of the DNS type constants.
TypeTSIG	&hfa	One of the DNS type constants.
TypeWKS	&h0b	One of the DNS type constants.
TypeX25	&h13	One of the DNS type constants.

74.23 class DNSWKSRecordMBS

74.23.1 class DNSWKSRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a WKS record.

74.23.2 Methods

74.23.3 Map(index as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The map values.
Notes: Index is zero based.

74.23.4 Properties

74.23.5 address as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The address.
Notes: (Read and Write property)

74.23.6 maplength as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of items in the map array.
Notes: (Read and Write property)

74.23.7 protocol as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The protocol.
Notes: (Read and Write property)

74.24 class DNSX25RecordMBS

74.24.1 class DNSX25RecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a X25 record.

74.24.2 Properties

74.24.3 psdnAddress as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The psdn address.
Notes: (Read and Write property)

Chapter 75

Dongle

75.1 class HASPHLDMBS

75.1.1 class HASPHLDMBS

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class for accessing HASP HL or Sentinel dongles.
Example:

```
// Load your vendor library or the demo one
Var LibFile as FolderItem = New FolderItem("hasp_darwin_12345.dylib")

if HASPHLDMBS.LoadLibrary(LibFile) then
'MessageBox "OK"
else
MessageBox "Failed to load library."
Return
end if

// init dongle
' This method runs the actual tests on the given program number
Var blob as MemoryBlock // container for data for en-/decryption

Var FeatureID = HASPHLDMBS.HASP_DEFAULT_FID
Var VendorCode = "123456" // your vendor code here, some big Base64 encoded block

Var hasp as new HASPHLDMBS(FeatureID, VendorCode)
Select case hasp.Lasterror
case HASPHLDMBS.HASP_STATUS_OK
// ok
```

```
case HASPHLDMBS.HASP_HASP_NOT_FOUND
MessageBox "Dongle not found."
return
case HASPHLDMBS.HASP_INV_VCODE
MessageBox "Invalid vendor code"
Return
else
MessageBox "Error: "+str(hasp.Lasterror)
return
end Select

// read a file ID
Var fileid as Integer = 65524
Var size as Integer = hasp.GetSize( fileid )

if hasp.Lasterror = HASPHLDMBS.HASP_STATUS_OK then // ONLY IF FILE IS SUPPORTED

// read to memoryblock
blob = hasp.ReadMemory( fileid, 0, size )
if hasp.Lasterror = HASPHLDMBS.HASP_STATUS_OK then
// show in MessageBox
s = Blob.stringvalue(0,blob.size)
MessageBox DefineEncoding(s,Encodings.UTF8)
end if
end if
```

Notes: Please use HASP Master Wizard Suite to generate your own runtime libraries. Than you get a couple of DLLs which you can load with this class. For the demo keys, you can use the demo DLLs.
The demo DLL for example is named "hasp_windows_x64_demo.dll" or including your vendor code "hasp_windows_x64_12345.dll" (64bit). 32bit Windows DLL is named hasp_windows_12345.dll, hasp_windows_demo.dll or haspvlib_12345.dll.

Now when you have the platform dependent libraries, you can use LoadLibrary() function in this class to load the right one.

HASPHLMBS uses a linked in library. This is okay for older HASP HL versions. But newer versions require you to create your own signed libraries. For them use the HASPHLDMBS class.

75.1.2 Methods

75.1.3 Available as boolean

MBS Dongle Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether library was loaded.
Notes: Returns true if library was loaded successfully or we use internal library.

75.1.4 Close

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Logs out from a context or session.
Notes: Called automatically for you by the destructor.

Use this function to end a connection to an API session object. Once logged out from a session, all memory allocated for the session is released.

Lasterror is set.

75.1.5 Constructor(FeatureID as Integer, scope as string, VendorCode as string)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Logs into a Feature to establish a session, according to predefined search parameters.
Notes: This function is used to specify conditions that describe where login information is to searched for.

The requisite Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor Code, the function call cannot succeed.

You can open up to 512 simultaneous login sessions.

This function does not work with legacy HASP Features.

FeatureID: Unique identifier for a specific Feature stored in a Sentinel HASP protection key
Scope: Definition of the search parameters for this Feature ID. See the additional HASP API Reference documentation for more information about Scope XML Tags.
VendorCode: the vendor code

Lasterror is set. This calls SDK function hasp_login_scope.
See also:

- 75.1.6 Constructor(FeatureID as Integer, VendorCode as string) 12662

75.1.6 Constructor(FeatureID as Integer, VendorCode as string)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Logs into a Feature and thereby establishes a session context.
Notes: This function establishes a context to a Sentinel HASP protection key containing a license for the requested Feature ID.
The requisite Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor Code, the function call cannot succeed.

You can open up to 512 simultaneous login sessions.

Legacy HASP Remarks
For local prognum Features, concurrency is not handled and each login performs a decrement if it is a counting license.

Network "prognum" features continue to use the old HASP LM login logic, with its inherent limitations.

There is only support for concurrent usage of one server (global server address).

With "Program Number" features (see HASP_FEATURETYPE_MASK), 8 bits are reserved for legacy options (see HASP_PROGNUM_OPT_MASK, currently 5 bits are used):

- only local
- only remote
- login is counted per process ID
- disable terminal server check

- enable access to old (HASP3/HASP4) keys

FeatureID: Unique identifier for a specific Feature stored in a Sentinel HASP protection key
VendorCode: the Vendor Code

Lasterror is set. This calls SDK function hasp_login.
See also:

- 75.1.5 Constructor(FeatureID as Integer, scope as string, VendorCode as string) 12661

75.1.7 DateTimeToHaspTime(day as Integer, month as Integer, year as Integer, hour as Integer, minute as Integer, second as Integer) as memoryblock

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Converts a date and time value to hasptime (the number of elapsed seconds since January 1 1970).
Notes: Time values are in UTC.
Memoryblock has 8 bytes.

75.1.8 DecryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decrypts a buffer.
Notes: Decrypts data using the decryption engine in the Sentinel HASP protection key.
The specific session handle determines which Sentinel HASP protection key and which Feature ID decrypts the data buffer. The decryption key remains in the Sentinel HASP protection key. If the decryption fails, the buffer is not modified. To encrypt the data buffer, use the Encrypt function.

Data: The data to decrypt.
DataOffset: Start address in Bytes in the memoryblock.
Size: Data size in Bytes in memoryblock. (16 bytes minimum)

Lasterror is set. This calls SDK function hasp_decrypt.

75.1.9 DecryptString(Data as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decrypts a buffer.
Notes: Decrypts data using the decryption engine in the Sentinel HASP protection key.
The specific session handle determines which Sentinel HASP protection key and which Feature ID decrypts the data buffer. The decryption key remains in the Sentinel HASP protection key. If the decryption fails, the buffer is not modified. To encrypt the data buffer, use the Encrypt function.

Data: The data to decrypt.
Returns the decrypted data.
Lasterror is set. This calls SDK function hasp_decrypt.

75.1.10 Detach(detachAction as string, scope as string, VendorCode as string, recipient as string, byref info as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Detaches or cancels an attached license, according to customizable parameters
Notes: You do not need to be logged in to a Sentinel HASP Feature in order to use this function.
This function is used to detach a license for a Product (i.e. all Sentinel HASP Features and Memory files which belong to this Product) from a HASP SL Protection key. The function returns a H2R file which must then be applied on the recipient machine using hasp_update() or the ACC.
This function only works with HASP SL Protection Keys; HASP HL Protection Keys are ignored.
This function can also be used on the recipient machine to cancel an attached license. In this case, the recipient parameter is ignored and should be set to NULL. For cancelling, the function returns a R2H file which must be applied on the host machine using hasp_update() or the ACC. If the detached Product is already expired, no R2H file will be returned.
The required Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor Code, the function call cannot succeed.

75.1.11 EncryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encrypts a buffer.
Notes: Encrypts data using the encryption engine in the Sentinel HASP protection key.
The specific session handle determines which Sentinel HASP protection key and which Feature ID encrypts the data buffer. The encryption key remains in the Sentinel HASP protection key. If the encryption fails,

Parameter	Description
detachAction:	Parameters for the operation, in XML format. For more information, see the accompanying Sentinel HASP Run-time API help documentation.
scope:	Search parameters for the Product that is to be detached
VendorCode:	The Vendor Code.
recipient:	Definition in XML format of the recipient computer, on which the detached Product will be installed. This information can be retrieved using either GetInfo or GetSessionInfo together with the format specifier HASP_RECIPIENT. Set to "" if an attached protection key is cancelled.
info:	The information that is retrieved, in XML format. This information is a V2C, which can then be installed on the recipient computer via Update.

Return code	Description
HASP_STATUS_OK	Request was successfully completed
HASP_INV_DETACH_ACTION	Invalid XML "detach_action" parameter
HASP_INV_RECIPIENT	Invalid XML "recipient" parameter
HASP_TOO_MANY_PRODUCTS	Scope for Detach does not specify a unique Parameter
HASP_TOO_MANY_USERS	Too many users currently connected, or: at least one detachable Feature does not have enough network seats available
HASP_ACCESS_DENIED	Request cannot be processed due to ACC restrictions
HASP_FEATURE_EXPIRED	All detachable Features are expired
HASP_INV_PRODUCT	Invalid Product information
HASP_INV_DURATION	In the case of a new detachable license, duration exceeds maximum allowed OR, in the case of a detachable license extension, expiration date earlier than original date or too short (if an existing detached Product is extended, and the new expiration date is earlier than the original expiration date)
HASP_INSUF_MEM	Out of memory
HASP_DEVICE_ERR	Input/Output error in HASP SL secure storage, OR in case of a HASP HL key,USB communication error
HASP_LOCAL_COMM_ERR	Communication error between API and local HASP License Manager
HASP_REMOTE_COMM_ERR	Communication error between local and remote HASP License Manager

the buffer is not modified. To decrypt the data buffer, use the Decrypt function.

Data: The data to encrypt.
DataOffset: Start address in Bytes in the memoryblock.
Size: Data size in Bytes in memoryblock. (16 bytes minimum)

Lasterror is set. This calls SDK function hasp_encrypt.

75.1.12 EncryptString(Data as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encrypts a buffer.
Notes: Encrypts data using the encryption engine in the Sentinel HASP protection key.
The specific session handle determines which Sentinel HASP protection key and which Feature ID encrypts the data buffer. The encryption key remains in the Sentinel HASP protection key. If the encryption fails, the buffer is not modified. To decrypt the data buffer, use the Decrypt function.

Data: The data to encrypt. (16 bytes minimum)

Returns encrypted string.

Lasterror is set. This calls SDK function hasp_encrypt.

75.1.13 GetInfo(scope as string, format as string, VendorCode as string, byref info as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves information about system components, according to customizable search parameters, and presents it according to customizable formats.
Notes: You do not need to be logged in to a Sentinel HASP Feature in order to use this function.

This function is used to specify conditions about where to search for information. In addition, it enables you to specify conditions about the format in which the retrieved information is presented. If retrieved information is appropriately formatted, it can be used as a template in the Constructor.

The requisite Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor Code, the function call cannot succeed.

This function cannot be used to retrieve legacy HASP Features.

scope: Definition of the data that is to be searched, in XML format. For more information, see the accompanying Sentinel HASP Run-time API help documentation
format: Definition of the format in which the data is to be displayed, in XML format. For more information, see the accompanying Sentinel HASP Run-time API help documentation.
VendorCode: the Vendor Code
info: The information that is retrieved, in XML format

Return Code	Description
HASP_STATUS_OK	Request was successfully completed
HASP_SCOPE_RESULTS_EMPTY	Unable to locate a Feature matching the scope
HASP_INSUF_MEM	Out of memory
HASP_INV_VCODE	Invalid Vendor Code
HASP_UNKNOWN_VCODE	Vendor Code not recognized
HASP_INVALID_PARAMETER	Scope or format string too long (max. length 32 kb)
HASP_DEVICE_ERR	Input/Output error in HASP SL secure storage, OR in case of a HASP HL key, USB communication error
HASP_LOCAL_COMM_ERR	Communication error between API and local HASP License Manager
HASP_REMOTE_COMM_ERR	Communication error between local and remote HASP License Manager
HASP_INV_FORMAT	Unrecognized format string
HASP_INV_SCOPE	Unrecognized scope string
HASP_BROKEN_SESSION	Session has been interrupted

75.1.14 GetRTC as memoryblock

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the current time.
Notes: Only HASP HL keys with a Real-time clock (rtc) and HASP SL keys can provide the current time.
Primarily used to obtain reliable timestamps that are independent from the system clock.
Time values are returned as the number of seconds that have elapsed since Jan-01-1970 0:00:00 UTC.
This request is only supported on locally accessed keys. Trying to get the time from a remotely accessed key will return HASP_NO_TIME.
Returns time as a 8 byte memoryblock.
Lasterror is set.

75.1.15 GetSessionInfo(format as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves information regarding a session context.
Notes: format: Definition for the type of output data structure, in XML format.
There are three format options:

- HASP_KEYINFO For retrieving information on the Sentinel HASP protection key
- HASP_SESSIONINFO For retrieving information on the login session
- HASP_UPDATEINFO For retrieving information on a license update usually contained in a C2V file. The retrieved information includes the current state of the key, including update counters, license

availability and memory images

Returns answer. Lasterror is set.

HASP_KEYINFO is ”<haspformat format=””keyinfo””/>”
HASP_SESSIONINFO is ”<haspformat format=””sessioninfo””/>”
HASP_UPDATEINFO is ”<haspformat format=””updateinfo””/>”

75.1.16 GetSize(FileID as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the byte size of a memory file from a HASP protection key.
Notes: This function is used to determine the file size of a HASP memory file.
FileID: Identifier for the file that is to be queried.
Returns file size. Lasterror is set.

Possible File ID constants: HASP_FILEID_LICENSE, HASP_FILEID_MAIN, HASP_FILEID_RO or HASP_FILEID_RW.

75.1.17 GetVersion(byref MajorVersion as Integer, byref MinorVersion as Integer, byref BuildServer as Integer, byref BuildNumber as Integer, VendorCode as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves version and build number of the HASP library.
Notes: Returns error code.

75.1.18 HaspTimeToDateTime(time as memoryblock, byref day as Integer, byref month as Integer, byref year as Integer, byref hour as Integer, byref minute as Integer, byref second as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Converts a time value (elapsed seconds since January 1 1970) into a date and time
Notes: Memoryblock has 8 bytes.

Time values are in UTC.

75.1.19 LegacyDecryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Legacy HASP4 compatible decryption function.
Notes: This object must have been created by calling Constructor() with a "prognum" Feature ID.

Data: The memoryblock where bytes are decrypted.
DataOffset is the start position in Bytes in the memoryblock and size the length of the data block to decrypt.
Size: Size of the data in the memoryblock to decrypt.

Lasterror is set.

75.1.20 LegacyDecryptString(Data as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Legacy HASP4 compatible decryption function.
Notes: This object must have been created by calling Constructor() with a "prognum" Feature ID.

Lasterror is set.

75.1.21 LegacyEncryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Legacy HASP4 compatible encryption function.
Notes: This object must have been created by calling Constructor() with a "prognum" Feature ID.

Data: The memoryblock where bytes are encrypted.
DataOffset is the start position in Bytes in the memoryblock and size the length of the data block to encrypt.
Size: Size of the data in the memoryblock to encrypt.

Lasterror is set.

75.1.22 LegacyEncryptString(Data as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Legacy HASP4 compatible encryption function.
Notes: This object must have been created by calling Constructor() with a "prognum" Feature ID.

Lasterror is set.

75.1.23 LegacySetIdleTime(idletime as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the LM idle time.
Notes: This object must have been created by calling Constructor() with a "prognum" Feature ID.

time: The idle time in minutes.

Lasterror is set.

75.1.24 LegacySetRTC(time as memoryblock)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes to HASP4-compatible real-time clock.
Notes: This object must have been created by calling Constructor() with a "prognum" Feature ID.

This request is only supported on locally accessed keys. Attempting to set the time on a remotely accessed key will return HASP_NO_TIME.

time: The new time value (8 byte Memoryblock)

Lasterror is set.

75.1.25 LoadLibrary(file as folderitem) as boolean

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the HASPHL shared library.
Notes: Returns true on success and false on failure.

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library or a Mac OS X framework from the given path.
See also:

- 75.1.26 LoadLibrary(path as string) as boolean 12671

75.1.26 LoadLibrary(path as string) as boolean

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the HASPHL shared library.
Notes: Returns true on success and false on failure.
Path can be an absolute, a relative or just a file name.

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library or a Mac OS X framework from the given path.
See also:

- 75.1.25 LoadLibrary(file as folderitem) as boolean 12671

75.1.27 ReadMemory(FileID as Integer, Offset as Integer, Size as Integer) as Memoryblock

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the memory of a Sentinel HASP protection key.
Notes: Valid File IDs are HASP_FILEID_RW and HASP_FILEID_RO.

Legacy HASP Remarks
Valid File IDs are HASP_FILEID_LICENSE and HASP_FILEID_MAIN.

FileID: Identifier for the file that is to be read
Offset: Byte offset in the file

Size: Number of bytes to read.

Lasterror is set.

75.1.28 ReadString(FileID as Integer, Offset as Integer, Size as Integer) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the memory of a Sentinel HASP protection key.
Notes: Valid File IDs are HASP_FILEID_RW and HASP_FILEID_RO.

Legacy HASP Remarks
Valid File IDs are HASP_FILEID_LICENSE and HASP_FILEID_MAIN.

FileID: Identifier for the file that is to be read
Offset: Byte offset in the file
Size: Number of bytes to read.

Lasterror is set.

75.1.29 Transfer(action as string, scope as string, VendorCode as string, recipient as string, byref info as string) as Integer

MBS Dongle Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Performs a transfer operation.
Notes: Sentinel Licensing API Usage Notes
You do not need to be logged in to a Sentinel Feature in order to use this function.

This function is used to perform the following task as per its
"action" parameter.
for "detach" action: detach a license for a Product (i.e. all Sentinel Features and Memory files which belong to this Product) from a Sentinel SL/SL-AdminMode/SL-UserMode key. The function returns a bufferwhich should be saved as H2R file.

for "cancel" action: This action runs on the recipient machine to cancel an attached license. In this case, the
recipient parameter is ignored and should be set to "". For cancelling, the function returns a buffer which

must be applied on the host machine using Update() or ACC If the detached Product is already expired, no buffer will be returned.

for "rehost" action: create a tranferable a license for given container (i.e. all Sentinel Features and Memory files
which belong to this container) from SL-AdminMode/SL-UserMode Protection key. The function returns buffer on success which must be saved as V2C file. Update() or ACC is used to apply this on destination machine.

This function only works with Sentinel SL/SL-AdminMode/SL-UserMode Protection Keys; Sentinel HL Protection Keys are ignored.

The required Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor Code, the function call cannot succeed.

action: Parameters for the operation, in XML format. For more information, see the accompanying Sentinel Licensing API help documentation.
scope: Search parameters for the conatiner-id that is to be re-hosted. For more information, see the accompanying
Sentinel Licensing API help documentation.
VendorCode: The Vendor Code
recipient: Definition in XML format of the recipient computer, on which the detached Product will be installed.

This information can be retrieved using either GetInfo or GetSessionInfo together with the format specifier

info: String for the information that is retrieved, in XML format. This information is a V2C, which can then be installed on the destination computer via Update.

75.1.30 Update(data as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates a Sentinel HASP protection key.
Notes: This function writes update information. Note that the Sentinel HASP protection key must be locally connected.

The update code contains all necessary data to perform the update on a deployed Sentinel HASP protection key including:

- The Sentinel HASP protection key on which the updated information is to be written
- The necessary Vendor Code that is required to access the Sentinel HASP key
- The actual update information

Depending on the update data, the function returns an acknowledgement code that is signed/encrypted by the key. The code is evidence that an update has been applied to a license.

data: The update data.
Returns the acknowledge data.

Lasterror is set.

75.1.31 WriteMemory(FileID as Integer, FileOffset as Integer, Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes to the memory of a Sentinel HASP protection key.
Notes: Valid File ID is HASP_FILEID_RW.

Depending on the provided session handle (either logged into the default Feature or any other Feature), write access to the FAS memory (HASP_FILEID_LICENSE) is not permitted.

FileID: Identifier for the file that is to be written
FileOffset: Byte offset in the file
Data: the data
DataOffset: Start address in Bytes in the memoryblock.
Size: Data size in Bytes in memoryblock.

Lasterror is set.

75.1.32 WriteString(FileID as Integer, FileOffset as Integer, Data as String)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes to the memory of a Sentinel HASP protection key.
Notes: alid File ID is HASP_FILEID_RW.

Depending on the provided session handle (either logged into the default Feature or any other Feature), write access to the FAS memory (HASP_FILEID_LICENSE) is not permitted.

FileID: Identifier for the file that is to be written
FileOffset: Byte offset in the file
Data: the data

Lasterror is set.

75.1.33 Properties

75.1.34 Handle as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Internal handle for the session.
Notes: (Read and Write property)

75.1.35 Lasterror as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error value.
Notes: (Read and Write property)

75.1.36 Constants

Constants

Constant	Value	Description
HASP_DEFAULT_FID	0	The HASP default Feature ID. Available in every HASP key.
HASP_FEATURETYPE_MASK	&hffff0000	Legacy HASP HL Run-time API: ”Feature Type” mask. AND-mask used to identify Feature type.
HASP_INVALID_HANDLE_VALUE	0	Invalid handle value for Handle property.
HASP_MIN_BLOCK_SIZE	16	Minimum block size for encrypt and decrypt functions.
HASP_MIN_BLOCK_SIZE_LEGACY	8	Minimum block size for legacy encrypt and legacy decrypt f
HASP_PROGNUM_DEFAULT_FID	&hffff0000	Legacy HASP HL Run-time API: The HASP default Featur Available in every legacy HASP hardware key.
HASP_PROGNUM_FEATURETYPE	&hffff0000	Legacy HASP HL Run-time API: ”Program Number Featur After AND-ing with HASP_FEATURETYPE_MASK the tain this value.
HASP_PROGNUM_MASK	&h000000ff	Legacy HASP HL Run-time API: ”Program Number Mask” AND-mask used to extract the Program Number from a ” ID.
HASP_PROGNUM_OPT_CLASSIC	&h00001000	Legacy HASP HL Run-time API: ”Program Number” optio Enables the API to access ”classic” (HASP4 or earlier) keys
HASP_PROGNUM_OPT_MASK	&h0000ff00	Legacy HASP HL Run-time API: ”Program Number Optior AND-mask used to identify Program Number options: * HASP_PROGNUM_OPT_NO_LOCAL * HASP_PROGNUM_OPT_NO_REMOTE * HASP_PROGNUM_OPT_PROCESS * HASP_PROGNUM_OPT_CLASSIC * HASP_PROGNUM_OPT_TS 3 bits of the mask are reserved for future extensions and cu Initialize them with zero.
HASP_PROGNUM_OPT_NO_LOCAL	&h00008000	Legacy HASP HL Run-time API: ”Program Number” optio Disables the search for local licenses.
HASP_PROGNUM_OPT_NO_REMOTE	&h00004000	Legacy HASP HL Run-time API: ”Program Number” optio Disables the search for network licenses.
HASP_PROGNUM_OPT_PROCESS	&h00002000	Legacy HASP HL Run-time API: ”Program Number” optio Sets session count of network licenses to ”per-process”.
HASP_PROGNUM_OPT_TS	&h00000800	Legacy HASP HL Run-time API: ”Program Number” optio Ignores the presence of terminal servers.

HASP Error Codes

Constant	Value	Description
HASP_ACCESS_DENIED	5	Access to Feature, HASP protection key or functionality denied.
HASP_ALREADY_LOGGED_IN	502	C++ API: Logging in twice to the same object.
HASP_ALREADY_LOGGED_OUT	503	C++ API: Logging out twice of the same object
HASP_BROKEN_SESSION	39	Session been interrupted.
HASP_CANNOT_READ_FILE	72	File not found or access denied.
HASP_CLONE_DETECTED	64	Cloned HASP SL secure storage detected.
HASP_CONTAINER_NOT_FOUND	7	Deprecated - use HASP_HASP_NOT_FOUND.
HASP_DETACHED_LICENSE_FOUND	76	Format SL-AdminMode or migrate SL-Legacy to SL-AdminMod as container has detached license.
HASP_DETACH_DISABLED	74	Detach of license not allowed as product. contains VM disabled feature and host machine is a virtual mac
HASP_DEVICE_ERR	43	Input/Output error occurred in secure storage area of HASP SL l error occurred when communicating with a HASP HL key
HASP_DUPLICATE_HOSTNAME	79	Duplicate Hostname found while key contains Hostname Finger
HASP_ENC_NOT_SUPP	23	Sentinel HASP protection key does not support encryption type
HASP_EXTENSION_NOT_ALLOWED	73	Extension of license not allowed as number of detached. licenses is greater than current concurrency count.
HASP_FEATURE_EXPIRED	41	Feature expired.
HASP_FEATURE_NOT_FOUND	31	Requested Feature not available.
HASP_FEATURE_TYPE_NOT_IMPL	28	Requested Feature type not implemented.
HASP_FILEID_DYNAMIC_FIRST	1	Sentinel dynamic memory file ID avaliable range File ID lower limit for Sentinel dynamic memory file.
HASP_FILEID_DYNAMIC_LAST	&hffbf	Sentinel dynamic memory file ID avaliable range File ID upper limit for Sentinel dynamic memory file.
HASP_FIRST_HASP_ACT	3001	Reserved for HASP Activation API
HASP_FIRST_HELPER	2001	Reserved for HASP helper libraries.
HASP_HARDWARE_MODIFIED	52	HASP SL key incompatible with machine hardware; HASP SL to different hardware. OR: In the case of a V2C file, conflict b SL key data and machine hardware data; HASP SL key locke hardware
HASP_HASP_INACTIVE	66	Specified Hasp Id is in Inactive state
HASP_HASP_NOT_FOUND	7	Sentinel HASP protection key not available.
HASP_INCOMPAT_FEATURE	6	Legacy decryption function cannot work on Feature.
HASP_INSUF_MEM	3	System is out of memory.
HASP_INT_ERR	699	Internal error occurred in API.
HASP_INVALID_OBJECT	500	C++ API: Object incorrectly initialized.
HASP_INVALID_PARAMETER	501	Invalid function parameter.
HASP_INV_ACTION	59	Invalid XML "action" parameter
HASP_INV_API_DYLIB	401	API dispatcher: Unable to load API; DLL possibly corrupt?
HASP_INV_DETACH_ACTION	59	Invalid XML "action" parameter.
HASP_INV_DURATION	63	Invalid duration.
HASP_INV_FILEID	10	Specified File ID not recognized by API.
HASP_INV_FORMAT	15	Invalid XML format.
HASP_INV_HND	9	Invalid login handle passed to function.
HASP_INV_PORT	651	Internal use: invalid port value.
HASP_INV_PORT_TYPE	650	Internal use: invalid port type.
HASP_INV_PRODUCT	61	Invalid Product information.
HASP_INV_PROGNUM_OPT	2	Legacy HASP HL Run-time API: Unknown/Invalid Feature ID
HASP_INV_RECIPIENT	58	Invalid XML "recipient" parameter.
HASP_INV_SCOPE	36	Invalid XML scope.
HASP_INV_SIG	30	Signature verification operation failed.
HASP_INV_SPEC	35	Invalid XML specification.
HASP_INV_TIME	24	Passed time value outside supported value range.
HASP_INV_UPDATE_CNTR	21	Update counter set incorrectly.
HASP_INV_UPDATE_DATA	19	Required XML tags not found; Contents in binary data are miss
HASP_INV_UPDATE_NOTSUPP	20	Update request not supported by Sentinel HASP protection key
HASP_INV_UPDATE_OBJ	17	Binary data passed to function does not contain valid update.
HASP_INV_VCODE	22	Invalid Vendor Code passed.

Memory File ID constants

Constant	Value	Description
HASP_FILEID_LICENSE	&hfff2	Legacy HASP HL Run-time API: HASP4 FAS memory file (Dummy) File ID for the license data area of memory contents.
HASP_FILEID_MAIN	&hfff0	Legacy HASP HL Run-time API: HASP4 memory file File ID for HASP4-compatible memory contents w/o FAS.
HASP_FILEID_RO	&hfff5	Sentinel HASP secure read only memory file. File ID for HASP Sentinel HASP read only memory.
HASP_FILEID_RW	&hfff4	Sentinel HASP secure writable memory file File ID for Sentinel HASP secure writable memory.

75.2 class Rockey4NDMBS

75.2.1 class Rockey4NDMBS

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to handle calls to the Rockey4ND Dongle API.
Notes: Available for:

- macOS
- Linux on Intel
- Linux 64-bit on ARM
- Windows on Intel

Unavailable for:

- iOS
- Linux 32-bit on ARM
- Windows 64-bit on ARM

We may add more targets once we get newer SDK versions with new libraries.
Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 26.4
- MBS Xojo Plugins, version 26.4pr1
- MBS Xojo Plugins, version 20.6pr4
- MBS Xojo Plugins 18.3
- MBS Xojo Plugins, version 18.3pr2
- MBS Xojo Plugins, version 18.3pr1

75.2.2 Methods

75.2.3 Available as Boolean

MBS Dongle Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Checks whether the class is available
Example:

```
if Rockey4NDMBS.Available then

// check dongle

else

// can't check dongle

end if
```

Notes: Available for:

- macOS
- Linux on Intel
- Linux 64-bit on ARM
- Windows on Intel

Unavailable for:

- iOS
- Linux 32-bit on ARM
- Windows 64-bit on ARM

We may add more targets once we get newer SDK versions with new libraries.

75.2.4 Rockey(FunctionCode as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls the Rockey Dongle API.
Example:

```
Var r as RockeyMBS
Var e as Integer

r=new RockeyMBS
```

```
r.p1=&HC44C
r.p2=&HC8F8
r.p3=0
r.p4=0

e=r.Rockey(1)

if e=0 then
MessageBox "Found dongle: "+hex(r.lp1)
else
MessageBox "Error: "+str(e)
end if
```

Notes: See the Rockey dongle documentation for more details.

Be aware that no endian correction is done!

Error codes from the plugin:
-1 = memoryblock is nil
-2 = library not present

75.2.5 RockeyCall(FunctionCode as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Same as Rockey but a different name for compatibility.
Notes: The original Rockey dongle calls the function RockeyCall.

75.2.6 Properties

75.2.7 Buffer as MemoryBlock

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A one KB big buffer.
Notes: (Read and Write property)

75.2.8 Handle as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The 16bit handle value.
Notes: (Read and Write property)

75.2.9 LP1 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The first 32bit parameter for the rockey function.
Notes: (Read and Write property)

75.2.10 LP2 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The second 32bit parameter for the rockey function.
Notes: (Read and Write property)

75.2.11 P1 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The first 16bit parameter for the rockey function.
Notes: (Read and Write property)

75.2.12 P2 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The second 16bit parameter for the rockey function.
Notes: (Read and Write property)

75.2.13 P3 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The third 16bit parameter for the rockey function.
Notes: (Read and Write property)

75.2.14 P4 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The fourth 16bit parameter for the rockey function.
Notes: (Read and Write property)

75.3 module SGLockMBS

75.3.1 module SGLockMBS

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The MBS Module for using SG-Lock dongles in Xojo.
Example:

```
// check whether the SG-Lock dongle for your product is plugged in
Const ProductID = 1234 // your product ID stored in the dongle
If SGLockMBS.SearchLock(ProductID) Then
System.DebugLog "Dongle found, serial " + SGLockMBS.SerialNumber.ToString
Else
MessageBox "Please plug in the dongle."
End If
```

Notes: See website:
https://www.sg-lock.com

Please read manual from SG Intec for details.

Works on all platforms (except iOS) in case you have a matching dylib/dll/so file.
Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.5
- MBS Xojo Plugins, version 18.5pr8

75.3.2 Methods

75.3.3 Authenticate(AuthentCode as MemoryBlock)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Authentication of SG-Lock library to the protected application and vice versa.
Notes: This function of the SG-Lock API has to be called once first and successfully to enable all other API functions. In the case of dynamic linking the authentication is required after every link procedure (LoadLibrary call).

Every customer get his unique Authentcode when purchasing SG-Lock (non Demo) the first time. Demo kits have an own authentication code (see example source code files).

AuthentCode: 48 byte sequence, that is unique to every SG-Lock customer. As array, it's 12 values in the array.

Lasterror is set to kErrorSuccess on success and an error code otherwise.
See also:

- 75.3.4 Authenticate(AuthentCode() as UInt32) 12685

75.3.4 Authenticate(AuthentCode() as UInt32)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Authentication of SG-Lock library to the protected application and vice versa.
Notes: This function of the SG-Lock API has to be called once first and successfully to enable all other API functions. In the case of dynamic linking the authentication is required after every link procedure (LoadLibrary call).

Every customer get his unique Authentcode when purchasing SG-Lock (non Demo) the first time. Demo kits have an own authentication code (see example source code files).

AuthentCode: 48 byte sequence, that is unique to every SG-Lock customer. As array, it's 12 values in the array.

Lasterror is set to kErrorSuccess on success and an error code otherwise.
See also:

- 75.3.3 Authenticate(AuthentCode as MemoryBlock) 12684

75.3.5 CloseLibrary

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Unloads and closes DLL.

75.3.6 CryptLock(ProductId as UInt32, KeyNum as UInt32, CryptMode as UInt32, Data as MemoryBlock) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encrypts or decrypts data on the dongle.
Notes: En- or decrypts one or more 64-bit data blocks with 128-bit key. The crypto- graphic algorithm is TEA.

ProductId: Indicates the ProductId of the SG-Lock
KeyNum: Number of key to use 0 to 1 - SG-Lock U3 0 to 15 - SG-Lock U4
CryptMode: Working mode. kCryptModeEncrypt = 0 for Encrypt, kCryptModeDecrypt = 1 for Decrypt.
Data: Input data. Should be multiply of 4 in length.

Returns the output data.

Lasterror property is set.

75.3.7 LoadLibraryFile(File as folderItem) as boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the dll/dylib/so file at the give path.
Notes: Returns true on success or false on failure.
Please call once on app startup to load library.
Sets LibraryError property in case of error.

75.3.8 LoadLibraryPath(Path as String) as boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the dll/dylib/so file at the give path.
Notes: Returns true on success or false on failure.
Please call once on app startup to load library.
Sets LibraryError property in case of error.

75.3.9 ReadConfig(ProductId as UInt32, Category as UInt32 = 0) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads configuration information about SG-Lock.
Notes: ProductId: Indicates the ProductId of the SG-Lock

Category: Type of requested information. currently only 0 for Information about SG-Lock modul.

Returns memoryblock with an array of 8 integers of 32-bit. The meaning of the single values are:

Index 0: Type
Index 1: Interface
Index 2: Software Version
Index 3: Hardware Version
Index 4: Serial number
Index 5: Memory size in Dwords
Index 6: Number of counters
Index 7: Number of 128-Bit Keys

Updates HardwareVersion, CounterCount, KeyCount, MemorySize, MemorySizeBytes, SerialNumber, SoftwareVersion, Type and InterfaceType properties.

Lasterror is set.

75.3.10 ReadCounter(ProductId as UInt32, CntNum as UInt32) as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads a 32-bit count value from the SG-Lock memory.
Notes: ProductId: Indicates the ProductId of the SG-Lock
CntNum: Number of counter, 0 to 15 - SG-Lock U3 0 to 63 - SG-Lock U4

Returns the value read.
Lasterror property is set.

Counters are simple 32 bit data values in the SG-Lock memory. If desired, they can also be used for everything a 32 bit read/write variable is suitable for. By doing so you can extend the general purpose memory over the indicated size.

75.3.11 ReadData(ProductId as UInt32, Address as UInt32, LongCount as UInt32) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read 32-bit data from the SG-Lock memory.

Notes: ProductId: Indicates the ProductId of the SG-Lock
Address: Start address of data value block 0 to 63 - SG-Lock U3 or 0 to 255 - SG-Lock U4
Count: Number of data values to read, each 4 bytes.

Returns memoryblock with data values.
Lasterror property is set.

75.3.12 ReadProductId as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the 16-bit ProductId from the SG-Lock.
Notes: Lasterror property is set.

The ProductId is an identifier that eases to distinguish between different protected applications of SG-Lock users. For example company X protects its application A and B with SG-Lock and gives all keys for application A the ProductId 1 and the keys for application B the ProductId 2, then all keys of application B are ,Äùhidden,Äú for application A and vice versa. This simple mechanism offers an effective way to prevent confusion between keys of different applications. Setting of the ProductId should be integrated into the initial- ization process of the SG-Locks before distributing with the protected software.

Returns the ProductId assigned to dongle.
Lasterror is set.

75.3.13 ReadSerialNumber(ProductId as UInt32) as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the for every SG-Lock unique serial number.
Notes: ProductId: Indicates the ProductId of the SG-Lock

Returns the serial number will be given back to the calling application

Lasterror property is set.

Every SG-Lock has a serial number that is unique, which is also not depending on type and interface.

75.3.14 SearchLock(ProductId as UInt32) as Boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Searches for a SG-Lock device.
Notes: ProductId: Indicates the ProductId of the SG-Lock looked for

Updates HardwareVersion, CounterCount, KeyCount, MemorySize, MemorySizeBytes, SerialNumber, SoftwareVersion, Type and InterfaceType properties.

75.3.15 SignData(ProductId as UInt32, AppSignKey as MemoryBlock, LockSignKeyNum as UInt32, LockSignInterval as UInt32 = 0, Data as MemoryBlock) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Signs the data.
Notes: The task will will be processed by the SG-Lock and if desired also by the application (PC-CPU) to accelerate the signing process (combined mode). Important condition for combined mode: Both keys (application and SG-Lock internal) have to be different, to ensure highest security! The signature is 64-bit long.

ProductId: Indicates the ProductId of the SG-Lock
AppSignKey: The 128-bit key used by the application for sign- ing and verification. Pointer to an array of 4 in- teger values of 32-bit. Only needed in combined mode otherwise set 0.
LockSignKeyNum: Number of 128-bit key in SG-Lock for signing and verification.
LockSignInterval: Indicates the partitioning of computing power between SG-Lock and application (PC-CPU). 0 is SG-Lock only. If >0 the value is used as the power of 2, where the result of that determines which block index is signed or verified by the SG-Lock. E.g. value= 8, 28ÀÜ=256, that means the first and after that every 256th block is processed by the SG-Lock and all others by the application (PC-CPU). That means 1/256= 0.4% of the task is done by the SG-Lock and 99.6% by the PC- CPU. The result is a very high acceleration of the process.
Data: Pointer to the memoryblock with of 32-bit values to sign or verify.

Returns signature as memoryblock.

Lasterror property is set.

The same value for the parameter LockSignInterval has to be used for signing and verifying a certain data block, when using different 128-bit keys in the SG-Lock and application (highly recommended for highest security). The reasons is, that the 128-bit key in the application is less safe than the 128-bit key in the

SG-Lock. When a hacker succeeds to investigate the 128-bit key in the application (which is in principle possible), then he will try that also first for the SG-Lock. That will fail, if a differnt 128-bit key is used in the SG-Lock. For a deeper understanding of the function, please take a look into the SG-Lock include/header file for your programming language. You will find the source code of the function in it.

75.3.16 TeaDecipher(data as MemoryBlock, Key as MemoryBlock) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decrypt data.
Notes: Encryption happens in plugin using sample code from SG.
Data is memoryblock with 8 bytes of data.
Key is memoryblock with 16 bytes in size.

Lasterror property is set.

75.3.17 TeaEncipher(data as MemoryBlock, Key as MemoryBlock) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encrypt data.
Notes: Encryption happens in plugin using sample code from SG.
Data is memoryblock with 8 bytes of data.
Key is memoryblock with 16 bytes in size.

Lasterror property is set.

75.3.18 VerifyData(ProductId as UInt32, AppSignKey as MemoryBlock, LockSignKeyNum as UInt32, LockSignInterval as UInt32 = 0, Data as MemoryBlock, Signature as MemoryBlock) as Boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Verifies the signature with the data.
Notes: The task will will be processed by the SG-Lock and if desired also by the application (PC-CPU) to accelerate the signing process (combined mode). Important condition for combined mode: Both keys

(application and SG-Lock internal) have to be different, to ensure highest security! The signature is 64-bit long.

ProductId: Indicates the ProductId of the SG-Lock
AppSignKey: The 128-bit key used by the application for sign- ing and verification. Pointer to an array of 4 in- teger values of 32-bit. Only needed in combined mode otherwise set 0.
LockSignKeyNum: Number of 128-bit key in SG-Lock for signing and verification.
LockSignInterval: Indicates the partitioning of computing power between SG-Lock and application (PC-CPU). 0 is SG-Lock only. If >0 the value is used as the power of 2, where the result of that determines which block index is signed or verified by the SG-Lock. E.g. value= 8, 28ÀÜ=256, that means the first and after that every 256th block is processed by the SG-Lock and all others by the application (PC-CPU). That means 1/256= 0.4% of the task is done by the SG-Lock and 99.6% by the PC- CPU. The result is a very high acceleration of the process.
Data: Pointer to the memoryblock with of 32-bit values to sign or verify.
Signature: The signature as memory block.

Lasterror property is set.

The same value for the parameter LockSignInterval has to be used for signing and verifying a certain data block, when using different 128-bit keys in the SG-Lock and application (highly recommended for highest security). The reasons is, that the 128-bit key in the application is less safe than the 128-bit key in the SG-Lock. When a hacker succeeds to investigate the 128-bit key in the application (which is in principle possible), then he will try that also first for the SG-Lock. That will fail, if a differnt 128-bit key is used in the SG-Lock. For a deeper understanding of the function, please take a look into the SG-Lock include/header file for your programming language. You will find the source code of the function in it.

75.3.19 WriteCounter(ProductId as UInt32, CntNum as UInt32, Data as UInt32)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes a 32-bit count value to the SG-Lock memory.
Notes: ProductId: Indicates the ProductId of the SG-Lock
CntNum: Number of counter, 0 to 63 - SG-Lock U3 0 to 255 - SG-Lock U4
Data: Counter value to be written

Lasterror property is set.

75.3.20 WriteData(ProductId as UInt32, Address as UInt32, Data as MemoryBlock)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes 32-bit data values to SG-Lock memory.
Notes: ProductId: Indicates the ProductId of the SG-Lock
Address: Startaddress of data value block 0 to 63 - SG-Lock U3, 0 to 255 - SG-Lock U4
Count: Number of data values
Data: Memoryblock, where data values be copied from. (size is multiply of 4)

Lasterror property is set.

75.3.21 WriteKey(ProductId as UInt32, Address as UInt32, Key as MemoryBlock)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes a 128-bit key to the SG-Lock key memory.
Notes: ProductId: Indicates the ProductId of the SG-Lock
KeyNum: Number of the key to be written 0 to 1 - SG-Lock U3, 0 to 15 - SG-Lock U4
Key: 128-bit Key to be written. Pointer to data array of 4 integer values of 32-bit, that form the 128-bit key

Lasterror property is set.
The 128-bit key of the U2 is read only and not changeable.

75.3.22 WriteProductId(OldProductId as UInt32, NewProductId as UInt32) as Boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes a new 16-bit ProductId to the SG-Lock.
Notes: OldProductId: Indicates the actual ProductId of the SG-Lock
NewProductId: Indicates the new ProductId of the SG-Lock

Returns true on success or false on failure.

Lasterror property is set.

75.3.23 Properties

75.3.24 Available as Boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether library has been loaded and functions are available.
Notes: Returns true if you can call functions without getting a FunctionNotFoundException.

Works on all platforms (except iOS) in case you have a matching dylib/dll/so file.
(Read only property)

75.3.25 CounterCount as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of counters.
Notes: Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

75.3.26 HardwareVersion as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The hardware version number.
Notes: Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

75.3.27 InterfaceType as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The type of interface.
Notes: Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

75.3.28 KeyCount as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of 128-bit keys.
Notes: Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

75.3.29 Lasterror as Integer

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code returned by a function.
Notes: (Read and Write property)

75.3.30 LibraryError as String

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The error message from loading the library.
Notes: (Read only property)

75.3.31 MemorySize as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The memory size in data words.
Notes: MemorySizeBytes = 4 * MemorySize
Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

75.3.32 MemorySizeBytes as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The memory size in bytes.
Notes: Updated by plugin when you call SearchLock or ReadConfig methods.

(Read only property)

75.3.33 SerialNumber as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The serial number of the dongle.
Notes: Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

75.3.34 SoftwareVersion as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The software version.
Notes: Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

75.3.35 Type as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The type of dongle.
Notes: Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

75.3.36 Constants

SG-Lock Types

Constant	Value	Description
kConfigLockSeries2	1	Series 2
kConfigLockSeries3	2	Series 3
kConfigLockSeries4	3	Series 4

Crypto Modes

Constant	Value	Description
kCryptModeDecrypt	1	Decrypt it
kCryptModeEncrypt	0	Encrypt it

Errors

Constant	Value	Description
kErrorAuthenticationFailed	6	Authentification with Authenticate failed.
kErrorAuthenticationRequired	5	Authentication with Authenticate function not or not error free processed.
kErrorDongleNotFound	1	Dongle not found.
kErrorFunctionNotSupported	7	The called function is not supported by the found SG-Lock.
kErrorLPTBusy	2	The LPT (printer port) is busy.
kErrorLPTOpenError	3	The LPT (printer port) could not be opened.
kErrorNoLPTPortFound	4	The LPT (printer port) was not found.
kErrorParameterInvalid	8	Parameter of the called function is out of the vaild value range.
kErrorSignatureInvalid	9	Signature invalid.
kErrorSuccess	0	All okay.
kErrorUSBBusy	10	Another application is claming the SG-Lock for more than 5 seconds.

Interface Types

Constant	Value	Description
kInterfaceLPT	1	Printer port connection.
kInterfaceUSB	0	USB connection.

Sign Modes

Constant	Value	Description
kSignModeSign	0	Sign the data.
kSignModeVerify	1	Verify the signature.

75.4 class UnikeyMBS

75.4.1 class UnikeyMBS

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to enable Xojo to use Unikey dongles.
Notes: Website:
http://www.esecutech.com

Available for:

- MacOS 64-bit on ARM
- MacOS 64-bit on Intel
- MacOS 32-bit on Intel
- Linux 32-bit on ARM
- Linux 32-bit on Intel
- Linux 64-bit on ARM
- Linux 64-bit on Intel
- Windows 32-bit on Intel
- Windows 64-bit on Intel

Unavailable for:

- iOS
- Windows 64-bit on ARM

We may add more targets once we get newer SDK versions with new libraries.
Blog Entries

- MBS Xojo Plugins, version 25.3pr5
- MBS Xojo Plugins, version 25.3pr4
- MBS Releases the MBS Xojo / Real Studio plug-ins in version 16.4

75.4.2 Methods

75.4.3 Calculate1(StartAddress as Integer, Module as Integer, byref RegA as Integer, byref RegB as Integer, byref RegC as Integer, byref RegD as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return the results of a calculation performed in UniKey, using input provided by the developer and the CALCULATE1 function.
Notes: See Unikey API Reference for details on UniKey_Calculate1 function.
Returns error code.

75.4.4 Calculate2(StartAddress as Integer, Seed as Integer, byref RegA as Integer, byref RegB as Integer, byref RegC as Integer, byref RegD as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return the results of a calculation performed in UniKey, using input provided by the developer and the CALCULATE2 function.
Notes: See Unikey API Reference for details on UniKey_Calculate2 function.
Returns error code.

75.4.5 Calculate3(StartAddress as Integer, Module as Integer, byref RegA as Integer, byref RegB as Integer, byref RegC as Integer, byref RegD as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return results of a calculation performed in UniKey, using input provided by the developer and the CALCULATE3 function.
Notes: See Unikey API Reference for details on UniKey_Calculate3 function.
Returns error code.

75.4.6 CheckModule(Module as Integer, byref Value as Integer, byref Decrease as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the attributes of a specific UniKey license module.
Notes: See Unikey API Reference for details on UniKey_Check_Module function.
Returns error code.

75.4.7 CheckTimeModule(Module as Integer, byref RemainDays as Integer, Year as Integer, Month as Integer, Day as Integer, Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the attributes of a specific UniKey Time license module.
Notes: See Unikey API Reference for details on UniKey_Check_Time_Module function.
Returns error code.

75.4.8 CheckTimeModuleNow(Module as Integer, byref RemainDays as Integer, byref RemainHours as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the attributes of a specific UniKey Time license module now.
Notes: See Unikey API Reference for details on UniKey_Check_Time_Module_Now function.
Returns error code.

75.4.9 CheckTimeModuleNowPC(Module as Integer, byref RemainDays as Integer, byref RemainHours as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the attributes of a specific UniKey Time license module Now PC.
Notes: See Unikey API Reference for details on UniKey_Check_Time_Module_Now_PC function.
Returns error code.

75.4.10 Decrypt(BufferLength as Integer, KeyNumber as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decrypt an amount of memory with a key.
Notes: The length of data must be a multiple of 8.
See Unikey API Reference for details on UniKey_Decrypt function.
Returns error code.

75.4.11 Encrypt(BufferLength as Integer, KeyNumber as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encrypt an amount of memory with a key.
Notes: The length of data must be a multiple of 8.
See Unikey API Reference for details on UniKey_Encrypt function.
Returns error code.

75.4.12 EraseTimeModule(Module as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Erase/Reset a real time module, and all the info in the module will be erased including start, end or duration.
Notes: See Unikey API Reference for details on UniKey_Erase_Time_Module function.
Returns error code.

75.4.13 Find(byref Setting1 as Integer, byref Setting2 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Check if a specific UniKey is attached to the USB port.
Notes: This is the first API to start a UniKey session.
Sets handle property.

See Unikey API Reference for details on UniKey_Find function.

75.4.14 FindNext(byref Setting1 as Integer, byref Setting2 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Check if another UniKey is attached to the USB port.
Notes: Sets the handle property.
Returns error code.
See Unikey API Reference for details on UniKey_Find_Next function.

75.4.15 GenerateKey(KeyNumber as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Generate a new key in the specific key storage.
Notes: See Unikey API Reference for details on UniKey_Generate_Key function.
Returns error code.

75.4.16 GenerateKeyViaSeed(KeyNumber as Integer, byref Seed1 as Integer, byref Seed2 as Integer, byref Seed3 as Integer, byref Seed4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Generate a new key in the specific key storage via seed.
Notes: See Unikey API Reference for details on UniKey_Generate_Key_Via_Seed function.
Returns error code.

75.4.17 GenerateNewPassword(Seed as Integer, byref Password1 as Integer, byref Password2 as Integer, byref Password3 as Integer, byref Password4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Generate a new password via a seed code; the mapping from the seed code to the password is only one way. Without the seed, you cannot generate the same password.

Notes: See Unikey API Reference for details on UniKey_Generate_New_Password function.
Returns error code.

75.4.18 GetCliNum(byref Count as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the UniKey client number.
Notes: See Unikey API Reference for details on UniKey_Get_Cli_Num function.
Returns error code.

75.4.19 GetDongleLocation(byref IP as String) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the Server IP, if it is local, return 127.0.0.1.
Notes: See Unikey API Reference for details on UniKey_Get_Dongle_Location function.
Returns error code.

75.4.20 GetMaxNum(byref Count as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the maximum client number.
Notes: See Unikey API Reference for details on UniKey_Get_Max_Num function.
Returns error code.

75.4.21 GetModule(Module as Integer, byref Value as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get a value from a specific UniKey license module.
Notes: See Unikey API Reference for details on UniKey_Get_Module function.
Returns error code.

75.4.22 GetModuleEndTime(Module as Integer, byref Year as Integer, byref Month as Integer, byref Day as Integer, byref Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the end time of a specific UniKey Time license module.
Notes: See Unikey API Reference for details on UniKey_Get_Module_End_Time function.
Returns error code.

Not supported for 64-bit Linux and Mac PPC.

75.4.23 GetModuleStartTime(Module as Integer, byref Year as Integer, byref Month as Integer, byref Day as Integer, byref Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the start time of a specific UniKey Time license module.
Notes: See Unikey API Reference for details on UniKey_Get_Module_Start_Time function.
Returns error code.

Not supported for 64-bit Linux and Mac PPC.

75.4.24 GetTime(byref Year as Integer, byref Month as Integer, byref Day as Integer, byref Hour as Integer, byref Minute as Integer, byref Second as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get UniKey Time,Äôs real time clock,Äôs time.
Notes: See Unikey API Reference for details on UniKey_Get_Time function.
Returns error code.
Year is 10 for 2010.

75.4.25 GetType(byref type as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: GetType can help you get the type of the UniKey dongle.
Notes: The return value of type will indicate the type of the UniKey dongle.
UNIKEY_TYPE_TIME 101
UNIKEY_TYPE_PRO 102
UNIKEY_TYPE_STD 103

See Unikey API Reference for details on UniKey_Get_Type function.

75.4.26 GetVersion(byref Version as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the current UniKey library version.
Notes: See Unikey API Reference for details on UniKey_Get_Version function.
Returns error code.

75.4.27 Lock as integer

MBS Dongle Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Locks the unikey.

75.4.28 Logoff as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Logoff a UniKey dongle with a specific handle.
Notes: This API should be called at the end of UniKey session.
See Unikey API Reference for details on UniKey_Logoff function.
Returns error code.

75.4.29 MD5(BufferLength as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Make an MD5 digest for a mount of content or data.
Notes: See Unikey API Reference for details on UniKey_MD5 function.
Returns error code.

75.4.30 ModuleDecrease(Module as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decrease the value in a specified UniKey license module by ,Äú1,Äù.
Notes: See Unikey API Reference for details on UniKey_Module_Decrease function.
Returns error code.

For Linux, does not work on Linux ARM or 32-bit Linux. Works on 64-bit Linux.

75.4.31 Random(byref Return1 as Integer, byref Return2 as Integer, byref Return3 as Integer, byref Return4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Generate a random number from the dongle.
Notes: See Unikey API Reference for details on UniKey_Random function.
Returns error code.

75.4.32 ReadMemory(StartAddress as Integer, BufferLength as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the contents of the Memory.
Notes: This API needs to be called after logon of a UniKey dongle.
See Unikey API Reference for details on UniKey_Read_Memory function.
Returns error code.

75.4.33 ReadSoftID(byref SoftID as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the user defined SoftID.
Notes: See Unikey API Reference for details on UniKey_Read_SoftID function.
Returns error code.

75.4.34 ReadUpdateTag(byref UpdateTag as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read UpdateTag from a specific dongle.
Notes: See Unikey API Reference for details on UniKey_Read_UpdateTag function.
Returns error code.

75.4.35 Seed(Seed as Integer, byref Return1 as Integer, byref Return2 as Integer, byref Return3 as Integer, byref Return4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get return codes from the input of a seed code.
Notes: This API return for values which are related to Seed and UniKey dongle,Äôs password.
See Unikey API Reference for details on UniKey_Seed function.
Returns error code.

75.4.36 SetMaxNum(byref Count as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the maximum client number.
Notes: See Unikey API Reference for details on UniKey_Set_Max_Num function.
Returns error code.

Not supported for Mac PPC.

75.4.37 SetModule(Module as Integer, Value as Integer, Decrease as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: To write a value to a specific UniKey license module and set the Decrement attribute.
Notes: See Unikey API Reference for details on UniKey_Set_Module function.
Returns error code.

75.4.38 SetNETINILocation(byref Setting1 as Integer, byref Setting2 as Integer, IniFile as String) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets ini location.
Notes: See Unikey API Reference for details on UniKey_SetNETINILocation function.
Returns error code.

75.4.39 SetTime(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set UniKey Time,Äôs real time clock,Äôs time.
Notes: See Unikey API Reference for details on UniKey_Set_Time function.
Returns error code.
Year is 10 for 2010.

75.4.40 SetTimeModuleDuration(Module as Integer, Year as Integer, Day as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the duration time for a specific real time module. The total duration is (Day)*24 + (Hour) in hours.
Notes: See Unikey API Reference for details on UniKey_Set_Time_Module_Duration function.
Returns error code.

75.4.41 SetTimeModuleEndTime(Module as Integer, Year as Integer, Month as Integer, Day as Integer, Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set a real time module,Äôs end time.
Notes: See Unikey API Reference for details on UniKey_Set_Time_Module_End_Time function.
Returns error code.

75.4.42 SetTimeModuleStartTime(Module as Integer, Year as Integer, Month as Integer, Day as Integer, Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set a real time module,Äôs start time.
Notes: See Unikey API Reference for details on UniKey_Set_Time_Module_Start_Time function.
Returns error code.

75.4.43 SetTimeModuleStartTimeNow(Module as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set a real time module,Äôs start time as the now time in UniKey dongle,Äôs clock.
Notes: See Unikey API Reference for details on UniKey_Set_Time_Module_Start_Time_Now function.
Returns error code.

75.4.44 SetTimeModuleStartTimeNowPC(Module as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set a real time module,Äôs start time as the now time in host computer.
Notes: See Unikey API Reference for details on UniKey_Set_Time_Module_Start_Time_Now_PC function.
Returns error code.

75.4.45 SetTimeNow as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set UniKey Time,Äôs real time clock,Äôs time by the host computer,Äôs clock.
Notes: See Unikey API Reference for details on UniKey_Set_Time_Now function.
Returns error code.

75.4.46 Unikey(FunctionCode as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls the unikey function with the values from this object.
Notes: See the unikey documentation for what values to use.

75.4.47 UnLock as integer

MBS Dongle Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Unlocks the unikey.

75.4.48 UserLogon(Password1 as Integer, Password2 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Logon a UniKey dongle with specified passwords.
Notes: This API should be called in the released software in order to improve security.
See Unikey API Reference for details on UniKey_User_Logon function.
Returns error code.
Sets handle property.

75.4.49 VendorLogon(Password1 as Integer, Password2 as Integer, Password3 as Integer, Password4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Logon a UniKey dongle in vendor mode with specified passwords.
Notes: This API helps software vendors to logon the UniKey dongle in vendor mode, and get the full

permission to UniKey dongle.
We do NOT advise you to enclose this API in the final released software. This API is only for software vendor,Äôs usage.
If password3 or password4 is wrong while password1 and password2 is correct, the dongle is also logged on in user mode automatically.

Sets handle property.
See Unikey API Reference for details on UniKey_Vender_Logon function.
Returns error code.

Not supported on Linux.

75.4.50 WriteArithmetic(StartAddress as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write user-defined mathematical algorithms.
Notes: See Unikey API Reference for details on UniKey_Write_Arithmetic function.
Returns error code.

75.4.51 WriteMemory(StartAddress as Integer, BufferLength as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write data into the memory.
Notes: This API needs to be called after logging on to a UniKey dongle.
See Unikey API Reference for details on UniKey_Write_Memory function.
Returns error code.

75.4.52 WriteSoftID(SoftID as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write the vendor defined SoftID.
Notes: See Unikey API Reference for details on UniKey_Write_SoftID function.
Returns error code.

75.4.53 WriteUpdateTag(UpdateTag as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write UpdateTag into a specific dongle.
Notes: See Unikey API Reference for details on UniKey_Write_UpdateTag function.
Returns error code.

75.4.54 Properties

75.4.55 Buffer as MemoryBlock

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The memoryblock to use when calling the unikey function.
Notes: (Read and Write property)

75.4.56 Handle as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The handle to the dongle.
Notes: (Read and Write property)

75.4.57 LP1 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The parameter LP1.
Notes: (Read and Write property)

75.4.58 LP2 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The parameter LP2.

Notes: (Read and Write property)

75.4.59 P1 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The value for the parameter p1.
Notes: (Read and Write property)

75.4.60 P2 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The value for the parameter p2.
Notes: (Read and Write property)

75.4.61 P3 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The value for the parameter p3.
Notes: (Read and Write property)

75.4.62 P4 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The value for the parameter p4.
Notes: (Read and Write property)

75.4.63 Result as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The result of the last function call.
Notes: (Read and Write property)

75.4.64 Constants

Encryption Modes

Constant	Value	Description
CBC_MODE	2	CBC Mode
	DES1 1	DES1
	DES2 2	DES2
	DES3 3	DES3
DES_KEY	2	DES Key
DES_KEY_LEN	24	DES Key Len
ECB_MODE	1	ECB Mode
RSA	4	RSA
RSA_KEY	1	RSA Key
	RSA_KEY_1024 3	RSA Key 1024 bit.
	RSA_KEY_2048 4	RSA Key 2048 bit.
RSA_KEY_LEN	1408	RSA Key Len

Errors

Constant	Value	Description
ERROR_KEY_INDEX	259	Error with key in
ERROR_MAX_KEYS	258	Error with max k
ERROR_MAX_USERS	257	Error with max u
ERROR_UNIKEY_ALREADY_LOCKED	236	Dongle Already L
ERROR_UNIKEY_AR_BAD_COMMAND	217	Arithmetic Instru
ERROR_UNIKEY_AR_UNKNOWN_OPCODE	218	Arithmetic Opera
ERROR_UNIKEY_AR_VALUE_OVERFLOW	221	Const Number >6
ERROR_UNIKEY_AR_WRONG_BEGIN	219	Const Number Ca
ERROR_UNIKEY_AR_WRONG_END	220	Const Number Ca
ERROR_UNIKEY_CALCULATE	211	Calculate Failed
ERROR_UNIKEY_COMPARE_TIME_MODULE	233	The Specific Time
ERROR_UNIKEY_DECRYPT_FAILED	229	Decrypt Data Fai
ERROR_UNIKEY_ENCRYPT_FAILED	228	Encrypt Data Fai
ERROR_UNIKEY_FILE_LOCK_CLOSE	261	close lock file erro
ERROR_UNIKEY_FILE_LOCK_OPEN	260	open lock file erro
ERROR_UNIKEY_FS_ERR_OPEN_FILE	247	Can't Open File
ERROR_UNIKEY_FS_ERR_SYS_UNINIT	246	File Sys Is Not In
ERROR_UNIKEY_FS_FILE_EXIST	245	File Already Exis
ERROR_UNIKEY_FS_FILE_NAME	240	Wrong Or Invalid
ERROR_UNIKEY_FS_FILE_OFFSET	242	Offset Of File Err
ERROR_UNIKEY_FS_NO_FILE	241	No Such File Nam
ERROR_UNIKEY_FS_NO_MEMORY	244	Not Enough Free
ERROR_UNIKEY_FS_UNKONW	243	Unknown Error
ERROR_UNIKEY_GENERATE_NEW_PASSWORD	225	Generate New Pa
ERROR_UNIKEY_GET_TYPE	256	Failed to get type
ERROR_UNIKEY_INVALID_ADDR_OR_SIZE	204	Read/Write Addr
ERROR_UNIKEY_INVALID_KEY	222	The Key In The I
ERROR_UNIKEY_INVALID_KEY_STORE	224	Wrong Key Stora
ERROR_UNIKEY_INVALID_PASSWORD	201	Found UniKey Do
ERROR_UNIKEY_INVALID_PASSWORD_OR_ID	202	Wrong Password
ERROR_UNIKEY_KEY_INDEX	239	Dongle Over Keyi
ERROR_UNIKEY_LOGOUT	251	Logout error?
ERROR_UNIKEY_MAX_KEYS	238	Dongle Already M
ERROR_UNIKEY_MAX_USERS	237	Dongle Already M
ERROR_UNIKEY_MODULE	216	License Module E
ERROR_UNIKEY_NEED_FIND	215	No Find Before F
ERROR_UNIKEY_NEED_OPEN	212	Need Open Dongl
ERROR_UNIKEY_NOMORE	214	No More Dongle
	ERROR_UNIKEY_NOTBELEVEL3 206	Internal Error
ERROR_UNIKEY_NOT_FOUND	200	No UniKey Dongl
ERROR_UNIKEY_NO_ENCYYPT	248	No Secure Drive
ERROR_UNIKEY_OPEN_OVERFLOW	213	Too Many Open I
ERROR_UNIKEY_PARAMETER	254	Some parameter i
ERROR_UNIKEY_PASSWORD	249	Password Error
ERROR_UNIKEY_RANDOM	209	Random Number
ERROR_UNIKEY_READ_MEMORY	207	Read Memory Fai
ERROR_UNIKEY_READ_TIME	230	Get UniKey Time
ERROR_UNIKEY_READ_UPDATETAG	226	Read UpdateTag
ERROR_UNIKEY_SEED	210	Get Seed Code Fa
ERROR_UNIKEY_SET_SOFTID_FAILED	203	Set UniKey ID Fa
ERROR_UNIKEY_TIME_MODULE_NOT_NULL	234	The Real Time M flag is set
ERROR_UNIKEY_TIME_MODULE_OVERDUR	235	The Specific Time Expired
ERROR_UNIKEY_TOO_MUCH_THREAD	255	Too many (>100)
ERROR_UNIKEY_UNKNOW	252	Unknown error
ERROR_UNIKEY_UNKNOWN_COMMAND	205	No Such Comman
ERROR_UNIKEY_USERLOCK	250	User Has Been Lo

NetUniKey Error Codes

Constant	Value	Description
NET_UNIKEY_AREADY_START	111	The Server Has Already Started
NET_UNIKEY_CLIENT_EXSIT	106	The Client Already Exists, Per This Mode
NET_UNIKEY_DISCARD_BY_SERVER	118	The Client Is Discarded By The Server
NET_UNIKEY_ERROR_BASE	100	NetUniKey Error Base
NET_UNIKEY_INIFILE_NOT_EXISTS	120	ZhaoHJ: 2015-08-13, INI file not exists
NET_UNIKEY_IN_BLACKLIST	108	The Client Is In The Black List
NET_UNIKEY_MEMORY_ERROR	101	Memory Allocation Error
NET_UNIKEY_MESSAGE_CHANGE	110	The Message Packet Was Changed
NET_UNIKEY_MESSAGE_WRONG	104	Communication Message Is Modified
NET_UNIKEY_NOT_WORKING	117	Cannot Connect Remote Netunikey Server
NET_UNIKEY_OUT_WHITELIST	109	The Client Is Not In The White List
NET_UNIKEY_RECEIVE_ERROR	103	Receive Error
NET_UNIKEY_SEND_ERROR	102	Send Error
NET_UNIKEY_SERVER_RESOURCE_INADEQUACY	119	by lzm
NET_UNIKEY_SETUP_SOCKET_ERROR	105	Setup Socket Error
NET_UNIKEY_SOCKET_BIND_FAILED	113	Cannot Bind The Port With The Socket
NET_UNIKEY_SOCKET_INIT_FAILED	112	Cannot Initialize The Socket
NET_UNIKEY_SOCKET_LISTEN_FAILED	114	Cannot Start Listening With The Socket
NET_UNIKEY_START_UDP_SERVER_FAILED	115	Start Udp Server Failed
NET_UNIKEY_TOO_LONG_MESSAGE	116	Too Long Message
NET_UNIKEY_TOO_MANY_CLIENT	107	The Number Of Client Reach The Limitation

Functions

Constant	Value	Description
NET_UNIKEY_GET_NUM_CLIENT	226	get the number of client for netunikey
NET_UNIKEY_SET_NUM_CLIENT	225	set the number of client for netunikey
UNIKEY_CALCULATE1	14	Calculate 1
UNIKEY_CALCULATE2	15	Calculate 2
UNIKEY_CALCULATE3	16	
UNIKEY_CHECK_MODULE	12	Check Module
UNIKEY_DECRYPT	21	Decrypt the Buffer with a Specific Key
UNIKEY_ENCRYPT	20	Encrypt the Buffer with a Specific Key
UNIKEY_FIND	1	Find UniKey
UNIKEY_FIND_NEXT	2	Find next UniKey
UNIKEY_GENERATE_KEY	19	Generate a New Key in specific Key Store
UNIKEY_GET_MODULE	25	Get Module. p1 [in] Number [p3] out Value
UNIKEY_GET_TYPE	100	get the Unikey type
UNIKEY_LOCK	41	Lock
UNIKEY_LOGOFF	4	Close UniKey
UNIKEY_LOGON	3	Open UniKey
UNIKEY_MD5	22	Make an MD5 Digest for a Certain Content
UNIKEY_MODULE_DECREASE	17	Decrease Module Unit
UNIKEY_RANDOM	7	Generate Random Number
UNIKEY_READ_MEMORY	5	Read UniKey
UNIKEY_READ_SOFTID	10	Read Software ID
UNIKEY_READ_UPDATETAG	23	Read UpdateTag from a Specific Key
UNIKEY_SEED	8	Generate Seed Code
UNIKEY_SET_KEY	222	
UNIKEY_SET_MODULE	11	Set Module
UNIKEY_SET_NEW_PASSWORD	18	Set New Password via a New Seed
UNIKEY_UNLOCK	42	Unlock
UNIKEY_WRITE_ARITHMETIC	13	Write Arithmetic
UNIKEY_WRITE_MEMORY	6	Write UniKey
UNIKEY_WRITE_SOFTID	9	Write Software ID
UNIKEY_WRITE_UPDATETAG	24	Write UpdateTag to a Specific Key
UNKEY_GET_CLI_NUM	101	Get client number now.
UNKEY_GET_MAX_NUM	226	Get Max number.

Real Time Clock Functions

Constant	Value	Description
UNIKEY_CHECK_TIME_MODULE	35	check if a time >START_TIME and START_TIME+DURATION) (p1,p2,p3,p4 =
UNIKEY_CHECK_TIME_MODULE_NOW	36	check if now >START_TIME a START_TIME+DURATION) use dongle tim
UNIKEY_CHECK_TIME_MODULE_NOW_PC	37	check if now >START_TIME a START_TIME+DURATION) use host time
UNIKEY_ERASE_TIME_MODULE	29	ERASE TIME MODULE to NULL. (lp1 = m
UNIKEY_GET_MODULE_END_TIME	39	get module end time (lp1 = module index)
UNIKEY_GET_MODULE_START_TIME	38	get module start time (lp1 = module index)
UNIKEY_GET_TIME	26	read rtc time (lp1,lp2,p1,p2,p3,p4 = year,mon
UNIKEY_SET_TIME	27	write rtc time (lp1,lp2,p1,p2,p3,p4 = year,mo
UNIKEY_SET_TIME_MODULE_DURATION	34	write rtc time module duration (lp2,p1 = day
UNIKEY_SET_TIME_MODULE_END_TIME	33	write rtc time module end time (p1,p2,p3,p4 =
UNIKEY_SET_TIME_MODULE_START_TIME	30	write rtc time module start time(p1,p2,p3,p4
UNIKEY_SET_TIME_MODULE_START_TIME_NOW	31	write rtc time module start time use dongle ti
UNIKEY_SET_TIME_MODULE_START_TIME_NOW_PC	32	write rtc time module start time use host tim
UNIKEY_SET_TIME_NOW	28	write rtc time use host time (lp1 = module in

Types

Constant	Value	Description
UNIKEY_TYPE_PRO	102	Pro Unikey
UNIKEY_TYPE_STD	103	Standard Unikey
UNIKEY_TYPE_TIME	101	Time Unikey

Chapter 76

Drag & Drop

76.1 class DragItem

76.1.1 class DragItem

Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The dragitem class from Xojo framework.

76.1.2 Methods

76.1.3 NSDraggingInfoMBS as NSDraggingInfoMBS

MBS MacCocoa Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Provides the NSDraggingInfo object for the DragItem.

76.2 class NSDraggingImageComponentMBS

76.2.1 class NSDraggingImageComponentMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The NSDraggingImageComponent class represents a single object in a dragging item.
Notes: An array of NSDraggingImageComponent instances are composited together to create the dragging image for an NSDraggingItem. NSDraggingImageComponent instances can simply be considered as named images with a location used by an NSDraggingItem instance.
Blog Entries

- MBS Real Studio Plugins, version 13.1pr11

76.2.2 Methods

76.2.3 Constructor(key as string)

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Initializes a dragging image component with the specified key.
Notes: key: The key.
Available in OS X v10.7 and later.

76.2.4 draggingImageComponentWithKey(key as string) as NSDraggingImageComponentMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Creates and returns a dragging image component with the specified key.
Notes: Available in OS X v10.7 and later.

76.2.5 NSDraggingImageComponentIconKey as string

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for Constructor.
Notes: Key with a corresponding value that is an image of the item being dragged.
Available in OS X v10.7 and later.

76.2.6 NSDraggingImageComponentLabelKey as string

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for Constructor.
Notes: Key with a corresponding value that represents a textual label associate with the item, for example, a file name.
Available in OS X v10.7 and later.

76.2.7 Properties

76.2.8 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The internal object handle.
Notes: (Read and Write property)

76.2.9 contents as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: An object providing the image contents of the component.
Notes: Typically you set an NSImage instance as content.
Available in OS X v10.7 and later.
(Read and Write computed property)

76.2.10 frame as NSRectMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The coordinate space is the bounds of the parent dragging item.
Notes: The frame is { { 0,0 } , { draggingFrame.size.width, draggingFrame.size.height } } .

The coordinate space is the bounds of the parent NSDraggingItem instance's draggingFrame.
Available in OS X v10.7 and later.
(Read and Write computed property)

76.2.11 key as string

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The unique name of this image component instance.
Notes: The key must be unique for each component in an NSDraggingItem instance. You can create your own named components, however the keys described in NSDragImage Component Keys have special meanings.

When an NSDraggingItem instances imageComponents are changed by one of the enumerateDraggingItemsWithOptions methods the image associated with this key is morphed into the new image component's image associated with the same key.

Available in OS X v10.7 and later.
(Read and Write computed property)

76.3 class NSDraggingInfoMBS

76.3.1 class NSDraggingInfoMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The NSDraggingInfo protocol declares methods that supply information about a dragging session.
Notes: NSDraggingInfo protocol methods are designed to be invoked from within a class's implementation of NSDraggingDestination protocol methods. The Application Kit automatically passes an object that conforms to the NSDraggingInfo protocol as the argument to each of the methods defined by NSDraggingDestination. NSDraggingInfo messages should be sent to this object; you never need to create a class that implements the NSDraggingInfo protocol.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr7
- MBS Real Studio Plugins, version 13.1pr9

76.3.2 Methods

76.3.3 Constructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.
See also:

- 76.3.4 Constructor(Handle as Integer) 12723

76.3.4 Constructor(Handle as Integer)

MBS MacCocoa Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The constructor to build an NSDraggingInfo object with a handle.
Notes: Handle should be a Cocoa object reference implementing the NSDraggingInfo protocol.
See also:

- 76.3.3 Constructor 12723

76.3.5 namesOfPromisedFilesDroppedAtDestination(dropDestination as FolderItem) as string()

MBS MacCocoa Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Sets the drop location for promised files and returns the names of the files that the receiver promises to create there.
Notes: dropDestination: A folderitem specifying the drop location for promised files.

Return an array of file names, which are not full paths.

Drag destinations should invoke this method within their performDragOperation method. The source may or may not have created the files by the time this method returns.

76.3.6 promisedFilesDroppedAtDestination(dropDestination as FolderItem) as FolderItem()

MBS MacCocoa Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Sets the drop location for promised files and returns the files that the receiver promises to create there.
Notes: dropDestination: A folderitem specifying the drop location for promised files.

Return an array of folderitems for the files.
The files may not yet exist.

Drag destinations should invoke this method within their performDragOperation method. The source may or may not have created the files by the time this method returns.

76.3.7 slideDraggedImageTo(screenPoint as NSPointMBS)

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Slides the image to a specified location.
Notes: screenPoint: A point that specifies a location in the screen coordinate system.

This method can be used to adjust the location to which the dragged image will slide back if the drag is rejected.
It should only be invoked from within the destination's implementation of prepareForDragOperation, and will only have effect if the destination rejects the drag.
This method is invoked after the user has released the image but before it is removed from the screen.

76.3.8 Properties

76.3.9 animatesToDestination as boolean

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Whether the dragging formation animates while the drag is over this destination.
Notes: During the conclusion of an accepted drag, if this property is set to true, the drag manager will animate each dragging image to their NSDraggingFormationNone locations. Otherwise, the drag images are removed without any animation.

This property is inspected between prepareForDragOperation and performDragOperation. You should enumerate through the dragging items during performDragOperation to set the item's draggingFrame to the correct destinations.

Available in OS X v10.7 and later.
(Read and Write property)

76.3.10 draggedImage as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the image being dragged.
Notes: Value is a NSImageMBS object. Returned as Variant to reduce plugin dependencies.

This image object visually represents the data put on the pasteboard during the drag operation; however, it is the pasteboard data and not this image that is ultimately utilized in the dragging operation.

This method returns non-nil for a local drag, but nil for a cross-process drag. With the new multi-image dragging capabilities, a cross-process destination may participate and change the drag image. But it still cannot get the current drag image.
(Read only property)

76.3.11 draggedImageLocation as NSPointMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the current location of the dragged image's origin.
Notes: Returns the dragged image's origin, in the base coordinate system of the destination object's window.
The image moves along with the mouse pointer (the position of which is given by draggingLocation) but may be positioned at some offset.

(Read only property)

76.3.12 draggingDestinationWindow as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the destination window for the dragging operation.
Notes: Value is a NSWindowMBS object. Returned as Variant to reduce plugin dependencies.

Either this window is the destination itself, or it contains the view object that is the destination.
(Read only property)

76.3.13 draggingFormation as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the dragging formation while the drag is over this destination.
Notes: Set this property to change the formation of the drag items. This is generally done during the updateDraggingItemsForDrag method or whenever you enumerate the dragging items.

The default value is the current drag formation.

Note: Set this property before or after the NSDraggingInfo or NSDraggingSession class's method enumerateDraggingItemsWithOptions not inside the enumeration Block.

Available in OS X v10.7 and later.
(Read and Write property)

76.3.14 draggingLocation as NSPointMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the current location of the mouse pointer in the base coordinate system of the destination object's window.
Notes: (Read only property)

76.3.15 draggingPasteboard as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the pasteboard object that holds the data being dragged.
Notes: Value is a NSPasteboardMBS object. Returned as Variant to reduce plugin dependencies.

The dragging operation that is ultimately performed utilizes this pasteboard data and not the image returned by the draggedImage method.
(Read only property)

76.3.16 draggingSequenceNumber as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns a number that uniquely identifies the dragging session.
Notes: (Read only property)

76.3.17 draggingSource as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the source, or owner, of the dragged data.
Notes: This method returns nil if the source is not in the same application as the destination. The dragging source implements methods from the NSDraggingSource protocol.
(Read only property)

76.3.18 draggingSourceOperationMask as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the dragging operation mask of the dragging source.
Notes: The dragging operation mask, which is declared by the dragging source through the NSDraggingSource sourceOperationMaskForDraggingContext method (preferred) or the NSDraggingSource draggingSourceOperationMaskForLocal method. If the source does not permit any dragging operations, this method should return NSDragOperationNone.

If the source permits dragging operations, the elements in the mask are one or more of the constants described in "Obtaining Information About the Dragging Session", combined using the C bitwise OR operator.

If the user is holding down a modifier key during the dragging session and the source does not prohibit modifier keys from affecting the drag operation (through its ignoreModifierKeysWhileDragging method), then the operating system combines the dragging operation value that corresponds to the modifier key (see the descriptions below) with the source's mask using the C bitwise AND operator.

The modifier keys are associated with the dragging operation options shown below:

Modifier Key	Dragging Operation
Control	NSDragOperationLink
Option	NSDragOperationCopy
Command	NSDragOperationGeneric

(Read only property)

76.3.19 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

76.3.20 numberOfValidItemsForDrop as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Specifies the number of valid items for a drop operation.
Notes: During draggingEntered or draggingUpdated, you are responsible for returning the drag operation. In some cases, you may accept some, but not all items on the dragging pasteboard. (For example, your application may only accept image files.)

If you only accept some of the items, set this property to the number of items accepted so the drag manager can update the drag count badge.

When updateDraggingItemsForDrag is called, you should set the image of non-valid dragging items to nil. If none of the drag items are valid then you should not updateItems, simply return NSDragOperationNone from your implementation of draggingEntered and, or draggingUpdated and do not modify any drag item properties.

Available in OS X v10.7 and later.
(Read and Write property)

76.3.21 Constants

Visual Format Constants

Constant	Value	Description
NSDraggingFormationDefault	0	The system determined formation. Available in OS X v10.7 and later.
NSDraggingFormationList	3	Drag images are laid out vertically, non-overlapping with the left edges aligned. Available in OS X v10.7 and later.
NSDraggingFormationNone	1	Drag images maintain their set positions relative to each other/ Available in OS X v10.7 and later.
NSDraggingFormationPile	2	Drag images are placed on top of each other with random rotations. Available in OS X v10.7 and later.
NSDraggingFormationStack	4	Drag images are laid out overlapping diagonally. Available in OS X v10.7 and later.

Drag Operations Constants

Constant	Value	Description
NSDragOperationAll_Obsolete	15	The NSDragOperationAll constant is deprecated. Use NSDragOperationEvery instead.
NSDragOperationCopy	1	The data represented by the image can be copied.
NSDragOperationDelete	32	The data can be deleted.
NSDragOperationEvery	-1	All of the above.
NSDragOperationGeneric	4	The operation can be defined by the destination.
NSDragOperationLink	2	
NSDragOperationMove	16	The data can be moved.
NSDragOperationNone	0	No drag operations are allowed.
NSDragOperationPrivate	8	The operation is negotiated privately between the source and the destination.

76.4 class NSDraggingItemMBS

76.4.1 class NSDraggingItemMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The NSDraggingItem class encompasses a single dragged item within an NSDraggingSession instance.
Notes: See NSDraggingSessionMBS Class Reference for more information

When the NSDraggingSession method beginDraggingSessionWithItems is called, the dragging items passed to the method are consumed immediately and are not retained.
Blog Entries

- MBS Real Studio Plugins, version 13.1pr11

76.4.2 Methods

76.4.3 Constructor(item as NSPasteboardItemMBS)

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Initializes a dragging item using the specified content.
Notes: item: The object that provides the dragging content.

When the developer creates an NSDraggingItem instance, it is for use with the view method beginDraggingSessionWithItems. During the invocation of that method, the item is placed onto the dragging pasteboard for the NSDraggingSession that contains the dragging item instance.

Available in OS X v10.7 and later.

76.4.4 item as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the pasteboard reader or writer object dependent on the context of where this dragging item is used. (read-only)
Notes: When you create an NSDraggingItem instance, item is the pasteboardWriter passed to Constructor.

76.4.5 setDraggingFrame(frame as NSRectMBS, contents as Variant)

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Sets the item's dragging frame and contents.
Notes: frame: The item content frame in the same coordinate space that the draggingFrame.
contents: The item contents to display when dragging. Typically this is an NSImage, but a CGImageRef will also work.

Alternate single image component setter.

This method simplifies modifying the components of an NSDraggingItem when there is only one component.

This is a convenience method. This method sets the draggingFrame and creates a single NSDraggingImage-Component instance with one image corresponding to the NSDraggingImageComponentIconKey key. You should only use this method under the following conditions: the drag image for this item is composed of a single image., or there are a reasonable number of dragging item instances being created or enumerated.

This method will set the draggingFrame and imageComponents properties.
Available in OS X v10.7 and later.

76.4.6 Properties

76.4.7 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

76.4.8 draggingFrame as NSRectMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The frame of the dragging item.
Notes: The dragging frame provides the spatial relationship between NSDraggingItem instances when the dragging formation is set to NSDraggingFormationNone.

The exact coordinate space of this rectangle is dependent on where it is used. The view that initiated the drag using beginDraggingSessionWithItems or the view your pass to the NSDraggingSession instance implantation of enumerateDraggingItemsWithOptions.

Available in OS X v10.7 and later.
(Read and Write computed property)

76.5 class NSDraggingSessionMBS

76.5.1 class NSDraggingSessionMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The NSDraggingSession class encompases a drag and drop action and allows modification of the drag while in progress.
Notes: You start a new dragging session by calling the NSView method beginDraggingSessionWithItems method. This method immediately returns and you can further modify the properties of the dragging session. The actual drag begins at the next turn of the run loop.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

76.5.2 Methods

76.5.3 Constructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

76.5.4 draggingLeaderIndex as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The index of the dragging item under the cursor.
Notes: The index is to an element in the array passed as the first parameter to the NSView method beginDraggingSessionWithItem.

The default is the NSDraggingItem closest to the location field in the event parameter that was passed to the beginDraggingSessionWithItems method.

Available in OS X v10.7 and later.

76.5.5 draggingLocation as NSPointMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The current cursor location of the drag in screen coordinates. (read-only)
Notes: Available in OS X v10.7 and later.

76.5.6 draggingPasteboard as NSPasteboardMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the pasteboard object that contains the data being dragged. (read-only)
Notes: Available in OS X v10.7 and later.

76.5.7 draggingSequenceNumber as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns a number that uniquely identifies the dragging session. (read-only)
Notes: Available in OS X v10.7 and later.

76.5.8 Properties

76.5.9 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

76.5.10 animatesToStartingPositionsOnCancelOrFail as boolean

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Controls whether the dragging image animates back to its starting point on a cancelled or failed drag.
Notes: This property should be set immediately after creating the dragging session.

The default value is true.
Available in OS X v10.7 and later.
(Read and Write computed property)

76.5.11 draggingFormation as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Controls the dragging formation when the drag is not over the source or a valid destination.
Notes: Setting this value causes the dragging formation to change immediately, provided a valid destination has not overriden the behavior. If the dragging session hasn't started yet, the dragging items will animate into formation immediately upon start. It is highly recommended to never change the formation when starting a drag.

The default value is NSDraggingFormationNone.
Available in OS X v10.7 and later.
(Read and Write computed property)

76.5.12 Constants

Constants

Constant	Value	Description
NSDraggingContextOutsideApplication	0	Whether a drag terminates within or outside the application. The dragging terminates outside the application. Available in OS X v10.7 and later.
NSDraggingContextWithinApplication	1	Whether a drag terminates within or outside the application. The dragging terminates within the application. Available in OS X v10.7 and later.

Visual Format Constants

Constant	Value	Description
NSDraggingFormationDefault	0	The system determined formation. Available in OS X v10.7 and later.
NSDraggingFormationList	3	Drag images are laid out vertically, non-overlapping with the left edges aligned. Available in OS X v10.7 and later.
NSDraggingFormationNone	1	Drag images maintain their set positions relative to each other/ Available in OS X v10.7 and later.
NSDraggingFormationPile	2	Drag images are placed on top of each other with random rotations. Available in OS X v10.7 and later.
NSDraggingFormationStack	4	Drag images are laid out overlapping diagonally. Available in OS X v10.7 and later.

76.6 Globals

76.6.1 InstallDragImageMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Install drag image patch.
Notes: This allows you to use retina NSImage for drag image with using Xojo's built in drag and drop classes.
So call InstallDragImageMBS once in app.open to initialize.

Than before call DragItem.Drag, call SetNextDragImageMBS and provide a 2x image as NSImageMBS object.
See example project for details.

76.6.2 SetNextDragImageMBS(Img as NSImageMBS, DragItemCount as Integer = 1)

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Sets which image to use for next drag.
Notes: Once image has been replaced for Xojo's drag, the image reference is freed by plugin.

Please call setSize on the NSImageMBS to set the size to use.
e.g. half the pixels, so the picture is sharp on a retina screen.

Added DragItemCount parameter for version 23.0 to define how many drag items you have, so all can get the new picture.

76.7.2 Methods

76.7.3 AddDragImage(pic as picture, width as Integer, height as Integer, x as Integer, y as Integer)

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop only.

Function: Adds a drag image to the data object.
Notes: pic: the picture to use.
width and height: The size of the picture.
x and y: The location of the cursor within the drag image. The point should contain the offset from the upper-left corner of the drag image to the location of the cursor.

Requires Windows 2000 Professional with SP3, Windows XP.
On success the HelperHandle property is not zero.

Turn off antialiasing when drawing text. Otherwise, artifacts could occur at the edges, between the text color and the color key.

This function takes the picture (and it's mask) and turns it in a nice drag picture. This includes applying the mask and passing black for the background color. Dark colors which should be transparent will be made lighter.
See also:

- 76.7.4 AddDragImage(pic as picture, width as Integer, height as Integer, x as Integer, y as Integer, ImageBackgroundColor as color) 12738

76.7.4 AddDragImage(pic as picture, width as Integer, height as Integer, x as Integer, y as Integer, ImageBackgroundColor as color)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop only.

Function: Adds a drag image to the data object.
Notes: pic: the picture to use.
width and height: The size of the picture.
x and y: The location of the cursor within the drag image. The point should contain the offset from the upper-left corner of the drag image to the location of the cursor.
ImageBackgroundColor: The color used by the control to fill the background of the drag image.

Requires Windows 2000 Professional with SP3, Windows XP.
On success the HelperHandle property is not zero.

Turn off antialiasing when drawing text. Otherwise, artifacts could occur at the edges, between the text color and the color key.

76.7.5 AddFiles(files() as folderitem)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds file references in the format the explorer can understand them.
See also:

- 76.7.6 AddFiles(pathes() as string) 12739

76.7.6 AddFiles(pathes() as string)

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds file pathes in the format the explorer can understand them.
Notes: Folder pathes should have no backslash on the end.
See also:

- 76.7.5 AddFiles(files() as folderitem) 12738

76.7.7 AddPicture(pic as picture)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop only.

Function: Adds a picture to the data object.

76.7.8 AddRaw(format as Integer, data as string)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds raw data to the data object.
Notes: Depending of the format you may need to add chr(0) on the end.

76.7.9 AddText(text as string)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds the text to the data object.

76.7.10 Constructor

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates an empty data object.
See also:

- 76.7.11 Constructor(files() as folderitem) 12740
- 76.7.12 Constructor(pic as picture) 12740
- 76.7.13 Constructor(text as string) 12740

76.7.11 Constructor(files() as folderitem)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a data object and adds the files.
See also:

- 76.7.10 Constructor 12739
- 76.7.12 Constructor(pic as picture) 12740
- 76.7.13 Constructor(text as string) 12740

76.7.12 Constructor(pic as picture)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop only.

Function: Creates a new data object and adds the given picture.
Example:

```
// take some picture
Var p as Picture = LogoMBS(500)

// create data object
Var w as new WinDataObjectMBS(p)
```

See also:

- 76.7.10 Constructor 12739
- 76.7.11 Constructor(files() as folderitem) 12740
- 76.7.13 Constructor(text as string) 12740

76.7.13 Constructor(text as string)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new data object and adds the given text.
Example:

```
// create data object with text
Var w as new WinDataObjectMBS("Hello World")
```

See also:

- 76.7.10 Constructor 12739

- 76.7.11 Constructor(files() as folderitem) 12740
- 76.7.12 Constructor(pic as picture) 12740

76.7.14 Formats as String()

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries list of formats in the data object.
Notes: Helps for debugging to see what is inside.

76.7.15 GetFileContents(index as Integer) as string

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries file content for the file with the given index.
Notes: Use index from WindowsFileDescriptorMBS.index property.

This works for files up to a few hundred megabytes in size. For larger files we will have to change plugin if you want to receive those.

Only accepts data provided as blob.
See also:

- 76.7.16 GetFileContents(index as integer, byref IsPath as boolean) as string 12741

76.7.16 GetFileContents(index as integer, byref IsPath as boolean) as string

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries file content for the file with the given index.
Notes: Use index from WindowsFileDescriptorMBS.index property.

This works for files up to a few hundred megabytes in size. For larger files we will have to change plugin if you want to receive those.

IsPath is set to true, when the returned data is a file path instead of data itself.
See also:

- 76.7.15 GetFileContents(index as Integer) as string 12741

76.7.17 GetFileDescriptors as WindowsFileDescriptorMBS()

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries file descriptors.
Example:

```
Var dataObject as WinDataObjectMBS // your data object

Var des(-1) as WindowsFileDescriptorMBS = dataObject.GetFileDescriptors

for each d as WindowsFileDescriptorMBS in des
// we got file descriptions. Some metadata and the data. No path.
Var data as string = dataObject.GetFileContents(0)
MessageBox "File """+d.FileName+""" with "+str(lenb(data))+" bytes data."
next
```

Notes: Result array is empty on any error.

76.7.18 GetFileName as string

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries filename from data object.
Notes: Depending on how the other application works, the drag data object may have either file descriptors, a file path or path strings.

The file name is valid at least as long as this object is alive.

76.7.19 GetPaths as folderitem()

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the paths in the data object.
Example:

```
Var dataObject as WinDataObjectMBS // your data object

Var files(-1) as FolderItem = dataObject.GetPaths

for each f as FolderItem in files
// we got a file you can use like any other file (e.g. copy)
ListBox1.AddRow "Path """+f.NativePath+"""
next
```

Notes: Checks for a CF_HDROP type. May return one or more folderitems.

76.7.20 GetPathStrings as string()

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the paths in the data object.
Notes: Checks for a CF_HDROP type. May return one or more folderitems.

76.7.21 GetPicture as picture

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop only.

Function: Queries the picture from the data object.
Notes: Supports CF_BITMAP/TYMED_GDI.

76.7.22 GetRaw(format as Integer) as string

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the raw data for the given type.

76.7.23 GetText as string

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the text from the data object.
Notes: Returns unicode or ANSI text depending on what is available. Unicode is preferred.

76.7.24 HasFileDescriptors as boolean

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether this data object contains file descriptors.
Notes: Returns true if a path is found.
Checks for CF_FILEGROUPDESCRIPTOR.

Windows uses File Descriptors and FileContents for drag and drop operations where the data is not stored in a file. You get the descriptors and if you need you can get the data which is delivered just in time.

76.7.25 HasFileName as boolean

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks to see if a filename entry is in the data object.

76.7.26 HasPaths as boolean

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether this data object contains file paths.
Notes: Returns true if a path is found.
Checks for CF_HDROP.

76.7.27 HasPicture as boolean

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks if a picture is part of this data object.
Notes: Returns true if a picture is found.
Checks for CF_BITMAP.

76.7.28 HasRaw(format as Integer) as boolean

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether this data object contains data in the given format.

76.7.29 HasText as boolean

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether this data object contains Text or UnicodeText.
Notes: Returns true if text is found.
Checks for CF_UNICODETEXT and CF_TEXT.

76.7.30 Properties

76.7.31 DragImage as Picture

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The drag image.
Notes: Used to show user what he is dragging.
(Read only property)

76.7.32 Handle as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle.
Notes: (Read and Write property)

76.7.33 HelperHandle as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal helper object to handle the drag image.
Notes: This value is not zero if the AddDragImage call was successful.
(Read and Write property)

76.7.34 Lasterror as Integer

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

76.7.35 Constants

Constants

Constant	Value	Description
CF_BITMAP	2	One of the constants for the data types.
CF_DIB	8	One of the constants for the data types.
CF_DIBV5	17	One of the constants for the data types.
CF_DIF	5	One of the constants for the data types.
CF_ENHMETAFILE	14	One of the constants for the data types.
CF_HDROP	15	One of the constants for the data types.
CF_LOCALE	16	One of the constants for the data types.
CF_METAFILEPICT	3	One of the constants for the data types.
CF_OEMTEXT	7	One of the constants for the data types.
CF_PALETTE	9	One of the constants for the data types.
CF_PENDATA	10	One of the constants for the data types.
CF_RIFF	11	One of the constants for the data types.
CF_SYLK	4	One of the constants for the data types.
CF_TEXT	1	One of the constants for the data types.
CF_TIFF	6	One of the constants for the data types.
CF_UNICODETEXT	13	One of the constants for the data types.
CF_WAVE	12	One of the constants for the data types.

76.8 class WindowsDragSourceMBS

76.8.1 class WindowsDragSourceMBS

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for Drag and Drop on Windows to create a drag source.
Notes: The WindowsDragSourceMBS class is one of the class you implement to provide drag-and-drop operations in your application. It contains methods used in any application used as a data source in a drag-and-drop operation. The data source application in a drag-and-drop operation is responsible for:

- Determining the data being dragged based on the user's selection.
- Initiating the drag-and-drop operation based on the user's mouse actions.
- Generating some of the visual feedback during the drag-and-drop operation, such as setting the cursor and highlighting the data selected for the drag-and-drop operation.
- Canceling or completing the drag-and-drop operation based on the user's mouse actions.
- Performing any action on the original data caused by the drop operation, such as deleting the data on a drag move.

WindowsDragSourceMBS contains the events for generating visual feedback to the end user and for canceling or completing the drag-and-drop operation.

When To Implement

Implement WindowsDragSourceMBS if you are developing a container or server application that can act as a data source for a drag-and-drop operation. The WindowsDragSourceMBS interface is only required during the drag-and-drop operation.

If you implement the WindowsDragSourceMBS class, you must also implement the DataObjectMBS class on the same object to represent the data being transferred.

You can use the same implementation of DataObjectMBS for drag-and-drop data as for the data object offered to the clipboard. After you have implemented clipboard operations in your application, you can add drag-and-drop operations with only a little extra work.

When To Use

You do not usually call the WindowsDragSourceMBS methods directly. Instead, your data source calls the DoDragDrop function when it detects that the user has initiated a drag-and-drop operation. Then, DoDragDrop calls the WindowsDragSourceMBS methods during the drag-and-drop operation.

For example, DoDragDrop calls WindowsDragSourceMBS.GiveFeedback when you need to change the cursor shape or when you need to provide some other visual feedback. DoDragDrop calls WindowsDragSourceMBS.QueryContinueDrag when there is a change in the mouse button state to determine if the drag-and-drop operation was canceled or completed.

While the drag classes compile for Web Edition, they run on the server, so they have no effect on the client browser!

76.8.2 Methods

76.8.3 DoDragDrop(dataObject as WinDataObjectMBS, OKEffect as Integer, byref Effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Carries out an OLE drag and drop operation.
Notes: Parameters:

dataObject: The WinDataObjectMBS data object that contains the data being dragged.
OKEffects: Effects the source allows in the OLE drag-and-drop operation. Most significant is whether it permits a move. The OKEffect and Effect parameters obtain values from the DROPEFFECT* constants.
Effect: Pointer to a value that indicates how the OLE drag-and-drop operation affected the source data. The pdwEffect parameter is set only if the operation is not canceled.

This function returns S_OK on success. Other possible values include the following.

Return code	Description
DRAGDROP_S_DROP	The OLE drag-and-drop operation was successful.
DRAGDROP_S_CANCEL	The OLE drag-and-drop operation was canceled.
E_UNSPEC	Unexpected error occurred.

Remarks

If you are developing an application that can act as a data source for an OLE drag-and-drop operation, you must call DoDragDrop when you detect that the user has started an OLE drag-and-drop operation.

The DoDragDrop function enters a loop in which it calls various methods in the WindowsDragSourceMBS and WindowsDropTargetMBS interfaces. (For a successful drag-and-drop operation, the application acting as the data source must also implement WindowsDragSourceMBS, while the target application must imple-

ment WindowsDropTargetMBS.)

The DoDragDrop function determines the window under the current cursor location. It then checks to see if this window is a valid drop target.

If the window is a valid drop target, DoDragDrop calls WindowsDropTargetMBS.DragEnter. This method supplies an effect code indicating what would happen if the drop actually occurred. For a list of valid drop effects, see the DROPEFFECT* constants.

DoDragDrop calls WindowsDragSourceMBS.GiveFeedback with the effect code so that the drop source interface can provide appropriate visual feedback to the user.

DoDragDrop tracks mouse cursor movements and changes in the keyboard or mouse button state.

If the user moves out of a window, DoDragDrop calls WindowsDropTargetMBS.DragLeave.

If the mouse enters another window, DoDragDrop determines if that window is a valid drop target and then calls WindowsDropTargetMBS.DragEnter for that window.

If the mouse moves but stays within the same window, DoDragDrop calls WindowsDropTargetMBS.DragOver.

If there is a change in the keyboard or mouse button state, DoDragDrop calls WindowsDragSourceMBS.QueryContinueDrag and determines whether to continue the drag, to drop the data, or to cancel the operation based on the return value.

If the return value is S_OK, DoDragDrop first calls WindowsDropTargetMBS.DragOver to continue the operation. This method returns a new effect value and DoDragDrop then calls WindowsDragSourceMBS.GiveFeedback with the new effect so appropriate visual feedback can be set. For a list of valid drop effects, see the DROPEFFECT constants. WindowsDropTargetMBS.DragOver and WindowsDragSourceMBS.GiveFeedback are paired so that as the mouse moves across the drop target, the user is given the most up-to-date feedback on the mouse's position.

If the return value is DRAGDROP_S_DROP, DoDragDrop calls WindowsDropTargetMBS.Drop. The DoDragDrop function returns the last effect code to the source, so the source application can perform the appropriate operation on the source data, for example, cut the data if the operation was a move.

If the return value is DRAGDROP_S_CANCEL, the DoDragDrop function calls WindowsDropTargetMBS.DragLeave.

76.8.4 Properties

76.8.5 Handle as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle.
Notes: (Read and Write property)

76.8.6 Events

76.8.7 GiveFeedback(Effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enables a source application to give visual feedback to the end user during a drag-and-drop operation by providing the DoDragDrop function with an enumeration value specifying the visual effect.
Notes: Effect: The drop effect value returned by the most recent call to WindowsDropTargetMBS.DragEnter, WindowsDropTargetMBS.DragOver, or WindowsDropTargetMBS.DragLeave.

Return S_OK on success. Return DRAGDROP_S_USEDEFAULTCURSORS to indicate successful completion of the method, and requests OLE to update the cursor using the OLE-provided default cursors.

When your application detects that the user has started a drag-and-drop operation, it should call the DoDragDrop function. DoDragDrop enters a loop, calling WindowsDropTargetMBS.DragEnter when the mouse first enters a drop target window, WindowsDropTargetMBS.DragOver when the mouse changes its position within the target window, and WindowsDropTargetMBS.DragLeave when the mouse leaves the target window.

For every call to either WindowsDropTargetMBS.DragEnter or WindowsDropTargetMBS.DragOver, DoDragDrop calls WindowsDropTargetMBS.GiveFeedback, passing it the drop effect value returned from the drop target call.

DoDragDrop calls WindowsDropTargetMBS.DragLeave when the mouse has left the target window. Then, DoDragDrop calls WindowsDropTargetMBS.GiveFeedback and passes the DROPEFFECT_NONE value in the dwEffect parameter.

The Effect parameter can include DROPEFFECT_SCROLL, indicating that the source should put up the drag-scrolling variation of the appropriate pointer.

Notes to Implementers

This function is called frequently during the DoDragDrop loop, so you can gain performance advantages if you optimize your implementation as much as possible.

GiveFeedback is responsible for changing the cursor shape or for changing the highlighted source based on the value of the dwEffect parameter. If you are using default cursors, you can return DRAGDROP_S_USEDEFAULTCURSORS, which causes OLE to update the cursor for you, using its defaults.

76.8.8 QueryContinueDrag(EscapePressed as boolean, KeyState as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Determines whether a drag-and-drop operation should be continued, canceled, or completed. You do not call this method directly.
Notes: The OLE DoDragDrop function calls this method during a drag-and-drop operation.

EscapePressed: Indicates whether the Esc key has been pressed since the previous call to QueryContinueDrag or to DoDragDrop if this is the first call to QueryContinueDrag. A true value indicates the end user has pressed the escape key; a false value indicates it has not been pressed.

KeyState: The current state of the keyboard modifier keys on the keyboard. Possible values can be a combination of any of the flags MK_CONTROL, MK_SHIFT, MK_ALT, MK_BUTTON, MK_LBUTTON, MK_MBUTTON, and MK_RBUTTON.

This event can return the following values.

Return code	Description
S_OK	The drag operation should continue. This result occurs if no errors are detected, the mouse button starting the drag-and-drop operation has not been released, and the Esc key has not been detected.
DRAGDROP_S_DROP	The drop operation should occur completing the drag operation. This result occurs if KeyState indicates that the key that started the drag-and-drop operation has been released.
DRAGDROP_S_CANCEL	The drag operation should be canceled with no drop operation occurring. This result occurs if EscapePressed is true, indicating the Esc key has been pressed.

The DoDragDrop function calls QueryContinueDrag whenever it detects a change in the keyboard or mouse button state during a drag-and-drop operation. QueryContinueDrag must determine whether the drag-and-drop operation should be continued, canceled, or completed based on the contents of the parameters KeyState and EscapePressed.

76.8.9 Constants

Constants

Constant	Value	Description
DRAGDROP_S_CANCEL	&H00040101	One of the OLE error codes. Drag and Drop was cancelled.
DRAGDROP_S_DROP	&h00040100	One of the OLE error codes. Do the drop operation.
DRAGDROP_S_USEDEFAULTCURSORS	&h00040102	One of the OLE error codes.
DROPEFFECT_COPY	1	One of the drop effect constants. Drop results in a copy. The original data is untouched by t Your application should always mask drop effect constants ibility with future implementations. Presently, only some in a drop effect value have meaning. In the future, more the bits will be added. Drag sources and drop targets sho these values appropriately before comparing. They shoul drop effect value against, say, DROPEFFECT_COPY by if DropEffect = DROPEFFECT_COPY then Instead, the application should always mask for the value or as using one of the following techniques: if bitwiseAnd(DropEffect, DROPEFFECT_COPY) FECT_COPY then This allows for the definition of new drop effects, while pr compatibility with existing code.
DROPEFFECT_LINK	4	One of the drop effect constants. Drag source should create a link to the original data.
DROPEFFECT_MOVE	2	One of the drop effect constants. Drag source should remove the data.
DROPEFFECT_NONE	0	One of the drop effect constants. Drop target cannot accept the data.
DROPEFFECT_SCROLL	&h80000000	One of the drop effect constants. Scrolling is about to start or is currently occurring in the t used in addition to the other values.
MK_CONTROL	8	One of the key state constants. The CTRL key is down.
MK_LBUTTON	1	One of the key state constants. The left mouse button is down.
MK_MBUTTON	&h10	One of the key state constants. The middle mouse button is down.
MK_RBUTTON	2	One of the key state constants. The right mouse button is down.
MK_SHIFT	4	One of the key state constants. The SHIFT key is down.
MK_XBUTTON1	&h20	One of the key state constants. The first X button is down.
MK_XBUTTON2	&h40	One of the key state constants. The second X button is down.
S_FALSE	1	One of the OLE error codes.
S_OK	0	One of the OLE error codes.

76.9 class WindowsDropTargetMBS

76.9.1 class WindowsDropTargetMBS

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WindowsDropTargetMBS interface is one of the interfaces you implement to provide drag-and-drop operations in your application.
Example:

```
// This example needs a window with Canvas1.
// accept files dropped from Explorer on a canvas, with Windows drag image
// MyDropTarget is a subclass of WindowsDropTargetMBS with the events implemented.
// DropTarget is a property of the window: DropTarget As MyDropTarget
DropTarget = New MyDropTarget
Call DropTarget.AttachToControl(Canvas1)

// in MyDropTarget:
Function DragEnter(dataObject As WinDataObjectMBS, keystate As Integer, x As Integer, y As Integer,
ByRef effect As Integer) As Integer Handles DragEnter
effect = 1 // DROPEFFECT_COPY
End Function

Function Drop(dataObject As WinDataObjectMBS, keystate As Integer, x As Integer, y As Integer, ByRef
effect As Integer) As Integer Handles Drop
For Each f As FolderItem In dataObject.GetPaths
System.DebugLog "Dropped: " + f.NativePath
Next
effect = 1
End Function
```

Notes: It contains methods used in any application that can be a target for data during a drag-and-drop operation. A drop-target application is responsible for:

- Determining the effect of the drop on the target application.
- Incorporating any valid dropped data when the drop occurs.
- Communicating target feedback to the source so the source application can provide appropriate visual feedback such as setting the cursor.
- Implementing drag scrolling.
- Registering and revoking its application windows as drop targets.

The WindowsDropTargetMBS class contains methods that handle all these responsibilities except registering and revoking the application window as a drop target, for which you must call the AttachToWindow

functions.

When To Implement

Implement the WindowsDropTargetMBS interface if you are developing an application that can act as a target for a drag-and-drop operation. The WindowsDropTargetMBS interface is associated with your application windows and is implemented on your window objects. Call the AttachToWindow function to register your window objects as drop targets.

When To Use

You do not call the methods of WindowsDropTargetMBS directly. The DoDragDrop function calls the WindowsDropTargetMBS methods during the drag-and-drop operation.

For example, DoDragDrop calls WindowsDropTargetMBS.DragEnter when it detects the mouse has moved over a window that is registered as a drag target. After the mouse has entered a drag-target window, DoDragDrop calls WindowsDropTargetMBS.DragOver as the mouse moves through the window and calls WindowsDropTargetMBS.DragLeave if the mouse leaves the target window or if the user cancels or completes the drag-and-drop operation. DoDragDrop calls WindowsDropTargetMBS.Drop if the drop finally occurs.

To see the ghost picture of the drag, please register a WindowsDragSourceMBS for the same window.

While the drag classes compile for Web Edition, they run on the server, so they have no effect on the client browser!

76.9.2 Methods

76.9.3 AttachToControl(ctl as control, showDragImage as boolean = true) as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop only.

Function: Attached the drop target to the control.
Notes: This method unregistered any existing drop target on the control (including the one from Xojo).

Registers the specified control as one that can be the target of an OLE drag-and-drop operation and specifies

the WindowsDropTargetMBS instance to use for drop operations.

ctl: The control that can be a target for an OLE drag-and-drop operation.
showDragImage: Whether we should support the drag image methods in the newer Windows versions.

This function returns S_OK on success. Other possible values include the following.

Return code	Description
DRAGDROP_E_INVALIDHWND	Invalid handle returned in the hwnd parameter.
DRAGDROP_E_ALREADYREGISTERED	The specified window has already been registered as a drop target.
E_OUTOFMEMORY	Insufficient memory for the operation.

If your application can accept dropped objects during OLE drag-and-drop operations, you must call the AttachToControl function. Do this whenever one of your application windows is available as a potential drop target, i.e., when the window appears unobscured on the screen.

AttachToControl must be called on the main thread of your application.

The AttachToControl function only registers one control at a time, so you must call it for each application control capable of accepting dropped objects. For each control, you need your own instance of the WindowsDropTargetMBS class.

As the mouse passes over unobscured portions of the target control during an OLE drag-and-drop operation, the DoDragDrop function calls the specified WindowsDropTargetMBS.DragOver method for the current control. When a drop operation actually occurs in a given control, the DoDragDrop function calls WindowsDropTargetMBS.Drop.

- 76.9.4 AttachToControl(ctl as DesktopControl, showDragImage as boolean = true) as integer 12756

76.9.4 AttachToControl(ctl as DesktopControl, showDragImage as boolean = true) as integer

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Attached the drop target to the control.
Notes: This method unregistered any existing drop target on the control (including the one from Xojo).

Registers the specified control as one that can be the target of an OLE drag-and-drop operation and specifies the WindowsDropTargetMBS instance to use for drop operations.

ctl: The control that can be a target for an OLE drag-and-drop operation.

showDragImage: Whether we should support the drag image methods in the newer Windows versions.

This function returns S_OK on success. Other possible values include the following.

Return code	Description
DRAGDROP_E_INVALIDHWND	Invalid handle returned in the hwnd parameter.
DRAGDROP_E_ALREADYREGISTERED	The specified window has already been registered as a drop target.
E_OUTOFMEMORY	Insufficient memory for the operation.

If your application can accept dropped objects during OLE drag-and-drop operations, you must call the AttachToControl function. Do this whenever one of your application windows is available as a potential drop target, i.e., when the window appears unobscured on the screen.

AttachToControl must be called on the main thread of your application.

The AttachToControl function only registers one control at a time, so you must call it for each application control capable of accepting dropped objects. For each control, you need your own instance of the WindowsDropTargetMBS class.

As the mouse passes over unobscured portions of the target control during an OLE drag-and-drop operation, the DoDragDrop function calls the specified WindowsDropTargetMBS.DragOver method for the current control. When a drop operation actually occurs in a given control, the DoDragDrop function calls WindowsDropTargetMBS.Drop.

76.9.7 Properties

76.9.8 Handle as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle.
Notes: (Read and Write property)

76.9.9 Helper as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference to the helper object.
Notes: (Read and Write property)

76.9.10 Events

76.9.11 DragEnter(dataObject as WinDataObjectMBS, keystate as Integer, x as Integer, y as Integer, byref effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates whether a drop can be accepted, and, if so, the effect of the drop.
Notes: dataObject: This data object contains the data being transferred in the drag-and-drop operation. If the drop occurs, this data object will be incorporated into the target.

KeyState: The current state of the keyboard modifier keys on the keyboard. Possible values can be a combination of any of the flags MK_CONTROL, MK_SHIFT, MK_ALT, MK_BUTTON, MK_LBUTTON, MK_MBUTTON, and MK_RBUTTON.

x and y: A point containing the current cursor coordinates in screen coordinates.

effect: The value of the Effect parameter of the DoDragDrop function. On return, must contain one of the DROPEFFECT flags, which indicates what the result of the drop operation would be.

Return S_OK on success. Other possible values include the following.

Return code	Description
E_UNEXPECTED	An unexpected error has occurred.
E_INVALIDARG	The Effect parameter is NULL on input.
E_OUTOFMEMORY	There was insufficient memory available for this operation.

You do not call DragEnter directly; instead the DoDragDrop function calls it to determine the effect of a drop the first time the user drags the mouse into the registered window of a drop target.

To implement DragEnter, you must determine whether the target can use the data in the source data object by checking three things:

- The format and medium specified by the data object
- The input value of Effect
- The state of the modifier keys

To check the format and medium, use the WinDataObjectMBS object.

On entry to WindowsDropTargetMBS.DragEnter, the Effect parameter is set to the effects given to the OkEffect parameter of the DoDragDrop function. The WindowsDropTargetMBS.DragEnter method must choose one of these effects or disable the drop.

The following modifier keys affect the result of the drop.

Key Combination	User-Visible Feedback	Drop Effect
CTRL + SHIFT	=	DROPEFFECT_LINK
CTRL	+	DROPEFFECT_COPY
No keys or SHIFT	None	DROPEFFECT_MOVE

On return, the method must write the effect, one of the DROPEFFECT flags, to the Effect parameter. DoDragDrop then takes this parameter and writes it to its Effect parameter. You communicate the effect of the drop back to the source through DoDragDrop in the Effect parameter. The DoDragDrop function then calls WindowsDragSourceMBS.GiveFeedback so that the source application can display the appropriate visual feedback to the user through the target window.

76.9.12 DragLeave as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Removes target feedback and releases the data object.
Notes: Return S_OK on success. Other possible values include the following.

Return code	Description
E_OUTOFMEMORY	There is insufficient memory available for this operation.

You do not call this method directly. The DoDragDrop function calls this method in either of the following cases:

- When the user drags the cursor out of a given target window.
- When the user cancels the current drag-and-drop operation.

To implement WindowsDropTargetMBS.DragLeave, you must remove any target feedback that is currently displayed. You must also release any references you hold to the data transfer object.

76.9.13 DragOver(keystate as Integer, x as Integer, y as Integer, byref effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides target feedback to the user and communicates the drop's effect to the DoDragDrop function so it can communicate the effect of the drop back to the source.
Notes: KeyState: The current state of the keyboard modifier keys on the keyboard. Valid values can be a combination of any of the flags MK_CONTROL, MK_SHIFT, MK_ALT, MK_BUTTON, MK_LBUTTON, MK_MBUTTON, and MK_RBUTTON.
x and y: The point containing the current cursor coordinates in screen coordinates.
Effect: On input, pointer to the value of the Effect parameter of the DoDragDrop function. On return, must contain one of the DROPEFFECT flags, which indicates what the result of the drop operation would be.

Return S_OK on success. Other possible values include the following.

Return code	Description
E_UNEXPECTED	An unexpected error has occurred.
E_INVALIDARG	The Effect value is not valid.
E_OUTOFMEMORY	There was insufficient memory available for this operation.

You do not call DragOver directly. The DoDragDrop function calls this method each time the user moves the mouse across a given target window. DoDragDrop exits the loop if the drag-and-drop operation is canceled, if the user drags the mouse out of the target window, or if the drop is completed.

In implementing WindowsDropTargetMBS.DragOver, you must provide features similar to those in WindowsDropTargetMBS.DragEnter. You must determine the effect of dropping the data on the target by examining the FORMATETC defining the data object's formats and medium, along with the state of the modifier keys. The mouse position may also play a role in determining the effect of a drop. The following modifier keys affect the result of the drop.

Key Combination	User-Visible Feedback	Drop Effect
CTRL + SHIFT	=	DROPEFFECT_LINK
CTRL	+	DROPEFFECT_COPY
No keys or SHIFT	None	DROPEFFECT_MOVE

You communicate the effect of the drop back to the source through DoDragDrop in Effect. The DoDragDrop function then calls WindowsDragSourceMBS.GiveFeedback so the source application can display the appropriate visual feedback to the user.

On entry to WindowsDropTargetMBS.DragOver, the Effect parameter must be set to the allowed effects passed to the OkEffect parameter of the DoDragDrop function. The WindowsDropTargetMBS.DragOver method must be able to choose one of these effects or disable the drop.

Upon return, Effect is set to one of the DROPEFFECT flags. This value is then passed to the Effect parameter of DoDragDrop. Reasonable values are DROPEFFECT_COPY to copy the dragged data to the target, DROPEFFECT_LINK to create a link to the source data, or DROPEFFECT_MOVE to allow the dragged data to be permanently moved from the source application to the target.

You may also wish to provide appropriate visual feedback in the target window. There may be some target feedback already displayed from a previous call to WindowsDropTargetMBS.DragOver or from the initial WindowsDropTargetMBS.DragEnter. If this feedback is no longer appropriate, you should remove it.

For efficiency reasons, a data object is not passed in WindowsDropTargetMBS.DragOver. The data object passed in the most recent call to WindowsDropTargetMBS.DragEnter is available and can be used.

When WindowsDropTargetMBS.DragOver has completed its operation, the DoDragDrop function calls WindowsDragSourceMBS.GiveFeedback so the source application can display the appropriate visual feedback to the user.

Notes to Implementers

This function is called frequently during the DoDragDrop loop so it makes sense to optimize your implementation of the DragOver method as much as possible.

76.9.14 Drop(dataObject as WinDataObjectMBS, keystate as Integer, x as Integer, y as Integer, byref effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Incorporates the source data into the target window, removes target feedback, and releases the data object.
Notes: dataObject: The data object being transferred in the drag-and-drop operation.
KeyState: The current state of the keyboard modifier keys on the keyboard. Possible values can be a combination of any of the flags MK_CONTROL, MK_SHIFT, MK_ALT, MK_BUTTON, MK_LBUTTON, MK_MBUTTON, and MK_RBUTTON.
x and y: The point containing the current cursor coordinates in screen coordinates.
Effect: On input, the value of the Effect parameter of the DoDragDrop function. On return, must contain one of the DROPEFFECT flags, which indicates what the result of the drop operation would be.

Return S_OK on success. Other possible values include the following.

You do not call this method directly. The DoDragDrop function calls this method when the user completes the drag-and-drop operation.

Return code	Description
E_UNEXPECTED	An unexpected error has occurred.
E_INVALIDARG	The pdwEffect parameter is not valid.
E_OUTOFMEMORY	There is insufficient memory available for this operation.

In implementing Drop, you must incorporate the data object into the target. Use the formats available in WinDataObjectMBS, available through dataObject, along with the current state of the modifier keys to determine how the data is to be incorporated, such as linking or embedding.

In addition to incorporating the data, you must also clean up as you do in the WindowsDropTargetMBS.DragLeave method:

Remove any target feedback that is currently displayed.
Release any references to the data object.
You also pass the effect of this operation back to the source application through DoDragDrop, so the source application can clean up after the drag-and-drop operation is complete:

Remove any source feedback that is being displayed.
Make any necessary changes to the data, such as removing the data if the operation was a move.

76.9.15 Constants

Constants

Constant	Value	Description
DROPEFFECT_COPY	1	One of the drop effect constants. Drop results in a copy. The original data is untouched by the drag source. Your application should always mask drop effect constants to ensure compa ibility with future implementations. Presently, only some of the bit positio in a drop effect value have meaning. In the future, more interpretations f the bits will be added. Drag sources and drop targets should carefully ma these values appropriately before comparing. They should never compare drop effect value against, say, DROPEFFECT_COPY by doing the followin if DropEffect = DROPEFFECT_COPY then Instead, the application should always mask for the value or values being soug as using one of the following techniques: if bitwiseAnd(DropEffect, DROPEFFECT_COPY) = DROPE FECT_COPY then This allows for the definition of new drop effects, while preserving backwar compatibility with existing code.
DROPEFFECT_LINK	4	One of the drop effect constants. Drag source should create a link to the original data.
DROPEFFECT_MOVE	2	One of the drop effect constants. Drag source should remove the data.
DROPEFFECT_NONE	0	One of the drop effect constants. Drop target cannot accept the data.
DROPEFFECT_SCROLL	&h80000000	One of the drop effect constants. Scrolling is about to start or is currently occurring in the target. This value used in addition to the other values.
E_INVALIDARG	&h80070057	One of the OLE error codes. An invalid argument was passed.
E_OUTOFMEMORY	&h80000002	One of the OLE error codes. There was insufficient memory available for this operation.
E_UNEXPECTED	&h8000FFFF	One of the OLE error codes. An unexpected error has occurred.
MK_CONTROL	8	One of the key state constants. The CTRL key is down.
MK_LBUTTON	1	One of the key state constants. The left mouse button is down.
MK_MBUTTON	&h10	One of the key state constants. The middle mouse button is down.
MK_RBUTTON	2	One of the key state constants. The right mouse button is down.
MK_SHIFT	4	One of the key state constants. The SHIFT key is down.
MK_XBUTTON1	&h20	One of the key state constants. The first X button is down.
MK_XBUTTON2	&h40	One of the key state constants. The second X button is down.
S_FALSE	1	One of the OLE error codes.
S_OK	0	One of the OLE error codes.

76.10 class WindowsFileDescriptorMBS

76.10.1 class WindowsFileDescriptorMBS

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a file description.
Example:

```
// This example needs a window with Canvas1.
// accept files dragged from Outlook (attachments or emails), which have no path on disk
// MyDropTarget is a subclass of WindowsDropTargetMBS with the Drop event implemented.
// DropTarget is a property of the window: DropTarget As MyDropTarget
DropTarget = New MyDropTarget
Call DropTarget.AttachToControl(Canvas1)

// in MyDropTarget:
Function Drop(dataObject As WinDataObjectMBS, keystate As Integer, x As Integer, y As Integer, ByRef
effect As Integer) As Integer Handles Drop
Var descriptors() As WindowsFileDescriptorMBS = dataObject.GetFileDescriptors
For Each d As WindowsFileDescriptorMBS In descriptors
Var data As String = dataObject.GetFileContents(d.Index)
Var file As FolderItem = SpecialFolder.Temporary.Child(d.FileName)
Var stream As BinaryStream = BinaryStream.Create(file, True)
stream.Write data
stream.Close
System.DebugLog "Saved " + d.FileName + " with " + d.FileSize.ToString + " bytes"
Next
effect = 1 // DROPEFFECT_COPY
End Function
```

Notes: Describes the properties of a file that is being copied by means of the clipboard during a Microsoft ActiveX drag-and-drop operation.
Blog Entries

- MBS Real Studio Plugins, version 11.2pr4

76.10.2 Properties

76.10.3 ClassID as String

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file type identifier.
Example:

```
Var d as WindowsFileDescriptorMBS // your file description
```

```
if BitwiseAnd(d.Flags, d.FD_CLSID) <>0 then
MessageBox d.ClassID
end if
```

Notes: Only valid if FD_CLSID is set in the flags.
(Read and Write property)

76.10.4 CreationTime as Double

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The time of file creation.
Example:

```
Var d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_CREATETIME) <>0 then
Var da as new date
da.TotalSeconds = d.CreationTime
MessageBox da.LongDate
end if
```

Notes: Only valid if FD_CREATETIME is set in the flags.
(Read and Write property)

76.10.5 FileAttributes as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: File attribute flags.
Example:

```
Var d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_ATTRIBUTES) <>0 then
if BitwiseAnd(d.FileAttributes, d.FILE_ATTRIBUTE_TEMPORARY) = d.FILE_ATTRIBUTE_TEM-
PORARY then
MessageBox "temp file"
else
MessageBox "no temp file"
end if
end if
```

Notes: This will be a combination of the FILE_ATTRIBUTE_* constants.
Only valid if FD_ATTRIBUTES is set in the flags.
(Read and Write property)

76.10.6 FileName as String

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string that contains the name of the file.
Example:

```
Var d as WindowsFileDescriptorMBS // your file description

MessageBox d.FileName
```

Notes: (Read and Write property)

76.10.7 FileSize as Int64

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file size, in bytes.
Example:

```
Var d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_FILESIZE) <>0 then
MessageBox str(d.FileSize)
end if
```

Notes: Only valid if FD_FILESIZE is set in flags.
(Read and Write property)

76.10.8 Flags as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: An array of flags that indicate which of the other structure members contain valid data.
Notes: A combination of the FD_* constants.
(Read and Write property)

76.10.9 IconHeight as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height of the file icon.
Example:

```
Var d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <>0 then
MessageBox "file object at "+stR(d.Pointx)+"/"+str(d.Pointy)+" with size "+str(d.IconWidth)+"/"+str(d.IconHeight)
end if
```

Notes: Only valid if FD_SIZEPOINT is set in the flags.
(Read and Write property)

76.10.10 IconWidth as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width of the file icon.
Example:

```
Var d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <>0 then
MessageBox "file object at "+stR(d.Pointx)+"/"+str(d.Pointy)+" with size "+str(d.IconWidth)+"/"+str(d.IconHeight)
end if
```

Notes: Only valid if FD_SIZEPOINT is set in the flags.
(Read and Write property)

76.10.11 Index as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The index of the file descriptor.
Notes: Use this entry for GetFileContent call.
(Read and Write property)

76.10.12 LastAccessTime as Double

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The time that the file was last accessed.
Example:

```
Var d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_ACCESSTIME) <>0 then
Var da as new date
da.TotalSeconds = d.LastAccessTime
MessageBox da.LongDate
end if
```

Notes: Only valid if FD_ACCESSTIME is set in the flags.
(Read and Write property)

76.10.13 LastWriteTime as Double

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The time of the last write operation.
Example:

```
Var d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_WRITESTIME) <>0 then
Var da as new date
da.TotalSeconds = d.LastWriteTime
MessageBox da.LongDate
end if
```

Notes: Only valid if FD_WRITESTIME is set in the flags.
(Read and Write property)

76.10.14 PointX as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The x screen coordinate of the file object.
Example:

```
Var d as WindowsFileDescriptorMBS // your file description
```

```
if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <>0 then
MessageBox "file object at "+stR(d.Pointx)+"/"+str(d.Pointy)+" with size "+str(d.IconWidth)+"/"+str(d.IconHeight)
end if
```

Notes: Only valid if FD_SIZEPOINT is set in the flags.
(Read and Write property)

76.10.15 PointY as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The y screen coordinate of the file object.
Example:

```
Var d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <>0 then
MessageBox "file object at "+stR(d.Pointx)+"/"+str(d.Pointy)+" with size "+str(d.IconWidth)+"/"+str(d.IconHeight)
end if
```

Notes: Only valid if FD_SIZEPOINT is set in the flags.
(Read and Write property)

76.10.16 Constants

Flag constants

Constant	Value	Description
FD_ACCESSTIME	&h0010	The LastAccessTime member is valid.
FD_ATTRIBUTES	4	The FileAttributes member is valid.
FD_CLSID	1	The ClassID member is valid.
FD_CREATETIME	8	The CreationTime member is valid.
FD_FILESIZE	&h0040	Whether the FileSize member is valid.
FD_LINKUI	&h8000	Treat the operation as a shortcut.
FD_PROGRESSUI	&h4000	A progress indicator is shown with drag-and-drop operations.
FD_SIZEPOINT	2	The Icon* and point* members are valid.
FD_WRITESTIME	&h0020	Whether the LastWriteTime property is valid.

File attribute constants

Constant	Value	Description
FILE_ATTRIBUTE_ARCHIVE	&h00000020	A file or directory that is an archive file or directory. Appl use this attribute to mark files for backup or removal .
FILE_ATTRIBUTE_ATOMIC_WRITE	&h00000200	
FILE_ATTRIBUTE_COMPRESSED	&h00000800	A file or directory that is compressed. For a file, all of the compressed. For a directory, compression is the default for n and subdirectories.
FILE_ATTRIBUTE_DIRECTORY	&h00000010	The handle that identifies a directory.
FILE_ATTRIBUTE_HIDDEN	&h00000002	The file or directory is hidden. It is not included in an o listing.
FILE_ATTRIBUTE_NORMAL	&h00000080	A file that does not have other attributes set. This attribute i used alone.
FILE_ATTRIBUTE_OFFLINE	&h00001000	The data of a file is not available immediately. This attribute file data is physically moved to offline storage. This attribute i Storage, which is the hierarchical storage management softw should not arbitrarily change this attribute.
FILE_ATTRIBUTE_READONLY	&h00000001	A file that is read-only. Applications can read the file, but c or delete it.
FILE_ATTRIBUTE_SYSTEM	&h00000004	A file or directory that the operating system uses a part of, o
FILE_ATTRIBUTE_TEMPORARY	&h00000100	A file that is being used for temporary storage. File systems a back to mass storage if sufficient cache memory is available, an application deletes a temporary file after the handle is scenario, the system can entirely avoid writing the data. Ot is written after the handle is closed.
FILE_ATTRIBUTE_XACTION_WRITE	&h00000400	

Chapter 77

DynamicDeclares

77.1 class DeclareCallBackMBS

77.1.1 class DeclareCallBackMBS

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a callback for use in declares.
Notes: Allows you to dynamically create callback functions.
Pass the function pointer to a C function which later calls back your callback.

Please make sure this callback object stays alive, e.g. stored in a global property. When the object is released and the callback later invoked, the application will crash.

When you code sign on macOS, you may need to use the entitlement for just-in-time compiler and for unsigned executable memory, e.g. the com.apple.security.cs.allow-unsigned-executable-memory entitlement.

Xojo Developer Magazine

- 21.1, page 28: News from MBS Xojo Plugins, What's up with MonkeyBread Software by Stefanie Juchmes

- 19.3, page 10: News

77.1.2 Methods

77.1.3 Constructor(Signature as String)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new callback object.
Notes: Please pass a valid signature, e.g. "(pi)v" for a function taking one pointer, one integer and return nothing (void).
If the signature doesn't match the values put on the stack, the app may crash.

77.1.4 ParameterType(Index as Integer) as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries type of a parameter.
Notes: Index in range from 0 to ParameterCount-1.

77.1.5 Properties

77.1.6 AllowAsync as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the callbacks are allowed to go asynchronously.
Notes: For MacOS/iOS only.

Asynchronous callbacks have no chance to return a value as the call to the Xojo event happens later and the C function returns before the Xojo event is started.
Synchronous callbacks would let the callback wait for the Xojo main thread to react to the event and then return the result back.

AllowAsync is set to true automatically for callbacks with void as return automatically.
(Read and Write property)

77.1.7 CallCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The call counter.
Notes: We call how often the callback is called.
(Read only property)

77.1.8 FunctionPtr as Ptr

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function pointer for the callback.
Notes: Pass this to the C functions to pass a callback function pointer.
(Read only property)

77.1.9 Name as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the callback.
Notes: You can set this to later read value in debugging.
(Read and Write property)

77.1.10 ParameterCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of parameters.
Notes: We currently limit this to 32 parameters.
(Read only property)

77.1.11 Signature as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature used to initialize this object.
Notes: (Read only property)

77.1.12 SignatureParameters as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature part for the parameters.
Notes: (Read only property)

77.1.13 SignatureReturn as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature part for the return value.
Notes: (Read only property)

77.1.14 Tag as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag value.
Notes: Store whatever you need to keep referenced.
(Read and Write property)

77.1.15 ParameterCFRetain(Index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets whether a parameter needs to be retained via CFRetain() call.
Notes: If the callback is within Apple's frameworks passing a CoreFoundation object, you can set this property to true, so we call CFRetain method on it in the callback and later release when the Xojo event was called.
This allows to avoid crashes with CoreFoundation objects passed from one thread to another thread for multi threaded callbacks.

Parameter must be of type pointer.
(Read and Write computed property)

77.1.16 ParameterCopyString(Index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets whether a parameter needs to be copied as a zero terminated string.
Notes: If the callback receives a C string, you can set this property to true, so we copy it in the callback and later release when the Xojo event was called.
This allows to avoid crashes with strings passed from one thread to another thread for multi threaded callbacks.

Parameter must be of type pointer or string.
(Read and Write computed property)

77.1.17 ParameterNSRetain(Index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets whether a parameter needs to be retained via [NSObject retain] call.
Notes: If the callback is within Apple's frameworks passing a Objective-C object, you can set this property to true, so we call retain method on it in the callback and later release when the Xojo event was called.
This allows to avoid crashes with NSObject objects passed from one thread to another thread for multi threaded callbacks.

Parameter must be of type pointer.
(Read and Write computed property)

77.1.18 Events

77.1.19 Callback(Parameters() as Variant) as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The callback event.
Notes: Parameters are converted to variants and passed as array.
The result is converted to the required data type and returned.

77.1.20 Constants

Call Modes

Constant	Value	Description
kCallModeARM	"A"	ARM calling
kCallModeARMThumb	"a"	ARM calling in thumb mode
kCallModeCDecl	"c"	x86 specific CDecl
kCallModeDefault	":"	Default calling conv (platform native)
kCallModeEllipsisVarargs	"."	C ellipsis function call (variable/unnamed arguments (after ,Äô...,Äô))
kCallModeSysCall	"$ "	SysCall mode
kCallModeThisCallGNU	"#"	x86 specific, GNU C++ this calls are cdecl, but keep specific sig char for clarity.

Calling Conventions

Constant	Value	Description
kCallModeEllipsis	"e"	C ellipsis function call
kCallModeFastCallGNU	"f"	C x86 Windows GCC fast call
kCallModeFastCallMS	"F"	C x86 Windows Microsoft fast call
kCallModePrefix	"_"	The character to indicate that next character in the signature is a calling convention prefix.
kCallModeStdCall	"s"	C x86 Windows standard call
kCallModeThisCallMS	"+"	C x86 Windows Microsoft this call

Types

Constant	Value	Description
kTypeBool	"B"	bool
kTypeChar	"c"	char, 8 bit signed byte
kTypeDouble	"d"	Double, 64-bit and 8 bytes big.
kTypeEndArg	")"	end of arguments symbol.
kTypeFloat	"f"	Single, 32-bit and 4 bytes big.
kTypeInt	"i"	32-bit signed integer.
kTypeInt64	"l"	64-bit signed integer.
kTypeLong	"j"	32/64-bit signed integer. 64-bit only for MacOS and Linux in 64-bit application. Always 32-bit on Windows.
kTypePtr	"p"	Pointer. Maybe a reference to an object or array.
kTypeShort	"s"	16-bit signed integer.
kTypeString	"Z"	C String with zero byte as terminator.
kTypeStruct	"T"	Structure
kTypeUnsignedChar	"C"	8 bit unsigned byte
kTypeUnsignedInt	"I"	32-bit unsigned integer.
kTypeUnsignedInt64	"L"	64-bit unsigned integer.
kTypeUnsignedLong	"J"	32/64-bit unsigned integer. 64-bit only for MacOS and Linux in 64-bit application. Always 32-bit on Windows.
kTypeUnsignedShort	"S"	16-bit unsigned integer.
kTypeVoid	"v"	Nothing to return.

77.2 class DeclareFunctionMBS

77.2.1 class DeclareFunctionMBS

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a C function call.
Example:

```
// change path if you like to try this on Windows or Linux
Var d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Var p As ptr = d.Symbol("zlibVersion")
Var f As New DeclareFunctionMBS("()Z", p)

Var n As String = f.Invoke
MessageBox "zlibVersion: "+n
```

Notes: Compared to built-in declares in Xojo, those functions allow a much more dynamic calling of functions with various calling conventions.

We have

- more dynamic
- the possibility to define declares at runtime
- more calling conventions
- support for variable arguments in C (dots in argument list)
- thread safe callbacks with DeclareCallBackMBS class.

77.2.2 Methods

77.2.3 ClearParameters

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all parameters.
Notes: Sets them all to zero/nil.

77.2.4 Constructor(Signature as String, FunctionPtr as Ptr)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Example:

```
// change path if you like to try this on Windows or Linux
Var d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Var p As ptr = d.Symbol("zlibVersion")
Var f As New DeclareFunctionMBS("()Z", p)

Var n As String = f.Invoke
MessageBox "zlibVersion: "+n
```

Notes: Pass the signature and function pointer from a C function.
If signature is incorrect, the application will probably crash with stack corruption.

77.2.5 Invoke as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Invokes the function.
Example:

```
// change path if you like to try this on Windows or Linux
Var d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")
```

```
// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Var p As ptr = d.Symbol("zlibVersion")
Var f As New DeclareFunctionMBS("()Z", p)

Var n As String = f.Invoke
MessageBox "zlibVersion: "+n
```

See also:

- 77.2.6 Invoke(Parameters() as Variant) as Variant 12781

77.2.6 Invoke(Parameters() as Variant) as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Invokes the function.
Notes: First calls SetParameters with the given array to set parameters.
Then invokes the function.
See also:

- 77.2.5 Invoke as Variant 12780

77.2.7 SetParameters(paramArray Parameters as Variant)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set all parameters together with passing arguments to this function.
Example:

```
// We try to run sysctlbyname on macOS

Var d As New DeclareLibraryMBS("/usr/lib/libc.dylib")

// int sysctlbyname(const char *name, void *oldp, size_t *oldlenp, void *newp, size_t newlen);

Var p As ptr = d.Symbol("sysctlbyname")

'const char* ->CString for name ->Z
'void* ->pointer to data ->p
'size_t * ->pointer to 32/64 bit integer for length ->p
'void* ->pointer to data ->p
'size_t ->32/64bit unsigned int ->L in 64-bit
```

```
Var f As New DeclareFunctionMBS("(ZpppL)i", p)

Var mData As New MemoryBlock(8)
Var mLen As New MemoryBlock(8)
Var pData As ptr = mData
Var pLen as ptr = mLen

mLen.UInt64Value(0) = mData.Size

f.SetParameters "hw.ncpu", pData, pLen, Nil, 0
Var n As Integer = f.Invoke
// result is zero on result or -1 on failure

Var CPUCount As Integer = mData.UInt32Value(0)

If n = 0 Then
MessageBox "CPU count: "+Str(CPUCount)
Else
MessageBox "Failed."
End If

Break // see in debugger
```

Notes: We automatically convert values based on the parameter type.
The class stores reference to the variant when setting to make sure strings and MemoryBlocks are not freed too early.

Please pass C Strings as Xojo strings, not CString data type.
See also:

- 77.2.8 SetParameters(Parameters() as Variant) 12782

77.2.8 SetParameters(Parameters() as Variant)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets all arguments by passing an array of values.
Notes: We automatically convert values based on the parameter type.
The class stores reference to the variant when setting to make sure strings and MemoryBlocks are not freed too early.

Please pass C Strings as Xojo strings, not CString data type.
See also:

- 77.2.7 SetParameters(paramArray Parameters as Variant) 12781

77.2.9 Properties

77.2.10 CallCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The call counter.
Notes: We call how often the function is called.
(Read only property)

77.2.11 CallMode as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The calling convention mode to use.
Notes: Default is to use default mode for the given platform.
(Read and Write property)

77.2.12 FunctionPtr as Ptr

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The pointer for the C function.
Example:

```
// change path if you like to try this on Windows or Linux
Var d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Var p As ptr = d.Symbol("zlibVersion")

// call via delegate
' define delegate like this:
' Public Function zlibVersionDelegate() As CString

Var z As New zlibVersionDelegate(p)
Var v As String = z.Invoke
MessageBox "zlibVersion: "+v
```

Notes: (Read and Write property)

77.2.13 Name as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the function.
Notes: (Read and Write property)

77.2.14 ParameterCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of parameters.
Notes: We currently limit this to 32 parameters.
(Read only property)

77.2.15 Parameters as Dictionary

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries all parameters.
Notes: Mainly to inspect parameters in debugger.
Keys are indexes and values are the parameter values.
(Read only property)

77.2.16 RawResult as Integer

MBS Util Plugin, Plugin Version: 25.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The raw result of the last invocation.
Notes: This is useful to get the pointer for a returned string.
(Read and Write property)

77.2.17 Result as Variant

MBS Util Plugin, Plugin Version: 25.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The result of the last invocation.
Notes: (Read and Write property)

77.2.18 Signature as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature used to initialize this object.
Notes: (Read only property)

77.2.19 SignatureParameters as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature part for the parameters.
Notes: (Read only property)

77.2.20 SignatureReturn as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature part for the return value.
Notes: (Read only property)

77.2.21 StackSize as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The stack size to use.
Notes: Defaults to 4096 bytes.
(Read and Write property)

77.2.22 Tag as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag value.
Notes: Store whatever you need to keep referenced.
(Read and Write property)

77.2.23 ParameterBoolean(Index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter as boolean.
Notes: You can get and set value here.
(Read and Write computed property)

77.2.24 ParameterDouble(Index as Integer) as Double

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter value as double.
Notes: You can get and set value here.
(Read and Write computed property)

77.2.25 ParameterInteger(Index as Integer) as Int64

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter as integer value.
Notes: You can get and set value here.
(Read and Write computed property)

77.2.26 ParameterPointer(Index as Integer) as Ptr

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter as pointer value.
Notes: You can get and set value here.
(Read and Write computed property)

77.2.27 ParameterSingle(Index as Integer) as Single

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter as single value.
Notes: You can get and set value here.
(Read and Write computed property)

77.2.28 ParameterString(Index as Integer) as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter as string value.
Example:

```
// We try to run strstr on C Library on macOS to find string in string with strstr as example:

Var d As New DeclareLibraryMBS("/usr/lib/libc.dylib")

// char *strstr(Const char *__big, Const char *__little);

Var p As ptr = d.Symbol("strstr")
Var f As New DeclareFunctionMBS("(ZZ)Z", p)

f.ParameterString(0) = "Hello World!"
f.ParameterString(1) = "World"

Var n1 As String = f.Invoke
// gives back World! as that was found

f.ParameterString(0) = "Hello World!"
f.ParameterString(1) = "xxx"

Var n2 As String = f.Invoke
// gives empty string as not found

Break // see in debugger
```

Notes: To avoid crashes, we only read strings from parameters with type string or pointer.
But you can assign a string value to all types, which may not make sense for numbers.
You can get and set value here.
(Read and Write computed property)

77.2.29 ParameterValue(Index as Integer) as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set the value as variant.
Notes: We automatically convert values based on the parameter type.
The class stores reference to the variant when setting to make sure strings and MemoryBlocks are not freed too early.
You can get and set value here.

Please pass C Strings as Xojo strings, not CString data type.
(Read and Write computed property)

77.2.30 Constants

Call Modes

Constant	Value	Description
kCallModeARM	"A"	ARM calling
kCallModeARMThumb	"a"	ARM calling in thumb mode
kCallModeCArm64	22	C arm64 call (AArch64)
kCallModeCArmArmhf	30	C arm call (arm hardÔ¨Çoat - e.g. raspberry pi)
kCallModeCDecl	"c"	x86 specific CDecl
kCallModeCDefault	0	C default function call for current platform
kCallModeCDefaultThis	99	C default function call for current platform with this pointer.
kCallModeCEllipsis	100	C ellipsis function call (named arguments (before ,Äô...,Äô))
kCallModeCEllipsisVarargs	101	C ellipsis function call (variable/unnamed arguments (after ,Äô...,Äô))
kCallModeCX64Win64	7	C x64 Windows standard call
kCallModeCX86Cdecl	1	C x86 platforms standard call
kCallModeCX86Win32FastGnu	4	C x86 Windows GCC fast call
kCallModeCX86Win32FastMs	3	C x86 Windows Microsoft fast call
kCallModeCX86Win32Std	2	C x86 Windows standard call
kCallModeCX86Win32This	70	C ellipsis function call (variable/unnamed arguments (after ,Äô...,Äô))
kCallModeCX86Win32ThisGnu	1	C x86 Windows GCC this call
kCallModeCX86Win32ThisMs	5	C x86 Windows Microsoft this call
kCallModeDefault	":"	Default calling conv (platform native)
kCallModeEllipsisVarargs	"."	C ellipsis function call (variable/unnamed arguments (after ,Äô...,Äô))
kCallModeSysCall	"$ "	SysCall mode
kCallModeSysDefault	200	C default syscall for current platform
kCallModeSysX64SyscallSysV	204	C syscall for x64 System V platforms
kCallModeSysX86Int80HBSD	202	C syscall for x86 BSD platforms
kCallModeSysX86Int80HLinux	201	C syscall for x86 Linux
kCallModeThisCallGNU	"#"	x86 specific, GNU C++ this calls are cdecl, but keep specific sig char for clarity.

Calling Conventions

Constant	Value	Description
kCallModeEllipsis	"e"	C ellipsis function call
kCallModeFastCallGNU	"f"	C x86 Windows GCC fast call
kCallModeFastCallMS	"F"	C x86 Windows Microsoft fast call
kCallModePrefix	"_"	The character to indicate that next character in the signature is a calling convention prefix.
kCallModeStdCall	"s"	C x86 Windows standard call
kCallModeThisCallMS	"+"	C x86 Windows Microsoft this call

Types

Constant	Value	Description
kTypeBool	"B"	bool
kTypeChar	"c"	char, 8 bit signed byte
kTypeDouble	"d"	Double, 64-bit and 8 bytes big.
kTypeEndArg	")"	end of arguments symbol.
kTypeFloat	"f"	Single, 32-bit and 4 bytes big.
kTypeInt	"i"	32-bit signed integer.
kTypeInt64	"l"	64-bit signed integer.
kTypeLong	"j"	32/64-bit signed integer. 64-bit only for MacOS and Linux in 64-bit application. Always 32-bit on Windows.
kTypePtr	"p"	Pointer. Maybe a reference to an object or array.
kTypeShort	"s"	16-bit signed integer.
kTypeString	"Z"	C String with zero byte as terminator.
kTypeStruct	"T"	Structure
kTypeUnsignedChar	"C"	8 bit unsigned byte
kTypeUnsignedInt	"I"	32-bit unsigned integer.
kTypeUnsignedInt64	"L"	64-bit unsigned integer.
kTypeUnsignedLong	"J"	32/64-bit unsigned integer. 64-bit only for MacOS and Linux in 64-bit application. Always 32-bit on Windows.
kTypeUnsignedShort	"S"	16-bit unsigned integer.
kTypeVoid	"v"	Nothing to return.

77.3 class DeclareLibraryMBS

77.3.1 class DeclareLibraryMBS

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a C library loaded into Xojo.
Example:

```
// change path if you like to try this on Windows or Linux
Var d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

Var lines() As String = d.SymbolNames
Break // look in list of functions
```

Notes: Allows you to load a DLL on Windows, dylib on MacOS and shared object (so) on Linux and inspect the available functions and load functions by name.

77.3.2 Methods

77.3.3 Constructor(LibFile as folderItem)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads a library.
Notes: Pass path to DLL on Windows, dylib on MacOS or so file on Linux.
Raises exception in case of problems.
See also:

- 77.3.4 Constructor(LibPath as string) 12790

77.3.4 Constructor(LibPath as string)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads a library.
Example:

```
// change path if you like to try this on Windows or Linux
Var d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

Var lines() As String = d.SymbolNames
Break // look in list of functions
```

Notes: Pass path to DLL on Windows, dylib on MacOS or so file on Linux.
Raises exception in case of problems.
See also:

- 77.3.3 Constructor(LibFile as folderItem) 12790

77.3.5 Symbol(name as string) as ptr

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries function or data pointer for a symbol.
Example:

```
// change path if you like to try this on Windows or Linux
Var d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Var p As ptr = d.Symbol("zlibVersion")
Var f As New DeclareFunctionMBS("()Z", p)

Var n As String = f.Invoke
MessageBox "zlibVersion: "+n
```

Notes: Returns nil if not found.

77.3.6 SymbolName(index as Integer) as string

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries name of a symbol.
Notes: Index is in range from 0 to SymbolCount-1.
See also:

- 77.3.7 SymbolName(p as Ptr) as string 12792

77.3.7 SymbolName(p as Ptr) as string

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries name of a symbol from the ptr.
Notes: Looks up the symbol table to find the entry with the right pointer and returns the name.
Returns "" if not found.
See also:

- 77.3.6 SymbolName(index as Integer) as string 12791

77.3.8 SymbolNames as string()

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of symbols of a library.
Example:

```
// change path if you like to try this on Windows or Linux
Var d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

Var lines() As String = d.SymbolNames
Break // look in list of functions
```

Notes: This may show more symbols as defined in public C headers.

77.3.9 Properties

77.3.10 Handle as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object handle.
Notes: (Read only property)

77.3.11 Name as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries name of the library.
Notes: (Read only property)

77.3.12 Path as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries path of the library.
Notes: May return the path used to load the library.
(Read only property)

77.3.13 SymbolCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of symbols in the library.
Notes: (Read only property)

Chapter 78

DynaPDF

78.1 class DynaPDFAnnotationExMBS

78.1.1 class DynaPDFAnnotationExMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for extended annotation information.
Example:

```
Var pdf as DynaPDFMBS // your instance

Var c as Integer = pdf.GetAnnotCount

for i as Integer = 0 to c-1
Var a as DynaPDFAnnotationExMBS = pdf.GetAnnotEx(i)

MessageBox str(a.Type)
next
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS REALbasic Plugins, version 11.1pr4

78.1.2 Methods

78.1.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.1.4 DashPattern(index as UInt32) as single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The dash pattern.
Notes: If BorderStyle is kbsDashed.

78.1.5 InkList(index as UInt32) as Single()

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ink list.
Notes: Ink annotations only. Array of array.
Index is from 0 to InkListCount-1.

78.1.6 Operator_Convert as DynaPDFAnnotationMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts this annotation object to older DynaPDFAnnotationMBS.
Example:

```
Var d As New DynaPDFMBS

// create a new annotation
Call d.CreateNewPDF
Call d.append
Var n As Integer = d.WebLink(0, 0, 100, 100, "about:blank")

// now query as old class and convert to new class
Var a1 As DynaPDFAnnotationMBS = d.GetAnnot(n)
Var a2 As DynaPDFAnnotationExMBS = a1
```

```
// now query as new class and convert to old class
Var e1 As DynaPDFAnnotationExMBS = d.GetAnnotEx(n)
Var e2 As DynaPDFAnnotationMBS = e1

// please update all your code to move to DynaPDFAnnotationExMBS
Break
```

Notes: The fields not supported by DynaPDFAnnotationMBS are lost in the conversion.

78.1.7 QuadPoints(index as UInt32) as single

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a quad point value.
Notes: Index from 0 to QuadPointsCount-1.
Highlight, Link, and Redact annotations only.

78.1.8 Vertices(index as UInt32) as single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The vertices array.
Notes: Line, PolyLine, and Polygon annotations only.

78.1.9 Properties

78.1.10 AnnotFlags as UInt32

MBS DynaPDF Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags for this annotation.
Notes: You can use this constants:

(Read only property)

78.1.11 Author as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

```
kafNone        = &h0000000
kafInvisible   = &h0000001
kafHidden      = &h0000002
kafPrint       = &h0000004
kafNoZoom      = &h0000008
kafNoRotate    = &h0000010
kafNoView      = &h0000020
kafReadOnly    = &h0000040
```

Function: Annotation's author.
Notes: This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

78.1.12 BackColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Background color.
Notes: (Read only property)

78.1.13 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bounding box in bottom-up coordinates.
Notes: (Read only property)

78.1.14 BorderColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border color.
Notes: (Read only property)

78.1.15 BorderEffect as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The border effect.
Notes: Circle, Square, FreeText, and Polygon annotations.
(Read only property)

78.1.16 BorderStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border style.
Notes: (Read only property)

78.1.17 BorderWidth as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border width.
Notes: (Read only property)

78.1.18 Caption as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the annotation string Content is used as caption.
Notes: The string is shown in a PopUp annotation otherwise.
(Read only property)

78.1.19 CaptionOffsetX as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Horizontal offset of the caption from its normal position.
Notes: (Read only property)

78.1.20 CaptionOffsetY as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Vertical offset of the caption from its normal position.
Notes: (Read only property)

78.1.21 CaptionPos as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The position where the caption should be drawn if present.
Notes: (Read only property)

78.1.22 Content as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's contents.
Notes: This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

78.1.23 CreateDate as String

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creation Date ->Optional
Notes: (Read only property)

78.1.24 DashPatternCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of values in the array.
Notes: (Read only property)

78.1.25 Deleted as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is this annotation marked as deleted?
Notes: (Read only property)

78.1.26 DestFile as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination file.
Notes: For File link or web link annotations.
(Read only property)

78.1.27 DestPage as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination page.
Notes: For Page link annotations only.
(Read only property)

78.1.28 DestPos as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination position.
Notes: For Page link annotations only.
(Read only property)

78.1.29 DestType as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination type.
Notes: For Page link annotations only.
(Read only property)

78.1.30 EmbeddedFileHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle for the embedded file.
Notes: For FileAttach annotations only. Use the handle with the GetEmbeddedFile function.
(Read only property)

78.1.31 Grouped as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Meaningful only if Parent <>-1 and Type <>katPopUp.
Notes: If true, the annotation is part of an annotation group. Properties like Content, CreateDate, ModDate, BackColor, Subject, and Open must be taken from the parent annotation.
(Read only property)

78.1.32 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

78.1.33 HighlightMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Visual effect.
Notes: (Read only property)

78.1.34 Icon as Integer

MBS DynaPDF Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The icon type for this annotation.
Notes: The Icon type depends on the annotation type. If the annotation type is atText then the Icon is of type TAnnotIcon. If the annotation type is atFileAttach then it is of type kTFileAttachIcon. If the annotation type is atStamp then the Icon is the stamp type (kTRubberStamp).
For any other annotion type this value is not set (-1).
(Read only property)

78.1.35 InkListCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of ink arrays.
Notes: (Read only property)

78.1.36 Intent as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Markup annotations only.
Notes: The intent allows to distinguish between different uses of an annotation. For example, line annotations have two intents: LineArrow and LineDimension.
(Read only property)

78.1.37 LE1 as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Style of the start point ->Line and PolyLine annotations only.
Notes: (Read only property)

78.1.38 LE2 as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Style of the end point ->Line and PolyLine annotations only.
Notes: (Read only property)

78.1.39 LeaderLineExtend as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional leader line extend beyond the leader line.
Notes: (Read only property)

78.1.40 LeaderLineLen as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the leader lines (positive or negative)
Notes: (Read only property)

78.1.41 LeaderLineOffset as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Amount of space between the endpoints of the annotation and the leader lines.
Notes: (Read only property)

78.1.42 MarkupAnnot as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the annotation is a markup annotation.
Notes: Markup annotations can be flattened separately, see FlattenAnnots function.
(Read only property)

78.1.43 ModDate as String

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modification Date ->Optional
Notes: (Read only property)

78.1.44 Name as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's name.
Notes: This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

78.1.45 OC as Integer

MBS DynaPDF Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Handle of an OCG or OCMD or -1 if not set.
Notes: Annotations can be part of an Optional Content Group (OCG) or Optional Content Membership Dictionary (OCMD). If OC is greater -1 an OCG or OCMD handle was set. To determine whether an OCG handle was set, check whether the value is smaller &h40000000.
(Read only property)

78.1.46 Opacity as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The annotation's opacity.
Notes: Opacity = 1.0 = Opaque, Opacity <1.0 = Transparent, Markup annotations only
(Read only property)

78.1.47 Open as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Meaningful only for annotations which have a corresponding PopUp annotation.
Notes: (Read only property)

78.1.48 PageIndex as UInt32

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The page index is used to sort form fields.
Notes: See SortFieldsByIndex().
(Read only property)

78.1.49 PageNum as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Page on which the annotation appears.
Notes: (Read only property)

78.1.50 Parent as Integer

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parent annotation handle of a PopUp Annotation or the parent annotation if this annotation represents a state of a base annotation.
Notes: In this case, the annotation type is always atText and only the following members should be considered:

The PopUp annotation of a text annotation which represent an Annotation State must be ignored.
(Read only property)

State	The current state
StateModel	Marked, Review, and so on
CreateDate	Creation Date
ModDate	Modification Date
Author	The user who has set the state
Content	Not displayed in Adobe's Acrobat...
Subject	Not displayed in Adobe's Acrobat...

78.1.51 PopUp as Integer

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Handle of the corresponding PopUp annotation if any.
Notes: (Read only property)

78.1.52 QuadPointsCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of quad points.
Notes: Highlight, Link, and Redact annotations only.
(Read only property)

78.1.53 RD as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rectangular difference between the annotations bounding box and the content area.
Notes: Caret, Circle, Square, and FreeText annotations.
(Read only property)

78.1.54 RichStyle as String

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional default style string.
Notes: For FreeText annotations.
(Read only property)

78.1.55 RichText as String

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional rich text string (RC key).
Notes: For Markup annotations.
(Read only property)

78.1.56 Rotate as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rotation for caret annotations.
Notes: Caret and FreeText annotations only. Must be zero or a multiple of 90.
(Read only property)

78.1.57 StampName as String

MBS DynaPDF Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The stamp name.
Notes: Set only, if Icon property is rsUserDefined.
(Read only property)

78.1.58 State as String

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The state of the annotation.
Notes: (Read only property)

78.1.59 StateModel as String

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The state model (Marked, Review, and so on).
Notes: (Read only property)

78.1.60 Subject as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's subject.
Notes: This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

78.1.61 Subtype as String

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The subtype.
Notes: Set only, if Type = katUnknownAnnot.
(Read only property)

78.1.62 Type as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation type.
Notes: See at* constants.
(Read only property)

78.1.63 VerticesCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of values in the vertices array.
Notes: This is the raw number of floating point values. Since a vertice requires always two coordinate pairs, the number of vertices or points is VerticeCount divided by 2.
(Read only property)

78.2 class DynaPDFAnnotationMBS

78.2.1 class DynaPDFAnnotationMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for annotation information.
Example:

```
Var pdf as DynaPDFMBS // your instance

Var c as Integer = pdf.GetAnnotCount

for i as Integer = 0 to c-1
Var a as DynaPDFAnnotationMBS = pdf.GetAnnot(i)

MessageBox str(a.Type)
next
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- News from the MBS Xojo Plugins Version 23.5
- MBS Xojo Plugins, version 23.5pr1
- MBS Xojo / Real Studio Plugins, version 14.5pr4

78.2.2 Methods

78.2.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.2.4 Operator_Convert as DynaPDFAnnotationExMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts this annotation object to newer DynaPDFAnnotationExMBS.
Example:

```
Var d As New DynaPDFMBS
```

```
// create a new annotation
Call d.CreateNewPDF
Call d.append
Var n As Integer = d.WebLink(0, 0, 100, 100, "about:blank")

// now query as old class and convert to new class
Var a1 As DynaPDFAnnotationMBS = d.GetAnnot(n)
Var a2 As DynaPDFAnnotationExMBS = a1

// now query as new class and convert to old class
Var e1 As DynaPDFAnnotationExMBS = d.GetAnnotEx(n)
Var e2 As DynaPDFAnnotationMBS = e1

// please update all your code to move to DynaPDFAnnotationExMBS
Break
```

Notes: The fields not supported by DynaPDFAnnotationMBS are all zero.

78.2.5 Properties

78.2.6 Author as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's author.
Notes: This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

78.2.7 BackColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Background color.
Notes: (Read only property)

78.2.8 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bounding box in bottom-up coordinates.
Notes: (Read only property)

78.2.9 BorderColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border color.
Notes: (Read only property)

78.2.10 BorderStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border style.
Notes: (Read only property)

78.2.11 BorderWidth as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border width.
Notes: (Read only property)

78.2.12 Content as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's contents.
Notes: This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

78.2.13 Deleted as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is this annotation marked as deleted?
Notes: (Read only property)

78.2.14 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation handle.
Notes: (Read only property)

78.2.15 HighlightMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Visual effect.
Notes: See hm* constants.
(Read only property)

78.2.16 Name as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's name.
Notes: This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

78.2.17 PageNum as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Page on which the annotation appears.
Notes: (Read only property)

78.2.18 Subject as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's subject.
Notes: This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

78.2.19 Type as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation type.
Notes: See at* constants.

(Read only property)

78.3 class DynaPDFBarcode2MBS

78.3.1 class DynaPDFBarcode2MBS

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for barcode creation parameters.

Xojo Developer Magazine

- 19.2, pages 30 to 31: Getting Started with DynaPDF, If you've never tried DynaPDF, you don't know how easy it is! by Stefanie Juchmes

78.3.2 Properties

78.3.3 BarcodeType as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of barcode that should be created.
Notes: See kbct* constants.
(Read and Write property)

78.3.4 BgColor as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Background color.
Notes: Default: NO_COLOR (transparent)
(Read and Write property)

78.3.5 BorderWidth as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border width
Notes: Default is zero.

(Read and Write property)

78.3.6 Data as String

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data in the barcode.
Notes: (Read and Write property)

78.3.7 DataType as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Data type and escape flag.
Notes: Default is kbcdtBinary.
See kbcdt* constants.
(Read and Write property)

78.3.8 DotSize as Single

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Dotty mode only.
Notes: Default is 4.0/5.0.
(Read and Write property)

78.3.9 Eci as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extended Channel Interpretation mode.
Notes: Default 0.
(Read and Write property)

78.3.10 FgColor as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: RGB Foreground color
Notes: (Read and Write property)

78.3.11 FSizeFactor as Single

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font size correction factor.
Notes: Default 0.7.
(Read and Write property)

78.3.12 Option1 as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Various options, depends on barcode type.
Notes: Default value is -1.

For QRCode:
Option1 is the ECC Level with values from 1 = low, 2 = middle, 3 = better, 4 high. Default is low.
Option2 is version code from 1 to 40. Default is 0 to auto select.
For MicroQR you can use ECC Level 1 to 3 as 4 is not supported.

For Data Matrix:
Option2 size from 1 to 30. 0 is auto. See table in zint manual pdf.
Option3 can be 100 to force square size.

For Code 39:
You can set Option2 to 1 to add module 43 checksum.

For MaxiCode:
Option 1 is the mode.

For PDF 417:
Option 1 is a number between 0 and 8 where the number of codewords used for check information is determined by 2^(value + 1).
Option 2 is the number of columns between 1 and 30.
(Read and Write property)

78.3.13 Option2 as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Various options, depends on barcode type.
Notes: Default value is 0.
(Read and Write property)

78.3.14 Option3 as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Various options, depends on barcode type.
Notes: Default value is 0.
(Read and Write property)

78.3.15 Options as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Output options.
Notes: See kbco* constants.
(Read and Write property)

78.3.16 Orientation as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The orientation of the barcode.
Notes: Supported values: 0, 90, -90, 180, -180, 270, -270.
(Read and Write property)

78.3.17 OuterBorder as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional border around the scaled barcode measured in user space.
Notes: The member OuterBorder can be used to extend the background rectangle. Each side of OuterBorder specifies the line width of the corresponding side of the rectangle. OuterBorder is measured in user space whereas BorderWidth is measured in pixels of the reference grid.

Note that the background rectangle is drawn only if BgColor is set to another value than NO_COLOR (default).
(Read and Write property)

78.3.18 Primary as String

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Primary data message (max 127 bytes).
Notes: Composite codes only.
Image based barcodes only.
(Read and Write property)

78.3.19 Scale as Single

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image based barcodes only.
Notes: Default value is 1.0.
(Read and Write property)

78.3.20 ShowText as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Show human readable text?
Notes: Default is true.
(Read and Write property)

78.3.21 SpaceWidth as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whitespace width in pixels
Notes: Default value is 0 (auto).
(Read and Write property)

78.3.22 SymbHeight as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Symbol height
Notes: Default is 50.
(Read and Write property)

78.3.23 TextOffsetY as Single

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Offset to correct the y-coordinate of text.
Notes: The default value is zero.
(Read and Write property)

78.3.24 Constants

Data Type Flags

Constant	Value	Description
kbcdtBinary	0	Binary data.
kbcdtEscapeMode	8	Scan input data for escape sequences. This is a flag that can be combined with the other constants, e.g. pass EscapeMode and Unicode.
kbcdtGS1Mode	2	Encodes GS1 data using FNC1 characters.
kbcdtUnicode	1	UTF-8.

Output Flags

Constant	Value	Description
kbcoBind	2	Boundary bars above and below the symbol and between rows if stacking multiple symbols.
kbcoBoldText	64	Embolden human readable text.
kbcoBox	4	Add a box surrounding the symbol and whitespace.
kbcoDefault	0	Use default settings.
kbcoDottyMode	&h00000100	Plot a matrix symbol using dots rather than squares.
kbcoGS1_GS_Separator	&h00000200	Use GS instead FNC1 as GS1 separator.
kbcoImageOutput	&h01000000	Draw the barcode as an image. Images are usually larger than vectors and require more processing time.
kbcoNonASCII	1	Consider non-ASCII characters when creating the barcode.
kbcoReaderInit	16	Add a reader initialisation symbol to the data before encoding.
kbcoSmallText	32	Use a smaller font for human readable text.
kbcoUseActiveFont	&h02000000	Vector output only. If set, text is output with the active font. Helvetica is used otherwise.

Barcode Types

Constant	Value	Description
kbctAustraliaPost	63	Australia Post Standard Customer
kbctAustraliaRedir	68	Australia Post Redirection
kbctAustraliaReply	66	Australia Post Reply Paid
kbctAustraliaRout	67	Australia Post Routing
kbctAztec	92	Aztec Code
kbctAztecRunes	&h00000080	Aztec Runes
kbctC2Of5IATA	4	Code 2 of 5 IATA
kbctC2Of5Industrial	7	Code 2 of 5 Industrial
kbctC2Of5Interleaved	3	Interleaved 2 of 5
kbctC2Of5Logic	6	Code 2 of 5 Data Logic
kbctC2Of5Matrix	2	Standard Code 2 of 5
kbctChannelCode	&h0000008C	Channel Code
kbctCodabar	18	Codabar
kbctCodablockF	74	Codablock-F
kbctCode11	1	Code 11
kbctCode128	20	Code 128 (automatic subset switching)
kbctCode128B	60	Code 128 (Subset B)
kbctCode16K	23	Code 16K
kbctCode32	&h00000081	Code 32
kbctCode39	8	Code 3 of 9 (Code 39)
kbctCode49	24	Code 49
kbctCode93	25	Code 93
kbctCodeOne	&h0000008D	Code One
kbctDAFT	93	DAFT Code
kbctDataBarExpanded	31	GS1 DataBar Expanded / RSS_EXP
kbctDataBarExpStacked	81	GS1 DataBar Expanded Stacked
kbctDataBarLimited	30	GS1 DataBar Limited / RSS_LTD
kbctDataBarOmniTrunc	29	GS1 DataBar-14 Omnidirectional and truncated / RSS14
kbctDataBarStacked	79	GS1 DataBar-14 Stacked
kbctDataBarStackedO	80	GS1 DataBar-14 Stacked Omnidirectional
kbctDataMatrix	71	Data Matrix ECC200
kbctDotCode	&h00000073	DotCode
kbctDPD	96	DPD code
kbctDPIdentCode	22	Deutsche Post Identcode
kbctDPLeitcode	21	Deutsche Post Leitcode
kbctEAN128	16	GS1-128 (UCC.EAN-128)
kbctEAN128_CC	&h00000083	Composite Symbol with GS1-128 linear component
kbctEAN14	72	EAN-14
kbctEANX	13	EAN in various sizes.
kbctEANXCheck	14	EAN + Check Digit
kbctEANX_CC	&h00000082	Composite Symbol with EAN linear component
kbctExtCode39	9	Extended Code 3 of 9 (Code 39+)
kbctFIM	49	FIM
kbctFlattermarken	28	Flattermarken
kbctHIBC_Aztec	&h00000070	HIBC Aztec Code
kbctHIBC_CodablockF	&h0000006E	HIBC Codablock-F
kbctHIBC_Code128	98	HIBC Code 128
kbctHIBC_Code39	99	HIBC Code 39
kbctHIBC_DataMatrix	&h00000066	HIBC Data Matrix ECC200
kbctHIBC_MicroPDF417	&h0000006C	HIBC MicroPDF417
kbctHIBC_PDF417	&h0000006A	HIBC PDF417
kbctHIBC_QR	&h00000068	HIBC QR Code
kbctISBNX	69	ISBN (EAN-13 with verification stage)
kbctITF14	89	ITF-14
kbctJapanPost	76	Japanese Postal Code
kbctKIX	90	Dutch Post KIX Code
kbctKoreaPost	77	Korea Post
kbctLOGMARS	50	LOGMARS

78.4 class DynaPDFBarcodeMBS

78.4.1 class DynaPDFBarcodeMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for detail information on barcode fields.
Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

78.4.2 Properties

78.4.3 Caption as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, the caption.
Notes: (Read and Write property)

78.4.4 ECC as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error correction code.
Notes: 0..8 for PDF417, or 0..3 for QRCode
(Read and Write property)

78.4.5 Height as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Height in inches.
Notes: (Read and Write property)

78.4.6 nCodeWordCol as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of codewords per barcode coloumn.
Notes: Required for PDF417.

(Read and Write property)

78.4.7 nCodeWordRow as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of codewords per barcode row.
Notes: Required for PDF417.
(Read and Write property)

78.4.8 Resolution as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The resolution.
Notes: Required. Should be 300.
(Read and Write property)

78.4.9 Symbology as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The symbology.
Notes: PDF417, QRCode, or DataMatrix.
(Read and Write property)

78.4.10 Version as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of this object.
Notes: Should be 1
(Read and Write property)

78.4.11 Width as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width in inches.
Notes: (Read and Write property)

78.4.12 XSymHeight as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The vertical distance between two barcode modules, measured in pixels.
Notes: Only needed for PDF417.
The ratio XSymHeight/XSymWidth shall be an integer value. For PDF417, the acceptable ratio range is from 1 to 4. For QRCode and DataMatrix, this ratio shall always be 1.
(Read and Write property)

78.4.13 XSymWidth as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Required. The horizontal distance, in pixels, between two barcode modules.
Notes: (Read and Write property)

78.5 class DynaPDFBitmapMBS

78.5.1 class DynaPDFBitmapMBS

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a bitmap in DynaPDF.
Notes: Currently only used for RenderAnnotOrField function.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 24.6pr2

78.5.2 Methods

78.5.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.5.4 Properties

78.5.5 Buffer as Memoryblock

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raw image buffer.
Notes: To avoid problems, this is a copy of the image data.
(Read and Write property)

78.5.6 BufSize as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Buffer size in bytes.
Notes: (Read and Write property)

78.5.7 DestX as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: x-coordinate in the main image (the rendered page)
Notes: (Read and Write property)

78.5.8 DestY as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: y-coordinate in the main image (the rendered page)
Notes: (Read and Write property)

78.5.9 Height as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image height in pixels.
Notes: (Read and Write property)

78.5.10 Stride as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scanline length in bytes.
Notes: (Read and Write property)

78.5.11 Width as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image width.
Notes: (Read and Write property)

78.6 class DynaPDFBookmarkMBS

78.6.1 class DynaPDFBookmarkMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for bookmark information.
Example:

```
// list the bookmarks (outline) of a PDF with their target pages
Var pdf As New DynaPDFMBS
Call pdf.CreateNewPDF(Nil)
Call pdf.OpenImportFile(SpecialFolder.Desktop.Child("manual.pdf"))
Call pdf.ImportPDFFile(1)

Var lines() As String
For i As Integer = 0 To pdf.GetBookmarkCount - 1
Var b As DynaPDFBookmarkMBS = pdf.GetBookmark(i)
If b = Nil Then Continue
Var indent As String = If(b.Parent >= 0, " ", "")
lines.Add indent + b.Title + " ->page " + b.DestPage.ToString
Next
MessageBox String.FromArray(lines, EndOfLine)
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.6.2 Methods

78.6.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.6.4 Properties

78.6.5 ColorValue as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bookmark color (PDF 1.4).
Notes: (Read and Write property)

78.6.6 DestPage as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destination page.
Notes: (Read and Write property)

78.6.7 DestPos as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destination position.
Notes: (Read and Write property)

78.6.8 DestType as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destination type.
Notes: (Read and Write property)

78.6.9 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The bookmark handle.
Notes: Index from 0 to GetBookmarkCount-1.
(Read and Write property)

78.6.10 Open as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the bookmark appears open.
Notes: (Read and Write property)

78.6.11 Parent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parent bookmark if any or -1.
Notes: (Read and Write property)

78.6.12 Style as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text style (PDF 1.4).
Notes: (Read and Write property)

78.6.13 Title as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The title string.
Notes: This string is either an unicode encoded string or an ASCII encoded string.
(Read and Write property)

78.6.14 TitleLen as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The title length.
Notes: (Read and Write property)

78.7 class DynaPDFChoiceValueMBS

78.7.1 class DynaPDFChoiceValueMBS

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for choice values in a PDF.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

78.7.2 Methods

78.7.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.7.4 Properties

78.7.5 ExpValue as String

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ExpValue.
Notes: (Read and Write property)

78.7.6 Selected as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the choice value is selected.
Notes: (Read and Write property)

78.7.7 Value as String

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value.
Notes: (Read and Write property)

78.8 class DynaPDFCIDMetricMBS

78.8.1 class DynaPDFCIDMetricMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a CID Metric.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.8.2 Methods

78.8.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.8.4 Properties

78.8.5 Width as Double

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width value.
Notes: (Read and Write property)

78.8.6 x as Double

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: X value.
Notes: (Read and Write property)

78.8.7 y as Double

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Y value.
Notes: (Read and Write property)

78.9 class DynaPDFCMapMBS

78.9.1 class DynaPDFCMapMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a character map in DynaPDF.
Notes: This class contains several duplicate fields because CMap files contain usually a DSC comment section which provides Postscript specific initialization code. With exception of DSCResName the strings in the DSC section should not differ from their CMap counterparts. The Identity mapping of a character collection should contain the DSC comment "%%BeginResource: CMap (Identity)". Otherwise the string should be set to the CMap name.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.9.2 Methods

78.9.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.9.4 Properties

78.9.5 BaseCMap as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If set, this base cmap is required when loading the cmap.
Notes: (Read only property)

78.9.6 CIDCount as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ID count.
Notes: 0 if not set.
(Read only property)

78.9.7 CMapName as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CMap name.
Notes: (Read only property)

78.9.8 CMapType as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CMap type.
Notes: Should be 1!
(Read only property)

78.9.9 CMapVersion as Double

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CMap version.
Notes: (Read only property)

78.9.10 DSCBaseCMap as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: DSC comment.
Notes: (Read only property)

78.9.11 DSCCMapVersion as Double

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The DSC CMap version.
Notes: (Read only property)

78.9.12 DSCResName as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: DSC comment.
Notes: If the CMap uses an Identity mapping this string should be set to Identity.
(Read only property)

78.9.13 DSCTitle as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The DSC title.
Notes: DSC comment ->DSC CMap name + Registry + Ordering + Supplement, e.g. "GB-EUC-H Adobe GB1 0"
(Read only property)

78.9.14 FileName as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file name.
Notes: The file name and CMap name should be identical!
(Read only property)

78.9.15 FilePath as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file path.
Notes: (Read only property)

78.9.16 Ordering as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ordering.
Notes: CIDSystemInfo ->The Character Collection, e.g. Japan1.
(Read only property)

78.9.17 Registry as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The registry string.
Notes: CIDSystemInfo ->The registrant of the Character Collection is usually Adobe.
(Read only property)

78.9.18 Supplement as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Supplement number.
Notes: CIDSystemInfo ->The Supplement number should be supported in the used PDF Version.
(Read only property)

78.9.19 WritingMode as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The writing mode.
Notes: 0 == Horizontal, 1 == Vertical
(Read only property)

78.10 class DynaPDFColorProfilesExMBS

78.10.1 class DynaPDFColorProfilesExMBS

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A set of ICC profiles for color management.
Notes: In general, the DefInXXX profiles are used if no other profile is available for the color space. Possible sources are DefaultGray, DefaultRGB, DefaultCMYK, and the Rendering Intents.
The SoftProof profile emulates the output device. This is typically a printer profile or a default CMYK profile. If no profile is set then no device will be emulated. What you see is maybe not what you get on a printer.
To disable color management set the parameter Profiles of InitColormanagement() to nil.

Please use DynaPDFColorProfilesExMBS when you have profiles in memory and DynaPDFColorProfilesMBS when you have them as files.

78.10.2 Properties

78.10.3 DefInCMYK as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CMYK Profile.
Notes: Optional, CMYK colors are the problematic ones.
The other profiles can be created on demand but this is not possible with a CMYK profile. So, this is the most important input profile.

This is for the profile content as string, not the path.
(Read and Write property)

78.10.4 DefInGray as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The gray profile.
Notes: Optional
This is for the profile content as string, not the path.
(Read and Write property)

78.10.5 DefInRGB as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The RGB profile.
Notes: Optional, sRGB is the default.
This is for the profile content as string, not the path.
(Read and Write property)

78.10.6 DeviceProfile as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output device profile.
Notes: Optional, the output profile must be compatible with the output color space.
At this time only Gray or RGB profiles are supported. This is the monitor profile! Default is sRGB.

This is for the profile content as string, not the path.
(Read and Write property)

78.10.7 SoftProof as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The proofing profile.
Notes: Optional but very important. This profile emulates the output device.
This is for the profile content as string, not the path.
(Read and Write property)

78.11 class DynaPDFColorProfilesMBS

78.11.1 class DynaPDFColorProfilesMBS

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A set of ICC profiles for color management.
Notes: In general, the DefInXXX profiles are used if no other profile is available for the color space. Possible sources are DefaultGray, DefaultRGB, DefaultCMYK, and the Rendering Intents.
The SoftProof profile emulates the output device. This is typically a printer profile or a default CMYK profile. If no profile is set then no device will be emulated. What you see is maybe not what you get on a printer.
To disable color management set the parameter Profiles of InitColormanagement() to nil.

Please use DynaPDFColorProfilesExMBS when you have profiles in memory and DynaPDFColorProfilesMBS when you have them as files.

78.11.2 Properties

78.11.3 DefInCMYK as FolderItem

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CMYK Profile.
Notes: Optional, CMYK colors are the problematic ones.
The other profiles can be created on demand but this is not possible with a CMYK profile. So, this is the most important input profile.
(Read and Write property)

78.11.4 DefInGray as FolderItem

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The gray profile.
Notes: Optional
(Read and Write property)

78.11.5 DefInRGB as FolderItem

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The RGB profile.
Notes: Optional, sRGB is the default.
(Read and Write property)

78.11.6 DeviceProfile as FolderItem

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output device profile.
Notes: Optional, the output profile must be compatible with the output color space.
At this time only Gray or RGB profiles are supported. This is the monitor profile! Default is sRGB.
(Read and Write property)

78.11.7 SoftProof as FolderItem

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The proofing profile.
Notes: Optional but very important. This profile emulates the output device.
(Read and Write property)

78.12 class DynaPDFColorSpaceMBS

78.12.1 class DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color space class.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS REALbasic Plugins, version 11.1pr4

78.12.2 Methods

78.12.3 BlackPoint(index as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: CIE blackpoint.
Notes: If set, the array contains exactly 3 values. (index 0 to 2)

78.12.4 Colorants(index as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colorant names (Separation, DeviceN, and NChannel only).
Example:

```
Sub DrawSomething(pdf as DynaPDFMBS)
// draw all colorants with their own color
Var MyX, MyY as Double

MyX = 10
MyY = 100

// set a font
call pdf.SetFont "Times", pdf.kfsItalic, 10.0, true, pdf.kcp1252

// loop over all color spaces
```

```
Var Colorcount as Integer = pdf.GetColorSpaceCount

For j as Integer = 0 to Colorcount-1
MyX = 10
Var MyColourSpace as DynaPDFColorSpaceMBS = PDF.GetColorSpaceObj(j)
Var ColorantsCount as Integer = MyColourSpace.ColorantsCount
Var c as Integer = MyColourSpace.NumInComponents
Call pdf.SetExtColorSpace j

// draw name of each colorant
for i as Integer = 0 to c-1

// build array with colors and set 100% for the one color we need
Var values() as Double
redim values(c-1)
values(i) = 1.0

// get name
Var name as string = "#"+str(i)
if i <= ColorantsCount then
name = MyColourSpace.Colorants(i)
end if

// draw name
Call pdf.SetFillColor(values)
call pdf.WriteText(MyX,MyY, name)

// next
MyX = MyX + pdf.GetTextWidth(name) + 20
next

// next
MyY = MyY+20
Next
End Sub
```

Notes: This array contains ColorantsCount strings.
The plugin marks the string as UTF-8 and it should contain UTF-8. Be we saw PDF files form other applications which put here WindowsANSI or MacRoman strings.

78.12.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.12.6 Gamma(index as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The gamma values.
Notes: If set, one value per component.

78.12.7 Matrix(index as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: XYZ matrix.
Notes: If set, the array contains exactly 9 values.

78.12.8 Range(index as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The range values.
Notes: min/max for each component or for the .a and .b components of a Lab color space. Index is zero based.

78.12.9 WhitePoint(index as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: CIE whitepoint.
Notes: If set, the array contains exactly 3 values. (index 0 to 2)

78.12.10 Properties

78.12.11 Alternate as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The alternative color space.
Notes: Only set if the color space contains an alternate or base color space.
(Read only property)

78.12.12 AlternateHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 26.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The alternative color space internal reference.
Notes: Only set if the color space contains an alternate or base color space.
(Read only property)

78.12.13 AlternateType as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Alternate color space or base space of an Indexed or Pattern color space.
Notes: (Read only property)

78.12.14 Buffer as string

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Contains either an ICC profile or the color table of an Indexed color space.
Notes: (Read only property)

78.12.15 BufferSize as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The buffer length in bytes.
Notes: (Read only property)

78.12.16 ColorantsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of colorants in the array.
Example:

```
Sub DrawSomething(pdf as DynaPDFMBS)
// draw all colorants with their own color
Var MyX, MyY as Double

MyX = 10
MyY = 100
```

```
// set a font
call pdf.SetFont "Times", pdf.kfsItalic, 10.0, true, pdf.kcp1252

// loop over all color spaces
Var Colorcount as Integer = pdf.GetColorSpaceCount

For j as Integer = 0 to Colorcount-1
MyX = 10
Var MyColourSpace as DynaPDFColorSpaceMBS = PDF.GetColorSpaceObj(j)
Var ColorantsCount as Integer = MyColourSpace.ColorantsCount
Var c as Integer = MyColourSpace.NumInComponents
Call pdf.SetExtColorSpace j

// draw name of each colorant
for i as Integer = 0 to c-1

// build array with colors and set 100% for the one color we need
Var values() as Double
redim values(c-1)
values(i) = 1.0

// get name
Var name as string = "#"+str(i)
if i <= ColorantsCount then
name = MyColourSpace.Colorants(i)
end if

// draw name
Call pdf.SetFillColor(values)
call pdf.WriteText(MyX,MyY, name)

// next
MyX = MyX + pdf.GetTextWidth(name) + 20
next

// next
MyY = MyY+20
Next
End Sub
```

Notes: (Read only property)

78.12.17 Description as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The description text for color space.
Notes: For color spaces with valid ICC profile only.
(Read only property)

78.12.18 DeviceNAttributes as DynaPDFDeviceNAttributesMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional attributes of DeviceN or NChannel color spaces.
Notes: (Read only property)

78.12.19 DeviceNAttributesHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 26.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional reference to the attributes of DeviceN or NChannel color spaces.
Notes: (Read only property)

78.12.20 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal handle for this color space object.
Notes: An IColorSpaceObj reference.
(Read only property)

78.12.21 HasBlackPoint as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the black point array has values.
Notes: (Read only property)

78.12.22 HasGamma as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the gamma array has values.
Notes: (Read only property)

78.12.23 HasMatrix as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the matrix array has values.
Notes: (Read only property)

78.12.24 HasRange as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the range array has values.
Notes: (Read only property)

78.12.25 HasWhitePoint as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the white point array has values.
Notes: (Read only property)

78.12.26 Index as Integer

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The index in the color space list for current document.
Notes: Can be -1 if not known by plugin.
In that case you would need to get list of all colorspaces and compare handle values to see which entry you got.
(Read only property)

78.12.27 Manufacturer as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The manufacturer text for color space.
Notes: For color spaces with valid ICC profile only.

(Read only property)

78.12.28 MetaData as string

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional XMP metadata stream ->ICCBased only.
Notes: (Read only property)

78.12.29 MetadataSize as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Metadata length in bytes.
Notes: (Read only property)

78.12.30 Model as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The model text for color space.
Notes: For color spaces with valid ICC profile only.
(Read only property)

78.12.31 Name as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the color space.
Notes: For color spaces with valid ICC profile only.
The plugin picks name from Model, Description and Manufacturer properties.
(Read only property)

78.12.32 NumColors as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of colors in this color space.
Notes: HiVal + 1 as specified in the color space. Indexed color space only.

(Read only property)

78.12.33 NumInComponents as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of input components.
Notes: (Read only property)

78.12.34 NumOutComponents as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of output components.
Notes: (Read only property)

78.12.35 Type as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of this color space.
Notes: (Read only property)

78.12.36 TypeString as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type as string for viewing in debugger.
Notes: (Read only property)

78.13 class DynaPDFDeviceNAttributesMBS

78.13.1 class DynaPDFDeviceNAttributesMBS

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for information about a Device N.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 26.2pr2
- MBS REALbasic Plugins, version 11.1pr4

78.13.2 Methods

78.13.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.13.4 ProcessColorant(index as integer) as string

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns process colorants with the given index.
Notes: Raises out of bounds exceptions on bad index or if object does not have such an array.
Index is zero based.

78.13.5 ProcessColorants as string()

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all process colorants.

78.13.6 Separation(index as integer) as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional array of separation color spaces.
Notes: Raises out of bounds exceptions if used with wrong index parameter.
Index is zero based.

78.13.7 Separations as DynaPDFColorSpaceMBS()

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional array of separation color spaces.

78.13.8 Properties

78.13.9 ProcessColorantsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of process colorants in the array or zero if not set.
Notes: (Read only property)

78.13.10 ProcessColorSpace as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The process color space.
Notes: (Read and Write property)

78.13.11 SeparationsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of color spaces in the Separations array.
Notes: (Read only property)

78.14 class DynaPDFEditTextMBS

78.14.1 class DynaPDFEditTextMBS

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text editor.
Example:

```
// replace a word on all pages of a PDF (needs a Pro license)
Var pdf As New DynaPDFMBS
pdf.SetLicenseKey "Pro" // your license key
Call pdf.CreateNewPDF(SpecialFolder.Desktop.Child("replaced.pdf"))
Call pdf.SetImportFlags(DynaPDFMBS.kifImportAll + DynaPDFMBS.kifImportAsPage)
If pdf.OpenImportFile(SpecialFolder.Desktop.Child("test.pdf")) <0 Then Return
Call pdf.ImportPDFFile(1)

Var editor As New DynaPDFEditTextMBS(pdf)
Var found As Integer
For page As Integer = 1 To pdf.GetPageCount
Call pdf.EditPage(page)
found = found + editor.FindPattern("2024")
editor.ReplacePattern "2025"
Call pdf.EndPage
Next

Call pdf.CloseFile
MessageBox found.ToString + " places replaced."
```

Notes: If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.

FindPattern needs at least Lite license and ReplacePattern needs a Pro license.

78.14.2 Methods

78.14.3 Constructor(PDF as DynaPDFMBS)

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the edit text class with the given PDF instance.

78.14.4 Destructor

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

78.14.5 FindPattern(text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches the text on the current PDF page for the given text.
Notes: Returns the number of occurrences.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.

FindPattern needs at least Lite license and ReplacePattern needs a Pro license.

78.14.6 ReplacePattern(NewText as string)

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces the text with a new one or deletes it if the new string is an empty string.
Notes: Use the PrepareWrite event.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.

FindPattern needs at least Lite license and ReplacePattern needs a Pro license.

78.14.7 Properties

78.14.8 Parent as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reference of the DynaPDFMBS object.
Notes: (Read only property)

78.14.9 Events

78.14.10 PrepareWrite(M as DynaPDFMatrixMBS, text as string, FillCS as Integer, FillColor as UInt32, StrokeCS as Integer, StrokeColor as UInt32, FontSize as Double, x as Double, y as Double, w as Double, h as Double, font as DynaPDFFontMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event called before replace function writes.
Notes: Changed font, text size or color here.
If you return true, the text is not written.
Like if you draw it yourself or delete it.

Add new parameters for fill color, stroke color, font size, rectangle and font information in version 17.0.

78.15 class DynaPDFEmbFileNodeMBS

78.15.1 class DynaPDFEmbFileNodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an embedded file node.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.15.2 Methods

78.15.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.15.4 Properties

78.15.5 EF as DynaPDFFileSpecMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Embedded file.
Notes: (Read only property)

78.15.6 Name as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name.
Notes: UTF-8 encoded name. This key contains usually a 7 bit ASCII string.
(Read only property)

78.15.7 NextObject as DynaPDFEmbFileNodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Next node if any.
Notes: (Read only property)

78.16 class DynaPDFEncryptInfoMBS

78.16.1 class DynaPDFEncryptInfoMBS

MBS DynaPDF Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for encryption information.

78.16.2 Properties

78.16.3 Filter as Integer

MBS DynaPDF Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Encryption filter.
Notes: (Read only property)

78.16.4 HaveOpenPassword as Boolean

MBS DynaPDF Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: If true, an open password was set.
Notes: (Read only property)

78.16.5 HaveOwnerPassword as Boolean

MBS DynaPDF Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: If true, an owner password was set.
Notes: (Read only property)

78.16.6 Restrictions as Integer

MBS DynaPDF Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: What must be restricted? This is a bit mask and the very same value that GetInEncryptionFlags returns.
Notes: (Read only property)

78.16.7 UnsafeOpenPwd as Boolean

MBS DynaPDF Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: If true, the file can be easily decrypted by DynaPDF if SetUseExactPwd is false.
Notes: (Read only property)

78.16.8 UnsafeOwnerPwd as Boolean

MBS DynaPDF Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: If true, the file can be easily decrypted by DynaPDF if SetUseExactPwd() is false.
Notes: (Read only property)

78.17 class DynaPDFErrorExceptionMBS

78.17.1 class DynaPDFErrorExceptionMBS

MBS DynaPDF Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error exception.
Notes: We report errors as exceptions if Error event is not implemented or you return kErrorEventRaise there.
Subclass of the RuntimeException class.

78.18.2 Methods

78.18.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.18.4 Properties

78.18.5 ErrCode as Integer

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error code.
Notes: ErrCode and ErrType are set if the error mode was set to kemUseErrLog.
See SetErrorMode() for further information.
(Read and Write property)

78.18.6 ErrType as Integer

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error type.
Notes: ErrCode and ErrType are set if the error mode was set to kemUseErrLog.
See SetErrorMode() for further information.
(Read and Write property)

78.18.7 Message as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error message
Notes: (Read and Write property)

78.18.8 ObjNum as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Object Number.
Notes: -1 if not available
(Read and Write property)

78.18.9 Offset as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The offset.
Notes: -1 if not available
(Read and Write property)

78.18.10 SrcFile as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source file.
Notes: (Read and Write property)

78.18.11 SrcLine as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Source Line.
Notes: (Read and Write property)

78.19 class DynaPDFExtGState2MBS

78.19.1 class DynaPDFExtGState2MBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The extended graphics state class.
Blog Entries

- MBS Xojo Plugins, version 26.5pr5

78.19.2 Methods

78.19.3 BlendMode(index as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blend modes.
Notes: See bm* constants.

78.19.4 Update(PDF as DynaPDFMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Updates the underlaying object.
Notes: You set a properties and then call Update to pass the value to DynaPDF.
Returns true on success or false on failure.

Please check pdfChangeExtGState in DynaPDF manual.

78.19.5 Properties

78.19.6 AlphaIsShape as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The AlphaIsShape property.
Notes: PDF_MAX_INT if not set.
(Read and Write property)

78.19.7 AutoStrokeAdjust as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The AutoStrokeAdjust property.
Notes: PDF_MAX_INT if not set.
(Read and Write property)

78.19.8 BlackGen as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function handle or 0.
Notes: (Read and Write property)

78.19.9 BlackGen2 as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function handle or 0.
Notes: (Read and Write property)

78.19.10 BlendModeCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blend mode count.
Notes: (Read only property)

78.19.11 FillAlpha as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The fill alpha.
Notes: -1.0 if not set.
(Read and Write property)

78.19.12 FlatnessTol as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The FlatnessTol property.
Notes: -1.0 if not set.
(Read and Write property)

78.19.13 Halftone as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The halftone handle or 0.
Notes: (Read and Write property)

78.19.14 OverPrintFill as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The OverPrintFill property.
Notes: PDF_MAX_INT if not set.
(Read and Write property)

78.19.15 OverPrintMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The OverPrintMode property.
Notes: PDF_MAX_INT if not set.
(Read and Write property)

78.19.16 OverPrintStroke as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The OverPrintStroke property.
Notes: PDF_MAX_INT if not set.
(Read and Write property)

78.19.17 RenderingIntent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rendering intent.
Notes: riNone if not set
(Read and Write property)

78.19.18 SmoothnessTol as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SmoothnessTol property.
Notes: -1.0 if not set.
(Read and Write property)

78.19.19 SoftMask as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Soft mask handle.
Notes: (Read and Write property)

78.19.20 SoftMaskNone as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the softmask must be disabled.
Notes: (Read and Write property)

78.19.21 StrokeAlpha as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The stoke alpha value.
Notes: -1.0 if not set.
(Read and Write property)

78.19.22 TextKnockout as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The TextKnockout property.
Notes: PDF_MAX_INT if not set.

(Read and Write property)

78.20 class DynaPDFExtGStateMBS

78.20.1 class DynaPDFExtGStateMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The extended graphics state class.
Blog Entries

- DynaPDF with gradients in DeviceN colorspace

78.20.2 Properties

78.20.3 AlphaIsShape as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The AlphaIsShape property.
Notes: PDF_MAX_INT if not set.
(Read and Write property)

78.20.4 AutoStrokeAdjust as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The AutoStrokeAdjust property.
Notes: PDF_MAX_INT if not set.
(Read and Write property)

78.20.5 BlendMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blend mode.
Notes: See bm* constants.
Default bmNotSet.
(Read and Write property)

78.20.6 FillAlpha as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The fill alpha.
Notes: -1.0 if not set.
(Read and Write property)

78.20.7 FlatnessTol as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The FlatnessTol property.
Notes: -1.0 if not set.
(Read and Write property)

78.20.8 OverPrintFill as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The OverPrintFill property.
Notes: PDF_MAX_INT if not set.
(Read and Write property)

78.20.9 OverPrintMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The OverPrintMode property.
Notes: PDF_MAX_INT if not set.
(Read and Write property)

78.20.10 OverPrintStroke as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The OverPrintStroke property.
Notes: PDF_MAX_INT if not set.
(Read and Write property)

78.20.11 RenderingIntent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rendering intent.
Notes: riNone if not set
(Read and Write property)

78.20.12 SmoothnessTol as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SmoothnessTol property.
Notes: -1.0 if not set.
(Read and Write property)

78.20.13 SoftMask as Integer

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Soft mask pointer or nil. See CreateSoftMask for further information.
Notes: (Read and Write property)

78.20.14 SoftMaskNone as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Disables the active soft mask.
Notes: (Read and Write property)

78.20.15 StrokeAlpha as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The stoke alpha value.
Notes: -1.0 if not set.
(Read and Write property)

78.20.16 TextKnockout as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The TextKnockout property.
Notes: PDF_MAX_INT if not set.

(Read and Write property)

78.21 class DynaPDFFieldExMBS

78.21.1 class DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for extended field information.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.21.2 Methods

78.21.3 Close

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: You can call close to release all values now or simply let it go automatically later.

78.21.4 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.21.5 Kids(index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Array of child fields.

78.21.6 Properties

78.21.7 Action as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Action handle or -1 if not set.
Notes: This action is executed when the field is activated.
(Read only property)

78.21.8 ActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of action.
Notes: See kat* constants.
Meaningful only, if Action >= 0.
(Read only property)

78.21.9 BackColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Background color.
Notes: (Read only property)

78.21.10 BackColorSP as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color space of the background color.
Notes: (Read only property)

78.21.11 Barcode as DynaPDFBarcodeMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If present, this field is a barcode field.
Notes: The field type is set to kftText since barcode fields are extended text fields.
(Read only property)

78.21.12 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bounding box of the field in bottom-up coordinates.
Notes: (Read only property)

78.21.13 BorderColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Border color.
Notes: (Read only property)

78.21.14 BorderColorSP as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color space of the border color.
Notes: (Read only property)

78.21.15 BorderStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Border style.
Notes: (Read only property)

78.21.16 BorderWidth as Single

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Border width.
Notes: (Read only property)

78.21.17 CaptionPos as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Where to position the caption.
Notes: Use constants kbcpCaptionAbove, kbcpCaptionBelow, kbcpCaptionLeft, kbcpCaptionOnly, kbcpCaptionOver, kbcpCaptionRight or kbcpImageOnly.
(Read only property)

78.21.18 CharSpacing as Single

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The char spacing.
Notes: Text fields only.
(Read only property)

78.21.19 CheckBoxChar as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ZapfDingbats character that is used to display the on state.
Notes: (Read only property)

78.21.20 Checked as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The check value.
Notes: Check boxes only
(Read only property)

78.21.21 DefState as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default state.
Notes: Check boxes only
(Read only property)

78.21.22 DefValue as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional default value.
Notes: (Read only property)

78.21.23 Deleted as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the field was marked as deleted by DeleteField().
Notes: (Read only property)

78.21.24 DownCaption as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Caption of the down state.
Notes: (Read only property)

78.21.25 DownImage as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image handle of the down state.
Notes: You can use this image handle with GetImageObj to get the image.
(Read only property)

78.21.26 EditFont as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Postscript name of the editing font.
Notes: (Read only property)

78.21.27 Events as DynaPDFObjEventMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The events for this fields.
Notes: (Read only property)

78.21.28 ExpValCount as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combo and list boxes only.
Notes: The values can be accessed with GetFieldExpValueEx().
(Read only property)

78.21.29 ExpValue as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exp value.
Notes: Check boxes only.
(Read only property)

78.21.30 FieldFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Field flags.
Notes: (Read only property)

78.21.31 FieldFont as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Postscript name of the font.
Notes: (Read only property)

78.21.32 FieldName as String

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The field name.
Notes: Note that children of a field group or radio button have no name.
(Read only property)

78.21.33 FieldType as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Field type.
Notes: (Read only property)

78.21.34 FmtText as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The formatted field value.
Notes: Text fields only.
The formatted field value if the field contains an OnFormat Javascript action.
(Read only property)

78.21.35 FmtTextColor as Integer

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text color for formatting.
Notes: Text fields only.
Zero if not set. Usually RGB red otherwise.
(Read only property)

78.21.36 FontSize as Double

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font size. 0.0 means auto font size.
Notes: (Read only property)

78.21.37 FullyQualifiedFieldName as String

MBS DynaPDF Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The fully qualified name of a field.
Notes: Note that children of a radio button, for example, have no name by its own. The export value must be compared to distinguish the children fields in this case.
(Read only property)

78.21.38 GroupType as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If GroupType <>FieldType the field is a terminal field of a field group.
Notes: (Read only property)

78.21.39 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Field handle.
Notes: (Read only property)

78.21.40 HighlightMode as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Highlight mode.
Notes: (Read only property)

78.21.41 IEditFont as DynaPDFFontMBS

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The edit font object.
Notes: The object is created on demand the first time you access and cached.
(Read only property)

78.21.42 IEditFontInfo as DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The edit font info object.
Notes: The object is created on demand the first time you access and cached.
(Read only property)

78.21.43 IFieldFont as DynaPDFFontMBS

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The field font object.
Notes: The object is created on demand the first time you access and cached.
(Read only property)

78.21.44 IFieldFontInfo as DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The field font info object.
Notes: The object is created on demand the first time you access and cached.
(Read only property)

78.21.45 IsCalcField as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the OnCalc event of the field is connected with a JavaScript action.
Notes: (Read only property)

78.21.46 KidCount as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of fields in the Kids array.
Notes: (Read only property)

78.21.47 MapName as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional unique mapping name of the field.
Notes: (Read only property)

78.21.48 MaxLen as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum text length.
Notes: Text fields only ->zero means not restricted.

(Read only property)

78.21.49 ModDate as String

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modification date.
Notes: (Read only property)

78.21.50 OC as Integer

MBS DynaPDF Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Handle of an OCG or OCMD or -1.
Notes: Fields can be part of an Optional Content Group (OCG) or Optional Content Membership Dictionary (OCMD). If OC is greater -1 an OCG or OCMD handle was set. To determine whether an OCG handle was set, check whether the value is smaller &h40000000.
(Read only property)

78.21.51 PageIndex as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Array index to change the tab order.
Notes: see SortFieldsByIndex().
(Read only property)

78.21.52 PageNum as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Page on which the field is used or -1.
Notes: (Read only property)

78.21.53 RollCaption as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Caption of the roll over state.
Notes: (Read only property)

78.21.54 RollImage as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image handle of the roll over state.
Notes: You can use this image handle with GetImageObj to get the image.
(Read only property)

78.21.55 Rotate as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotation angle in degrees.
Notes: (Read only property)

78.21.56 Signature as DynaPDFSigDictMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature details.
Notes: Signature fields only. Present only for imported signature fields which which have a value. That means the file was digitally signed. -
Signed signature fields are always marked as deleted!
(Read only property)

78.21.57 TextAlign as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text align.
Notes: Text fields only.
(Read only property)

78.21.58 TextColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text color.
Notes: (Read only property)

78.21.59 TextColorSP as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color space of the field's text.
Notes: (Read only property)

78.21.60 TextScaling as Single

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text scaling.
Notes: Text fields only.
(Read only property)

78.21.61 ToolTip as String

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tooltip text.
Notes: Optional tool tip.
(Read only property)

78.21.62 UniqueName as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional unique name (NM key).
Notes: (Read only property)

78.21.63 UpCaption as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Caption of the up state.
Notes: (Read only property)

78.21.64 UpImage as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image handle of the up state.
Notes: You can use this image handle with GetImageObj to get the image.
(Read only property)

78.21.65 Value as String

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the field.
Notes: (Read only property)

78.21.66 WordSpacing as Single

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The word spacing.
Notes: Text fields only.
(Read only property)

78.22 class DynaPDFFieldMBS

78.22.1 class DynaPDFFieldMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use DynaPDFFieldExMBS instead. **Function:** The class for field information.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

78.22.2 Methods

78.22.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.22.4 Properties

78.22.5 BackColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Background color.
Notes: (Read only property)

78.22.6 BackCS as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color space of background / border color
Notes: (Read only property)

78.22.7 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Bounding box.
Notes: (Read only property)

78.22.8 BorderColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border color.
Notes: (Read only property)

78.22.9 Checked as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Only set if the field is a check box.
Notes: (Read only property)

78.22.10 Deleted as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the field was deleted.
Notes: (Read only property)

78.22.11 FieldName as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Field name.
Notes: May be unicode or ASCII encoded.
(Read only property)

78.22.12 FieldNameLen as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Field name length in characters.
Notes: (Read only property)

78.22.13 FieldType as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Field type (see ft* constants)
Notes: (Read only property)

78.22.14 Font as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Used font by the field (PostScript name).
Notes: (Read only property)

78.22.15 FontSize as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font size.
Notes: (Read only property)

78.22.16 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Field handle.
Notes: (Read only property)

78.22.17 KidCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Greater zero if the field has childs.
Notes: (Read only property)

78.22.18 Parent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parent field handle if any.
Notes: (Read only property)

78.22.19 TextColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text color.
Notes: (Read only property)

78.22.20 TextCS as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color space of text color.
Notes: (Read only property)

78.22.21 ToolTip as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tool tip if any.
Notes: Unicode or ASCII encoded.
(Read only property)

78.22.22 Value as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Field value.
Notes: Unicode or ASCII encoded.
(Read only property)

78.23 class DynaPDFFileSpecExMBS

78.23.1 class DynaPDFFileSpecExMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an extended file specification.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.23.2 Methods

78.23.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.23.4 Properties

78.23.5 AFRelationship as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The relationship.
Notes: PDF 2.0
(Read and Write property)

78.23.6 ColItem as Ptr

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If <>nil the embedded file contains a collection item with user defined data.
Notes: This entry can occur in PDF Collections only (PDF 1.7). See "PDF Collections" in the help file for further information.
(Read and Write property)

78.23.7 Description as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional description string.
Notes: (Read and Write property)

78.23.8 DOS as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional DOS file name.
Notes: (Read and Write property)

78.23.9 EmbFileNode as DynaPDFEmbFileNodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The embedded file node for embedded file.
Notes: (Read and Write property)

78.23.10 FileName as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: File name as 7 bit ASCII string.
Notes: (Read and Write property)

78.23.11 FileNameIsURL as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, FileName contains a URL.
Notes: (Read and Write property)

78.23.12 ID1 as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional file ID.
Notes: Meaningful only if FileName points to a PDF file.
(Read and Write property)

78.23.13 ID2 as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional file ID.
Notes: Meaningful only if FileName points to a PDF file.
(Read and Write property)

78.23.14 IsVolatile as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the file changes frequently with time.
Notes: (Read and Write property)

78.23.15 Mac as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional Mac file name.
Notes: (Read and Write property)

78.23.16 Thumb as DynaPDFImageMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional thumb nail image.
Notes: (Read and Write property)

78.23.17 UFileName as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file name.
Notes: PDF 1.7. Same as FileName but Unicode is allowed.
(Read and Write property)

78.23.18 Unix as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional Unix file name.
Notes: (Read and Write property)

78.24 class DynaPDFFileSpecMBS

78.24.1 class DynaPDFFileSpecMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for information about an embedded file.
Example:

```
// extract all files embedded in a PDF, e.g. the XML of an e-invoice
Var pdf As New DynaPDFMBS
Call pdf.CreateNewPDF(Nil)
Call pdf.OpenImportFile(SpecialFolder.Desktop.Child("invoice.pdf"))
Call pdf.ImportPDFFile(1)

For i As Integer = 0 To pdf.GetEmbeddedFileCount - 1
Var spec As DynaPDFFileSpecMBS
If pdf.GetEmbeddedFile(i, spec, True) Then
Var file As FolderItem = SpecialFolder.Desktop.Child(spec.Name)
Var stream As BinaryStream = BinaryStream.Create(file, True)
stream.Write spec.Buffer
stream.Close
System.DebugLog "Saved " + spec.Name + " (" + spec.MIMEType + ", " + spec.BufferSize.ToString + "
bytes)"
End If
Next
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.24.2 Methods

78.24.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.24.4 Properties

78.24.5 Buffer as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Buffer of an embedded file.
Notes: (Read and Write property)

78.24.6 BufferSize as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Buffer size in bytes.
Notes: (Read and Write property)

78.24.7 Checksum as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: 16 byte MD5 digest if set.
Notes: (Read and Write property)

78.24.8 ColItem as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pointer to user defined collection item.
Notes: (Read and Write property)

78.24.9 Compressed as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Should be false if Decompress was true.
Notes: (Read and Write property)

78.24.10 CreateDate as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creation date as string.
Notes: (Read and Write property)

78.24.11 Description as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Description.
Notes: This string is either an unicode encoded string or an ASCII encoded string.
(Read and Write property)

78.24.12 FileName as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: File name as 7 bit ASCII string.
Notes: (Read and Write property)

78.24.13 FileSize as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decompressed stream size or zero if not known.
Notes: (Read and Write property)

78.24.14 IsURL as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, FileName contains a URL.
Notes: (Read and Write property)

78.24.15 MIMEType as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: MIME media type name (RFC 2046).
Notes: See also MimeTypeToFileExtensionMBS function.
(Read and Write property)

78.24.16 ModDate as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modification date as string.
Notes: (Read and Write property)

78.24.17 Name as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of the file specification in the name tree.
Notes: This string is either an unicode encoded string or an ASCII encoded string.
This value is always present.
(Read and Write property)

78.24.18 UnicodeFileName as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Same as FileName but Unicode is allowed.
Notes: PDF 1.7.
This string is either an unicode encoded string or an ASCII encoded string.
(Read and Write property)

78.25 class DynaPDFFontInfoMBS

78.25.1 class DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for DynaPDF font info.
Example:

```
// list the fonts used in a PDF and whether they are embedded
Var pdf As New DynaPDFMBS
Call pdf.CreateNewPDF(Nil)
Call pdf.OpenImportFile(SpecialFolder.Desktop.Child("test.pdf"))
Call pdf.ImportPDFFile(1)

For i As Integer = 0 To pdf.GetFontCount - 1
Var info As DynaPDFFontInfoMBS = pdf.GetFontInfoEx(i)
If info <>Nil Then System.DebugLog info.BaseFont + " (" + info.FontFamily + "), imported: " + info.Imported.ToString
Next
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.25.2 Methods

78.25.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.25.4 HorzWidths(index as UInt32) as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Horizontal glyph widths.
Notes: Index from 0 ot HorzWidthsCount -1.

78.25.5 VertWidths(index as UInt32) as DynaPDFCIDMetricMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Vertical glyph widths array.

78.25.6 Properties

78.25.7 Ascent as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Ascent (optional).
Notes: (Read only property)

78.25.8 AvgWidth as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Average character width (optional).
Notes: (Read only property)

78.25.9 BaseEncoding as Integer

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The base encoding.
Notes: Valid only if HaveEncoding is true.
Can be kbeWinAnsi, kbeStandard, kbeMacRoman or kbeMacExpert.
(Read only property)

78.25.10 BaseFont as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: PostScript Name or Family Name.
Notes: (Read only property)

78.25.11 CapHeight as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cap height (optional).
Notes: (Read only property)

78.25.12 CharSet as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The charset describes which glyphs are present in the font.
Notes: (Read only property)

78.25.13 CharSetSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the CharSet in bytes.
Notes: (Read only property)

78.25.14 CIDOrdering as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: SystemInfo ->Character collection.
Notes: (Read only property)

78.25.15 CIDRegistry as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: SystemInfo ->Issuer of the character collection.
Notes: (Read only property)

78.25.16 CIDSet as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: CID fonts only.
Notes: This is a table of bits indexed by CIDs.
(Read only property)

78.25.17 CIDSetSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the CIDSet in bytes.
Notes: (Read only property)

78.25.18 CIDSupplement as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: CIDSystemInfo ->Supplement number.
Notes: (Read only property)

78.25.19 CIDToGIDMap as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allowed for embedded TrueType based CID fonts only.
Notes: (Read only property)

78.25.20 CIDToGIDMapSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the CIDToGIDMap in bytes.
Notes: (Read only property)

78.25.21 CMapBuf as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CMap data.
Notes: Only available if the CMap was embedded.
(Read only property)

78.25.22 CMapBufSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: CMAP Buffer size in bytes.
Notes: (Read only property)

78.25.23 CMapName as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: CID fonts only external CMap name or encoding.
Notes: (Read only property)

78.25.24 Descent as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Descent (optional).
Notes: (Read only property)

78.25.25 Encoding as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unicode mapping 0..255.
Notes: not available for CID fonts.
(Read only property)

78.25.26 FirstChar as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: First char (simple fonts only).
Notes: (Read only property)

78.25.27 Flags as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font flags.
Notes: See DynaPDF manual.

The font flags describe certain properties of the font. The most important flags are the following:

Flag	Description
1	Fixed pitch font
2	Serif style
4	Symbol font
8	Script style
&h20	Non-symbolic font
&h40	Italic style
&h40000	Force Bold (Type1 fonts only)

The full set of available flags can be found in the PDF Reference.
(Read only property)

78.25.28 FontBBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is the size of the largest glyph in this font.
Notes: (Read only property)

78.25.29 FontBuffer as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font data.
Notes: Available if the font was embedded or loaded from a buffer.
(Read only property)

78.25.30 FontBufSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font file size in bytes..
Notes: (Read only property)

78.25.31 FontFamily as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional Font Family (Family Name).
Notes: (Read only property)

78.25.32 FontFilePath as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font file path.
Notes: Only available for system fonts.
(Read only property)

78.25.33 FontFileType as Integer

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font file type.
Notes: Can be:
kffsType1C, kffsOpenTypeC, kffsOpenType, kffsNoSubtype, kffsCIDFontType2 or kffsCIDFontType0C.
(Read only property)

78.25.34 FontName as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font name (should be the same as BaseFont).
Notes: (Read only property)

78.25.35 FontStretch as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font stretch.
Notes: Optional ->Condensed, and so on.
(Read only property)

78.25.36 FontType as Integer

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font type.
Notes: If ftType0 the font is a CID font.
(Read only property)

78.25.37 FontWeight as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font weight (optional).
Notes: (Read only property)

78.25.38 FullName as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The full name.
Notes: System fonts only.
(Read only property)

78.25.39 HaveEncoding as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether encoding is known.
Notes: If true, BaseEncoding was set from the font's encoding.
(Read only property)

78.25.40 HorzWidthsCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of horizontal widths in the array.
Notes: (Read only property)

78.25.41 Imported as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether font is imported.
Notes: If true, the font was imported from an external PDF file.
(Read only property)

78.25.42 ItalicAngle as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Italic angle.
Notes: (Read only property)

78.25.43 Lang as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional language code defined by BCP 47.
Notes: (Read only property)

78.25.44 LastChar as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Last char (simple fonts only).
Notes: (Read only property)

78.25.45 Leading as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Leading (optional).
Notes: (Read only property)

78.25.46 Length1 as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the clear text portion of a Type1 font.
Notes: (Read only property)

78.25.47 Length2 as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the encrypted portion of a Type1 font program.
Notes: (Read only property)

78.25.48 Length3 as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the fixed-content portion of a Type1 font program.
Notes: (Read only property)

78.25.49 MaxWidth as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum glyph width (optional).
Notes: (Read only property)

78.25.50 Metadata as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional XMP metadata stream about the font file.
Notes: (Read only property)

78.25.51 MetadataSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: MetaData size in bytes.
Notes: (Read only property)

78.25.52 MisWidth as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Missing width (default = 0.0).
Notes: (Read only property)

78.25.53 Panose as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional 12 bytes long Panose string.
Notes: CID fonts only.
(Read only property)

78.25.54 PostScriptName as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: System fonts only.
Notes: (Read only property)

78.25.55 SpaceWidth as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Space width in font units.
Notes: A default value is set if the font contains no space character.
(Read only property)

78.25.56 StemH as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The thickness of horizontal stems.
Notes: (Read only property)

78.25.57 StemV as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The thickness of vertical stems.
Notes: (Read only property)

78.25.58 ToUnicode as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: ToUnicode CMap.
Notes: Only available for imported fonts.
(Read only property)

78.25.59 ToUnicodeSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: ToUnicode CMap size in bytes.
Notes: (Read only property)

78.25.60 VertDefPos as DynaPDFPointMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Default vertical displacement vector.
Notes: (Read only property)

78.25.61 VertWidthsCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of vertical widths in the array.
Notes: (Read only property)

78.25.62 WMode as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writing Mode.
Notes: 0: Horizontal
1: Vertical.

(Read only property)

78.25.63 XHeight as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of lowercase letters measured from the baseline.
Notes: (Read only property)

78.26 class DynaPDFFontMBS

78.26.1 class DynaPDFFontMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for pdf font information.
Example:

```
// list the fonts of an imported PDF with type and whether the font file is embedded
Var pdf As New DynaPDFMBS
Call pdf.CreateNewPDF(Nil)
Call pdf.OpenImportFile(SpecialFolder.Desktop.Child("test.pdf"))
Call pdf.ImportPDFFile(1)

Var lines() As String
For i As Integer = 0 To pdf.GetFontCount - 1
Var font As DynaPDFFontMBS = pdf.GetFontEx(i)
If font = Nil Then Continue
Var embedded As Boolean = font.FontFile <>Nil And font.FontFile.Size >0
lines.Add font.BaseFont + " (type " + font.FontType.ToString + "), embedded: " + embedded.ToString
Next
MessageBox String.FromArray(lines, EndOfLine)
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.26.2 Methods

78.26.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.26.4 Encoding(Index as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unicode mapping 0..255 if set.
Notes: Index from 0 to 255.

78.26.5 Widths as Single()

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Glyph widths.
See also:

- 78.26.6 Widths(Index as Integer) as single 12910

78.26.6 Widths(Index as Integer) as single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Glyph widths.
Notes: Index from 0 to WidthsCount-1.
See also:

- 78.26.5 Widths as Single() 12910

78.26.7 Properties

78.26.8 Ascent as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ascent of this font.
Notes: (Read and Write property)

78.26.9 BaseFont as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: PostScript Name or Family Name.
Notes: (Read and Write property)

78.26.10 CapHeight as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Cap height.
Notes: (Read and Write property)

78.26.11 DefWidth as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Default character widths ->CID fonts only.
Notes: (Read and Write property)

78.26.12 Descent as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Descent.
Notes: (Read and Write property)

78.26.13 FirstChar as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first character.
Notes: (Read and Write property)

78.26.14 Flags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font flags.
Notes: (Read and Write property)

78.26.15 FontFamily as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional Font Family (Family Name).
Notes: Unicode or ASCII encoded.
(Read and Write property)

78.26.16 FontFile as Memoryblock

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font file buffer.
Notes: Only imported fonts are returned.
(Read and Write property)

78.26.17 FontFileType as Integer

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font file subtype.
Notes: See kffs* constants like those:

Name	Value	Description
kffsType1C	0	CFF based Type1 font
kffsCIDFontType0C	1	CFF based Type1 CID font
kffsOpenType	2	TrueType based OpenType font
kffsOpenTypeC	3	CFF based OpenType font
kffsCIDFontType2	4	TrueType based CID Font
kffsNoSubtype	9	The font file is in the format of FontType

(Read and Write property)

78.26.18 FontName as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Font name.
Notes: (Read and Write property)

78.26.19 FontType as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font type.
Notes: If ftType0 the font is a CID font.
(Read and Write property)

78.26.20 ItalicAngle as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Italic angle.
Notes: (Read and Write property)

78.26.21 LastChar as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Last char.
Notes: (Read and Write property)

78.26.22 Length1 as Integer

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the clear text portion of the Type1 font, or the length of the entire font program if FontType <>kffType1.
Notes: (Read and Write property)

78.26.23 Length2 as Integer

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the encrypted portion of the Type1 font program (Type1 fonts only).
Notes: (Read and Write property)

78.26.24 Length3 as Integer

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the fixed-content portion of the Type1 font program or zero if not present.
Notes: (Read and Write property)

78.26.25 SpaceWidth as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Space width in font units or default value.
Notes: (Read and Write property)

78.26.26 WidthsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of widths in the array.
Notes: (Read only property)

78.26.27 XHeight as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x-height.
Notes: (Read and Write property)

78.27 class DynaPDFFontMetricsMBS

78.27.1 class DynaPDFFontMetricsMBS

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for font metrics.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.27.2 Methods

78.27.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.27.4 Properties

78.27.5 Ascent as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Ascent.
Notes: (Read and Write property)

78.27.6 AvgWidth as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Average character width.
Notes: (Read and Write property)

78.27.7 CapHeight as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cap height.
Notes: (Read and Write property)

78.27.8 DefWidth as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Default width.
Notes: (Read and Write property)

78.27.9 Descent as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Descent.
Notes: (Read and Write property)

78.27.10 FirstChar as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: First char.
Notes: (Read and Write property)

78.27.11 FixedWidth as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width of all glyphs in a fixed pitch font.
Notes: (Read and Write property)

78.27.12 FontBBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font's bounding box.
Notes: (Read and Write property)

78.27.13 FontStyle as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font style with which the font was loaded.
Example:

```
Var pdf as DynaPDFMBS // your instance

// set font
call pdf.SetFont("Helvetica", pdf.kfsNone, 12)

// and check whether it is bold
Var m as DynaPDFFontMetricsMBS = pdf.GetFontMetrics(pdf.GetActiveFont)
if BitwiseAnd(m.FontStyle, pdf.kfsBold) = pdf.kfsBold then
MessageBox "is bold"
else
MessageBox "is not bold"
end if

// set bold font
call pdf.SetFont("Helvetica", pdf.kfsBold, 12)

// and check whether it is bold
m = pdf.GetFontMetrics(pdf.GetActiveFont)
if BitwiseAnd(m.FontStyle, pdf.kfsBold) = pdf.kfsBold then
MessageBox "is bold"
else
MessageBox "is not bold"
end if
```

Notes: See kfs* constants in DynaPDFMBS class.
(Read and Write property)

78.27.14 IsFixedPitch as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is this a fixed pitch font?
Notes: (Read and Write property)

78.27.15 IsStdFont as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is this is a standard font?
Notes: (Read and Write property)

78.27.16 IsSymbolFont as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is this is a symbolic font?
Notes: (Read and Write property)

78.27.17 ItalicAngle as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Italic angle of italic fonts.
Notes: (Read and Write property)

78.27.18 LastChar as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Last char.
Notes: (Read and Write property)

78.27.19 LineGap as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Typographic line gap.
Notes: (Read and Write property)

78.27.20 MacStyle as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: macOS style flags.
Notes: (Read and Write property)

78.27.21 RealStyle as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is the real style of the font (bold and italic styles are maybe emulated)
Notes: See kfs* constants in DynaPDFMBS class.
(Read and Write property)

78.27.22 StemV as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width of vertical stems.
Notes: (Read and Write property)

78.27.23 StrikeoutPos as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Strikeout position.
Notes: (Read and Write property)

78.27.24 StrikeoutWidth as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width of the strikeout line.
Notes: (Read and Write property)

78.27.25 TypoAscender as Single

MBS DynaPDF Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: sTypoAscender of the OS/2 table of TrueType and OpenType fonts.
Notes: (Read and Write property)

78.27.26 TypoLeading as Single

MBS DynaPDF Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Typographic leading or line height of the font. T
Notes: This is TypoAscender - Descent + LineGap.
If typographic metrics are not available then TypoAscender is set to Ascent.
(Read and Write property)

78.27.27 UnderlinePos as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Underline position.
Notes: (Read and Write property)

78.27.28 UnderlineWidth as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width of the underline.
Notes: (Read and Write property)

78.27.29 UnicodeRange1 as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bitset for unicode ranges.
Notes: (Read and Write property)

78.27.30 UnicodeRange2 as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bitset for unicode ranges.
Notes: (Read and Write property)

78.27.31 UnicodeRange3 as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bitset for unicode ranges.
Notes: (Read and Write property)

78.27.32 UnicodeRange4 as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bitset for unicode ranges.
Notes: (Read and Write property)

78.27.33 Weight as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font weight.
Notes: (Read and Write property)

78.27.34 WidthClass as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width class of the font.
Notes: (Read and Write property)

78.27.35 WinDescent as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: usWinDescent of the OS/2 table of TrueType and OpenType fonts
Notes: (Read and Write property)

78.27.36 WinStyle as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: fsSelection of the OS/2 table of TrueType and OpenType fonts
Notes: (Read and Write property)

78.27.37 XHeight as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: X-height.
Notes: (Read and Write property)

78.28 class DynaPDFGlyphOutlineMBS

78.28.1 class DynaPDFGlyphOutlineMBS

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for glyph outline.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.28.2 Methods

78.28.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.28.4 Outline(index as Integer) as DynaPDFPointMBS

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries point with given index.
Notes: Index from 0 to OutlineCount-1.

78.28.5 Outlines as DynaPDFPointMBS()

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries array with all points.

78.28.6 Properties

78.28.7 AdvanceX as Single

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Glyph width in horizontal writing mode.
Notes: (Read only property)

78.28.8 AdvanceY as Single

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Glyph height in vertical writing mode.
Notes: (Read only property)

78.28.9 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bounding box of the glyph outline.
Notes: (Read only property)

78.28.10 HaveBBox as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, BBox was computed.
Notes: (Read only property)

78.28.11 Lsb as Integer

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Left side bearing (already applied, info only).
Notes: (Read only property)

78.28.12 OriginX as Single

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Placement vector (vertical writing mode only).
Notes: (Read only property)

78.28.13 OriginY as Single

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Placement vector (vertical writing mode only).
Notes: (Read only property)

78.28.14 OutlineCount as Integer

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of points.
Notes: (Read only property)

78.28.15 Tsb as Integer

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Top side bearing (already applied, info only).
Notes: (Read only property)

78.29 class DynaPDFGoToActionMBS

78.29.1 class DynaPDFGoToActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for details on a GoTo action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.29.2 Methods

78.29.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.29.4 DestPos(index as Integer) as Single

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destination position.
Notes: Array of 4 floating point values if set.
Index from 0 to 3.

78.29.5 Properties

78.29.6 DestFile as DynaPDFFileSpecExMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination file.
Notes: (Read only property)

78.29.7 DestName as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional named destination that shall be loaded when opening the file.
Notes: (Read only property)

78.29.8 DestPage as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destination page (the first page is denoted by 1).
Notes: (Read only property)

78.29.9 DestType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destination type.
Notes: (Read only property)

78.29.10 NewWindow as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to open a new window.
Notes: Meaningful only if the destination file points to a PDF file.
-1 = viewer default, 0 = false, 1 = true.
(Read only property)

78.29.11 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The index of the action.
Notes: -1 or next action handle to be executed if any.
(Read only property)

78.29.12 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the action.
Notes: Only set if NextAction is >= 0.

(Read only property)

78.30 class DynapdfGraphicsPathItemMBS

78.30.1 class DynapdfGraphicsPathItemMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a path item.
Notes: MBS Plugin needs to collect what path items you added, so we can later draw them to the PDF.
Blog Entries

- MBS Xojo Plugins, version 20.2pr1

78.30.2 Properties

78.30.3 clockwise as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The clockwise parameter.
Notes: For drawing arcs.
(Read only property)

78.30.4 cornerHeight as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The corner height.
Notes: for round rectangle.
(Read and Write property)

78.30.5 cornerWidth as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The corner width.
Notes: for round rectangle.
(Read and Write property)

78.30.6 cp1X as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: First control point X coordinate.
Notes: (Read and Write property)

78.30.7 cp1Y as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: First control point Y coordinate.
Notes: (Read and Write property)

78.30.8 cp2X as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Second control point X coordinate.
Notes: (Read and Write property)

78.30.9 cp2Y as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Second control point Y coordinate.
Notes: (Read and Write property)

78.30.10 cpX as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Control point X coordinate.
Notes: (Read and Write property)

78.30.11 cpY as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Control point Y coordinate.
Notes: (Read and Write property)

78.30.12 endRadian as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The radian for the end angle.
Notes: (Read and Write property)

78.30.13 height as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height parameter.
Notes: (Read and Write property)

78.30.14 radius as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The radius for an arc.
Notes: (Read and Write property)

78.30.15 startRadian as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The radian for the start angle.
Notes: (Read and Write property)

78.30.16 Type as Integer

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of path item.
Notes: See type constants.
(Read only property)

78.30.17 width as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width parameter.
Notes: (Read and Write property)

78.30.18 x as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: X coordinate.
Notes: (Read and Write property)

78.30.19 y as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Y coordinate.
Notes: (Read and Write property)

78.30.20 Constants

Types

Constant	Value	Description
TypeAddArc	1	Add arc
TypeAddCurveToPoint	2	Add curve to point
TypeAddLineToPoint	3	Add line to point
TypeAddQuadraticCurveToPoint	4	Add quadratic curve to point
TypeAddRectangle	5	Add rectangle
TypeAddRoundRectangle	6	Add round rectangle
TypeMoveToPoint	7	Move to point
TypeUnknown	0	Unknown type. Only for an uninitialized object.

78.31 class DynapdfGraphicsPathMBS

78.31.1 class DynapdfGraphicsPathMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a path.
Notes: We subclass the GraphicsPath class in Xojo 2019r2 and newer to be able to record what methods you call.
Subclass of the GraphicsPath class.

78.31.2 Methods

78.31.3 AddArc(x As Double, y As Double, radius As Double, startRadian As Double, endRadian As Double, clockwise As Boolean)

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an arc to the path.

78.31.4 AddCurveToPoint(cp1X As Double, cp1Y As Double, cp2X As Double, cp2Y As Double, x As Double, y As Double)

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a cubic B√©zier curve to the point in the path.

78.31.5 AddLineToPoint(x As Double, y As Double)

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a line from the Point to the specified point.

78.31.6 AddQuadraticCurveToPoint(cpX As Double, cpY As Double, x As Double, y As Double)

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a quadratic B√©zier curve to the point in the path.

78.31.7 AddRectangle(x As Double, y As Double, width As Double, height As Double)

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a rectangle to the path.

78.31.8 AddRoundRectangle(x As Double, y As Double, width As Double, height As Double, cornerWidth As Double, cornerHeight As Double)

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a rounded rectangle to the path.

78.31.9 MoveToPoint(x As Double, y As Double)

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves to the point without drawing anything.

78.31.10 PathItems as DynapdfGraphicsPathItemMBS()

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries array of path items.

78.31.11 Properties

78.31.12 Count as Integer

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries count of items.
Notes: (Read only property)

78.32 class DynaPDFHideActionMBS

78.32.1 class DynaPDFHideActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a hide action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.32.2 Methods

78.32.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.32.4 Fields(index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Array of fields.

78.32.5 Properties

78.32.6 FieldsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of fields in the array.
Notes: (Read only property)

78.32.7 Hide as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A flag indicating whether to hide or show the fields in the array.
Notes: (Read only property)

78.32.8 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle of the next action to use.
Notes: -1 or next action handle to be executed if any.
(Read only property)

78.32.9 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the next action.
Notes: Only set if NextAction is >= 0.
(Read only property)

78.33 class DynaPDFImageMBS

78.33.1 class DynaPDFImageMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for dynapdf for passing image data.
Example:

```
// export all images of an imported PDF page as JPEG files
Var pdf As New DynaPDFMBS
Call pdf.CreateNewPDF(Nil)
Call pdf.OpenImportFile(SpecialFolder.Desktop.Child("test.pdf"))
Call pdf.ImportPDFFile(1)

Var folder As FolderItem = SpecialFolder.Desktop
For i As Integer = 0 To pdf.GetImageObjCount - 1
Var image As DynaPDFImageMBS = pdf.GetImageObj(i)
If image = Nil Then Continue
System.DebugLog "Image " + i.ToString + ": " + image.Width.ToString + " x " + image.Height.ToString
+ ", " + image.BitsPerPixel.ToString + " bits"
Var data As String = image.PictureData(DynaPDFMBS.kifmJPEG)
If data.Bytes >0 Then
Var stream As BinaryStream = BinaryStream.Create(folder.Child("image" + i.ToString + ".jpg"), True)
stream.Write data
stream.Close
End If
Next
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

Xojo Developer Magazine

- 19.6, page 14: Things you can do with DynaPDF, The MBS DynaPDF Plugin is more powerful than you think by Stefanie Juchmes

78.33.2 Methods

78.33.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.33.4 Decode as Single()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The decode array.
Notes: If set, samples must be decoded. The array contains 2 * NumComponents values.
The decode array is never set if the image is returned decompressed since it is already applied during decompression.

78.33.5 MaskImage(Flags as UInt32 = 0) as DynaPDFImageMBS

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the image details on the soft mask for this image.
Notes: If set, a 1 bit image is used as a transparency mask.
Plugin calls GetImageObjEx with the given flags to decode the image.

78.33.6 PictureData(ImageFormat as Integer = 0, ImageFilter as Integer = 0) as String

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Requests images in the given format.
Notes: Default for ImageFormat is Tiff (kifmTIFF is zero) and default Image Filter is flate (kcfFlate is zero).
You can pass different constants.

If you request JPEG or JPEG 2000 and the image is already in that format, we pass through.
Else we recompress image.

78.33.7 SoftMask(Flags as UInt32 = 0) as DynaPDFImageMBS

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the image details on the soft mask for this image.
Notes: If set, a grayscale image is used as alpha channel.
Plugin calls GetImageObjEx with the given flags to decode the image.

78.33.8 Properties

78.33.9 BitsPerPixel as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bit depth of the image buffer.
Notes: Possible values are 1, 2, 4, 8, 24, 32, and 64.
(Read only property)

78.33.10 Buffer as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The buffer for the image data as a string.
Notes: Each scanline is aligned to a full byte.
(Read only property)

78.33.11 BufferPtr as Ptr

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The buffer for the image data.
Notes: Each scanline is aligned to a full byte.
(Read only property)

78.33.12 BufferSize as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of the image buffer in bytes.
Notes: (Read only property)

78.33.13 ColorCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of colors in the color table.
Notes: (Read only property)

78.33.14 ColorMask as Memoryblock

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pointer to color mask.
Notes: The array contains ranges in the form min/max (2 values per component) for each component before decoding.
(Read only property)

78.33.15 ColorSpace as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color space refers either to the image buffer or to the color table if set.
Notes: Note that 1 bit images can occur with and without a color table.
(Read only property)

78.33.16 ColorSpaceObject as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The original color space.
Notes: (Read only property)

78.33.17 ColorTable as Memoryblock

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color table or nil.
Notes: (Read only property)

78.33.18 DestHeight as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destination height (can be negative).
Notes: (Read only property)

78.33.19 DestWidth as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destination width (can be negative).
Notes: (Read only property)

78.33.20 DestX1 as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The X1 coordinate of the parallelogram into which the image is drawn.
Notes: (Read only property)

78.33.21 DestX2 as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The X2 coordinate of the parallelogram into which the image is drawn.
Notes: (Read only property)

78.33.22 DestX3 as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The X3 coordinate of the parallelogram into which the image is drawn.
Notes: (Read only property)

78.33.23 DestX4 as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The X4 coordinate of the parallelogram into which the image is drawn.
Notes: (Read only property)

78.33.24 DestY1 as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Y1 coordinate of the parallelogram into which the image is drawn.
Notes: (Read only property)

78.33.25 DestY2 as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Y2 coordinate of the parallelogram into which the image is drawn.
Notes: (Read only property)

78.33.26 DestY3 as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Y3 coordinate of the parallelogram into which the image is drawn.
Notes: (Read only property)

78.33.27 DestY4 as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Y4 coordinate of the parallelogram into which the image is drawn.
Notes: (Read only property)

78.33.28 FillColor as Integer

MBS DynaPDF Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current fill color.
Notes: An image mask is drawn with the current fill color.
(Read only property)

78.33.29 FillColorSpace as Integer

MBS DynaPDF Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color space in which FillColor is defined.
Notes: (Read only property)

78.33.30 Filter as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Required decode filter if the image is compressed.
Notes: Required decode filter if the image is compressed.
Possible values are dfDCTDecode (JPEG), dfJPXDecode (JPEG2000), and dfJBIG2Decode. Other filters are already removed by DynaPDF since a conversion to a native file format is then always required.
(Read only property)

78.33.31 Height as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image height in pixel.
Notes: (Read only property)

78.33.32 ImageHandle as Ptr

MBS DynaPDF Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image handle if known.
Notes: (Read only property)

78.33.33 ImageIndex as Integer

MBS DynaPDF Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image index if known.
Notes: (Read only property)

78.33.34 IMaskImageHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The index of the mask image.
Notes: This is the index to use with DynaPDFMBS.GetImageObj function.
(Read only property)

78.33.35 InlineImage as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the image is an inline image.
Notes: (Read only property)

78.33.36 Intent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rendering intent.
Notes: Default riNone.
(Read only property)

78.33.37 Interpolate as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, image interpolation should be performed.
Notes: (Read and Write property)

78.33.38 ISoftMaskHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The index of the soft mask image.
Notes: This is the index to use with DynaPDFMBS.GetImageObj function.
(Read only property)

78.33.39 JBIG2Globals as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional global page 0 segment (kdfJBIG2Decode filter only).
Notes: (Read only property)

78.33.40 JBIG2GlobalsSize as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of the bit stream in bytes.
Notes: (Read only property)

78.33.41 JBIG2Lossy as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the JBIG2 image stream was compressed with lossy compression.
Notes: This is an important special case because "lossy" means that symbols with no exact match were used to compress the image. This improved compression rates but caused sometimes unacceptable errors in the resulting image, e.g. changing text or even worse, changing numbers.
(Read only property)

78.33.42 Measure as DynaPDFMeasureMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional measure dictionary.
Notes: (Read only property)

78.33.43 Metadata as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional XML Metadata stream.
Notes: (Read only property)

78.33.44 MetadataSize as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of Metadata in bytes.
Notes: (Read only property)

78.33.45 MinIsWhite as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the colors of 1 bit images are reversed.
Notes: (Read only property)

78.33.46 NumComponents as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of components stored in the image buffer.
Notes: (Read only property)

78.33.47 OCG as Integer

MBS DynaPDF Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Handle of an OCG or OCMD or -1.
Notes: Images can be part of an Optional Content Group (OCG) or Optional Content Membership Dictionary (OCMD). If OC is greater -1 an OCG or OCMD handle was set. To determine whether an OCG handle was set, check whether the value is smaller &h40000000.
(Read only property)

78.33.48 OrgFilter as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image was compressed with this filter in the PDF file.
Notes: This info is useful to determine which compression filter should be used when creating a new image

file from the image buffer.
(Read only property)

78.33.49 PDF as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reference to the parent DynaPDF object.
Notes: (Read and Write property)

78.33.50 PtData as DynaPDFPointDataDictionaryMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Point Data dictionary.
Notes: (Read only property)

78.33.51 ResolutionX as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image resolution on the x-axis.
Notes: (Read only property)

78.33.52 ResolutionY as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image resolution on the y-axis.
Notes: (Read only property)

78.33.53 ScanLineLength as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The length of a scanline in bytes.
Notes: (Read only property)

78.33.54 SMaskInData as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SMaskInData value.
Notes: JPXDecode only, PDF_MAX_INT if not set. See PDF Reference for further information.
(Read only property)

78.33.55 Transparent as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The transparent mode.
Notes: The meaning is different depending on the bit depth and whether a color table is available. If the image is a 1 bit image and if no color table is available, black pixels must be drawn with the current fill color. If the image contains a color table ColorMask contains the range of indexes in the form min/max index which appears transparent. If no color table is present ColorMask contains the transparent ranges in the form min/max for each component.

(Read only property)

78.33.56 Width as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image width in pixel.
Notes: (Read only property)

78.34 class DynaPDFImportDataActionMBS

78.34.1 class DynaPDFImportDataActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an import data action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.34.2 Methods

78.34.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.34.4 Properties

78.34.5 Data as DynaPDFFileSpecExMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data or file to be loaded.
Notes: (Read only property)

78.34.6 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle to the next action.
Notes: -1 or next action handle to be executed if any
(Read only property)

78.34.7 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the next action.
Notes: Only set if NextAction is >= 0.
(Read only property)

78.35 class DynaPDFIteratorMBS

78.35.1 class DynaPDFIteratorMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The iterator object use for for-each loops in Xojo.
Notes: Implements Iterable and Iterator interfaces.

This class is hidden for auto complete as you don't need to use it manually. Please use it using for each loops.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

Interfaces: Iterator, Iterable

78.35.2 Methods

78.35.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

78.35.4 Iterator as Iterator

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the iterator object.
Notes: Returns self and is used internally by Xojo for the for each loops.
Part of the Iterable interface and needed for for-each loops.

78.35.5 MoveNext as Boolean

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Moves to next object for iterator.
Notes: Returns true on success and false in case of an error like end of iterator.
Part of the Iterator interface and needed for for-each loops.

78.35.6 Value as Variant

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Current value for the iterator.
Notes: The type of object depends on what you iterate over.

Part of the Iterator interface and needed for for-each loops.

78.35.7 Properties

78.35.8 PDF as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The object reference to the parent DynaPDFMBS object.
Notes: (Read only property)

78.36 class DynaPDFJavaScriptActionMBS

78.36.1 class DynaPDFJavaScriptActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a javascript action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.36.2 Methods

78.36.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.36.4 Properties

78.36.5 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle to the next action.
Notes: -1 or next action handle to be executed if any
(Read only property)

78.36.6 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the next action.
Notes: Only set if NextAction is >= 0.
(Read only property)

78.36.7 Script as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The script.
Notes: (Read only property)

78.37 class DynaPDFLaunchActionMBS

78.37.1 class DynaPDFLaunchActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for details on a launch action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.37.2 Methods

78.37.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.37.4 Properties

78.37.5 AppName as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional. The name of the application that should be launched.
Notes: (Read only property)

78.37.6 DefDir as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional default directory.
Notes: (Read only property)

78.37.7 File as DynaPDFFileSpecExMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file specification for the launch.
Notes: (Read only property)

78.37.8 NewWindow as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to launch in new window.
Notes: -1 = viewer default, 0 = false, 1 = true.
(Read only property)

78.37.9 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle to the next action.
Notes: -1 or next action handle to be executed if any
(Read only property)

78.37.10 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the next action.
Notes: Only set if NextAction is >= 0.
(Read only property)

78.37.11 Operation as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional string specifying the operation to perform (open or print).
Notes: (Read only property)

78.37.12 Parameter as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional parameter string that shall be passed to the application (AppName).
Notes: (Read only property)

78.38 class DynaPDFLayerGroupMBS

78.38.1 class DynaPDFLayerGroupMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a DynaPDF Layer Group.
Notes: Used to link layers in hierarchies.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.38.2 Methods

78.38.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.38.4 Properties

78.38.5 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

78.38.6 Owner as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The link to the parent DynaPDF object.
Notes: (Read only property)

78.39 class DynaPDFLineAnnotParameterMBS

78.39.1 class DynaPDFLineAnnotParameterMBS

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for line annotation parameters.

78.39.2 Properties

78.39.3 Caption as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies whether the parameter Content of the function LineAnnot should be used as caption of the measure line.
Notes: (Read and Write property)

78.39.4 CaptionOffsetX as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Horizontal offset of the caption from its normal position.
Notes: (Read and Write property)

78.39.5 CaptionOffsetY as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Vertical offset of the caption from its normal position.
Notes: (Read and Write property)

78.39.6 CaptionPos as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The position where the caption should be drawn if present.
Notes: (Read and Write property)

78.39.7 LeaderLineExtend as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional leader line extend beyond the leader line (must be a positive value or zero).
Notes: (Read and Write property)

78.39.8 LeaderLineLen as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the leader lines (positive or negative).
Notes: (Read and Write property)

78.39.9 LeaderLineOffset as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Amount of space between the endpoints of the annotation and the leader lines (must be a positive value or zero)
Notes: (Read and Write property)

78.40 class DynaPDFMatrixMBS

78.40.1 class DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a DynaPDF matrix structure.
Example:

```
// rotate and move a point with a transformation matrix
Var m As New DynaPDFMatrixMBS // identity
m.Translate(100, 50)
m.Rotate(90)
m.Scale(2, 2)

Var px As Double = 10
Var py As Double = 0
m.Transform(px, py)

Var matrixText As String = m // Operator_Convert
MessageBox "Point: " + Format(px, "0.0") + ", " + Format(py, "0.0") + EndOfLine + _
"Rotation: " + Format(m.RotationAngle, "0.0") + EndOfLine + _
"Scale: " + Format(m.ScaleFactor, "0.0") + EndOfLine + _
"Matrix: " + matrixText
```

Notes: in the documentation known as TCTM struct.

78.40.2 Methods

78.40.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new matrix and sets it to identity.
Example:

```
Var m as new DynaPDFMatrixMBS
MessageBox m
```

See also:

- 78.40.4 Constructor(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double) 12963
- 78.40.5 Constructor(other as DynaPDFMatrixMBS) 12963

78.40.4 Constructor(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double)

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new instance with setting values to the given parameters.
Example:

```
Var m as new DynaPDFMatrixMBS(1,2,3,4,5,6)
MessageBox m
```

See also:

- 78.40.3 Constructor 12962
- 78.40.5 Constructor(other as DynaPDFMatrixMBS) 12963

78.40.5 Constructor(other as DynaPDFMatrixMBS)

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a matrix object with copying the values.
Example:

```
Var m as new DynaPDFMatrixMBS(1,2,3,4,5,6)
Var n as new DynaPDFMatrixMBS(m)
MessageBox n
```

See also:

- 78.40.3 Constructor 12962
- 78.40.4 Constructor(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double) 12963

78.40.6 Identity as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates new object with identity matrix.
Example:

```
Var m as DynaPDFMatrixMBS = DynapdfMatrixMBS.Identity

MessageBox m // shows [ 1.000000 0.000000 0.000000 1.000000 0.000000 0.000000 ]
```

78.40.7 Invert

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverts the matrix.
Example:

```
Var m as new DynaPDFMatrixMBS

m.Invert

MessageBox m // shows [ 1.000000 -0.000000 -0.000000 1.000000 0.000000 0.000000 ]
```

78.40.8 LeftMultiply(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies both matrix where self is on the left side.
See also:

- 78.40.9 LeftMultiply(other as DynaPDFMatrixMBS) 12964

78.40.9 LeftMultiply(other as DynaPDFMatrixMBS)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies both matrix where self is on the left side.
Example:

```
Var m1 as new DynaPDFMatrixMBS
Var m2 as new DynaPDFMatrixMBS

m1.Rotate 0.1
```

```
m2.Scale 2.0, 3.0

Var m3 as new DynaPDFMatrixMBS(m1)
m3.LeftMultiply(m2)

MessageBox m1.Str+EndOfLine+m2.Str+EndOfLine+m3.Str
```

See also:

- 78.40.8 LeftMultiply(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double) 12964

78.40.10 Multiply(M1 as DynaPDFMatrixMBS, M2 as DynaPDFMatrixMBS) as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 26.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies two matrices.

78.40.11 Operator_Compare(other as DynaPDFMatrixMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two matrix objects whether they have same values.
Example:

```
Var m1 as new DynaPDFMatrixMBS
Var m2 as new DynaPDFMatrixMBS

if m1 = m2 then
MessageBox "Equal, same values."
else
MessageBox "Not equal ->Bug in Plugin."
end if

if m1 is m2 then
MessageBox "Equal ->Bug in Xojo."
else
MessageBox "Not equal, different objects."
end if
```

78.40.12 Operator_Convert as string

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts matrix into a string for displaying in log files.
Example:

```
Var m as new DynaPDFMatrixMBS
MessageBox m // shows [ 1.000000 0.000000 0.000000 1.000000 0.000000 0.000000 ]
```

Notes: Added for debugging.

78.40.13 Operator_Multiply(other as DynaPDFMatrixMBS) as DynapdfMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies both matrix where self is on the left side.
Example:

```
Var m1 as new DynaPDFMatrixMBS
Var m2 as new DynaPDFMatrixMBS

m1.Rotate 0.1
m2.Scale 2.0, 3.0

Var m3 as DynaPDFMatrixMBS = m1*m2

MessageBox m1.Str+EndOfLine+m2.Str+EndOfLine+m3.Str
```

78.40.14 Operator_MultiplyRight(other as DynaPDFMatrixMBS) as DynapdfMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies both matrix where self is on the right side.

78.40.15 RightMultiply(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies both matrix where self is on the right side.
See also:

- 78.40.16 RightMultiply(other as DynaPDFMatrixMBS) 12967

78.40.16 RightMultiply(other as DynaPDFMatrixMBS)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies both matrix where self is on the right side.
See also:

- 78.40.15 RightMultiply(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double) 12966

78.40.17 Rotate(angle as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates matrix with the given angle.
Example:

```
Var m as new DynaPDFMatrixMBS

const pi = 3.14159265

Var angle as Double = 30.0/180.0*pi

m.Rotate(angle)

MessageBox m // shows [ 0.866025 0.500000 -0.500000 0.866025 0.000000 0.000000 ]
```

Notes: Angle in radians: 2*pi = 360 degree

78.40.18 Scale(sx as Double, sy as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales the matrix.
Example:

```
Var m as new DynaPDFMatrixMBS

m.Scale 2.0, 3.0
```

```
MessageBox m // [ 2.000000 0.000000 0.000000 3.000000 0.000000 0.000000 ]
```

78.40.19 SetIdentity

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets values back to the identity matrix.
Example:

```
Var m as new DynaPDFMatrixMBS

m.Scale 2.0, 3.0 // modify values
m.SetIdentity // and reset

MessageBox m // [ 1.000000 0.000000 0.000000 1.000000 0.000000 0.000000 ]
```

78.40.20 SetValues(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets all the values in one method
Example:

```
Var m as new DynaPDFMatrixMBS

m.SetValues 1,2,3,4,5,6

MessageBox m
```

78.40.21 Transform(byref x as Double, byref y as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies the matrix to the given point.
Example:

```
Var m as new DynaPDFMatrixMBS

const pi = 3.14159265
Var angle as Double = 30.0/180.0*pi
m.Rotate(angle)
m.Translate 2.0, 3.0
```

```
Var x as Double = 100.0
Var y as Double = 100.0

m.Transform x,y

MessageBox str(x)+" "+str(y) // 36.83459 140.2006
```

78.40.22 TransformInv(byref x as Double, byref y as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies the matrix to the given point in inverse mode.
Example:

```
Var m as new DynaPDFMatrixMBS

const pi = 3.14159265
Var angle as Double = 30.0/180.0*pi
m.Rotate(angle)
m.Translate 2.0, 3.0

Var x as Double = 100.0
Var y as Double = 100.0

// transform
m.Transform x,y

MessageBox str(x)+" "+str(y) // 36.83459 140.2006

// transform back
m.TransformInv x,y

MessageBox str(x)+" "+str(y) // 100 100#
```

Notes: Like you have a point and want to know whether it was before the matrix was applied.

78.40.23 Translate(x as Double, y as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates matrix by given values.
Example:

```
Var m as new DynaPDFMatrixMBS
```

m.Translate 2,3

MessageBox m // shows [1.000000 0.000000 0.000000 1.000000 2.000000 3.000000]

78.40.24 Properties

78.40.25 a as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the matrix properties.
Notes: (Read and Write property)

78.40.26 b as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the matrix properties.
Notes: (Read and Write property)

78.40.27 c as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the matrix properties.
Notes: (Read and Write property)

78.40.28 d as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the matrix properties.
Notes: (Read and Write property)

78.40.29 IsIdentity as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether matrix is the identity matrix.
Example:

```
Var m as new DynaPDFMatrixMBS

MessageBox str(m.IsIdentity)

m.a = 3.0

MessageBox str(m.IsIdentity)
```

Notes: Returns true if a = 1, b = 0, c = 0, d = 1, x = 0 and y = 0.
(Read only property)

78.40.30 RotationAngle as Double

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the rotate angle.
Example:

```
Var m as DynaPDFMatrixMBS = DynapdfMatrixMBS.Identity

m.Rotate 0.1

MessageBox str(m.GetRotationAngle) // shows 0.1
```

Notes: In radians from -pi to pi.
Used to be named GetRotationAngle before.
(Read only property)

78.40.31 ScaleFactor as Double

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the scale factor.
Example:

```
Var m as DynaPDFMatrixMBS = DynapdfMatrixMBS.Identity

m.Scale 3.0, 4.0

MessageBox str(m.GetScaleFactor) // shows 3.535534
```

Notes: Used to be named GetScaleFactor before.
(Read only property)

78.40.32 StringValue as string

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts matrix into a string for displaying in log files.
Example:

```
Var m as new DynaPDFMatrixMBS
MessageBox m.Str // shows [ 1.000000 0.000000 0.000000 1.000000 0.000000 0.000000 ]
```

Notes: Added for debugging.
Used to be named Str.
(Read only property)

78.40.33 x as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the matrix properties.
Notes: (Read and Write property)

78.40.34 y as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the matrix properties.
Notes: (Read and Write property)

78.41 class DynaPDFMBS

78.41.1 class DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The dynapdf class.
Example:

```
// create a PDF with one page and a line of text
Var file As FolderItem = SpecialFolder.Desktop.Child("hello.pdf")

Var pdf As New DynaPDFMBS
pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

If Not pdf.CreateNewPDF(file) Then
MessageBox "Failed to create PDF file."
Return
End If

Call pdf.SetDocInfo(pdf.kdiCreator, "My Xojo application")
Call pdf.SetDocInfo(pdf.kdiTitle, "Hello World")

// use top down coordinates like Xojo graphics
Call pdf.SetPageCoords(pdf.kpcTopDown)

Call pdf.Append
Call pdf.SetFont("Helvetica", pdf.kfsNone, 24.0, True, pdf.kcpUnicode)
Call pdf.WriteText(50.0, 50.0, "Hello World!")
Call pdf.EndPage

Call pdf.CloseFile
file.Open
```

Notes: A pdf library to create, modify, import pdf files.
You need a separate dynapdf license key for this class.

Please note that all constants have the prefix k. In the dynapdf_help.pdf file, the constants don't have a k prefix. And the C functions there have IPDF parameters which the plugin automatically passes for you. So

SI32 pdfSetPageCoords(const void* IDPF, TPageCoord PageCoords)

translates in Xojo to

function SetPageCoords(PageCoords as Integer) as Integer

and you call it like this:

call pdf.SetPageCoords pdf.kpcTopDown

where in this sample the DynaPDF object is named pdf.

Pro license is required for the following functions:

- BeginTransparencyGroup
- ConvertColors
- Create3DAnnot
- CreateSoftMask
- FlattenForm
- GetPageText
- ImportPage and ImportPageEx
- ParseContent
- RenderAnnotOrField
- RenderPage
- SetCMapDir
- SetExtColorSpace, SetExtFillColorSpace and SetExtStrokeColorSpace.
- SetUseGlobalImpFiles

Lite is required for:

- AddRenderingIntent and AddRenderingIntentEx
- CreateFormFields
- CloseFileEx
- ConvertEMFSpool
- CreateCollection
- CreateExtGState

- InsertMetafile and InsertMetafileEx
- OpenImportBuffer, OpenImportFile and OpenImportStream
- SetPDFVersion for PDF/A and PDF/X

And all functions relaying on those functions internally.

78.41.2 Methods

78.41.3 AbortPath

MBS DynaPDF Plugin, Plugin Version: 26.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Discards the current path in memory.
See also AbortPath function in DynaPDF manual.

78.41.4 ActivateAltFontList(FontListHandle as Integer, EnableSysFonts as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Activates or deactivates an alternate font list that was created by CreateAltFontList().
Notes: An alternate font list represents a list of fallback fonts which are tested if one or more required glyphs were not found in the current font.
If no compatible font was found in the list, then system fonts are tested if EnableSysFonts was set to true. Although EnableSysFonts should be set to true in most cases, it is sometimes useful to disable system fonts, e.g. to restrict the number of fonts which can be embeded.
In order to disable the current alternate font list set the parameter Handle to -1. The value of EnableSysFonts is ignored this case. To fully deactivate font substitution disable system fonts with SetUseSystemFonts() before calling a text function.
Please note that alternate font lists are used only, if complex text layout was enabled. This can be done by setting the flag kgfComplexText with SetGStateFlags().
See also ActivateAltFontList function in DynaPDF manual.

78.41.5 AddActionToObj(ObjType as Integer, theEvent as Integer, ActHandle as Integer, ObjHandle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds an action to a PDF object.
See also AddActionToObj function in DynaPDF manual.

78.41.6 AddAnnotToPage(PageNum as UInt32, Handle as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an annotation to a page.
Notes: With exception of PopUp annotations all annotation types can be drawn on multiple pages. Watermark or Stamp annotations are typical annotations which can be placed on multiple pages.
Returns true on success.
See also AddAnnotToPage function in DynaPDF manual.

78.41.7 AddArticle(PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a new article and adds it to the currently open article thread that must be created with CreateArticleThread() beforehand.
See also AddArticle function in DynaPDF manual.

78.41.8 AddBookmark(title as String, parent as Integer, DestPage as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds a bookmark to the global outline tree of the document.
Notes: The title parameter is converted to unicode.
See also AddBookmark function in DynaPDF manual.

78.41.9 AddBookmarkAnsi(title as String, parent as Integer, DestPage as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** This function adds a bookmark to the global outline tree of the document.
Notes: The title parameter is converted to ANSI.
See also AddBookmark function in DynaPDF manual.

78.41.10 AddBookmarkEx(title as String, parent as Integer, NamedDest as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds a bookmark to the global outline tree of the document.
Notes: The title parameter is converted to unicode.
See also AddBookmarkEx function in DynaPDF manual.

78.41.11 AddBookmarkEx2(title as String, parent as Integer, NamedDest as String, unicode as boolean, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds a bookmark to the global outline tree of the document.
Notes: If unicode is true, the plugin passes NamedDest as unicode, else as Windows ANSI text.
See also AddBookmarkEx2 function in DynaPDF manual.

78.41.12 AddBookmarkEx2Ansi(title as String, parent as Integer, NamedDest as String, unicode as boolean, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** This function adds a bookmark to the global outline tree of the document.
Notes: If unicode is true, the plugin passes NamedDest as unicode, else as Windows ANSI text.
See also AddBookmarkEx2 function in DynaPDF manual.

78.41.13 AddBookmarkExAnsi(title as String, parent as Integer, NamedDest as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** This function adds a bookmark to the global outline tree of the document.
Notes: The title parameter is converted to ANSI.

See also AddBookmarkEx function in DynaPDF manual.

78.41.14 AddButtonImage(BtnHandle as Integer, State as Integer, Caption as string, ImgFile as FolderItem) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function adds an image to a push button to one or more of the three different states of a button.
See also AddButtonImage function in DynaPDF manual.

78.41.15 AddButtonImageEx(BtnHandle as Integer, State as Integer, Caption as string, hbitmap as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function adds a memory bitmap to a push button in the same ways as AddButtonImage() but accepts a HBITMAP handle as input image.
See also AddButtonImageEx function in DynaPDF manual.

78.41.16 AddButtonImageEx2(BtnHandle as integer, State as integer, Caption as string, ImageData as MemoryBlock) as boolean

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds image to a button.
Notes: The function adds an image to a push button in the same way as AddButtonImage(), but accepts an image buffer as input.
The function supports all image formats that InsertImageEx() supports, e.g. JPEG or PNG.

If the function succeeds the return value is true. If the function fails the return value is false.
See also AddButtonImageEx2 function in DynaPDF manual.
See also:

- 78.41.17 AddButtonImageEx2(BtnHandle as integer, State as integer, Caption as string, ImageData as String) as boolean 12979

78.41.17 AddButtonImageEx2(BtnHandle as integer, State as integer, Caption as string, ImageData as String) as boolean

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds image to a button.
Notes: The function adds an image to a push button in the same way as AddButtonImage(), but accepts an image buffer as input.
The function supports all image formats that InsertImageEx() supports, e.g. JPEG or PNG.

If the function succeeds the return value is true. If the function fails the return value is false.
See also AddButtonImageEx2 function in DynaPDF manual.
See also:

- 78.41.16 AddButtonImageEx2(BtnHandle as integer, State as integer, Caption as string, ImageData as MemoryBlock) as boolean 12979

78.41.18 AddContinueText(text as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function prints a single text line and adds a line feed.
Notes: The text string is converted to Unicode.
See also AddContinueText function in DynaPDF manual.

78.41.19 AddContinueTextAnsi(text as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** This function prints a single text line and adds a line feed.
Notes: The text string is converted to ANSI.
See also AddContinueText function in DynaPDF manual.

78.41.20 AddDeviceNProcessColorants(DeviceNCS as Integer, Colorants() as string, ProcessCS as Integer, Handle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds DeviceN process colorants.
Notes: Returns true on success and false on failure.
See also AddDeviceNProcessColorants function in DynaPDF manual.

78.41.21 AddDeviceNSeparations(DeviceNCS as Integer, Colorants() as string, SeparationCS() as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds device N separations.
Notes: Same as AddDeviceNSeparationsAnsi, but here the Xojo colorant strings are converted to UTF-8 encoding before they are passed to the DynaPDF library.

ubound(Colorants) must be ubound(SeparationCS).
Returns true on success and false on failure.

Currently limited to 100 colorants on the plugin side.
See also AddDeviceNSeparations function in DynaPDF manual.

78.41.22 AddDeviceNSeparationsAnsi(DeviceNCS as Integer, Colorants() as string, SeparationCS() as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** Adds device N separations.
Notes: Same as AddDeviceNSeparations, but here the Xojo colorant strings are converted to ANSI encoding before they are passed to the DynaPDF library.

ubound(Colorants) must be ubound(SeparationCS).
Returns true on success and false on failure.

Currently limited to 100 colorants on the plugin side.
See also AddDeviceNSeparations function in DynaPDF manual.

78.41.23 AddDPartNode(Parent as Integer, FirstPage as Integer, LastPage as Integer, DPM as String) as Integer

MBS DynaPDF Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a DPart Node.
Notes: DPart nodes can be used to add metadata to a single page or range of pages. In addition, DPart nodes can be nested to form a tree like structure.

Unlike XMP metadata streams which base on XML, Document Part Metadata (parameter DPM) is stored

in PDF syntax. This type of metadata supports dictionaries, arrays, strings, name objects, numbers, and boolean values, or almost the entire range of PDF data types.

DPart nodes require a global root node that must be created with CreateDPartRoot() before this function can be called the first time.
See also AddDPartNode function in DynaPDF manual.

78.41.24 AddFieldToFormAction(Action as Integer, Field as Integer, Include as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a field to a form action.
See also AddFieldToFormAction function in DynaPDF manual.

78.41.25 AddFieldToHideAction(HideAct as Integer, Field as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds a field to a hide action.
See also AddFieldToHideAction function in DynaPDF manual.

78.41.26 AddFileComment(Text as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds one or more comments to the end of the PDF file.
Notes: The text parameter is converted to unicode.
See also AddFileComment function in DynaPDF manual.

78.41.27 AddFileCommentAnsi(Text as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** Adds one or more comments to the end of the PDF file.
Notes: The text parameter is converted to ANSI.
See also AddFileComment function in DynaPDF manual.

78.41.28 AddFontSearchPath(path as folderitem, recursive as boolean = true) as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds a search path to the list of available font search paths.
Example:

```
Var d as new DynaPDFMBS
if TargetLinux then
call d.AddFontSearchPath "/usr/share/fonts/truetype", true
else
// on Mac and Windows we use system fonts.
end if
```

Notes: This function adds a search path to the list of available font search paths. An arbitrary number of search paths can be added at runtime. Subdirectories are included recursively if the parameter Recursive is true.
DynaPDF requires no separate metric files for Type1 fonts.

The list of search directories can be cleared at runtime with the function ClearHostFonts().

If system fonts are enabled (default) DynaPDF adds the default font directories of the operating system automatically to the list of font search paths (Windows and Mac OSX only, see SetUseSystemFonts() for further information). On Windows this is the %Windows%/Fonts directory as well as fonts listed in the Registry and linked fonts.

On Mac OSX the following directories are added to the list of font search paths (in this order):

- users font folder in
  textasciitilde /Library/Fonts
- /Library/Fonts
- /System/Library/Fonts

If the function succeeds the function returns the number of found font files (this is maybe not the number of available fonts, because the list is cleared each time all fonts in the list are processed during font selection). If the function fails a negative error code is returned.

Please call this method on Linux to get fonts loaded from your font folder.
See also AddFontSearchPath function in DynaPDF manual.
See also:

- 78.41.29 AddFontSearchPath(path as string, recursive as boolean = true) as Integer 12984

78.41.29 AddFontSearchPath(path as string, recursive as boolean = true) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds a search path to the list of available font search paths.
Example:

```
Var d as new DynaPDFMBS
if TargetLinux then
call d.AddFontSearchPath "/usr/share/fonts/truetype", true
else
// on Mac and Windows we use system fonts.
end if
```

Notes: This function adds a search path to the list of available font search paths. An arbitrary number of search paths can be added at runtime. Subdirectories are included recursively if the parameter Recursive is true.
DynaPDF requires no separate metric files for Type1 fonts.

This function is implemented in an ANSI and Unicode compatible version. However, Unicode file paths are converted back to ANSI on Windows. On non-Windows operating systems the path is converted to UTF-8 and passed to the ANSI version of the function.

The list of search directories can be cleared at runtime with the function ClearHostFonts().

If system fonts are enabled (default) DynaPDF adds the default font directories of the operating system automatically to the list of font search paths (Windows and Mac OSX only, see SetUseSystemFonts() for further information). On Windows this is the %Windows%/Fonts directory as well as fonts listed in the Registry and linked fonts.

On Mac OSX the following directories are added to the list of font search paths (in this order):

- users font folder in
  textasciitilde /Library/Fonts
- /Library/Fonts
- /System/Library/Fonts

If the function succeeds the function returns the number of found font files (this is maybe not the number of available fonts, because the list is cleared each time all fonts in the list are processed during font selection). If the function fails a negative error code is returned.

Please call this method on Linux to get fonts loaded from your font folder.
See also AddFontSearchPath function in DynaPDF manual.
See also:

- 78.41.28 AddFontSearchPath(path as folderitem, recursive as boolean = true) as Integer 12983

78.41.30 AddImage(Filter as Integer, Flags as Integer, Image as DynaPDFImageMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an image to the current image file.
Notes: For the filter you use one of the kcf* constants.
For the flags you use either kicNone of kicUseCCITT4.

TIFF is the only format that supports different compression filters. The Filter parameter of the function AddImage() is ignored if the image format supports only one specific compression filter.
Note that images are automatically converted to the nearest supported color space if the image format does not support the color space of the image.
See also AddImage function in DynaPDF manual.

78.41.31 AddInkList(InkAnnot as UInt32, points() as DynaPDFPointMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an array of points or path to an Ink Annotation.
Notes: The function must be called within an open page.
An ink annotation can contain an arbitrary number of paths. The points will be connected by curves to achieve a smooth transition between points. The coordinates are treated in current user space. Any transformation that was applied on the coordinate system will be taken into account.
If the number of points is zero then all paths will be deleted from the annotation.

Returns true on success.
See also AddInkList function in DynaPDF manual.

78.41.32 AddJavaScript(Name as string, Script as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function adds a global JavaScript to the PDF file.
Notes: The script parameter is converted to unicode.

See also AddJavaScript function in DynaPDF manual.

78.41.33 AddJavaScriptAnsi(Name as string, Script as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function adds a global JavaScript to the PDF file.
Notes: The script parameter is converted to ANSI.
See also AddJavaScript function in DynaPDF manual.

78.41.34 AddLayerToDisplTree(parent as DynaPDFLayerGroupMBS, layer as UInt32, Title as string) as DynaPDFLayerGroupMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a layer to the display tree.
See also AddLayerToDisplTree function in DynaPDF manual.

78.41.35 AddLayerToDisplTreeAnsi(parent as DynaPDFLayerGroupMBS, layer as UInt32, Title as string) as DynaPDFLayerGroupMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** Adds a layer to the display tree.
See also AddLayerToDisplTree function in DynaPDF manual.

78.41.36 AddMaskImage(BaseImage as Integer, Buffer as MemoryBlock, Stride as UInt32, BitsPerPixel as UInt32, Width as UInt32, Height as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function adds an image mask to a base image.
Notes: Please note that this function can be called with Ptr or Memoryblock.
See also AddMaskImage function in dynapdf_help.pdf manual.
See also AddMaskImage function in DynaPDF manual.
See also:

- 78.41.37 AddMaskImage(BaseImage as Integer, Buffer as Ptr, BufSize as UInt32, Stride as UInt32, BitsPerPixel as UInt32, Width as UInt32, Height as UInt32) as boolean 12987

78.41.37 AddMaskImage(BaseImage as Integer, Buffer as Ptr, BufSize as UInt32, Stride as UInt32, BitsPerPixel as UInt32, Width as UInt32, Height as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function adds an image mask to a base image.
Notes: Please note that this function can be called with Ptr or Memoryblock.
See also AddMaskImage function in dynapdf_help.pdf manual.
See also AddMaskImage function in DynaPDF manual.
See also:

- 78.41.36 AddMaskImage(BaseImage as Integer, Buffer as MemoryBlock, Stride as UInt32, BitsPerPixel as UInt32, Width as UInt32, Height as UInt32) as boolean 12986

78.41.38 AddObjectToLayer(OCG as UInt32, ObjType as Integer, Handle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function adds an object to an Optional Content Group (OCG) or Optional Content Membership dictionary (OCMD).
Notes: If the function succeeds the return value is true. If the function fails the return value is false.

For ObjectType use the constants: kooAnnotation, kooField, kooImage and kooTemplate.
See also AddObjectToLayer function in DynaPDF manual.

78.41.39 AddOCGToAppEvent(Handle as UInt32, Events as Integer, Categories as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an Optional Content Group (OCG) to an application event.
Notes: See dynapdf_help.pdf manual for details.
See also AddOCGToAppEvent function in DynaPDF manual.

78.41.40 AddOutputIntent(ICCFile as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds an ICC color profile to the PDF file that should be used to render device dependent colors.
Notes: This function was named AddRenderingIntent before.
Requires DynaPDF Lite license.
See also AddOutputIntent function in DynaPDF manual.

78.41.41 AddOutputIntentEx(buffer as Memoryblock) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds an ICC color profile to the PDF file that should be used to render device dependent colors.
Notes: This function was named AddRenderingIntentEx before.
Requires DynaPDF Lite license.
See also AddOutputIntentEx function in DynaPDF manual.
See also:

- 78.41.42 AddOutputIntentEx(buffer as string) as Integer 12988

78.41.42 AddOutputIntentEx(buffer as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds an ICC color profile to the PDF file that should be used to render device dependent colors.
Notes: This function was named AddRenderingIntentEx before.
Requires DynaPDF Lite license.
See also AddOutputIntentEx function in DynaPDF manual.
See also:

- 78.41.41 AddOutputIntentEx(buffer as Memoryblock) as Integer 12988

78.41.43 AddPageLabel(StartRange as UInt32, PageLabelFormat as Integer, Value as string, FirstPageNum as Int32) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a page label object.
Notes: The Value string is converted to Unicode internally.
See also AddPageLabel function in DynaPDF manual.

78.41.44 AddPageLabelAnsi(StartRange as UInt32, PageLabelFormat as Integer, Value as string, FirstPageNum as Int32) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function creates a page label object.
Notes: The Value string is converted to Windows ANSI internally.
See also AddPageLabel function in DynaPDF manual.

78.41.45 AddValToChoiceField(Field as Integer, ExpValue as string, Value as string, Selected as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds a value to a choice field.
Notes: The Value string is converted to Unicode.
See also AddValToChoiceField function in DynaPDF manual.

78.41.46 AofLAB(LAB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns A of a LAB color value.
Example:

```
Var lab as Integer = DynaPDFMBS.LAB(1,2,3)
MessageBox str(DynaPDFMBS.AofLAB(lab)) // shows 2
```

78.41.47 Append as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function appends an empty page to the document.
Example:

```
Var pdf as DynaPDFMBS // your DynaPDF object
Var bBool as Boolean

// Create a new page
bBool=pdf.Append
```

Notes: If a page is open, we automatically close it.

See also Append function in DynaPDF manual.

78.41.48 AppendTraceFile(File as FolderItem) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a trace file with appending.
Notes: The plugin writes debug messages to this file so you can check what functions you called.

Improved with 16.2 plugin to really cover over 99% of all calls with parameters and result. Please report if you miss something.

While assignment to TraceFile property or CreateTraceFile() always overwrites existing log file, this method can append to it.

78.41.49 ApplyAppEvent(TOCAppEvent as Integer, SaveResult as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The visibility state of optional content groups (OCGs) can be dynamically changed in application events like Export, View, or Print.
Notes: DynaPDF loads the view state when rendering PDF pages by default.
The function can be used to apply the visibility state of another event if necessary. The result can optionally be stored in the PDF file but note that this has only an effect in PDF viewers which support layers but no application events since the events will not be deleted from the PDF file. It is also possible to delete the events with DeleteAppEvents().

If the function succeeds the return value is true. If the function fails the return value is false.
See also ApplyAppEvent function in DynaPDF manual.

78.41.50 ApplyPattern(PattHandle as Integer, ColorMode as Integer, ColorValue as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function sets a tiling pattern as current fill, stroke or fill, and stroke color.
See also ApplyPattern function in DynaPDF manual.

78.41.51 ApplyShading(ShadHandle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function applies a shading to the current clipping path, or if no clipping is active, to the entire page.
See also ApplyShading function in DynaPDF manual.

78.41.52 AssociateEmbFile(DestObject as Integer, DestHandle as Integer, Relationship as Integer, EmbFile as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function associates an embedded file with a PDF object.
Notes: The parameter DestHandle must be a valid handle of a PDF object. If destination object type is a page, then the page number must be used as handle. The first page is denoted by one. If the destination object is the documents catalog then the parameter DestHandle is ignored. Set the parameter to zero or -1 in this case.
The parameter EmbFile must be a valid handle of an embedded file. See AttachFile() or AttachFileEx() for further information.

Associated files are supported since PDF 2.0 and in PDF/A 3 files. In PDF/A 3 files all embedded files must be associated with a PDF object.

If the function succeeds the return value is true. If the function fails the return value is false.
See also AssociateEmbFile function in DynaPDF manual.

78.41.53 AttachFile(File as folderitem, Description as string, Compress as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function attaches a file to the document.
Notes: On Windows, the description parameter is converted to unicode.
See also AttachFile function in DynaPDF manual.

78.41.54 AttachFileEx(Buffer as Memoryblock, Filename as string, Description as string, Compress as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function attaches a file to the document in the same way as AttachFile() but accepts a file buffer instead of a file path.
See also AttachFileEx function in DynaPDF manual.
See also:

- 78.41.55 AttachFileEx(Buffer as string, Filename as string, Description as string, Compress as boolean) as Integer 12992

78.41.55 AttachFileEx(Buffer as string, Filename as string, Description as string, Compress as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function attaches a file to the document in the same way as AttachFile() but accepts a file buffer instead of a file path.
Example:

```
Var pdf as DynaPDFMBS // your dynapdf object

// add embedded file to PDF
const Compressed = true
call pdf.AttachFileEx("This is hidden text in an attached file.", "attachment.txt", "", Compressed)
```

See also AttachFileEx function in DynaPDF manual.
See also:

- 78.41.54 AttachFileEx(Buffer as Memoryblock, Filename as string, Description as string, Compress as boolean) as Integer 12991

78.41.56 AutoTemplate(Templ as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: To insert a template automatically on newly created pages, use the function AutoTemplate().
See also AutoTemplate function in DynaPDF manual.

78.41.57 BeginContinueText(PosX as Double, PosY as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function prepares the output of multiple text lines which use the graphics state parameter Leading as line height, or the font size if Leading is not set.
See also BeginContinueText function in DynaPDF manual.

78.41.58 BeginLayer(OCG as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function opens a layer in the current open page or template.
Notes: If the function succeeds the return value is true. If the function fails the return value is false.
See also BeginLayer function in DynaPDF manual.

78.41.59 BeginPageTemplate(Name as String, UseAutoTemplates as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new page template with given name.
Notes: This function creates or opens a page template for editing. Page templates are hidden pages which can be added to the document or overlaid on existing pages via JavaScript.

The usage of the function is like Append() or EditPage(). If the template does already exist then it will be opened for editing. Page templates support form fields and annotations but it is not allowed to add article beads to them.
See also BeginPageTemplate function in DynaPDF manual.

78.41.60 BeginPattern(PatternType as Integer, TilingType as Integer, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a new tiling pattern.
See also BeginPattern function in DynaPDF manual.

78.41.61 BeginTemplate(Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Begins a new template
See also BeginTemplate function in DynaPDF manual.

78.41.62 BeginTemplateEx(BBox as DynaPDFRectMBS, Matrix as DynaPDF-MatrixMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Begins a new template
Notes: The plugin passes nil to the library for the bbox or the matrix parameter if they are nil.

78.41.63 BeginTransparencyGroup(x1 as Double, y1 as Double, x2 as Double, y2 as Double, Isolated as Boolean, Knockout as Boolean, CS as Integer, CSHandle as Int32) as Int32

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Begins a new transparency group.
Notes: CS: color space, pass kes* constants.

Requires DynaPDF Pro license.
See also BeginTransparencyGroup function in DynaPDF manual.

78.41.64 Bezier_1_2_3(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x3 as Double, y3 as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a bezier path to the pdf.
See also Bezier_1_2_3 function in DynaPDF manual.

78.41.65 Bezier_1_3(x1 as Double, y1 as Double, x3 as Double, y3 as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a bezier path to the pdf.
See also Bezier_1_3 function in DynaPDF manual.

78.41.66 Bezier_2_3(x2 as Double, y2 as Double, x3 as Double, y3 as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a bezier path to the pdf.
See also Bezier_2_3 function in DynaPDF manual.

78.41.67 BofLAB(LAB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns B of a LAB color value.
Example:

```
Var lab as Integer = DynaPDFMBS.LAB(1,2,3)
MessageBox str(DynaPDFMBS.BofLAB(lab)) // shows 3
```

78.41.68 BofRGB(RGB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns B of a RGB color value.
Example:

```
Var rgb as Integer = DynaPDFMBS.RGB(1,2,3)
MessageBox str(DynaPDFMBS.BofRGB(rgb)) // shows 3
```

78.41.69 BuildFamilyNameAndStyle(IFont as Integer, byref name as string, byref style as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds a family name and style from a font object.
See also BuildFamilyNameAndStyle function in DynaPDF manual.

78.41.70 CalcWidthHeight(OrgWidth as Double, OrgHeight as Double, ScaledWidth as Double, ScaledHeight as Double) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function calculates the scaled width or height of a given size in the same way as InsertImage() or PlaceTemplate().
See also CalcWidthHeight function in DynaPDF manual.

78.41.71 CaretAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, ColorValue as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a caret annotation.
Notes: This type of annotation is typically used to mark a position on a page where a user should add or edit text.
If the coordinate system is bottom-up the point PosX, PosY defines the lower left corner of the bounding rectangle. If the coordinate system is top-down it defines the upper left corner.
This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also CaretAnnot function in DynaPDF manual.

78.41.72 CaretAnnotAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, ColorValue as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** Creates a caret annotation.
Notes: This type of annotation is typically used to mark a position on a page where a user should add or edit text.
If the coordinate system is bottom-up the point PosX, PosY defines the lower left corner of the bounding rectangle. If the coordinate system is top-down it defines the upper left corner.
This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also CaretAnnot function in DynaPDF manual.

78.41.73 ChangeAnnotName(Handle as Integer, Name as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function changes or deletes the optional name of an annotation.
Notes: The Name parameter is converted to unicode.
See also ChangeAnnotName function in DynaPDF manual.

78.41.74 ChangeAnnotNameAnsi(Handle as Integer, Name as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** This function changes or deletes the optional name of an annotation.
Notes: The Name parameter is converted to ANSI.
See also ChangeAnnotName function in DynaPDF manual.

78.41.75 ChangeAnnotPos(Handle as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function changes the position and size of an annotation.
See also ChangeAnnotPos function in DynaPDF manual.

78.41.76 ChangeBookmark(ABmk as Integer, Text as string, Parent as Integer, DestPage as Integer, Open as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function changes an existing bookmark.
Notes: The text parameter is converted to unicode.
See also ChangeBookmark function in DynaPDF manual.

78.41.77 ChangeBookmarkAnsi(ABmk as Integer, Text as string, Parent as Integer, DestPage as Integer, Open as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** This function changes an existing bookmark.
Notes: The text parameter is converted to ANSI.
See also ChangeBookmark function in DynaPDF manual.

78.41.78 ChangeFont(Handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function changes or sets the font to the one defined by the parameter AHandle.
See also ChangeFont function in DynaPDF manual.

78.41.79 ChangeFontEx(Handle as integer, FontSize as double, Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes or sets the font to the one of the parameter Handle.
Notes: Handle must be a valid font handle that was returned by SetFont(), SetFontEx(), SetCIDFont(), or LoadFont().
The style flags should be the same as in the initial SetFont() call with exception of the flags fsUnderline or fsStriked which can be used to underline or strikeout text.
The parameter FontSize must be greater zero.

If the function succeeds the return value is true. If the function fails the return value is false.
See also ChangeFontEx function in DynaPDF manual.

78.41.80 ChangeFontSize(size as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function changes the font size of the current font.
See also ChangeFontSize function in DynaPDF manual.

78.41.81 ChangeFontStyle(Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function changes the style of the current font.
See also ChangeFontStyle function in DynaPDF manual.

78.41.82 ChangeFontStyleEx(Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the font style of a font like ChangeFontStyle() but it accepts also the font styles fsBold and fsItalic.
See also ChangeFontStyleEx function in DynaPDF manual.

78.41.83 ChangeJavaScript(Handle as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function replaces a global JavaScript with a new one.
Notes: The text parameter is converted to unicode.
See also ChangeJavaScript function in DynaPDF manual.

78.41.84 ChangeJavaScriptAction(Handle as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function replaces the script of a JavaScript action with a new one.
Notes: The text parameter is converted to unicode.
See also ChangeJavaScriptAction function in DynaPDF manual.

78.41.85 ChangeJavaScriptActionAnsi(Handle as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function replaces the script of a JavaScript action with a new one.
Notes: The text parameter is converted to ANSI.
See also ChangeJavaScriptAction function in DynaPDF manual.

78.41.86 ChangeJavaScriptAnsi(Handle as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function replaces a global JavaScript with a new one.
Notes: The text parameter is converted to ANSI.
See also ChangeJavaScript function in DynaPDF manual.

78.41.87 ChangeJavaScriptName(Handle as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function changes the name of a global JavaScript.
Notes: The text parameter is converted to unicode.
See also ChangeJavaScriptName function in DynaPDF manual.

78.41.88 ChangeJavaScriptNameAnsi(Handle as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** This function changes the name of a global JavaScript.
Notes: The text parameter is converted to ANSI.
See also ChangeJavaScriptName function in DynaPDF manual.

78.41.89 ChangeLinkAnnot(Handle as Integer, URL as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function changes the link of a file link or web link annotation.
See also ChangeLinkAnnot function in DynaPDF manual.

78.41.90 ChangeNamedDest(ObjType as Integer, Handle as Integer, Name as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the name of a named destination.
Notes: ObjType: Object type to which the handle belongs like kotAction, kotAnnotation, kotBookmark or kotPageLink.
Handle: Object handle
Name: New destination name

Named destinations can be accessed by link annotations, bookmarks, and actions. For link annotations the object type otPageLink or otAnnotation can be used.

If the function succeeds the return value is true. If the function fails the return value is false.
See also ChangeNamedDest function in DynaPDF manual.

78.41.91 ChangeOCGName(Handle as Integer, Name as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the name of an Optional Content Group (OCG).
Notes: Returns true on success and false in case of error.
See also ChangeOCGName function in DynaPDF manual.

78.41.92 ChangeSeparationColor(CSHandle as UInt32, NewColor as UInt32, AlternateExtColorSpace as Integer, AltHandle as Integer = -1) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the color of a separation color space.
Example:

```
// your instance
Var pdf as DynaPDFMBS

// Create new separation color
Var ColorSpaceHandle as Integer = pdf.CreateSeparationCS("test",DynaPDFMBS.kcsDeviceCMYK,-1,DynapdfMBS.CMYK
call pdf.SetExtColorSpace(ColorSpaceHandle)

// draw something
call pdf.SetfillColor(255) // 100% of the separation color test
call pdf.DrawCircle(193,389,66, pdf.kfmFill)

// change it to red
call pdf.ChangeSeparationColor(ColorSpaceHandle, 255, DynaPDFMBS.kcsDeviceRGB, -1)
```

Notes: The new color value must be defined in the alternate color space. The alternate color space can be any device or ICC based color space including Lab. If a non-device color space is used, the parameter AltHandle must be set to the color space handle of the alternate color space.

Returns true on success or false on failure.
CSHandle is the index in the colorspace table, not the reference to the C++ object. So do not pass handle property from DynaPDFColorSpaceMBS, but the Index property.
See also ChangeSeparationColor function in DynaPDF manual.

78.41.93 CheckCollection as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function:

The function checks whether user defined data fields in embedded files are consistently defined with collection fields.
See also CheckCollection function in DynaPDF manual.

78.41.94 CheckConformance(ConformanceType as Integer, CheckOptions as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The functions checks whether the PDF file is compatible to a specific PDF standard or PDF version depending the parameter Type and modifies anything that is required to get the file compatible to the standard depending on the check options.
Notes: For Factur-X / ZUGFeRD 2.1, please use the following constants:

- kctFacturX_Basic
- kctFacturX_XRechnung
- kctFacturX_Minimum
- kctFacturX_Extended
- kctFacturX_Comfort
- kctFacturX_Basic_WL

See also CheckConformance function in DynaPDF manual.

78.41.95 CheckEmbeddedFileCheckSum(Handle as integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks the checksum for an embedded file.
Notes: Returns 1 for checksum okay, 0 for checksum invalid and -1 if no checksum is present.

You may detect bad bytes e.g. from a disk reading error or transmitting error.
Since the checksum is just MD5, a malicious actor could swap out the content of the embedded file and fill in a new correct checksum.

78.41.96 CheckFieldNames as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function checks all currently defined interactive form fields for invalid duplicate field names.
See also CheckFieldNames function in DynaPDF manual.

78.41.97 CircleAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function draws a circle annotation on the current open page.
Notes: If the parameters Width and Height are equal the function draws a circle, an ellipse otherwise. If the annotation should be drawn without a border, set the parameter LineWidth zo zero or StrokeColor to the special constant kNO_COLOR.
If the interior should be transparent set FillColor to the special constant kNO_COLOR.
Although the line width can be set to any positive floating point value, Adobe's Acrobat or Reader restrict the line width to 0 through 12 units. The line width should be restricted in the same way to avoid issues in Adobe viewer products.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails, the return value is a negative error code.
See also CircleAnnot function in DynaPDF manual.

78.41.98 CircleAnnotAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function draws a circle annotation on the current open page.
Notes: If the parameters Width and Height are equal the function draws a circle, an ellipse otherwise. If the annotation should be drawn without a border, set the parameter LineWidth zo zero or StrokeColor to the special constant kNO_COLOR.
If the interior should be transparent set FillColor to the special constant kNO_COLOR.
Although the line width can be set to any positive floating point value, Adobe's Acrobat or Reader restrict the line width to 0 through 12 units. The line width should be restricted in the same way to avoid issues in Adobe viewer products.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails, the return value is a negative error code.
See also CircleAnnot function in DynaPDF manual.

78.41.99 ClearAutoTemplates as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes the array of templates which are automatically added to newly created pages.
See also ClearAutoTemplates function in DynaPDF manual.

78.41.100 ClearErrorLog

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the error log.
See also ClearErrorLog function in DynaPDF manual.

78.41.101 ClearHostFonts as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes the array of fonts included in all currently defined font search paths.
See also ClearHostFonts function in DynaPDF manual.

78.41.102 ClearPageGraphics

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the page graphics objects.
Notes: This method clears graphics object.

As the graphics object keeps a reference to DynaPDFMBS object and the DynaPDF object references the graphics object, this call may be required to make sure the circular reference is cleared.

Automatically called in Append, EndPage, CloseFile, ImportPDFFile, ImportPDFPage and CloseFileEx.

78.41.103 ClipPath(ClipMode as Integer, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function marks the current path as clipping path.
See also ClipPath function in DynaPDF manual.

78.41.104 CloseAndSignFile(CertFile as folderitem, Password as string, Reason as string, Location as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function finishes the PDF file, digitally signs it, and frees all used resources if the file was not created in memory.
Notes: Only for 1024 bit keys. For longer keys, check our custom signature example.
See also CloseAndSignFile function in DynaPDF manual.

78.41.105 CloseAndSignFileEx(OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer, CertFile as folderitem, Password as string, Reason as string, Location as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function finishes the PDF file, encrypts it, digitally signs it, and frees all used resources if the file was not created in memory.
Notes: If you need more than 1024 bit keys, please check our custom signatur example, which shows how to signatures with 2048 or 4096 bit keys and the CloseAndSignFileExt function.
See also CloseAndSignFileEx function in DynaPDF manual.

78.41.106 CloseAndSignFileExt(SigParams as DynaPDFSigParmsMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function closes the PDF file and returns either the file hash or the byte ranges to be signed by an external signature handler.
See also CloseAndSignFileExt function in DynaPDF manual.

78.41.107 CloseAndSignPDFFile(OutputFile as FolderItem, CertificateData as String, Password as String, ContactInfo as String = """, Location as String = """, Reason as String = """) as boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platform: Windows, Targets: All.

Function: Closes and signs file.
Notes: This uses pdf_signature.cpp example code from DynaPDF.
The function will on Windows use functions from Crypt DLL on Windows.
Internally calls CloseAndSignFileExt, OpenOutputFile and FinishSignature.
Returns true on success and false on failure.

Loads certificate from provided certificate file data.

Version 15.1 allows OutputFile to be nil.

If you need more than 1024 bit keys, please check our custom signatur example, which shows how to signatures with 2048 or 4096 bit keys and the CloseAndSignFileExt function.

78.41.108 CloseAndSignPDFFileWithDialog(OutputFile as FolderItem, StoreName as String = "MY", ContactInfo as String = """, Location as String = """, Reason as String = """, CertificateName as String = """) as boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platform: Windows, Targets: All.

Function: Closes and signs file.
Notes: Picks a certificate from the given certificate store on Windows.

This uses pdf_signature.cpp example code from DynaPDF.
The function will on Windows use functions from Crypt DLL on Windows.
Internally calls CloseAndSignFileExt, OpenOutputFile and FinishSignature.
Returns true on success and false on failure.

Version 15.1 allows OutputFile to be nil.
Version 14.2 adds CertificateName: The name of the certificate to find.
If set, we skip the dialog and look for the given certificate (subject name).

78.41.109 CloseFile as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function finishes the PDF file and frees all used resources if the file was not created in memory.
Example:

```
Var pdf as DynaPDFMBS // your DynaPDF object
Var bBool as Boolean

bBool=pdf.CloseFile
```

Notes: If a page is open, we automatically close it.
See also CloseFile function in DynaPDF manual.

78.41.110 CloseFileEx(OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function finishes the PDF file, encrypts it, and frees all used resources if the file was not created in memory.
Notes: Requires DynaPDF Lite license.
If a page is open, we automatically close it.
See also CloseFileEx function in DynaPDF manual.

78.41.111 CloseImage as boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the current open image.
See also CloseImage function in DynaPDF manual.

78.41.112 CloseImportFile as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function closes an open import file that was be opened by OpenImportFile() or OpenImportBuffer().
Example:

```
Var pdf as DynaPDFMBS // your DynaPDF object
Var bBool as Boolean

bBool=pdf.CloseImportFile
```

See also CloseImportFile function in DynaPDF manual.

78.41.113 CloseImportFileEx(Handle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function closes a specific import file and deletes the corresponding parser instance.
Notes: The parameter Handle must be a valid file handle that was returned by OpenImportFile() or OpenImportBuffer(). See OpenImportFile() for further information in dynapdf_help.pdf.
If the function succeeds the return value is true. If the function fails the return value is false.
See also CloseImportFileEx function in DynaPDF manual.

78.41.114 ClosePath(FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the current path.
See also ClosePath function in DynaPDF manual.

78.41.115 CloseTag as boolean

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes an open tag.
See also CloseTag function in DynaPDF manual.

78.41.116 CMYK(C as Integer, M as Integer, Y as Integer, K as Integer) as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds a CMYK color value based on the given component values.
Example:

```
Var cmyk as Integer = DynaPDFMBS.CMYK(1,2,3,4)
MessageBox hex(cmyk)
```

Notes: Returns different values on BigEndian and LittleEndian systems.

78.41.117 CofCMYK(CMYK as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns C of a CMYK color value.
Example:

```
Var cmyk as Integer = DynaPDFMBS.CMYK(1,2,3,4)
MessageBox str(DynaPDFMBS.CofCMYK(cmyk)) // shows 1
```

Notes: Returns different values on BigEndian and LittleEndian systems.

78.41.118 ComputeBBox(Flags as Integer) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Computes the bounding box.
See also ComputeBBox function in DynaPDF manual.

78.41.119 ConvColor(Colors() as double, SourceColorSpace as DynaPDFColorSpaceMBS, DestColorSpace as integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 26.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a color from one ColorSpace to another.
See also ConvColor function in DynaPDF manual.
See also:

- 78.41.120 ConvColor(Colors() as Double, SourceColorSpaceHandle as Integer, DestColorSpace as Integer) as Integer 13009

78.41.120 ConvColor(Colors() as Double, SourceColorSpaceHandle as Integer, DestColorSpace as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a color from one ColorSpace to another.
Example:

```
// setup Environment
Var dy as new DynaPDFMBS
call dy.CreateNewPDF(nil)

// create a simple RGB colorspace
```

```
Var whitePoint as MemoryBlock = NewMemoryBlock(12)
whitePoint.SingleValue(0)=1.0
whitePoint.SingleValue(4)=1.0
whitePoint.SingleValue(8)=1.0

Var BlackPoint as MemoryBlock = nil // default
Var Gamma as MemoryBlock = nil // default
Var Matrix as MemoryBlock = nil // default

Var h as Integer = dy.CreateCIEColorSpace(dy.kesCalRGB, WhitePoint, BlackPoint, Gamma, Matrix)

// do we have one?
if dy.GetColorSpaceCount=0 then
MessageBox "No color space!"
Return
else
MessageBox str(dy.GetColorSpaceCount)+" Colorspace defined"
end if

// Now get the colorspace information including the Object reference:
Var c as DynaPDFColorSpaceMBS = dy.GetColorSpaceObj(h)

Var d(-1) as Double = array(0.3,0.5,0.7)
Var IColorSpace as Integer = c.Handle
Var DestCS as Integer = DynaPDFMBS.kesDeviceCMYK

// convert a color
Var n as Integer = dy.ConvColor(d, IColorSpace, DestCS)

MessageBox hex(n)
```

Notes: Colors: The array of color values. 3 values for RGB, 4 values for CMYK and one value for Gray.
IColorSpaceSource: The source color space object reference.
DestCS: The destination color space. One of the kes* constants.
See also ConvColor function in DynaPDF manual.
See also:

- 78.41.119 ConvColor(Colors() as double, SourceColorSpace as DynaPDFColorSpaceMBS, DestColorSpace as integer) as Integer 13009

78.41.121 ConvertColors(Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the colors.
Notes: Requires DynaPDF Pro license.
See also ConvertColors function in DynaPDF manual.

78.41.122 ConvertEMFSpool(File as folderitem, LeftMargin as Double, TopMargin as Double, Flags as Integer = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts an EMF spool file to PDF.
Notes: See dynapdf_help.pdf file.
Pass kspc* flags.
Requires DynaPDF Lite license.
See also ConvertEMFSpool function in DynaPDF manual.

78.41.123 ConvertStyledText(StyledText as StyledText, LeadingFactor as double = -1) as String

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Converts styled text to formatting commands.
Example:

```
Public Function Convert(s as StyledText) as string
Var d as new DynaPDFMBS

// create dummy in memory pdf
call d.CreateNewPDF(nil)

// create dummy page
call d.Append

// convert
Return d.ConvertStyledText(s)

// destructor will cleanup
End Function
```

Notes: You can use the result with WriteFText, WriteFTextEx or DynaPDFTableMBS.SetCellText functions.
Needs an open page as it loads fonts for you. May cause error events if fonts are not found.

LeadingFactor: Added in v21.0. If you pass a value >0, the plugin will add \LD [ ] commands to styled text to set leading relative to font size. This way you define the spacing beteween lines. e.g. 1.2

78.41.124 ConvToFreeTextCallout(Handle as Integer, StartX as double, StartY as double, KneeOffset as double, EndStyle as integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a regular FreeText annotation to a FreeTextCallout annotation.
Notes: The parameter Handle must be a valid handle of a FreeText or FreeTextCallout annotation. A FreeText annotation can be created with the function FreeTextAnnot.

The callout line is drawn on the side whose distance to the start point is the shortest.
The FreeTextCallout tool in Adobes Acrobat restricts the position on which the text rectangle of the FreeText annotation can be placed. The callout line including the line end style cannot cross this rectangle. If this would be the case then Acrobat adjusts the position of the text rectangle so that ot does not cross or touch the callout line. This makes it difficult to place the annotation to a specific position.

However, no such restriction exists in DynaPDF but keep in mind that Adobes Acrobat or Reader update the appearance if the annotation would be changed, e.g. changing the text.

Handle: Handle of a FreeText annotation
StartX: Start point of the callout line
StartY: Start point of the callout line
KneeOffset: Knee offset ->see description
EndStyle: End line style of the callout line
See also ConvToFreeTextCallout function in DynaPDF manual.

78.41.125 CopyChoiceValues(Source as UInt32, Dest as UInt32, Share as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the list items, default value, and value of the source field to the destination field.
Notes: The source and destination field can be combo and list boxes. It is allowed to copy the list items of a list box to a combo box or vice versa.
If Share is true, the function adds just a reference to the list item so that both fields share the same list items. This is still the case if more list items will be added to such a field. If Share is false, the list items will be copied to the destination field. Both fields contain independent list items in this case.
Already existing list items of the destination field will be deleted.
See also CopyChoiceValues function in DynaPDF manual.

78.41.126 Create3DAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Name as string, U3DFile as string, Image as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a 3D annotation from a U3D file.
See also Create3DAnnot function in DynaPDF manual.

78.41.127 Create3DAnnotAnsi(PosX as double, PosY as double, Width as double, Height as double, Author as string, Name as string, U3DFile as string, Image as string) as integer

MBS DynaPDF Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function creates a 3D annotation from a U3D file.
See also Create3DAnnot function in DynaPDF manual.

78.41.128 Create3DBackground(IView as Integer, BackColor as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a background dictionary for a 3D annotation that is used to change the annotation's background color.
See also Create3DBackground function in DynaPDF manual.

78.41.129 Create3DGotoViewAction(Base3DAnnot as Integer, IView as Integer, Named as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A go to 3D view action can be used to dynamically change the view of a 3D annotation.
See also Create3DGotoViewAction function in DynaPDF manual.

78.41.130 Create3DProjection(IView as Integer, ProjType as Integer, ScaleType as Integer, Diameter as Double, FOV as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a projection dictionary for a 3D annotation.
See also Create3DProjection function in DynaPDF manual.

78.41.131 Create3DView(Base3DAnnot as Integer, Name as string, SetAsDefault as boolean, Matrix as memoryblock, CamDistance as Double, RenderingMode as Integer, LightingSheme as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a 3D view for a 3D annotation.
Notes: The plugin passes nil for the matrix if the matrix memoryblock parameter is nil.
This is the unicode version and you should prefer it.
See also Create3DView function in DynaPDF manual.

78.41.132 Create3DViewAnsi(Base3DAnnot as integer, Name as string, SetAsDefault as boolean, Matrix as memoryblock, CamDistance as double, RenderingMode as integer, LightingSheme as integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function creates a 3D view for a 3D annotation.
Notes: The plugin passes nil for the matrix if the matrix memoryblock parameter is nil.
This is the older ANSI version of the function.
See also Create3DView function in DynaPDF manual.

78.41.133 CreateAltFontList as Integer

MBS DynaPDF Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an alternate font list, that can be filled with data by SetAltFonts().
Notes: It is possible to create an arbitrary number of alternate font lists. Multiple lists can be created because different fonts and languages require different fallback fonts. For example, one could create one list for proportional fonts and another one for fixed pitch fonts, or different lists for different languages.
Each list can be activated or deactivated with ActivateAltFontList() arbitrary often. Changing the active alternate font list is very fast and causes no overhead.
Once a font list was created it can be filled with data with SetAltFonts(). A font list that is no longer needed can be deleted with DeleteAltFontList().
Please note that alternate font lists are used only, if complex text layout was enabled. This can be done by setting the flag kgfComplexText with SetGStateFlags().

If the function succeeds the return value is the handle of the font list, a value greater or equal zero. If the

function fails the return value is a negative error code.
See also CreateAltFontList function in DynaPDF manual.

78.41.134 CreateAnnotAP(annot as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an annotation appearance stream.
Notes: Returns the new annotation handle.
You can draw to this template directly.
You must close it with EndTemplate.

This method helps you to create a custom stamp or change different annotation appearance.
See also CreateAnnotAP function in DynaPDF manual.

78.41.135 CreateArticleThread(ThreadName as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a new article thread.
Notes: ThreadName string is converted to Unicode.
See also CreateArticleThread function in DynaPDF manual.

78.41.136 CreateArticleThreadAnsi(ThreadName as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** This function creates a new article thread.
Notes: ThreadName string is converted to ANSI.
See also CreateArticleThread function in DynaPDF manual.

78.41.137 CreateAxialShading(sX as Double, sY as Double, eX as Double, eY as Double, SCenter as Double, SColor as Integer, EColor as Integer, Extend1 as Boolean, Extend2 as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Axial shadings define a color blend that varies along a linear axis between two endpoints and extends indefinitely perpendicular to that axis.

Notes: Useful to draw gradients.
See also CreateAxialShading function in DynaPDF manual.

78.41.138 CreateBarcodeField(Name as string, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double, Barcode as DynaPDFBarcodeMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a barcode field.
Notes: Note that users require either the full version of Adobe's Acrobat or a separate license of Adobe's Barcodes Paper Forms Solutions to enable the usage of barcode fields in Adobe's Reader.
See also CreateBarcodeField function in DynaPDF manual.

78.41.139 CreateButton(Name As String, Caption as string, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a push button.
Notes: The Caption parameter is converted to unicode.
See also CreateButton function in DynaPDF manual.

78.41.140 CreateButtonAnsi(Name As String, Caption as string, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** This function creates a push button.
Notes: The Caption parameter is converted to ANSI.
See also CreateButton function in DynaPDF manual.

78.41.141 CreateCheckBox(Name as string, ExpValue as string, Checked as boolean, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a check box.
See also CreateCheckBox function in DynaPDF manual.

78.41.142 CreateCIEColorSpace(Base as Integer, WhitePoint as memoryblock, BlackPoint as memoryblock, Gamma as memoryblock, Matrix as memoryblock) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a CIE based color space.
See also CreateCIEColorSpace function in DynaPDF manual.

78.41.143 CreateColItemDate(EmbFile as Integer, Key as string, Value as Integer, Prefix as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a user defined collection item which accepts a date time value.
See also CreateColItemDate function in DynaPDF manual.

78.41.144 CreateColItemNumber(EmbFile as Integer, Key as string, Value as Double, Prefix as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a user defined collection item which accepts an arbitrary number as value.
See also CreateColItemNumber function in DynaPDF manual.

78.41.145 CreateColItemString(EmbFile as Integer, Key as string, Value as string, Prefix as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a user defined collection item which accepts an arbitrary string as value.
Notes: The value and prefix parameters are converted to unicode.
See also CreateColItemString function in DynaPDF manual.

78.41.146 CreateColItemStringAnsi(EmbFile as Integer, Key as string, Value as string, Prefix as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function creates a user defined collection item which accepts an arbitrary string as value.
Notes: The value and prefix parameters are converted to ANSI.
See also CreateColItemString function in DynaPDF manual.

78.41.147 CreateCollection(View as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function marks the current PDF file in memory as PDF collection, also known as PDF Package.
Notes: Requires DynaPDF Lite license.
See also CreateCollection function in DynaPDF manual.

78.41.148 CreateCollectionField(ColType as Integer, Column as Integer, Name as String, Key as string, Visible as boolean, Editable as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a user defined collection field.
Notes: The name parameter is converted to unicode.
See also CreateCollectionField function in DynaPDF manual.

78.41.149 CreateCollectionFieldAnsi(ColType as Integer, Column as Integer, Name as String, Key as string, Visible as boolean, Editable as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function creates a user defined collection field.
Notes: The name parameter is converted to ANSI.
See also CreateCollectionField function in DynaPDF manual.

78.41.150 CreateComboBox(Name as string, Sort as boolean, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a combo box.
See also CreateComboBox function in DynaPDF manual.

78.41.151 CreateDeviceNColorSpace(Colorants() as string, PostScriptFunc as string, AlternateColorSpace as Integer, Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new colorspace using the given color names.
Notes: Strings are passed as UTF-8 Strings in this function to the library.
Currently the function is limited to 100 colorants on the plugin side.
See also CreateDeviceNColorSpace function in DynaPDF manual.

78.41.152 CreateDeviceNColorSpaceAnsi(Colorants() as string, PostScriptFunc as string, AlternateColorSpace as Integer, Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** Creates a new colorspace using the given color names.
Notes: Strings are passed as Windows ANSI Strings in this function to the library.
Currently the function is limited to 100 colorants on the plugin side.
See also CreateDeviceNColorSpace function in DynaPDF manual.

78.41.153 CreateDPartRoot(NodeNameList() as String, RecordLevel as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates the DPartRoot dictionary that must be present before DPart nodes can be created with AddDPartNode().
Notes: Note that the function will fail if a DPartRoot dictionary was already imported or created by this function. You can check whether a DPartRoot dictionary exists with HaveDPartRoot().

DPart stands for Document Part. DParts are a feature of PDF/VT, a PDF format for the printing industry.
See also CreateDPartRoot function in DynaPDF manual.

78.41.154 CreateExtGState(e as DynaPDFExtGStateMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates an extended graphics state dictionary from the structure e.
Example:

```
Var h as Integer // handle
Var pdf as DynaPDFMBS
Var state as new DynaPDFExtGStateMBS

' get pdf, set state properties

h=pdf.CreateExtGState(state)

call pdf.SetExtGState(h)
```

Notes: Requires DynaPDF Lite license.
See also CreateExtGState function in DynaPDF manual.

78.41.155 CreateGeospatialMeasure(Viewport as UInt32, Attributes as String) as Integer

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a geospatial measure dictionary.
Notes: This kind of measure dictionary can be used to convert PDF units to geographic coordinates.
A measure dictionary is used by the measure tool of Adobe's Acrobat and by other PDF viewers which contain a PDF compatible measure tool.

Notice:
This is a low level function for more experienced users who are familiar with PDF. It is assumed that a copy of the ISO Standard 32000-2 or newer is available by these users.
See also CreateGeospatialMeasure function in DynaPDF manual.

78.41.156 CreateGoToAction(DestType as Integer, PageNum as Integer, a as Double, b as Double, c as Double, d as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A go-to action changes the view to a specific destination (page, location, and magnification factor).
See also CreateGoToAction function in DynaPDF manual.
See also:

- 78.41.157 CreateGoToAction(NamedDest as Integer) as Integer 13021

78.41.157 CreateGoToAction(NamedDest as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a go√Ö] to action which uses a named destination to open the target page.
See also CreateGoToAction function in DynaPDF manual.
See also:

- 78.41.156 CreateGoToAction(DestType as Integer, PageNum as Integer, a as Double, b as Double, c as Double, d as Double) as Integer 13021

78.41.158 CreateGoToEAction(Location as Integer, Source as string, SrcPage as Integer, Target as string, DestName as string, DestPage as Integer, NewWindow as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates an embedded GoTo action.
Notes: See also CreateGoToEAction function in dynapdf_help.pdf manual.
See also CreateGoToEAction function in DynaPDF manual.

78.41.159 CreateGoToRAction(File as folderitem, PageNum as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a go to remote action.
See also CreateGoToRAction function in DynaPDF manual.
See also:

- 78.41.160 CreateGoToRAction(FilePath as String, PageNum as integer) as integer 13022

78.41.160 CreateGoToRAction(FilePath as String, PageNum as integer) as integer

MBS DynaPDF Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a go to remote action.
See also CreateGoToRAction function in DynaPDF manual.
See also:

- 78.41.159 CreateGoToRAction(File as folderitem, PageNum as Integer) as Integer 13021

78.41.161 CreateGoToRActionEx(File as folderitem, DestName as String, NewWindow as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a go-to-remote action that opens a named destination in an external PDF file.
See also CreateGoToRActionEx function in DynaPDF manual.
See also:

- 78.41.162 CreateGoToRActionEx(FilePath as String, DestName as String, NewWindow as boolean) as integer 13022

78.41.162 CreateGoToRActionEx(FilePath as String, DestName as String, NewWindow as boolean) as integer

MBS DynaPDF Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a go-to-remote action that opens a named destination in an external PDF file.
See also CreateGoToRActionEx function in DynaPDF manual.
See also:

- 78.41.161 CreateGoToRActionEx(File as folderitem, DestName as String, NewWindow as boolean) as Integer 13022

78.41.163 CreateGoToRActionExU(File as folderitem, DestName as String, NewWindow as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a go-to-remote action that opens a named destination in an external PDF file.
See also:

- 78.41.164 CreateGoToRActionExU(FilePath as String, DestName as String, NewWindow as boolean) as integer 13023

78.41.164 CreateGoToRActionExU(FilePath as String, DestName as String, NewWindow as boolean) as integer

MBS DynaPDF Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a go-to-remote action that opens a named destination in an external PDF file.
See also:

- 78.41.163 CreateGoToRActionExU(File as folderitem, DestName as String, NewWindow as boolean) as Integer 13022

78.41.165 CreateGroupField(Name as string, Parent as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a group field.
See also CreateGroupField function in DynaPDF manual.

78.41.166 CreateHideAction(Field as Integer, Hide as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A hide action hides or shows one or more interactive form fields on screen by setting or clearing their hidden flags.
See also CreateHideAction function in DynaPDF manual.

78.41.167 CreateICCBasedColorSpace(File as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates an ICC based color space.
Notes: Use the value returned for the SetExtColorSpace method.
See also CreateICCBasedColorSpace function in DynaPDF manual.
See also:

- 78.41.168 CreateICCBasedColorSpace(Path as String) as Integer 13024

78.41.168 CreateICCBasedColorSpace(Path as String) as Integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates an ICC based color space.
Notes: Use the value returned for the SetExtColorSpace method.
See also CreateICCBasedColorSpace function in DynaPDF manual.
See also:

- 78.41.167 CreateICCBasedColorSpace(File as folderitem) as Integer 13023

78.41.169 CreateICCBasedColorSpaceEx(Buffer as Memoryblock) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new ICC based color space from ICC file content in a string buffer.
Notes: Returns the color space handle.
See also CreateICCBasedColorSpaceEx function in DynaPDF manual.
See also:

- 78.41.170 CreateICCBasedColorSpaceEx(Buffer as string) as Integer 13024

78.41.170 CreateICCBasedColorSpaceEx(Buffer as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new ICC based color space from ICC file content in a string buffer.
Notes: Returns the color space handle.
See also CreateICCBasedColorSpaceEx function in DynaPDF manual.
See also:

- 78.41.169 CreateICCBasedColorSpaceEx(Buffer as Memoryblock) as Integer 13024

78.41.171 CreateImage(file as folderitem, format as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an image file with the given image format.
Notes: For the format parameter use the kifm* constants.

If file parameter is nil for CreateImage, you create image in memory and can pick it up with GetImageBuffer function later after you closed it.
See also CreateImage function in DynaPDF manual.

78.41.172 CreateImpDataAction(DataFile as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An import data action imports FDF data into the document s interactive form.
Notes: Also check the dynapdf manual on the pdfCreateImpDataActionA function (pdfCreateImpDataActionW on Windows).

78.41.173 CreateIndexedColorSpace(Base as Integer, Handle as Integer, ColorTable as memoryblock, NumColors as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates an indexed color space which can be used for vector graphics and text output.
Notes: Use the value returned for the SetExtColorSpace method.
See also CreateIndexedColorSpace function in DynaPDF manual.

78.41.174 CreateJSAction(Script as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a JavaScript action.
Notes: The script parameter is converted to unicode.
See also CreateJSAction function in DynaPDF manual.

78.41.175 CreateJSActionAnsi(Script as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** This function creates a JavaScript action.
Notes: The script parameter is converted to ANSI.
See also CreateJSAction function in DynaPDF manual.

78.41.176 CreateLaunchAction(OP as Integer, FileName as folderitem, DefDir as string, Param as string, NewWindow as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A launch action launches an application or opens or prints a document.

See also CreateLaunchAction function in DynaPDF manual.

78.41.177 CreateLaunchActionEx(FileName as folderitem, NewWindow as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a launch link.
See also CreateLaunchActionEx function in DynaPDF manual.

78.41.178 CreateListBox(Name as string, Sort as boolean, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a list box.
See also CreateListBox function in DynaPDF manual.

78.41.179 CreateNamedAction(Action as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a named action.
See also CreateNamedAction function in DynaPDF manual.

78.41.180 CreateNamedDest(Name as string, DestPage as Integer, DestType as Integer, a as Double, b as Double, c as Double, d as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a named destination that can be accessed from external PDF files.
Notes: The name parameter is converted to unicode.
See also CreateNamedDest function in DynaPDF manual.

78.41.181 CreateNamedDestAnsi(Name as string, DestPage as Integer, DestType as Integer, a as Double, b as Double, c as Double, d as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function creates a named destination that can be accessed from external PDF files.
Notes: The name parameter is converted to ANSI.
See also CreateNamedDest function in DynaPDF manual.

78.41.182 CreateNewPDF(OutPDF as folderitem = nil) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a new PDF file.
Example:

```
Var dest as folderitem // where to save?
Var pdf as DynaPDFMBS // your DynaPDF object
Var bBool as Boolean

// create new pdf
bBool=pdf.CreateNewPDF(dest)
if bBool=False then
MessageBox "Failed to create pdf file "+dest.NativePath
Return
end if
```

See also CreateNewPDF function in DynaPDF manual.

78.41.183 CreateOCG(name as string, DisplayInUI as boolean, Visible as boolean, Intent as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates an Optional Content Group (OCG).
Notes: CreateOCG stores the name in unicode encoding and CreateOCGAnsi in Windows ANSI encoding.
See also CreateOCG function in DynaPDF manual.

78.41.184 CreateOCGAnsi(name as string, DisplayInUI as boolean, Visible as boolean, Intent as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function creates an Optional Content Group (OCG).
Notes: CreateOCG stores the name in unicode encoding and CreateOCGAnsi in Windows ANSI encoding.
See also CreateOCG function in DynaPDF manual.

78.41.185 CreateOCMD(Visibility as Integer, OCGs() as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates an Optional Content Membership Dictionary (OCMD).
Notes: For Visibility use the constants kovAllOff, kovAllOn, kovAnyOff, kovAnyOn and kovNotSet.
See also CreateOCMD function in DynaPDF manual.

78.41.186 CreateRadialShading(sX as Double, sY as Double, R1 as Double, eX as Double, eY as Double, R2 as Double, SCenter as Double, SColor as Integer, EColor as Integer, Extend1 as boolean, Extend2 as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Radial shadings define a color blend that varies between two circles.
Notes: Useful to draw gradients.
See also CreateRadialShading function in DynaPDF manual.

78.41.187 CreateRadioButton(Name as string, ExpValue as string, Checked as boolean, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A radio button field is a set of related toggle controls (check boxes), at most one of which may be on at any given time; selecting any one of the button automatically deselects all others.
See also CreateRadioButton function in DynaPDF manual.

78.41.188 CreateRectilinearMeasure(ViewPort as Integer, Scale as Double, UnitDescription as String, LabelDistance as String, LabelArea as String) as Integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a rectilinear measure dictionary.
Notes: This kind of measure dictionary can be used to convert PDF units to an arbitrary other unit like millimeters, meters, feets, and so on.
A measure dictionary is used by the measure tool of Adobe's Acrobat and by other PDF viewers which contain a PDF compatible measure tool.
The parameter Viewport must be a viewport handle that was returned by CreateViewport(). Scale is the required scaling factor to convert a PDF unit (1/72 inch) to the wished destination unit. The parameters UnitDescription, LabelDistance, and LabelArea are all required and cannot be NULL.
UnitDescription is a description of the coordinate conversion, e.g. "Inch to mm". LabelDistance is the label for the distance tool, e.g. "mm".
LabelArea is the label for the area tool, e.g. "mm2".

If the function succeds the return value is a measure handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also CreateRectilinearMeasure function in DynaPDF manual.

78.41.189 CreateRectilinearMeasureAnsi(ViewPort as Integer, Scale as Double, UnitDescription as String, LabelDistance as String, LabelArea as String) as Integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** Creates a rectilinear measure dictionary.
Notes: This kind of measure dictionary can be used to convert PDF units to an arbitrary other unit like millimeters, meters, feets, and so on.
A measure dictionary is used by the measure tool of Adobe's Acrobat and by other PDF viewers which contain a PDF compatible measure tool.
The parameter Viewport must be a viewport handle that was returned by CreateViewport(). Scale is the required scaling factor to convert a PDF unit (1/72 inch) to the wished destination unit. The parameters UnitDescription, LabelDistance, and LabelArea are all required and cannot be NULL.
UnitDescription is a description of the coordinate conversion, e.g. "Inch to mm". LabelDistance is the label for the distance tool, e.g. "mm".
LabelArea is the label for the area tool, e.g. "mm2".

If the function succeds the return value is a measure handle, a value greater or equal zero. If the function fails the return value is a negative error code.

This is ANSI version, so all strings are converted to ANSI encoding.
See also CreateRectilinearMeasure function in DynaPDF manual.

78.41.190 CreateResetAction as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A reset form action resets all or specific fields of an interactive form to their default values.
See also CreateResetAction function in DynaPDF manual.

78.41.191 CreateSeparationCS(Colorant as string, Alternate as Integer, Handle as Integer, ColorValue as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a Separation color space.
Notes: This function passes colorant string in UTF-8 encoding to the library.
See also CreateSeparationCS function in DynaPDF manual.

78.41.192 CreateSeparationCSAnsi(Colorant as string, Alternate as Integer, Handle as Integer, ColorValue as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function creates a Separation color space.
Notes: This function passes colorant string in Windows ANSI encoding to the library.
See also CreateSeparationCS function in DynaPDF manual.

78.41.193 CreateSetOCGStateAction(On() as UInt32, Off() as UInt32, Toggle() as UInt32, PreserveRB as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a SetOCGState action that can be used to change the visibility state of certain Optional Content Groups (OCGs).
See also CreateSetOCGStateAction function in DynaPDF manual.

78.41.194 CreateSigField(Name as string, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates an empty signature field which can be used to digitally sign the PDF file.
Notes: If you see errors in Acrobat Reader with signing multiple fields, please try DynaPDF.CreateStructureTree function and test whether it works then.
See also CreateSigField function in DynaPDF manual.

78.41.195 CreateSigFieldAP(SigField as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a signature appearance template in the exact size of the base signature field.
See also CreateSigFieldAP function in DynaPDF manual.

78.41.196 CreateSoftMask(TranspGroup as UInt32, MaskType as Integer, BackColor as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new soft mask.
Notes: MaskType: pass ksmtAlpha or ksmtLuminosity constants.
Requires DynaPDF Pro license.
See also CreateSoftMask function in DynaPDF manual.

78.41.197 CreateStdPattern(Pattern as Integer, LineWidth as Double, Distance as Double, LineColor as Integer, BackColor as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a hatch pattern.
See also CreateStdPattern function in DynaPDF manual.

78.41.198 CreateStructureTree as boolean

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a global structure tree that is required to create Tagged PDF files.
Notes: Tagged PDF files require a root node of type Art, Div, Document, Part, or Sect. This function creates a root node of type Document if nothing else was already imported. Other types can be created with the function CreateStructureTreeEx.

Notice:
DynaPDF is able to extend an existing structure tree that was imported from an external PDF file. However, when editing external PDF files the following rules must be considered:

- The structure information of a PDF file will only be imported when the entire PDF file is imported with ImportPDFFile(). When importing single pages with ImportPage() or ImportPageEx() of a PDF file that contains structure information then tagging will be disabled because DynaPDF is not able to import the structure information of a PDF file on a per page basis.
- Import first the PDF file and call then CreateStructureTree(). The reverse order causes that the structure tree will not be imported and tagging will be disabled!
- Only one PDF file with structure information can be imported without invalidating the structure information.
- Keep in mind that the structure tree of a PDF file is a complex global structure that is difficult to edit. Because of this, probably millions of PDF files exist that contain damages in the structure tree, mostly due to editing actions in certain viewer applications. When opening an existing page with EditPage() the function tries to find the corresonding StructParents array of the page in the ParentTree of the document's Structure Tree. When this action fails then tagging will be disabled for this page. OpenTag() and CloseTag() do not produce further warnings in this case. The function GetIsTaggingEnabled() can be used to determine whether tagging is still enabled after an existing page was opened for editing.

When creating Tagged PDF files it is important to create the PDF file in the logical reading order.

If the function succeeds the return value is true. If the function fails the return value is false.
See also CreateStructureTree function in DynaPDF manual.

78.41.199 CreateStructureTreeEx(Tag as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates the global structure tree as described at CreateStructureTree().
Notes: The only difference is that the type of the root node can be specified.

Returns true on success and false on failure.
See also CreateStructureTreeEx function in DynaPDF manual.

78.41.200 CreateSubmitAction(Flags as Integer, URL as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A submit form action submits the field values of an interactive form to a web server.
See also CreateSubmitAction function in DynaPDF manual.

78.41.201 CreateTable(AllocRows as UInt32, NumCols as UInt32, width as Double, DefRowHeight as Double) as DynaPDFTableMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a table with the given size.
Notes: Returns a new table object.
See also CreateTable function in DynaPDF manual.

78.41.202 CreateTextField(Name as string, Parent as Integer, Multiline as boolean, MaxLen as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a text field.
Example:

```
Var pdf As DynapdfMBS // your PDF environment with open page

// create field on current page
Var Field1 As Integer = pdf.CreateTextField("Field1", -1, True, 0, 50.0, 100, 200.0, 100.0)

// and fill value
Call pdf.SetTextFieldValue(Field1, "Hello", "", pdf.ktaLeft)
```

See also CreateTextField function in DynaPDF manual.

78.41.203 CreateTraceFile(File as FolderItem) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a trace file.
Notes: The plugin writes debug messages to this file so you can check what functions you called.

Improved with 16.2 plugin to really cover over 99% of all calls with parameters and result. Please report if you miss something.

While assignment to TraceFile property or CreateTraceFile() always overwrites existing log file, the AppendTraceFile method can append to it.

78.41.204 CreateURIAction(URL as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function:

A uniform resource identifier (URI) is a string that identifies (resolves to) a resource on the internet - typically a file that is the destination of a hyperlink, although it can also resolve to a query or other entity.
Notes:

A URI action causes a URI to be resolved. The parameter URL must be 7√Ö] bit ASCII string.
See also CreateURIAction function in DynaPDF manual.

78.41.205 CreateViewport(Name as String, X1 as Double, Y1 as Double, X2 as Double, Y2 as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a viewport.
Notes: A viewport is a rectangular region of a page that can be associated with a measure dictionary. A measure dictionary achieves a coordinate conversion so that the distance and area can be calculated in other units like meters, feets, or millimeters, for example.
This is especially useful for CAD drawings which are not defined in PDF units. A PDF unit represents 1/72 inch.
A page can contain an arbitrary number of viewports and every viewport can be assigned with its own measure dictionary, e.g. to calculate coordinates in different units on the same page.
Viewports should be created in drawing order. Since viewports might overlap a PDF viewer examines the array starting with the last one and itereates in reverse order. The first one whose bounding box contains the point or cursor coordiante is chosen.
See also CreateRectilinearMeasure().

See also CreateViewport function in DynaPDF manual.

78.41.206 CreateViewportAnsi(Name as String, X1 as Double, Y1 as Double, X2 as Double, Y2 as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** Creates a viewport.
Notes: A viewport is a rectangular region of a page that can be associated with a measure dictionary. A measure dictionary achieves a coordinate conversion so that the distance and area can be calculated in other units like meters, feets, or millimeters, for example.
This is especially useful for CAD drawings which are not defined in PDF units. A PDF unit represents 1/72 inch.
A page can contain an arbitrary number of viewports and every viewport can be assigned with its own measure dictionary, e.g. to calculate coordinates in different units on the same page.
Viewports should be created in drawing order. Since viewports might overlap a PDF viewer examines the array starting with the last one and itereates in reverse order. The first one whose bounding box contains the point or cursor coordiante is chosen.
See also CreateRectilinearMeasure().

This is ANSI version, so all strings are converted to ANSI encoding.
See also CreateViewport function in DynaPDF manual.

78.41.207 CreateXFAStream(Name as String, Buffer as String) as Integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates an XFA stream and adds it to the global XFA resource array.
Notes: The parameter Name must be the name of the XFA resource. Buffer must be a valid XFA stream buffer or "", if the buffer should be set later with SetXFAStream().

If the function succeeds the return value is the stream handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also CreateXFAStream function in DynaPDF manual.

78.41.208 DecryptPDF(File as folderitem, PwdType as Integer, Password as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function decrypts a PDF file by using the supplied password to decrypt the file.
See also DecryptPDF function in DynaPDF manual.

78.41.209 DecryptPDFAnsi(Path as string, PwdType as Integer, Password as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** This function decrypts a PDF file by using the supplied password to decrypt the file.
Notes: Same as DecryptPDF, but takes path name in Windows ANSI encoding.
See also DecryptPDF function in DynaPDF manual.

78.41.210 DeleteAcroForm

MBS DynaPDF Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes an acrobat reader form.
See also DeleteAcroForm function in DynaPDF manual.

78.41.211 DeleteActionFromObj(ObjType as Integer, ActHandle as Integer, ObjHandle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes an action from a PDF object.
See also DeleteActionFromObj function in DynaPDF manual.

78.41.212 DeleteActionFromObjEx(ObjType as Integer, ObjHandle as Integer, ActIndex as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to delete an action from an object without using an action handle.
See also DeleteActionFromObjEx function in DynaPDF manual.

78.41.213 DeleteAltFontList(FontListHandle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes an alternate font list that was created by DynaPDF.CreateAltFontList.
Notes: If the parameter Handle was set to -1 all available lists will be deleted.
Returns true on success.
See also DeleteAltFontList function in DynaPDF manual.

78.41.214 DeleteAnnotation(Handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes an annotation.
See also DeleteAnnotation function in DynaPDF manual.

78.41.215 DeleteAnnotationFromPage(PageNum as UInt32, Handle as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes an annotation from a page.
See also DeleteAnnotationFromPage function in DynaPDF manual.

78.41.216 DeleteAppEvents(ApplyEvent as Boolean, TOCAppEvent as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function deletes all application events if any.
Notes: The function can optionally apply the visibility state of an event before the application events will be deleted. The new visibility state will be stored in the PDF file. To apply the visibility state of a specific event without deletion call ApplyAppEvent() instead.

If the function succeeds and if application events were deleted the return value is 1. If the no application events were defined the return value is 0. If the function fails the return value is a negative error code.
See also DeleteAppEvents function in DynaPDF manual.

78.41.217 DeleteBookmark(ABmk as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes a bookmark.
See also DeleteBookmark function in DynaPDF manual.

78.41.218 DeleteDPartNode(Handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The deletes a dpart node.
Notes: The deletes a dpart node or the entire dpart structure if Handle was set to -1. DPart stands for Document Parts, a feature of PDF/VT. If the dpart node contains children then all child nodes will be deleted too.

If the function succeeds the return value is true. If the function fails the return value is false.
See also DeleteDPartNode function in DynaPDF manual.

78.41.219 DeleteEmbeddedFile(handle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes the embedded file with the given handle.
See also DeleteEmbeddedFile function in DynaPDF manual.

78.41.220 DeleteField(Field as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes an interactive form field.
See also DeleteField function in DynaPDF manual.

78.41.221 DeleteFieldEx(URL as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes an interactive form field by using its full qualified name, that is the name of any parent group field separated by a period (.) plus the field name.
See also DeleteFieldEx function in DynaPDF manual.

78.41.222 DeleteJavaScripts(DelJavaScriptActions as boolean)

MBS DynaPDF Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes java scripts.
See also DeleteJavaScripts function in DynaPDF manual.

78.41.223 DeleteNamedDest(Name as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes a named destination.
Notes: If Name is an empty string all named destinations will be deleted.
See also DeleteNamedDest function in DynaPDF manual.

78.41.224 DeleteNamedDestByIndex(Index as integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes a named destination.
Notes: If Index is set to a negative value all named destinations will be deleted.
See also DeleteNamedDestByIndex function in DynaPDF manual.

78.41.225 DeleteOCGFromAppEvent(Handle as UInt32, Events as Integer, Categories as Integer, DelCategoryOnly as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes an OCG or layer from one or more application events, or it deletes only one or more categories from an application event in which the OCG was found (if DelCategoryOnly is true).
Notes: If DelCategoryOnly is true, and if no more categories are left in the application event, then the event will be deleted. See also AddOCGToAppEvent() and SetOCGContUsage() for further information.
If the function succeeds the return value is true. If the function fails the return value is false.
See also DeleteOCGFromAppEvent function in DynaPDF manual.

78.41.226 DeleteOCGFromDisplayTree(OCGHandle as UInt32, Recursive as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes a layer or OCG (Optional Content Group) from the display tree of the currently active layer configuration.
Notes: Notice:
If the PDF file was not imported with ImportPDFFile() the function ImportOCProperties() must be called in order to import the global Optional Content Properties.

It is also required to load a layer configuration with LoadLayerConfig() before the function can be called.

The display tree is a linked list that contains UI nodes. UI stands for User Interface. Every node in this tree can contain an OCG or an array of OCGs with an optional label.
This function can be used to delete an OCG from the display tree without traversing every node of it with GetOCUINode() beforehand. Therefore, the function is suitable for console applications but GUI based applications should use DeleteOCUINode() instead. DeleteOCUINode() can also be used to delete the entire display tree with just one function call.

If the function succeeds the return value is true. If the function fails the return value is false.
See also DeleteOCGFromDisplayTree function in DynaPDF manual.

78.41.227 DeleteOCUINode(OCGNodeHandle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes an OCUINode.
Notes: Deletes an OCUINode (Optional Content User Interface Node) from the display tree of the currently active layer configuration or the entire tree if Node is set to 0.

If the PDF file was not imported with ImportPDFFile() the function ImportOCProperties() must be called in order to import the global Optional Content Properties.
It is also required to load a layer configuration with LoadLayerConfig() before the function can be called.

Note that the deletion of the display tree does not delete any layer or OCG (Optional Content Group). All OCGs still exists and are fully functional. However, users are not able to change the visibility state of OCGs which are not included in the display tree of the corresponding layer configuration.

If the parameter Node is set then it must be a valid pointer of an OCUINode that was returned by GetOCUINode(). Note that the deletion of a node invalidates all pointers which were previously returned by GetOCUINode().

Return value: If the function succeeds the return value is true. If the function fails the return value is false.
See also DeleteOCUINode function in DynaPDF manual.

78.41.228 DeleteOutputIntent(Index as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Can be used to delete a specific or all output intents.
Notes: A PDF file can contain more than one output intent. Call GetOutputIntentCount to determine the

number of available output intents. If the parameter Index is set to -1 all output intents will be deleted.

If the function succeeds the return value is the remaining number of output intents. If the function fails the return value is a negative error code.
See also DeleteOutputIntent function in DynaPDF manual.

78.41.229 DeletePage(PageNum as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes a page.
Example:

```
// new PDF
Var pdf As New MyDynapdfMBS

pdf.SetLicenseKey "Lite" // For this example you can use a Lite, Pro or Enterprise License

// create output file
Var outFile As folderitem = SpecialFolder.Desktop.Child("NewPDF.pdf")
Call pdf.CreateNewPDF(outFile)

// set flags to import all
Var flags As Integer = Bitwise.BitOr(pdf.kifImportAsPage, pdf.kifImportAll)
Call pdf.SetImportFlags(flags)

// import PDF
Var inFile As folderitem = SpecialFolder.Desktop.Child("test.pdf")

Call pdf.OpenImportFile(inFile)
Call pdf.ImportPDFFile(1)

// now delete one page
Call pdf.DeletePage(2)

// close output file
Call pdf.closefile
```

Notes: Used to return boolean value up to version 24.2.
Changed in version 24.3 to return integer. Negative number for errors or positive number with the number of pages left.
See also DeletePage function in DynaPDF manual.

78.41.230 DeletePageLabels

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function deletes all page labels contained in the current open document, if any.
See also DeletePageLabels function in DynaPDF manual.

78.41.231 DeleteSeparationInfo(AllPages as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function deleted the separation of the current open page or of all pages if the parameter AllPages is set to true.
See also DeleteSeparationInfo function in DynaPDF manual.

78.41.232 DeleteTemplate(handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes a template.
See also DeleteTemplate function in DynaPDF manual.

78.41.233 DeleteTemplateEx(index as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes a template by using an index instead of a template handle.
See also DeleteTemplateEx function in DynaPDF manual.

78.41.234 DeleteWatermark(PageNum as Integer, InclAnnots as Boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Delete a watermark template.
Notes: The function can be used to delete watermarks from a single page or from the entire document if PageNum is set to -1. If InclAnnots is true, watermark annotations will be deleted too, if any.
A watermark in PDF terms is a regular template that has a ADBE_CompoundType property of type Watermark. Such templates can be created with the Watermark tool of Adobes Acrobat, or with DynaPDF, for example. See MarkTemplateAsWatermark() for further information.
Return values:

If the function succeeds the return value is the number of deleted watermarks. Note that deleted watermark annotations do not increment the return value. If the function fails, the return value is a negative error code.
See also DeleteWatermark function in DynaPDF manual.

78.41.235 DeleteXFAForm

MBS DynaPDF Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes XFA Form.
See also DeleteXFAForm function in DynaPDF manual.

78.41.236 DrawArc(PosX as Double, PosY as Double, Radius as Double, StartAngle as Double, EndAngle as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function draws an arc by using a start and end angle.
See also DrawArc function in DynaPDF manual.

78.41.237 DrawArcEx(PosX as Double, PosY as Double, Width as Double, Height as Double, StartAngle as Double, EndAngle as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function draws an elliptical arc.
Example:

```
Var pdf as new DynaPDFMBS
Var f as FolderItem = SpecialFolder.Desktop.Child("Create PDF.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

// create new PDF
call pdf.CreateNewPDF f

// We want to use top-down coordinates
call pdf.SetPageCoords pdf.kpcTopDown

// new page
call pdf.Append

// black
```

```
call pdf.SetStrokeColor 0

// draw an arc
call pdf.DrawArcEx 100,100,100,100, 90,180
call pdf.StrokePath

// and a second one
call pdf.DrawArcEx 200,200,100,100, 0,90
call pdf.StrokePath

// and a third one. 0 to 0 gives a full circle
call pdf.DrawArcEx 300,300,100,100, 0,0
call pdf.StrokePath

// finish page
call pdf.EndPage

// Close file
call pdf.CloseFile

// open PDF
f.Launch
```

See also DrawArcEx function in DynaPDF manual.

78.41.238 DrawChord(PosX as Double, PosY as Double, Width as Double, Height as Double, StartAngle as Double, EndAngle as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function draws an elliptical chord (a region bounded by the intersection of an ellipse and a line segment, called a secant).
See also DrawChord function in DynaPDF manual.

78.41.239 DrawCircle(PosX as Double, PosY as Double, Radius as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function draws a circle.
Example:

```
Var pdf as new DynaPDFMBS
```

```
Var f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Line.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

// Create a new PDF
call pdf.CreateNewPDF f

// We want to use top-down coordinates
call pdf.SetPageCoords pdf.kpcTopDown

// Add a page
call pdf.Append

// a circle, filled
call pdf.SetFillColor pdf.RGB(0,255,0) // green
call pdf.DrawCircle(100, 100, 100, pdf.kfmFill)

// a circle, stoked
call pdf.SetStrokeColor pdf.RGB(255,0,0) // red
call pdf.DrawCircle(200, 200, 100, pdf.kfmStroke)

// end page
call pdf.EndPage

// Close page
call pdf.CloseFile

// Open PDF
f.Launch
```

See also DrawCircle function in DynaPDF manual.

78.41.240 DrawNGon(PosX as double, PosY as double, Radius as double, Alpha as double, NumSides as Integer, FillMode as integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a n-gon.
Notes: PosX: X-Coordinate of the midpoint of the ngon
PosY: Y-Coordinate of the midpoint of the ngon
Radius: The radius.
Alpha: Rotation angle in degrees
NumSides: Number of sides. Must be greater 2.
FillMode: Fill mode, e.g. kfmFillStroke

The function A n-gon is a polygon with "n" number of sides. The minimum number of sides is three.
A n-gon is a closed path that can be filled, stroked or both. It is also possible to draw a n-gon invisible to apply the filling rules nonzero winding number or even-odd. The filling rules are described at ClipPath(). The parameter FillMode is ignored if the circle is drawn inside a clipping path. The fill modes are described at ClosePath().

If the function succeeds the return value is true. If the function fails the return value is false.
See also DrawNGon function in DynaPDF manual.

78.41.241 DrawPie(PosX as Double, PosY as Double, Width as Double, Height as Double, StartAngle as Double, EndAngle as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function draws a pie-shaped wedge bounded by the intersection of an ellipse and two angles.
See also DrawPie function in DynaPDF manual.

78.41.242 EditPage(PageNum as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function prepares a page for editing.
Example:

```
Var pdf as DynaPDFMBS // your dynapdf instance

// edit page 1
call pdf.EditPage(1)
// set a font
call pdf.SetFont( "Times New Roman",pdf.kfsNone,46,True,pdf.kcp1252 )
// set a color
call pdf.SetFillColor(0)

// now add a text annotation
call pdf.FreeTextAnnot( 100, 100, 100, 100, "author", "test", 0 )

// end page
call pdf.EndPage
```

See also EditPage function in DynaPDF manual.

78.41.243 EditTemplate(index as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function prepares a template for editing.
See also EditTemplate function in DynaPDF manual.

78.41.244 EditTemplate2(handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prepares the template for editing.
See also EditTemplate2 function in DynaPDF manual.

78.41.245 Ellipse(PosX as Double, PosY as Double, Width as Double, Height as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function draws an ellipse.
See also Ellipse function in DynaPDF manual.

78.41.246 EnableImageCache(MaxImageCount as UInt32, Size as UInt32) as Boolean

MBS DynaPDF Plugin, Plugin Version: 24.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an image cache that is used when rendering PDF pages.
Notes: The maximum number of images and the maximum cache size can be set independently of each other.
Caching can speed up rendering dramatically but caching can also slow down rendering if too many images are in the cache. Therefore, the maximum number of images must be restricted. The value should be between 256 and 1024 but not much higher.
The optimal cache size depends on the number of pages and whether the app is 32 or 64 bit. The cache size can be large, e.g. up to 1 GB on 32 bit or 2 GB on 64 bit systems, if a document contains only a few pages. Images are cached only if the system contains enough memory.
The size of the image cache should be around 30% of the entire cache size for rendered images. If the full cache size is 1 GB, for example, then around 300 MB should be used for the image cache. Keep all caches dynamic depending on the currently available memory.
The cache size is automatically reduced if the system has not sufficient memory.
The cache is always cleared when the PDF file in memory was closed or when FreePDF() was called. In order to disable or delete the cache set MaxImageCount or Size to zero.

Returns true on success and false on failure.
See also EnableImageCache function in DynaPDF manual.

78.41.247 EnableMutex(Value as boolean)

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to enable mutex or not.

78.41.248 EncryptPDF(File as folderitem, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function encrypts a PDF file.
See also EncryptPDF function in DynaPDF manual.

78.41.249 EncryptPDFAnsi(Path as string, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** This function encrypts a PDF file.
Notes: Same as EncryptPDF, but takes path name in Windows ANSI encoding.
See also EncryptPDF function in DynaPDF manual.

78.41.250 EndContinueText as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** This function finishes a continue text block that was created with the function BeginContinueText() beforehand.
See also EndContinueText function in DynaPDF manual.

78.41.251 EndLayer as boolean

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function closes a layer that was opened by BeginLayer.
Notes: If the function succeeds the return value is true. If the function fails the return value is false.
See also EndLayer function in DynaPDF manual.

78.41.252 EndPage as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function closes an open page that was opened by Append() or EditPage().
Example:

```
Var pdf as DynaPDFMBS // your DynaPDF object
Var bBool as Boolean

bBool=pdf.EndPage
```

See also EndPage function in DynaPDF manual.

78.41.253 EndPattern as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function closes an open pattern that was opened by BeginPattern() or CreateStdPattern().
See also EndPattern function in DynaPDF manual.

78.41.254 EndTemplate as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function closes an open template that was opened by BeginTemplate(), EditTemplate() or EditTemplate2().
See also EndTemplate function in DynaPDF manual.

78.41.255 EnumDocFonts as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function enumerates all fonts used in the current PDF document.
Notes: Will call the EnumDocFont event.
See also EnumDocFonts function in DynaPDF manual.

78.41.256 EnumDocFontsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function enumerates all fonts used in the current PDF document and returns the count.
Notes: Returns the number of fonts found. Does not call the event.

78.41.257 EnumHostFonts as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use GetSysFontInfos instead.
Function: This function enumerates all fonts found in the search directories by passing the font names to a callback function.
Notes: Calls the EnumHostFont event.
See also EnumHostFonts function in DynaPDF manual.

78.41.258 EnumHostFontsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use GetSysFontInfos instead.
Function: This function enumerates all fonts found in the search directories.
Notes: Returns the number of fonts found. Does not call the event.

78.41.259 EnumHostFontsEx as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use GetSysFontInfos instead.
Function: The function enumerates all fonts found in the search directories in the same way as EnumHostFonts().
Notes: Calls the EnumHostFontEx event.
See also EnumHostFontsEx function in DynaPDF manual.

78.41.260 EnumHostFontsExCount as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use GetSysFontInfos instead.
Function: The function enumerates all fonts found in the search directories in the same way as EnumHostFontsCount().

Notes: Returns the number of fonts found. Does not call the event.

78.41.261 ExchangeBookmarks(Bmk1 as Integer, Bmk2 as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function exchanges two bookmarks.
See also ExchangeBookmarks function in DynaPDF manual.

78.41.262 ExchangePages(first as Integer, second as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function exchanges two pages.
See also ExchangePages function in DynaPDF manual.

78.41.263 ExtractPageText(RemoveText as boolean = false) as String

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts text of current open page.
Notes: This is a convenience function so you don't need to use DynaPDFStackMBS class yourself.
Returns the text of the page. Use EditPage() to open a page and than EndPage() to close it.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.
Requires DynaPDF Pro license.

Deprecated in favor of newer ExtractText function.

78.41.264 ExtractPageTextRect(Left as Double, Top as Double, Right as Double, Bottom as Double, RemoveText as boolean = false) as String

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts text of current open page within given rectangle.
Notes: Text that starts within the given rectangle is captured.
Be aware that PDF coordinates start on bottom left of page with 0/0.

This is a convenience function so you don't need to use DynaPDFStackMBS class yourself.

Returns the text of the page. Use EditPage() to open a page and than EndPage() to close it.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs. Requires DynaPDF Pro license.

Deprecated in favor of newer ExtractText function.

78.41.265 ExtractText(PageNum as Integer, Flags as Integer, rect as DynaPDFRectMBS = nil, byref text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the text of the page PageNum.
Example:

```
Var pdf as DynaPDFMBS

Var Page as Integer = 1 // first page
Var Flags as Integer = ktefDefault
Var text as string
Var ok as boolean = pdf.ExtractText(Page, Flags, text)

if ok then
MessageBox text
end if
```

Notes: The first page is denoted by 1.

Text lines can be sorted in x- and y-direction. The flag ktefDeleteOverlappingText causes that identical text records which are placed on the same position (with a tolerance of 2 units) will be deleted. The records must occur one after the other in order to detect them.

The optional parameter Area can be set to restrict the text extraction to that rectangle. The rectangle must be defined according to the current coordinate system. That means either in bottom up or top down coordinates, see SetPageCoords() for further information. Note also that the function considers the orientation of the page. The width and height of the rectangle must be exchanged if the orientation is 90, -90, 270, or -270 degrees.

If the function succeeds the return value is true. If the function fails the return value is false.
See also ExtractText function in DynaPDF manual.

78.41.266 FileAttachAnnot(PosX as Double, PosY as Double, Icon as Integer, Author as string, Desc as string, File as folderitem, Compress as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a file attachment annotation on the current open page.
Notes: On Windows, the Desc and the Author parameters are converted to unicode.
See also FileAttachAnnot function in DynaPDF manual.

78.41.267 FileAttachAnnotEx(PosX as double, PosY as double, Icon as integer, Author as string, Desc as string, Filename as String, FileBuffer as MemoryBlock, Compress as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file attachment annotation exactly in the same way as FileAttachAnnot() but accepts a file buffer as input.
Notes: See FileAttachAnnot() for further information. The parameter FileName is required. It should contain the file name including extension, e.g. "MyImage.jpg".

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also FileAttachAnnotEx function in DynaPDF manual.
See also:

- 78.41.268 FileAttachAnnotEx(PosX as double, PosY as double, Icon as integer, Author as string, Desc as string, Filename as String, FileBuffer as String, Compress as boolean) as Integer 13053

78.41.268 FileAttachAnnotEx(PosX as double, PosY as double, Icon as integer, Author as string, Desc as string, Filename as String, FileBuffer as String, Compress as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file attachment annotation exactly in the same way as FileAttachAnnot() but accepts a file buffer as input.
Notes: See FileAttachAnnot() for further information. The parameter FileName is required. It should contain the file name including extension, e.g. "MyImage.jpg".

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also FileAttachAnnotEx function in DynaPDF manual.
See also:

- 78.41.267 FileAttachAnnotEx(PosX as double, PosY as double, Icon as integer, Author as string, Desc as string, Filename as String, FileBuffer as MemoryBlock, Compress as boolean) as Integer 13053

78.41.269 FileLink(PosX as Double, PosY as Double, Width as Double, Height as Double, FileLink as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a file link annotation.
Notes: Here you can pass a string which may be a relative file path like simply the file name of other pdf file in same folder.
See also FileLink function in DynaPDF manual.

78.41.270 FileLinkAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, FileLink as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function creates a file link annotation.
Notes: Here you can pass a string which may be a relative file path like simply the file name of other pdf file in same folder.
See also FileLink function in DynaPDF manual.

78.41.271 FindBookmark(DestPage as Integer, Text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function searches for a bookmark in the document outline tree.
Notes: The text parameter is converted to unicode.
See also FindBookmark function in DynaPDF manual.

78.41.272 FindBookmarkAnsi(DestPage as Integer, Text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** This function searches for a bookmark in the document outline tree.
Notes: The text parameter is converted to ANSI.
See also FindBookmark function in DynaPDF manual.

78.41.273 FindEmbeddedFile(Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for the embedded file Name and returns the handle of it when it can be found.
Notes: The file can then be extracted with GetEmbeddedFile().

If the function succeeds the return value is an embedded file handle, a value greater or equal zero. If the file cannot be found the return value is -1.
See also FindEmbeddedFile function in DynaPDF manual.

78.41.274 FindField(Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function searches for an interactive form field by using the fully qualified field name.
Notes: The Name parameter is converted to unicode.
See also FindField function in DynaPDF manual.

78.41.275 FindFieldAnsi(Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** This function searches for an interactive form field by using the fully qualified field name.
Notes: The Name parameter is converted to ANSI.
See also FindField function in DynaPDF manual.

78.41.276 FindLinkAnnot(URL as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function searches for a file link or web link annotation.
See also FindLinkAnnot function in DynaPDF manual.

78.41.277 FindNextBookmark as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function searches for the next bookmark with the same search parameters which were used by a previous call of FindBookmark().
See also FindNextBookmark function in DynaPDF manual.

78.41.278 FinishSignature(PKCS7 as Memoryblock) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function writes the PKCS#7 signature object to the PDF file and writes finally the finish PDF file to disk and frees all used resources if the file was not created in memory.
Notes: If the file was created in memory GetBuffer() can now be called to obtain the finish PDF buffer. CloseAndSignFileExt() must be called prior this function can be called.

Return values: If the function succeeds the return value is true. If the function fails the return value is false.
See also FinishSignature function in DynaPDF manual.
See also:

- 78.41.279 FinishSignature(PKCS7 as string) as boolean 13056

78.41.279 FinishSignature(PKCS7 as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function writes the PKCS#7 signature object to the PDF file and writes finally the finish PDF file to disk and frees all used resources if the file was not created in memory.
Notes: If the file was created in memory GetBuffer() can now be called to obtain the finish PDF buffer. CloseAndSignFileExt() must be called prior this function can be called.

Return values: If the function succeeds the return value is true. If the function fails the return value is false.
See also FinishSignature function in DynaPDF manual.
See also:

- 78.41.278 FinishSignature(PKCS7 as Memoryblock) as boolean 13056

78.41.280 FlattenAnnotOrField(AnnotationOrFieldHandle as Integer, AnnotFlattenFlags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws an annotation or form field on the current open page.
Notes: Form fields are annotations of type atWidget. The annotations of a page can be enumerated with GetPageAnnotEx() / GetPageAnnotCount().
The annotation or form field is deleted from the page's annotation array after it was flattened. If the function

succeeds the return value is true. If the function fails the return value is false.
See also FlattenAnnotOrField function in DynaPDF manual.

78.41.281 FlattenAnnots(AnnotFlattenFlags as Integer = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flattens the annotations.
Notes: By default all annotations which have an appearance stream and which have the print flag set are flattened.
All annotations are deleted when the function returns with the exception of file attachment annotations.
If you want to flatten the view state then set the flag affUseViewState.

Annotation flags:

kaffNone	0	Printable annotations independent of the type
kaffUseViewState	1	If set, annotations which are visible in a viewer become flattened.
kaffMarkupAnnots	2	If set, markup annotations are flattened only. Link, Sound, or FileAttach annotations are no markup annotations. These types will be left intact.

See also FlattenAnnots function in DynaPDF manual.

78.41.282 FlattenForm as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts all fields of an Interactive Form to native PDF vector graphics and deletes the form after all fields are converted, incl. all JavaScript actions which are connected with form fields, pages, or the catalog object, and global JavaScript functions.
Notes: Requires DynaPDF Pro license.
See also FlattenForm function in DynaPDF manual.

78.41.283 FlushPageContent(stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function replaces the content stream of a page or template that was changed with the function ReplacePageText() or ReplacePageTextEx() beforehand.
Notes: The function must be called after all changes are made. See GetPageText() for an example application.

Return values:
If the function succeeds the return value is true. If the function fails the return value is false.
See also FlushPageContent function in DynaPDF manual.

78.41.284 FlushPages(Flags as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flushes pages.
Notes: Do not use FlushPages and SetUseSwapFile together. Use one function.
See also FlushPages function in DynaPDF manual.

78.41.285 FlushPagesEx(Flags as integer, LastPage as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes the pages in memory to the PDF file exactly like FlushPages().
Notes: The only difference is that the last page can be specified. The function calls FlushPages() if LastPage is smaller than 1.
See also FlushPagesEx function in DynaPDF manual.

78.41.286 FreeImageBuffer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Frees the current image buffer.
See also FreeImageBuffer function in DynaPDF manual.

78.41.287 FreeImageObj(Handle as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function releases memory that was allocated by GetImageObj to decompress the image.
Notes: If the function succeeds the return value is true. If the function fails the return value is false.
See also FreeImageObj function in DynaPDF manual.

78.41.288 FreePDF as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function frees all used resources except the font cache.
See also FreePDF function in DynaPDF manual.

78.41.289 FreeTextAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Text as string, Align as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a free text annotation.
Example:

```
Var pdf as DynaPDFMBS // your dynapdf instance

// edit page 1
call pdf.EditPage(1)
// set a font
call pdf.SetFont( "Times New Roman",pdf.kfsNone,46,True,pdf.kcp1252 )
// set a color
call pdf.SetFillColor(0)

// now add a text annotation
call pdf.FreeTextAnnot( 100, 100, 100, 100, "author", "test", 0 )

// end page
call pdf.EndPage
```

Notes: The Name and Author parameters are converted to unicode.
See also FreeTextAnnot function in DynaPDF manual.

78.41.290 FreeTextAnnotAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Text as string, Align as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** This function creates a free text annotation.
Notes: The Name and Author parameters are converted to ANSI.
See also FreeTextAnnot function in DynaPDF manual.

78.41.291 Get3DAnnotStream(Annot as UInt32, byref Data as String, byref SubType as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieves the data stream of a 3D annotation.
Notes: At time of publication, PDF supports U3D and PRC files. Check the value of the string SubType to determine the file type. The default format is U3D. SubType can be "" in this case. For PRC files, SubType is required to be present.

Returns true on success and false on failure.
See also Get3DAnnotStream function in DynaPDF manual.

78.41.292 GetActionCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of actions contained in a document.
See also GetActionCount function in DynaPDF manual.

78.41.293 GetActionHandle(ObjType as Integer, ObjHandle as UInt32, ActIndex as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the handle of an action.
Notes: To determine the number of available actions of a specific object call GetObjActionCount. Since the Catalog object contains no handle, the parameter ObjHandle will be ignored for this object type.

If the function succeeds the return value is the action handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also GetActionHandle function in DynaPDF manual.

78.41.294 GetActionType(ActHandle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the type of an annotation.
See also GetActionType function in DynaPDF manual.

78.41.295 GetActionTypeEx(ObjType as Integer, ObjHandle as Integer, ActIndex as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the action type of an action used by a specific PDF object.
See also GetActionTypeEx function in DynaPDF manual.

78.41.296 GetActiveFont as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the handle of the active font or -1 if no font is set.
See also GetActiveFont function in DynaPDF manual.

78.41.297 GetAllocBy as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the pre allocated buffer size of page content streams in bytes.
See also GetAllocBy function in DynaPDF manual.

78.41.298 GetAnnot(ahandle as Integer) as DynaPDFAnnotationMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use GetAnnotEx instead.
Function: This function retrieves the most important properties of an annotation.
Example:

```
Var pdf as DynaPDFMBS // your instance

Var c as Integer = pdf.GetAnnotCount

for i as Integer = 0 to c-1
Var a as DynaPDFAnnotationMBS = pdf.GetAnnot(i)

MessageBox str(a.Type)
next
```

See also GetAnnot function in DynaPDF manual.

78.41.299 GetAnnotBBox(ahandle as Integer) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function retrieves the bounding box of an annotation measured in bottom up coordinates.
See also GetAnnotBBox function in DynaPDF manual.

78.41.300 GetAnnotColor(Handle as UInt32, ColorType as Integer, byref ColorSpace as Integer, byref ColorValue as UInt32) as Boolean

MBS DynaPDF Plugin, Plugin Version: 24.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieves the color of an annotation.
Example:

```
Var pdf As New DynaPDFMBS

Call pdf.CreateNewPDF(Nil)
Call pdf.Append

// make an annotation
Call pdf.SetStrokeColor(pdf.RGB(255, 0, 0))
Var AnnotHandle As Integer = pdf.FreeTextAnnot(10.0, 10, 100, 20, "me", "Hello", pdf.ktaLeft)

// now query color
Var colorValue As UInt32
Var ColorSpace As Integer
Var r As Boolean = pdf.GetAnnotColor(AnnotHandle, pdf.kfcTextColor, ColorSpace, colorValue)

Break
```

Notes: If a color type is not supported by an annotation, the function returns false and passes a warning to the error event if set.

ColorType: The color type to retrieve. Can be kfcBackColor, kfcBorderColor or kfcTextColor.
See also GetAnnotColor function in DynaPDF manual.

78.41.301 GetAnnotCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of annotations currently used in the document.
See also GetAnnotCount function in DynaPDF manual.

78.41.302 GetAnnotEx(ahandle as Integer) as DynaPDFAnnotationExMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function retrieves the most important properties of an annotation.
Example:

```
Var pdf as DynaPDFMBS // your instance

Var c as Integer = pdf.GetAnnotCount

for i as Integer = 0 to c-1
Var a as DynaPDFAnnotationExMBS = pdf.GetAnnotEx(i)

MessageBox str(a.Type)
next
```

See also GetAnnotEx function in DynaPDF manual.

78.41.303 GetAnnotFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the default flags used for newly created annotations.
See also GetAnnotFlags function in DynaPDF manual.

78.41.304 GetAnnotLink(Handle as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns the URL or file path of a file link annotation.
See also GetAnnotLink function in DynaPDF manual.

78.41.305 GetAnnotTextAlign(ahandle as integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 24.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the text alignment of an annotation.
Notes: At time of publication only FreeText annotations support a text alignment.
See also GetAnnotTextAlign function in DynaPDF manual.

78.41.306 GetAnnotType(Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the type of a specific annotation.
See also GetAnnotType function in DynaPDF manual.

78.41.307 GetAscent as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the ascender of the active font.
See also GetAscent function in DynaPDF manual.

78.41.308 GetBBox(boundary as Integer) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns a bounding box of a PDF page.
Example:

```
// Just set the trim box to the same value as the media box as an example

Var r as DynaPDFRectMBS = pdf.GetBBox(pdf.kpbMediaBox)
call pdf.SetBBox(pdf.kpbTrimBox, r.Left, r.Bottom, r.Right, r.Top)
```

See also GetBBox function in DynaPDF manual.

78.41.309 GetBidiMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current bidirectional mode.
Notes: Useful constants:

kbmLeftToRight	0	Apply the bidi algorithm in Left to Right layout
kbmRightToLeft	1	Apply the bidi algorithm in Right to Left layout
kbmNone	2	Default ->do not apply the bidi algorithm

See also GetBidiMode function in DynaPDF manual.

78.41.310 GetBookmark(ahandle as Integer) as DynaPDFBookmarkMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns the properties of a bookmark.
See also GetBookmark function in DynaPDF manual.

78.41.311 GetBookmarkCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of bookmarks defined in the document.
See also GetBookmarkCount function in DynaPDF manual.

78.41.312 GetBorderStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the global border style which is used for newly created Interactive Form fields.
See also GetBorderStyle function in DynaPDF manual.

78.41.313 GetBuffer as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns a pointer to the buffer of a memory based PDF file.
Notes: The result string has no encoding set.
See also GetBuffer function in DynaPDF manual.

78.41.314 GetBufferMemory as Memoryblock

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns a pointer to the buffer of a memory based PDF file.
Example:

```
Var pdf As New DynaPDFMBS

// start new PDF
call pdf.CreateNewPDF

// set flags to import all
Var flags As Integer = Bitwise.BitOr(pdf.kifImportAsPage, pdf.kifImportAll)
Call pdf.SetImportFlags(flags)

// merge two PDF

var Data1 as MemoryBlock // first PDF data
Var Data2 As MemoryBlock // second PDF data

if Data1 <>nil then
Call pdf.OpenImportBuffer(Data1)
Call pdf.ImportPDFFile 1
end If

If Data2 <>Nil Then
Call pdf.OpenImportBuffer(Data2)
Call pdf.ImportPDFFile pdf.GetPageCount+1
```

```
End If

// Close and get new data
call pdf.CloseFile

Var NewPDFData As MemoryBlock = pdf.GetBufferMemory
```

Notes: The result string has no encoding set.

78.41.315 GetCapHeight as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the cap height of the active font.
See also GetCapHeight function in DynaPDF manual.

78.41.316 GetCharacterSpacing as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current character spacing.
See also GetCharacterSpacing function in DynaPDF manual.

78.41.317 GetCheckBoxChar as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the character used for newly created check boxes.
See also GetCheckBoxChar function in DynaPDF manual.

78.41.318 GetCheckBoxCharEx(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the check box character for the given field.
See also GetCheckBoxCharEx function in DynaPDF manual.

78.41.319 GetCheckBoxDefState(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns the default state of a check box, that is 1 == checked or 0 == unchecked.
See also GetCheckBoxDefState function in DynaPDF manual.

78.41.320 GetCMap(index as Integer) as DynaPDFCMapMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the CMap object with the given index.
See also GetCMap function in DynaPDF manual.

78.41.321 GetCMapCount as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of character maps.
See also GetCMapCount function in DynaPDF manual.

78.41.322 GetColorSpace as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the active color space.
See also GetColorSpace function in DynaPDF manual.

78.41.323 GetColorSpaceCount as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of color spaces.
Example:

```
Sub DrawSomething(pdf as DynaPDFMBS)
// draw all colorants with their own color
Var MyX, MyY as Double

MyX = 10
MyY = 100
```

```
// set a font
call pdf.SetFont "Times", pdf.kfsItalic, 10.0, true, pdf.kcp1252

// loop over all color spaces
Var Colorcount as Integer = pdf.GetColorSpaceCount

For j as Integer = 0 to Colorcount-1
MyX = 10
Var MyColourSpace as DynaPDFColorSpaceMBS = PDF.GetColorSpaceObj(j)
Var ColorantsCount as Integer = MyColourSpace.ColorantsCount
Var c as Integer = MyColourSpace.NumInComponents
Call pdf.SetExtColorSpace j

// draw name of each colorant
for i as Integer = 0 to c-1

// build array with colors and set 100% for the one color we need
Var values() as Double
redim values(c-1)
values(i) = 1.0

// get name
Var name as string = "#"+str(i)
if i <= ColorantsCount then
name = MyColourSpace.Colorants(i)
end if

// draw name
Call pdf.SetFillColor(values)
call pdf.WriteText(MyX,MyY, name)

// next
MyX = MyX + pdf.GetTextWidth(name) + 20
next

// next
MyY = MyY+20
Next
End Sub
```

See also GetColorSpaceCount function in DynaPDF manual.

78.41.324 GetColorSpaceObj(index as Integer) as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a ColorSync Profile for the given index.
Notes: Index from 0 to GetColorSpaceCount-1.
See also GetColorSpaceObj function in DynaPDF manual.

78.41.325 GetCompressionFilter as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the standard compression filter for images.
See also GetCompressionFilter function in DynaPDF manual.

78.41.326 GetCompressionLevel as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the active compression level.
See also GetCompressionLevel function in DynaPDF manual.

78.41.327 GetContent as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns a pointer to the content stream of the currently open page or template.
Notes: The result string has no encoding set.
See also GetContent function in DynaPDF manual.

78.41.328 GetDefBitsPerPixel as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns default color depth in bits per pixel, which determines whether images should be down sampled.
See also GetDefBitsPerPixel function in DynaPDF manual.

78.41.329 GetDescent as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the descender of the active font.
See also GetDescent function in DynaPDF manual.

78.41.330 GetDocInfo(dinfo as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves a document info entry as Unicode string.
Notes: The result is an unicode string.
See also GetDocInfo function in DynaPDF manual.

78.41.331 GetDocInfoCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of document info entries defined in the document.
See also GetDocInfoCount function in DynaPDF manual.

78.41.332 GetDocInfoEx(index as Integer, byref DInfo as Integer, byref key as string, byref value as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns a document info entry.
Notes: Key is an ascii string and value an unicode string.
See also GetDocInfoEx function in DynaPDF manual.

78.41.333 GetDocumentColorSpaces as DynaPDFColorSpaceMBS()

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries Colorspace objects for all colorspaces in the current working document.

78.41.334 GetDocUsesTransparency(Flags as UInt32 = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether this document uses transparency.
Notes: Checks whether a PDF file uses native PDF Transparency (PDF 1.4). The file uses transparency when it contains soft masks, blend modes other than Normal, or fill or stroke alpha values smaller than 1.0. The function checks all pages, templates, extended graphics states, images, annotations, and form fields.

If the file uses transparency the return value is true. If it uses no transparency the return value is false.
See also GetDocUsesTransparency function in DynaPDF manual.

78.41.335 GetDrawDirection as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the actual draw direction for closed vector graphics such as rectangles, circles, ellipses and so on.
See also GetDrawDirection function in DynaPDF manual.

78.41.336 GetDynaPDFVersion as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the version string of DynaPDF.
Notes: Result is an ASCII string.
See also GetDynaPDFVersion function in DynaPDF manual.

78.41.337 GetEmbeddedFile(Handle as Integer, byref FileSpec as DynaPDFFileSpecMBS, Decompress as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of an embedded file as well as a pointer to the file buffer.
Example:

```
// new PDF Environment
Var pdf as new MyDynaPDFMBS
call pdf.CreateNewPDF nil

// import PDF file
Var f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with hidden data.pdf")
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)
call pdf.OpenImportFile(f)
call pdf.ImportPDFFile(1)

// walk over list of embedded files and get their data
Var c as Integer = pdf.GetEmbeddedFileCount
for i as Integer = 0 to c-1
Var e as DynaPDFFileSpecMBS
if pdf.GetEmbeddedFile(i, e, true) then
```

```
Var data as string = e.Buffer

Break
end if
next

// cleanup
call pdf.CloseFile
```

See also GetEmbeddedFile function in DynaPDF manual.

78.41.338 GetEmbeddedFileCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of embedded files available in the PDF file.
Example:

```
// new PDF Environment
Var pdf as new MyDynaPDFMBS
call pdf.CreateNewPDF nil

// import PDF file
Var f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with hidden data.pdf")
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)
call pdf.OpenImportFile(f)
call pdf.ImportPDFFile(1)

// walk over list of embedded files and get their data
Var c as Integer = pdf.GetEmbeddedFileCount
for i as Integer = 0 to c-1
Var e as DynaPDFFileSpecMBS
if pdf.GetEmbeddedFile(i, e, true) then
Var data as string = e.Buffer

Break
end if
next

// cleanup
call pdf.CloseFile
```

See also GetEmbeddedFileCount function in DynaPDF manual.

78.41.339 GetEMFPatternDistance as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the distance between lines of standard patterns during EMF conversion.
See also GetEMFPatternDistance function in DynaPDF manual.

78.41.340 GetErrLogMessage(index as Integer) as DynaPDFErrorMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Querties the error message details for the given index.
Notes: Index from 0 to GetErrLogMessageCount-1.
See also GetErrLogMessage function in DynaPDF manual.

78.41.341 GetErrLogMessageCount as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of error log messages.
See also GetErrLogMessageCount function in DynaPDF manual.

78.41.342 GetErrorMessage as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the last error message as a string, or "" if no error occurred.
See also GetErrorMessage function in DynaPDF manual.

78.41.343 GetErrorMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current error mode.
See also GetErrorMode function in DynaPDF manual.

78.41.344 GetField(index as Integer) as DynaPDFFieldMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use GetFieldEx instead.
Function: The function retrieves the most important properties of a field.
See also GetField function in DynaPDF manual.

78.41.345 GetFieldBackColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the default background color used for newly created interactive form fields.
See also GetFieldBackColor function in DynaPDF manual.

78.41.346 GetFieldBorderColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the default border color used for newly created interactive form fields.
See also GetFieldBorderColor function in DynaPDF manual.

78.41.347 GetFieldBorderStyle(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the border style of a specific form field.
See also GetFieldBorderStyle function in DynaPDF manual.

78.41.348 GetFieldBorderWidth(aField as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the line width of the border of a field.
See also GetFieldBorderWidth function in DynaPDF manual.

78.41.349 GetFieldCalcOrder as UInt32()

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries field calculation order.
Notes: Retrieves the calculation order of form fields which contain an action in the OnCalc event (see AddActionToObj() for further information). This is the order in which their values will be recalculated when

the value of any field changes. The retrieved array values are field handles.

To change the calculation order of a specific field call SetFieldCalcOrder().
See also GetFieldCalcOrder function in DynaPDF manual.

78.41.350 GetFieldChoiceValue(Field as Integer, ValIndex as Integer) as DynaPDFChoiceValueMBS

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the choice values for this field.
See also GetFieldChoiceValue function in DynaPDF manual.

78.41.351 GetFieldColor(Field as Integer, ColorType as Integer, byref ColorSpace as Integer, byref ColorValue as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves a specific color of an interactive form field.
See also GetFieldColor function in DynaPDF manual.

78.41.352 GetFieldCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of fields contained in the document.
See also GetFieldCount function in DynaPDF manual.

78.41.353 GetFieldEx(index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the most important properties of a field.
Example:

```
Var pdf as new MyDynaPDFMBS

pdf.SetLicenseKey "Lite" // For this example you can use a Lite, Pro or Enterprise License

call pdf.CreateNewPDF(nil)
call pdf.SetImportFlags(BitwiseOr(pdf.kifImportAll, pdf.kifImportAsPage))
```

```
Var filePath as FolderItem=SpecialFolder.Desktop.Child("acroform.pdf")
if (pdf.OpenImportFile(filePath, pdf.kptOpen, "") <0) then
MessageBox "Input file """+filePath.name+""" not found!"
quit
end if

// import all pages
Var r as Integer = pdf.ImportPDFFile( 1, 1.0, 1.0)

// now check all fields
Var n as Integer = pdf.GetFieldCount
for i as Integer = 0 to n-1
Var f as DynaPDFFieldExMBS = pdf.GetFieldEx(i)

break // inspect in debugger
next
```

Notes: See dynapdf_help.pdf for more details.
See also GetFieldEx function in DynaPDF manual.

78.41.354 GetFieldExpValCount(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of values/export values which are defined for a field.
See also GetFieldExpValCount function in DynaPDF manual.

78.41.355 GetFieldExpValue(Field as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function retrieves the export value(s) of a check box, list box, or combo box.
See also GetFieldExpValue function in DynaPDF manual.

78.41.356 GetFieldExpValueEx(Field as Integer, ValIndex as Integer, byref Value as string, byref ExpValue as string, byref Selected as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to enumerate the choice values of a combo box, list box, or radio

button.
See also GetFieldExpValueEx function in DynaPDF manual.

78.41.357 GetFieldFlags(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the flags of a specific interactive form field.
See also GetFieldFlags function in DynaPDF manual.

78.41.358 GetFieldGroupType(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the base type of a field group.
See also GetFieldGroupType function in DynaPDF manual.

78.41.359 GetFieldHighlightMode(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the highlight mode of buttons, checkboxes, and signature fields.
See also GetFieldHighlightMode function in DynaPDF manual.

78.41.360 GetFieldIndex(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the index or tab order of the field.
See also GetFieldIndex function in DynaPDF manual.

78.41.361 GetFieldMapName(Field as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the mapping name of a specific form field if set.
Notes: The result string is in unicode or ASCII encoding.
See also GetFieldMapName function in DynaPDF manual.

78.41.362 GetFieldName(Field as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the name of a specific interactive form field.
See also GetFieldName function in DynaPDF manual.

78.41.363 GetFieldOrientation(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the orientation of a field.
See also GetFieldOrientation function in DynaPDF manual.

78.41.364 GetFieldTextAlign(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the text alignment of a text field or button field.
See also GetFieldTextAlign function in DynaPDF manual.

78.41.365 GetFieldTextColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the default text color used for newly created fields.
See also GetFieldTextColor function in DynaPDF manual.

78.41.366 GetFieldToolTip(Field as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves a pointer to the tool tip string of a specific interactive form field.
Notes: The result string has either unicode or ascii encoding.
See also GetFieldToolTip function in DynaPDF manual.

78.41.367 GetFieldType(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the field type.
See also GetFieldType function in DynaPDF manual.

78.41.368 GetFillColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current color used for fillings.
See also GetFillColor function in DynaPDF manual.

78.41.369 GetFontCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the font count.
See also GetFontCount function in DynaPDF manual.

78.41.370 GetFontEx(index as Integer) as DynaPDFFontMBS

MBS DynaPDF Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use GetFontInfo instead.
Function: Queries the font information for the font specified by the index value.
Example:

```
// create PDF object with page
Var pdf as new DynaPDFMBS
call pdf.CreateNewPDF(nil)
call pdf.Append

// draw some text
call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252
call pdf.WriteFText pdf.ktaCenter, "My first Xojo output!"

// and list all fonts:
Var n as Integer = pdf.GetFontCount-1

for i as Integer = 0 to n
MessageBox pdf.GetFontEx(i).FontName
next
```

Notes: Returns nil on any error.
Index from 0 to GetFontCount-1.

See also GetFontEx function in DynaPDF manual.

78.41.371 GetFontInfoEx(index as Integer) as DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieves the most important properties of a font.
Notes: This function accepts a font handle instead. A font handle is a simple array index. To enumerate all fonts of a document execute the function in a loop from zero to GetFontCount - 1.

If the function succeeds the return value is font info object. If the function fails the return value is nil.
See also GetFontInfoEx function in DynaPDF manual.

78.41.372 GetFontMetrics(FontHandle as Integer) as DynaPDFFontMetricsMBS

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries font metrics for a font handle.
See also GetFontMetrics function in DynaPDF manual.

78.41.373 GetFontOrigin as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current font origin.
See also GetFontOrigin function in DynaPDF manual.

78.41.374 GetFontSearchOrder as Integer()

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the font search order.
Notes: The values in the array use this constants:

The array has 4 values.
See also GetFontSearchOrder function in DynaPDF manual.

kfbtTrueType	TrueType, TrueType Collections, or OpenType fonts with TrueType outlines
kfbtType1	Type1 font
kfbtOpenType	OpenType font with Postscript outlines
kfbtStdFont	PDF Standard font
kfbtDisabled	This value can be used to disable a specific font format.

78.41.375 GetFontSelMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current font selection mode.
See also GetFontSelMode function in DynaPDF manual.

78.41.376 GetFontSize as Double

MBS DynaPDF Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the font size of the active font.
Notes: The function returns the font size, a value greater zero on success, or a negative error code on failure.
See also GetFontSize function in DynaPDF manual.

78.41.377 GetFontWeight as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the weight that will be used to emulate a bold font style.
See also GetFontWeight function in DynaPDF manual.

78.41.378 GetFTextHeight(Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function measures the height of a formatted text block.
Notes: The text parameter is converted to unicode.
See also GetFTextHeight function in DynaPDF manual.

78.41.379 GetFTextHeightAnsi(Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function measures the height of a formatted text block.
Notes: The text parameter is converted to ANSI.
See also GetFTextHeight function in DynaPDF manual.

78.41.380 GetFTextHeightEx(Width as Double, Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function measures the height of a formatted text block.
Notes: The text parameter is converted to unicode.
See also GetFTextHeightEx function in DynaPDF manual.

78.41.381 GetFTextHeightExAnsi(Width as Double, Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function measures the height of a formatted text block.
Notes: The text parameter is converted to ANSI.
See also GetFTextHeightEx function in DynaPDF manual.

78.41.382 GetGlyphIndex(Index as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the glyph index of the given code page or Unicode index.
Notes: How Index must be defined depends on the code page with which the font was loaded. For example, if the font was loaded with a 8 bit code page, then indexes below 256 are treated as index into the code page table. Higher indexes are treated as Unicode value in this case. Note that all Unicode encoded glyphs of the font are accessible in this case, also if the font was loaded with a 8 bit code page!

At time of publication the function does not support CJK code pages which require a conversion to Unicode, e.g. cpCJK_Big5_Uni, cpCJK_EUC_JP_Uni, and so on.

If the function succeeds the return value is greater or equal zero. If the function fails the return value is a negative error code.
See also GetGlyphIndex function in DynaPDF manual.

78.41.383 GetGlyphOutline(Index as UInt32) as DynaPDFGlyphOutlineMBS

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the outline of a glyph of the active font.
Notes: Note that not all glyphs have an outline. A space character, for example, has no outline and therefore the size can be zero. The function returns normalized outlines scaled to a font size of 1000 units.

Please see dynapdf_help.pdf and our example project on how to process the outline data.
See also GetGlyphOutline function in DynaPDF manual.

78.41.384 GetGoToAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = &h00000080) as DynaPDFGoToActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for a GoToR action.
Notes: Index is from 0 to GetActionCount-1.

If Decompress is true, all file specification containing compressed data are uncompressed.
And ImageParseFlags defines how GetImageObj is called internally to decompress image. Default is to only get image info, but you can pass other values to actually get image data.
See also GetGoToAction function in DynaPDF manual.

78.41.385 GetGoToRAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = &h00000080) as DynaPDFGoToActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for a GoTo action.
Notes: Index is from 0 to GetActionCount-1.

If Decompress is true, all file specification containing compressed data are uncompressed.
And ImageParseFlags defines how GetImageObj is called internally to decompress image. Default is to only get image info, but you can pass other values to actually get image data.
See also GetGoToRAction function in DynaPDF manual.

78.41.386 GetGStateFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current graphics state flags.
See also GetGStateFlags function in DynaPDF manual.

78.41.387 GetHideAction(index as Integer) as DynaPDFHideActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for a hide action.
Notes: Index is from 0 to GetActionCount-1.
See also GetHideAction function in DynaPDF manual.

78.41.388 GetIconColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the icon color used for newly created text annotations.
See also GetIconColor function in DynaPDF manual.

78.41.389 GetImageBuffer as string

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the image buffer.
See also GetImageBuffer function in DynaPDF manual.

78.41.390 GetImageBufferMemory as memoryblock

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the image buffer.

78.41.391 GetImageCount(File as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of images contained in a multi page image.
See also GetImageCount function in DynaPDF manual.
See also:

- 78.41.392 GetImageCount(Path as string) as Integer 13086

78.41.392 GetImageCount(Path as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of images contained in a multi page image.
See also GetImageCount function in DynaPDF manual.
See also:

- 78.41.391 GetImageCount(File as folderitem) as Integer 13085

78.41.393 GetImageCountEx(Buffer as Memoryblock) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function determines the number of images in a multi-page image in the same way as GetImageCount(), but accepts a file buffer as input.
See also GetImageCountEx function in DynaPDF manual.
See also:

- 78.41.394 GetImageCountEx(Buffer as string) as Integer 13086

78.41.394 GetImageCountEx(Buffer as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function determines the number of images in a multi-page image in the same way as GetImageCount(), but accepts a file buffer as input.
See also GetImageCountEx function in DynaPDF manual.
See also:

- 78.41.393 GetImageCountEx(Buffer as Memoryblock) as Integer 13086

78.41.395 GetImageHeight(Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the height of an image in pixel.
See also GetImageHeight function in DynaPDF manual.

78.41.396 GetImageObj(Handle as UInt32, Flags as Integer = 0) as DynaPDFImageMBS

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the properties of an image as well as the decompressed image buffer if needed.
Notes: For the flags use the constants: kpfNone, kpfDecomprAllImages, kpfNoJPXDecode, kpfDitherImagesToBW, kpfConvImagesToGray, kpfConvImagesToRGB, kpfConvImagesToCMYK or kpfImageInfoOnly.

By default all images are returned decompressed, with exception of image types which are already stored in a valid file format like JPEG and JPEG 2000 images.
If all image types should be decompressed set the flag kpfDecompressAllImages.
This function allocates memory that should be released with FreeImageObj when finish (happens automatically in DynaPDFImageMBS destructor).
Image handles are simple array indexes. The number of image objects can be determined with GetImageObjCount. Note that this array does not include inline images which are stored in content streams. Such images can only be accessed with ParseContent().

Returns the function succeeds the return value is true. If the function fails the return value is false.
See also GetImageObj function in DynaPDF manual.

78.41.397 GetImageObjCount as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of image objects which were loaded with DynaPDF functions or imported from external PDF files.
Notes: The images can be accessed with GetImageObj().
The return value is the number of image objects. This function cannot fail.
See also GetImageObjCount function in DynaPDF manual.

78.41.398 GetImageWidth(Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the width of an image in pixel.
See also GetImageWidth function in DynaPDF manual.

78.41.399 GetImportDataAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = &h00000080) as DynaPDFImportDataActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for an import action.
Notes: Index is from 0 to GetActionCount-1.

If Decompress is true, all file specification containing compressed data are uncompressed.
And ImageParseFlags defines how GetImageObj is called internally to decompress image. Default is to only get image info, but you can pass other values to actually get image data.
See also GetImportDataAction function in DynaPDF manual.

78.41.400 GetImportFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current import flags used to import PDF files.
See also GetImportFlags function in DynaPDF manual.

78.41.401 GetImportFlags2 as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries import flags 2.
See also GetImportFlags2 function in DynaPDF manual.

78.41.402 GetInBBox(PageNum as Integer, Boundary as Integer) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves a bounding box of an external PDF page.
Example:

```
Var pdf as new MyDynaPDFMBS

// open some PDF
call pdf.CreateNewPDF(nil)
call pdf.OpenImportFile(file, 0, "")

// query page size
```

Var bounds as DynaPDFRectMBS = pdf.GetInBBox(1, pdf.kpbMediaBox)

See also GetInBBox function in DynaPDF manual.

78.41.403 GetInDocInfo(DInfo as Integer, byref value as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves a document info entry from an external PDF file as Unicode string.
See also GetInDocInfo function in DynaPDF manual.

78.41.404 GetInDocInfoCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of available document info entries of the currently opened import file or a negative error code on failure.
See also GetInDocInfoCount function in DynaPDF manual.

78.41.405 GetInDocInfoEx(index as Integer, byref DInfo as Integer, byref key as string, byref value as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns a document info entry from the currently opened import file.
Example:

```
Var p as new DynaPDFMBS

call p.CreateNewPDF(nil)

// Skip anything that is not required
call p.SetImportFlags p.kifImportAll+p.kifImportAsPage

// From which PDF file do you want to extract the information?
call p.OpenImportFile(file, p.kptOpen, "")

// lookup all document information

Var count as integer = p.GetInDocInfoCount
for i as integer = 0 to count-1

Var DInfo as integer
Var key as string
Var value as string
if p.GetInDocInfoEx(i, DInfo, key, value) >= 0 then

Var Type as string
select case dinfo
```

```
case p.kdiAuthor
type = "Author"
case p.kdiCreator
type = "Creator"
case p.kdiKeywords
type = "Keywords"
case p.kdiProducer
type = "Producer"
case p.kdiSubject
type = "Subject"
case p.kdiTitle
type = "Title"
case p.kdiCompany
type = "Company"
case p.kdiPDFX_Ver
type = "PDF/X Version"
case p.kdiCustom
type = "Custom"
case p.kdiPDFX_Conf
type = "PDF/X Config"
case p.kdiCreationDate
type = "Creation Date"
case p.kdiModDate
type = "Modification Date"
else
Break
type = "?"
end Select

List.AddRow type, key, value
end if

next

// close import file
call p.CloseImportFile
```

Notes: The key result is an ASCII string.
The value result is an ASCII or Unicode string.
See also GetInDocInfoEx function in DynaPDF manual.

78.41.406 GetInEncryptionFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the encryption flags of the currently opened import file.

See also GetInEncryptionFlags function in DynaPDF manual.

78.41.407 GetInEncryptionInfo as DynaPDFEncryptInfoMBS

MBS DynaPDF Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieves encryption settings of the currently active import file.
Notes: It is not meaningful to call this function on an unencrypted file. Therefore, call GetInIsEncrypted() beforehand to determine whether the file is encrypted.
See also GetInEncryptionInfo function in DynaPDF manual.

78.41.408 GetInFieldCount as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns number of field in open import file.
See also GetInFieldCount function in DynaPDF manual.

78.41.409 GetInIsCollection as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function checks whether the currently opened import file is a portable collection.
Notes: Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetInIsCollection function in DynaPDF manual.

78.41.410 GetInIsEncrypted as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function checks whether the currently opened import file is encrypted.
Notes: Changed to boolean in version 24.4. Used to be integer.
See also GetInIsEncrypted function in DynaPDF manual.

78.41.411 GetInIsSigned as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to determine whether a PDF file contains a digital signature.
Notes: Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.

See also GetInIsSigned function in DynaPDF manual.

78.41.412 GetInIsTaggedPDF as integer

MBS DynaPDF Plugin, Plugin Version: 21.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the currently open import file is a Tagged PDF file.
Notes: The PDF file must be opened beforehand with OpenImportFile() or OpenImportBuffer().
The return value is a set flags indicating the tagging status of the file.

If the function succeeds, the return value is greater or equal zero. If the function fails, the return value is a negative error code.
See also GetInIsTaggedPDF function in DynaPDF manual.

78.41.413 GetInIsTrapped as Integer

MBS DynaPDF Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the input PDF is trapped.
Notes: Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetInIsTrapped function in DynaPDF manual.

78.41.414 GetInIsXFAForm as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the input PDF is a XFA form.
Notes: Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetInIsXFAForm function in DynaPDF manual.

78.41.415 GetInMetadata(PageNum as Integer) as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Access the optional metadata streams of pages or the global metadata stream of the current open import file.
Notes: Metadata streams are in XMP format that is a superset of XML. The PDF file must be opened with OpenImportImportFile or OpenImportBuffer beforehand.
Although the global XMP stream does usually exist in todays PDF files, metadata streams are optional and maybe not present. The function returns true if no error occurs, also if no metadata stream is present.

See also GetInMetadata function in DynaPDF manual.

78.41.416 GetInOrientation(PageNum as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the orientation of a specific page within the currently open import file (see also OpenImportFile()).
See also GetInOrientation function in DynaPDF manual.

78.41.417 GetInPageCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of pages contained in an external PDF file.
See also GetInPageCount function in DynaPDF manual.

78.41.418 GetInPDFVersion as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the minor PDF version number of an external PDF file.
See also GetInPDFVersion function in DynaPDF manual.

78.41.419 GetInPDFVersionEx as DynaPDFVersionInfoMBS

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the version information of the currently open import file.
See also GetInPDFVersionEx function in DynaPDF manual.

78.41.420 GetInPrintSettings as DynaPDFPrintSettingsMBS

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the print settings for the imported document.
Notes: This is a PDF 1.7 extension.
See also GetInPrintSettings function in DynaPDF manual.

78.41.421 GetInRepairMode as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to determine whether the current open import file was opened in repair or normal mode.
Notes: Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetInRepairMode function in DynaPDF manual.

78.41.422 GetIsFixedPitch as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns 1 if the active font is a fixed pitch font or 0 if the font is a variable pitch font.
Notes: Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetIsFixedPitch function in DynaPDF manual.

78.41.423 GetIsTaggingEnabled as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether tagging is enabled.
See also GetIsTaggingEnabled function in DynaPDF manual.

78.41.424 GetItalicAngle as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the italic angle in degrees that will be used to emulate italic style fonts.
See also GetItalicAngle function in DynaPDF manual.

78.41.425 GetJavaScript(Handle as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns a global JavaScript as string.
Notes: The result text string has either unicode or ASCII encoding.

You can use JavaScriptEngineMBS class to execute JavaScript without HTMLViewer in our own cross platform JavaScript engine.

If the JavaScript is attached to a field, please use GetFieldEx functions to get the action handle (DynaPDFFieldExMBS.Action) and then use GetJavaScriptAction instead.
See also GetJavaScript function in DynaPDF manual.

78.41.426 GetJavaScriptAction(Handle as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use GetJavaScriptActionEx instead. **Function:** Returns a java script action value for the given handle.
Notes: May return an unicode string.
See also GetJavaScriptAction function in DynaPDF manual.
See also:

- 78.41.427 GetJavaScriptAction(ObjType as Integer, ObjHandle as Integer, ActIndex as Integer, byref ObjEvent as Integer) as string 13096

78.41.427 GetJavaScriptAction(ObjType as Integer, ObjHandle as Integer, ActIndex as Integer, byref ObjEvent as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use GetJavaScriptActionEx instead. **Function:** Returns a java script action value for the given object.
Notes: May return an unicode string.

The ObjEvent parameter was added in plugin version 9.3 and contains a value from the koe* constants.
See also GetJavaScriptAction function in DynaPDF manual.
See also:

- 78.41.426 GetJavaScriptAction(Handle as Integer) as string 13096

78.41.428 GetJavaScriptActionEx(index as Integer) as DynaPDFJavaScriptActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for an javascript action.
Notes: Index is from 0 to GetActionCount-1.
See also GetJavaScriptActionEx function in DynaPDF manual.

78.41.429 GetJavaScriptCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of global JavaScripts contained in a document.
See also GetJavaScriptCount function in DynaPDF manual.

78.41.430 GetJavaScriptEx(Name as string) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns a global JavaScript as string by using the script s name instead of a handle to identify the script.
Notes: The result string is an unicode or an ASCII string.

You can use JavaScriptEngineMBS class to execute JavaScript without HTMLViewer in our own cross platform JavaScript engine.

If the JavaScript is attached to a field, please use GetFieldEx functions to get the action handle (DynaPDFFieldExMBS.Action) and then use GetJavaScriptAction instead.
See also GetJavaScriptEx function in DynaPDF manual.

78.41.431 GetJavaScriptName(Handle as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the name of a global JavaScript.
Notes: The result string has either unicode or ASCII encoding.
See also GetJavaScriptName function in DynaPDF manual.

78.41.432 GetJPEGQuality as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current JPEG compression quality in percent used for newly inserted images which are compressed with JPEG.
See also GetJPEGQuality function in DynaPDF manual.

78.41.433 GetJPEGVersion as String

MBS DynaPDF Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries JPEG library version.
Notes: Currently reporting 9.1 for version 9b.

78.41.434 GetLanguage as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the language identifier of the document as an ISO 3166 language tag or IANA tag, or "" if not set.
See also GetLanguage function in DynaPDF manual.

78.41.435 GetLastTextOffset as UInt32

MBS DynaPDF Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns current text offset for WriteFText.
Notes: This lets you know how much text is left to write when you get a page break event.

78.41.436 GetLastTextPosX as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the x coordinate of the last printed text.

78.41.437 GetLastTextPosXAbs as double

MBS DynaPDF Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the x coordinate of the last printed text.
Notes: This function returns the absolute end position of the last drawn text after applying coordinate transformations, if any. The relative end point before applying coordinate transformations is returned by GetLastTextPosX() / GetLastTextPosY().

The y-coordinate is the position of the text's baseline measured in bottom-up coordinates.
Note that the reference point of WriteFText() is the baseline plus font size, independent of the current coordinate system. In contrast, the reference point of WriteText() is the baseline if bottom up coordinates are active and the baseline plus font size if top down coordinates are active (see SetPageCoords() for further

information).

If the function succeeds the return value is the x- or y-coordinate. This value can be negative depending on the coordinate where the string was placed. If the function fails the return value is a negative error code. An error code is smaller than -33554531.0.

78.41.438 GetLastTextPosY as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the y coordinate of the last printed text.

78.41.439 GetLastTextPosYAbs as double

MBS DynaPDF Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the y coordinate of the last printed text.
Notes: This function returns the absolute end position of the last drawn text after applying coordinate transformations, if any. The relative end point before applying coordinate transformations is returned by GetLastTextPosX() / GetLastTextPosY().

The y-coordinate is the position of the text's baseline measured in bottom-up coordinates.
Note that the reference point of WriteFText() is the baseline plus font size, independent of the current coordinate system. In contrast, the reference point of WriteText() is the baseline if bottom up coordinates are active and the baseline plus font size if top down coordinates are active (see SetPageCoords() for further information).

If the function succeeds the return value is the x- or y-coordinate. This value can be negative depending on the coordinate where the string was placed. If the function fails the return value is a negative error code. An error code is smaller than -33554531.0.

78.41.440 GetLaunchAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = &h00000080) as DynaPDFLaunchActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for a launch action.
Notes: Index is from 0 to GetActionCount-1.

If Decompress is true, all file specification containing compressed data are uncompressed.
And ImageParseFlags defines how GetImageObj is called internally to decompress image. Default is to only get image info, but you can pass other values to actually get image data.
See also GetLaunchAction function in DynaPDF manual.

78.41.441 GetLayerConfig(Index as Integer) as DynaPDFOCLayerConfigMBS

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieves the most important properties of a layer configuration.
Notes: A PDF file can contain one or more layer configurations so that different layers can be initially shown or hidden.
A PDF file that contains layers (Optional Content Groups in PDF syntax) contains usually at least a default configuration dictionary. This configuration is loaded by default when the visibility state of a layer or optional content group must be determined, e.g. when rendering a page.
To determine the number of available configurations call GetLayerConfigCount(). The first index is denoted by 0.

If the function succeeds the return value is the object. If the function fails the return value is nil.
See also GetLayerConfig function in DynaPDF manual.

78.41.442 GetLayerConfigCount as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of available layer configurations.
Notes: Note that it is possible that a document contains layers but no layer configuration. To determine whether a document contains layers or optional content groups use GetOCGCount().
To load a specific layer configuration call LoadLayerConfig().
See also GetLayerConfigCount function in DynaPDF manual.

78.41.443 GetLeading as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current leading.
See also GetLeading function in DynaPDF manual.

78.41.444 GetLineCapStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current line cap style used for vector graphics.
See also GetLineCapStyle function in DynaPDF manual.

78.41.445 GetLineJoinStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current line join style used for vector graphics.
See also GetLineJoinStyle function in DynaPDF manual.

78.41.446 GetLineWidth as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current line width used for stroked vector graphics and the border of interactive objects.
See also GetLineWidth function in DynaPDF manual.

78.41.447 GetLinkHighlightMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current highlight mode used for newly created annotations.
See also GetLinkHighlightMode function in DynaPDF manual.

78.41.448 GetLogMetafileSize(FileName as folderitem) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the logical bounding box of an enhanced or Windows metafile.
See also GetLogMetafileSize function in DynaPDF manual.

78.41.449 GetLogMetafileSizeEx(Buffer as Memoryblock) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the logical bounding box of an enhanced or Windows metafile.
See also GetLogMetafileSizeEx function in DynaPDF manual.
See also:

- 78.41.450 GetLogMetafileSizeEx(Buffer as string) as DynaPDFRectMBS 13102

78.41.450 GetLogMetafileSizeEx(Buffer as string) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the logical bounding box of an enhanced or Windows metafile.
See also GetLogMetafileSizeEx function in DynaPDF manual.
See also:

- 78.41.449 GetLogMetafileSizeEx(Buffer as Memoryblock) as DynaPDFRectMBS 13101

78.41.451 GetMatrix(byref Matrix as DynaPDFMatrixMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the current transformation.
See also GetMatrix function in DynaPDF manual.

78.41.452 GetMaxFieldLen(TxtField as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the allowed maximum string length of a text field, or zero if the length is not restricted.
See also GetMaxFieldLen function in DynaPDF manual.

78.41.453 GetMetaConvFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the conversion flags used to convert enhanced metafiles to PDF.
See also GetMetaConvFlags function in DynaPDF manual.

78.41.454 GetMetadata(ObjType as Integer, Handle as Integer) as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function can be used to access the optional metadata streams of pages, fonts, images, pages, templates, as well as the global metadata stream that is associated with the Catalog object.
Notes: Metadata streams are in XMP format that is a superset of XML.
The global metadata stream will be created when this function is called. The returned stream is a preview of the XMP stream that will be stored in the file when CloseFile or CloseFileEx is called. Note that the creation and modification date will be updated when the file is closed.
The original global XMP stream of external PDF files can be accessed with GetInMetadata().
Metadata streams are optional and maybe not present. The function returns true if no error occurs, also if no metadata stream is present.
See also GetMetadata function in DynaPDF manual.

78.41.455 GetMissingGlyphs as UInt32()

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an array with missing glyphs.
Notes: See also GetMissingGlyphsString.
See also GetMissingGlyphs function in DynaPDF manual.

78.41.456 GetMissingGlyphsString as String

MBS DynaPDF Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string containing the missing glpyhs characters.
Notes: This is a convenience function which builds a string from the array given by pdfGetMissingGlyphs.

See also GetMissingGlyphs.

78.41.457 GetMiterLimit as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current miter limit used to draw stroked vector graphics.
See also GetMiterLimit function in DynaPDF manual.

78.41.458 GetMovieAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = &h00000080) as DynaPDFFieldMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for a movie action.
Notes: Index is from 0 to GetActionCount-1.

If Decompress is true, all file specification containing compressed data are uncompressed.
And ImageParseFlags defines how GetImageObj is called internally to decompress image. Default is to only get image info, but you can pass other values to actually get image data.
See also GetMovieAction function in DynaPDF manual.

78.41.459 GetNamedAction(index as Integer) as DynaPDFNamedActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for a named action.
Notes: Index is from 0 to GetActionCount-1.
See also GetNamedAction function in DynaPDF manual.

78.41.460 GetNamedDest(index as Integer) as DynaPDFNamedDestMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries information about the named destination with the given index.
Notes: Index from 0 to GetNamedDestCount-1.
Returns nil on any error.
See also GetNamedDest function in DynaPDF manual.

78.41.461 GetNamedDestCount as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of named destination objects.
See also GetNamedDestCount function in DynaPDF manual.

78.41.462 GetNeedAppearance as boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether appearance is needed.
See also GetNeedAppearance function in DynaPDF manual.

78.41.463 GetObjActionCount(ObjType as Integer, ObjHandle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use GetObjActions instead.
Function: The function returns the number of actions used by an object.
See also GetObjActionCount function in DynaPDF manual.

78.41.464 GetObjActions(ObjType as Integer, ObjHandle as Integer, byref Actions as DynaPDFObjActionsMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for an object action.
Notes: Index is from 0 to GetActionCount-1.

The function retrieves the first action and additional trigger events that should be executed when a specific event occurs.
If the object type is a page, then use the page number as handle.

Trigger events are supported by the global Catalog object (this is the document root), Pages, and Form Fields. All other objects do not support trigger events.
Actions are defined as a single linked list. That means one action can execute another action (if NextAction of that action is >= 0).
Note that an action can reference itself! The application must check whether an action is already in the execution list before it will be executed.

If an error occurred, the plugin returns nil.
On success, we provide the DynaPDFObjActionsMBS object in Actions parameter.

Return values:

<0	An error occurred, e.g. due to an invalid handle.
0	The object contains no action or trigger event.
1	The object contains an action.
2	The object contains a trigger event.
3	The object contains an action and a trigger event.

See also GetObjActions function in DynaPDF manual.

78.41.465 GetOCG(Handle as UInt32) as DynaPDFOCGMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the properties of an OCG, also called layer.
Notes: An OCG handle is a simple array index. You can loop over all available OCGs from 0 to GetOCGCount - 1.
If the member HaveContUsage is true, the OCG contains a Content Usage dictionary. The contents of this dictionary can be accessed with the function GetOCGContUsage. A Content Usage dictionary contains additional information about a layer or OCG.

If the OCG is also included in an application event, this is the case if AppEvent is non-zero, then the Content Usage dictionary is used to control the visibility state of the layer. The member Categories specifies which categories control the visibility state.

Returns nil on any error.
See also GetOCG function in DynaPDF manual.

78.41.466 GetOCGContUsage(Handle as UInt32) as DynaPDFOCGContUsageMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the properties of the Content Usage dictionary that is associated with an OCG or layer.
Notes: If the OCG is not included in an application event, then the contents in this dictionary serves as pure information.
If the OCG is included in one or more application events, then these settings control also the visibility state of the OCG. The function GetOCG returns the events and categories which control the layer visibility.
If UserNamesCount is greater zero, the dictionary contains also user names. The user names can be accessed with GetOCGUsageUserName.
Ôø°

Returns nil on any error.
See also GetOCGContUsage function in DynaPDF manual.

78.41.467 GetOCGCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of OCGs or layers which are available in document.
Notes: This function cannot fail, the return value is always greater or equal zero.
See also GetOCGCount function in DynaPDF manual.

78.41.468 GetOCGUsageUserName(Handle as UInt32, Index as UInt32, byref Name as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a user name of a Content Usage dictionary that is associated with an OCG or layer.
Notes: The functions a pointer of the original string that is stored in the PDF file.
If the function succeeds the return value is true. If the function fails the return value is false.
See also GetOCGUsageUserName function in DynaPDF manual.

78.41.469 GetOCUINode(Node as Integer) as DynaPDFOCUINodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieves the most important properties of an Optional Content UI node (UI stands for User Interface).
Notes: If the PDF file was not already imported with ImportPDFFile() the function ImportOCProperties() must be called to import the global Optional Content Properties.
UI nodes are part of a layer configuration. Therefore, a layer configuration must be loaded with LoadLayerConfig() before the function can be called.

Optional Content Groups (OCGs) which are returned by this function should be visible in the user interface of a viewer application. All other OCGs should not be shown by default.
UI nodes are stored in a single linked list. To get the pointer of the root node set the parameter Node to 0. The parameter OutNode will be ignored in this case but it is required otherwise.
The next node of the root is in the NextItem property. If no further node is available the return value will be 0.
Every node can contain one or more child nodes, an optional label, or a reference to an OCG.
See also GetOCUINode function in DynaPDF manual.

78.41.470 GetOpacity as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the opacity value used to draw the visible appearance of an annotation (requires Acrobat 5 or higher).
See also GetOpacity function in DynaPDF manual.

78.41.471 GetOrientation as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the orientation of the current open page if an open page was detected or the default orientation for newly created pages if no open page was detected.
Example:

```
// query orientation of current page and orientate coordinate system to match

Var orientation As Integer = pdf.GetOrientation
call pdf.SetOrientationEx(orientation)
```

See also GetOrientation function in DynaPDF manual.

78.41.472 GetOutputIntent(Index as Integer) as DynaPDFOutputIntentMBS

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an output intent as well as the properties of it.
Notes: An output intent is an ICC profile that describes the characteristics of the output device. The profile is mostly embedded but certain standards like PDF/X 4p, for example, allow also the usage of non-embedded profiles.

The parameter Index is the array index of the output intent. To determine the number of available intents call GetOutputIntentCount.

Returns nil in case of error.
See also GetOutputIntent function in DynaPDF manual.

78.41.473 GetOutputIntentCount as Integer

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of available output intents.
See also GetOutputIntentCount function in DynaPDF manual.

78.41.474 GetPage(PageNum as UInt32) as DynaPDFPageMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the page object for the given page number.
Notes: If you like to open a page for editing, please use editpage function.

78.41.475 GetPageAnnot(index as Integer) as DynaPDFAnnotationMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use GetPageAnnotEx instead.
Function: Retrieves the page annotation with the given index.
See also GetPageAnnot function in DynaPDF manual.

78.41.476 GetPageAnnotCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the page annotation count.
See also GetPageAnnotCount function in DynaPDF manual.

78.41.477 GetPageAnnotEx(index as Integer) as DynaPDFAnnotationExMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries an extended annotation with the given index.
See also GetPageAnnotEx function in DynaPDF manual.

78.41.478 GetPageColorSpaces as DynaPDFColorSpaceMBS()

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries for current open page the color spaces used.
Notes: Color spaces used for drawing colors (Stroke and Fill Color) and for image color space.
The list may be empty if for example everything is drawn in standard color spaces like RGB.

78.41.479 GetPageCoords as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the page coordinate system setting.
Notes: The native coordinate system of the Portable Document Format is bottom up.
See also GetPageCoords function in DynaPDF manual.

78.41.480 GetPageCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of pages of the current PDF file if any.
See also GetPageCount function in DynaPDF manual.

78.41.481 GetPageField(Index as Integer) as DynaPDFFieldMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use GetPageFieldEx instead.
Function: The function retrieves the most important properties of a field.
See also GetPageField function in DynaPDF manual.

78.41.482 GetPageFieldCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of fields used by a page.
See also GetPageFieldCount function in DynaPDF manual.

78.41.483 GetPageFieldEx(Index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of a field.
Notes: The parameter Index must be a valid index to the page's field array. To enumerate the fields of a page execute the function in a loop from 0 to GetPageFieldCount - 1.
See also GetPageFieldEx function in DynaPDF manual.

78.41.484 GetPageHeight as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the height of the currently open page.
See also GetPageHeight function in DynaPDF manual.

78.41.485 GetPageLabel(index as Integer, byref Label as DynaPDFPageLabelMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the properties of a page label.
See also GetPageLabel function in DynaPDF manual.

78.41.486 GetPageLabelCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of page labels defined in the document.
See also GetPageLabelCount function in DynaPDF manual.

78.41.487 GetPageLayout as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the page layout that is used when opening the document with Adobe s Acrobat.
See also GetPageLayout function in DynaPDF manual.

78.41.488 GetPageMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the page mode that is used when opening the document with Adobe's Acrobat.
See also GetPageMode function in DynaPDF manual.

78.41.489 GetPageNum as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the page number of the currently open page.
See also GetPageNum function in DynaPDF manual.

78.41.490 GetPageText(stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to extract the text of a page or template, or to find a specific text that should be replaced or deleted with the function ReplacePageText() or ReplacePageTextEx().
Notes: InitStack must be called before you use GetPageText.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.
Requires DynaPDF Pro license.
See also GetPageText function in DynaPDF manual.

78.41.491 GetPageWidth as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the width of the currently open page.
See also GetPageWidth function in DynaPDF manual.

78.41.492 GetPDFVersion as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the minor version of the output PDF file as Integer value.
Notes: Zero stand for PDF 1.0, one for PDF 1.1 and so on.
See also GetPDFVersion function in DynaPDF manual.

78.41.493 GetPDFVersionEx as DynaPDFVersionInfoMBS

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieves the major and minor version of the PDF document as well as the underlying PDF standard, if any.
Example:

```
Var d As New DynaPDFMBS
Var v As DynaPDFVersionInfoMBS = d.GetPDFVersionEx

Break // check in debugger
```

Notes: Result includes:

Major	PDF major version, e.g. 1
Minor	PDF minor version, e.g. 7
MainVer	Set only if the file conforms to a specific PDF standard, e.g. "PDF/X // 1a:2003", "PDF/A 3b", and so on.
SubVer	e.g. "ZUGFeRD 2.0", "Factur-X", and so on

Returns nil in case of an error.
See also GetPDFVersionEx function in DynaPDF manual.

78.41.494 GetPNGVersion as String

MBS DynaPDF Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries PNG library version used in DynaPDF.

78.41.495 GetPrintSettings as DynaPDFPrintSettingsMBS

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the print settings for the current document.
Notes: This is a PDF 1.7 extension.
See also GetPrintSettings function in DynaPDF manual.

78.41.496 GetResetAction(Handle as UInt32) as DynaPDFResetFormActionMBS

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the properties of a Reset Form Action.
See also GetResetAction function in DynaPDF manual.

78.41.497 GetResolution as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the resolution in DPI (Dots per Inch), in which images are stored by DynaPDF.
See also GetResolution function in DynaPDF manual.

78.41.498 GetSaveNewImageFormat as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If false, images are not downscaled if necessary.
See also GetSaveNewImageFormat function in DynaPDF manual.

78.41.499 GetSeparationInfo(byref Colorant as string, byref ColorSpace as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the separation info stored in the current open page.
See also GetSeparationInfo function in DynaPDF manual.

78.41.500 GetSpaceWidth(FontHandle as Integer, FontSize as Double) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the width of the space character of the font depending on the font size.
Notes: If the font contains no space character a default size is used to compute the space width.
The parameter FontHandle must be a valid pointer to a PDF font. Such a reference is returned by GetPageText, EnumDocFonts, or by the content parser (see ParseContent).

Returns: If the function succeeds the return value is the space width. If the function fails the return value is zero. This function does not use the exception handling of DynaPDF. No error message is set on failure.
See also GetSpaceWidth function in DynaPDF manual.

78.41.501 GetStrokeColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current stroke color.
See also GetStrokeColor function in DynaPDF manual.

78.41.502 GetSubmitAction(Handle as UInt32) as DynaPDFSubmitFormActionMBS

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the properties of a Submit Form Action.
Notes: Returns nil in case of an error.
See also GetSubmitAction function in DynaPDF manual.

78.41.503 GetSysFontInfo as DynaPDFSysFontMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the most important properties of a system font.
Example:

```
// This example needs a window with ListBox1.
// list all fonts
Var d as new DynaPDFMBS

Var f as DynaPDFSysFontMBS = d.GetSysFontInfo
while f<>nil
ListBox1.AddRow f.FamilyName

f = f.NextFont
wend
```

Notes: The function returns the fonts in the current font search order. That means if the search order is { fbtTrueType, fbtOpenType, fbtType1, fbtStdFont } , for example, then the function returns first all TrueType fonts sorted in ascending order, then all OpenType fonts, and so on.
Since standard fonts are no system fonts, these fonts are not returned.
See also GetSysFontInfo function in DynaPDF manual.
See also:

- 78.41.504 GetSysFontInfo(PostscriptName as String) as DynaPDFSysFontMBS 13116

78.41.504 GetSysFontInfo(PostscriptName as String) as DynaPDFSysFontMBS

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries system font with given postscript name.
Example:

```
Var d as new DynaPDFMBS

// find one font with postscript name
Var font as DynaPDFSysFontMBS = d.GetSysFontInfo("Verdana-BoldItalic")

// find all with family name
Var fonts() as DynaPDFSysFontMBS = d.GetSysFontInfos("Verdana")

Break // see in debugger
```

Notes: Returns nil if font is not found.
See also GetSysFontInfo function in DynaPDF manual.
See also:

• 78.41.503 GetSysFontInfo as DynaPDFSysFontMBS 13116

78.41.505 GetSysFontInfos as DynaPDFSysFontMBS()

MBS DynaPDF Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an array with the most important properties of system fonts.
Example:

```
Var pdf as new MyDynaPDFMBS

// get all fonts
Var fonts() as DynaPDFSysFontMBS = pdf.GetSysFontInfos

// add one row for each font
for each f as DynaPDFSysFontMBS in fonts

Var name as string = f.FamilyName

if f.BaseType = pdf.kfbtOpenType and f.CIDOrdering = "" then
// This font cannot be used with Unicode

else
// Everything is ok
end if

next
```

Notes: The function returns the fonts in the current font search order. That means if the search order is { fbtTrueType, fbtOpenType, fbtType1, fbtStdFont } , for example, then the function returns first all TrueType fonts sorted in ascending order, then all OpenType fonts, and so on.
Since standard fonts are no system fonts, these fonts are not returned.
See also:

• 78.41.506 GetSysFontInfos(Name as String) as DynaPDFSysFontMBS() 13117

78.41.506 GetSysFontInfos(Name as String) as DynaPDFSysFontMBS()

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an array with the most important properties of system fonts.
Example:

```
Var d as new DynaPDFMBS

// find one font with postscript name
Var font as DynaPDFSysFontMBS = d.GetSysFontInfo("Verdana-BoldItalic")
```

```
// find all with family name
Var fonts() as DynaPDFSysFontMBS = d.GetSysFontInfos("Verdana")

Break // see in debugger
```

Notes: Matchs fonts by family name, full name or Postscript name.

The function returns the fonts in the current font search order. That means if the search order is { fbtTrueType, fbtOpenType, fbtType1, fbtStdFont } , for example, then the function returns first all TrueType fonts sorted in ascending order, then all OpenType fonts, and so on.
Since standard fonts are no system fonts, these fonts are not returned.
See also:

- 78.41.505 GetSysFontInfos as DynaPDFSysFontMBS() 13117

78.41.507 GetTabLen as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the tabulator length in spaces that is used to emulate tabulators during text formatting (see WriteFText() for further information).
See also GetTabLen function in DynaPDF manual.

78.41.508 GetTemplCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of templates used by a page.
See also GetTemplCount function in DynaPDF manual.

78.41.509 GetTemplHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the handle of the current open template or a negative error code on failure.
See also GetTemplHandle function in DynaPDF manual.

78.41.510 GetTemplHeight(Handle as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the height of a template.
See also GetTemplHeight function in DynaPDF manual.

78.41.511 GetTemplWidth(Handle as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the width of a template. The parameter Handle must be a valid template handle.
Notes: If the function succeeds the return value is the width of the template. If the function fails the return value is a negative error code.
See also GetTemplWidth function in DynaPDF manual.

78.41.512 GetTextBBox(Text as String) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 24.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the exact bounding box of a text string.
Example:

```
Var pdf As New DynaPDFMBS

Call pdf.CreateNewPDF(Nil)
Call pdf.Append

Var Text As String = "Hello World"
Var rect As DynaPDFRectMBS = pdf.GetTextBBox(Text)

MessageBox rect.Left.ToString+"/"+rect.Top.ToString+" "+rect.Right.ToString+"/"+rect.Bottom.ToString
```

Notes: The bounding box is computed from the outline of every glyph. However, the function does not consider the current text draw mode or bold or italic font style emulation.
Returns nil in case of an error.
See also GetTextBBox function in DynaPDF manual.

78.41.513 GetTextDrawMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the text draw mode. Se draw modes are described in detail under SetTextDrawMode().
See also GetTextDrawMode function in DynaPDF manual.

78.41.514 GetTextFieldValue(Field as Integer, byref Value as string, byref DefValue as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the text of a field.
Notes: The strings may be ANSI or Unicode encoded.
See also GetTextFieldValue function in DynaPDF manual.

78.41.515 GetTextHeight(Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function measures the height of a formatted text block.
Example:

```
Var pdf as DynaPDFMBS // your PDF instance

Var text as string = "Hello \ul#World"

Var h1 as Integer = pdf.GetTextHeight(pdf.ktaLeft, text)
Var h2 as Integer = pdf.GetFTextHeight(pdf.ktaLeft, text)

Var h3 as Integer = pdf.GetTextHeightEx(150, pdf.ktaLeft, text)
Var h4 as Integer = pdf.GetFTextHeightEx(150, pdf.ktaLeft, text)

// see different heights in debugger.
```

Notes: GetTextHeight does escape backslashes so no formatting commands are taken from the string.
The text parameter is converted to unicode.

78.41.516 GetTextHeightAnsi(Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function measures the height of a formatted text block.
Notes: GetTextHeightAnsi does escape backslashes so no formatting commands are taken from the string.

The text parameter is converted to ANSI.

78.41.517 GetTextHeightEx(Width as Double, Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function measures the height of a formatted text block.
Example:

```
Var pdf as new MyDynaPDFMBS

call pdf.CreateNewPDF nil
call pdf.Append

call pdf.SetFont("Helvetica", pdf.kfsnone, 12, true, pdf.kcpUnicode)

Var h as Double = pdf.GetTextHeightEx(100, pdf.ktaLeft, "Hello World. Just a test string.")

MessageBox "height: "+str(h)

call pdf.EndPage
call pdf.CloseFile
```

Notes: GetTextHeightEx does escape backslashes so no formatting commands are taken from the string. The text parameter is converted to unicode.

78.41.518 GetTextHeightExAnsi(Width as Double, Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function measures the height of a formatted text block.
Notes: GetTextHeightExAnsi does escape backslashes so no formatting commands are taken from the string. The text parameter is converted to ANSI.

78.41.519 GetTextRect(byref PosX as Double, byref PosY as Double, byref Width as Double, byref Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the bounding rectangle to output formatted text.
See also GetTextRect function in DynaPDF manual.

78.41.520 GetTextRise as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current text rise used to output text.
See also GetTextRise function in DynaPDF manual.

78.41.521 GetTextScaling as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current value of horizontal text scaling.
See also GetTextScaling function in DynaPDF manual.

78.41.522 GetTextWidth(aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function calculates the width of a string.
Notes: The text parameter is converted to unicode.
See also GetTextWidth function in DynaPDF manual.
See also:

- 78.41.523 GetTextWidth(FontHandle as integer, Text as String, CharSpacing as Single, WordSpacing as Single, TextScale as Single) as double 13122

78.41.523 GetTextWidth(FontHandle as integer, Text as String, CharSpacing as Single, WordSpacing as Single, TextScale as Single) as double

MBS DynaPDF Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates text width.
Notes: The function can be used to calculate the width of a sub string that was returned by the content parser (see ParseContent() for further information). The parameter FontHandle must be a valid handle of a font object that was provided in the SetFont event. Note that this function is optimized for speed and does not use the normal error handling of DynaPDF. The parameters CharSpacing, WordSpacing, and TextScale must be taken from the current graphics state.

If the function succeeds the return value is the string width measured in text space. If the parameter FontHandle is set 0 the return value is 0.0.
See also GetTextWidth function in DynaPDF manual.
See also:

- 78.41.522 GetTextWidth(aText as string) as Double 13122

78.41.524 GetTextWidthAnsi(aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function calculates the width of a string.
Notes: The text parameter is converted to ANSI.
See also GetTextWidth function in DynaPDF manual.
See also:

- 78.41.522 GetTextWidth(aText as string) as Double 13122
- 78.41.523 GetTextWidth(FontHandle as integer, Text as String, CharSpacing as Single, WordSpacing as Single, TextScale as Single) as double 13122

78.41.525 GetTIFFVersion as String

MBS DynaPDF Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries version of tiff library.
Notes: Should be 3.7.2 on plugins 17.1.
Version is always same on Mac, Windows and Linux.
If you notice a mismatch, something is wrong!

78.41.526 GetTransparentColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the transparent color value that is used for newly inserted images.
See also GetTransparentColor function in DynaPDF manual.

78.41.527 GetTrapped as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the trapped key of the document.
See also GetTrapped function in DynaPDF manual.

78.41.528 GetTypoLeading as double

MBS DynaPDF Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the typographic leading or line height of a font.
Notes: This is sTypoAscender –sTypoDescender + sTypoLineGap of the OS/2 table of TrueType and OpenType fonts. The value is scaled to the current font size. Type1 fonts do not support these metrics.

The function can be called after a font was activated in the graphics state, e.g. with SetFont(), SetFontEx(), SetCIDFont(), or ChangeFont().

If typographic metrics are not available the return value is Ascent –Descent. If the value is smaller than the font size then the font size is returned.

If the function succeeds the return value is the typographic leading of the active font, this is a value greater zero. If the function fails the return value is a negative error code.
See also GetTypoLeading function in DynaPDF manual.

78.41.529 GetURIAction(index as Integer) as DynaPDFURIActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for an URI action.
Notes: Index is from 0 to GetActionCount-1.
See also GetURIAction function in DynaPDF manual.

78.41.530 GetUseExactPwd as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the property UseExactPwd is false, an encrypted PDF file can always be decrypted, if either the open or owner password in the file is an empty string.
See also GetUseExactPwd function in DynaPDF manual.

78.41.531 GetUseGlobalImpFiles as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property specifies whether import files should be loaded permanent into memory, e.g. to enable splitting of large PDF files.
See also GetUseGlobalImpFiles function in DynaPDF manual.

78.41.532 GetUserRights as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the encryption flags of an imported PDF file or -1 if the imported PDF file was not encrypted.
See also GetUserRights function in DynaPDF manual.

78.41.533 GetUserUnit as single

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the user unit of the current open page.
Notes: A user unit acts like a scaling factor. The page format and all page coordinates are multiplied with this factor in a viewer application. The default size of a PDF unit is 1/72 inch and the default user unit is 1.0. User units can be useful if the page format would be too large to be expressed in standard PDF units. The largest page format in PDF is limited to 14400 units or 200 inches. This limit can be extended with the user unit.
The largest value that is supported is 75.0 which results in a maximum page format of 15,000 x 15,000 inches or 1,800,000 units.

Use EditPage() to open a page if needed to inspect.
See also GetUserUnit function in DynaPDF manual.

78.41.534 GetUseStdFonts as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns 1 (true) if the 14 standard fonts are enabled.
See also GetUseStdFonts function in DynaPDF manual.

78.41.535 GetUsesTransparency(Page as Integer = -1) as Integer

MBS DynaPDF Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether a page or the entire document uses transparency.
Notes: This is no quick check as GetDocUsesTransparency() applies. The function parses the page or pages to determine whether transparent objects are relly used.
To check whether a specific page uses transparency set the parameter PageNum to the wished page number. The first page is denoted by 1. To check the entire PDF file set PageNum to -1.

The return value is a bit mask on success (a positive integer value), or a negative error code on failure.

The following flags are defined:

- 0: The page or document uses no transparency.
- 1: The content stream of a page contains transparent objects.
- 2: A page defines the blending color space (Group dictionary).
- 4: A page contains transparent annotations or form fields.

The above values can occur in any combination. To check whether a specific flag was set use a binary and operator: BitwiseAnd(value, flag)
See also GetUsesTransparency function in DynaPDF manual.

78.41.536 GetUseSystemFonts as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property specifies whether the %Windows%/Fonts directory should be added automatically to the list of available font search paths.
See also GetUseSystemFonts function in DynaPDF manual.

78.41.537 GetUseTransparency as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property specifies whether images should get a transparent background.
See also GetUseTransparency function in DynaPDF manual.

78.41.538 GetUseVisibleCoords as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property specifies whether DynaPDF should consider the crop box to calculate to position of an object.
See also GetUseVisibleCoords function in DynaPDF manual.

78.41.539 GetViewerPreferences(byref Preference as Integer, byref AddVal as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the viewer preferences specified in the document.
See also GetViewerPreferences function in DynaPDF manual.

78.41.540 GetViewport(Page as UInt32, index as Integer) as DynaPDFViewportMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a viewport that is associated with a page.
Notes: A viewport is a rectangular region of a page, that specifies usually a measure coordinate system or points in a geospatical coordinate system.
Since viewports might overlap, to determine the viewport to use for any point on a page, the viewports in the array shall be examined, starting with the last one and iterating in reverse, and the first one whose BBox entry contains the point shall be chosen.
To determine how viewports and measure dictionaries can be used, please have a look into the PDF Reference 2.0, ISO/DIS 32000-2, Section Measurement properties.
Returns nil on any error.
See also GetViewport function in DynaPDF manual.

78.41.541 GetViewportCount(Page as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of viewports which are associated with a page.
Notes: The first page has the page number 1.
If the function succeeds the return value is the number of viewports, a number greater or equal zero. If the function fails the return value is a negative error code. The function can only fail if the page number is invalid.
See also GetViewportCount function in DynaPDF manual.

78.41.542 GetWMFDefExtent(byref width as Integer, byref height as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the default size which is used to convert non portable WMF files to EMF.
See also GetWMFDefExtent function in DynaPDF manual.

78.41.543 GetWMFPixelPerInch as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the default pixels per inch of the y-axis which are used to convert portable WMF files to EMF.
See also GetWMFPixelPerInch function in DynaPDF manual.

78.41.544 GetWordSpacing as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current word spacing.
See also GetWordSpacing function in DynaPDF manual.

78.41.545 GetXFAStream(Handle as UInt32) as DynaPDFXFAStreamMBS

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns an XFA stream.
Notes: The parameter Index is the array index. The function GetXFAStreamCount() returns the number of available streams.
An XFA form consist of several XML streams. The stream name must be used to determine which stream was returned.
If the function succeeds the return value is 1. If the function fails the return value is 0.
See also GetXFAStream function in DynaPDF manual.

78.41.546 GetXFAStreamCount as Integer

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of available XFA streams.
Notes: XFA streams are available after a PDF file was imported.
If the function succeeds the return value is the number of available XFA streams. If the function fails the return value is a negative error code.
See also GetXFAStreamCount function in DynaPDF manual.

78.41.547 GetZlibVersion as String

MBS DynaPDF Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries version of zlib library.
Notes: Should be 1.2.7 on plugins 17.x.
Version is always same on Mac, Windows and Linux.

If you notice a mismatch, something is wrong!

78.41.548 GofRGB(RGB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns G of a RGB color value.
Example:

```
Var rgb as Integer = DynaPDFMBS.RGB(1,2,3)
MessageBox str(DynaPDFMBS.GofRGB(rgb)) // shows 2
```

78.41.549 HaveDPartRoot as Boolean

MBS DynaPDF Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether the PDF file in memory contains a DPartRoot dictionary.
Notes: DPart stands for Document Parts. DParts are a feature of PDF/VT, a PDF format for the printing industry.
The function should be used to determine whether a DPart structure is already in memory, before calling CreateDPartRoot() since the function would fail if this is the case.
An existing DPart structure can be extended with additional DPart nodes, but it is not yet possible to edit existing nodes.

If the document contains a DPartRoot dictionary, the return value is true or false otherwise.
See also HaveDPartRoot function in DynaPDF manual.

78.41.550 HighlightAnnot(SubType as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double, ColorValue as Integer, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a highlight annotation with unicode text.
See also HighlightAnnot function in DynaPDF manual.

78.41.551 HighlightAnnotAnsi(SubType as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double, ColorValue as Integer, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** Adds a highlight annotation with ANSI text.
See also HighlightAnnot function in DynaPDF manual.

78.41.552 HighlightOnAllPages(SearchText as string, ColorValue as Color, CaseInsenitive as boolean = false) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Highlights text on all pages of the current document.
Notes: If CaseInsenitive is true, the case of letters is ignored (also umlauts and accents)
Searches on all pages in the document.
Returns number of times the text was found.

If a page is open, we automatically close it.

78.41.553 HighlightOnCurrentPage(SearchText as string, ColorValue as Color, CaseInsenitive as boolean = false) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Highlights text on all pages of the current page.
Notes: If CaseInsenitive is true, the case of letters is ignored (also umlauts and accents)
Use EditPage function to open the page before you search on it.
Returns number of times the text was found.

78.41.554 ImportBookmarks as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function imports the outline tree of the currently opened import file (see OpenImportFile() or OpenImportBuffer()).
See also ImportBookmarks function in DynaPDF manual.

78.41.555 ImportCatalogObjects as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function imports global objects of the currently opened import file such as bookmarks, JavaScripts, embedded files, open actions, invisible page templates, rendering intents, the document info entries, and certain other global properties such as the page mode or page layout.
See also ImportCatalogObjects function in DynaPDF manual.

78.41.556 ImportDocInfo as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function imports the document info entries from the currently opened import file.
See also ImportDocInfo function in DynaPDF manual.

78.41.557 ImportEncryptionSettings as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Imports the encryption settings from the currently open import file (see OpenImportFile() or OpenImportBuffer() for further information).
Notes: If the PDF file is not encrypted, the function does nothing. To determine whether the open PDF file is encrypted call GetInIsEncrypted().
The encryption settings should be imported to make sure that the PDF file can be saved with the same settings after it was edited. The user rights should be considered if the file was opened with the open password, also if the password was just an empty string. See GetUserRights() for further information.
If the file was opened with the owner password, then all editing rights should be grated. The PDF file must be closed with CloseFile() or CloseAndSignFile() for example. Don't use
CloseFileEx() for example since this function would override the encryption settings.
If the file should be saved unencrypted call ResetEncryptionSettings() before closing the file. Return values: If the function succeeds the return value is true. If the function fails the return value is false.
See also ImportEncryptionSettings function in DynaPDF manual.

78.41.558 ImportOCProperties as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Imports the global Optional Content Properties of the curent open import file.
Notes: OC properties are normally automatically imported by functions like ImportPDFFile() or when importing a page that contains layers. However, a viewer application must be able to access the OC properties right after the PDF file was opened so that the layer configuration and the layer tree can be loaded (see LoadLayerConfig() and GetOCUINode() for further information).

The function can be called multiple times without causing unwanted side effects.

If the function succeeds the return value is true. If the function fails the return value is false.
See also ImportOCProperties function in DynaPDF manual.

78.41.559 ImportPage(PageNum as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function imports a page of an external PDF file and converts this page to a template.
Notes: Requires DynaPDF Lite license.
See also ImportPage function in DynaPDF manual.

78.41.560 ImportPageEx(PageNum as Integer, ScaleX as Double = 1.0, ScaleY as Double = 1.0) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function imports a PDF page of an external PDF file incl. interactive objects such as annotations, form fields and so on, if any.
Notes: Requires DynaPDF Lite license.
See also ImportPageEx function in DynaPDF manual.

78.41.561 ImportPDFFile(DestPage as Integer, ScaleX as Double = 1.0, ScaleY as Double = 1.0) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function imports an external PDF file incl. interactive objects such as annotations, bookmarks, form fields and so on.
Example:

```
// new PDF
Var pdf As New MyDynapdfMBS

pdf.SetLicenseKey "Lite" // For this example you can use a Lite, Pro or Enterprise License

// create output file
Var outFile As folderitem = SpecialFolder.Desktop.Child("NewPDF.pdf")
Call pdf.CreateNewPDF(outFile)

// set flags to import all
```

```
Var flags As Integer = Bitwise.BitOr(pdf.kifImportAsPage, pdf.kifImportAll)
Call pdf.SetImportFlags(flags)

// import PDF
Var inFile As folderitem = SpecialFolder.Desktop.Child("test.pdf")

Call pdf.OpenImportFile(inFile)
Call pdf.ImportPDFFile(1)

// now delete one page
Call pdf.DeletePage(2)

// close output file
Call pdf.closefile
```

Notes: Scaling factor is ignored if importing as pages (not templates).

This function returns the page number of the last page imported. It does not return how many pages are imported. If you need number of imported pages, please use returned value minus DestPage.

If a page is open, we automatically close it.
See also ImportPDFFile function in DynaPDF manual.

78.41.562 ImportPDFPage(PageNum as Integer, ScaleX as Double = 1.0, ScaleY as Double = 1.0) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Imports a PDF page.
Notes: If a page is open, this function calls EndPage.
Than it appends a new page, calls ImportPageEx and Endpage.

On success the return value is zero. If the function fails the return value is a negative error code.

Requires a Lite license in DynaPDF 5. Used to be a Pro license for DynaPDF 4.

If a page is open, we automatically close it.
See also ImportPDFPage function in DynaPDF manual.

78.41.563 InitColorManagement(profiles as DynaPDFColorProfilesMBS, DestSpace as Integer, Flags as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes color management with the given default profiles.
Notes: Pass nil for profiles to disable color management.
DestSpace can be kcsDeviceRGB, kcsDeviceCMYK or kcsDeviceGray.
Flags can be kicmDefault or kicmBPCompensation for:
Black point compensation preserves the black point when converting CMYK colors to different color spaces.
See also InitColorManagement function in DynaPDF manual.

78.41.564 InitColorManagementEx(profiles as DynaPDFColorProfilesExMBS, DestSpace as Integer, Flags as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialize color management.
Notes: The function enables color management in the functions RenderPage(), RenderPageEx(), RenderPageToImage(), and RenderPDFFile() exactly like InitColorManagement() but accepts ICC profile buffers instead of file paths. See InitColorManagement() for further information.

To disable color management set the parameter Profiles to nil.

Initializing the color management requires a considerable amount of processing time. It is strongly recommended to use one PDF instance as long as possible so that it must not be initialized again when another PDF file will be rendered.
The color management can be initialized right after the PDF instance was created.

Returns true on succes or false on failure.
See also InitColorManagementEx function in DynaPDF manual.

78.41.565 InitStack(byref stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function initializes the variable Stack with default values and prepares the editing of a content stream.
Example:

```
Var s as DynaPDFStackMBS
Var pdf as DynaPDFMBS // get your DynaPDF object
```

call pdf.InitStack(s)

Notes: If stack is nil, a new one will be created and stored in the variable.

Return values:
If the function succeeds the return value is true. If the function fails the return value is false.
See also InitStack function in DynaPDF manual.

78.41.566 InkAnnot(points() as DynaPDFPointMBS, LineWidth as Double, ColorValue as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an Ink annotation.
Notes: An ink annotation (PDF 1.3) represents a freehand "scribble" composed of one or more disjoint paths. The parameter Points represents a stroked path. More paths can be added with AddInkList.
The points are interpreted in currect user space. Any transformation that was applied on the coordinate system will be taken into account.
The points are connected with bezier curves to achieve a smooth transition between points. If the points should be connected with straight lines, then create a PolyLine annotation instead (see PolyLineAnnot).
This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState() if necessary.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also InkAnnot function in DynaPDF manual.

78.41.567 InkAnnotAnsi(points() as DynaPDFPointMBS, LineWidth as Double, ColorValue as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** Creates an Ink annotation.
Notes: An ink annotation (PDF 1.3) represents a freehand "scribble" composed of one or more disjoint paths. The parameter Points represents a stroked path. More paths can be added with AddInkList.
The points are interpreted in currect user space. Any transformation that was applied on the coordinate system will be taken into account.
The points are connected with bezier curves to achieve a smooth transition between points. If the points

should be connected with straight lines, then create a PolyLine annotation instead (see PolyLineAnnot). This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState() if necessary.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also InkAnnot function in DynaPDF manual.

78.41.568 InsertBarcode(PosX as double, PosY as double, Width as double, Height as double, HAlign as Integer, VAlign as Integer, Barcode as DynaPDFBarcode2MBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inserts a barcode to the current open page.
Example:

```
Var d As New DynapdfMBS
// create/edit a page, then draw barcode:

// UPCA
Var b1 As New DynaPDFBarcode2MBS
b1.BarcodeType = b1.kbctUPCA
b1.Data = "72527270270"

Call d.InsertBarcode(100, 100, 200, 50, d.kcoLeft, d.kcoTop, b1)
```

Notes: See the kbct* constants for the types supported.

Options are very similar to what we have in our BarcodeGeneratorMBS class as both use the same zint library.
See also InsertBarcode function in DynaPDF manual.

78.41.569 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as memoryblock) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use InsertImageFromBuffer instead. **Function:** The function inserts a Device Independent Bitmap from a file buffer.
See also InsertBMPFromBuffer function in DynaPDF manual.
See also:

- 78.41.570 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string) as Integer 13137
- 78.41.571 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, BufferAddress as Integer) as Integer 13137

78.41.570 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use InsertImageFromBuffer instead. **Function:** The function inserts a Device Independent Bitmap from a file buffer.
See also InsertBMPFromBuffer function in DynaPDF manual.
See also:

- 78.41.569 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as memoryblock) as Integer 13136
- 78.41.571 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, BufferAddress as Integer) as Integer 13137

78.41.571 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, BufferAddress as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use InsertImageFromBuffer instead. **Function:** The function inserts a Device Independent Bitmap from a file buffer.
See also InsertBMPFromBuffer function in DynaPDF manual.
See also:

- 78.41.569 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as memoryblock) as Integer 13136
- 78.41.570 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string) as Integer 13137

78.41.572 InsertBMPFromHandle(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, hBitmap as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function inserts a bitmap in the same way as InsertImage() but accepts a HBITMAP handle as input.

See also InsertBMPFromHandle function in DynaPDF manual.

78.41.573 InsertBookmark(title as String, parent as Integer, DestPage as Integer, Open as boolean, AddChildren as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function inserts a bookmark to the global outline tree of the document.
Notes: The title parameter is converted to unicode.
See also InsertBookmark function in DynaPDF manual.

78.41.574 InsertBookmarkAnsi(title as String, parent as Integer, DestPage as Integer, Open as boolean, AddChildren as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** This function inserts a bookmark to the global outline tree of the document.
Notes: The title parameter is converted to ANSI.
See also InsertBookmark function in DynaPDF manual.

78.41.575 InsertBookmarkEx(title as String, parent as Integer, NamedDest as Integer, Open as boolean, AddChildren as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function inserts a bookmark to the global outline tree of the document.
Notes: The title parameter is converted to unicode.
See also InsertBookmarkEx function in DynaPDF manual.

78.41.576 InsertBookmarkExAnsi(title as String, parent as Integer, NamedDest as Integer, Open as boolean, AddChildren as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** This function inserts a bookmark to the global outline tree of the document.
Notes: The title parameter is converted to ANSI.
See also InsertBookmarkEx function in DynaPDF manual.

78.41.577 InsertImage(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, File as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use InsertImage instead.
Function: The function inserts an image from a file.
Example:

```
Var pdf as DynaPDFMBS

// ... add page

// use transparency from image
call pdf.SetUseTransparency(False)

// max 300 dpi for recompressed images
call pdf.SetResolution(300)

// use JPEG when compressing new pictures
call pdf.SetCompressionFilter(pdf.kcfJPEG)

// pass through JPEGs if possible
call pdf.SetSaveNewImageFormat(false)

// insert image
Var source as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
call pdf.InsertImage(0, 0, 300, 200, source)
```

Notes: Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.

DynaPDF 3.0 adds support for pictures with alpha channel for this function.
See also InsertImage function in DynaPDF manual.

78.41.578 InsertImageEx(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, File as folderitem, index as Integer = 1) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts an image from a file.
Example:

```
Var pdf as DynaPDFMBS
```

```
// ... add page

// use transparency from image
call pdf.SetUseTransparency(False)

// max 300 dpi for recompressed images
call pdf.SetResolution(300)

// use JPEG when compressing new pictures
call pdf.SetCompressionFilter(pdf.kcfJPEG)

// pass through JPEGs if possible
call pdf.SetSaveNewImageFormat(false)

// insert image
Var source as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
call pdf.InsertImageEx(0, 0, 300, 200, source)
```

Notes: Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.

DynaPDF 3.0 adds support for pictures with alpha channel for this function.
See also InsertImageEx function in DynaPDF manual.
See also:

- 78.41.579 InsertImageEx(PosX as double, PosY as double, ScaleWidth as double, ScaleHeight as double, Path as String, index as integer = 1) as integer 13140

78.41.579 InsertImageEx(PosX as double, PosY as double, ScaleWidth as double, ScaleHeight as double, Path as String, index as integer = 1) as integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts an image from a file.
Example:

```
Var d As New DynaPDFMBS

// create PDF in memory
Call d.CreateNewPDF

// add a picture
Call d.Append
Call d.InsertImageEx(100, 100, 100, 100, "/Users/cs/Pictures/mond.jpg")
Call d.EndPage
```

```
// okay?
If d.HaveOpenDoc Then

// open target file
Call d.OpenOutputFile("/Users/cs/Desktop/mond.pdf")

// write and close
Call d.CloseFile

End If
```

Notes: Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.

DynaPDF 3.0 adds support for pictures with alpha channel for this function.
See also InsertImageEx function in DynaPDF manual.
See also:

- 78.41.578 InsertImageEx(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, File as folderitem, index as Integer = 1) as Integer 13139

78.41.580 InsertImageFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as Memoryblock, index as Integer = 1) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts an image in exactly the same way as InsertImageEx(), but it accepts a file buffer as input.
Notes: Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.

DynaPDF 3.0 adds support for pictures with alpha channel for this function.
Please pass positon and size as doubles. If you use integers, Xojo will give a compile error.
See also InsertImageFromBuffer function in DynaPDF manual.
See also:

- 78.41.581 InsertImageFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string, index as Integer = 1) as Integer 13142

78.41.581 InsertImageFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string, index as Integer = 1) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts an image in exactly the same way as InsertImageEx(), but it accepts a file buffer as input.
Notes: Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.

DynaPDF 3.0 adds support for pictures with alpha channel for this function.
Please pass positon and size as doubles. If you use integers, Xojo will give a compile error.
See also InsertImageFromBuffer function in DynaPDF manual.
See also:

- 78.41.580 InsertImageFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as Memoryblock, index as Integer = 1) as Integer 13141

78.41.582 InsertMetafile(FileName as folderitem, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic.
Notes: Requires DynaPDF Lite license.
See also InsertMetafile function in DynaPDF manual.

78.41.583 InsertMetafileEx(Buffer as memoryblock, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafile().
Notes: Requires DynaPDF Lite license.
See also InsertMetafileEx function in DynaPDF manual.
See also:

- 78.41.584 InsertMetafileEx(Buffer as string, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean 13143

78.41.584 InsertMetafileEx(Buffer as string, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafile().
Notes: Requires DynaPDF Lite license.
See also InsertMetafileEx function in DynaPDF manual.
See also:

- 78.41.583 InsertMetafileEx(Buffer as memoryblock, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean 13142

78.41.585 InsertMetafileExt(FileName as folderitem, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafile().
Notes: Requires DynaPDF Lite license.
See also InsertMetafileExt function in DynaPDF manual.

78.41.586 InsertMetafileExtEx(Buffer as Memoryblock, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafileExt().
Notes: Requires DynaPDF Lite license.
See also InsertMetafileExtEx function in DynaPDF manual.
See also:

- 78.41.587 InsertMetafileExtEx(Buffer as String, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean 13144

78.41.587 InsertMetafileExtEx(Buffer as String, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafileExt().
Notes: Requires DynaPDF Lite license.
See also InsertMetafileExtEx function in DynaPDF manual.
See also:

- 78.41.586 InsertMetafileExtEx(Buffer as Memoryblock, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean 13143

78.41.588 InsertMetafileFromHandle(hEnhMetafileHandle as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function inserts an Enhanced Metafile exactly in the same way as InsertMetafile() but accepts a HENHMETAFILE handle as input.
Notes: Requires DynaPDF Lite license.
See also InsertMetafileFromHandle function in DynaPDF manual.

78.41.589 InsertMetafileFromHandleEx(hEnhMetafileHandle as Integer, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function inserts an Enhanced Metafile exactly in the same way as InsertMetafileExt() but accepts a HENHMETAFILE handle as input.
Notes: Requires DynaPDF Lite license.
See also InsertMetafileFromHandleEx function in DynaPDF manual.

78.41.590 InsertPicture(pic as picture, mask as picture, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Takes a Xojo picture with a mask and adds it to the PDF.
Example:

```
// insert MBS Logo with round Mask
Var d as new MyDynaPDFMBS
Var file as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

call d.CreateNewPDF file
call d.Append

// get picture
Var p as Picture = LogoMBS(500)

// get mask
Var m as new Picture(500, 500, 32)
m.Graphics.ForeColor = &cFFFFFF
m.Graphics.FillRect 0,0,500,500
m.Graphics.ForeColor = &c000000
m.Graphics.FillOval 0,0,500,500

// add image to pdf
call d.InsertPicture(p, m, 50, 150, 500, 500)

call d.EndPage
call d.CloseFile
```

Notes: Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.
This is a convenience function to handle picture with mask.

Internally this calls pdfInsertRawImage so check the documtation on this function in the dynapdf manual.
For images with alpha channel, we pass a PNG via pdfInsertImageFromBuffer.

Usually InsertPicture with the mask/alpha is better.
PosX and PosY are the destination position and ScaledWidth and ScaledHeight is the new size of the image.
See also:

- 78.41.591 InsertPicture(pic as picture, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer 13145

78.41.591 InsertPicture(pic as picture, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Takes a Xojo picture and adds it to the PDF.

Notes: Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.
Internally this calls pdfInsertRawImage so check the documtation on this function in the dynapdf manual.
For images with alpha channel, we pass a PNG via pdfInsertImageFromBuffer.

PosX and PosY are the destination position and ScaledWidth and ScaledHeight is the new size of the image.
See also:

- 78.41.590 InsertPicture(pic as picture, mask as picture, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer 13144

78.41.592 InsertRawImage(Data as String, BitsPerPixel as Integer, ColorCount as Integer, ImgWidth as Integer, ImgHeight as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts an image from a raw image buffer which contains no image header.
See also InsertRawImage function in DynaPDF manual.
See also:

- 78.41.593 InsertRawImage(Memory as MemoryBlock, BitsPerPixel as Integer, ColorCount as Integer, ImgWidth as Integer, ImgHeight as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer 13146

78.41.593 InsertRawImage(Memory as MemoryBlock, BitsPerPixel as Integer, ColorCount as Integer, ImgWidth as Integer, ImgHeight as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts an image from a raw image buffer which contains no image header.
See also InsertRawImage function in DynaPDF manual.
See also:

- 78.41.592 InsertRawImage(Data as String, BitsPerPixel as Integer, ColorCount as Integer, ImgWidth as Integer, ImgHeight as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer 13146

78.41.594 InsertRawImageEx(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Image as DynaPDFRawImageMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts an image from a raw image buffer that contains no image header.
Notes: See also InsertRawImageEx in dynapdf_help.pdf manual file.
Returns false if image parameter has invalid values.
See also InsertRawImageEx function in DynaPDF manual.

78.41.595 InsertSVG(SVG as DynaPDFSVGMBS, PosX as double, PosY as double, Width as double, Height as double, SymbolID as String = ””, Flags as Integer = 0) as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Places a SVG graphic on the currently open page, template, or pattern.
Example:

```
Var pdf As New DynaPDFMBS
Call pdf.CreateNewPDF

// load a SVG
var file as FolderItem = SpecialFolder.Desktop.Child("dinosaur.svg")
Var svg As DynaPDFSVGMBS = pdf.LoadSVG(file)

// add page and place SVG
Call pdf.Append
Call pdf.InsertSVG(svg, 50, 50, 500, 500)
Call pdf.EndPage

// save it
Call pdf.OpenOutputFile(SpecialFolder.Desktop.Child("dinosaur.pdf"))
Call pdf.CloseFile
```

Notes: As described at LoadSVG, a symbol name is might be required in order to load the desired symbol or graphic.

This is a native SVG-to-PDF converter that translates SVG graphics directly into PDF drawing operations and resources. Vector graphics remain vector-based whenever possible, preserving their scalability and rendering quality.

The converter supports commonly used SVG features including paths and basic shapes, transformations,

clipping, text, gradients, patterns, reusable elements, symbols, nested SVG documents, viewports and view boxes, as well as a subset of CSS relevant to SVG rendering.

SVG files containing multiple embedded SVG graphics can be enumerated and individual graphics can be selected by their symbol id. This makes it possible to efficiently process SVG icon and symbol collections without extracting the individual SVG documents beforehand.

The converter includes protection against cyclic and recursive references and is designed to handle malformed or unsupported SVG constructs gracefully.

DynaPDF implements the SVG features required for a broad range of real-world SVG documents but full conformance with every feature of the SVG and CSS specifications is not provided. SVG Graphics are drawn into a clipping path so that contents outside the bounding box of the graphic remains invisible.

Positioning & Scaling
If top down coordinates are active (see SetPageCoords() for further information), PosX / PosY is the upper left corner of the graphic. If bottom up coordinates are active, PosX / PosY is the lower left corner of the graphic.
The width and height can be calculated as follows:

- If Width and Height is 0 the function uses the original width or height from the svg file.
- If Width or Height is 0, the missing value is calculated in relation to the given value of Height or Width to preserve the aspect ratio. The resulting output is a vector graphic with exact proportions relative to its original size.
- If Width or Height is negative, the graphic is scaled to the absolute value and mirrored on the x- or y-axis.

See also InsertSVG function in DynaPDF manual.

78.41.596 IsBidiText(Text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the position of the first bidirectional character that can be found in the string or -1 if no such character can be found.
Notes: The text parameter is converted to unicode.
See also IsBidiText function in DynaPDF manual.

78.41.597 IsColorPage(GrayIsColor as Boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function checks whether a page is a color page or if all graphic elements of the page use black & white only.
Notes: Value is 0 for false, 1 for true or negative for an error.
See also IsColorPage function in DynaPDF manual.

78.41.598 IsEmptyPage as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function checks whether a page is empty.
Notes: Value is 0 for false, 1 for true or negative for an error.
See also IsEmptyPage function in DynaPDF manual.

78.41.599 IsWrongPwd(errCode as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether an error code is for a wrong password.
Notes: We have several error codes which result from different password protections and this function considers them all.
See also IsWrongPwd function in DynaPDF manual.

78.41.600 IterateAnnotations as DynaPDFIteratorMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Iterate over annotations.
Example:

```
Var d As New DynaPDFMBS

// load a PDF here or add an annotation

For Each Annotation As DynaPDFAnnotationExMBS In d.IterateAnnotations

Var Nmae As String = Annotation.Name

Break
Next
```

Notes: The value is a DynaPDFAnnotationExMBS object.

78.41.601 IterateBookmarks as DynaPDFIteratorMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Iterate over bookmarks.
Example:

```
Var d As New DynaPDFMBS

For Each Bookmark As DynaPDFBookmarkMBS In d.IterateBookmarks

Var Name As String = Bookmark.Title

Break
Next
```

Notes: The value is a DynaPDFBookmarkMBS object.

78.41.602 IterateCMaps as DynaPDFIteratorMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Iterate over character maps.
Example:

```
Var d As New DynaPDFMBS

For Each CMap As DynaPDFCMapMBS In d.IterateCMaps

Var Name As String = CMap.CMapName

Break
Next
```

Notes: The value is a DynaPDFCMapMBS object.

78.41.603 IterateColorSpaces as DynaPDFIteratorMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Iterate over Colorspaces.
Example:

```
Var d As New DynaPDFMBS

For Each ColorSpace As DynaPDFColorSpaceMBS In d.IterateColorSpaces

Var Name As String = ColorSpace.Name

Break
Next
```

Notes: The value is a DynaPDFColorSpaceMBS object.

78.41.604 IterateEmbeddedFiles(Decompress as boolean = false) as DynaPDFIteratorMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Iterate over embedded files.
Example:

```
Var d As New DynaPDFMBS

For Each fileSpace As DynaPDFFileSpecMBS In d.IterateEmbeddedFiles

Var Name As String = fileSpace.Name

Break
Next
```

Notes: The value is a DynaPDFFileSpecMBS object.

78.41.605 IterateErrLogMessages as DynaPDFIteratorMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Iterate over error log messages.
Example:

```
Var d As New DynaPDFMBS
```

```
For Each Error As DynaPDFErrorMBS In d.IterateErrLogMessages

Var Name As String = Error.Message

Break
Next
```

Notes: The value is a DynaPDFErrorMBS object.

78.41.606 IterateFields as DynaPDFIteratorMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Iterate over fields.
Example:

```
Var d As New DynaPDFMBS

For Each Field As DynaPDFFieldExMBS In d.IterateFields

Var Name As String = Field.FieldName

Break
Next
```

Notes: The value is a DynaPDFFieldExMBS object.

78.41.607 IterateFonts as DynaPDFIteratorMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Iterate over fonts.
Example:

```
Var d As New DynaPDFMBS

Call d.CreateNewPDF

Call d.Append
Call d.SetFont("Geneva")

// now we can find fonts like Helvetica (default) and our Geneva
For Each Font As DynaPDFFontMBS In d.IterateFonts
```

```
Var Name As String = Font.FontName

Break
Next
```

Notes: The value is a DynaPDFFontMBS object.

78.41.608 IterateImages(ImageFlags as Integer = 0) as DynaPDFIteratorMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Iterate over images.
Example:

```
Var d As New DynaPDFMBS

// load a PDF here or add pages with images

For Each Image As DynaPDFImageMBS In d.IterateImages

Var Buffer As String = Image.Buffer

Break
Next
```

Notes: The value is a DynaPDFImageMBS object.

78.41.609 IterateLayerConfigurations as DynaPDFIteratorMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Iterate over layer configurations.
Example:

```
Var d As New DynaPDFMBS

// load a PDF here or add pages with layers

For Each layer As DynaPDFOCLayerConfigMBS In d.IterateLayerConfigurations

Var Name As String = layer.Name

Break
```

```
Next
```

Notes: The value is a DynaPDFOCLayerConfigMBS object.

78.41.610 IterateNamedDestinations as DynaPDFIteratorMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Iterate over named destinations.
Example:

```
Var d As New DynaPDFMBS

// load a PDF here or add pages with named destinations

For Each dest As DynaPDFNamedDestMBS In d.IterateNamedDestinations

Var Name As String = dest.Name

Break
Next
```

Notes: The value is a DynaPDFNamedDestMBS object.

78.41.611 IterateOCGs as DynaPDFIteratorMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Iterate over OCGs.
Example:

```
Var d As New DynaPDFMBS

// load a PDF here or add pages with layers

For Each layer As DynaPDFOCGMBS In d.IterateOCGs

Var IsVisible As Boolean = layer.IsVisible

Break
Next
```

Notes: The value is a DynaPDFOCGMBS object.

78.41.612 IterateOutputIntents as DynaPDFIteratorMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Iterate over output intents.
Example:

```
Var d As New DynaPDFMBS

// load a PDF here or add output intent

For Each OutputIntent As DynaPDFOutputIntentMBS In d.IterateOutputIntents

Var RegistryName As String = OutputIntent.RegistryName

Break
Next
```

Notes: The value is a DynaPDFOutputIntentMBS object.

78.41.613 IteratePageAnnotations as DynaPDFIteratorMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Iterate over page annotations.
Example:

```
Var d As New DynaPDFMBS

// load a PDF here or add annotation

For Each Annotation As DynaPDFAnnotationExMBS In d.IteratePageAnnotations

Var Name As String = Annotation.Name

Break
Next
```

Notes: The value is a DynaPDFAnnotationExMBS object.

78.41.614 IteratePageLabels as DynaPDFIteratorMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Iterate over page labels.
Example:

```
Var d As New DynaPDFMBS

// load a PDF here or add page labels

For Each PageLabel As DynaPDFPageLabelMBS In d.IteratePageAnnotations

Var Prefix As String = PageLabel.Prefix

Break
Next
```

Notes: The value is a DynaPDFPageLabelMBS object.

78.41.615 IterateSysFonts as DynaPDFIteratorMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Iterate over system fonts.
Example:

```
Var d As New DynaPDFMBS

For Each Font As DynaPDFSysFontMBS In d.IterateSysFonts

Var Name As String = Font.FullName

Break
Next
```

Notes: The value is a DynaPDFSysFontMBS object.

78.41.616 IterateXFAStreams as DynaPDFIteratorMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Iterate over XFA Streams.
Example:

```
Var d As New DynaPDFMBS

// load a PDF here or add a XFAStream
```

```
For Each XFAStream As DynaPDFXFAStreamMBS In d.IterateXFAStreams

Var Nmae As String = XFAStream.Name

Break
Next
```

Notes: The value is a DynaPDFXFAStreamMBS object.

78.41.617 KofCMYK(CMYK as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns K of a CMYK color value.
Example:

```
Var cmyk as Integer = DynaPDFMBS.CMYK(1,2,3,4)
MessageBox str(DynaPDFMBS.KofCMYK(cmyk)) // shows 4
```

Notes: Returns different values on BigEndian and LittleEndian systems.

78.41.618 LAB(L as Integer, A as Integer, B as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds a LAB color value based on the given component values.
Example:

```
Var lab as Integer = DynaPDFMBS.LAB(1,2,3)
MessageBox hex(lab)
```

78.41.619 LineAnnot(x1 as Double, y1 as Double, x2 as Double, y2 as Double, LineWidth as Double, StartLineEndStyle as Integer, EndLineEndStyle as Integer, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a line annotation.
See also LineAnnot function in DynaPDF manual.

78.41.620 LineAnnotAnsi(x1 as Double, y1 as Double, x2 as Double, y2 as Double, LineWidth as Double, StartLineEndStyle as Integer, EndLineEndStyle as Integer, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** Adds a line annotation.
See also LineAnnot function in DynaPDF manual.

78.41.621 LineTo(PosX as Double, PosY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function draws a path from the current position up to the specified point.
Example:

```
Var pdf as new DynaPDFMBS
Var f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Line.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

// Create a new PDF
call pdf.CreateNewPDF f

// We want to use top-down coordinates
call pdf.SetPageCoords pdf.kpcTopDown

// Add a page
call pdf.Append

// black
call pdf.SetStrokeColor 0

// line down
call pdf.MoveTo(100,100)
call pdf.LineTo(200,200)
call pdf.StrokePath

// line up
call pdf.MoveTo(200,200)
call pdf.LineTo(300,100)
call pdf.StrokePath
```

```
// end page
call pdf.EndPage

// Close page
call pdf.CloseFile

// Open PDF
f.Launch
```

See also LineTo function in DynaPDF manual.

78.41.622 LoadCMap(CMapName as string, Embed as Boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads a character map.
See also LoadCMap function in DynaPDF manual.

78.41.623 LoadError as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message from LoadLibrary call.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.dylib")

if DynaPDFMBS.LoadLibrary(f) then
MessageBox "OK"
else
MessageBox DynaPDFMBS.LoadError
end if
```

78.41.624 LoadFDFData(FileName as folderitem, Password as string, Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads PDF form data from the given PDF file.
See also LoadFDFData function in DynaPDF manual.

78.41.625 LoadFDFDataEx(Buffer as memoryblock, Password as string, Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads PDF form data from the given PDF file in the buffer.
See also LoadFDFDataEx function in DynaPDF manual.
See also:

- 78.41.626 LoadFDFDataEx(Buffer as string, Password as string, Flags as Integer) as Boolean 13160

78.41.626 LoadFDFDataEx(Buffer as string, Password as string, Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads PDF form data from the given PDF file in the buffer.
See also LoadFDFDataEx function in DynaPDF manual.
See also:

- 78.41.625 LoadFDFDataEx(Buffer as memoryblock, Password as string, Flags as Integer) as Boolean 13160

78.41.627 LoadFont(Buffer as memoryblock, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function loads a font from a file buffer.
Notes: Added CollectionIndex parameter in 12.1 plugin version.
See also LoadFont function in DynaPDF manual.
See also:

- 78.41.628 LoadFont(Buffer as string, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer 13160

78.41.628 LoadFont(Buffer as string, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function loads a font from a file buffer.
Notes: Added CollectionIndex parameter in 12.1 plugin version.

See also LoadFont function in DynaPDF manual.
See also:

- 78.41.627 LoadFont(Buffer as memoryblock, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer 13160

78.41.629 LoadFontEx(File as folderitem, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function loads a font from a font file and activates it in the graphics state if the function was called within an open page or template.
See also LoadFontEx function in DynaPDF manual.
See also:

- 78.41.630 LoadFontEx(Filepath as string, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer 13161

78.41.630 LoadFontEx(Filepath as string, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function loads a font from a font file and activates it in the graphics state if the function was called within an open page or template.
See also LoadFontEx function in DynaPDF manual.
See also:

- 78.41.629 LoadFontEx(File as folderitem, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer 13161

78.41.631 LoadLayerConfig(Index as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the specified layer configuration.
Notes: A PDF file that contains layers (Optional Content Groups in PDF syntax) contains usually at least a default configuration dictionary. This configuration is loaded by default when the visibility state of a layer or optional content group must be determined, e.g. when rendering a page.
Use this function to load another configuration if available. To determine the number of available configurations call GetLayerConfigCount().

The parameter Index can be one of the following:

- -1: Load the default configuration.
- -2: If a configuration was already loaded, leave it unchanged. Load
- the default configuration otherwise.
- 0..Count -1: Load the specified configuration.

If the function succeeds the return value is true. If the function fails the return value is false.
See also LoadLayerConfig function in DynaPDF manual.

78.41.632 LoadLibrary(File as FolderItem) as boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the dynapdf library file.
Example:

```
MessageBox "Version before: "+DynaPDFMBS.DynaPDFVersion

Var f as FolderItem = SpecialFolder.Desktop.Child("dynapdf.dylib")

if DynaPDFMBS.LoadLibrary(f) then
MessageBox "Version after: "+DynaPDFMBS.DynaPDFVersion
else
MessageBox DynaPDFMBS.LoadError
end if
```

Notes: Returns true on success or false on failure.

While the plugin comes with an internal dynapdf library, you can use this method to load a different version of the library.
See also:

- 78.41.633 LoadLibrary(Path as string) as boolean 13162

78.41.633 LoadLibrary(Path as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the dynapdf library file.
Notes: Returns true on success or false on failure.

While the plugin comes with an internal dynapdf library, you can use this method to load a different version of the library.
See also:

- 78.41.632 LoadLibrary(File as FolderItem) as boolean 13162

78.41.634 LoadSVG(file as FolderItem) as DynaPDFSVGMBS

MBS DynaPDF Plugin, Plugin Version: 26.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens the specified SVG file and returns the SVG parser instance on success.
Example:

```
Var pdf As New DynaPDFMBS
Call pdf.CreateNewPDF

// load a SVG
var file as FolderItem = SpecialFolder.Desktop.Child("dinosaur.svg")
Var svg As DynaPDFSVGMBS = pdf.LoadSVG(file)
```

Notes: SVG files are available in different flavors. Regular SVG files contain exactly one graphic but SVG files can also contain more than one graphic or symbol. Such symbol files contain no visible graphic if loaded without a symbol name.

In order to determine which kind of SVG file we have in memory, the function
SymbolCount() must be called after the SVG file was loaded. If the return value is greater zero, the file contains multiple symbols. In such a case the desired symbol name must be passed to InsertSVG(), otherwise there is no visible output.
The symbol names that a SVG file contains can be accessed with SymbolName. The function accepts an index from 0 through SymbolCount -1.
See also LoadSVG function in DynaPDF manual.
See also:

- 78.41.635 LoadSVG(path as String) as DynaPDFSVGMBS 13163

78.41.635 LoadSVG(path as String) as DynaPDFSVGMBS

MBS DynaPDF Plugin, Plugin Version: 26.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens the specified SVG file and returns the SVG parser instance on success.
Notes: SVG files are available in different flavors. Regular SVG files contain exactly one graphic but SVG files can also contain more than one graphic or symbol. Such symbol files contain no visible graphic if loaded without a symbol name.

In order to determine which kind of SVG file we have in memory, the function

SymbolCount() must be called after the SVG file was loaded. If the return value is greater zero, the file contains multiple symbols. In such a case the desired symbol name must be passed to InsertSVG(), otherwise there is no visible output.
The symbol names that a SVG file contains can be accessed with SymbolName. The function accepts an index from 0 through SymbolCount -1.
See also LoadSVG function in DynaPDF manual.
See also:

- 78.41.634 LoadSVG(file as FolderItem) as DynaPDFSVGMBS 13163

78.41.636 LoadSVGFromBuffer(data as MemoryBlock) as DynaPDFSVGMBS

MBS DynaPDF Plugin, Plugin Version: 26.4, Platforms: macOS, Linux, Windows, Targets: All.

Function:

Opens a SVG file and returns the SVG parser instance on success like LoadSVG(), but accepts a file buffer as input.
Notes:

If the function succeeds the return value is a pointer of the SVG parser instance. If the function fails, the return value is nil.
See also LoadSVGFromBuffer function in DynaPDF manual.
See also:

- 78.41.637 LoadSVGFromBuffer(data as String) as DynaPDFSVGMBS 13164

78.41.637 LoadSVGFromBuffer(data as String) as DynaPDFSVGMBS

MBS DynaPDF Plugin, Plugin Version: 26.4, Platforms: macOS, Linux, Windows, Targets: All.

Function:

Opens a SVG file and returns the SVG parser instance on success like LoadSVG(), but accepts a file buffer as input.
Notes:

If the function succeeds the return value is a pointer of the SVG parser instance. If the function fails, the return value is nil.
See also LoadSVGFromBuffer function in DynaPDF manual.
See also:

- 78.41.636 LoadSVGFromBuffer(data as MemoryBlock) as DynaPDFSVGMBS 13164

78.41.638 LockLayer(layer as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unlocks a layer.
See also LockLayer function in DynaPDF manual.

78.41.639 LofLAB(LAB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns L of a LAB color value.
Example:

```
Var lab as Integer = DynaPDFMBS.LAB(1,2,3)
MessageBox str(DynaPDFMBS.LofLAB(lab)) // shows 1
```

78.41.640 MarkTemplateAsWatermark(TemplateHandle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Marks template as watermark.
Notes: The function adds additional metadata to a template (XObject type Form in PDF terms, see BeginTemplate() or BeginTransparencyGroup() for further information) so that PDF editors like Adobe Acrobat are able to identify the template as watermark.

Watermarks can be deleted with Acrobat and many other PDF editors. DynaPDF can delete such watermarks too with DeleteWatermark() or Optimize().

Returns true on success or false on failure.
See also MarkTemplateAsWatermark function in DynaPDF manual.

78.41.641 MofCMYK(CMYK as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns M of a CMYK color value.
Example:

```
Var cmyk as Integer = DynaPDFMBS.CMYK(1,2,3,4)
MessageBox str(DynaPDFMBS.MofCMYK(cmyk)) // shows 2
```

Notes: Returns different values on BigEndian and LittleEndian systems.

78.41.642 MovePage(source as Integer, dest as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function moves a page to another position in the document.
See also MovePage function in DynaPDF manual.

78.41.643 MoveTo(PosX as Double, PosY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function moves the current position to the point specified by PosX, PosY.
Example:

```
Var pdf as new DynaPDFMBS
Var f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Line.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

// Create a new PDF
call pdf.CreateNewPDF f

// We want to use top-down coordinates
call pdf.SetPageCoords pdf.kpcTopDown

// Add a page
call pdf.Append

// black
call pdf.SetStrokeColor 0

// line down
call pdf.MoveTo(100,100)
call pdf.LineTo(200,200)
call pdf.StrokePath

// line up
call pdf.MoveTo(200,200)
call pdf.LineTo(300,100)
call pdf.StrokePath

// end page
call pdf.EndPage

// Close page
call pdf.CloseFile
```

```
// Open PDF
f.Launch
```

See also MoveTo function in DynaPDF manual.

78.41.644 MultiplyMatrix(M1 as DynaPDFMatrixMBS, M2 as DynapdfMatrixMBS, NewMatrix as DynapdfMatrixMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function multiplies two transformation matrices and stores the result in the parameter NewMatrix.
Notes: You must pass three non nil matrix references into the function.
See also MultiplyMatrix function in DynaPDF manual.

78.41.645 OpenImportBuffer(Buffer as Memoryblock, PwdType as Integer = 0, Password as string = "") as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function reads an external PDF from a file buffer so that it can be imported entirely or parts of it.
Example:

```
Var pdf As New DynaPDFMBS

// start new PDF
call pdf.CreateNewPDF

// set flags to import all
Var flags As Integer = Bitwise.BitOr(pdf.kifImportAsPage, pdf.kifImportAll)
Call pdf.SetImportFlags(flags)

// merge two PDF

var Data1 as MemoryBlock // first PDF data
Var Data2 As MemoryBlock // second PDF data

if Data1 <>nil then
Call pdf.OpenImportBuffer(Data1)
Call pdf.ImportPDFFile 1
end If

If Data2 <>Nil Then
```

```
Call pdf.OpenImportBuffer(Data2)
Call pdf.ImportPDFFile pdf.GetPageCount+1
End If

// Close and get new data
call pdf.CloseFile

Var NewPDFData As MemoryBlock = pdf.GetBufferMemory
```

Notes: Requires DynaPDF Lite license.
See also OpenImportBuffer function in DynaPDF manual.
See also:

- 78.41.646 OpenImportBuffer(Buffer as string, PwdType as Integer = 0, Password as string = "") as Integer 13168

78.41.646 OpenImportBuffer(Buffer as string, PwdType as Integer = 0, Password as string = "") as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function reads an external PDF from a file buffer so that it can be imported entirely or parts of it.
Notes: Requires DynaPDF Lite license.
See also OpenImportBuffer function in DynaPDF manual.
See also:

- 78.41.645 OpenImportBuffer(Buffer as Memoryblock, PwdType as Integer = 0, Password as string = "") as Integer 13167

78.41.647 OpenImportFile(File as folderitem, PwdType as Integer = 0, Password as string = "") as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function opens an external PDF file so that it can be imported entirely or parts of it.
Notes: Requires DynaPDF Lite license.
See also OpenImportFile function in DynaPDF manual.
See also:

- 78.41.648 OpenImportFile(Path as String, PwdType as integer = 0, Password as string = "") as integer 13169

78.41.648 OpenImportFile(Path as String, PwdType as integer = 0, Password as string = "") as integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function opens an external PDF file so that it can be imported entirely or parts of it.
Notes: Requires DynaPDF Lite license.
See also OpenImportFile function in DynaPDF manual.
See also:

- 78.41.647 OpenImportFile(File as folderitem, PwdType as Integer = 0, Password as string = "") as Integer 13168

78.41.649 OpenOutputFile(File as folderitem) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function opens the output file into which the PDF file should be written.
Example:

```
Var d As New DynaPDFMBS

// create PDF in memory
Call d.CreateNewPDF

// add a picture
Call d.Append
Call d.InsertImageEx(100, 100, 100, 100, "/Users/cs/Pictures/mond.jpg")
Call d.EndPage

// okay?
If d.HaveOpenDoc Then

// open target file
Var f As FolderItem = SpecialFolder.Desktop.Child("mond.pdf")
Call d.OpenOutputFile(f)

// write and close
Call d.CloseFile

End If
```

See also OpenOutputFile function in DynaPDF manual.
See also:

- 78.41.650 OpenOutputFile(Path as String) as Boolean 13170

78.41.650 OpenOutputFile(Path as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function opens the output file into which the PDF file should be written.
Example:

```
Var d As New MyDynaPDFMBS

// create PDF in memory
Call d.CreateNewPDF

// add a picture
Call d.Append
Call d.InsertImageEx(100, 100, 100, 100, "/Users/cs/Pictures/mond.jpg")
Call d.EndPage

// okay?
If d.HaveOpenDoc Then

// open target file
Call d.OpenOutputFile("/Users/cs/Desktop/mond.pdf")

// write and close
Call d.CloseFile

End If
```

See also OpenOutputFile function in DynaPDF manual.
See also:

- 78.41.649 OpenOutputFile(File as folderitem) as Boolean 13169

78.41.651 OpenOutputFileEncrypted(File as folderitem, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens the output file and sets the encryption parameters.
Notes: This function enables in combination with FlushPages the creation of very large encrypted PDF files with minimal memory usage.
The function can be called in a while statement, e.g. to display a open file dialog if the file could not be opened. Once the function succeeds the PDF file can be finished with CloseFile.

If the function succeeds the return value is true. If the function fails the return value is false.

See also OpenOutputFileEncrypted function in DynaPDF manual.
See also:

- 78.41.652 OpenOutputFileEncrypted(Path as String, OpenPwd as string, OwnerPwd as string, KeyLen as integer, Restrict as integer) as Boolean 13171

78.41.652 OpenOutputFileEncrypted(Path as String, OpenPwd as string, OwnerPwd as string, KeyLen as integer, Restrict as integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens the output file and sets the encryption parameters.
Notes: This function enables in combination with FlushPages the creation of very large encrypted PDF files with minimal memory usage.
The function can be called in a while statement, e.g. to display a open file dialog if the file could not be opened. Once the function succeeds the PDF file can be finished with CloseFile.

If the function succeeds the return value is true. If the function fails the return value is false.
See also OpenOutputFileEncrypted function in DynaPDF manual.
See also:

- 78.41.651 OpenOutputFileEncrypted(File as folderitem, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Boolean 13170

78.41.653 OpenTag(Tag as Integer, Lang as string, AltText as string, Expansion as string, BBox as DynaPDFRectMBS = nil) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tag.
Notes: Rect: Optional parameter BBox that is required by the tags btFigure and btTable.

BBox must be defined in the current coordinate system that is used to output the corresponding contents. All transformations will be taken into account.
See also OpenTag function in DynaPDF manual.

78.41.654 OpenTagAnsi(Tag as Integer, Lang as string, AltText as string, Expansion as string, BBox as DynaPDFRectMBS = nil) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** Opens a tag with ANSI encoding.

Notes: Rect: Optional parameter BBox that is required by the tags btFigure and btTable.
See also OpenTag function in DynaPDF manual.

78.41.655 OpenTagEx(Tag as integer, Lang as string, AltText as string, Expansion as string, Attributes as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tag in the very same way as DynaPDF.OpenTag but supports additional parameters which can be set in a JSON (Javascript Object Notation) like format.
Notes: The optional parameter Attributes is a JSON like string. The JSON parser in DynaPDF supports a few extensions to make the definition of additional attributes as easy as possible.
See also OpenTagEx function in DynaPDF manual.

78.41.656 Optimize(Flags as Integer = 0, Params as DynaPDFOptimizeParamsMBS = nil) as boolean

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optimizes PDF.
Example:

```
Var pdf as new DynapdfMBS
// import PDF here

Var flags as integer = Bitwise.BitOr(_
pdf.kofInMemory, _ // Optimize the file fully in memory. Only useful for small PDF files.
pdf.kofScaleImages, _ // Scale images as specified in the DynaPDFOptimizeParamsMBS class.
pdf.kofNewLinkNames, _ // If set, rename all object links to short names like F1, F2 etc.
pdf.kofDeleteInvPaths, _ // Delete invisible paths.
pdf.kofDeletePrivateData, _ // Delete private data objects from pages, templates, and images.
pdf.kofIgnoreZeroLineWidth, _
pdf.kofDeleteAlternateImages, _ // If set, alternate images will be deleted.
pdf.kofDeleteThumbnails) // Thumbnails can be deleted since PDF viewers can create thumbnails easily on demand.

// pdf.kofInMemory // Optimize the file fully in memory. Only useful for small PDF files.
// pdf.kofConvertAllColors // If set, Separation, DeviceN, and NChannel color spaces will be converted to the device space.
// pdf.kofIgnoreICCBased // If set, ICCBased color spaces will be left unchanged.
// pdf.kofScaleImages // Scale all images
// pdf.kofNewLinkNames // If set, rename all object links to short names like F1, F2 etc.
// pdf.kofDeleteInvPaths // Delete invisible paths. An invisible path is a path that was finished with the no-op operator "n".
```

```
// more flags in DynaPDF documentation

Var o As New DynaPDFOptimizeParamsMBS

o.MinColorRes = 100 // scale images with more than 100 dpi
o.ResColorImages = 150 // down to 150 dpi

call pdf.Optimize(flags, o)
```

Notes: This repairs also a lot of errors in the PDF and can shrink the PDF size.
After optimize, please close PDF. If you need to further edit it, please import it again in a new environment.

You need to use InitColorManagement to get color conversion working well if needed.

Note that this function requires the DynaPDF Pro.

If a page is open, we automatically close it.
See also Optimize function in DynaPDF manual.

78.41.657 PageLink(PosX as Double, PosY as Double, Width as Double, Height as Double, DestPage as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a page link onto the current open page.
See also PageLink function in DynaPDF manual.

78.41.658 PageLink2(PosX as Double, PosY as Double, Width as Double, Height as Double, NamedDest as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a page link onto the current open page by using a named destination as target.
See also PageLink2 function in DynaPDF manual.

78.41.659 PageLink3(PosX as Double, PosY as Double, Width as Double, Height as Double, NamedDest as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function adds a page link to the current open page by using a named destination as target.
Notes: The difference in comparison to PageLink2() is that the named destination can be defined as string. This makes it possible to create the link, also if you don't have the required information to create the named destination at this point. If the named destination does not exist when the file is closed then the link does nothing. See also, CreateNamedDest().

Return values:
If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also PageLink3 function in DynaPDF manual.

78.41.660 PageLinkEx(PosX as Double, PosY as Double, Width as Double, Height as Double, DestType as Integer, DestPage as Integer, a as Double = 0.0, b as Double = 0.0, c as Double = 0.0, d as Double = 0.0) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a page link onto the current open page.
See also PageLinkEx function in DynaPDF manual.

78.41.661 PageStatistic(page as Integer = -1) as DynaPDFPageStatisticMBS

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries statistics from a page.
Notes: If page is -1 the current open page is used. Else the plugin uses editpage(page) to open the page and run the statistics on that.
Returns nil on any error or statistic value.

If a page is open, we automatically close it.

78.41.662 ParseContent(ParseInterface as DynaPDFParseInterfaceMBS, flags as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses the content of a page.
Notes: Requires DynaPDF Pro license.

Please check the newer DynaPDFParserMBS class. There you can use DynaPDFParserContentMBS subclasses to inspect all the page content without all the events. And you can make a couple of modifications on the fly.
See also ParseContent function in DynaPDF manual.

78.41.663 PlaceImage(ImgHandle as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Images can be used multiple times on different positions and with different sizes. This function places an image onto a page or template that was already inserted beforehand by an image function.
See also PlaceImage function in DynaPDF manual.

78.41.664 PlaceSigFieldValidateIcon(SigField as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function places the validation icon in a signature field to the whished position.
See also PlaceSigFieldValidateIcon function in DynaPDF manual.

78.41.665 PlaceTemplate(TmplHandle as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function places a template onto a page, another open template, or pattern.
See also PlaceTemplate function in DynaPDF manual.

78.41.666 PlaceTemplateEx(TmplHandle as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Places a template.
See also PlaceTemplateEx function in DynaPDF manual.

78.41.667 PolygonAnnot(Vertices() as DynaPDFPointMBS, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a Polygon Annotation.
Notes: The vertices are connected by straight lines. The path is always closed before it will be drawn. It is not required to close the path explicitly. At least two vertices must be provided.
The coordinates of the vertices are interpretet in current user space. Any transformation that was applied on the coordinate system will be taken into account.
The stroke or fill color can be set to the special constant kNO_COLOR to fill or stroke the polygon. It is not allowed to set both colors to kNO_COLOR since this would result in an invisible annotation.
This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.
ÔøºÔøº

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also PolygonAnnot function in DynaPDF manual.

78.41.668 PolygonAnnotAnsi(Vertices() as DynaPDFPointMBS, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function creates a Polygon Annotation.
Notes: The vertices are connected by straight lines. The path is always closed before it will be drawn. It is not required to close the path explicitly. At least two vertices must be provided.
The coordinates of the vertices are interpretet in current user space. Any transformation that was applied on the coordinate system will be taken into account.
The stroke or fill color can be set to the special constant kNO_COLOR to fill or stroke the polygon. It is not allowed to set both colors to kNO_COLOR since this would result in an invisible annotation.
This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.
ÔøºÔøº

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.

See also PolygonAnnot function in DynaPDF manual.

78.41.669 PolyLineAnnot(Vertices() as DynaPDFPointMBS, LineWidth as Double, StartLineEndStyle as Integer, EndLineEndStyle as Integer, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a PolyLine Annotation.
Notes: The vertices are connected by straight lines. At least two vertices must be provided.
The coordinates of the vertices are interpretet in current user space. Any transformation that was applied on the coordinate system will be taken into account.
The parameter FillColor is only used if the line end style of the start or end point has an interior that can be filled. The special constant kNO_COLOR represents a transparent interior.
The stroke color is required and must not be set to kNO_COLOR.

This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.
The parameter LineWidth must be in the range 0 through 12 units. Values outside the valid range will be adjusted to the nearest allowed value. A zero line width produces a 1 pixel wide line.
The line end styles can be changed if necessary with SetAnnotLineEndStyle.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also PolyLineAnnot function in DynaPDF manual.

78.41.670 PolyLineAnnotAnsi(Vertices() as DynaPDFPointMBS, LineWidth as Double, StartLineEndStyle as Integer, EndLineEndStyle as Integer, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function creates a PolyLine Annotation.
Notes: The vertices are connected by straight lines. At least two vertices must be provided.
The coordinates of the vertices are interpretet in current user space. Any transformation that was applied on the coordinate system will be taken into account.
The parameter FillColor is only used if the line end style of the start or end point has an interior that can be filled. The special constant kNO_COLOR represents a transparent interior.

The stroke color is required and must not be set to kNO_COLOR.

This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.
The parameter LineWidth must be in the range 0 through 12 units. Values outside the valid range will be adjusted to the nearest allowed value. A zero line width produces a 1 pixel wide line.
The line end styles can be changed if necessary with SetAnnotLineEndStyle.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also PolyLineAnnot function in DynaPDF manual.

78.41.671 PrintGetDevMode as String

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: All.

Function: Queries last print dev mode.
Notes: You can store this in a preferences file for next printing.
This is same data structure as in WindowsDeviceModeMBS class.

78.41.672 PrintGetDevNames(byref Driver as String, byref Device as String, byref Output as String, byref DefaultFlag as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: All.

Function: Queries printer device names.
Notes: Driver: File name (without the extension) of the device driver.
Device: Name of the device.
Output: Device name for the physical output medium (output port).
DefaultFlag: 1 if the selected printer is the default one.

Returns true on success or false on failure.

78.41.673 PrintPDFFile(TempDir as FolderItem, DocName as string, DCHandle as integer, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Prints current PDF file.

Notes: Returns true on success and false on failure.
Flags can be a combination of the flag values kpffPrintAsImage, kpffDefault, kpffColor, kpffAutoRotateAndCenter and kpff1Bit.
Margin can be nil. If not nil, specifies the margins to use.
DCHandle is the handle of the graphics context.

If you only want to print a selection of pages, please only import those pages via ImportPDFPage function. Or use DeletePage to remove the pages you don't want to print.

Does not work with a graphics handle from Xojo 2016r4 and newer due to switch to DirectDraw APIs.
Or in other words, you can use a HDC handle from graphics class in Xojo 2016r3 and older to print PDF.
See also PrintPDFFile function in DynaPDF manual.
See also:

- 78.41.674 PrintPDFFile(TempDir as FolderItem, DocName as string, PrinterName as String, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean 13179

78.41.674 PrintPDFFile(TempDir as FolderItem, DocName as string, PrinterName as String, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: All.

Function: Prints current PDF file.
Notes: Returns true on success and false on failure.
Flags can be a combination of the flag values kpffPrintAsImage, kpffDefault, kpffColor, kpffAutoRotateAndCenter and kpff1Bit.
Margin can be nil. If not nil, specifies the margins to use.
PrinterName is the name of the printer to use. The plugin will open the printer and print PDF there with default settings.

If you only want to print a selection of pages, please only import those pages via ImportPDFPage function. Or use DeletePage to remove the pages you don't want to print.
See also PrintPDFFile function in DynaPDF manual.
See also:

- 78.41.673 PrintPDFFile(TempDir as FolderItem, DocName as string, DCHandle as integer, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean 13178

78.41.675 PrintPDFFileWithDialog(TempDir as FolderItem, DocName as string, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil, parentWindow as Window = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop only.

Function: Prints current PDF file with dialog.
Notes: Returns true on success and false on failure.
Flags can be a combination of the flag values kpffPrintAsImage, kpffDefault, kpffColor, kpffAutoRotateAndCenter and kpff1Bit.
Margin can be nil. If not nil, specifies the margins to use.
Shows print dialog and allows user to set printer.

If you only want to print a selection of pages, please only import those pages via ImportPDFPage function.
Or use DeletePage to remove the pages you don't want to print.

After this call you can use PrintGetDevNames and PrintGetDevMode to get printer settings.
And before this call you can use PrintSetDevMode and PrintSetDevNames to restore printer settings.
See also:

- 78.41.676 PrintPDFFileWithDialog(TempDir as FolderItem, DocName as string, Flags as Integer, Margin as DynaPDFRectMBS, PrintParams as DynaPDFPrintParamsMBS, parentWindow as DesktopWindow) as Boolean 13180

78.41.676 PrintPDFFileWithDialog(TempDir as FolderItem, DocName as string, Flags as Integer, Margin as DynaPDFRectMBS, PrintParams as DynaPDFPrintParamsMBS, parentWindow as DesktopWindow) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Prints current PDF file with dialog.
Notes: Returns true on success and false on failure.
Flags can be a combination of the flag values kpffPrintAsImage, kpffDefault, kpffColor, kpffAutoRotateAndCenter and kpff1Bit.
Margin can be nil. If not nil, specifies the margins to use.
Shows print dialog and allows user to set printer.

If you only want to print a selection of pages, please only import those pages via ImportPDFPage function.
Or use DeletePage to remove the pages you don't want to print.

After this call you can use PrintGetDevNames and PrintGetDevMode to get printer settings.
And before this call you can use PrintSetDevMode and PrintSetDevNames to restore printer settings.

- 78.41.675 PrintPDFFileWithDialog(TempDir as FolderItem, DocName as string, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil, parentWindow as Window = nil) as Boolean 13180

78.41.677 PrintPDFPage(PageNumber as Integer, DocName as string, DCHandle as integer, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: All.

Function: Prints a page.
Notes: See PrintPDFFile for details and options.
See also:

- 78.41.678 PrintPDFPage(PageNumber as Integer, DocName as string, PrinterName as String, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean 13181

78.41.678 PrintPDFPage(PageNumber as Integer, DocName as string, PrinterName as String, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: All.

Function: Prints a page.
Notes: See PrintPDFFile for details and options.

Version 18.4 and newer use device mode set with DynaPDFMBS.PrintSetDevMode method for printer settings.
See also:

- 78.41.677 PrintPDFPage(PageNumber as Integer, DocName as string, DCHandle as integer, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean 13181

78.41.679 PrintPDFPageWithDialog(PageNumber as Integer, DocName as string, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil, parentWindow as Window = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop only.

Function: Prints a page with dialog.
Notes: See PrintPDFFileWithDialog for details and options.
See also:

- 78.41.680 PrintPDFPageWithDialog(PageNumber as Integer, DocName as string, Flags as Integer, Margin as DynaPDFRectMBS, PrintParams as DynaPDFPrintParamsMBS, parentWindow as DesktopWindow) as Boolean 13182

78.41.680 PrintPDFPageWithDialog(PageNumber as Integer, DocName as string, Flags as Integer, Margin as DynaPDFRectMBS, PrintParams as DynaPDFPrintParamsMBS, parentWindow as DesktopWindow) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Prints a page with dialog.
Notes: See PrintPDFFileWithDialog for details and options.
See also:

- 78.41.679 PrintPDFPageWithDialog(PageNumber as Integer, DocName as string, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil, parentWindow as Window = nil) as Boolean 13181

78.41.681 PrintSetDevMode(data as MemoryBlock) as Boolean

MBS DynaPDF Plugin, Plugin Version: 18.5, Platform: Windows, Targets: All.

Function: Set last print dev mode.
Notes: Returns true on success.
This is same data structure as in WindowsDeviceModeMBS class.

See also DynaPDFPrintParamsMBS class for rendering parameters.
See also:

- 78.41.682 PrintSetDevMode(data as String) as Boolean 13182

78.41.682 PrintSetDevMode(data as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: All.

Function: Set last print dev mode.
Notes: Returns true on success.
This is same data structure as in WindowsDeviceModeMBS class.

See also DynaPDFPrintParamsMBS class for rendering parameters.
See also:

- 78.41.681 PrintSetDevMode(data as MemoryBlock) as Boolean 13182

78.41.683 PrintSetDevNames(Driver as String, Device as String, Output as String, DefaultFlag as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: All.

Function: Sets printer device names.
Notes: Driver: File name (without the extension) of the device driver.
Device: Name of the device.
Output: Device name for the physical output medium (output port).
DefaultFlag: 1 if the selected printer is the default one.

Returns true on success or false on failure.

78.41.684 ReadImageFormat(FileName as folderitem, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of an image file.
See also ReadImageFormat function in DynaPDF manual.

78.41.685 ReadImageFormat2(FileName as folderitem, Index as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of an image file.
Example:

```
// read image format and resolution and calculate physical size
Var bits as integer
Var useZip as Boolean
Var resX as integer = 0
Var resY as integer = 0
Var physHeight as integer
Var physWidth as integer
```

```
Var w as integer
Var h as integer

call pdf.ReadImageFormat2(Source, 1, w, h, bits, useZip)
call pdf.ReadImageResolution(Source, 1, resX, resY)

if (resX <>resY and resX >0 and resY >0) then
if (resX >resY) then
physWidth = w
physHeight = h \(resX \resY)
else
physWidth = w \(resY \resX)
physHeight = h
end if
else
physHeight = h
physWidth = w
end if
```

See also ReadImageFormat2 function in DynaPDF manual.

78.41.686 ReadImageFormatEx(hBitmap as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of a memory bitmap.
See also ReadImageFormatEx function in DynaPDF manual.

78.41.687 ReadImageFormatFromBuffer(Buffer as memoryblock, Index as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of an image in the same way as ReadImageFormat2(), but accepts an image buffer as input.
See also ReadImageFormatFromBuffer function in DynaPDF manual.
See also:

- 78.41.688 ReadImageFormatFromBuffer(Buffer as string, Index as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

78.41.688 ReadImageFormatFromBuffer(Buffer as string, Index as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of an image in the same way as ReadImageFormat2(), but accepts an image buffer as input.
See also ReadImageFormatFromBuffer function in DynaPDF manual.
See also:

- 78.41.687 ReadImageFormatFromBuffer(Buffer as memoryblock, Index as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean 13184

78.41.689 ReadImageResolution(FileName as folderitem, Index as Integer, byref ResX as Integer, byref ResY as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the horizontal and vertical resolution of an image file.
Example:

```
// read image format and resolution and calculate physical size
Var bits as integer
Var useZip as Boolean
Var resX as integer = 0
Var resY as integer = 0
Var physHeight as integer
Var physWidth as integer
Var w as integer
Var h as integer

call pdf.ReadImageFormat2(Source, 1, w, h, bits, useZip)
call pdf.ReadImageResolution(Source, 1, resX, resY)

if (resX <>resY and resX >0 and resY >0) then
if (resX >resY) then
physWidth = w
physHeight = h \(resX \resY)
else
physWidth = w \(resY \resX)
physHeight = h
end if
else
physHeight = h
physWidth = w
```

end if

See also ReadImageResolution function in DynaPDF manual.

78.41.690 ReadImageResolutionEx(Buffer as Memoryblock, Index as Integer, byref ResX as Integer, byref ResY as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the horizontal and vertical resolution of an image file in the same way as ReadImageResolution() but accepts an image buffer as input.
See also ReadImageResolutionEx function in DynaPDF manual.
See also:

- 78.41.691 ReadImageResolutionEx(Buffer as string, Index as Integer, byref ResX as Integer, byref ResY as Integer) as Boolean 13186

78.41.691 ReadImageResolutionEx(Buffer as string, Index as Integer, byref ResX as Integer, byref ResY as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the horizontal and vertical resolution of an image file in the same way as ReadImageResolution() but accepts an image buffer as input.
See also ReadImageResolutionEx function in DynaPDF manual.
See also:

- 78.41.690 ReadImageResolutionEx(Buffer as Memoryblock, Index as Integer, byref ResX as Integer, byref ResY as Integer) as Boolean 13186

78.41.692 Rectangle(PosX as Double, PosY as Double, Width as Double, Height as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function draws a rectangle.
See also Rectangle function in DynaPDF manual.

78.41.693 ReEncryptPDF(File as folderitem, PwdType as Integer, InPwd as string, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function encrypts an already encrypted or unencrypted PDF file.
See also ReEncryptPDF function in DynaPDF manual.

78.41.694 ReEncryptPDFAnsi(Path as string, PwdType as Integer, InPwd as string, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** This function encrypts an already encrypted or unencrypted PDF file.
Notes: Same as ReEncryptPDF, but takes path name in Windows ANSI encoding.
See also ReEncryptPDF function in DynaPDF manual.

78.41.695 RenameSpotColor(Colorant as string, NewName as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renames a colorant.
Example:

```
// your instance
Var pdf as DynaPDFMBS

// rename the color
call pdf.RenameSpotColor("Magenta", "Magenta2")
```

Notes: Strings are converted to UTF-8.
See also RenameSpotColor function in DynaPDF manual.

78.41.696 RenderAnnotOrField(Handle as UInt32, IsAnnot as boolean, State as Integer, Matrix as DynaPDFMatrixMBS, Flags as Integer, PixFmt as Integer, Filter as Integer, byref Out as DynaPDFBitmapMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function renders an annotation or field independent of the page.
Notes: Please check dynapdf_help.pdf for details on RenderAnnotOrField function.
Plugin will fill out parameter only if result is zero.
Requires DynaPDF Pro license.
See also RenderAnnotOrField function in DynaPDF manual.

78.41.697 RenderPageBands(page as DynaPDFPageMBS, Resolution as UInt32, Width as Integer, Height as Integer, PixFmt as Integer, RasterParms as DynaPDFRasterParmsMBS, MaxBandBytes as UInt32) as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, Targets: All.

Function:

Renders a page in horizontal bands and passes each band to the callback in the requested pixel format.
Notes:

The application can process or write each band as it arrives.

Overprint simulation and supersampling require a license of the DynaPDF Rendering Extension. Overprint simulation can be enabled with the flag rf2Overprint. Supersampling is used if the member Supersampling is 2 or 4.

Please check DynaPDF manual for RenderPageBands function.

78.41.698 RenderPagePicture(PageNum as Integer) as picture

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders a picture for the page with the given page number.
Example:

```
Var pdf as new MyDynaPDFMBS

// For this example you can use a Pro or Enterprise License
pdf.SetLicenseKey "Pro"

// create in memory
call pdf.CreateNewPDF nil

// set import flags
call pdf.SetImportFlags pdf.kifImportAsPage
```

```
// open the PDF file
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
call pdf.OpenImportFile(f, 0, "")

// import all the pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

// and render first page
Var out as Picture = pdf.RenderPagePicture(1)

// display in window
Backdrop = out
```

Notes: Please note that for most cases RenderPageToImage and RenderPDFFile are better choices for rendering. Especially if you plan to compress images later anyway. And you avoid trouble with color matching. For this function to work correct you have to initialize DynaPDF with right color space for screen (Generic RGB on Mac and screen profile for Windows).

The picture size is set to the Cropbox. If no crop box is defined, it uses the media box.

Returns nil on any error.

If you render a lot of pages from the same PDF, consider using DynaPDFRasterizerMBS class as it's faster when you reuse the rasterizer.

Currently not available for Linux Desktop apps.
Requires DynaPDF Pro license.

For pages with orientation of 90 or 270 degree, the plugin will take that into account and swap width/height to have rendered picture have the riuht size.
See also:

- 78.41.699 RenderPagePicture(PageNum as Integer, Width as Integer, Height as Integer, DefScale as Integer = 2, matrix as DynaPDFMatrixMBS = nil) as picture 13189

78.41.699 RenderPagePicture(PageNum as Integer, Width as Integer, Height as Integer, DefScale as Integer = 2, matrix as DynaPDFMatrixMBS = nil) as picture

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders a picture for the page with the given page number.

Example:

```
Var pdf as new MyDynaPDFMBS

// For this example you can use a Pro or Enterprise License
pdf.SetLicenseKey "Pro"

// create in memory
call pdf.CreateNewPDF nil

// set import flags
call pdf.SetImportFlags pdf.kifImportAsPage

// open the PDF file
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
call pdf.OpenImportFile(f, 0, "")

// import all the pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

// and render first page with window size
Var out as Picture = pdf.RenderPagePicture(1, Width, Height)

// display in window
Backdrop = out
```

Notes: Please note that for most cases RenderPageToImage and RenderPDFFile are better choices for rendering. Especially if you plan to compress images later anyway. And you avoid trouble with color matching. For this function to work correct you have to initialize DynaPDF with right color space for screen (Generic RGB on Mac and screen profile for Windows).

The picture is created with the given size. The PDF page is scaled to fit size. You can use the constants kpsFitBest, kpsFitHeight or kpsFitWidth for the DefScale parameter. The matrix allows you to move, rotate or scale the PDF inside the picture.

Returns nil on any error.

If you render a lot of pages from the same PDF, consider using DynaPDFRasterizerMBS class as it's faster when you reuse the rasterizer.

Currently not available for Linux Desktop apps.
Requires DynaPDF Pro license.

If page is rotated, please swap width and height yourself.
See also:

• 78.41.698 RenderPagePicture(PageNum as Integer) as picture 13188

78.41.700 RenderPageSeparations(page as DynaPDFPageMBS, Resolution as UInt32, Width as Integer, Height as Integer, PixFmt as Integer, RasterParms as DynaPDFRasterParmsMBS, MaxBandBytes as UInt32) as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, Targets: All.

Function:

Renders color separations in horizontal bands and passes each color channel to the callback.
Notes:

The first four channels are Cyan, Magenta, Yellow, and Black, followed by any spot colors.

Each band is delivered for all channels before the next vertical band is processed. Overprinting is considered when producing separations. It is not required to set the flag krf2Overprint. Channel is the zero-based channel index and ChannelCount is the number of channels. Name contains the colorant name.

The samples are 8-bit grayscale, or packed 1-bit samples when PixFmt is pxf1Bit. White represents no ink and black represents full ink.

This function requires a license of the DynaPDF Rendering Extension. The development of a rendering engine that supports separations and overprinting simulation is complex and time consuming. This cannot be part of a regular DynaPDF Professional license.

See pdfRenderPageSeparations function in DynaPDF manual.

78.41.701 RenderPageToImage(PageNum as UInt32, OutFile as FolderItem, Resolution as UInt32, Width as Integer, Height as Integer, PixFmt as Integer, Filter as Integer, Format as Integer, RenderImageParms as DynaPDFRenderImageParmsMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders page to image file.
Notes: If OutFile is nil, we render in memory and you can use GetImageBuffer or GetImageBufferMemory to pick up the image data.

For PixFmt use kpxf* constants, e.g. kpxfRGB.

For Filter use kcf* constants, e.g. kcfJPEG.
For Format use kifm* constants, e.g. kifmJPEG.

Pass render parameter with an object of DynaPDFRenderImageParmsMBS class.
Returns zero for success or error code.
See also RenderPageToImage function in DynaPDF manual.
See also:

- 78.41.702 RenderPageToImage(PageNum as UInt32, OutFilePath as String, Resolution as UInt32, Width as Integer, Height as Integer, PixFmt as Integer, Filter as Integer, Format as Integer, RenderImageParms as DynaPDFRenderImageParmsMBS) as Boolean 13192
- 78.41.703 RenderPageToImage(PageNumber as UInt32, OutFile as folderitem, Resolution as UInt32, Width as UInt32, Height as UInt32, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean 13193

78.41.702 RenderPageToImage(PageNum as UInt32, OutFilePath as String, Resolution as UInt32, Width as Integer, Height as Integer, PixFmt as Integer, Filter as Integer, Format as Integer, RenderImageParms as DynaPDFRenderImageParmsMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders page to image file.
Notes: If OutFile is empty, we render in memory and you can use GetImageBuffer or GetImageBufferMemory to pick up the image data.

For PixFmt use kpxf* constants, e.g. kpxfRGB.
For Filter use kcf* constants, e.g. kcfJPEG.
For Format use kifm* constants, e.g. kifmJPEG.

Pass render parameter with an object of DynaPDFRenderImageParmsMBS class.
Returns zero for success or error code.
See also RenderPageToImage function in DynaPDF manual.
See also:

- 78.41.701 RenderPageToImage(PageNum as UInt32, OutFile as FolderItem, Resolution as UInt32, Width as Integer, Height as Integer, PixFmt as Integer, Filter as Integer, Format as Integer, RenderImageParms as DynaPDFRenderImageParmsMBS) as Boolean 13191
- 78.41.703 RenderPageToImage(PageNumber as UInt32, OutFile as folderitem, Resolution as UInt32, Width as UInt32, Height as UInt32, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean 13193

78.41.703 RenderPageToImage(PageNumber as UInt32, OutFile as folderitem, Resolution as UInt32, Width as UInt32, Height as UInt32, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function renders a PDF page into an image.
Example:

```
Var pdf as new MyDynaPDFMBS // your DynaPDF subclass with Error event filled

// where to get PDF page
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// where to write
Var t as FolderItem = SpecialFolder.Desktop.Child("test.jpg")

pdf.SetLicenseKey "Pro" // For this example you can use a Pro or Enterprise License

call pdf.CreateNewPDF nil
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)

// open file
call pdf.OpenImportFile(f,0,"")

// add page
call pdf.Append

// import the page
call pdf.ImportPageEx(1,1.0,1.0)
call pdf.EndPage

// render the page
call pdf.RenderPageToImage(1, t, 72, ImageView1.Width, ImageView1.Height, DynaPDFRasterImageMBS.krfDe-
fault, DynaPDFRasterizerMBS.kpxfRGB, DynaPDFMBS.kcfJPEG, DynaPDFMBS.kifmJPEG)
```

Notes: PixFmt: pass kpxf* constants like DynaPDFRasterizerMBS.kpxfRGB.
Filter: Pass kcf* constants like DynaPDFMBS.kcfJPEG.
Format: pass kifm* constants like DynaPDFMBS.kifmJPEG.

The page that should be rendered must be closed (Append() or EditPage() open a page and EndPage() closes a page).
If the parameter OutFile is set to nil the image is created in memory. In this case call GetImageBuffer() to retrieve the image buffer and finally FreeImageBuffer() to release it.

The output image size can be calculated in different ways:

- If Resolution is >0 the image width and height is calculated according to the specified resolution. On a 32 bit machine it is possible to render pages in up to 1200 DPI depending on the page format. Larger resolutions require special techniques like banding to restrict the memory usage. However, no such feature is available in DynaPDF.
- If Width >0 and if Height == 0 the image height is calculated according to the given width to archive an image with exact proportions.
- If Width == 0 and if Height >0 then image width is calculated according to the given height to archive an image with exact proportions.
- If Width >0 and if Height >0 the image is scaled to the width and height.

The pixel format and the output image format must be compatible. Because TIFF is the only image format that supports different compression filters, the parameter Filter will be ignored for all other output formats.
If the function succeeds the return value is true. If the function fails the return value is false.
Requires DynaPDF Pro license.
See also RenderPageToImage function in DynaPDF manual.
See also:

- 78.41.701 RenderPageToImage(PageNum as UInt32, OutFile as FolderItem, Resolution as UInt32, Width as Integer, Height as Integer, PixFmt as Integer, Filter as Integer, Format as Integer, RenderImageParms as DynaPDFRenderImageParmsMBS) as Boolean 13191
- 78.41.702 RenderPageToImage(PageNum as UInt32, OutFilePath as String, Resolution as UInt32, Width as Integer, Height as Integer, PixFmt as Integer, Filter as Integer, Format as Integer, RenderImageParms as DynaPDFRenderImageParmsMBS) as Boolean 13192

78.41.704 RenderPageToImageMT(PageNumber as UInt32, OutFile as folderitem, Resolution as UInt32, Width as UInt32, Height as UInt32, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function renders a PDF page into an image.
Notes: PixFmt: pass kpxf* constants like DynaPDFRasterizerMBS.kpxfRGB.
Filter: Pass kcf* constants like DynaPDFMBS.kcfJPEG.
Format: pass kifm* constants like DynaPDFMBS.kifmJPEG.

The page that should be rendered must be closed (Append() or EditPage() open a page and EndPage() closes a page).
If the parameter OutFile is set to nil the image is created in memory. In this case call GetImageBuffer() to

retrieve the image buffer and finally FreeImageBuffer() to release it.

The output image size can be calculated in different ways:

- If Resolution is >0 the image width and height is calculated according to the specified resolution. On a 32 bit machine it is possible to render pages in up to 1200 DPI depending on the page format. Larger resolutions require special techniques like banding to restrict the memory usage. However, no such feature is available in DynaPDF.
- If Width >0 and if Height == 0 the image height is calculated according to the given width to archive an image with exact proportions.
- If Width == 0 and if Height >0 then image width is calculated according to the given height to archive an image with exact proportions.
- If Width >0 and if Height >0 the image is scaled to the width and height.

The pixel format and the output image format must be compatible. Because TIFF is the only image format that supports different compression filters, the parameter Filter will be ignored for all other output formats. If the function succeeds the return value is true. If the function fails the return value is false.

Requires DynaPDF Pro license.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

78.41.705 RenderPageToPicture(PageNum as integer, pic as picture, DefScale as integer = 2, matrix as DynaPDFMatrixMBS = nil, RenderWithAlpha as boolean = false) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders the page into the given picture.
Example:

```
Var pdf as new MyDynaPDFMBS

// For this example you can use a Pro or Enterprise License
pdf.SetLicenseKey "Pro"

// create in memory
```

```
call pdf.CreateNewPDF nil

// set import flags
call pdf.SetImportFlags pdf.kifImportAsPage

// open the PDF file
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
call pdf.OpenImportFile(f, 0, "")

// import all the pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

// create picture
Var out as new Picture(800, 600, 32)

// render first page in the existing picture
call pdf.RenderPageToPicture(1, out)

// display in window
Backdrop = out
```

Notes: Please note that for most cases RenderPageToImage and RenderPDFFile are better choices for rendering. Especially if you plan to compress images later anyway. And you avoid trouble with color matching. For this function to work correct you have to initialize DynaPDF with right color space for screen (Generic RGB on Mac and screen profile for Windows).

This method draws into an existing picture. The PDF page is scaled to fit size. You can use the constants kpsFitBest, kpsFitHeight or kpsFitWidth for the DefScale parameter. The matrix allows you to move, rotate or scale the PDF inside the picture.

Returns nil on any error.

This does not work on Linux desktop targets as the plugin can't write into a picture there.

If you render a lot of pages from the same PDF, consider using DynaPDFRasterizerMBS class as it's faster when you reuse the rasterizer.
Requires DynaPDF Pro license.

Added RenderWithAlpha parameter in plugin version 19.0.
If RenderWithAlpha is true, we render with alpha channel. If the destination is a picture has alpha channel, you should get the alpha there. Otherwise for picture without alpha channel, we only copy RGB channels.

78.41.706 RenderPDFFile(OutFile as folderitem, Resolution as UInt32, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use RenderPDFFileEx instead.
Function: The function renders all PDF pages which are currently in memory and stores the result in a proprietary image format.
Example:

```
Var file as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var pdf as new MyDynaPDFMBS

call pdf.CreateNewPDF nil
call pdf.OpenImportFile(file, 0, "")
call pdf.ImportPDFFile(1, 1.0, 1.0)

// create a TIFF file:

Var outfile as FolderItem = SpecialFolder.Desktop.Child("test.tif")

Var Flags as Integer = DynaPDFRasterImageMBS.krfDefault
Var PixFmt as Integer = DynaPDFRasterizerMBS.kpxfRGB
Var Format as Integer = DynaPDFMBS.kifmTIFF // use kifm* constants
Var Filter as Integer = DynaPDFMBS.kcfLZW // pick a compression scheme for the file format

call pdf.RenderPDFFile(outfile, 300, Flags, PixFmt, Filter, Format)

// create a folder of JPEG file:

Var outfolder as FolderItem = SpecialFolder.Desktop.Child("test files")
outfolder.CreateAsFolder

Flags = DynaPDFRasterImageMBS.krfDefault
PixFmt = DynaPDFRasterizerMBS.kpxfRGB
Format = DynaPDFMBS.kifmJPEG // use kifm* constants
Filter = DynaPDFMBS.kcfJPEG

call pdf.RenderPDFFile(outfolder, 300, Flags, PixFmt, Filter, Format)
```

Notes: One page PDF can go to e.g. a JPEG file.
Multi page PDF file can go to a TIFF file with several images.
Or you specify a folder and get a folder of JPEG/PNG/TIFF files.
See also RenderPDFFile function in DynaPDF manual.

78.41.707 RenderPDFFileEx(OutFile as folderitem, Resolution as UInt32, Width as Integer, Height as Integer, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders all PDF pages which are currently in memory and stores the result in a proprietary image format.
Notes: The pages in memory could be imported from one or more external PDF files, e.g. with ImportPDFFile(), created with DynaPDF functions, or a combination of both.

The parameter OutFile can be a path to an existing directory or the file name of the output image. The latter type can be used with TIFF images because this format supports multi-page output. When a file path is used with a single page image format only the first page will be rendered.

The function checks whether the path is a directory or a file name.
The function can render pages in a specific resolution, or scale them to a given width or height.

Depending on which parameters are set the image size is calculated as follows:

- Resolution >0 and Width == 0 and Height == 0: Pages are rendered according to the given resolution. Note that PDF pages can be very large. Therefore, it is maybe not possible to render all pages in the whished resolution.
- Resolution >0 and Width <0 and or Height <0: Pages are rendered according to the given resolution. Negative values of Width and Height are interpreted as maximum width or height if Resolution is greater zero. Since PDF pages can be very large, it is recommended to set the maximum width and height to a value that is low enough so that no out of memory exception occurs, e.g. 5000 x 5000 pixels.
- Resolution == 0 and Width >0 or Height >0: Pages are scaled to the given Width or Height. If Width and Height are greater zero then pages are scaled to that size independent of the original page format (not recommended). It is usually best to set the width or height to zero so that the function can calculate the missing value to preserve the aspect ratio.

On a 32 bit system it is possible to render PDF pages in RGB with up to around 1200 DPI, depending on the page format and available memory. The resolution of gray images can be higher but the encoder must be able to handle such large images. The PNG and bitmap encoders accept images in almost arbitrary resolutions but all other encoders can fail when the resolution is larger than about 2000 DPI.

The function calls the progress events.
Returns true on success or false on failure.
See also RenderPDFFileEx function in DynaPDF manual.

78.41.708 RenderPDFFileExMT(OutFile as folderitem, Resolution as UInt32, Width as Integer, Height as Integer, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders all PDF pages which are currently in memory and stores the result in a proprietary image format.
Notes: The pages in memory could be imported from one or more external PDF files, e.g. with ImportPDFFile(), created with DynaPDF functions, or a combination of both.

The parameter OutFile can be a path to an existing directory or the file name of the output image. The latter type can be used with TIFF images because this format supports multi-page output. When a file path is used with a single page image format only the first page will be rendered.

The function checks whether the path is a directory or a file name.
The function can render pages in a specific resolution, or scale them to a given width or height.

On a 32 bit system it is possible to render PDF pages in RGB with up to around 1200 DPI, depending on the page format and available memory. The resolution of gray images can be higher but the encoder must be able to handle such large images. The PNG and bitmap encoders accept images in almost arbitrary resolutions but all other encoders can fail when the resolution is larger than about 2000 DPI.

The function calls the progress events.
Returns true on success or false on failure.

Same as RenderPDFFile, but multithreaded.

Requires DynaPDF Pro license.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

78.41.709 RenderPDFFileMT(OutFile as folderitem, Resolution as UInt32, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use RenderPDFFileEx instead.
Function: The function renders all PDF pages which are currently in memory and stores the result in a proprietary image format.
Notes: Same as RenderPDFFile, but multithreaded.
Also check the dynapdf manual on the pdfRenderPDFFileA function (pdfRenderPDFFileW on Windows).

Requires DynaPDF Pro license.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

78.41.710 ReOpenImportFile(Handle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function re-opens a PDf file so that further contents can be imported from it.
Notes: The parameter Handle must be a valid file handle that OpenImportFile() or OpenImportBuffer() returned.
When the file is no longer needed close the parser instance with CloseImportFileEx().
If the function succeeds the return value is true. If the function fails the return value is false.
See also ReOpenImportFile function in DynaPDF manual.

78.41.711 ReplaceFont(PDFFontRef as Integer, Name as string, Style as integer = 0, NameIsFamilyName as boolean = true) as integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces a PDF font with another one.
Notes: The function can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

On Linux or Unix system fonts must be loaded with AddFontSearchPath() before this function can be called. This should be done before the first PDF file is imported.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
See also ReplaceFont function in DynaPDF manual.

78.41.712 ReplaceFontAnsi(PDFFontRef as Integer, Name as string, Style as integer = 0, NameIsFamilyName as boolean = true) as integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** Replaces a PDF font with another one.
Notes: The function can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

On Linux or Unix system fonts must be loaded with AddFontSearchPath() before this function can be called. This should be done before the first PDF file is imported.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
See also ReplaceFont function in DynaPDF manual.

78.41.713 ReplaceFontEx(PDFFontRef as Integer, FontFile as FolderItem, Embed as boolean = true) as integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces a PDF font with another one.
Notes: The font file can be loaded directly. It is not required to install the font on the system. The function

can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
See also ReplaceFontEx function in DynaPDF manual.

- 78.41.714 ReplaceFontEx(PDFFontRef as Integer, FontFilePath as string, Embed as boolean = true) as integer 13202

78.41.714 ReplaceFontEx(PDFFontRef as Integer, FontFilePath as string, Embed as boolean = true) as integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces a PDF font with another one.
Notes: The font file can be loaded directly. It is not required to install the font on the system. The function can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
See also ReplaceFontEx function in DynaPDF manual.
See also:

- 78.41.713 ReplaceFontEx(PDFFontRef as Integer, FontFile as FolderItem, Embed as boolean = true) as integer 13201

78.41.715 ReplaceFontExAnsi(PDFFontRef as Integer, FontFilePath as string, Embed as boolean = true) as integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** Replaces a PDF font with another one.
Notes: The font file can be loaded directly. It is not required to install the font on the system. The function can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.

See also ReplaceFontEx function in DynaPDF manual.
See also:

- 78.41.713 ReplaceFontEx(PDFFontRef as Integer, FontFile as FolderItem, Embed as boolean = true) as integer 13201
- 78.41.714 ReplaceFontEx(PDFFontRef as Integer, FontFilePath as string, Embed as boolean = true) as integer 13202

78.41.716 ReplaceICCProfile(ColorSpace as Integer, ICCFile as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function is used to dynamically create ICC based color spaces within OnReplaceICCProfile event of CheckConformance().
Notes: Use in OnReplaceICCProfile event.
See also ReplaceICCProfile function in DynaPDF manual.

78.41.717 ReplaceICCProfileEx(ColorSpace as integer, ICCFileData as MemoryBlock) as integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces an ICC profile exactly in the same way as ReplaceICCProfile() but accepts a file buffer as input.
Notes: If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
Use in OnReplaceICCProfile event.
See also ReplaceICCProfileEx function in DynaPDF manual.
See also:

- 78.41.718 ReplaceICCProfileEx(ColorSpace as integer, ICCFileData as String) as integer 13203

78.41.718 ReplaceICCProfileEx(ColorSpace as integer, ICCFileData as String) as integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces an ICC profile exactly in the same way as ReplaceICCProfile() but accepts a file buffer as input.
Notes: If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
Use in OnReplaceICCProfile event.

See also ReplaceICCProfileEx function in DynaPDF manual.
See also:

- 78.41.717 ReplaceICCProfileEx(ColorSpace as integer, ICCFileData as MemoryBlock) as integer 13203

78.41.719 ReplaceImage(ImageToReplace as DynaPDFImageMBS, ImageFile as FolderItem, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces an image with another image.
Notes: The parameter ImageToReplace must be a valid pointer of an image object which is retrieved by functions like GetImageObj() or ParseContent().
The resolution, aspect ratio, color space and so on can be freely chosen. However, note that this function does not change the output position or size. If the aspect ratio of the new image is different, then it will be stretched or shrinked to fit into the output rectangle.
The parameter ColorSpace specifies the destination color space into which the image should be converted or saved, if the image is already defined in that color space. CSHandle must be the handle of that color space if a non-device space is used. The will be ignored for devices spaces.

The function works in the very same way as InsertImageEx() with the following differences:
,Äc The color of an image mask cannot be set or changed because this would require changes on the content stream in which the image is used. An image mask will be created if the image color depth is 1 bit and if color key masking is enabled (see SetUseTransparency()). SetUseTransparency() should normally be set to false before calling this function.
,Äc The image will never be downscaled, independent of the current resolution, because the size of the output rectangle is not known.

If the image that should be replaced is a soft mask of another base image, then make sure that the destination color space is set to kesDeviceGray, kesCalGray, or to a one channel ICC based color space because a soft mask must not contain more than one color channel.
The flags kgfUseImageColorSpace, kgfIgnoreICCProfiles, kgfRealPassThrough, and kfNoBitmapAlpha are all supported. See SetGStateFlags() for further information.

If the function succeeds the return value is true. If the function fails the return value is false.
See also ReplaceImage function in DynaPDF manual.

78.41.720 ReplaceImageEx(ImageToReplace as DynaPDFImageMBS, ImageData as MemoryBlock, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces an image with a new image exactly like ReplaceImage() but accepts a file buffer as input.
Notes: See ReplaceImage() for further information.

If the function succeeds the return value is 1. If the function fails the return value is 0.
See also ReplaceImageEx function in DynaPDF manual.
See also:

- 78.41.721 ReplaceImageEx(ImageToReplace as DynaPDFImageMBS, ImageData as String, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean 13205

78.41.721 ReplaceImageEx(ImageToReplace as DynaPDFImageMBS, ImageData as String, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces an image with a new image exactly like ReplaceImage() but accepts a file buffer as input.
Notes: See ReplaceImage() for further information.

If the function succeeds the return value is 1. If the function fails the return value is 0.
See also ReplaceImageEx function in DynaPDF manual.
See also:

- 78.41.720 ReplaceImageEx(ImageToReplace as DynaPDFImageMBS, ImageData as MemoryBlock, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean 13204

78.41.722 ReplacePageText(text as string, stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function deletes or replaces a text string of a content stream that was found by the function GetPageText() beforehand.
Notes: Be aware that ReplacePageText can't always replace text as encoding must match and fonts may not have the characters for the new text. For that better use ReplacePageTextEx.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.
Requires DynaPDF Pro license.
See also ReplacePageText function in DynaPDF manual.

78.41.723 ReplacePageTextEx(text as string, stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function deletes or replaces a text string of a content stream that was found by the function GetPageText() beforehand.
Notes: The text parameter is converted to unicode.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.
Requires DynaPDF Pro license.
See also ReplacePageTextEx function in DynaPDF manual.

78.41.724 ReplacePageTextExAnsi(text as string, stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function deletes or replaces a text string of a content stream that was found by the function GetPageText() beforehand.
Notes: The text parameter is converted to ANSI.
Requires DynaPDF Pro license.
See also ReplacePageTextEx function in DynaPDF manual.

78.41.725 ResetAnnotAP(Handle as integer = -1) as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Forces a rebuild of the appearance stream of the specified annotation.
Notes: If Handle is set to -1 all annotation appearances will be rebuild. This function be useful if an imported annotation has an invalid or empty appearance stream.
See also ResetAnnotAP function in DynaPDF manual.

78.41.726 ResetEncryptionSettings as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the encryption settings which were imported from an external PDF file so that the PDF file in memory can be saved unencrypted.
Notes: If the function succeeds the return value is true. If the function fails the return value is false.
See also ResetEncryptionSettings function in DynaPDF manual.

78.41.727 ResetLineDashPattern as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function resets a previously defined line dash pattern to its default value (straight line).
See also ResetLineDashPattern function in DynaPDF manual.

78.41.728 RestoreGraphicState as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function restores a previously saved graphics state.
See also RestoreGraphicState function in DynaPDF manual.

78.41.729 RGB(R as Integer, G as Integer, B as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds a RGB color value based on the given component values.
Example:

```
Var rgb as Integer = DynaPDFMBS.RGB(1,2,3)
MessageBox hex(rgb)
```

78.41.730 RofRGB(RGB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns R of a RGB color value.
Example:

```
Var rgb as Integer = DynaPDFMBS.RGB(1,2,3)
MessageBox str(DynaPDFMBS.RofRGB(rgb)) // shows 1
```

78.41.731 RotateCoords(alpha as Double, OriginX as Double, OriginY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function rotates the coordinate system at the point OriginX, OriginY by applying a transformation matrix.
Notes: Please do not try to scale/skew/translate back later. use SaveGraphicState and RestoreGraphicState.
See also RotateCoords function in DynaPDF manual.

78.41.732 RotateTemplate(OldTemplate as Integer, Rotation as Integer, RotateCoords as boolean = true) as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates a template.
Notes: Returns a new template handle.
This is a convenience function which creates a new template and draws the existing template there with rotation.
Returns negative number for errors. The plugin uses -1 for plugin errors like wrong rotation angle.

RotateCoords: Whether to rotate coordinate system.
This is now done by DynaPDF automatically, so for current version of the library, this must be false. But older versions need the true.

78.41.733 RoundRect(PosX as Double, PosY as Double, Width as Double, Height as Double, Radius as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function draws a rectangle with rounded corners.
Example:

```
Var pdf as new DynaPDFMBS
Var f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Round Rectangles.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

call pdf.CreateNewPDF f
call pdf.Append

Var PosX as Double = 100.0
Var PosY as Double = 100.0
Var Width as Double = 100.0
Var Height as Double = 100.0
Var Radius as Double = 20.0
Var FillMode as Integer = pdf.kfmFill
```

```
call pdf.RoundRect(PosX, PosY, Width, Height, Radius, FillMode)

PosX = 300.0
Var RadiusX as Double = 30.0
Var RadiusY as Double = 30.0

call pdf.RoundRectEx(PosX, PosY, Width, Height, RadiusX, RadiusY, FillMode)

call pdf.EndPage
call pdf.CloseFile

f.Launch
```

See also RoundRect function in DynaPDF manual.

78.41.734 RoundRectEx(PosX as Double, PosY as Double, Width as Double, Height as Double, rWidth as Double, rHeight as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function draws a rectangle with elliptical corners.
Example:

```
Var pdf as new DynaPDFMBS
Var f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Round Rectangles.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

call pdf.CreateNewPDF f
call pdf.Append

Var PosX as Double = 100.0
Var PosY as Double = 100.0
Var Width as Double = 100.0
Var Height as Double = 100.0
Var Radius as Double = 20.0
Var FillMode as Integer = pdf.kfmFill

call pdf.RoundRect(PosX, PosY, Width, Height, Radius, FillMode)

PosX = 300.0
Var RadiusX as Double = 30.0
Var RadiusY as Double = 30.0

call pdf.RoundRectEx(PosX, PosY, Width, Height, RadiusX, RadiusY, FillMode)
```

```
call pdf.EndPage
call pdf.CloseFile

f.Launch
```

See also RoundRectEx function in DynaPDF manual.

78.41.735 SaveGraphicState as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function saves the current graphics state.
See also SaveGraphicState function in DynaPDF manual.

78.41.736 ScaleCoords(sx as Double, sy as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function scales the coordinate system by applying a transformation matrix.
Notes: Please do not try to scale/skew/translate back later. use SaveGraphicState and RestoreGraphicState.
See also ScaleCoords function in DynaPDF manual.

78.41.737 SelfTest as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function checks the size of all required data types and checks whether the endian configuration of the library is correct.
See also SelfTest function in DynaPDF manual.

78.41.738 Set3DAnnotProps(Annot as Integer, ActType as Integer, DeActType as Integer, InstType as Integer, DeInstType as Integer, DisplayToolbar as boolean, DisplayModelTree as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the properties of a 3D Annotation.
See also Set3DAnnotProps function in DynaPDF manual.

78.41.739 Set3DAnnotScriptAnsi(Annot as Integer, Value as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** Sets the 3D Annotation Script.
See also Set3DAnnotScript function in DynaPDF manual.

78.41.740 SetActiveSigField(Handle as UInt32) as Boolean

MBS DynaPDF Plugin, Plugin Version: 25.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the signature field that should be signed.
Notes: If a PDF file contains more than one signature field, the first signature field without a value is selected for signing by default.
If a different signature field should be signed, call this function with the desired handle.
If the signature field contains already a value or signature, the function returns with an error and the field to be signed is not changed.
See also SetActiveSigField function in DynaPDF manual.

78.41.741 SetAllocBy(Value as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the size of the memory blocks in kilo bytes, which will be allocated if memory must be allocated for page content streams.
See also SetAllocBy function in DynaPDF manual.

78.41.742 SetAltFonts(FontListHandle as Integer, List() as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills an alternate font list created by CreateAltFontList() with data.
Notes: Alternate font list are tested if one more glyphs were not found in the current font. Since the fonts in the list are used as fallback they should be compatible to the active font in regard to properties like serif, sans serif, proportional or fixed pitch, and so on.
A list should be sorted by priority and not by name. That means index 0 should contain a font name that is most probably the best match. If this one was not available or incompatible then the next font in the list will be tested until the end of the list was reached. If no suitable font was found then system fonts are tested.

The fonts in the list should support the language that must be output. Otherwise, the fonts can never be selected. An alternate font list can be arbitrary large but it is usually best to restrict the number fonts in a list to speed up processing.
A list can contain font names which are not available on the system. This causes no error. Non existing fonts are simply ignored. This makes it possible to define suitable alternate font lists statically. Such lists can then be loaded on demand.
After a list was filled with data it can be activated with ActivateAltFontList(). If a list is no longer needed delete it with DeleteAltFontList().

Please note that alternate font lists are used only, if complex text layout was enabled. This can be done by setting the flag kgfComplexText with SetGStateFlags().

Returns true on success.
See also SetAltFonts function in DynaPDF manual.

78.41.743 SetAnnotBorderEffect(Handle as Integer, BorderEffect as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the border effect for an annotation.
Notes: Returns true on success.
Handle is in range of 0 to number of annotations - 1.
See also SetAnnotBorderEffect function in DynaPDF manual.

78.41.744 SetAnnotBorderStyle(Handle as Integer, BorderStyle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the annotation border style.
See also SetAnnotBorderStyle function in DynaPDF manual.

78.41.745 SetAnnotBorderWidth(Handle as Integer, LineWidth as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the annotation border width.
See also SetAnnotBorderWidth function in DynaPDF manual.

78.41.746 SetAnnotColor(Handle as Integer, ColorType as Integer, PDFColorSpace as Integer, ColorValue as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the annotation color.
See also SetAnnotColor function in DynaPDF manual.

78.41.747 SetAnnotFlags(Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the default flags used for newly created annotations.
See also SetAnnotFlags function in DynaPDF manual.

78.41.748 SetAnnotFlagsEx(Handle as Integer, Flags as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the annotation flags.
See also SetAnnotFlagsEx function in DynaPDF manual.

78.41.749 SetAnnotHighlightMode(Handle as Integer, HighlightMode as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the annotation highlight mode.
See also SetAnnotHighlightMode function in DynaPDF manual.

78.41.750 SetAnnotIcon(Handle as Integer, AnnotIcon as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the annotation icon.
See also SetAnnotIcon function in DynaPDF manual.

78.41.751 SetAnnotLineDashPattern(Handle as UInt32, dash as memoryblock, NumValues as integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets or deletes the line dash pattern of an annotation.
Notes: The following annotation types support line dash patterns:

- atCircle
- atInk
- atLine
- atPolygon
- atPolyLine
- atSquare

Memoryblock must contain floating point values (Single).
Returns true on success.

If array is nil, the pattern is removed.
See also SetAnnotLineDashPattern function in DynaPDF manual.
See also:

- 78.41.752 SetAnnotLineDashPattern(Handle as UInt32, dash() as single) as Boolean 13214

78.41.752 SetAnnotLineDashPattern(Handle as UInt32, dash() as single) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets or deletes the line dash pattern of an annotation.
Notes: The following annotation types support line dash patterns:

- atCircle
- atInk
- atLine
- atPolygon
- atPolyLine
- atSquare

Returns true on success.

If array is nil, the pattern is removed.
See also SetAnnotLineDashPattern function in DynaPDF manual.
See also:

- 78.41.751 SetAnnotLineDashPattern(Handle as UInt32, dash as memoryblock, NumValues as integer) as Boolean 13214

78.41.753 SetAnnotLineEndStyle(Handle as UInt32, StartLineStyle as Integer, EndLineStyle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the line end styles of a Line or PolyLine Annotation.
Notes: If the function succeeds the return value is true. If the function fails the return value is false.
See also SetAnnotLineEndStyle function in DynaPDF manual.

78.41.754 SetAnnotMigrationState(Handle as Integer, State as Integer, Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a migration state to a markup annotation.
Notes: All annotation types with exception of 3D, Link, Movie, Screen, PrinterMark, TrapNet, and Watermark are markup annotations.
Migration states are stored in text annotations as reply to the base annotation. Further states are stored as reply to the last reply; the result is a single linked list. Because the base annotation contains no reference to the last reply or migration state the function must search for it. To speed upÔøºprocessing the function returns the handle of the text annotation so that the next state can directly be added to this annotation.

The migration state is defined since PDF 1.5. The function adjusts the PDF version automatically if it is lower than PDF 1.5.

If the function succeeds the return value is the handle of the text annotation, a value greater or equal zero. If the function fails the return value is a negative error code.

State can be kasNone, kasAccepted, kasRejected, kasCancelled, kasCompleted.
See also SetAnnotMigrationState function in DynaPDF manual.

78.41.755 SetAnnotMigrationStateAnsi(Handle as Integer, State as Integer, Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** Adds a migration state to a markup annotation.
Notes: All annotation types with exception of 3D, Link, Movie, Screen, PrinterMark, TrapNet, and Watermark are markup annotations.
Migration states are stored in text annotations as reply to the base annotation. Further states are stored as reply to the last reply; the result is a single linked list. Because the base annotation contains no reference to the last reply or migration state the function must search for it. To speed upÔøºprocessing the function returns the handle of the text annotation so that the next state can directly be added to this annotation.

The migration state is defined since PDF 1.5. The function adjusts the PDF version automatically if it is lower than PDF 1.5.

If the function succeeds the return value is the handle of the text annotation, a value greater or equal zero. If the function fails the return value is a negative error code.

State can be kasNone, kasAccepted, kasRejected, kasCancelled, kasCompleted.
See also SetAnnotMigrationState function in DynaPDF manual.

78.41.756 SetAnnotOpacity(Handle as Integer, opacity as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the opacity of a markup annotation.
Notes: The function GetAnnotEx() or GetPageAnnotEx() can be used to determine whether an annotation is a markup annotation.

Returns true on succes or false on failure.
See also SetAnnotOpacity function in DynaPDF manual.

78.41.757 SetAnnotOpenState(Handle as Integer, Open as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the annotation open state.
See also SetAnnotOpenState function in DynaPDF manual.

78.41.758 SetAnnotOrFieldDate(CSHandle as UInt32, IsField as Boolean, Type as Integer, DateTime as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the creation or modification date of an annotation or form field.
Notes: If the parameter IsField is set to true, a valid field handle must be passed to the parameter Handle. An annotation handle is expected otherwise.
Annotations and form fields support a modification date but a creation date is supported by markup annotations only.
The following annotation types are markup annotations:

- Care
- Circle
- FileAttach
- FreeText
- Highlight, Squiggly, Strikeout, Underline
- Ink
- Line
- Polygon
- Projection
- Redact
- Sound
- Square
- Stamp
- Text

The function GetAnnotEx() or GetPageAnnotEx() can also be used to determine whether an annotation is a markup annotation.

If the function succeeds the return value is 1. If the function fails the return value is 0.
See also SetAnnotOrFieldDate function in DynaPDF manual.

78.41.759 SetAnnotQuadPoints(Handle as UInt32, points() as DynaPDFPointMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets or changes the quad points defintion of a Highlight, Link, Redakt, Squiggly, atStrikeOut, or Underline annotation.
Notes: The function must be called within an open page.
Independent of the used coordinate system (bottom up or top down), the points must be defined in the following order:
x1,y1 x3,y3
x2,y2 x4,y4
Ôøº
The coordinates of the vertices are interpreted in current user space. Any transformation that was applied on the coordinate system will be taken into account.
The number of points must be 4 or a multiple of 4.

Returns true on success.
See also SetAnnotQuadPoints function in DynaPDF manual.

78.41.760 SetAnnotString(Handle as Integer, StringType as Integer, Value as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stamp annotation.
See also SetAnnotString function in DynaPDF manual.

78.41.761 SetAnnotStringAnsi(Handle as Integer, StringType as Integer, Value as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** Creates a stamp annotation.
See also SetAnnotString function in DynaPDF manual.

78.41.762 SetAnnotSubject(Handle as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the optional subject string of an annotation.

Notes: The value parameter is converted to unicode.
See also SetAnnotSubject function in DynaPDF manual.

78.41.763 SetAnnotSubjectAnsi(Handle as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function sets or changes the optional subject string of an annotation.
Notes: The value parameter is converted to ANSI.
See also SetAnnotSubject function in DynaPDF manual.

78.41.764 SetBBox(Boundary as Integer, LeftX as Double, LeftY as Double, RightX as Double, RightY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets a specific bounding box of the current open PDF page.
See also SetBBox function in DynaPDF manual.

78.41.765 SetBidiMode(BidiMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the bidirectional mode.
See also SetBidiMode function in DynaPDF manual.

78.41.766 SetBlack(FillColor as Boolean, StrokeColor as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets black color.
Notes: This function is a bit optimized to check the current color space.
Depending on whether it's RGB, Gray, CMYK or Lab, it will set different color values.
And if other color space is active, it switches to Gray colorspace to set black.

78.41.767 SetBookmarkDest(ABmk as Integer, DestType as Integer, a as Double, b as Double, c as Double, d as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the destination of a bookmark.
See also SetBookmarkDest function in DynaPDF manual.

78.41.768 SetBookmarkStyle(ABmk as Integer, Style as Integer, RGBColor as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the bookmark style.
See also SetBookmarkStyle function in DynaPDF manual.

78.41.769 SetBorderStyle(Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function set the global border style which is used for newly created form fields.
See also SetBorderStyle function in DynaPDF manual.

78.41.770 SetCharacterSpacing(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the current character spacing. The function requires an open page, template or pattern.
See also SetCharacterSpacing function in DynaPDF manual.

78.41.771 SetCheckBoxChar(CheckBoxChar as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the character which should be used for newly created check boxes.
See also SetCheckBoxChar function in DynaPDF manual.

78.41.772 SetCheckBoxDefState(Field as Integer, Checked as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function changes the default state of a check box; it can differ from the current visible state of the check box.
See also SetCheckBoxDefState function in DynaPDF manual.

78.41.773 SetCheckBoxState(Field as Integer, Checked as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the state of a check box. The parameter Field must be a valid check box handle.
See also SetCheckBoxState function in DynaPDF manual.

78.41.774 SetChoiceFieldValue(Field as UInt32, ValIndex as UInt32, Selected as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the selection state of an existing option in a combo box or list box.
Notes: Field is the field handle, ValIndex is the zero-based index of the option, and Selected specifies whether the option is selected. The function changes the selection rather than adding or renaming an option. XFA forms cannot be edited with this function. See also GetFieldChoiceValue(), GetFieldExpValueEx(), and AddValToChoiceField().

If the function succeeds the return value is true. If the function fails the return value is false.

78.41.775 SetCIDFont(CMapHandle as Integer, Name as string, Style as Integer, Size as Double, Embed as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a CID Font.
See also SetCIDFont function in DynaPDF manual.

78.41.776 SetCMapDir(path as folderitem, flags as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the character map directory.
Example:

```
Var pdf as DynaPDFMBS // your dynapdf instance
call pdf.SetCMapDir SpecialFolder.Desktop.Child("CMAP"), 3
```

Notes: Takes an integer instead of a boolean starting with plugin version 11.2pr6.
See klcmDefault, klcmDelayed and klcmRecursive constants.
Requires DynaPDF Pro license.
See also SetCMapDir function in DynaPDF manual.
See also:

- 78.41.777 SetCMapDir(path as string, flags as Integer) as Integer 13222

78.41.777 SetCMapDir(path as string, flags as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the character map directory.
Example:

```
Var pdf as DynaPDFMBS // your dynapdf instance
call pdf.SetCMapDir SpecialFolder.Desktop.Child("CMAP"), pdf.klcmRecursive
```

Notes: Takes an integer instead of a boolean starting with plugin version 11.2pr6.
See klcmDefault, klcmDelayed and klcmRecursive constants.
Requires DynaPDF Pro license.
See also SetCMapDir function in DynaPDF manual.
See also:

- 78.41.776 SetCMapDir(path as folderitem, flags as Integer) as Integer 13221

78.41.778 SetColDefFile(EmbFile as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the initial document of a portable collection that should be opened in the viewer application. See also CreateCollection().
See also SetColDefFile function in DynaPDF manual.

78.41.779 SetColorMask(ImageHandle as Integer, Mask as Ptr, Count as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The functions sets or overrides the color mask of an image.
Notes: See also SetColorMask function in dynapdf_help.pdf manual.
See also SetColorMask function in DynaPDF manual.
See also:

- 78.41.780 SetColorMask(ImageHandle as Integer, Mask() as Integer) as boolean 13223

78.41.780 SetColorMask(ImageHandle as Integer, Mask() as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The functions sets or overrides the color mask of an image.
Notes: Same as other SetColorMask function, but values are taken from array.
See also SetColorMask function in dynapdf_help.pdf manual.
See also SetColorMask function in DynaPDF manual.
See also:

- 78.41.779 SetColorMask(ImageHandle as Integer, Mask as Ptr, Count as UInt32) as boolean 13222

78.41.781 SetColors(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the fill and stroke color.
See also SetColors function in DynaPDF manual.

78.41.782 SetColorSpace(ColorSpace as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the color space.
Example:

```
Var pdf as DynaPDFMBS // your DynaPDF object
Var bBool as Boolean

// get the colorspace of the image file
const DP_csDeviceRGB=0
const DP_csDeviceCMYK=1
const DP_csDeviceGray=2

Var iColorSpace as Integer

iColorSpace=DP_csDeviceRGB
```

```
// define color space
bBool=pdf.SetColorSpace(iColorSpace)
```

See also SetColorSpace function in DynaPDF manual.

78.41.783 SetColSortField(ColField as Integer, AscendingOrder as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the collection field that should be used to sort the list of embedded files.
See also SetColSortField function in DynaPDF manual.

78.41.784 SetCompressionFilter(Filter as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the compression filter which is used to compress images.
Example:

```
Var pdf as DynaPDFMBS // your DynaPDF object
Var bBool as Boolean

// set compression filter
bBool = pdf.SetCompressionFilter(pdf.kcfJPEG)
```

Notes: Use kcfCCITT3, kcfCCITT4, kcfFlate, kcfFlateBW, kcfJP2K, kcfJPEG or kcfLZW constants.
See also SetCompressionFilter function in DynaPDF manual.

78.41.785 SetCompressionLevel(CompressLevel as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the current compression level.
See also SetCompressionLevel function in DynaPDF manual.

78.41.786 SetContent(buffer as memoryblock) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function replaces the content stream of the currently open page or template with a new one.
See also SetContent function in DynaPDF manual.
See also:

- 78.41.787 SetContent(buffer as string) as Boolean 13225

78.41.787 SetContent(buffer as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function replaces the content stream of the currently open page or template with a new one.
See also SetContent function in DynaPDF manual.
See also:

- 78.41.786 SetContent(buffer as memoryblock) as Boolean 13224

78.41.788 SetDateTimeFormat(TxtField as Integer, Fmt as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function restricts the allowed value of a text field to a date time format and applies this format if the value was valid.
See also SetDateTimeFormat function in DynaPDF manual.

78.41.789 SetDefBitsPerPixel(value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the default color depth in bits per pixel, which determines whether images should be downsampled.
See also SetDefBitsPerPixel function in DynaPDF manual.

78.41.790 SetDocInfo(DInfo as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function set or changes a document info entry.
Example:

```
Var pdf as DynaPDFMBS // your DynaPDF object
Var bBool as Boolean
```

```
Var source as FolderItem // source pdf file?

const diAuthor=0
const diCreator=1
const diKeywords=2
const diProducer=3
const diSubject=4
const diTitle=5

// Define some pdf properties:
bBool=pdf.SetDocInfo(diAuthor, SystemInformationMBS.Username)
bBool=pdf.SetDocInfo(diCreator, "SysProgName"+" - "+"MetSysProgVer")
bBool=pdf.SetDocInfo(diKeywords, "")
bBool=pdf.SetDocInfo(diProducer, "SysProgName"+" - "+"MetSysProgVer")
bBool=pdf.SetDocInfo(diSubject, "")
bBool=pdf.SetDocInfo(diTitle, source.name)
```

Notes: The text parameter is converted to unicode.
See also SetDocInfo function in DynaPDF manual.

78.41.791 SetDocInfoAnsi(DInfo as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function set or changes a document info entry.
Example:

```
Var pdf as DynaPDFMBS // your DynaPDF object
Var bBool as Boolean
Var source as FolderItem // source pdf file?

const diAuthor=0
const diCreator=1
const diKeywords=2
const diProducer=3
const diSubject=4
const diTitle=5

// Define some pdf properties:
bBool=pdf.SetDocInfoAnsi(diAuthor, SystemInformationMBS.Username)
bBool=pdf.SetDocInfoAnsi(diCreator, "SysProgName"+" - "+"MetSysProgVer")
bBool=pdf.SetDocInfoAnsi(diKeywords, "")
bBool=pdf.SetDocInfoAnsi(diProducer, "SysProgName"+" - "+"MetSysProgVer")
```

bBool=pdf.SetDocInfoAnsi(diSubject, "")
bBool=pdf.SetDocInfoAnsi(diTitle, source.name)

Notes: The text parameter is converted to ANSI.
See also SetDocInfo function in DynaPDF manual.

78.41.792 SetDocInfoEx(DInfo as Integer, Key as string, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function set or changes a document info entry.
Notes: The Text parameter is converted to unicode.
See also SetDocInfoEx function in DynaPDF manual.

78.41.793 SetDocInfoExAnsi(DInfo as Integer, Key as string, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function set or changes a document info entry.
Notes: The Text parameter is converted to ANSI.
See also SetDocInfoEx function in DynaPDF manual.

78.41.794 SetDrawDirection(Direction as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the draw direction of closed vector graphics such as rectangles, ellipses, triangles and so on.
See also SetDrawDirection function in DynaPDF manual.

78.41.795 SetEMFFrameDPI(DPIX as Integer, DPIY as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to adjust DPI value which is used to calculate the picture size of an

EMF file.
See also SetEMFFrameDPI function in DynaPDF manual.

78.41.796 SetEMFPatternDistance(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the default distance between lines of standard patterns during EMF conversion.
See also SetEMFPatternDistance function in DynaPDF manual.

78.41.797 SetErrorMode(ErrMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error mode specifies which error types should be treated as fatal error.
See also SetErrorMode function in DynaPDF manual.

78.41.798 SetExtColorSpace(Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function activates an extended color space in the graphics state.
Notes: Requires DynaPDF Pro license.
See also SetExtColorSpace function in DynaPDF manual.

78.41.799 SetExtFillColorSpace(Handle as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the colorspace for filling.
Notes: Pass Colorspace handle like for SetExtColorSpace.
Requires DynaPDF Pro license.
See also SetExtFillColorSpace function in DynaPDF manual.

78.41.800 SetExtGState(Handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function applies an extended graphics state.
See also SetExtGState function in DynaPDF manual.

78.41.801 SetExtStrokeColorSpace(Handle as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the colorspace for filling.
Notes: Pass Colorspace handle like for SetExtColorSpace.
Requires DynaPDF Pro license.
See also SetExtStrokeColorSpace function in DynaPDF manual.

78.41.802 SetFieldBackColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the background color used for newly created interactive form fields and annotations.
See also SetFieldBackColor function in DynaPDF manual.

78.41.803 SetFieldBBox(Handle as Integer, rect as DynaPDFRectMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the bounding box of a field.
See also SetFieldBBox function in DynaPDF manual.

78.41.804 SetFieldBorderColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the border color used for newly created interactive form fields and annotations.
See also SetFieldBorderColor function in DynaPDF manual.

78.41.805 SetFieldBorderStyle(Field as Integer, Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the border style of a specific Interactive Form field.
See also SetFieldBorderStyle function in DynaPDF manual.

78.41.806 SetFieldBorderWidth(Field as Integer, LineWidth as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to change the border width of a field.
See also SetFieldBorderWidth function in DynaPDF manual.

78.41.807 SetFieldCalcOrder(CurrIndex as UInt32, NewIndex as UInt32) as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves a field in the global calc order array.
Notes: This is the order in which field values will be recalculated when the value of any field changes. The current calc order can be accessed with GetFieldCalcOrder(). The calc order array contains field handles. A field handle is a simple array index.

Returns true on success.
See also SetFieldCalcOrder function in DynaPDF manual.

78.41.808 SetFieldColor(Field as Integer, ColorType as Integer, ColorSpace as Integer, ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets a specific color of an interactive form field.
See also SetFieldColor function in DynaPDF manual.

78.41.809 SetFieldExpValue(Field as Integer, ValIndex as Integer, Value as string, ExpValue as string, Selected as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to change the choice values of a combo box, list box, or radio button.
See also SetFieldExpValue function in DynaPDF manual.

78.41.810 SetFieldExpValueAnsi(Field as Integer, ValIndex as Integer, Value as string, ExpValue as string, Selected as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** This function can be used to change the choice values of a combo box, list box, or radio button.
See also SetFieldExpValue function in DynaPDF manual.

78.41.811 SetFieldExpValueEx(Field as Integer, ValIndex as Integer, Selected as boolean, DefSelected as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function marks a choice value of a combo or list box as selected or unselected.
Notes: It can also be used to change the state of check boxes or the children of a radio button. The parameter ValIndex will be ignored if the field is a normal check box (no child of a redio button or field group).

To enumerate the choice values of a combo box, list box or radio button use the function GetFieldExpValueEx().

Return value:
If the function succeeds the return value is true. If the function fails the return value is false.

See also SetFieldExpValueEx function in DynaPDF manual.

78.41.812 SetFieldFlags(Field as Integer, Flags as Integer, Reset as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the flags of a specific interactive form field.
Example:

```
Var pdf As DynapdfMBS // your PDF environment with open page

// create field on current page
Var Field1 As Integer = pdf.CreateTextField("Field1", -1, True, 0, 50.0, 100, 200.0, 100.0)

// and fill value
Call pdf.SetTextFieldValue(Field1, "Hello", "", pdf.ktaLeft)

// make a field the user should not mess up with
Var Flags As Integer
flags = Bitwise.BitOr(pdf.kffNoView, pdf.kffInvisible, pdf.kffHidden, pdf.kffReadOnly)
Call pdf.SetFieldFlags(field1, flags, False)
```

See also SetFieldFlags function in DynaPDF manual.

78.41.813 SetFieldFont(Field as Integer, Name as string, Style as Integer = 0, Size as double = 12, Embed as boolean = true, CodePage as integer = &h27) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the font of a form field.
Notes: See documentation of SetFieldFont function in dynapdf_help manual file for details.
See also SetFieldFont function in DynaPDF manual.

78.41.814 SetFieldFontAnsi(Field as Integer, Name as string, Style as Integer = 0, Size as Double = 12, Embed as boolean = true, CodePage as Integer = &h27) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function

instead. **Function:** The function sets or changes the font of a form field.
Notes: See documentation of SetFieldFont function in dynapdf_help manual file for details.
See also SetFieldFont function in DynaPDF manual.

78.41.815 SetFieldFontEx(Field as UInt32, Handle as UInt32, FontSize as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or replaces the font of a field.
Notes: The function requires a font handle that was returned by SetFieldFont.
Returns true on success and false on failure.
See also SetFieldFontEx function in DynaPDF manual.

78.41.816 SetFieldFontSize(aField as Integer, FontSize as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the font size of a specific field.
See also SetFieldFontSize function in DynaPDF manual.

78.41.817 SetFieldHighlightMode(Field as Integer, HighlightMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the highlight mode of a specific field.
See also SetFieldHighlightMode function in DynaPDF manual.

78.41.818 SetFieldIndex(Field as Integer, Index as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to set the tab order of interactive form fields.
See also SetFieldIndex function in DynaPDF manual.

78.41.819 SetFieldMapName(Field as Integer, Name as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the mapping name of a field.
Notes: The parameter name is converted to unicode.
See also SetFieldMapName function in DynaPDF manual.

78.41.820 SetFieldMapNameAnsi(Field as Integer, Name as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function sets or changes the mapping name of a field.
Notes: The parameter name is converted to ANSI.
See also SetFieldMapName function in DynaPDF manual.

78.41.821 SetFieldName(Field as Integer, NewName as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the name of an interactive form field.
See also SetFieldName function in DynaPDF manual.

78.41.822 SetFieldNameAnsi(Field as Integer, NewName as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function changes the name of an interactive form field.
Notes: The text parameter is converted to ANSI.
See also SetFieldName function in DynaPDF manual.

78.41.823 SetFieldOrientation(Field as Integer, Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the orientation of a field.
See also SetFieldOrientation function in DynaPDF manual.

78.41.824 SetFieldTextAlign(Field as Integer, Align as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function set or changes the text alignment of a text or button field.
See also SetFieldTextAlign function in DynaPDF manual.

78.41.825 SetFieldTextColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the text color which is used for newly created interactive form fields.
See also SetFieldTextColor function in DynaPDF manual.

78.41.826 SetFieldToolTip(Field as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function set or changes the tool tip or description string of an interactive form field.
Notes: The value parameter is converted to unicode.
See also SetFieldToolTip function in DynaPDF manual.

78.41.827 SetFieldToolTipAnsi(Field as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function set or changes the tool tip or description string of an interactive form field.
Notes: The value parameter is converted to ANSI.
See also SetFieldToolTip function in DynaPDF manual.

78.41.828 SetFillColor(ColorValue as Color) as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the fill color.
Notes: Raises an exception if current color space is CMYK or Gray and not RGB.
The parameter Color must be defined in the current color space.
See also SetFillColor function in DynaPDF manual.
See also:

- 78.41.829 SetFillColor(ColorValue as Integer) as Boolean 13236
- 78.41.830 SetFillColor(values() as Double) as boolean 13237
- 78.41.831 SetFillColor(values() as single) as boolean 13238

78.41.829 SetFillColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the fill color.
Example:

```
// new DynaPDF Object. Use your own subclass to catch errors in error event
Var pdf as new DynaPDFMBS

// For this example you can use a Starter, Lite, Pro or Enterprise License
pdf.SetLicenseKey "Starter"

// destination pdf file
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// create new pdf document
call pdf.CreateNewPDF f

// add new page
call pdf.append

// set red text color
call pdf.SetFillColor pdf.RGB(255,0,0)

// set font
call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252

// write some text
call pdf.WriteFText pdf.ktaCenter, "My first PDF!"

// close page
call pdf.EndPage

// close file
call pdf.CloseFile

// open in users preferred PDF viewer application
f.Launch
```

Notes: The parameter Color must be defined in the current color space.
See also SetFillColor function in DynaPDF manual.
See also:

- 78.41.828 SetFillColor(ColorValue as Color) as Boolean 13235
- 78.41.830 SetFillColor(values() as Double) as boolean 13237
- 78.41.831 SetFillColor(values() as single) as boolean 13238

78.41.830 SetFillColor(values() as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets fill color based on an array of floats.
Example:

```
// new DynaPDF Object. Use your own subclass to catch errors in error event
Var pdf as new DynaPDFMBS

// For this example you can use a Starter, Lite, Pro or Enterprise License
pdf.SetLicenseKey "Starter"

// destination pdf file
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// create new pdf document
call pdf.CreateNewPDF f

// add new page
call pdf.append

// set blue text color with values in memoryblock
Var colorvalues() as Double = array(0.0, 1.0, 0.0)
call pdf.SetFillColor colorvalues

// set font
call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252

// write some text
call pdf.WriteFText pdf.ktaCenter, "My first PDF!"

// close page
call pdf.EndPage

// close file
call pdf.CloseFile

// open in users preferred PDF viewer application
f.Launch
```

Notes: The number of components must match.
See also SetFillColor function in DynaPDF manual.
See also:

- 78.41.828 SetFillColor(ColorValue as Color) as Boolean 13235
- 78.41.829 SetFillColor(ColorValue as Integer) as Boolean 13236

• 78.41.831 SetFillColor(values() as single) as boolean 13238

78.41.831 SetFillColor(values() as single) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets fill color based on an array of floats.
Notes: The number of components must match.
See also SetFillColor function in DynaPDF manual.
See also:

• 78.41.828 SetFillColor(ColorValue as Color) as Boolean 13235
• 78.41.829 SetFillColor(ColorValue as Integer) as Boolean 13236
• 78.41.830 SetFillColor(values() as Double) as boolean 13237

78.41.832 SetFillColorEx(colorvalues as memoryblock, count as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the fill color using the values in parameters.
Example:

```
// new DynaPDF Object. Use your own subclass to catch errors in error event
Var pdf as new DynaPDFMBS

// For this example you can use a Starter, Lite, Pro or Enterprise License
pdf.SetLicenseKey "Starter"

// destination pdf file
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// create new pdf document
call pdf.CreateNewPDF f

// add new page
call pdf.append

// set blue text color with values in memoryblock
Var m as new MemoryBlock(3)
m.Byte(0) = 0
m.Byte(1) = 0
m.Byte(2) = 255
call pdf.SetFillColorEx m,3

// set font
call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252
```

```
// write some text
call pdf.WriteFText pdf.ktaCenter, "My first PDF!"

// close page
call pdf.EndPage

// close file
call pdf.CloseFile

// open in users preferred PDF viewer application
f.Launch
```

Notes: Pass as many color values as needed for the current color space. 3 for RGB, 4 for CMYK. All values must be in the range of 0 to 255.
See also SetFillColorEx function in DynaPDF manual.
See also:

- 78.41.833 SetFillColorEx(ParamArray colorvalue as Integer) as Boolean 13239

78.41.833 SetFillColorEx(ParamArray colorvalue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the fill color using the values in parameters.
Example:

```
// new DynaPDF Object. Use your own subclass to catch errors in error event
Var pdf as new DynaPDFMBS

// For this example you can use a Starter, Lite, Pro or Enterprise License
pdf.SetLicenseKey "Starter"

// destination pdf file
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// create new pdf document
call pdf.CreateNewPDF f

// add new page
call pdf.append

// set red text color
call pdf.SetFillColorEx 255,0,0

// set font
call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252
```

```
// write some text
call pdf.WriteFText pdf.ktaCenter, "My first PDF!"

// close page
call pdf.EndPage

// close file
call pdf.CloseFile

// open in users preferred PDF viewer application
f.Launch
```

Notes: Pass as many color values as needed for the current color space. 3 for RGB, 4 for CMYK. All values must be in the range of 0 to 255.
See also SetFillColorEx function in DynaPDF manual.
See also:

- 78.41.832 SetFillColorEx(colorvalues as memoryblock, count as Integer) as Boolean 13238

78.41.834 SetFillColorSpace(Colorspace as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the fill color space.
See also SetFillColorSpace function in DynaPDF manual.

78.41.835 SetFloatPrecision(NumTextDecDigits as UInt32, NumVectDecDigits as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the output precision of text and vector coordinates.
Notes: The default precision for text and vector graphics is two decimal digits. This corresponds to 7200 DPI. The output precision of bezier curves is one higher as for vector graphics. The maximum output precision is 5 decimal digits.
Note that higher values increase the resulting file size.

NumTextDecDigits: Number decimal digits for text object.
NumVectDecDigits: Number of decimal digits for vector objects.

Returns boolean, true for success.
See also SetFloatPrecision function in DynaPDF manual.

78.41.836 SetFont(Name as string, Style as Integer = 0, Size as Double = 12, Embed as boolean = true, CP as Integer = &h27) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function loads a font that can be used for text output and interactive form fields.
Notes: The name parameter is converted to unicode.

If font is not found by name, please check SetFontSelMode function.
See also SetFont function in DynaPDF manual.

78.41.837 SetFontAnsi(Name as string, Style as integer = 0, Size as double = 12, Embed as boolean = true, CodePage as integer = &h27) as integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function loads a font that can be used for text output and interactive form fields.
Example:

```
Var pdf as DynaPDFMBS // your PDF object
call pdf.SetFontAnsi("Helvetica", pdf.kfsNone, 10.0, true, pdf.kcp1252)
```

Notes: The name parameter is converted to ANSI.

If font is not found by name, please check SetFontSelMode function.
See also SetFont function in DynaPDF manual.

78.41.838 SetFontEx(Name as string, Style as Integer = 0, Size as Double = 12, Embed as boolean = true, CodePage as Integer = &h27) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function loads a font that can be used for text output and interactive form fields.
Notes: The name parameter is converted to unicode.

If font is not found by name, please check SetFontSelMode function.
See also SetFontEx function in DynaPDF manual.

78.41.839 SetFontExAnsi(Name as string, Style as Integer = 0, Size as Double = 12, Embed as boolean = true, CodePage as Integer = &h27) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function loads a font that can be used for text output and interactive form fields.
Notes: The name parameter is converted to ANSI.

If font is not found by name, please check SetFontSelMode function.
See also SetFontEx function in DynaPDF manual.

78.41.840 SetFontOrigin(Origin as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the current font origin that is used to position text strings.
See also SetFontOrigin function in DynaPDF manual.

78.41.841 SetFontSearchOrder(Order() as Integer)

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the font search order.
Notes: The values in the array use this constants:

kfbtTrueType	TrueType, TrueType Collections, or OpenType fonts with TrueType outlines
kfbtType1	Type1 font
kfbtOpenType	OpenType font with Postscript outlines
kfbtStdFont	PDF Standard font
kfbtDisabled	This value can be used to disable a specific font format.

The array has 4 values.
See also SetFontSearchOrder function in DynaPDF manual.

78.41.842 SetFontSearchOrderEx(Order1 as Integer, Order2 as Integer, Order3 as Integer, Order4 as Integer)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the font search order in the same way as SetFontSearchOrder() but it does not use an array to set the search order to improve compatibility to programming languages with limited array support.
Notes: use the font base constants.
See also SetFontSearchOrderEx function in DynaPDF manual.

78.41.843 SetFontSelMode(Mode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the font selection mode.
See also SetFontSelMode function in DynaPDF manual.

78.41.844 SetFontWeight(Weight as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font weight specifies the thickness or boldness of a font.
See also SetFontWeight function in DynaPDF manual.

78.41.845 SetGStateFlags(Flags as Integer, Reset as boolean = false)

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets optional flags affecting the graphics state and coordinate handling.
Example:

```
// set the flag to use image colorspace:
Call pdf.SetGStateFlags(MyDynaPDFMBS.kgfUseImageColorSpace, False)
```

See also SetGStateFlags function in DynaPDF manual.

78.41.846 SetIconColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The icon color is used for the closed state of a text annotation.
See also SetIconColor function in DynaPDF manual.

78.41.847 SetImportFlags(Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets optional flags to control the import of external PDF files.
Example:

```
// set flags to import all
Var flags As Integer = Bitwise.BitOr(pdf.kifImportAsPage, pdf.kifImportAll)
Call pdf.SetImportFlags(flags)
```

See also SetImportFlags function in DynaPDF manual.

78.41.848 SetImportFlags2(Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets optional flags to control the import of external PDF files.
See also SetImportFlags2 function in DynaPDF manual.

78.41.849 SetItalicAngle(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property ItalicAngle is used to emulate an italic font if the font is not available in an italic style.
See also SetItalicAngle function in DynaPDF manual.

78.41.850 SetJPEGQuality(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the quality of JPEG compressed images in percent if JPEG compression is used.
See also SetJPEGQuality function in DynaPDF manual.

78.41.851 SetLanguage(ISOTag as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property specifies the language of the document.

See also SetLanguage function in DynaPDF manual.

78.41.852 SetLeading(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the leading that will be used by the functions AddContinueText() and WriteFText() to calculate the distance between two text lines.
Notes: This is for setting the line height.
See also SetLeading function in DynaPDF manual.

78.41.853 SetLicenseKey(Value as string)

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SetLicenseKeyGlobal instead. **Function:** Use this function to enter your license key.
Example:

```
Var pdf as DynaPDFMBS // your DynaPDF object
pdf.SetLicenseKey("1234567890") // enter your code here
```

Notes: If the value represents a correct license key the demo string does not longer appear on PDF pages. Once a correct key was set, it will be active until the library is unloaded or the current PDF object is released. Note that the key must be entered for each PDF object or process of a multi-threading application separately.

The license key must not be stored in the registry or other files in an unencrypted form.

You need to buy a license key from MBS.
The key will unlock the library to not run in demo mode.

Pro license is required for the following functions:

- BeginTransparencyGroup
- ConvertColors
- Create3DAnnot
- CreateSoftMask
- FlattenForm

- GetPageText
- ImportPage and ImportPageEx
- ParseContent
- RenderAnnotOrField
- RenderPage
- SetCMapDir
- SetExtColorSpace, SetExtFillColorSpace and SetExtStrokeColorSpace.
- SetUseGlobalImpFiles

Lite is required for:

- AddRenderingIntent and AddRenderingIntentEx
- CreateFormFields
- CloseFileEx
- ConvertEMFSpool
- CreateCollection
- CreateExtGState
- InsertMetafile and InsertMetafileEx
- OpenImportBuffer, OpenImportFile and OpenImportStream
- SetPDFVersion for PDF/A and PDF/X

And all functions relaying on those functions internally.

For testing you can pass "Lite", "Pro" or "Starter" for the license key. DynaPDF runs in demo mode, but will returners if you use functions which are not covered by the license.
See also SetLicenseKey function in DynaPDF manual.

78.41.854 SetLicenseKeyGlobal(Value as string)

MBS DynaPDF Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Private method to avoid you call this on an object.
Notes: Please call shared method in app.open.
Because if you make a new object and set key, it's too late.
See also:

- 78.41.855 SetLicenseKeyGlobal(Value as string)

78.41.855 SetLicenseKeyGlobal(Value as string)

MBS DynaPDF Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Use this function to enter your license key.
Notes: This method stores the key for later use. The constructor uses than this key to call SetLicenseKey for any new instance of the DynaPDFMBS class. This way you can register in the app.open event for your whole application.

For testing you can pass "Lite", "Pro" or "Starter" for the license key. DynaPDF runs in demo mode, but will returners if you use functions which are not covered by the license.
See also:

- 78.41.854 SetLicenseKeyGlobal(Value as string) 13246

78.41.856 SetLineAnnotParms(Handle as UInt32, FontHandle as Integer, FontSize as Double, Params as DynaPDFLineAnnotParameterMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the properties of a line annotation relating to measure lines.
Notes: The parameter Parms can be set to nil to delete all measure line specific values. The parameters FontHandle and FontSize will be ignored in this case.
The member Caption specifies whether the parameter Content of the function LineAnnot should be used as caption of the measure line. Although a measure line can display the string in a PopUp annotation like ordinary line annotations, this is not recommended and not fully supported in Adobe's Acrobat or Reader.
If Caption is true (recommended), the caption is drawn horizontally centered either on top or inside the measure line. The text position can be changed from its normal position with the members CaptionOffsetX and CaptionOffsetY.
The parameter FontHandle can be used to specify an arbitrary font that should be used to draw the caption. Although it is possible to use any font or font size greater 0 with DynaPDF, a PDF viewer will change the font and font size to it's default values when the annotation will be edited since line annotations support no property to specify the font or font size.
ÔøºÔøºFunction Reference

The default font to draw the caption is Helvetica and the default font size is 9 units. In order to use the default font set the parameter FontHandle to -1. The default font size is used if the parameter FontSize is set to zero.

Returns true on success or false on failure.
See also SetLineAnnotParms function in DynaPDF manual.

78.41.857 SetLineAnnotPoints(Handle as UInt32, P1 as DynaPDFPointMBS, P2 as DynaPDFPointMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 24.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the start and or end point of a line annotation.
Notes: P1 or P2 can be nil (but not both), if only the start or end point should be changed.

Returns true on success and false on failure.
See also SetLineAnnotPoints function in DynaPDF manual.

78.41.858 SetLineCapStyle(Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the line cap style that specifies how the endpoint of a line will be drawn.
See also SetLineCapStyle function in DynaPDF manual.

78.41.859 SetLineDashPattern(Dash as string, Phase as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The line dash pattern controls the pattern of dashes and gaps used to stroke paths.
See also SetLineDashPattern function in DynaPDF manual.

78.41.860 SetLineDashPattern2(dash() as double, Phase as double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a line dash pattern with a given array.
Notes: Returns true on success.
If array is nil, the pattern is removed.
See also SetLineDashPattern2 function in DynaPDF manual.

78.41.861 SetLineDashPatternEx(dash as memoryblock, NumValues as Integer, Phase as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SetLineDashPattern2 instead. **Function:** The function sets a line dash pattern in the same way as SetLineDashPattern().

Notes: dash is a memoryblock with doubles.
So dash.size=NumValues*8.
See also SetLineDashPatternEx function in DynaPDF manual.
See also:

- 78.41.862 SetLineDashPatternEx(dash() as double, Phase as integer) as Boolean 13249

78.41.862 SetLineDashPatternEx(dash() as double, Phase as integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use SetLineDashPattern2 instead. **Function:** Sets a line dash pattern with a given array.
Notes: However, this version accepts an array of doubles instead of a string value.
Returns true on success.
See SetLineDashPattern for more details.

If array is nil, the pattern is removed.
See also SetLineDashPatternEx function in DynaPDF manual.
See also:

- 78.41.861 SetLineDashPatternEx(dash as memoryblock, NumValues as Integer, Phase as Integer) as Boolean 13248

78.41.863 SetLineJoinStyle(Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the line join style which specifies how two line segments are connected.
See also SetLineJoinStyle function in DynaPDF manual.

78.41.864 SetLineWidth(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the line width used to stroke paths.
See also SetLineWidth function in DynaPDF manual.

78.41.865 SetLinkHighlightMode(Mode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the highlight mode that is used by link annotations.
See also SetLinkHighlightMode function in DynaPDF manual.

78.41.866 SetListFont(Handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function marks an arbitrary font as list font.
See also SetListFont function in DynaPDF manual.

78.41.867 SetMatrix(Matrix as DynaPDFMatrixMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function left multiplies the current transformation matrix with the new one.
See also SetMatrix function in DynaPDF manual.

78.41.868 SetMaxErrLogMsgCount(value as Integer)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the maximum number of error log messages kept in memory.
See also SetMaxErrLogMsgCount function in DynaPDF manual.

78.41.869 SetMaxFieldLen(TxtField as Integer, MaxLen as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the maximum count of characters which can be entered into a text field.
Notes: A value of zero determines that the string length should not be restricted.
See also SetMaxFieldLen function in DynaPDF manual.

78.41.870 SetMetaConvFlags(Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets specific flags to control the conversion of metafiles.
See also SetMetaConvFlags function in DynaPDF manual.

78.41.871 SetMetadata(ObjType as Integer, Handle as Integer, Buffer as Memoryblock) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or replaces the XMP metadata stream of a specific object.
Notes: The function deletes the XMP stream if empty buffer will be provided.

If the global XMP stream of the Catalog object should be replaced then proceed as follows:

- Set the wished output PDF version with SetPDFVersion.
- Get a preview of the XMP stream with GetMetadata.
- Modify the returned stream as needed and save it with SetMetadata, finished!

The above steps make sure that the XMP metadata and document info contain the same values. This is especially important for PDF standards like PDF/A or PDF/X. DynaPDF makes sure that the creation and modification date will not be changed when closing the file.

Returns true on success and false on failure.
See also SetMetadata function in DynaPDF manual.
See also:

- 78.41.872 SetMetadata(ObjType as Integer, Handle as Integer, Buffer as String) as Boolean 13251

78.41.872 SetMetadata(ObjType as Integer, Handle as Integer, Buffer as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or replaces the XMP metadata stream of a specific object.
Notes: The function deletes the XMP stream if empty buffer will be provided.

If the global XMP stream of the Catalog object should be replaced then proceed as follows:

- Set the wished output PDF version with SetPDFVersion.
- Get a preview of the XMP stream with GetMetadata.
- Modify the returned stream as needed and save it with SetMetadata, finished!

The above steps make sure that the XMP metadata and document info contain the same values. This is especially important for PDF standards like PDF/A or PDF/X. DynaPDF makes sure that the creation and

modification date will not be changed when closing the file.

Returns true on success and false on failure.
See also SetMetadata function in DynaPDF manual.
See also:

- 78.41.871 SetMetadata(ObjType as Integer, Handle as Integer, Buffer as Memoryblock) as Boolean 13251

78.41.873 SetMiterLimit(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the miter limit.
See also SetMiterLimit function in DynaPDF manual.

78.41.874 SetNeedAppearance(value as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the appearance flag.
See also SetNeedAppearance function in DynaPDF manual.

78.41.875 SetNumberFormat(TxtField as Integer, Sep as Integer, DecPlaces as Integer, NegStyle as Integer, CurrStr as string, Prepend as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function restricts the allowed input characters of a text field to numbers and formats the resulting string as specified.
See also SetNumberFormat function in DynaPDF manual.

78.41.876 SetOCGContUsage(Handle as UInt32, Value as DynaPDFOCGContUsageMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates or changes the Content Usage dictionary of an OCG.
Notes: See dynapdf_help.pdf manual for details.
If the function succeeds the return value is true. If the function fails the return value is false.

See also SetOCGContUsage function in DynaPDF manual.

78.41.877 SetOCGState(Handle as UInt32, On as Boolean, SaveState as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the visibility state of an OCG or layer.
Notes: If the parameter SaveState is true, the new state is also saved in the PDF file. Otherwise, the state is only changed temporarily so that the whished state can be rendered with RenderPage or RenderPageToImage for example.
Note that only the new state of the current OCG will be be saved. If the state of other OCGs were changed beforehand, while SaveState was set to false, then these changes will not be considered.

If the function succeeds the return value is true. If the function fails the return value is false.
See also SetOCGState function in DynaPDF manual.

78.41.878 SetOpacity(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the opacity value which is used to render the appearance of a text annotation.
See also SetOpacity function in DynaPDF manual.

78.41.879 SetOrientation(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the orientation of a page.
See also SetOrientation function in DynaPDF manual.

78.41.880 SetOrientationEx(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the orientation of a page, incl. important page properties such as the width and height, and the coordinate system.
See also SetOrientationEx function in DynaPDF manual.

78.41.881 SetPageCoords(PageCoords as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The native coordinate system of the Portable Document Format is bottom up.
Notes: Value can be kpcTopDown or kpcBottomUp. Default is kpcBottomUp.
See also SetPageCoords function in DynaPDF manual.

78.41.882 SetPageFormat(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets a predefined page or paper format.
Notes: Common paper formats and sizes in points:

Format	Size in units (Width x Height)
DIN A3	842.0 x 1191.0
DIN A4	595.0 x 842.0
DIN A5	419.0 x 595.0
DIN B4	709.0 x 1001.0
DIN B5	499.0 x 709.0
DIN B6	354.0 x 499.0
DIN C3	918.0 x 1298.0
DIN C4	649.0 x 918.0
DIN C5	459.0 x 649.0
DIN C6	323.0 x 459.0
DIN C65	323.0 x 649.0
DIN DL	312.0 x 624.0
DIN E4	623.0 x 879.0
DIN E5	439.0 x 624.0
DIN E6	312.0 x 439.0
DIN E65	312.0 x 624.0
DIN M5	439.0 x 632.0
DIN M65	317.0 x 632.0
US Legal	612.0 x 1008.0
US Letter	612.0 x 792.0

See also SetPageFormat function in DynaPDF manual.

78.41.883 SetPageHeight(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the height of the currently open page if any, or the default height for newly created pages.
Example:

```
Var pdf as DynaPDFMBS // your DynaPDF object
Var bBool as Boolean
Var dWidth as Double = 800 // new width
Var dHeight as Double = 600 // new height

// define page size
bBool=pdf.SetPageWidth(dWidth)
bBool=pdf.SetPageHeight(dHeight)
```

Notes: Common paper formats and sizes in points:

Format	Size in units (Width x Height)
DIN A3	842.0 x 1191.0
DIN A4	595.0 x 842.0
DIN A5	419.0 x 595.0
DIN B4	709.0 x 1001.0
DIN B5	499.0 x 709.0
DIN B6	354.0 x 499.0
DIN C3	918.0 x 1298.0
DIN C4	649.0 x 918.0
DIN C5	459.0 x 649.0
DIN C6	323.0 x 459.0
DIN C65	323.0 x 649.0
DIN DL	312.0 x 624.0
DIN E4	623.0 x 879.0
DIN E5	439.0 x 624.0
DIN E6	312.0 x 439.0
DIN E65	312.0 x 624.0
DIN M5	439.0 x 632.0
DIN M65	317.0 x 632.0
US Legal	612.0 x 1008.0
US Letter	612.0 x 792.0

See also SetPageHeight function in DynaPDF manual.

78.41.884 SetPageLayout(Layout as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the page layout that is used when opening the document with Adobe's Acrobat.
Example:

```
Var pdf as DynaPDFMBS // your DynaPDF object
Var bBool as Boolean

// define page view
'plSinglePage = 0, // Show one page at time
'plOneColumn = 1, // Show the pages continuous
'plTwoColumnLeft = 2, // Two columns, start with left column
'plTwoColumnRight = 3 // Two columns, start with right column
bBool=pdf.SetPageLayout(0)
```

Notes: See kpl* constants.
see also SetPageMode and SetViewerPreferences functions.
See also SetPageLayout function in DynaPDF manual.

78.41.885 SetPageMode(Mode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the page mode that is used when opening the document with Adobe's Acrobat.
Example:

```
Var pdf as DynaPDFMBS // your DynaPDF object
Var bBool as Boolean

// define page mode
'pmUseNone = 0, // Default
'pmUseOutlines = 1, // Show the outline tree
'pmUseThumbs = 2, // Show the thumb nails
'pmFullScreen = 3 // Open the document in full-screen mode
bBool=pdf.SetPageMode(0)
```

Notes: see also SetPageLayout and SetViewerPreferences functions.
See also SetPageMode function in DynaPDF manual.

78.41.886 SetPageWidth(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the width of the currently open page if any, or the default width for newly created pages.
Example:

```
Var pdf as DynaPDFMBS // your DynaPDF object
Var bBool as Boolean
Var dWidth as Double = 800 // new width
Var dHeight as Double = 600 // new height

// define page size
bBool=pdf.SetPageWidth(dWidth)
bBool=pdf.SetPageHeight(dHeight)
```

Notes: Common paper formats and sizes in points:

Format	Size in units (Width x Height)
DIN A3	842.0 x 1191.0
DIN A4	595.0 x 842.0
DIN A5	419.0 x 595.0
DIN B4	709.0 x 1001.0
DIN B5	499.0 x 709.0
DIN B6	354.0 x 499.0
DIN C3	918.0 x 1298.0
DIN C4	649.0 x 918.0
DIN C5	459.0 x 649.0
DIN C6	323.0 x 459.0
DIN C65	323.0 x 649.0
DIN DL	312.0 x 624.0
DIN E4	623.0 x 879.0
DIN E5	439.0 x 624.0
DIN E6	312.0 x 439.0
DIN E65	312.0 x 624.0
DIN M5	439.0 x 632.0
DIN M65	317.0 x 632.0
US Legal	612.0 x 1008.0
US Letter	612.0 x 792.0

See also SetPageWidth function in DynaPDF manual.

78.41.887 SetPDFVersion(Version as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the output PDF file version.
Example:

```
const pvPDF_1_3=3

Var pdf as DynaPDFMBS // your DynaPDF object
Var bBool as Boolean

// ask to create a pdf in version 1.3
bBool=pdf.SetPDFVersion(DynaPDFMBS.kpvPDFA_2005)
```

Notes: Requires DynaPDF Lite license for PDF/A and PDF/X versions.
See also SetPDFVersion function in DynaPDF manual.

78.41.888 SetPrintSettings(Mode as Integer, PickTrayByPDFSize as Integer, NumCopies as Integer, PrintScaling as Integer, PrintRanges() as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the print settings.
Notes: This is a PDF 1.7 extension.

For the Mode use the kdpm* constants.
For the PrintScaling use the kps* constants.
See also SetPrintSettings function in DynaPDF manual.

78.41.889 SetRenderingIntent(ImgHandle as Integer, RenderingIntent as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set function sets the rendering intent of an image.
Notes: The rendering intent describes how colors should be interpreted.
The parameter ImgHandle must be a valid image handle that was returned by InsertImage or InsertImageFile. Imported images returned in ParseContent, for example, can be changed too.

If the function succeeds the return value is true. If the function fails the return value is false.
See also SetRenderingIntent function in DynaPDF manual.

78.41.890 SetResolution(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the resolution in DPI (Dots per Inch), in which images are stored by DynaPDF.
Example:

```
Var pdf as DynaPDFMBS // your DynaPDF object
Var bBool as Boolean

// set maximum resolution
bBool = pdf.SetResolution(150)
```

See also SetResolution function in DynaPDF manual.

78.41.891 SetSaveNewImageFormat(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property SaveNewImageFormat specifies whether images should be downscaled if the original resolution of the image is higher than the value of the property resolution (see also SetResolution()).
Example:

```
Var pdf as DynaPDFMBS // your DynaPDF object
Var bBool as Boolean

// whether you want image to be recompressed
bBool=pdf.SetSaveNewImageFormat(False)
```

See also SetSaveNewImageFormat function in DynaPDF manual.

78.41.892 SetSeparationInfo(Handle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the separation info of the current open page.
See also SetSeparationInfo function in DynaPDF manual.

78.41.893 SetStrokeColor(ColorValue as color) as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the color used for stroked graphics objects.
Notes: Raises an exception if current color space is CMYK or Gray and not RGB.
See also SetStrokeColor function in DynaPDF manual.
See also:

- 78.41.894 SetStrokeColor(ColorValue as Integer) as Boolean 13260
- 78.41.895 SetStrokeColor(values() as Double) as boolean 13260
- 78.41.896 SetStrokeColor(values() as single) as boolean 13260

78.41.894 SetStrokeColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the color used for stroked graphics objects.
See also SetStrokeColor function in DynaPDF manual.
See also:

- 78.41.893 SetStrokeColor(ColorValue as color) as Boolean 13260
- 78.41.895 SetStrokeColor(values() as Double) as boolean 13260
- 78.41.896 SetStrokeColor(values() as single) as boolean 13260

78.41.895 SetStrokeColor(values() as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets stroke color based on an array of floats.
Notes: The number of components must match.
See also SetStrokeColor function in DynaPDF manual.
See also:

- 78.41.893 SetStrokeColor(ColorValue as color) as Boolean 13260
- 78.41.894 SetStrokeColor(ColorValue as Integer) as Boolean 13260
- 78.41.896 SetStrokeColor(values() as single) as boolean 13260

78.41.896 SetStrokeColor(values() as single) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets stroke color based on an array of floats.
Notes: The number of components must match.
See also SetStrokeColor function in DynaPDF manual.
See also:

- 78.41.893 SetStrokeColor(ColorValue as color) as Boolean 13260
- 78.41.894 SetStrokeColor(ColorValue as Integer) as Boolean 13260
- 78.41.895 SetStrokeColor(values() as Double) as boolean 13260

78.41.897 SetStrokeColorEx(colorvalues as memoryblock, count as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the stroke color using the values in parameters.
Example:

```
Var p as DynaPDFMBS // get a pdf object

Var colorvalues as memoryblock

colorvalues=NewMemoryBlock(3)
colorvalues.Byte(0)=255
colorvalues.Byte(1)=128
colorvalues.Byte(2)=0

if p.SetStrokeColorEx(colorvalues, 3) then
' ok
else
' failed
end if
```

Notes: Pass as many color values as needed for the current color space. 3 for RGB, 4 for CMYK. All values must be in the range of 0 to 255.
See also SetStrokeColorEx function in DynaPDF manual.
See also:

- 78.41.898 SetStrokeColorEx(ParamArray colorvalue as Integer) as Boolean 13261

78.41.898 SetStrokeColorEx(ParamArray colorvalue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the stroke color using the values in parameters.
Example:

```
Var p as DynaPDFMBS // get a pdf object

if p.SetStrokeColorEx(255,128,0) then
' ok
else
' failed
end if
```

Notes: Pass as many color values as needed for the current color space. 3 for RGB, 4 for CMYK. All values must be in the range of 0 to 255.
See also SetStrokeColorEx function in DynaPDF manual.
See also:

- 78.41.897 SetStrokeColorEx(colorvalues as memoryblock, count as Integer) as Boolean 13261

78.41.899 SetStrokeColorSpace(Colorspace as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the stroke color space. In PDF, fill and stroke colors use both their own color spaces.
See also SetStrokeColorSpace function in DynaPDF manual.

78.41.900 SetTabLen(TabLen as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the tabulator length, specified in number of spaces, which will be used to emulate tabulators during text formatting (see WriteFText() for further information).
See also SetTabLen function in DynaPDF manual.

78.41.901 SetTemplBBox(TemplateHandle as Integer, PageBoundary as Integer, BBoxRect as DynaPDFRectMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets or changes a bounding box of a template.
Notes: Templates support the bounding boxes kpbMediaBox and kpbCropBox only. The latter one is considered by PlaceTemplateEx() only.

A crop box can be set to clip the contents of a template without changing its bounding box. This can be useful when placing imported pages on another page.

If BBox is set to nil, the bounding box is deleted. Note that only the crop box can be deleted.

Returns true on success or false in case of an error.
See also SetTemplBBox function in DynaPDF manual.
See also:

- 78.41.902 SetTemplBBox(TemplateHandle as Integer, PageBoundary as Integer, Left as Double, Top as Double, Right as Double, Bottom as Double) as Boolean 13263

78.41.902 SetTemplBBox(TemplateHandle as Integer, PageBoundary as Integer, Left as Double, Top as Double, Right as Double, Bottom as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets or changes a bounding box of a template.
Notes: Templates support the bounding boxes kpbMediaBox and kpbCropBox only. The latter one is considered by PlaceTemplateEx() only.

A crop box can be set to clip the contents of a template without changing its bounding box. This can be useful when placing imported pages on another page.
If BBox is set to nil, the bounding box is deleted. Note that only the crop box can be deleted.

Returns true on success or false in case of an error.
See also SetTemplBBox function in DynaPDF manual.
See also:

- 78.41.901 SetTemplBBox(TemplateHandle as Integer, PageBoundary as Integer, BBoxRect as DynaPDFRectMBS) as Boolean 13262

78.41.903 SetTextDrawMode(Mode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text draw mode specifies how text should be rendered.
See also SetTextDrawMode function in DynaPDF manual.

78.41.904 SetTextFieldValue(Field as Integer, Value as string, DefValue as string, Align as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the value and default value of a text field.
Notes: The Value and the DefValue strings are converted to unicode.
See also SetTextFieldValue function in DynaPDF manual.

78.41.905 SetTextFieldValueAnsi(Field as Integer, Value as string, DefValue as string, Align as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function sets or changes the value and default value of a text field.
Notes: The Value and the DefValue strings are converted to ANSI.
See also SetTextFieldValue function in DynaPDF manual.

78.41.906 SetTextFieldValueAnsiEx(Field as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** Sets the text field value.

78.41.907 SetTextFieldValueEx(Field as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the text field value.
See also SetTextFieldValueEx function in DynaPDF manual.

78.41.908 SetTextRect(PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function defines the output rectangle that is used to output formatted text by the function WriteFText().
See also SetTextRect function in DynaPDF manual.

78.41.909 SetTextRise(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text rise specifies the distance, to move the baseline up or down from its default location.
See also SetTextRise function in DynaPDF manual.

78.41.910 SetTextScaling(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The scaling value adjusts the width of glyphs by stretching or compressing them in the horizontal direction.
See also SetTextScaling function in DynaPDF manual.

78.41.911 SetTransparentColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the transparent color which is used for newly inserted images.
Example:

```
Var pdf as DynaPDFMBS

if NoTransparentColor then
call pdf.SetTransparentColor pdf.kNO_COLOR
else
call pdf.SetTransparentColor pdf.RGB(255,255,255) // white
end if
```

See also SetTransparentColor function in DynaPDF manual.

78.41.912 SetTrapped(value as boolean)

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the trapped key of the document.
See also SetTrapped function in DynaPDF manual.

78.41.913 SetUseExactPwd(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the property UseExactPwd is false, an encrypted PDF file can always be decrypted, if either the open or owner password in the file is an empty string.
See also SetUseExactPwd function in DynaPDF manual.

78.41.914 SetUseGlobalImpFiles(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property can be used to load an external PDF file permanent into memory, e.g. to split a large PDF file into smaller pieces.
Notes: Requires DynaPDF Pro license.
See also SetUseGlobalImpFiles function in DynaPDF manual.

78.41.915 SetUseImageInterpolation(Index as Integer, Value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enables or disables image interpolation explictely for a given image.
Notes: If nothing was specified (this is the default), a viewer applications can only use a heuristic to determine whether image interpolation should be enabled or not. The result is then of course application specific. The parameter Handle must be a valid image handle that was returned by a DynaPDF function like InsertImage(), InsertImageEx(), or InsertImageFromBuffer(), for example.

If the function succeeds the return value is true. If the function fails the return value is false.
See also SetUseImageInterpolation function in DynaPDF manual.

78.41.916 SetUserUnit(value as single) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the user unit of the current open page.
Notes: A user unit acts like a scaling factor. The page format and all page coordinates are multiplied with this factor in a viewer application. The default size of a PDF unit is 1/72 inch. User units can be useful if the page format would be too large to be expressed in standard PDF units. The largest page format in PDF is limited to 14400 units or 200 inches. This limit can be extended with the user unit.
The largest value that is supported is 75.0 which results in a maximum page format of 15,000 x 15,000 inches or 1,800,000 units. Note that all functions which return page coordinates or page properties do not consider the user unit.
The page format must still be in the range 3..14400 units. It is also strongly recommended to set the user unit only if necessary. This is only the case if the required page format is larger 14400 units.
Default value = 1.0

Return values:
If the function succeeds the return value is true. If the function fails the return value is false.
See also SetUserUnit function in DynaPDF manual.

78.41.917 SetUseStdFonts(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function can be used to disable the 14 standard fonts temporarily.
See also SetUseStdFonts function in DynaPDF manual.

78.41.918 SetUseSwapFile(SwapContents as Boolean, SwapLimit as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** When creating large PDF files with many or large images it is sometimes recommended to page out large objects to a temp file to restrict the memory usage.
Example:

```
Var pdf as DynaPDFMBS // your DynaPDF object

// define a swap file in case memory is low
Var b as Boolean=pdf.SetUseSwapFile(False, 256*1024*1024)
if b=False then
MessageBox "Failed to create swap file."
Return
end if
```

Notes: Do not use FlushPages and SetUseSwapFile together. Use one function.
See also SetUseSwapFile function in DynaPDF manual.

78.41.919 SetUseSwapFileEx(SwapContents as Boolean, SwapLimit as Integer, SwapDir as FolderItem) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** This function enables paging out of large objects to restrict the memory usage in the same way as SetUseSwapFile().
See also SetUseSwapFileEx function in DynaPDF manual.

78.41.920 SetUseSystemFonts(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property specifies whether the Windows/Fonts directory should be added automatically to the list of available font search paths.
See also SetUseSystemFonts function in DynaPDF manual.

78.41.921 SetUseTransparency(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property specifies whether images should get a transparent background.
Example:

```
Var pdf as DynaPDFMBS // your DynaPDF object
Var bBool as Boolean

// allow transparency for images
bBool=pdf.SetUseTransparency(False)
```

Notes: Default is true in DynaPDF 4 vs. false in DynaPDF 5.
See also SetUseTransparency function in DynaPDF manual.

78.41.922 SetUseVisibleCoords(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property specifies whether DynaPDF should consider the crop box to calculate to position of an object.

See also SetUseVisibleCoords function in DynaPDF manual.

78.41.923 SetViewerPreferences(Value as Integer, AddVal as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the viewer preferences which can be used to control a few parameter of Adobe's Acrobat, such as hide the toolbar or menu bar.
Example:

call pdf.SetViewerPreferences pdf.kvpDisplayDocTitle,pdf.kavNone

Notes: See kvp* constants and *kav constants.
See also SetPageLayout and SetPageMode functions.
See also SetViewerPreferences function in DynaPDF manual.

78.41.924 SetWhite(FillColor as Boolean, StrokeColor as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets white color.
Notes: This function is a bit optimized to check the current color space.
Depending on whether it's RGB, Gray, CMYK or Lab, it will set different color values.
And if other color space is active, it switches to Gray colorspace to set white.

78.41.925 SetWMFDefExtent(Width as Integer, Height as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the default size which is used to convert non-portable WMF files to EMF. See InsertMetafile() for further information.
See also SetWMFDefExtent function in DynaPDF manual.

78.41.926 SetWMFPixelPerInch(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the default pixels per inch of the y-axis which are used to convert portable WMF files to EMF.
See also SetWMFPixelPerInch function in DynaPDF manual.

78.41.927 SetWordSpacing(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the word spacing.
See also SetWordSpacing function in DynaPDF manual.

78.41.928 SetXFAStream(Index as UInt32, Buffer as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function replaces the contents of an XFA stream with new contents.
Notes: Index must be a valid XFA resource index. XFA streams can be enumerated with GetXFAStream() / GetXFAStreamCount().
The function does not check whether the provided XFA buffer is valid. The buffer is written to the stream as is.

If the function succeeds the return value is true. If the function fails the return value is false.
See also SetXFAStream function in DynaPDF manual.

78.41.929 ShowDifferences(PageIndex1 as Integer, OtherPDF as DynaPDFMBS, PageIndex2 as Integer, CheckMoving as boolean, HighlightColor as UInt32 = &hFFFF, ScaleFactor as Integer = 1, ColorTolerance as Integer = 3, debug as boolean = false) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shows differences on two PDF pages by adding highlight annotations.
Notes: Please pass page indexes for both pages. OtherPDF can be same as the current instance you call this method on.

CheckMoving: Whether to check for moving parts, e.g. the big part of the page shifted up one line.

Returns number of annotations on success which means that highlight annotations have been added to both pages.
Or returns negative value in case of error.
You can than render a page to show differences to user.
Requires a DynaPDF Pro license. Without a license, the DynaPDF watermark will reduce the accuracy.

Scale: When comparison, scales up the pictures used for comparison. Default is 1 for 72dpi, but you can use 2 for double.
ColorTolerance: The tolerance for color comparison.

Colors where red, green or blue components are within given tolerance are considered equal. So FFFFFF and FFFFFD are equal.
Default is 3.

Debug Parameter: Whether to write debug images to temp folder.
If true, we write png files to temp folder. One image is before the check, one with all similar lines removed and one with result of comparison. Red pixels show you the raster, green equal pixels.

If a page is open, we automatically close it.

78.41.930 SkewCoords(alpha as Double, beta as Double, OriginX as Double, OriginY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function skews the coordinate system and sets the coordinate origin to the point OriginX, OriginY.
Notes: Please do not try to scale/skew/translate back later. use SaveGraphicState and RestoreGraphicState.
See also SkewCoords function in DynaPDF manual.

78.41.931 SortFieldsByIndex as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sorts the interactive form fields of a page by comparing the internal indices which can be set for each field separately (see SetFieldIndex() for further information).
See also SortFieldsByIndex function in DynaPDF manual.

78.41.932 SortFieldsByName as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sorts the interactive form fields of a page in ascending order by field name.
See also SortFieldsByName function in DynaPDF manual.

78.41.933 SquareAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function draws a square annotation on the current open page.
Notes: If the parameters Width and Height are equal the function draws a square, a rectangle otherwise. If the annotation should beÔøºdrawn without a border, set the parameter LineWidth zo zero or StrokeColor to the special constant kNO_COLOR.
If the interior should be transparent set FillColor to the special constant kNO_COLOR.
Although the line width can be set to any positive floating point value, Adobe's Acrobat or Reader restrict the line width to 0 through 12 units. The line width should be restricted in the same way to avoid issues in Adobe viewer products.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails, the return value is a negative error code.
See also SquareAnnot function in DynaPDF manual.

78.41.934 SquareAnnotAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function draws a square annotation on the current open page.
Notes: If the parameters Width and Height are equal the function draws a square, a rectangle otherwise. If the annotation should beÔøºdrawn without a border, set the parameter LineWidth zo zero or StrokeColor to the special constant kNO_COLOR.
If the interior should be transparent set FillColor to the special constant kNO_COLOR.
Although the line width can be set to any positive floating point value, Adobe's Acrobat or Reader restrict the line width to 0 through 12 units. The line width should be restricted in the same way to avoid issues in Adobe viewer products.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails, the return value is a negative error code.
See also SquareAnnot function in DynaPDF manual.

78.41.935 StampAnnot(SubType as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stamp annotation.
See also StampAnnot function in DynaPDF manual.

78.41.936 StampAnnotAnsi(SubType as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** Creates a stamp annotation with ANSI encoded texts.
See also StampAnnot function in DynaPDF manual.

78.41.937 StrokePath as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function strokes the current path without closing it.
See also StrokePath function in DynaPDF manual.

78.41.938 TestGlyphs(FontHandle as Integer, Text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function checks whether all glyphs of the text are available in the specified font.
Example:

```
// create dummy PDF with one page
Var d as new myDynaPDFMBS

call d.CreateNewPDF
call d.Append

// check this text
Var x as string = "ÊÇ®Â•Ω" // Hello in Chinese

// load 2 fonts to check
```

```
Var FontHandle1 as Integer = d.SetFont("Times", 12)
Var FontHandle2 as Integer = d.SetFont("Arial Unicode MS", 12)

Var r1 as Integer = d.TestGlyphs(FontHandle1, x)

if r1 = -1 then
MessageBox "Times supports chinese characters"
else
MessageBox "Times does not support chinese characters"
end if

Var r2 as Integer = d.TestGlyphs(FontHandle2, x)

if r2 = -1 then
MessageBox "Arial Unicode MS supports chinese characters"
else
MessageBox "Arial Unicode MS does not support chinese characters"
end if
```

Notes: The return value is the position of the first missing glyph, or -1 if all glyphs are available.
If the font uses a mixed 8/16 bit CJK code page that requires a conversion to Unicode (a code page that ends with "_Uni"), then the return value corresponds to the converted Unicode string and not to the CJK input string.
See also TestGlyphs function in DynaPDF manual.

78.41.939 TestGlyphsAnsi(FontHandle as Integer, Text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function checks whether all glyphs of the text are available in the specified font.
Notes: The return value is the position of the first missing glyph, or -1 if all glyphs are available.
If the font uses a mixed 8/16 bit CJK code page that requires a conversion to Unicode (a code page that ends with "_Uni"), then the return value corresponds to the converted Unicode string and not to the CJK input string.
The text parameter is converted to ANSI.
See also TestGlyphs function in DynaPDF manual.

78.41.940 TestPassword(PwdType as Integer, Value as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Test the given password against the owner one.
Notes: The main purpose of the function is to test the file against the owner password if the encryption

settings should be changed by the user. It is not meaningful to call this function for non-encrypted files. To determine whether a PDF file is encrypted call DynaPDF.GetInIsEncrypted.
See also TestPassword function in DynaPDF manual.

78.41.941 TextAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Text as string, Icon as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a text annotation.
Notes: The text and the author parameters are converted to unicode.
See also TextAnnot function in DynaPDF manual.

78.41.942 TextAnnotAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Text as string, Icon as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function creates a text annotation.
Notes: The text and the author parameters are converted to ANSI.
See also TextAnnot function in DynaPDF manual.

78.41.943 TranslateCoords(OriginX as Double, OriginY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function translates the coordinate system to the new origin OriginX, OriginY.
See also TranslateCoords function in DynaPDF manual.

78.41.944 TranslateRawCode(IFont as Integer, text as string, byref Width as Double, byref Decoded as boolean, CharSpacing as Double, WordSpacing as Double, TextScale as Double) as string

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates a raw code.
Notes: Deprecated. Please use other variant with more parameters.

See also TranslateRawCode function in DynaPDF manual.
See also:

- 78.41.945 TranslateRawCode(IFont as integer, text as string, textOffset as Integer, byref Width as double, byref Decoded as boolean, CharSpacing as double, WordSpacing as double, TextScale as double, byref count as integer) as string 13276

78.41.945 TranslateRawCode(IFont as integer, text as string, textOffset as Integer, byref Width as double, byref Decoded as boolean, CharSpacing as double, WordSpacing as double, TextScale as double, byref count as integer) as string

MBS DynaPDF Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts a source character to Unicode.
Notes: The code length of a character depends on the font's encoding. PDF supports encodings with fixed and variable code lengths from one through four bytes per character. The Count parameter provides the number of bytes which were consumed to convert the character to Unicode; this value must be used to increment the textOffset parameter for further calls.
The resulting Unicode character or sequence is returned in function result. The width parameter is used to return the character width.
The parameter Decoded is set to true if the source character could be sucsessfully converted to Unicode. If Decode is false the output string and character width contain no meaningful values.
The function can only fail when processing strings of CID fonts, e.g. if the font depends on an external CMap that could not be loaded, or if the font uses a damaged CMap. The search path(s) to external CMaps should always be set before extracting text from PDF files with SetCMapDir().
Passing an invalid or undefined code sequence to the function does not result in an error. In this case the notdef character is added to the output string (this is usually 0 or 0xFFFD if the font contains a ToUnicode CMap).
Notice:
To improve processing speed the function does not check whether the parameters are valid.
Remarks:
This function was designed to convert raw strings on a per character basis to Unicode which were returned by ParseContent() or GetPageText(). The parameters CharSpacing, WordSpacing, and TextScale must be taken from the current graphics state or from the structure DynaPDFStackMBS.
Return values:
The count value of this function is always greater or equal to one. Check the parameter Decoded to determine whether the function succeed.
See also TranslateRawCode function in DynaPDF manual.
See also:

- 78.41.944 TranslateRawCode(IFont as Integer, text as string, byref Width as Double, byref Decoded as boolean, CharSpacing as Double, WordSpacing as Double, TextScale as Double) as string 13275

78.41.946 TranslateString(IFont as Integer, text as string, flags as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates a string.
See also TranslateString function in DynaPDF manual.
See also:

- 78.41.947 TranslateString(stack as DynaPDFStackMBS, flags as Integer) as string 13277

78.41.947 TranslateString(stack as DynaPDFStackMBS, flags as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function translates a binary string returned by GetPageText() to Unicode.
See also TranslateString function in DynaPDF manual.
See also:

- 78.41.946 TranslateString(IFont as Integer, text as string, flags as Integer) as string 13277

78.41.948 Triangle(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x3 as Double, y3 as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function draws a triangle.
See also Triangle function in DynaPDF manual.

78.41.949 UnLockLayer(layer as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Locks a layer.
See also UnLockLayer function in DynaPDF manual.

78.41.950 WatermarkAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a Watermark annotation.
Example:

```
// create watermark annotation
Var AnnotHandle As Integer = pdf.WatermarkAnnot(100, 100, 300, 200)

// it's empty initially

// so we create an annotation appearance stream
Var x As Integer = pdf.CreateAnnotAP(AnnotHandle)

// set a color and draw rectangle
Call pdf.SetFillColor(&cFF7777)
Call pdf.Rectangle 0, 0, 300, 200, pdf.kfmFill

Call pdf.SetStrokeColor(&c000000)
Call pdf.SetFillColor(&c000000)
Call pdf.SetFont("Helvetica", pdf.kfsBold, 30)
Call pdf.WriteText(20, 20, "Hello World")

// close template
Call pdf.EndTemplate
```

Notes: Watermark annotations have no interactive elements like other annotation types. This property is useful in many cases because it is usually not possible to select or change the contents of a watermark annotation in viewer applications.
The annotation has no appearance after it was created. Call CreateAnnotAP to create an appearance template for the annotation. After the appearance template was created you can draw text, images or vector graphics into it. The template must be closed with EndTemplate when finished. It is also possible to import an external page or EMF contents into the template.
Watermark annotations can be shared on multiple pages. To place the annotation on other pages call AddAnnotToPage.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also WatermarkAnnot function in DynaPDF manual.

78.41.951 WebLink(PosX as Double, PosY as Double, Width as Double, Height as Double, aText as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a web link onto the current open page.
Notes: The text parameter is converted to unicode.
See also WebLink function in DynaPDF manual.

78.41.952 WebLinkAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, aText as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function inserts a web link onto the current open page.
Notes: The text parameter is converted to ANSI.
See also WebLink function in DynaPDF manual.

78.41.953 WeightFromStyle(s as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a style value to a weight value.

78.41.954 WeightToStyle(s as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a weight value to a style value.

78.41.955 WidthFromStyle(s as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a style constant to the width value.

78.41.956 WidthToStyle(s as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a width value to a style value.

78.41.957 WriteAngleText(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a string in a user defined angle around a radius.
Notes: The text parameter is converted to unicode.
See also WriteAngleText function in DynaPDF manual.
See also:

- 78.41.958 WriteAngleText(glyphs() as Integer, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean 13280

78.41.958 WriteAngleText(glyphs() as Integer, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a string in a user defined angle around a radius.
Notes: This version takes an array of integers. So if you are using the kcpUnicode on SetFont, please pass an array of unicode codepoints. If you use kcpGlyphIndexes, please pass an array of glyph values.
See also WriteAngleText function in DynaPDF manual.
See also:

- 78.41.957 WriteAngleText(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean 13280

78.41.959 WriteAngleTextAnsi(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function prints a string in a user defined angle around a radius.
Notes: The text parameter is converted to ANSI, so use only with SetFont with kcp1252.
See also WriteAngleText function in DynaPDF manual.
See also:

- 78.41.957 WriteAngleText(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean 13280
- 78.41.958 WriteAngleText(glyphs() as Integer, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean 13280

78.41.960 WriteAngleTextDirect(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a string in a user defined angle around a radius.
Notes: The text parameter is not converted, so pass a string in the right encoding.
See also:

- 78.41.961 WriteAngleTextDirect(glyphs() as Integer, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean 13281

78.41.961 WriteAngleTextDirect(glyphs() as Integer, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a string in a user defined angle around a radius.
Notes: This version takes an array of integers. So pass in values in the encoding you are using. This can be glyph values or bytes in any encoding you selected in the SetFont method.
See also:

- 78.41.960 WriteAngleTextDirect(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean 13281

78.41.962 WriteFText(Align as Integer, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.
Notes: The text parameter is converted to unicode.

The PageBreak event is called when needed by the plugin.
See also WriteFText function in DynaPDF manual.
See also:

- 78.41.963 WriteFText(Align as Integer, glyphs() as Integer) as Boolean 13281

78.41.963 WriteFText(Align as Integer, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.
Notes: This version takes an array of integers. So if you are using the kcpUnicode on SetFont, please pass an array of unicode codepoints. If you use kcpGlyphIndexes, please pass an array of glyph values.

The PageBreak event is called when needed by the plugin.
See also WriteFText function in DynaPDF manual.
See also:

- 78.41.962 WriteFText(Align as Integer, aText as string) as Boolean 13281

78.41.964 WriteFTextAnsi(Align as Integer, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.
Notes: The text parameter is converted to ANSI, so use only with SetFont with kcp1252.

The PageBreak event is called when needed by the plugin.
See also WriteFText function in DynaPDF manual.
See also:

- 78.41.962 WriteFText(Align as Integer, aText as string) as Boolean 13281
- 78.41.963 WriteFText(Align as Integer, glyphs() as Integer) as Boolean 13281

78.41.965 WriteFTextDirect(Align as Integer, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.
Notes: The text parameter is not converted, so pass a string in the right encoding.

The PageBreak event is called when needed by the plugin.
See also:

- 78.41.966 WriteFTextDirect(Align as Integer, glyphs() as Integer) as Boolean 13282

78.41.966 WriteFTextDirect(Align as Integer, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.
Notes: This version takes an array of integers. So pass in values in the encoding you are using. This can be glyph values or bytes in any encoding you selected in the SetFont method.

The PageBreak event is called when needed by the plugin.
See also:

- 78.41.965 WriteFTextDirect(Align as Integer, aText as string) as Boolean 13282

78.41.967 WriteFTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a formatted text exactly in the same way as WriteFText().
Notes: The text parameter is converted to unicode.

The PageBreak event is called when needed by the plugin.
See also WriteFTextEx function in DynaPDF manual.
See also:

- 78.41.968 WriteFTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, glyphs() as Integer) as Boolean 13283

78.41.968 WriteFTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a formatted text exactly in the same way as WriteFText().
Notes: This version takes an array of integers. So if you are using the kcpUnicode on SetFont, please pass an array of unicode codepoints. If you use kcpGlyphIndexes, please pass an array of glyph values.

The PageBreak event is called when needed by the plugin.
See also WriteFTextEx function in DynaPDF manual.

- 78.41.967 WriteFTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, aText as string) as Boolean 13283

78.41.969 WriteFTextExAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function prints a formatted text exactly in the same way as WriteFText().
Notes: The text parameter is converted to ANSI, so use only with SetFont with kcp1252.

The PageBreak event is called when needed by the plugin.
See also WriteFTextEx function in DynaPDF manual.
See also:

- 78.41.967 WriteFTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, aText as string) as Boolean 13283
- 78.41.968 WriteFTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, glyphs() as Integer) as Boolean 13283

78.41.970 WriteFTextExDirect(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a formatted text exactly in the same way as WriteFText().
Notes: The text parameter is not converted, so pass a string in the right encoding.

The PageBreak event is called when needed by the plugin.
See also:

- 78.41.971 WriteFTextExDirect(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, glyphs() as Integer) as Boolean 13284

78.41.971 WriteFTextExDirect(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a formatted text exactly in the same way as WriteFText().
Notes: This version takes an array of integers. So pass in values in the encoding you are using. This can be glyph values or bytes in any encoding you selected in the SetFont method.

The PageBreak event is called when needed by the plugin.
See also:

- 78.41.970 WriteFTextExDirect(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, aText as string) as Boolean 13284

78.41.972 WriteStyledText(Align as Integer, StyledText as StyledText, LeadingFactor as double = -1) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes styled text.
Notes: Same as WriteFText, but calls ConvertStyledText for you to convert the styled text to formatting commands.

LeadingFactor: Added in v21.0. If you pass a value >0, the plugin will add \LD [ ] commands to styled text to set leading relative to font size. This way you define the spacing beteween lines. e.g. 1.2.

If you have a problem with the conversion, you can always use ConvertStyledText function directly and inspect what it generates. And you can of course modify it and e.g. convert "* " on a beginning of a line to a list.
See also WriteStyledText function in DynaPDF manual.
See also:

- 78.41.973 WriteStyledText(Align as Integer, TextArea as TextArea, LeadingFactor as double = -1) as Boolean 13285

78.41.973 WriteStyledText(Align as Integer, TextArea as TextArea, LeadingFactor as double = -1) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Writes styled text from TextArea.
Notes: Same as WriteFText, but calls ConvertStyledText for you to convert the styled text to formatting commands.

LeadingFactor: Added in v21.0. If you pass a value >0, the plugin will add \LD [ ] commands to styled text to set leading relative to font size. This way you define the spacing beteween lines. e.g. 1.2.

If you have a problem with the conversion, you can always use ConvertStyledText function directly and inspect what it generates. And you can of course modify it and e.g. convert "* " on a beginning of a line to a list.

- 78.41.974 WriteStyledTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, StyledText as StyledText, LeadingFactor as double = -1) as Boolean 13286

78.41.976 WriteText(PosX as Double, PosY as Double, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a text onto the current open page, template, or pattern.
Notes: The text parameter is converted to unicode.
See also WriteText function in DynaPDF manual.
See also:

- 78.41.977 WriteText(PosX as Double, PosY as Double, glyphs() as Integer) as Boolean 13287

78.41.977 WriteText(PosX as Double, PosY as Double, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a text onto the current open page, template, or pattern.
Notes: This version takes an array of integers. So if you are using the kcpUnicode on SetFont, please pass an array of unicode codepoints. If you use kcpGlyphIndexes, please pass an array of glyph values.
See also WriteText function in DynaPDF manual.
See also:

- 78.41.976 WriteText(PosX as Double, PosY as Double, aText as string) as Boolean 13287

78.41.978 WriteTextAnsi(PosX as Double, PosY as Double, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function prints a text onto the current open page, template, or pattern.
Notes: The text parameter is converted to ANSI, so use only with SetFont with kcp1252.
See also WriteText function in DynaPDF manual.
See also:

- 78.41.976 WriteText(PosX as Double, PosY as Double, aText as string) as Boolean 13287

78.41.979 WriteTextDirect(PosX as Double, PosY as Double, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a text onto the current open page, template, or pattern.
Notes: The text parameter is not converted, so pass a string in the right encoding.
See also:

- 78.41.980 WriteTextDirect(PosX as Double, PosY as Double, glyphs() as Integer) as Boolean 13288

78.41.980 WriteTextDirect(PosX as Double, PosY as Double, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a text onto the current open page, template, or pattern.
Notes: This version takes an array of integers. So pass in values in the encoding you are using. This can be glyph values or bytes in any encoding you selected in the SetFont method.
See also:

- 78.41.979 WriteTextDirect(PosX as Double, PosY as Double, aText as string) as Boolean 13288

78.41.981 WriteTextMatrix(Matrix as DynaPDFMatrixMBS, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.
Notes: This version takes an array of integers. So if you are using the kcpUnicode on SetFont, please pass an array of unicode codepoints. If you use kcpGlyphIndexes, please pass an array of glyph values.
See also WriteTextMatrix function in DynaPDF manual.
See also:

- 78.41.982 WriteTextMatrix(Matrix as DynaPDFMatrixMBS, Text as string) as Boolean 13288

78.41.982 WriteTextMatrix(Matrix as DynaPDFMatrixMBS, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.
Notes: The text parameter is converted to unicode.

See also WriteTextMatrix function in DynaPDF manual.
See also:

- 78.41.981 WriteTextMatrix(Matrix as DynaPDFMatrixMBS, glyphs() as Integer) as Boolean 13288

78.41.983 WriteTextMatrixAnsi(Matrix as DynaPDFMatrixMBS, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Function:** The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.
Notes: The text parameter is converted to ANSI, so use only with SetFont with kcp1252.
See also WriteTextMatrix function in DynaPDF manual.

- 78.41.981 WriteTextMatrix(Matrix as DynaPDFMatrixMBS, glyphs() as Integer) as Boolean 13288
- 78.41.982 WriteTextMatrix(Matrix as DynaPDFMatrixMBS, Text as string) as Boolean 13288

78.41.984 WriteTextMatrixDirect(Matrix as DynaPDFMatrixMBS, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.
Notes: This version takes an array of integers. So pass in values in the encoding you are using. This can be glyph values or bytes in any encoding you selected in the SetFont method.
See also:

- 78.41.985 WriteTextMatrixDirect(Matrix as DynaPDFMatrixMBS, Text as string) as Boolean 13289

78.41.985 WriteTextMatrixDirect(Matrix as DynaPDFMatrixMBS, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.
Notes: The text parameter is not converted, so pass a string in the right encoding.
See also:

- 78.41.984 WriteTextMatrixDirect(Matrix as DynaPDFMatrixMBS, glyphs() as Integer) as Boolean 13289

78.41.986 YofCMYK(CMYK as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns Y of a CMYK color value.
Example:

```
Var cmyk as Integer = DynaPDFMBS.CMYK(1,2,3,4)
MessageBox str(DynaPDFMBS.YofCMYK(cmyk)) // shows 3
```

Notes: Returns different values on BigEndian and LittleEndian systems.

78.41.987 Properties

78.41.988 ActiveFontInfo as DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries font info for active font.
Notes: Added, so you can see it in debugger.
(Read only property)

78.41.989 ClearRectMode as Integer

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ClearRect Mode for Graphics class.
Example:

```
Var pdf as new DynaPDFMBS
pdf.ClearRectMode = kClearRectModeIgnoreAll
```

Notes: When graphics class is called with ClearRect method, the area in the PDF page is filled with white color.
If you like to ignore such calls, please set value to ignore all or just big rectangles.
(Read and Write property)

78.41.990 CustomerID as Integer

MBS DynaPDF Plugin, Plugin Version: 25.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the customer id from the license set.
Example:

```
Var pdf As New MyDynapdfMBS

// add your license
pdf.SetLicenseKey "123456-16022020-3-24-12-..."

// shows your customer ID for DynaPDF
MessageBox Str(pdf.CustomerID) // shows 123456
```

Notes: The license starts with the customer id followed by the expiration date, edition, extensions and operating systems.
(Read only property)

78.41.991 DynaPDFVersion as String

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The DynaPDF version text.
Notes: (Read only property)

78.41.992 ErrorCount as Integer

MBS DynaPDF Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of warnings and errors reported by DynaPDF.
Notes: Use Error event to track them.
Or catch exceptions.
(Read only property)

78.41.993 FontSize as Double

MBS DynaPDF Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the font size of the active font.
Notes: The function returns the font size, a value greater zero on success, or a negative error code on failure.

If you set this property, it calls ChangeFontSize internally.
(Read and Write property)

78.41.994 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The IPDF handle passed to each API function.
Notes: The constructor fills this handle and the destructor frees it.
(Read only property)

78.41.995 HasLite as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether a lite or pro license is in use.
Notes: Relevant for some example projects and graphics class support to know whether CreateExtGState is available.
(Read only property)

78.41.996 HasOutputFile as Boolean

MBS DynaPDF Plugin, Plugin Version: 25.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether we have an open file.
Notes: Returns true if you opened an output file.
(Read only property)

78.41.997 HasPro as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether a pro license is in use.
Notes: Relevant for some example projects and graphics class support to know whether Render Engine is available.
(Read only property)

78.41.998 HaveOpenDoc as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If an error occurred it is not always clear whether the PDF file was already deleted or if it is still in memory.
Notes: (Read only property)

See also HaveOpenDoc function in DynaPDF manual.

78.41.999 HaveOpenPage as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether a page is open.
Notes: (Read only property)
See also HaveOpenPage function in DynaPDF manual.

78.41.1000 HaveOpenPath as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.4, Platforms: macOS, Linux, Windows, Targets: All.

Function:

Returns true, if there is a path in memory that was not yet consumed by a ClosePath
or ClipPath function call.
Notes:

In order to discard the path call AbortPath.

If an open path could be found the return value is true, otherwise the return value is false.
(Read only property)
See also HaveOpenPath function in DynaPDF manual.

78.41.1001 ImportFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set import flags.
Notes: Same as using GetImportFlags and SetImportFlags.
(Read and Write property)

78.41.1002 ImportFlags2 as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set import flags 2.
Notes: Same as using GetImportFlags2 and SetImportFlags2.
(Read and Write property)

78.41.1003 JasperVersion as String

MBS DynaPDF Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Returns version of Jasper library.
Example:

MessageBox DynaPDFMBS.JasperVersion

Notes: DynaPDF uses customized version of Jasper library, so this may not be the latest public version. But it's patched to fix a couple of issues seen in PDF context.
(Read only property)

78.41.1004 PageCoords as Integer

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The page coordinate system setting.
Notes: The native coordinate system of the Portable Document Format is bottom up.
Also check the dynapdf manual on the pdfGetPageCoords and pdfSetPageCoords functions.
Value can be kpcTopDown or kpcBottomUp. Default is kpcBottomUp.
(Read and Write property)

78.41.1005 PageGraphics as Graphics

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The page graphics object.
Example:

```
Var pdf As New DynapdfMBS
// please subclass DynapdfMBS to implement error event

Var f As FolderItem = SpecialFolder.Desktop.Child("DynaPDF Graphics.pdf")

'pdf.SetLicenseKey "Starter"
// For this example you can use a Starter, Lite, Pro or Enterprise License

// Create new PDF. Use f = nil for in-memory PDF
Call pdf.CreateNewPDF(f)

// append a new page, so we have an open page
Call pdf.Append

// get graphics object to draw on the page
Var g As Graphics = pdf.PageGraphics

// draw as usual
g.DrawString "Hello World", 105, 100
g.DrawRect 100, 80, 100, 100

// close page and file
Call pdf.EndPage
Call pdf.CloseFile

// for in-memory PDF, use GetBuffer here to grab it.
'Dim PDFData As String = pdf.GetBuffer
```

Notes: We create a temporary picture and subclass the graphics to reproduce all drawing commands called

on this graphics object to the current PDF Page.

For every drawing command, we apply the following properties from graphics object to DynaPDF:

- ForeColor
- Bold
- Italic
- Underline
- TextUnit
- TextFont
- TextSize
- ScaleX
- ScaleY
- PenHeight
- PenWidth
- CharacterSpacing

Supports the following graphics commands:

- Draw/Fill Oval/Rect/RoundRect/Line/Polygon
- DrawString
- StringHeight and StringWidth
- DrawPicture
- NextPage
- Get/Set Pixel.
- Clip
- Supports vector graphics classes (Object2D)
- Supports report engine

Some notes:

- Handle() function returns handle for picture.
- Pixel reads from temporary picture
- ClearRect draws white rectangle
- DrawCautionIcon, DrawNoteIcon and DrawStopIcon are not supported.
- NextPage method calls NextPage event. If missing, we end page and create a new one. In the event, please call EndPage and maybe Append or import an existing PDF page from import PDF.
- If CMYK, Gray or Lab colorspace is set, the plugin will keep them for white/black colors, but switch to RGB for all other colors.

StyledTextPrinter is not supported, but you can do similar things via WriteStyledText or WriteStyledTextEx methods in DynaPDFMBS class.

If no page is open, call this may append a new page. If no document is open, we call CreateNewPDF for you with nil folderitem, so an in memory PDF get's created.

Seems like reports on Windows may not work for v19.2 of our plugins. This is fixed for 19.3.
(Read only property)

78.41.1006 PageGraphicsPicture as Picture

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The temporary picture for page graphics.
Notes: For debugging it may be useful to see the temporary picture with all the draws made on the PDF page.
This is not 1 to 1 what you will see in rendered PDF Page.

This can be viewed even when graphics object is cleared.
(Read only property)

78.41.1007 PrintCancelled as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.5, Platform: Windows, Targets: All.

Function: Whether last print operation was cancelled.
Notes: Set by PrintPDFFileWithDialog and PrintPDFPageWithDialog methods if user presses cancel button.
Otherwise will be false.
(Read and Write property)

78.41.1008 ReferenceCount as Integer

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the reference count.
Notes: For debugging and tracking memory leaks.
(Read only property)

78.41.1009 SpaceWidthFactor as Single

MBS DynaPDF Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The space width factor.
Notes: Sets the space width factor that is used by DynaPDF.ExtractText to determine whether the distance between two text records or glyphs should be interpreted as space character.
PDF files do often not contain space characters. Depending on the font type, i.e. fixed pitch or proportional fonts, different default widths are used during text extraction. However, the full space width is mostly too large to find spaces. Therefore, the text extraction algorithm multiplies the default space width with the space width factor to find suitable values.
The default value is 0.7. Increase the value if too many spaces occur in extracted text and decrease the value if too few spaces were found.
The value must be large zero. Although the upper bound is not restricted, values larger than 2 are mostly not meaningful.
(Read and Write property)

78.41.1010 TIFFVersion as String

MBS DynaPDF Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns version of tiff library.
Example:

MessageBox DynaPDFMBS.TIFFVersion

Notes: DynaPDF uses customized version of tiff library, so this may not be the latest public version.
But it's patched to fix a couple of issues seen in PDF context.
(Read only property)

78.41.1011 TraceFile as FolderItem

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The trace file.

Notes: The plugin writes debug messages to this file so you can check what functions you called.

Improved with 16.2 plugin to really cover over 99% of all calls with parameters and result. Please report if you miss something.

See also AppendTraceFile method to append the log file.
(Read and Write property)

78.41.1012 TraceHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal file handle for the trace file.
Notes: If this is not zero, the tracing option is turned on.
You can set this value indirectly by using the TraceFile property.
(Read only property)

78.41.1013 ValidateTextEncodings as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to validate text encodings.
Example:

```
Var pdf as new DynaPDFMBS

call pdf.CreateNewPDF nil
call pdf.Append

// enable validating
pdf.ValidateTextEncodings = true

// make text without text encoding
Var s as string = "Hello World"
s = DefineEncoding(s, nil) // remove encoding

call pdf.SetFont "Times", pdf.kfsItalic, 20.0, true, pdf.kcp1252
// now cause exception
call pdf.WriteText 50.0, 580.0, s

call pdf.EndPage
call pdf.CloseFile
```

Notes: You should enable this for debugging to find bugs with text encodings.
(Read and Write property)

78.41.1014 WarningCount as Integer

MBS DynaPDF Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of errors reported by DynaPDF.
Notes: Use Error event to track them.
Or catch exceptions.
(Read only property)

78.41.1015 zlibVersion as String

MBS DynaPDF Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns version of zLib library.
Example:

MessageBox DynaPDFMBS.zlibVersion

Notes: DynaPDF uses customized version of zlib library, so this may not be the latest public version.
But it's patched to fix a couple of issues seen in PDF context.
(Read only property)

78.41.1016 Events

78.41.1017 EnumDocFont(Font as DynaPDFFontMBS, FontInfo as DynaPDFFontInfoMBS, Type as Integer, BaseFont as string, Fontname as string, Embedded as boolean, IsFormFont as boolean, Flags as Integer, FontRef as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event being called if you use the EnumDocFonts function.
Notes: Font is deprecated. FontRef is the internal reference to the font.
FontInfo is the new property to use for font details.

78.41.1018 EnumHostFont(FamilyName as string, PostScriptName as string, Style as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event called by EnumHostFonts.

78.41.1019 EnumHostFontEx(FamilyName as string, PostScriptName as string, Style as Integer, BaseType as Integer, Embeddable as boolean, Flags as Integer, FilePath as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event called by EnumHostFontsEx.

78.41.1020 Error(ErrorCode as Integer, ErrorMessage as string, ErrorType as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error callback.
Notes: ErrCode is a positive error number starting at zero; it is an index into the array of error messages. ErrType is a bitmask to determine what kind of error occurred. The following
constants are defined:

const E_WARNING = &h02000000
const E_SYNTAX_ERROR = &h04000000
const E_VALUE_ERROR = &h08000000
const E_FONT_ERROR = &h10000000
const E_FATAL_ERROR = &h20000000
const E_FILE_ERROR = &h40000000

At time of publication only one flag is set at any one time. Future versions may be set multiple flags, e.g. E_SYNTAX_ERROR and E_WARNING. Because of this, it is recommended to mask out the error type with a bitwise and operator.
If the callback function returns a value other than zero (0), processing stops immediately.

You can return kErrorEventRaise (-2), we raise an exception.
We also raise the exception when no Error event is implemented.

78.41.1021 InitProgress(ProgType as Integer, MaxCount as Integer)

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Called when a progress ist starting.
Notes: The return value of the progress callback function must be 0, any other return value breaks processing.

See pt* constants for ProgType.

78.41.1022 NextPage(g as graphics, Width as Double, Height as Double)

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event called for graphics.nextpage method.
Notes: If you don't implement this event, the plugin will end the page and append a new page.
You can implement this event to do your own code to import e.g. an existing page as background.

Width and Height are the new values for the page. Values are -1 if not available. Then please check g.width and g.height instead.

78.41.1023 OnFontNotFound(PDFFontRef as Integer, FontName as string, Style as Integer, StdFontIndex as Integer, IsSymbolFont as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The events called when a font is not found.
Notes: Please call one of the ReplaceFont functions here and return their return code from the callback.
Or return -1 if your code has an error.
See also OnFontNotFound function in DynaPDF manual.

78.41.1024 OnReplaceICCProfile(Type as Integer, ColorSpace as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event called when an ICC profile is replaced.
Notes: Please use various ReplaceICCProfile functions to provide replacement profile.
See also OnReplaceICCProfile function in DynaPDF manual.

78.41.1025 PageBreak(LastPosX as Double, LastPosY as Double, PageBreak as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event called on every pagebreak.
Notes: The parameter PageBreak of the event specifies why the event was called:

- If true, a page break tag in the string was found (see WriteFText for further information).
- If false, the output rectangle was filled with text entirely.

The usage of the event is described in detail under WriteFText(). However, the following return values of the event can be used the change the text alignment:

New Alignment Left	1
New Alignment Right	2
New Alignment Center	3
New Alignment Justify	4

A return value of zero indicates that the alignment must not be changed. Negative return values break processing immediately. WriteFText() returns then with a warning.

When the event is called, the coordinate system is always bottom-up, it can be changed to top-down coordinates inside the event if necessary. The current page is still open, the page must be closed with EndPage() before a new page can be added or opened with Append() or EditPage(). To determine the current page number, call GetPageNum().

For example SetFont may fail if you try normal font family names. That is because SetFontSelMode is used with postscript names and you may want to set it to ksmPostScriptName using SetFontSelMode for SetFont to accept family names.

78.41.1026 Progress(ActivePage as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The progress callback.
Notes: The return value of the progress callback function must be 0, any other return value breaks processing.

78.41.1027 RasterShowText(MatrixBefore as DynaPDFMatrixMBS, MatrixAfter as DynapdfMatrixMBS, TextBuffers() as DynaPDFTextRecordAMBS, Texts() as String, Width as Double, Vertical as boolean, FontRef as Integer, textScaling as Double)

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rastering draws text.
Notes: This is experimental and will be replaced later with a better API in a future DynaPDF release. Works only if you have a plugin where this is enabled by us.

If you implement this event, you get an event whenever one of the rasterizers draws some text on a page. MatrixBefore tells you start position, MatrixAfter end position. TextBuffers provide raw text data. Texts array the matching unicode text. Width is length of text in points. Vertical is true for vertical text. FontRef is the internal font reference. You can query fonts with EnumDocFont before to get a list of all fonts and find it in the array. Do not use font functions in the event as that can confuse the rasterizer.

Do not use with MT methods, please.

78.41.1028 RenderPageBand(Pixels as Ptr, Width as UInt32, Height as UInt32, Stride as UInt32, Y as UInt32, TotalHeight as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event for RenderPageBands.
Notes: Reports progress regularly.

Return 0 on success, 1 on cancellation, negative error code on failure.

MaxBandBytes = 0 selects 16 MB.

Dimensions and band output pixel format are those of Rasterizer.

78.41.1029 RenderPageSeparation(Channel as UInt32, ChannelCount as UInt32, Name as String, Pixels as Ptr, Width as UInt32, Height as UInt32, Stride as UInt32, Y as UInt32, TotalHeight as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event for RenderPageSeparations.
Notes: Reports progress regularly.

Separation samples: 255 = no ink, 0 = full ink (8-bit grayscale).
Channels 0..3: Cyan, Magenta, Yellow, Black; then spot colors.

Name is decoded PDF name data.

Every band is delivered for all channels before advancing Y.

Return 0 on success, 1 on cancellation, negative error code on failure.

78.41.1030 UpdateWindow(r as DynaPDFRectMBS) as integer

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event called when you could update screen.
Notes: For RenderPageBands and RenderPageSeparations functions to inform you about a chance to update screen for a live progress showing.

78.41.1031 Constants

Constants

Constant	Value	Description
katGoToE	17	Like katGoToR but refers to an embedded PDF file. PDF 1.6 Like atGoToR but refers to an embedded PDF file.
kAV_DIRECTION_MASK	24	One of the DynaPDF constants.
kAV_NON_FULL_SRC_MASK	5	One of the DynaPDF constants.
kAV_VIEW_PRINT_MASK	&h000003E0	One of the DynaPDF constants.
kBMK_ADD_CHILDREN	&h40000000	Special flag for bookmark values.
kBMK_INSERT	&h20000000	Special flag for bookmark values.
kDEFAULT_LIST_CHAR	&h0000009F	Default character index of the font Wingdings-Regular to WriteFText())
kDRV_FLOAT_PRECISION	5	The precision used for float values.
kDYNAPDF_REVISION	"$ Rev: 454 $ "	The version of the dynapdf library.
kDYNAPDF_VERSIONSTRING	"5.0.9.23"	The version of the dynapdf library.
kE_FATAL_ERROR	&h20000000	One of the DynaPDF constants for error types. Note that error codes are negative; to determine the error type value: // if bitwiseand(-errCode,E_FATAL_ERROR)=E_FATAL MessageBox "A fatal error occurred!"
kE_FILE_ERROR	&h40000000	One of the DynaPDF constants for error types. Note that error codes are negative; to determine the error type value: // if bitwiseand(-errCode,E_FILE_ERROR)=E_FILE_ER sageBox "A fatal error occurred!"
kE_FONT_ERROR	&h10000000	One of the DynaPDF constants for error types. Note that error codes are negative; to determine the error type value: // if bitwiseand(-errCode,E_FONT_ERROR)=E_FONT MessageBox "A fatal error occurred!"
kE_SYNTAX_ERROR	&h04000000	One of the DynaPDF constants for error types. Note that error codes are negative; to determine the error type value: // if bitwiseand(-errCode,E_SYNTAX_ERROR)=E_SY then MessageBox "A fatal error occurred!"
kE_VALUE_ERROR	&h08000000	One of the DynaPDF constants for error types. Note that error codes are negative; to determine the error type value: // if bitwiseand(-errCode,E_VALUE_ERROR)=E_VALU MessageBox "A fatal error occurred!"
kE_WARNING	&h02000000	One of the DynaPDF constants for error types. Note that error codes are negative; to determine the error type value: // if bitwiseand(-errCode,E_WARNING)=E_WARNING t "A fatal error occurred!"
kffCommitOnSelCh	&h04000000	One of the field flags constants. (PDF 1.5) If set, the new value is committed as soon as a with the pointing device. This allows applications to perfor a selection is made, without requiring the user to exit the fi new value is not committed until the user exits the field. Sup boxes and list boxes only.
kffRadioIsUnion	&h02000000	One of the field flags constants. PDF-1.5 check boxes of a radio button field only
kicfDefault	0	One of the cache initialization flags.
kicfIgnoreOpenAction	1	One of the cache initialization flags.
kNEW_ALIGN_CENTER	3	One of the DynaPDF constants.
kNEW_ALIGN_JUSTIFY	4	One of the DynaPDF constants.
kNEW_ALIGN_LEFT	1	One of the DynaPDF constants.
kNEW_ALIGN_RIGHT	2	One of the DynaPDF constants.
kNO_COLOR	&hFFFFFFF1	One of the RGB color constants. This value can be used for form fields, annotations and star

Destination object type

Constant	Value	Description
kadAnnotation	0	Destination is annotation handle.
kadCatalog	1	Destination is root object of document (no handle).
kadField	2	Destination is field handle.
kadImage	3	Destination is image handle.
kadPage	4	Destination is page handle.
kadTemplate	5	Destination is template handle.

Application Event Constants

Constant	Value	Description
kaeExport	1	Export
kaePrint	2	Print
kaeView	4	View

Constants for the annotation flatten flags.

Constant	Value	Description
kaffFormFields	16	If set, form fields will be flattened too.
kaffKeepEmptySigFields	&h00008000	If set, signature fields which are not already signed will be kept.
kaffKeepFileAttach	&h00002000	If set, file attachment annotations will be kept.
kaffKeepLinkAnnots	&h00001000	If set, link annotations will be kept.
kaffKeepTextAnnots	&h00004000	If set, text annotations will be kept.
kaffKeepUnsupportedAnnots	&h00010000	If set, annotations whose appearance stream cannot be rebuild will be k (3D, Movie, Redact, or RichMedia annotations, for example).
kaffMarkupAnnots	2	If set, markup annotations are flattened only. Link, Sound, or FileAtta annotations are no markup annotations. These types will be left intact.
kaffNone	0	Printable annotations independent of the type. By default all annotations which have an appearance stream and which ha the print flag set are flattened. All annotations are deleted when the function returns with the exception of attachment annotations. If you want to flatten the view state then set the flag affUseViewState.
kaffNonPDFA_1	4	Flatten all annotations which are unsupported in PDF/A 1.
kaffNonPDFA_2	8	Flatten all annotations which are unsupported in PDF/A 2/3.
kaffNonPDFA_4e	&h00000080	Flatten annotations which are unsupported in PDF/A 4e.
kaffPreserveZOrder	&h00400000	If set, preserve the z-order under any curcumstances. That means visible ov lapping annotations or form fields will be flattened, regardless the type.
kaffSigFields	64	Meaningful only if affFormFields is not set. If set, signature fields with appearance stream will be flattened.
kaffUseFieldViewState	32	Meaningful only if kaffFormFields or kaffSigFields is set. If set, flatten the vi state of form fields. Use the print state otherwise.
kaffUseViewState	1	If set, annotations which are visible in a viewer become flattened.

Annotation flag constants for SetAnnotFlags

Constant	Value	Description
kafHidden	2	One of the three options to hide the annotation (see dynapdf manual)
kafInvisible	1	One of the three options to hide the annotation (see dynapdf manual)
kafLocked	&h00000080	(PDF 1.4) If set, do not allow the annotation to be deleted or its properties (including position and size) to be modified by the user. However, this flag does not restrict changes to the annotation,Äôs contents.
kafLockedContents	&h00000200	(PDF 1.7) If set, do not allow the contents of the annotation to be modified by the user. This flag does not restrict deletion of the annotation or changes to other annotation properties, such as position and size.
kafNone	0	No flags are set
kafNoRotate	16	Do not rotate the annotation
kafNoView	32	One of the three options to hide the annotation (see dynapdf manual)
kafNoZoom	8	Do not zoom the annotation
kafPrint	4	Annotation is printable
kafReadOnly	64	Changes are not allowed.
kafToggleNoView	&h00000100	(PDF 1.5) If set, invert the interpretation of the NoView flag for certain events.

Constants for annotation icons

Constant	Value	Description
kaiComment	0	
kaiHelp	1	
kaiInsert	2	
kaiKey	3	
kaiNewParagraph	4	
kaiNote	5	
kaiParagraph	6	

Relationships

Constant	Value	Description
karAlternative	4	This key must be used for ZUGFeRD compatible invoices
karAssociated	0	
karData	1	
karFormData	5	
karSource	2	
karSupplement	3	

Annotation Migration State

Constant	Value	Description
kasAccepted	1	Accepted
kasCancelled	3	Cancelled
kasCompleted	4	Completed
kasCreateReply	5	Don't add a migration state, create a reply instead. Set the contents of the reply with SetAnnotString.
kasNone	0	Undefined
kasRejected	2	Rejected

Annotation string type constants for SetAnnotString.

Constant	Value	Description
kasAuthor	0	Author
kasContent	1	Content
kasName	2	Name
kasRichStyle	4	Default style string. ->FreeText annotations only.
kasRichText	5	Rich text string. ->Supported by markup annotations.
kasSubject	3	Subject

Constants for annotation types.

Constant	Value	Description
kat3D	19	PDF 1.6
katCaret	0	
katCircle	1	
katFileAttach	21	PDF 1.3
katFileLink	2	
katFreeText	3	
katHighlight	4	
katInk	5	
katLine	6	
katMovieAnnot	25	PDF 1.2
katPageLink	7	
katPolygon	8	
katPolyLine	9	
katPopUp	10	
katPrinterMark	26	PDF 1.4
katProjection	27	PDF 1.7 Extension Level 3
katRedact	22	PDF 1.7
katRichMedia	28	PDF 1.7 Extension Level 3
katScreen	29	PDF 1.5
katSoundAnnot	20	PDF 1.2
katSquare	11	
katSquiggly	12	Highlight annotation
katStamp	13	
katStrikeOut	14	Highlight annotation
katText	15	Also used as container to store the State Model
katTrapNet	30	PDF 1.3
katUnderline	16	Highlight annotation
katUnknown	24	Unknown annotation type
katWatermark	23	PDF 1.6
katWebLink	17	A Link annotation with an associated URI action
katWidget	18	Form Fields are handled separately

3D Activation Type constants.

Constant	Value	Description
kat3D_AppDefault	0	Default.
kat3D_Explicit	3	The annotation should remain inactive until explicitely activated by a script or action (default).
kat3D_PageOpen	1	The annotaiton should be activated when the page is opened.
kat3D_PageVisible	2	The annotaiton should be activated when the page becomes visible.

Constants for action types.

Constant	Value	Description
katGoTo	0	
katGoTo3DView	16	PDF 1.6
katGoToR	1	
katHide	2	
katImportData	3	
katJavaScript	4	
katLaunch	5	
katMovie	6	
katNamed	7	
katRendition	8	PDF 1.5
katReset	9	Reset Form
katRichMediaExec	18	PDF 1.7 Extension Level 3
katSetOCGState	10	PDF 1.5
katSound	11	
katSubmit	12	Submit Form
katThread	13	
katTransition	14	
katURI	15	

Constants for parameter of the viewer preference.

Constant	Value	Description
kavDirectionL2R	8	
kavDirectionR2L	16	
kavNone	0	
kavNonFullScrUseNone	1	
kavNonFullScrUseOC	&h00000400	
kavNonFullScrUseOutlines	2	
kavNonFullScrUseThumbs	4	
kavViewPrintArtBox	32	
kavViewPrintBleedBox	64	
kavViewPrintCropBox	&h00000080	
kavViewPrintMediaBox	&h00000100	
kavViewPrintTrimBox	&h00000200	

Button Caption Constants

Constant	Value	Description
kbcpCaptionAbove	3	Caption above the image
kbcpCaptionBelow	2	Caption below the image
kbcpCaptionLeft	5	Caption on the left of the image
kbcpCaptionOnly	0	Default
kbcpCaptionOver	6	Caption overlaid directly on the image
kbcpCaptionRight	4	Caption on the right of the image
kbcpImageOnly	1	No caption; image only

Annotation Border Effects

Constant	Value	Description
kbeCloudy1	1	Circle diameter 9 units
kbeCloudy2	2	Circle diameter 17 units
kbeSolid	0	Default

Font Base Encoding

Constant	Value	Description
kbeMacExpert	2	Mac Expert encoding.
kbeMacRoman	1	Mac Roman encoding.
kbeStandard	3	Standard encoding is a special encoding for Type1 fonts.
kbeWinAnsi	0	This represents the Windows code page 1252.

Constants for blend modes.

Constant	Value	Description
kbmColor	2	Color
kbmColorBurn	3	Color Burn
kbmColorDodge	4	Color Dodge
kbmDarken	5	Darken
kbmDifference	6	Difference
kbmExclusion	7	Exclusion
kbmHardLight	8	Hard Light
kbmHue	9	Hue
kbmLighten	10	Lighten
kbmLuminosity	11	Luminosity
kbmMultiply	12	Multiply
kbmNormal	1	Normal
kbmNotSet	0	Non Set.
kbmOverlay	13	Overlay
kbmSaturation	14	Saturation
kbmScreen	15	Screen
kbmSoftLight	16	Soft Light.

Constants for bidirectional mode.

Constant	Value	Description
kbmLeftToRight	0	Apply the bidi algorithm on Unicode strings in Left to Right layout.
kbmNone	2	Default ->do not apply the bidi algorithm..
kbmRightToLeft	1	Apply the bidi algorithm on Unicode strings in Right to Left layout.

Bookmark Text Style Constants

Constant	Value	Description
kbmsBold	2	Bold
kbmsItalic	1	Italic
kbmsNormal	0	Normal

Constants for border styles.

Constant	Value	Description
kbsBevelled	1	
kbsDashed	4	
kbsInset	2	
kbsSolid	0	
kbsUnderline	3	

Constants for button states.

Constant	Value	Description
kbsDown	1	
kbsRollOver	2	
kbsUp	0	

PDF base Tag Constants

Constant	Value	Description
kbtAbbr	41	
kbtAnnot	2	An annotation must be inserted to finish the tag!
kbtArt	0	
kbtArtifact	1	
kbtBibEntry	3	BibEntry ->Bibliography entry
kbtBlockQuote	4	
kbtCallout	42	
kbtCaption	5	
kbtCL	37	
kbtCode	6	
kbtDek	43	
kbtDiv	7	
kbtDocument	8	
kbtEm	44	
kbtFigure	9	
kbtForm	10	A form field must be inserted to finish the tag!
kbtFormula	11	
kbtH	12	
kbtH1	13	
kbtH2	14	
kbtH3	15	
kbtH4	16	
kbtH5	17	
kbtH6	18	
kbtIndex	19	
kbtLabel	38	
kbtLineNum	45	
kbtLink	20	A link annotation must be inserted to finish the tag (FileLink(), PageLink(), or WebLink()!
kbtList	21	L
kbtListElem	22	LI, ->Correct nesting: btList/btListElem
kbtListText	23	LBody ->Correct nesting: btList/btListElem/btListText
kbtNote	24	
kbtP	25	
kbtPart	26	
kbtQuote	27	
kbtReason	46	
kbtRedaction	47	
kbtReference	28	
kbtRuby	39	
kbtSection	29	Sect
kbtSidebar	48	
kbtSpan	30	
kbtStrong	49	
kbtSub	50	
kbtSup	51	
kbtTable	31	
kbtTableDataCell	32	TD
kbtTableHeader	33	TH
kbtTableRow	34	TR
kbtTOC	35	
kbtTOCEntry	36	TOCI
kbtWarichu	40	

Checkbox state constants.

Constant	Value	Description
kcbChecked	1	
kcbUnChecked	2	
kcbUnknown	0	

Flag constants for ComputeBBox

Constant	Value	Description
kcbfIgnoreWhiteAreas	1	Ignore white vector graphics or text.
kcbfNone	0	
kcbfParse1BitImages	2	Find the visible area in 1 bit images. This is the most important case since scanned faxes are usually 1 bit images.
kcbfParseAllImages	14	Find the visible area in all images.
kcbfParseColorImages	8	Find the visible area in color images. This is usually not required and slow downs processing a lot.
kcbfParseGrayImages	4	Find the visible area in gray images.

Checkbox character constants.

Constant	Value	Description
kccCheck	0	
kccCircle	1	
kccCross1	2	
kccCross2	3	
kccCross3	4	
kccCross4	5	
kccDiamond	6	
kccSquare	7	
kccStar	8	

Flag constants for color conversion.

Constant	Value	Description
kccfBW_To_Gray	0	Default, RGB Black and White set with rg or RG inline operators are converted to gray
kccfRGB_To_Gray	1	If set, inline color operators rg and RG are converted to gray
kccfToGrayAdjust	2	Converts RGB and gray inline operators to gray and allows to darken or lighten the colors.

Compression filter constants

Constant	Value	Description
kcfCCITT3	2	PDF or TIFF output ->B&W CCITT Fax G3 compression ->fast but less compression ratio
kcfCCITT4	3	PDF or TIFF output ->B&W CCITT Fax G4 compression ->slower but higher compression ratio
kcfConvGrayToOtsu	&h00002000	The Otsu filter is a special filter to produce black & white images. It is very useful if an OCR scan should be applied on the resulting 1 bit image. The flag is considered in AddRasImage(), RenderPDFFile(), and RenderPageToImage() if the pixel format was set to pxfGray.
kcfConvGrayToSauvola	&h00040000	This is again a filter to produce black & white images. Text areas are converted very similar to the Otsu filter but dithered areas are converted differently. Since we have no parameter to set the contrast, it is set to 0.2 because it is assumed that the resulting image is mostly passed to an OCR engine. A contrast of 0.2 removes anti-aliasing artifacts very well but includes also brighter text that would be filtered ot when using the default value of 0.34.
kcfDitherFloydSteinberg	&h00001000	Floyd Steinberg dithering. Special flags for AddRasImage(). These flags can be combined with the filters cfFlate, cfCCITT3, cfCCITT4, and LZW.
kcfFlate	0	PDF or TIFF output
kcfFlateBW	6	TIFF, PNG, or BMP output ->Dithered black & white output. The resulting image will be compressed with Flate or left uncompressed if the output image format is a bitmap. If you want to use CCITT Fax 4 compression (TIFF only) set the flag icUseCCITT4 in the AddImage() function call. Note that this filter is not supported for PDF creation!
kcfIgnoreICCProfile	&h00008000	Meaningful only if color management is enabled. If set, the device ICC profile is not embedded in the image.
kcfJBIG2	8	JBIG2 for PDF output only.
kcfJP2K	7	PDF or JPEG2000 output
kcfJPEG	1	PDF, JPEG, or TIFF output
kcfLZW	4	TIFF or GIF output ->Very fast but less compression ratios than flate
kcfLZWBW	5	TIFF output ->Very fast but less compression ratios than flate. For black and white.
kcfNone	&h000000FF	No compression, only for TIFF format.
kcfOrderedDithering	&h00004000	Ordered dithering. The difference in comparison to the pixel format pxf1Bit is that we render into a GrayA buffer instead of a native 1 bit buffer since this one produces incorrect results in certain transparency calculations.
kcfPresLosslessFilter	&h00010000	Preserve loss-less compression filters. Use the specified filter otherwise.
kcfPresLossyFilter	&h00020000	Preserve lossy compression filters. Use the specified filter otherwise.

Constants for collection columns.

Constant	Value	Description
kcisCompressedSize	8	The compressed file size. Data value comes from the embedded file.
kcisCreationDate	0	The creation date of this file. Data value comes from the embedded file.
kcisCustomDate	5	User defined date.
kcisCustomNumber	6	User defined number.
kcisCustomString	7	User defined string.
kcisDescription	1	The description of the file. Data value comes from the embedded file.
kcisFileName	2	The file name. Data value comes from the embedded file.
kcisModDate	3	The modification date. Data value comes from the embedded file.
kcisSize	4	The file size. Data value comes from the embedded file.

Collection View Constants

Constant	Value	Description
kcivCustom	4	Custom: PDF 1.7 Extension Level 3, the collection view is presented by a SWF file.
kcivDetails	1	Details.
kcivHidden	3	Hidden.
kcivNotSet	0	Not set.
kcivTile	2	Title.

Compression level constants.

Constant	Value	Description
kclDefault	1	
kclFastest	2	
kclMax	3	
kclNone	0	

Clear Rect Modes

Constant	Value	Description
kClearRectModeDefault	0	Let all ClearRect calls pass through.
kClearRectModeIgnoreAll	2	Ignore all clearRect calls.
kClearRectModeIgnoreBig	1	Ignore clear rect calls bigger than half of page size.

Constants for clipping mode.

Constant	Value	Description
kcmEvenOdd	0	
kcmWinding	1	

Constants for color modes.

Constant	Value	Description
kcmFill	0	
kcmFillStroke	2	
kcmStroke	1	

Check flag constants for CheckConformance.

Constant	Value	Description
kcoAllowDeviceSpaces	&h40000000	If set, device color spaces will not be replaced with ICC based color s This flag is meaningful for normalization only.
kcoApplyExportState	&h00020000	Meaningful only if coDeleteAppEvents is set. Apply the export state.
kcoApplyPrintState	&h00040000	Meaningful only if coDeleteAppEvents is set. Apply the print state.
kcoCheckImages	&h00800000	Images will be decompressed to identify damages.
kcoDefault	&h0010FFFF	Default flags
kcoDefault_Normalize	&h50000000	kcoAllowDeviceSpaces + kcoNoFontEmbedding: Common default flags f ferent PDF/A versions:
kcoDefault_PDFA_1	&h0030FFFF	The ability to flatten layers was added after coDefault was defined. In kcoFlattenLayers
kcoDefault_PDFA_2	&h0050EFFF	Presentations are prohibited in PDF/A 2 and PDF/A 3. Includes kcoDe resentation
kcoDefault_PDFA_3	&h0050EF7F	Embedded files are allowed in PDF/A 3. kcoDefault_PDFA_2, but wi kcoDeleteEmbeddedFiles.
kcoDefault_PDFA_4	&h0050EF7F	Embedded files are allowed in PDF/A 4.
kcoDeleteActionsAndScripts	8	Delete actions and scripts. Imported files only.
kcoDeleteAlternateImages	&h00000800	Delete alternate images. Alternate images are seldom used and prohibited in PDF/A.
kcoDeleteAppEvents	&h00008000	PDF/A 2 and 3. Application events are prohibited in PDF/A. The view will be applied.
kcoDeleteDamagedImages	&h01000000	Meaningful only if coCheckImages is set.
kcoDeleteEmbeddedFiles	&h00000080	Delete embedded files. Imported files only
kcoDeleteHalftones	&h00100000	Delete halftone screens.
kcoDeleteInvRenderingIntent	16	Delete rendering intent. Imported files only
kcoDeleteMultiMediaContents	4	Delete multimedia content. Imported files only.
kcoDeleteOPIComments	&h00000100	Delete OPI comments. Imported files only
kcoDeletePostscript	&h00000400	Delete Postscript XObjects.
kcoDeletePresentation	&h00400000	Presentations are prohibited in PDF/A 2 and 3.
kcoDeleteReplies	&h00080000	Delete annotation replies. If absent, replies will be converted to regula annotations.
kcoDeleteSignatures	&h00000200	Delete signatures. Imported files only
kcoDeleteTransferFuncs	2	Delete transfer functions. Imported files only
kcoEmbedSubsets	1	Already done.
kcoFlattenFormFields	32	Flatten form fields.
kcoFlattenLayers	&h00200000	PDF/A 1b only. Flatten layers if any.
kcoFlushPages	&h20000000	Write converted pages directly into the output file to reduce the memory
kcoMakeLayerVisible	&h00004000	PDF/A 2 and 3 prohibit invisible layers. Layers can also be flattened if no option.
kcoNoFontEmbedding	&h10000000	Normalization only. If this flag is set not PDF/A file will be produced!
kcoReComprJPEG2000Images	&h00001000	Recompresses JPEG 2000 as flate images. Recompression results in lower quality and usually in larger images. It is better to keep such files as is.
kcoRepairDamagedImages	&h02000000	Meaningful only if coCheckImages is set. If set, try to recompress a dar image. The new image is maybe incomplete but error free. This flag c combined with coDeleteDamagedImages to delete the image if recompr fails.
kcoReplaceV4ICCProfiles	64	Replace V4 ICC Profiles. Imported files only
kcoReplCCITTFaxWithFlate	&h00010000	Replace CCITT Fax compression with Flate.
kcoResetAnnotAppearance	&h80000000	If set, appearance streams of annotations are rebuild before executing C Conformance.
kcoResolveOverprint	&h00002000	PDF/A 2 and 3. Set the overprint mode to 0 if the overprint mode = if overprinting for fill or stroke is true and if a ICCBased CMYK color is used. Note that DeviceCMYK is treated as ICCBased color space c implicit color conversion rules.

Cell Orientation

Constant	Value	Description
kcoBottom	1	Bottom
kcoCenter	2	Center
kcoLeft	0	Left
kcoRight	1	Right
kcoTop	0	Top

Code Page Constants

Constant	Value	Description
kcp1250	0	
kcp1251	1	
kcp1252	2	
kcp1253	3	
kcp1254	4	
kcp1255	5	
kcp1256	6	
kcp1257	7	
kcp1258	8	
kcp437	23	
kcp737	24	
kcp775	25	
kcp850	26	
kcp852	27	
kcp855	28	
kcp857	29	
kcp860	30	
kcp861	31	
kcp862	32	
kcp863	33	
kcp864	34	
kcp865	35	
kcp866	36	
kcp869	37	
kcp874	38	
kcp8859_10	17	
kcp8859_13	18	
kcp8859_14	19	
kcp8859_15	20	
kcp8859_16	21	
kcp8859_2	9	
kcp8859_3	10	
kcp8859_4	11	
kcp8859_5	12	
kcp8859_6	13	
kcp8859_7	14	
kcp8859_8	15	
kcp8859_9	16	
kcpAdobeStd	63	Internal ->not usable
kcpBig5	58	Big5 plus HKSCS extension.
kcpCJK_2022_CN_Uni	47	ISO-2022-CN-EXT (GB-2312 plus ISO-11643 Planes 1-7).
kcpCJK_2022_JP_Uni	48	ISO-2022-JP.
kcpCJK_2022_KR_Uni	49	ISO-2022-KR.
kcpCJK_646_CN_Uni	50	ISO-646-CN (GB-1988-80).
kcpCJK_646_JP_Uni	51	ISO-646-JP (JIS_C6220-1969-RO).
kcpCJK_932_Uni	53	Microsoft extended version of SHIFT_JIS.
kcpCJK_949_Uni	54	EUC-KR extended with UHC (Unified Hangul Codes).
kcpCJK_950_Uni	55	Microsoft extended version of Big5.
kcpCJK_Big5_Uni	40	Big5 plus HKSCS extension.
kcpCJK_EUC_JP_Uni	41	EUC-JP.
kcpCJK_EUC_KR_Uni	42	EUC-KR.
kcpCJK_EUC_TW_Uni	43	CNS-11643-1992 (Planes 1-15).
kcpCJK_GB12345_Uni	45	GB-12345-1990 (Traditional Chinese form of GB-2312).
kcpCJK_GBK_Uni	44	GBK is the Microsoft code page 936 (GB2312, EUC-CN plus GBK extension).
kcpCJK_HZ_Uni	46	Mixed ASCII / GB-2312 encoding
kcpCJK_IR_165_Uni	52	ISO-IR-165 (extended version of GB-2312).
kcpCJK_JOHAB_Uni	56	JOHAB.
kcpDingbats	68	Internal ->Special encoding for ZapfDingbats

Flags for Line Caption Position

Constant	Value	Description
kcpInline	0	The caption is centered inside the line.
kcpTop	1	The caption is drawn on top of the line.

Line cap style constants

Constant	Value	Description
kcsButtCap	0	Butt cap.
kcsRoundCap	1	Round cap.
kcsSquareCap	2	Square cap.

Colorspace constants.

Constant	Value	Description
kcsDeviceCMYK	1	
kcsDeviceGray	2	
kcsDeviceRGB	0	

Conformance type constants.

Constant	Value	Description
kctFacturX_Basic	13	Set the FacturX / ZUGFeRD 2.1 or higher conformance level to Basic.
kctFacturX_Basic_WL	14	Set the FacturX / ZUGFeRD 2.1 or higher conformance level to Basic WL.
kctFacturX_Comfort	15	Set the FacturX / ZUGFeRD 2.1 or higher conformance level to Comfort.
kctFacturX_Extended	16	Set the FacturX / ZUGFeRD 2.1 or higher conformance level to Extended.
kctFacturX_Minimum	12	Set the FacturX / ZUGFeRD 2.1 or higher conformance level to Minimum.
kctFacturX_XRechnung	17	German XRechnung profile
kctNormalize	1	Check the file for errors, rebuild all embedded fonts plus options.
kctPDFA_1b_2005	0	Convert the file to PDF/A if possible.
kctPDFA_2b	2	Convert the file to PDF/A 2b if possible
kctPDFA_2u	18	Convert the file to PDF/A 2u if possible
kctPDFA_3b	3	Convert the file to PDF/A 3b if possible
kctPDFA_3u	19	Convert the file to PDF/A 3u if possible
kctPDFA_4	20	Convert the file to PDF/A 4 if possible. Embedded files are supported but no file attach annotations.
kctPDFA_4e	21	Convert the file to PDF/A 4e if possible. This version allows 3D contents in rich media annotations.
kctPDFA_4f	22	Convert the file to PDF/A 4f if possible. This version allows file attach annotations.
kctZUGFeRD2_Basic	8	Set the ZUGFeRD 2.0 conformance level to Basic.
kctZUGFeRD2_Basic_WL	9	Set the ZUGFeRD 2.0 conformance level to Basic WL.
kctZUGFeRD2_Comfort	10	Set the ZUGFeRD 2.0 conformance level to Comfort (EN 169319).
kctZUGFeRD2_Extended	11	Set the ZUGFeRD 2.0 conformance level to Extended.
kctZUGFeRD2_Minimum	7	Set the ZUGFeRD 2.0 conformance level to Minimum.
kctZUGFeRD_Basic	4	Set the ZUGFeRD 1.0 conformance level to Basic This constant convert the file to PDF/A 3b and set the whished ZUGFeRD conformance level in the XMP metadata. CheckConformance() does not validate the XML invoice but it checks whether it is present. Setting the correct ZUGFeRD conformance level is very important since this value defines which fields must be present in the XML invoice.
kctZUGFeRD_Comfort	5	Set the ZUGFeRD 1.0 conformance level to Comfort This constant convert the file to PDF/A 3b and set the whished ZUGFeRD conformance level in the XMP metadata. CheckConformance() does not validate the XML invoice but it checks whether it is present. Setting the correct ZUGFeRD conformance level is very important since this value defines which fields must be present in the XML invoice.
kctZUGFeRD_Extended	6	Set the ZUGFeRD 1.0 conformance level to Extended This constant convert the file to PDF/A 3b and set the whished ZUGFeRD conformance level in the XMP metadata. CheckConformance() does not validate the XML invoice but it checks whether it is present. Setting the correct ZUGFeRD conformance level is very important since this value defines which fields must be present in the XML invoice.

Constants for draw direction.

Constant	Value	Description
kddClockwise	1	Clockwise.
kddCounterClockwise	0	Counter Clockwise.

PDF Date and Time format constants.

Constant	Value	Description
kdf12HR_MM	15	e.g. 2pm:59
kdf12HR_MM_SS	17	e.g. 2pm:59:59
kdf24HR_MM	14	e.g. 14:59
kdf24HR_MM_SS	16	e.g. 14:59:59
kdfDD_MMM_YY	6	e.g. 24 Dec 99
kdfD_MMM	4	e.g. 24 Dec
kdfD_MMM_YY	5	e.g. 24 Dec 99
kdfMMMM_D_YYYY	11	e.g. December 24 1999
kdfMMMM_YY	9	e.g. December 99
kdfMMM_D_YYYY	10	e.g. Dec 24 1999
kdfMMM_YY	8	e.g. Dec 99
kdfMM_D	0	e.g. 12/24
kdfMM_DD_YY	2	e.g. 12/24/99
kdfMM_YY	3	e.g. 12 99
kdfM_D_YY	1	e.g. 12 24 99
kdfM_D_YY_HH_MM	13	e.g. 12/24/99 14:59
kdfM_D_YY_H_MM_TT	12	e.g. 12/24/99 14:59:59
kdfYY_MM_DD	7	e.g. 99.12.24

Decode Filter constants

Constant	Value	Description
kdfASCII85Decode	1	
kdfASCIIHexDecode	2	
kdfCCITTFaxDecode	3	
kdfDCTDecode	4	
kdfFlateDecode	5	
kdfJBIG2Decode	6	
kdfJPXDecode	7	
kdfLZWDecode	8	
kdfNone	0	
kdfRunLengthDecode	9	

De-instantiation type constants for Set3DAnnotProps.

Constant	Value	Description
kdi3D_AppDefault	0	
kdi3D_Instantiated	2	The annotation will be instantiated but animations are disabled.
kdi3D_Live	3	The annotation will be instantiated and animations are enabled (default).
kdi3D_UnInstantiated	1	The annotation will be uninstantiated (default)

Document Information Constants

Constant	Value	Description
kdiAuthor	0	Author Name
kdiCompany	6	Company Name
kdiCreationDate	10	Creation Date
kdiCreator	1	Creator Name
kdiCustom	8	User defined key
kdiKeywords	2	Keywords
kdiModDate	11	Modification date.
kdiPDFX_Conf	9	
kdiPDFX_Ver	7	GetInDocInfo() only ->The PDF/X version is set by SetPDFVersion()!
kdiProducer	3	Producer Name
kdiSubject	4	Subject line
kdiTitle	5	Title tag.

Draw Mode Constants

Constant	Value	Description
kdmClipping	7	
kdmFillClip	4	
kdmFillStroke	2	
kdmFillStrokeClip	6	
kdmInvisible	3	
kdmNormal	0	
kdmStroke	1	
kdmStrokeClip	5	

Constants for Duplex Mode

Constant	Value	Description
kdpmFlipLongEdge	3	flip long edge
kdpmFlipShortEdge	2	flip short edge
kdpmNone	0	Use the default value of the viewer
kdpmSimplex	1	Simplex

Constants for thousand and decimal separators.

Constant	Value	Description
kdsCommaDot	0	1,234.56
kdsDotComma	2	1.234,56
kdsNoneComma	3	1234,56
kdsNoneDot	1	1234.56
kdsQuoteDot	4	Quote with dot.

3D DeActivateType constants.

Constant	Value	Description
kdt3D_AppDefault	0	
kdt3D_Explicit	3	The annotation should remain active until explicitely deactivated by a script or action.
kdt3D_PageClosed	1	The annotaiton should be deactivated as soon as the page is closed.
kdt3D_PageInvisible	2	The annotaiton should be deactivated as soon as the page becomes invisible (default).

Date Types

Constant	Value	Description
kdtCreationDate	0	Creation Date, Markup annotations only.
kdtModDate	1	Modification Date, Annotations or form fields.

Destination type constants for a link

Constant	Value	Description
kdtFit	1	no parameters
kdtFitB	5	no parameters
kdtFitBH_Top	6	one parameter (a)
kdtFitBV_Left	7	one parameter (a)
kdtFitH_Top	2	one parameter
kdtFitV_Left	3	one parameter (a)
kdtFit_Rect	4	four parameters (a, b, c, d) ->(left, bottom, right, top)
kdtXY_Zoom	0	Three parameters (a, b, c) ->(X, Y, Zoom)

Embedded File Location Values

Constant	Value	Description
keflChild	0	The file is an embedded file in the current document.
keflChildAnnot	1	The file is located in a file attachment annotion in the current document.
keflExternal	2	The file is an embedded file in an external document.
keflExternalAnnot	3	The file is located in a file attachment annotion in an external document.
keflParent	4	The file is located in the parent document.
keflParentAnnot	5	The file is located in a file attachment annotion in the parent document.

Flags for EnumHostFontEx event

Constant	Value	Description
kefpAnsiPath	0	Code page 1252 on Windows, UTF-8 otherwise. The font has embedding rights.
kefpEditable	4	If set, the font has editing rights (important for form fields).
kefpEmbeddable	2	The font has embedding rights.
kefpUnicodePath	1	FilePath is in Unicode format. Make a typecast to (UI16*) in this case. The plugin handles that for you.
kleButt	1	Butt
kleCircle	2	Circle
kleClosedArrow	3	Left Close Arrow
kleDiamond	4	Diamond
kleNone	0	No end
kleOpenArrow	5	Left Open Arrow
kleRClosedArrow	6	Right Close Arrow
kleROpenArrow	7	Right Open Arrow
kleSlash	8	Slash
kleSquare	9	Square

Error mode constants.

Constant	Value	Description
kemAllErrors	&h0000FFFF	All errors
kemFileError	8	File Error
kemFontError	16	Font Error
kemIgnoreAll	0	Ignore All
kemLogFonts	&h00010000	If set, CheckConformance() logs which fonts were replaced with system fonts or converted to Type3.
kemLogFontsVerbose	&h00020000	If set, the path to the font file is added to the message too. Use with kemLogFonts.
kemNoFuncNames	&h10000000	Do not print function names in error messages
kemSyntaxError	1	Syntax Error
kemUseErrLog	&h20000000	Redirect all error messages to the error log.
kemValueError	2	Value Error
kemWarning	4	Warning

Error Event Results

Constant	Value	Description
kErrorEventContinue	0	Please return zero to ignore the error and continue with your code.
kErrorEventRaise	-2	Please return -2 to raise an exception.
kErrorEventStop	-1	Please return -1 to stop processing.

Extended color space constants.

Constant	Value	Description
kesCalGray	3	CIE-based color space
kesCalRGB	4	CIE-based color space
kesDeviceCMYK	1	Device color space
kesDeviceGray	2	Device color space
kesDeviceN	10	Special color space
kesDeviceRGB	0	Device color space
kesICCBased	6	CIE-based color space ->contains an ICC profile
kesIndexed	8	Special color space
kesLab	5	CIE-based color space
kesNChannel	11	Special color space
kesPattern	7	Special color space
kesSeparation	9	Special color space

Fle attach icon constants.

Constant	Value	Description
kfaiGraph	0	Graph.
kfaiPaperClip	1	Paper Clip
kfaiPushPin	2	Push Pin
kfaiTag	3	Tag

Font Base Type constants

Constant	Value	Description
kfbtDisabled	4	This value can be used to disable a specific font format. See SetFontSearchOrder() for further information.
kfbtOpenType	2	OpenType font with Postscript outlines
kfbtStdFont	3	PDF Standard font
kfbtTrueType	0	TrueType, TrueType Collections, or OpenType fonts with TrueType outlines
kfbtType1	1	Type1 font

Field or annotation colors Constants.

Constant	Value	Description
kfcBackColor	0	
kfcBorderColor	1	
kfcTextColor	2	

Field Flags Constants.

Constant	Value	Description
kffComb	&h01000000	PDF 1.5 Text fields only
kffDoNotScroll	&h00800000	PDF 1.4 Text fields only
kffDoNotSpellCheck	&h00400000	PDF 1.4 Text fields, combo boxes. If the field is a combo box, this flag is meaningful only if ffEdit is also set.
kffEdit	&h00040000	Combo boxes only
kffFileSelect	&h00100000	PDF 1.4 Text fields only
kffHidden	16	
kffInvisible	8	
kffMultiline	&h00001000	Text fields only
kffMultiSelect	&h00200000	PDF 1.4 List boxes only
kffNoExport	4	
kffNoRotate	&h00000080	
kffNoToggleToOff	&h00004000	Radio buttons
kffNoView	&h00000100	
kffNoZoom	64	
kffPassword	&h00002000	Text fields only
kffPrint	32	
kffReadOnly	1	
kffRequired	2	
kffSorted	&h00080000	Use this flag to change the sort flag of combo boxes or list boxes

Font File Subtype constants

Constant	Value	Description
kffsCIDFontType0C	1	CFF based Type1 CID font
kffsCIDFontType2	4	TrueType based CID Font
kffsNoSubtype	9	The font file is in the format of FontType
kffsOpenType	2	TrueType based OpenType font
kffsOpenTypeC	3	CFF based OpenType font
kffsType1C	0	CFF based Type1 font.

Fillmode constants

Constant	Value	Description
kfmClose	11	Close the path, but do not fill or stroke it. More vertices are required or stroke the path in a separate step.
kfmFill	3	Fill path.
kfmFillEvOdd	6	Fill even odd.
kfmFillEvOddNoClose	8	Fill even odd and no close.
kfmFillNoClose	0	Fill, but don't close.
kfmFillStroke	5	Fill and stroke.
kfmFillStrokeEvOdd	7	Fill and stroke even odd.
kfmFillStrokeEvOddNoClose	9	Fill and stroke even odd, no close.
kfmFillStrokeNoClose	2	Fill, Stroke, but don't close.
kfmNoFill	10	Don't fill.
kfmStroke	4	Stroke path.
kfmStrokeNoClose	1	Stroke, but do not close.

File operation constants for CreateLaunchAction.

Constant	Value	Description
kfoOpen	0	Open file.
kfoPrint	1	Print file.

Flush constants

Constant	Value	Description
kfpfDefault	0	Write anything to the file that is possible.
kfpfExclLastPage	2	If set, the last page is not flushed.
kfpfImagesOnly	1	If set, only images are written to the file. The pages are still in memory and can be modified with EditPage(). Flushed images can still be referenced in other pages. The image handles remain valid.

Constants for font style.

Constant	Value	Description
kfsBlack	&h38400000	
kfsBold	&h2BC00000	The old constant 2 is still supported to preserve backward compatibility
kfsCondensed	&h00000300	
kfsDblUnderline	32	Double underlined text.
kfsDemiBold	&h25800000	
kfsExpanded	&h00000700	
kfsExtraBold	&h32000000	
kfsExtraCondensed	&h00000200	
kfsExtraExpanded	&h00000800	
kfsExtraLight	&h0C800000	
kfsItalic	1	
kfsLight	&h12C00000	
kfsMedium	&h1F400000	
kfsNone	0	
kfsNormal	&h00000500	
kfsRegular	&h19000000	Same as fsNone
kfsSemiCondensed	&h00000400	
kfsSemiExpanded	&h00000600	
kfsStriked	8	
kfsThin	&h06400000	
kfsUltraBlack	&h3E800000	
kfsUltraCondensed	&h00000100	
kfsUltraExpanded	&h00000900	
kfsUnderlined	4	Underlined text.
kfsVerticalMode	16	Not considered at this time (v2.5)

Field Type Constants

Constant	Value	Description
kftButton	0	Button
kftCheckBox	1	Checkbox
kftComboBox	3	Combobox
kftGroup	7	This is not a real field type, it is just an array of fields.
kftListBox	4	Listbox
kftRadioBtn	2	Radio Button
kftSignature	6	Signature
kftText	5	Text.

Font Type Constants

Constant	Value	Description
kftMMType1	0	Multiple Master
kftTrueType	1	TrueType font
kftType0	2	CID font ->the descendant font can be a TrueType, Type1 (CFF), or OpenType font
kftType1	3	Type1 font
kftType3	4	Type3 font

Graphics state flag constants

Constant	Value	Description
kgfAnsiStringIsUTF8	32	If set, single byte strings in Ansi functions are treated as UTF-8 encoded Un code strings. Currently not useable with plugins.
kgfCompatible	0	Compatible graphics state to earlier DynaPDF versions ->default
kgfComplexText	&h00000400	If set, text is processed with Uniscribe on Windows.
kgfDisableBidiCtrls	&h00001000	Meaningful only if gfComplexText is set too. If set, bidi control characte are ignored. This flag can be useful if the result of web browsers should b emulated since web browsers do not support bidi control characters. This fla is also used internally to create the appearance stream of form fields since for fields do not support bidi control characters.
kgfDisableJavascript	&h00000800	If set, Javascript actions associated with the OnFormat event of text fields a not executed to format the field value.
kgfDoNotComprMetadata	&h00002000	If set, arbitrary metadata stream associated with PDF objects other that th global metadata stream will not be compressed. This can be useful since certa standards prohibit compression of metadata streams. The flag is automatical for PDF/X files.
kgfIgnoreICCProfiles	16	Meaningful only if the flag kgfUseImageColorSpace is set. If set, an embedde profile is not used to create an ICCBased color space for the image. The imag is inserted in the corresponding device color space instead.
kgfNativeBlackWhite	4	Do not convert RGB black or white to DeviceGray
kgfNoBitmapAlpha	&h00000080	If set, the alpha channel in 32 bit bitmaps will be ignored. Useful for bitmap with an invalid alpha channel.
kgfNoImageDuplCheck	&h00000100	Disables duplicate check for images.
kgfNoObjCompression	&h00000200	If set, object compression will be disabled.
kgfRealPassThrough	64	If set, JPEG images are inserted as is. JPEG images are normally rebuild, als in pass-through mode, to avoid issues with certain malformed JPEG imag which cannot be displayed in Adobes Acrobat or Reader. If you know tha your JPEG images work then set this flag to avoid unnecessary processin time.
kgfRealTopDownCoords	2	If set, the page coordinate system is not reset to bottom-up when transformin the coordinate system. However, real top-down coordinates require a larg internal overhead and where never fully implemented. The usage of this fla should be avoided if possible.
kgfRestorePageCoords	1	Restore the coordinate system with the graphics state (the value of PageCoord see SetPageCoords())
kgfRoundHighlightAP	&h00010000	If set, highlight annotations are drawn with round edges.
kgfSkaleAnnotIcons	&h00008000	If set, icons of text and file attach annotation are scaled with the page li every other annotation. These annotations have normally a fixed size that indendent of the zoom or scaling factor.
kgfUpdatePDFVTModDate	&h00004000	If set, the key GTS_PDFVTModDate will be set to the file's modification dat
kgfUseImageColorSpace	8	If set, the active color space is ignored when inserting an image. The col space is taken from the image file instead. In DynaPDF 5 the UseImageColorSpace flag is on by default. Was off DynaPDF 4.

Highlight Mode Constants

Constant	Value	Description
khmInvert	1	
khmNone	0	
khmOutline	2	
khmPush	3	
khmPushUpd	4	Update appearance stream on changes

Constants for CloseAndSignFileExt.

Constant	Value	Description
khtDetached	0	Returns the byte ranges of the finish PDF buffer to create a detached signature.
khtSHA1	1	Returns the SHA1 hash of the PDF file so that it can be signed.

Init Cache Flags

Constant	Value	Description
kicfIgnorePageLayout	2	

Flags for InitColorManagement

Constant	Value	Description
kicmBPCompensation	1	Black point compensation preserves the black point when converting CMYK colors to different color spaces.
kicmCheckBlackPoint	2	If set, soft proofing will be disabled if the black point of the output intent is probably invalid.
kicmDefault	0	Default rules.

Image conversion flag constants.

Constant	Value	Description
kicNone	0	Default value.
kicUseCCITT4	1	Use CCITT Fax 4 compression instead of Flate for dithered images.

Constants for ICC profile types.

Constant	Value	Description
kictCMYK	2	
kictGray	0	
kictLab	3	
kictRGB	1	

Constants for ImportFlags2.

Constant	Value	Description
kif2CopyEncryptDict	64	If set, the encryption settings of an encrypted PDF file are copied to the new PDF file. The flag does nothing if the file is not encrypted.
kif2DuplicateCheck	16	Perform a duplicate check on color spaces, fonts, images, patterns, and templates when merging PDF files.
kif2IncrementalUpd	&h00000100	If set, the next PDF file that is opened for import is prepared for an incremental update.
kif2MergeLayers	1	If set, layers with identical name are merged. If this flag is absent DynaPDF imports such layers separately so that each layer refers still to the pages where it was orignally used.
kif2NoMetadata	8	Ignore metadata streams which are attached to fonts, pages, images, and so on.
kif2NoResNameCheck	32	Useful in viewer applications
kif2Normalize	2	Replace LZW compression with Flate, apply limit checks, repair errors if possible.
kif2SkipDPartData	&h00000080	If set, DPart dictionaries are not imported.
kif2UseProxy	4	Not meaningful for PDF files which are loaded from a memory buffer. If set, all streams are loaded from the file on demand but they are never hold in memory. This reduces drastically the memory usage and enables the processing of almost arbitrary large PDF files with minimal memory usage. The corresponding PDF file must not be deleted before CloseFile() or CloseFileEx() was called.

Constants for import flags.

Constant	Value	Description
kif3DAnnot	&h00100000	
kifAllAnnots	&h009F0000	
kifAllPageObjects	&h40000000	
kifArticles	16	
kifBookmarks	8	
kifBoxColorInfo	&h00000200	
kifCatalogAction	2	
kifContentOnly	0	
kifDocInfo	&h00008000	
kifEmbeddedFiles	&h00200000	
kifEnumFonts	&h20000000	
kifFileCollections	&h00400000	
kifFormFields	&h01000000	
kifFreeText	&h00010000	
kifImportAll	&h0FFFFFFE	
kifImportAsPage	&h80000000	
kifJavaScript	&h00002000	
kifJSActions	&h00004000	
kifLink	&h00040000	
kifNoContent	1	
kifOtherAnnots	&h00800000	
kifPageActions	4	
kifPageLabels	32	
kifPieceInfo	&h02000000	The PieceInfo dictionary contains arbitrary application defined data. The data in this dictionary is meaningful only for the application that created the data.
kifPrepareForPDFA	&h10000000	
kifSearchIndex	&h00001000	
kifSeparationInfo	&h00000100	Separation info
kifStamp	&h00080000	
kifStructureTree	&h00000400	
kifTextAnnot	&h00020000	
kifThumbs	64	
kifTransition	&h00000800	
kifTranspGroups	&h00000080	

Image Format Constants

Constant	Value	Description
kifmBigTIFF	6	Same as kifmTIFF but without the 4GB output restriction. Note that this format is not supported by most image viewers.
kifmBMP	4	BMP: DeviceGray, DeviceRGB, Black & White ->Uncompressed.
kifmJPC	5	JPEG 2000: DeviceRGB, DeviceCMYK, DeviceGray ->JPEG2000 compression.
kifmJPEG	1	JPEG: DeviceRGB, DeviceCMYK, DeviceGray ->JPEG compression.
kifmPNG	2	PNG: DeviceGray, DeviceRGB, Black & White ->Flate compression.
kifmTIFF	0	TIFF: DeviceRGB, DeviceCMYK, DeviceGray, Black & White ->CCITT Fax Group 3/4, JPEG, Flate, LZW.

Instantiation type constants for Set3DAnnotProps

Constant	Value	Description
kit3D_AppDefault	0	Default
kit3D_Instantiated	1	The annotation will be instantiated but animations are disabled.
kit3D_Live	2	The annotation will be instantiated and animations are enabled (default).

Line Join styles.

Constant	Value	Description
kjsBevelJoin	2	Bevel Join
kjsMiterJoin	0	Miter Join
kjsRoundJoin	1	Round Join

Key length Constant

Constant	Value	Description
kkl128bit	1	RC4 Encryption ->Acrobat 5 or higher
kkl128bitEx	2	RC4 Encryption ->Acrobat 6 or higher
kkl40bit	0	RC4 Encryption ->Acrobat 3 or higher
kklAES128	3	AES Encryption ->Acrobat 7 or higher
kklAES256	4	AES Encryption ->Acrobat 9 or higher
kklAESRev6	5	AES Encryption ->PDF 2.0, Acrobat X or higher

Constants for flags to SetCMapDir function.

Constant	Value	Description
klcmDefault	0	Load the cmaps in the directory now.
klcmDelayed	2	Load the cmap files only when a font requires an external cmap.
klcmRecursive	1	Load sub directories recursively.

Constants for a 3D Rendering mode for Create3DView.

Constant	Value	Description
klsArtwork	0	Lights from file lsBlue,
klsBlue	1	
klsCAD	2	
klsCube	3	
klsDay	4	
klsHard	5	
klsHeadlamp	6	
klsNight	7	
klsNoLights	8	
klsNotSet	12	
klsPrimary	9	
klsRed	10	
klsWhite	11	

Marked Content Types

Constant	Value	Description
kmcBDC	0	Begins a marked content sequence with a property list.
kmcBMC	1	Same as BDC but without a property list.
kmcDP	2	Marked content point with a property list.
kmcMP	3	Marked content point without a property list.
kmcOCG	4	Begins an optional content sequence with an Optional Content Group (OCG), also called layer.
kmcOCMD	5	Begins an optional content sequence with an Optional Content Membership Dictionary (this is a visibility expression)

Metadata Object Constants

Constant	Value	Description
kmdoCatalog	0	The global XMP stream of the document (no handle needed)
kmdoFont	1	Parameter Handle must be a font handle.
kmdoImage	2	Parameter Handle must be an image handle.
kmdoPage	3	Parameter Handle must be a page number.
kmdoTemplate	4	Parameter Handle must be a template handle.

Meta Flags

Constant	Value	Description
kmfApplyBidiAlgo	&h00080000	Apply the bidirectional algorithm on Unicode strings
kmfClipRclBounds	&h01000000	If set, the graphic is drawn into a clipping path with the size of rclBounds. This flag is useful if the graphic contains content outside of its bounding box.
kmfClipView	8	Draw the file into a clipping rectangle
kmfCurrComprFilter	&h20000000	If set, the currently active compression filter is used to compress the image (see SetCompressionFilter()). This flag is used only if the file is rastered to an image.
kmfDebug	1	Write debug information into the content stream.
kmfDefault	0	Default conversion
kmfDefBkModeTransp	&h00040000	Initialize the background mode to transparent (SetBkMode() overrides this state).
kmfDisableRasterEMF	&h02000000	If set, EMF files which use unsupported ROP codes are not rastered.
kmfDontSkipROP_DPa	&h10000000	If set, the ROP code 0x00A000C9 (DPa) is considered in BitBlt, StretchBlt, TranparentBlt, and AlphaBlend records. This kind of ROP code combines a pattern brush with the backdrop. If the flag mfDisableRasterEMF is absent, the usage of such a ROP code causes that the file is rendered to an image.
kmfFullScale	&h00010000	Recommended if 32 bit coordinates are used
kmfGDIFontSelection	&h00100000	Use the GDI to select fonts
kmfIgnoreEmbFonts	&h08000000	If set, embedded fonts in GDIComment records will be ignored. This flag must be set if the fonts of an EMF spool file were pre-loaded with ConvertEMF-Spool(). Spool fonts must always be loaded in a pre-processing step since required fonts are not necessarily embedded in the EMF files.
kmfIntersectClipRect	&h00002000	enabled by default ->can be disabled with mfNoClippingRgn
kmfNoBBoxCheck	&h04000000	Disable the bbox check.
kmfNoBmpPatterns	&h00000400	Ignore bitmap patterns
kmfNoClippingRgn	64	Disables SelectClippingRegion, IntersectClipRect, and SelectClipPath
kmfNoFontEmbedding	&h00000080	Do not embed fonts ->Fonts should be embedded!!!
kmfNoImages	&h00000100	Ignore image records
kmfNoStdPatterns	&h00000200	Ignore standard patterns
kmfNoText	&h00000800	Ignore text records
kmfNoTextClipping	&h00400000	If set, the ETO_CLIPPED flag in text records is ignored.
kmfNoTextScaling	4	Do not scale text
kmfNoUnicode	&h00008000	Avoid usage of Unicode fonts ->recommended to enable PDF 1.2 compability
kmfRclFrameEx	&h00200000	
kmfShowBounds	2	Show the bounding boxes of text strings
kmfSrcCopy_Only	&h00800000	If set, images which use a ROP code other than SRCCOPY are ignored. This is useful when processing Excel 2007 spool files.
kmfUseRclBounds	16	Use rclBounds instead of rclFrame
kmfUseRclFrame	&h00020000	This flag should be set if the rclFrame rectangle is properly set
kmfUseSpacingArray	32	enabled by default ->can be disabled with mfUseTextScaling
kmfUseTextScaling	&h00004000	Scale text instead of using the intercharacter spacing array
kmfUseUnicode	&h00001000	Ignore ANSI_CHARSET

PDFMarkInfo

Constant	Value	Description
kmiNotTagged	0	This is no Tagged PDF file.
kmiSuspects	2	The file contains suspect contents that whose ordering does not ordered meet the requirements of the Tagged PDF specifications.
kmiTagged	1	This is a Tagged PDF file.
kmiUserProperties	4	A flag indicating that at least one structure element contains user properties. User properties are stored in User Property dictionaries.

3D named action constants.

Constant	Value	Description
knaDefault	0	
knaFirst	1	
knaLast	2	
knaNext	3	
knaPrevious	4	

Named Action Constants.

Constant	Value	Description
knaDeletePages	13	
knaFirstPage	0	
knaFitPage	11	
knaFontsInfo	8	
knaFullScreen	12	
knaGeneralInfo	7	
knaGoBack	4	
knaLastPage	1	
knaNextPage	2	
knaOpenDlg	5	
knaPrevPage	3	
knaPrintDlg	6	
knaQuit	14	
knaSaveAs	9	
knaSecurityInfo	10	

Negative number format constants for SetNumberFormat.

Constant	Value	Description
knsMinusBlack	0	The number is colored black with a minus sign.
knsParensBlack	2	The number is colored black with parenthesis.
knsParensRed	3	The number is colored red with parenthesis.
knsRed	1	The number is colored red.

Optimization Flags

Constant	Value	Description
kof2Default	0	Nothing to do
kof2DeleteWatermarkAnnots	2	If set, watermark annotations will be deleted.
kof2DeleteWatermarks	1	Delete watermark templates.
kof2UseSauvolaFilter	4	Meaningful only, if the flag kofConvertGrayTo1Bit is set. The filter is comp rable with Otsu but provides a contrast parameter to fine tune the convers result. Very powerful, especially for brighter text that would be filtered out the Otsu filter.
kof3Default	0	Nothing to do
kof4Default	0	Nothing to do
kofAdjZeroLineWidthOnly	&h00002000	Meaningful only if the parameter MinLineWidth of the optimize parameters greater zero. If set, change the line width of real hairlines only (a hairline i one pixel width line ->LineWidth = 0).
kofCompressWithJBIG2	&h00004000	If set, 1 bit images are compressed with JBIG2 if not already compressed w this filter.
kofConvertAllColors	2	If set, Separation, DeviceN, and NChannel color spaces will be converted the device space.
kofConvertGrayTo1Bit	&h00010000	Useful for scanned faxes since many scanners create gray images for black white input.
kofConvertToCMYK	&h00080000	If set, images, text, and vector graphics are converted to DeviceCMYK.
kofConvertToGray	&h00020000	If set, images, text, and vector graphics are converted to DeviceGray.
kofConvertToRGB	&h00040000	If set, images, text, and vector graphics are converted to DeviceRGB.
kofConvNonEmbFontsOnly	&h00800000	Meaningful only, if the flag kofConvTextToOutlines is set. If set, text of no embedded fonts are converted to outlines only. Embedded fonts remain e bedded.
kofConvTextToOutlines	&h00400000	If set, texts of non-Type3 fonts are converted to outlines or vector graphi The resulting file contains no fonts with exception of Type3 fonts, if any. Su files are large but avoid printing issues due to missing or damaged fonts.
kofDefault	0	Just rebuild the content streams.
kofDeleteAlternateImages	&h00000400	If set, alternate images will be deleted.
kofDeleteInvPaths	64	Delete invisible paths. An invisible path is a path that was finished with t no-op operator "n".
kofDeletePrivateData	&h00000100	Delete private data objects from pages, templates, and images. For example Indesign may store the original Photoshop image within the PI file.
kofDeleteThumbnails	&h00000200	Thumbnails can be deleted since PDF viewers can create thumbnails easily demand.
kofFailOnOverprinting	&h08000000	Meaningful only if a color conversion flag is set. If set, the function retu with a fatal error if an object with enabled overprinting was found on the pa The appearance of overprinted objects would change and make the page may unusable. Overprinted objects can be left unchanged (set the flag kofSkipOv printedObj in this case) or Optimize() can return with a fatal error to av the creation of an invalid document.
kofFlattenLayers	&h00000080	Flatten layers if any.
kofIgnoreDeviceN	&h01000000	If set, DeviceN color spaces are left unchanged.
kofIgnoreICCBased	4	If set, ICCBased color spaces will be left unchanged.
kofIgnoreNChannel	&h02000000	If set, NChannel color spaces are left unchanged.
kofIgnoreSeparation	&h04000000	If set, Separation color spaces are left unchanged.
kofIgnoreSeparationAll	&h80000000	Meaningful only if a color conversion flag is set. If set, Separation color spa with the special colorant "All" will be ignored.
kofIgnoreZeroLineWidth	&h00001000	Meaningful only if the parameter MinLineWidth of the DynaPDFOp mizeParamsMBS class is greater zero. If set, ignore line width operators w a value of zero (zero means one device unit).
kofInMemory	1	Optimize the file fully in memory. Only useful for small PDF files.
kofNewLinkNames	32	If set, rename all object links to short names like F1, F2 etc.
kofNoFilterCheck	&h00008000	Meaningful only, if the flag ofCompressWithJBIG2 is set. If set, re-compr all 1 bit images, also if already compressed with JBIG2.
kofNoImageSizeCheck	&h00000800	Meaningful only if ofScaleImages is set. If set, do not check whether the sca image is smaller as the original image.

Object intent constants for CreateOCG.

Constant	Value	Description
koiAll	8	
koiDesign	2	
koiEmpty	16	Internal (refers to koiView if used)
koiView	4	Default.
koiVisible	32	Visible

Object type constants for AddObjectToLayer.

Constant	Value	Description
kooAnnotation	0	Handle is an annotation handle.
kooField	1	Handle is a field handle.
kooImage	2	Handle is a image handle.
kooTemplate	3	Handle is a template handle.

Origin constants.

Constant	Value	Description
korDownLeft	0	
korTopLeft	1	

Object type constants.

Constant	Value	Description
kotAction	0	Action
kotAnnotation	1	Annotation
kotBookmark	2	Bookmark
kotCatalog	3	Catalog. PDF 1.4
kotField	4	Field
kotPage	5	Page
kotPageLink	6	Page Link.

Usage Categories

Constant	Value	Description
koucExport	1	Export
koucLanguage	2	Language
koucNone	0	
koucPrint	4	Print
koucUser	8	User
koucView	16	View
koucZoom	32	Zoom

Visibility constants for CreateOCMD.

Constant	Value	Description
kovAllOff	0	All Off
kovAllOn	1	All On
kovAnyOff	2	Any Off
kovAnyOn	3	Any On
kovNotSet	4	Not Set

PDF Box Constants

Constant	Value	Description
kpbArtBox	0	Art box.
kpbBleedBox	1	Bleed box.
kpbCropBox	2	Crop Box.
kpbMediaBox	4	Media Box.
kpbTrimBox	3	Trim Box.

Page coordinate constants

Constant	Value	Description
kpcBottomUp	0	
kpcTopDown	1	

Cursor Constants.

Constant	Value	Description
kpcrHandClosed	1	
kpcrHandNormal	0	
kpcrHandPoint	2	
kpcrIBeam	3	

Constants for basic RGB colors.

Constant	Value	Description
kPDF_AQUA	&h00FFFF00	aqua
kPDF_BLACK	0	black
kPDF_BLUE	&h00FF0000	blue
kPDF_CREAM	&h00F0FBFF	cream
kPDF_DKGRAY	&h00808080	dark gray
kPDF_FUCHSIA	&h00FF00FF	fuchsia
kPDF_GRAY	&h00808080	gray
kPDF_GREEN	&h00008000	green
kPDF_LIME	&h0000FF00	lime
kPDF_LTGRAY	&h00C0C0C0	light gray
kPDF_MAROON	&h00000080	maroon
kPDF_MEDGRAY	&h00A4A0A0	medium gray
kPDF_MOGREEN	&h00C0DCC0	mogreen
kPDF_NAVY	&h00800000	navy
kPDF_OLIVE	&h00008080	olive
kPDF_PURPLE	&h00800080	purple
kPDF_RED	&h000000FF	red
kPDF_SILVER	&h00C0C0C0	silver
kPDF_SKYBLUE	&h00F0CAA6	skyblue
kPDF_TEAL	&h00808000	teal
kPDF_WHITE	&h00FFFFFF	white
kPDF_YELLOW	&h0000FFFF	yellow

OCG Pagination Artefacts

Constant	Value	Description
kpeBackgroundImage	0	Background image.
kpeForegroundImage	1	Foreground Image.
kpeHeaderFooter	2	Header or Footer
kpeLogo	3	Logo
kpeNone	4	

PDF parser constants.

Constant	Value	Description
kpfConvImagesToCMYK	64	Convert images to CMYK.
kpfConvImagesToGray	16	Convert images to grayscale.
kpfConvImagesToRGB	32	Convert images to RGB.
kpfDitherImagesToBW	8	Floyd-Steinberg dithering.
kpfNoJPXDecode	4	Meaningful only if the flag pfDecomprAllImages is set. If set, JPEG2000 images are returned as is so that you can use your own library to decompress such images since the entire JPEG2000 codec is still marked as experimental. If we find an alternative to the currently used Jasper library then we will replace it immediatly with another one...
kpfNone	0	

Page format constants for SetPageFormat

Constant	Value	Description
kpfDIN_A0	20	DIN A0
kpfDIN_A1	21	DIN A1
kpfDIN_A10	27	DIN A10
kpfDIN_A2	22	DIN A2
kpfDIN_A3	0	DIN A3
kpfDIN_A4	1	DIN A4
kpfDIN_A5	2	DIN A5
kpfDIN_A6	23	DIN A6
kpfDIN_A7	24	DIN A7
kpfDIN_A8	25	DIN A8
kpfDIN_A9	26	DIN A9
kpfDIN_B4	3	DIN B4
kpfDIN_B5	4	DIN B5
kpfDIN_B6	5	DIN B6
kpfDIN_C3	6	DIN C3
kpfDIN_C4	7	DIN C4
kpfDIN_C5	8	DIN C5
kpfDIN_C6	9	DIN C6
kpfDIN_C65	10	DIN C65
kpfDIN_DL	11	DIN DL
kpfDIN_E4	12	DIN E4
kpfDIN_E5	13	DIN E5
kpfDIN_E6	14	DIN E6
kpfDIN_E65	15	DIN E65
kpfDIN_M5	16	DIN M5
kpfDIN_M65	17	DIN M65
kpfUS_Legal	18	US Legal
kpfUS_Letter	19	US Letter

Printing Flags

Constant	Value	Description
kpff1Bit	1	Print with 1 bit in black and white.
kpffAutoCenter	&h00000400	Automatically scale the page to match printer context.
kpffAutoRotate	&h00000200	Automatically rotate the page to match printer context.
kpffAutoRotateAndCenter	4	Automatically rotate and scale the page to match printer context. With newer versions you can use kpffAutoRotate and kpffAutoCenter separately.
kpffColor	2	Print in color.
kpffDefault	0	Default print settings.
kpffNoEndDoc	&h00000080	Do not call EndDoc on Windows
kpffNoStartDoc	32	Do not call StartDoc on Windows
kpffNoStartPage	64	Do not call StartPage on Windows
kpffPrintAsImage	8	Print by rendering each page as image and drawing it in the graphics context.
kpffPrintPageAsIs	&h00000100	If set, do not scale or rotate a page to fit into the printable area.
kpffShrinkToPrintArea	16	Shrink PDF to print area.

PDF Font Flags

Constant	Value	Description
kpffAllCap	&h00010000	All capitals font
kpffFixedPitch	1	Fixed pitch
kpffForceBold	&h00040000	Bold required
kpffItalic	64	Italic font
kpffNonSymbolic	32	Non symbolic font.
kpffScriptStyle	8	Font in script style.
kpffSerifs	2	Serif font
kpffSmallCap	&h00020000	Small Caps font
kpffSymbolic	4	Symbolic font.

Page layout constants.

Constant	Value	Description
kplDefault	6	Use viewer's default settings
kplOneColumn	1	
kplSinglePage	0	
kplTwoColumnLeft	2	
kplTwoColumnRight	3	
kplTwoPageLeft	4	PDF 1.5
kplTwoPageRight	5	PDF 1.5

Page Label Format constants.

Constant	Value	Description
kplfDecimalArabic	0	1,2,3,4...
kplfLowercaseLetters	4	a,b,c,d...
kplfLowercaseRoman	2	i,ii,iii,iv...
kplfNone	5	
kplfUppercaseLetters	3	A,B,C,D...
kplfUppercaseRoman	1	I,II,III,IV...

Page Mode Constants.

Constant	Value	Description
kpmFullScreen	3	
kpmUseAttachments	5	PDF 1.6
kpmUseNone	0	
kpmUseOC	4	PDF 1.5
kpmUseOutlines	1	
kpmUseThumbs	2	

Print scaling flag constants.

Constant	Value	Description
kpsAppDefault	0	
kpsNone	1	

Picture Scaling Constants

Constant	Value	Description
kpsFitBest	2	Scale the page so that it fits fully into the image buffer.
kpsFitHeight	1	Scale the page to the height of the image buffer.
kpsFitWidth	0	Scale the page to the width of the image buffer.
kpsFitZoom	3	This mode must be used if the scaling factors of the transformation matrix are <>1.0

Constants for 3D projection types.

Constant	Value	Description
kpt3DOrthographic	0	Orthographic
kpt3DPerspective	1	Perspective

Pattern type constants.

Constant	Value	Description
kptColored	0	
kptShadingPattern	2	
kptUnColored	1	

Progress Types

Constant	Value	Description
kptConvertPage	3	Start converting the PDF file (Optimize(), CheckConformance())
kptImportPage	0	This value is for: Start page import
kptPrintPage	2	Progress for printing a page.
kptWritePage	1	This value is for: Start writing a page to file or buffer

Constants for password type to pass when opening files.

Constant	Value	Description
kptDontCopyBuf	4	If set, OpenImportBuffer() does not copy the PDF buffer to an internal buffer. This increases the processing speed and reduces the memory usage. The PDF buffer must not be released until CloseImportFile() or CloseFile() was called.
kptForceRepair	2	Meaningful only when opening a PDF file with OpenImportFile() or OpenImportBuffer(). If set, the PDF parser rebuilds the cross-reference table by scanning all the objects in the file. This can be useful if the cross-reference table contains damages while the top level objects are intact. Setting this flag makes only sence if the file was already previously opened in normal mode and if errors occurred when importing pages of it.
kptOpen	0	No password.
kptOwner	1	Owner password provided.

PDF Version constants.

Constant	Value	Description
kpvFacturX_Basic	&h00100000	Basic profile for FacturX.
kpvFacturX_Basic_WL	&h00200000	Basic WL profile for FacturX.
kpvFacturX_Comfort	&h00400000	Comfort profile for FacturX.
kpvFacturX_Extended	&h00800000	Extended profile for FacturX.
kpvFacturX_Mask	&h02F80000	Mask for all FacturX variants. Contains kpvFacturX_Minimum, kpvFacturX_Basic, kpvFacturX_Basic_WL, kpvFacturX_Comfort, kpvFacturX_Extended and kpvFacturX_XRechnung,
kpvFacturX_Minimum	&h00080000	Minimum profile for FacturX.
kpvPDFA_1a	16	PDF/A 1a
kpvPDFA_2005	14	PDF/A-1b 2005
kpvPDFA_2a	17	PDF/A 2a
kpvPDFA_2b	18	PDF/A 2b
kpvPDFA_2u	19	PDF/A 2u
kpvPDFA_3a	20	PDF/A 3a
kpvPDFA_3b	21	PDF/A 3b
kpvPDFA_3u	22	PDF/A 3u
kpvPDFA_4	31	PDF/A 4
kpvPDFA_4e	32	PDF/A 4e allows 3D contents in rich media annotations.
kpvPDFA_4f	33	PDF/A 4f allows file attach annotations.
kpvPDFUA1	29	PDF/UA-1
kpvPDFUAFlag	&h20000000	PDF/UA flag. Can be used in addition with other standards. File metadata will contain PDF/A and PDF/UA entries.
kpvPDFVT1	&h10000000	PDF/VT 1 flag. This is just a flag because PDF/VT requires always a PDF/X base version.
kpvPDFVT2	&h04000000	PDF/VT 2 flag. This is just a flag because PDF/VT requires always a PDF/X base version.
kpvPDFVT3	&h08000000	PDF/VT 3 flag. This is just a flag because PDF/VT requires always a PDF/X base version.
kpvPDFVTMask	&h1C000000	Mask for PDF/VT flags
kpvPDFX1a_2001	10	PDF/X-1a:2001
kpvPDFX1a_2003	11	PDF/X-1a:2003
kpvPDFX3_2002	12	PDF/X-3:2002
kpvPDFX3_2003	13	PDF/X-3:2003
kpvPDFX4p	30	PDF/X-4p
kpvPDFX5g	23	PDF/X 5g
kpvPDFX5n	24	PDF/X 5n
kpvPDFX5pg	25	PDF/X 5pq
kpvPDFX6	26	PDF/X 6
kpvPDFX6n	27	PDF/X 6n
kpvPDFX6p	28	PDF/X 6p
kpvPDFX_4	15	PDF/X-4
kpvPDF_1_0	0	PDF 1.0
kpvPDF_1_1	1	PDF 1.1
kpvPDF_1_2	2	PDF 1.2
kpvPDF_1_3	3	PDF 1.3
kpvPDF_1_4	4	PDF 1.4
kpvPDF_1_5	5	PDF 1.5
kpvPDF_1_6	6	PDF 1.6
kpvPDF_1_7	7	PDF 1.7
kpvPDF_2_0	8	PDF 2.0
kpvZUGFeRD2_Flag	&h01000000	The flag to indicate it is a ZUGFeRD 2.0 PDF and not FacturX.
kpvZUGFeRD_Basic	&h00010000	ZUGFeRD Basic level. This constant are flags which can be combined with kpvPDFA_3a, kpvPDFA_3b, and kpvPDFA_3u. If used stand alone PDF/A 3b with the correspondig ZUGFeRD metadata will be created.
kpvZUGFeRD_Comfort	&h00020000	ZUGFeRD Comfort level. This constant are flags which can be combined with kpvPDFA_3a,

Pixel formats for raster functions.

Constant	Value	Description
kpxf1Bit	0	1 bit per pixel black and white.
kpxfABGR	7	ABGR.
kpxfARGB	6	ARGB
kpxfBGR	3	BGR
kpxfBGRA	5	BGRA
kpxfCMYK	9	CMYK without alpha
kpxfCMYKA	10	CMYK with alpha
kpxfGray	1	8 bit grayscale.
kpxfGrayA	8	8 bit grayscale with alpha.
kpxfRGB	2	RGB
kpxfRGBA	4	RGBA

Raster Flags

Constant	Value	Description
krfClipBoxMask	28	The mask for Clip flags.
krfClipToArtBox	4	Clip the page to the art box if any. Only one of these clip flags must be set at time!
krfClipToBleedBox	8	Clip the page to the bleed box if any. Only one of these clip flags must be set at time!
krfClipToTrimBox	16	Clip the page to the bleed box if any. Only one of these clip flags must be set at time!
krfCompositeWhite	&h00001000	Composite pixel formats with an alpha channel finally with a white background. The alpha channel is 255 everywhere after composition. This flag is mainly provided for debug purposes but it can also be useful if the image must be copied on screen with a function that doesn't support alpha blending.
krfDefault	0	Render the page as usual.
krfDisableAAClipping	&h00200000	Disable Anti-Aliasing for clipping paths. This flag is the most important one since clipping paths cause often visible artefacts in PDF files with flattened transparency.
krfDisableAAText	&h00400000	Disable Anti-Aliasing for text.
krfDisableAAVector	&h00800000	Disable Anti-Aliasing for vector graphics.
krfDisableAntiAliasing	&h00E00000	Combination of krfDisableAAVector, krfDisableAAText and krfDisableAAClipping.
krfDisableBiLinearFilter	&h01000000	Disable the BiLevel filter for images. Sometetimes useful if sharp images are needed, e.g. for barcodes.
krfEnableBlendCS	&h10000000	If set, the page is rendered in the color space of the page group, soft proof color space, or output intent (if set), and finally converted to the destination colorspace.
krfExclAnnotations	32	Don't render annotations.
krfExclButtons	&h00004000	If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude buttons. If all fields should be skipped then set the flag rfExclFormFields instead.
krfExclCheckBoxes	&h00008000	If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude checkboxes. If all fields should be skipped then set the flag rfExclFormFields instead.
krfExclComboBoxes	&h00010000	If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude combobox. If all fields should be skipped then set the flag rfExclFormFields instead.
krfExclFormFields	64	Don't render form fields.
krfExclListBoxes	&h00020000	If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude listbox. If all fields should be skipped then set the flag rfExclFormFields instead.
krfExclPageContent	&h00002000	If set, only annotations and form fields will be rendered (if any).
krfExclSigFields	&h00080000	If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude signature fields. If all fields should be skipped then set the flag rfExclFormFields instead.
krfExclTextFields	&h00040000	If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude text fields. If all fields should be skipped then set the flag rfExclFormFields instead.
krfForceInterpolation	&h40000000	If set, image interpolation will be applied.
krfIgnoreCropBox	2	Ignore the crop box and render anything inside the media box without clipping.
krfInitBlack	&h00000800	Initialize the image buffer to black before rendering (RGBA or GrayA must be initialized to black)
krfPremulAlpha	&h80000000	If set, an image with pre-multiplied alpha values will be created.
krfRenderInvisibleText	&h02000000	If set, treat text rendering mode Invisible as Normal.
krfRenderPrintState	&h20000000	If set, the print state of layers, annotations, and form fields will be rendered.
krfRotate180	&h00000200	Rotate the page 180 degrees.
krfRotate270	&h00000400	Rotate the page 270 degrees.
krfRotate90	&h00000100	Rotate the page 90 degrees.
krfScaleToBBox	&h00100000	Meaningful only, if rfClipToArtBox, rfClipToBleedBox, or rfClipToTrimBox is set. If set, the picture size is set to the size of the whished bounding box.
krfScaleToMediaBox	1	Render the real paper format. Contents outside the crop box is clipped.

Rendering intent constants

Constant	Value	Description
kriAbsoluteColorimetric	0	
kriPerceptual	1	
kriRelativeColorimetric	2	
kriSaturation	3	

Raw Image Flags Constants.

Constant	Value	Description
krifByteAligned	&h00001000	
krifCMYKData	&h00004000	
krifRGBData	&h00002000	

ReplaceImage Flags

Constant	Value	Description
krifDefault	0	Nothing special to do.
krifDeleteAltImages	1	Delete all alternate images that are associated with this image if any.
krifDeleteMetadata	2	Delete the meta data that was associated with the image.
krifDeleteOCG	4	Delete the Optional Content Group if any. This changes the visibility state of the image. Normally the OCG should be left as is.
krifDeleteSoftMask	8	An image can contain a soft mask that acts as an alpha channel. This mask can be deleted or left as is. The mask will always be deleted if the new image contains a soft mask or an alpha channel.

3D rendering mode constants

Constant	Value	Description
krmBoundingBox	0	
krmHiddenWireframe	1	
krmIllustration	2	
krmNotSet	15	
krmShadedIllustration	3	
krmShadedVertices	4	
krmShadedWireframe	5	
krmSolid	6	
krmSolidOutline	7	
krmSolidWireframe	8	
krmTransparent	9	
krmTranspBBox	10	
krmTranspBBoxOutline	11	
krmTranspWireframe	12	
krmVertices	13	
krmWireframe	14	

Restriction constants.

Constant	Value	Description
krsAddObj	32	
krsAssemble	&h00000400	This flag is only used for 128 bit encryption. So this flag is ignored if 40 bit encryption is used.
krsCopyObj	16	
krsDenyAll	&h00000F3C	
krsDenyNothing	0	
krsEmbFilesOnly	&h00002000	This flag is only used for 128 bit encryption. So this flag is ignored if 40 bit encryption is used. PDF 1.6 Encrypt embedded files only ->Requires AES encryption.
krsExlMetadata	&h00001000	This flag is only used for 128 bit encryption. So this flag is ignored if 40 bit encryption is used. PDF 1.5 Exclude metadata streams ->128/256 bit encryption bit only.
krsExtractObj	&h00000200	This flag is only used for 128 bit encryption. So this flag is ignored if 40 bit encryption is used.
krsFillInFormFields	&h00000100	This flag is only used for 128 bit encryption. So this flag is ignored if 40 bit encryption is used.
krsModify	8	
krsPrint	4	
krsPrintHighRes	&h00000800	This flag is only used for 128 bit encryption. So this flag is ignored if 40 bit encryption is used.

Rubber stamp constants for StampAnnotation.

Constant	Value	Description
krsApproved	0	
krsAsIs	1	
krsConfidential	2	
krsDepartmental	3	
krsDraft	4	
krsExperimental	5	
krsExpired	6	
krsFinal	7	
krsForComment	8	
krsForPublicRelease	9	
krsNotApproved	10	
krsNotForPublicRelease	11	
krsSold	12	
krsTopSecret	13	
krsUserDefined	14	

Submit flag constants for CreateSubmitAction.

Constant	Value	Description
ksfCanonicalFormat	&h00000200	
ksfEmbedForm	&h00002000	PDF 1.5 embed the entire form into a file stream inside the FDF file ->requires the full version of Adobe's Acrobat.
ksfExlFKey	&h00000800	
ksfExlNonUserAnnots	&h00000400	
ksfExlude	1	If set, the fields in a submit form action are excluded if any.
ksfGetMethod	8	
ksfHTML	4	
ksfInclAnnots	&h00000080	
ksfInclAppSaves	64	Requires the full version of Adobe's Acrobat
ksfInclNoValFields	2	
ksfNone	0	The default export format is FDF
ksfPDF	&h00000100	Submit the entire PDF file ->requires the full version of Adobe's Acrobat.
ksfSubmCoords	16	
ksfXML	36	

Constants for font selection modes.

Constant	Value	Description
ksmFamilyName	0	
ksmFullName	2	Full name.
ksmPostScriptName	1	If font selection mode is set to smPostScriptName the font styles fsItalic or fsBold are ignored. The PostScriptName is already a unique font name incl. style information.

Soft Mask Constants.

Constant	Value	Description
ksmtAlpha	0	Alpha mode.
ksmtLuminosity	1	Luminosity mode.

Constants for ConvertEMFSpool.

Constant	Value	Description
kspcDefault	0	Default flags.
kspcDontAddMargins	2	If set, the page format is calculated from the EMF files as is. The current page format is not used to calculate margins which are maybe required. Note that the parameters LeftMargin and TopMargin will still be considered.
kspcFlushPages	8	If set, the function writes every finish page directly to the output file to reduce the memory usage. This flag is meaningful only if the PDF file is not created in memory. Note also that it is not possible to access already flushed pages again with EditPage().
kspcIgnorePaperFormat	1	If set, the current page format is used as is for the entire spool file.
kspcLoadSpoolFontsOnly	4	If set, only embedded fonts will be loaded. The EMF files must be converted with the flag mfIgnoreEmbFonts in this case. This flag can be useful if you want to use your own code to convert the EMF files of the spool file.

Standard Pattern Constants

Constant	Value	Description
kspCross	4	
kspDiaCross	5	
kspHorizontal	0	
kspLDiagonal	3	
kspRDiagonal	2	
kspVertical	1	

Constants for 3D scale type.

Constant	Value	Description
kst3DHeight	2	
kst3DMax	4	
kst3DMin	3	
kst3DValue	0	
kst3DWidth	1	

Shading type constants.

Constant	Value	Description
kstAxial	2	
kstCoonsPatch	6	
kstFreeFormGouraud	4	
kstFunctionBased	1	
kstLatticeFormGouraud	5	
kstRadial	3	
kstTensorProduct	7	

SVG Flags

Constant	Value	Description
ksvfDefault	0	Default settings.

Text Alignment Constants

Constant	Value	Description
ktaCenter	1	Center
ktaJustify	3	Justify
ktaLeft	0	Left
ktaPlainText	&h10000000	Added to alignment flag to tell WriteFText to not interpret escape commands.
ktaRight	2	Right

Text Extraction Flags

Constant	Value	Description
ktefDefault	0	Create text lines in the original order.
ktefDeleteOverlappingText	4	Delete duplicate text records on same position.
ktefNoHeuristic	8	If set, text is sorted on the x-axis as specified. If absent, a heuristic is used to determine whether it is might be better to leave a line unsorted.
ktefSortTextX	1	Sort text records in x-direction.
ktefSortTextXY	3	Sort text records in x and y-direction.
ktefSortTextY	2	Sort text records in y-direction.

Tab Order constants.

Constant	Value	Description
ktoAnnots	4	Annotation order ->PDF 1.7 Extension Level 3
ktoColumn	1	Column.
ktoFields	5	Widget order (Form Fields) ->PDF 1.7 Extension Level 3.
ktoNone	3	
ktoRow	0	Row.
ktoStructure	2	Structure

Tiling Type Constants

Constant	Value	Description
kttConstSpacing	0	
kttFastConstSpacing	2	
kttNoDistortion	1	

Scrollbar Update Constants.

Constant	Value	Description
kusbCursorHandClosed	32	Occurs when the cursor leaves an action field and if the left mouse button is pressed. The cursor constants are set by MouseMove. Since we have only one cursor there is never more than one constant set.
kusbCursorHandNormal	16	This is the default if the left mouse button is not pressed and if we are not over an action field. The cursor constants are set by MouseMove. Since we have only one cursor there is never more than one constant set.
kusbCursorHandPoint	64	Occurs when we enter link or button field. The cursor constants are set by MouseMove. Since we have only one cursor there is never more than one constant set.
kusbCursorIBeam	&h00000080	Occurs when we enter an action field that accepts text input. The cursor constants are set by MouseMove. Since we have only one cursor there is never more than one constant set.
kusbCursorMask	&h00003FF0	Bitmask to mask out the cursor constants.
kusbHorzRange	4	Update the horizontal scroll range.
kusbHorzScrollPos	8	Update the horizontal scroll position.
kusbNoUpdate	0	Nothing to do.
kusbUpdateAll	15	Update both scroll ranges and the scroll positions.
kusbVertRange	1	Update the vertical scroll range.
kusbVertScrollPos	2	Update the vertical scroll position.

Optional content User Type

Constant	Value	Description
kutIndividual	0	Individual
kutNotSet	3	Not set
kutOrganization	1	Organization
kutTitle	2	Title

Viewer Preference Constants

Constant	Value	Description
kvpCenterWindow	16	
kvpDirection	&h00000080	
kvpDisplayDocTitle	32	
kvpFitWindow	8	
kvpHideMenuBar	2	
kvpHideToolBar	1	
kvpHideWindowUI	4	
kvpNonFullScrPageMode	64	
kvpPrintArea	&h00000400	
kvpPrintClip	&h00000800	
kvpUseNone	0	
kvpViewArea	&h00000100	
kvpViewClip	&h00000200	

78.41.1032 Screenshots

78.41.1033 DynaPDF1.jpg

Function: A PDF file created with the unregistered DynaPDF plugin.

78.41.1034 DynaPDF2.jpg

Function: A PDF file created with the unregistered DynaPDF plugin showing an embedded picture and a blue triangle on top.

78.41.1035 DynaPDF3.jpg

Function: A PDF file created with the unregistered DynaPDF plugin showing an embedded PDF.

78.42 class DynaPDFMeasureMBS

78.42.1 class DynaPDFMeasureMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a measure dictionary.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 24.1pr2
- MBS Xojo / Real Studio Plugins, version 15.0pr8

78.42.2 Methods

78.42.3 Angles as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number format array to measure angles.

78.42.4 Area as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number format array to measure areas.

78.42.5 Bounds as Double()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Array of numbers taken pairwise to describe the bounds for which geospatial transforms are valid.
Notes: Changed to double in v24.1.

78.42.6 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.42.7 Distance as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number format array to measure distances.

78.42.8 GPTS as Double()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Required, an array of numbers that shall be taken pairwise, defining points in geographic space as degrees of latitude and longitude, respectively.
Notes: Changed to double in v24.1.

78.42.9 LPTS as Double()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, an array of numbers that shall be taken pairwise to define points in a 2D unit square.
Notes: Changed to double in v24.1.

78.42.10 Slope as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number format array for measurement of the slope of a line.

78.42.11 X as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number format array for measurement of change along the x-axis and, if Y is not present, along the y-axis as well.

78.42.12 Y as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number format array for measurement of change along the y-axis.

78.42.13 Properties

78.42.14 AnglesCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of objects in the array.
Notes: (Read and Write property)

78.42.15 AreaCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of objects in the array.
Notes: (Read and Write property)

78.42.16 BoundCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of values in the array.
Notes: Should be a multiple of two.
(Read and Write property)

78.42.17 CXY as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, meaningful only when Y is present.
Notes: (Read and Write property)

78.42.18 DCS_EPSG as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, either EPSG or WKT is set.
Notes: (Read and Write property)

78.42.19 DCS_IsSet as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the DCS members are set.
Notes: (Read and Write property)

78.42.20 DCS_Projected as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the DCS values contains a pojected coordinate system.
Notes: (Read and Write property)

78.42.21 DCS_WKT as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional ASCII string.
Notes: (Read and Write property)

78.42.22 DistanceCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of objects in the array.
Notes: (Read and Write property)

78.42.23 GCS_EPSG as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, either EPSG or WKT is set.
Notes: (Read and Write property)

78.42.24 GCS_Projected as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the GCS values contains a pojected coordinate system.
Notes: (Read and Write property)

78.42.25 GCS_WKT as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional ASCII string.
Notes: (Read and Write property)

78.42.26 GPTSCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of values in the array.
Notes: (Read and Write property)

78.42.27 IsRectilinear as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the members of the rectilinear measure dictionary are set.
Notes: The geospatial members otherwise.
(Read and Write property)

78.42.28 LPTSCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of values in the array.
Notes: (Read and Write property)

78.42.29 OriginX as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Origin of the measurement coordinate system.
Notes: (Read and Write property)

78.42.30 OriginY as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Origin of the measurement coordinate system.
Notes: (Read and Write property)

78.42.31 PDU1 as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional preferred linear display units.
Notes: (Read and Write property)

78.42.32 PDU2 as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional preferred area display units.
Notes: (Read and Write property)

78.42.33 PDU3 as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional preferred angular display units.
Notes: (Read and Write property)

78.42.34 R as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A text string expressing the scale ratio of the drawing.
Notes: (Read and Write property)

78.42.35 SlopeCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of objects in the array.
Notes: (Read and Write property)

78.42.36 XCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of objects in the array.
Notes: (Read and Write property)

78.42.37 YCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of objects in the array.
Notes: (Read and Write property)

78.43 class DynaPDFMissingFunctionExceptionMBS

78.43.1 class DynaPDFMissingFunctionExceptionMBS

MBS DynaPDF Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exception for a missing function.
Notes: Only used when DynaPDF library is loaded manually and is an older version and missing a function.
Subclass of the RuntimeException class.

78.44 class DynaPDFMovieActionMBS

78.44.1 class DynaPDFMovieActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a movie action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.44.2 Methods

78.44.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.44.4 FWPosition(index as Integer) as Single

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The position.
Notes: Index from 0 to 1.

78.44.5 FWScale(index as Integer) as Single

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The scaling.
Notes: Index from 0 to 1.

78.44.6 Properties

78.44.7 Annot as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional. The movie annotation handle identifying the movie that shall be played.
Notes: Either Annot or Title should be set, but not both.

(Read only property)

78.44.8 Mode as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mode.
Notes: (Read only property)

78.44.9 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle to the next action.
Notes: -1 or next action handle to be executed if any
(Read only property)

78.44.10 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the next action.
Notes: Only set if NextAction is >= 0.
(Read only property)

78.44.11 Operation as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Operation.
Notes: (Read only property)

78.44.12 Rate as Single

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The playback rate.
Notes: (Read only property)

78.44.13 ShowControls as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to show controls.
Notes: (Read only property)

78.44.14 Synchronous as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Synchronous flag.
Notes: (Read only property)

78.44.15 Title as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The title of a movie annotation that shall be played.
Notes: Either Annot or Title should be set, but not both.
(Read only property)

78.44.16 Volume as Single

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The volume.
Notes: (Read only property)

78.45 class DynaPDFNamedActionMBS

78.45.1 class DynaPDFNamedActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a named action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.45.2 Methods

78.45.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.45.4 Properties

78.45.5 Name as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the action.
Notes: Only set if Type = knaUserDefined.
(Read only property)

78.45.6 NewWindow as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to show in a new window or not.
Notes: -1 = viewer default, 0 = false, 1 = true.
(Read only property)

78.45.7 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle to the next action.
Notes: -1 or next action handle to be executed if any
(Read only property)

78.45.8 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the next action.
Notes: Only set if NextAction is >= 0.
(Read only property)

78.45.9 Type as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Known pre-defined actions.
Notes: See kna* constants.
(Read only property)

78.46 class DynaPDFNamedDestMBS

78.46.1 class DynaPDFNamedDestMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for the Named Destination.
Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

78.46.2 Properties

78.46.3 DestFile as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination file.
Notes: (Read only property)

78.46.4 DestPage as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination page.
Notes: (Read only property)

78.46.5 DestPos as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination position.
Notes: (Read only property)

78.46.6 DestType as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination type.
Notes: Values can be a kdt* constant.
(Read only property)

78.46.7 Name as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of that destination.
Notes: This string is either Unicode or ANSI encoded.
(Read only property)

78.47 class DynaPDFNotInitializedExceptionMBS

78.47.1 class DynaPDFNotInitializedExceptionMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An exception for the case a function is called and the library is not initialized.
Notes: Should only happen on the unsupported platforms.
Subclass of the RuntimeException class.

78.48 class DynaPDFNumberFormatMBS

78.48.1 class DynaPDFNumberFormatMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a number format.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

78.48.2 Methods

78.48.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.48.4 Properties

78.48.5 C as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The conversion factor used to multiply a value in partial units.
Notes: (Read and Write property)

78.48.6 D as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A positive integer that shall specify the precision or denominator of a fractional amount.
Notes: (Read and Write property)

78.48.7 F as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number format.
Notes: can be kmnfDecimal, kmnfFractional, kmnfRound or kmnfTruncate.
(Read and Write property)

78.48.8 FD as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, a fractional value formatted according to the D entry may not have its denominator reduced or low-order zeros truncated.
Notes: (Read and Write property)

78.48.9 O as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The label position.
Notes: Can be kmlpSuffix or kmlpPrefix.
(Read and Write property)

78.48.10 PS as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text to be concatenated to the left of the label specified by U.
Notes: (Read and Write property)

78.48.11 RD as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text for the decimal position in displaying numerical values.
Notes: (Read and Write property)

78.48.12 RT as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text to be used between orders of thousands in display of numerical values.
Notes: (Read and Write property)

78.48.13 SS as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text that shall be concatenated after the label specified by U.
Notes: (Read and Write property)

78.48.14 U as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Label, should be a universally recognized abbreviation.
Notes: (Read and Write property)

78.48.15 Constants

Label Position Constants

Constant	Value	Description
kmlpPrefix	1	Prefix
kmlpSuffix	0	Suffix

Number format

Constant	Value	Description
kmnfDecimal	0	Decimal
kmnfFractional	1	Fractional
kmnfRound	2	Round
kmnfTruncate	3	Truncate

78.49 class DynaPDFObjActionsMBS

78.49.1 class DynaPDFObjActionsMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an object action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.49.2 Methods

78.49.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.49.4 Properties

78.49.5 Action as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle to the action.
Notes: -1 or action handle to be executed if any
(Read only property)

78.49.6 ActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the action.
Notes: Only set if Action is >= 0.
(Read only property)

78.49.7 Events as DynaPDFObjEventMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Additional events if any.
Notes: (Read only property)

78.50 class DynaPDFObjEventMBS

78.50.1 class DynaPDFObjEventMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class with information about an object event.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.50.2 Methods

78.50.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.50.4 Properties

78.50.5 Action as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Action to be executed.
Notes: (Read only property)

78.50.6 ActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the action.
Notes: See kat* constants.
(Read only property)

78.50.7 NextObject as DynaPDFObjEventMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pointer to the next event if any.
Notes: (Read only property)

78.50.8 ObjEvent as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event when the action should be executed.
Notes: See koe* constants.
(Read only property)

78.51 class DynaPDFOCGContUsageMBS

78.51.1 class DynaPDFOCGContUsageMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for content usage properties of an optional layer.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.51.2 Methods

78.51.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.51.4 Properties

78.51.5 ExportState as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The export state.
Notes: 0 = Off, 1 = On, PDF_MAX_INT = not set (2147483647)
(Read and Write property)

78.51.6 InfoCreator as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The application that created the group.
Notes: (Read and Write property)

78.51.7 InfoSubtype as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A name defining the type of content, e.g. Artwork, Technical etc.
Notes: (Read and Write property)

78.51.8 LangPreferred as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The preffered state if there is a partial but no exact match of the lang id.
Notes: 0 = Off, 1 = On, PDF_MAX_INT (2147483647) = not set.
(Read and Write property)

78.51.9 Language as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A language code as described at DynaPDFMBS.SetLanguage.
Notes: (Read and Write property)

78.51.10 PageElement as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the group contains a pagination artefact.
Notes: (Read and Write property)

78.51.11 PrintState as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The print state.
Notes: 0 = Off, 1 = On, PDF_MAX_INT = not set (2147483647).
(Read and Write property)

78.51.12 PrintSubtype as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of content that is controlled by the OCG, e.g. Trapping, PrintersMarks or Watermark.
Notes: (Read and Write property)

78.51.13 UserNamesCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The user names can be accessed with GetOCGUsageUserName.
Notes: (Read and Write property)

78.51.14 UserType as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The user for whom the OCG is primarily intendet.
Notes: Can be kutIndividual, kutOrganization, kutTitle or kutNotSet. (constants defined in DynaPDFMBS)
(Read and Write property)

78.51.15 ViewState as Integer

MBS DynaPDF Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The view state.
Notes: 0 = Off, 1 = On, PDF_MAX_INT (2147483647) = not set
(Read and Write property)

78.51.16 ZoomMax as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum zoom factor at which the OCG should be On.
Notes: -1 = not set
(Read and Write property)

78.51.17 ZoomMin as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum zoom factor at which the OCG should be On.
Notes: -1 = not set
(Read and Write property)

78.52 class DynaPDFOCGMBS

78.52.1 class DynaPDFOCGMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for details ob OCG layers.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.52.2 Methods

78.52.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.52.4 Properties

78.52.5 AppEvents as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If non-zero, the layer is included in one or more app events which control the layer state.
Notes: Only valid if HaveContUsage is true.
see TOCAppEvent constants: kaeExport, kaePrint and kaeView. (constants defined in DynaPDFMBS)
(Read and Write property)

78.52.6 Categories as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Usage Categories which control the layer state.
Notes: Only valid if HaveContUsage is true.
See UsageCategory constants: koucNone, koucExport, koucLanguage, koucPrint, koucUser, koucView or oucZoom. (constants defined in DynaPDFMBS)
(Read and Write property)

78.52.7 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

78.52.8 HaveContUsage as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the layer contains a Content Usage dictionary.
Notes: see GetOCGContUsage function.
(Read and Write property)

78.52.9 Intent as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The intent.
Notes: See intent enumeration. Can be koiDesign, koiView, koiAll or koiEmpty. (constants defined in DynaPDFMBS)
(Read and Write property)

78.52.10 IsAll as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An accessor for intent state koiAll.
Notes: (Read only property)

78.52.11 IsDesign as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An accessor for intent state koiDesign.
Notes: (Read only property)

78.52.12 IsEmpty as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An accessor for intent state koiEmpty.
Notes: (Read only property)

78.52.13 IsView as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An accessor for intent state koiView.
Notes: (Read only property)

78.52.14 IsVisible as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An accessor for intent state koiVisible.
Notes: (Read only property)

78.52.15 Name as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The layer name.
Notes: (Read and Write property)

78.53 class DynaPDFOCLayerConfigMBS

78.53.1 class DynaPDFOCLayerConfigMBS

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an optional content layer configuration.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.53.2 Methods

78.53.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.53.4 Properties

78.53.5 Intent as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The object intent.
Notes: Possible values koiDesign, koiView, or koiAll.
(Read only property)

78.53.6 IsDefault as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, this is the default configuration.
Notes: (Read only property)

78.53.7 Name as String

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional configuration name.
Notes: (Read only property)

78.53.8 NameLen as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length in characters.
Notes: (Read only property)

78.54 class DynaPDFOCUINodeMBS

78.54.1 class DynaPDFOCUINodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an optional content user interface node.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.54.2 Methods

78.54.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.54.4 Properties

78.54.5 Label as String

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional label.
Notes: (Read only property)

78.54.6 LabelLength as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Label Length in characters.
Notes: (Read only property)

78.54.7 NewNode as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, a new child node must be created.
Notes: (Read only property)

78.54.8 NextChild as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: If set, the next child node that must be loaded.
Notes: (Read only property)

78.54.9 NextItem as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The next item handle in the list.
Notes: (Read only property)

78.54.10 OCG as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional OCG handle.
Notes: -1 if not set. See GetOCG method.
(Read only property)

78.55 class DynaPDFOptimizeParamsMBS

78.55.1 class DynaPDFOptimizeParamsMBS

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for optimize parameters.
Example:

```
Var o as new DynaPDFOptimizeParamsMBS

o.MinColorRes = 100 // scale colored images with more than 100 dpi
o.ResColorImages = 150 // down to 150 dpi
```

Notes: Use this class to configure the Optimize function.
See the DynaPDF manual for details.

If you like to scale images, you can decide for the parameter individually for 1 bit black & white images, grayscale images and multi-channel images.

For color images you can set MinColorRes property to e.g. 50, so all images with 50 dpi or more are considered. Then they are scaled to the resolution in ResColorImages property to e.g. 150 and compressed with the filter defined in FilterColor, e.g. JPEG. If the final image is bigger than the original, the new image is discarded. Sometimes a highly optimized tiff is smaller than a JPEG after scaling.
Use MinGrayRes, ResGrayImages and FilterGray properties for grayscale images.
Use Min1BitRes, Res1BitImages and Filter1Bit properties for 1 bit black & white images. For these you may prefer to have a higher resolution and e.g. TIFF with kcfCCITT compression.

use the JPEGQuality property to set the desired quality for the JPEG compression or JP2KQuality for JPEG 2000, if these filters are used.

With the MinLineWidth property, you can increase the size of lines. If not zero, all lines will be widened to this width.

ExcludeCS allows you to have an array of color space handles, that are excluded from modifications.

With the various Flags properties, you can pass additional flags.
See kof2* flags for the Flags2 property.

Xojo Developer Magazine

- 19.6, page 19: Things you can do with DynaPDF, The MBS DynaPDF Plugin is more powerful than you think by Stefanie Juchmes

78.55.2 Methods

78.55.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

78.55.4 ExcludeCS as UInt32()

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Array of color space handles which should be excluded from color conversion.
Notes: Queries array, which you can change.
If you set IncludeCS, this array controls which color spaces will be converted.

78.55.5 setExcludeCS(values() as UInt32)

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the array of color space handles which should be excluded from color conversion.
Notes: Replaces the current array with a new one.

78.55.6 Properties

78.55.7 Contrast as Double

MBS DynaPDF Plugin, Plugin Version: 26.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constrast used by the Sauvola filter.
Notes: Default 0.34
Decrease the value if text disappears. Inrease it, if the output becomes too dark. The suitable range lies between 0 through
textasciitilde 0.5.
(Read and Write property)

78.55.8 ExcludeCSCount as Integer

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of color space handles in the array.
Notes: This is ExcludeCS.ubound + 1.
(Read only property)

78.55.9 Filter1Bit as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Filter for black & white images.
Notes: See kcf* constants. Default is kcfJPEG.
(Read and Write property)

78.55.10 FilterColor as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Filter for multi-channel images.
Notes: See kcf* constants. Default is kcfJPEG.
(Read and Write property)

78.55.11 FilterGray as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The filter for gray image compression.
Notes: See kcf* constants. Default is kcfJPEG.
(Read and Write property)

78.55.12 Flags2 as Integer

MBS DynaPDF Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Additional flags.
Notes: See kof2* constants.
(Read and Write property)

78.55.13 Flags3 as Integer

MBS DynaPDF Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Additional flags.
Notes: (Read and Write property)

78.55.14 Flags4 as Integer

MBS DynaPDF Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Additional flags.
Notes: (Read and Write property)

78.55.15 IncludeCS as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If set, only these color spaces in ExcludeCS will be converted.
Notes: If false, the conversion excludes the color spaces in ExcludeCS array.
If true, the conversion only includes the color spaces in ExcludeCS array.
(Read and Write property)

78.55.16 JP2KQuality as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The JPEG 2000 quality.
Notes: Default is 80.
(Read and Write property)

78.55.17 JPEGQuality as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The JPEG quality.
Notes: Default is 80.
(Read and Write property)

78.55.18 Min1BitRes as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum resolution before scaling for one bit images.
Notes: Default is 100.
Can be zero to disable.
(Read and Write property)

78.55.19 MinColorRes as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum resolution before scaling for color images.
Notes: Default is 100.
Can be zero to disable.
(Read and Write property)

78.55.20 MinGrayRes as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum resolution before scaling for gray images.
Notes: Default is 100 dpi.
Can be zero to disable.
(Read and Write property)

78.55.21 MinLineWidth as Single

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum line width for lines.
Notes: Zero means no hair line removal.

(Read and Write property)

78.55.22 Res1BitImages as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resolution for 1 bit black & white images.
Notes: Default is 150.
Can be zero to disable.
(Read and Write property)

78.55.23 ResColorImages as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resolution for images with more than one color channel.
Notes: Default is 150.
Can be zero to disable.
(Read and Write property)

78.55.24 ResGrayImages as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resolution for Gray images.
Notes: Default is 150.
Can be zero to disable.
(Read and Write property)

78.56 class DynaPDFOutputIntentMBS

78.56.1 class DynaPDFOutputIntentMBS

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for details on an output intent.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.56.2 Methods

78.56.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Private constructor.

78.56.4 Properties

78.56.5 Buffer as String

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: ICC profile buffer (optional)
Notes: (Read and Write property)

78.56.6 BufferSize as Integer

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Buffer size in bytes.
Notes: (Read and Write property)

78.56.7 Info as String

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Info string or name of the ICC profile.
Notes: (Read and Write property)

78.56.8 NumComponents as Integer

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of components.
Notes: (Read and Write property)

78.56.9 OutputCondition as String

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Describtion of the output device.
Notes: (Read and Write property)

78.56.10 OutputConditionID as String

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Describtion of the output device.
Notes: (Read and Write property)

78.56.11 RegistryName as String

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The registry in which OutputConditionID is defined.
Notes: (Read and Write property)

78.56.12 SubType as String

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sub type.
Notes: GTS_PDFX, GTS_PDFA1, or ISO_PDFE1
(Read and Write property)

78.57 class DynaPDFPageLabelMBS

78.57.1 class DynaPDFPageLabelMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a Page label.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Xojo / Real Studio Plugins, version 16.3pr2

78.57.2 Methods

78.57.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.57.4 Properties

78.57.5 FirstPageNum as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: First page number to be displayed in the page label.
Notes: Subsequent pages are numbered sequentially from this value.
(Read only property)

78.57.6 Format as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The format of the page label.
Notes: (Read only property)

78.57.7 Prefix as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The prefix.
Notes: This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

78.57.8 PrefixLen as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The length of the prefix in characters.
Notes: (Read only property)

78.57.9 PrefixUni as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the prefix is in unicode.
Notes: (Read only property)

78.57.10 StartRange as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The start range.
Notes: (Read only property)

78.58 class DynaPDFPageMBS

78.58.1 class DynaPDFPageMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a DynaPDF page.
Example:

```
// show the size of all pages of a PDF in millimeters
Var pdf As New DynaPDFMBS
Call pdf.CreateNewPDF(Nil)
Call pdf.OpenImportFile(SpecialFolder.Desktop.Child("test.pdf"))
Call pdf.ImportPDFFile(1)

Var lines() As String
For i As Integer = 1 To pdf.GetPageCount
Var page As DynaPDFPageMBS = pdf.GetPage(i)
Var box As DynaPDFRectMBS = page.MediaBox
lines.Add "Page " + i.ToString + ": " + Format((box.Right - box.Left) / 72 * 25.4, "0") + " x " + Format((box.Top - box.Bottom) / 72 * 25.4, "0") + " mm, rotated " + page.Orientation.ToString
Next
MessageBox String.FromArray(lines, EndOfLine)
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

Xojo Developer Magazine

- 22.1, page 9: News

78.58.2 Methods

78.58.3 BBox(type as Integer) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the requested bounding box.
Notes: use the constants kpbArtBox, kpbBleedBox, kpbCropBox, kpbMediaBox or kpbTrimBox.

If orientation gives you 90, 270, -90 or -270, you may want to swap width and height of the rectangle.

78.58.4 CalcPagePixelSize(DefScale as UInt32, Scale as single, FrameWidth as UInt32, FrameHeight as UInt32, Flags as UInt32, byref Width as UInt32, byref Height as UInt32)

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function calculates the image size of a page exactly in the way as RenderPage() does, if called with the same parameters.
Example:

```
// your PDF environment
Var pdf as new DynaPDFMBS

// some PDF
Var file as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

call pdf.CreateNewPDF(nil)

// We import all pages
call pdf.SetImportFlags(pdf.kifImportAsPage)
call pdf.OpenImportFile(file, 0, "")
call pdf.ImportPDFFile(1,1.0,1.0)

// get first page
Var p as DynaPDFPageMBS = pdf.GetPage(1)

// and calculate how big it would be:
Var PageWidth, PageHeight as UInt32

Var DefScale as UInt32 = DynaPDFMBS.kpsFitBest
Var Scale as Single = 1.0
Var Flags as Uint32 = DynaPDFRasterImageMBS.krfDefault

p.CalcPagePixelSize(DefScale, Scale, Window1.Width, Window1.Height, Flags, PageWidth, PageHeight)

MessageBox "PageWidth: "+str(PageWidth)+EndOfLine+"PageHeight: "+str(PageHeight)
```

Notes: This makes it possible to create the image in the required size so that it can be rendered without a border.

78.58.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.58.6 GetWidthHeight(Flags as UInt32, byref Width as Single, byref Height as Single, Rotate as Integer = 0) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates page width and height.

78.58.7 SetBBox(type as integer, BBox as DynaPDFRectMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets or changes the bounding box of a page.
Notes: This function is intended to be fast as possible. It requires no open page like DynaPDFMBS.SetBBox(), it does not change the default media or crop box, and it does not adjust the current coordinate system if the media box will be changed.

The function is useful if only one or more bounding boxes must be changed, whithout editing a page, or when a specific area of a page should be rendered. In the latter case change the crop box and restore it to the previous value when finish.
To delete a bounding box set the bounding box to 0, 0, 0, 0. The parameter BBox is required to be present, it cannot be nil.

If the function succeeds the return value is true. If the function fails the return value is false.

78.58.8 Properties

78.58.9 ArtBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries art box for this page.
Notes: May be nil if not defined.
(Read only property)

78.58.10 BleedBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries bleed box for this page.
Notes: May be nil if not defined.
(Read only property)

78.58.11 CropBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries crop box for this page.
Notes: May be nil if not defined.
(Read only property)

78.58.12 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

78.58.13 MediaBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries media box for this page.
Notes: (Read only property)

78.58.14 Orientation as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the page orientation.
Notes: (Read and Write property)

78.58.15 Page as Integer

MBS DynaPDF Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The original page number used to query this page.
Notes: (Read only property)

78.58.16 PDF as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reference back to parent dynaPDF object.
Notes: (Read only property)

78.58.17 TrimBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries trim box for this page.
Notes: May be nil if not defined.
(Read only property)

78.58.18 Constants

PDF Box Constants

Constant	Value	Description
kpbArtBox	0	Art box.
kpbBleedBox	1	Bleed box.
kpbCropBox	2	Crop Box.
kpbMediaBox	4	Media Box.
kpbTrimBox	3	Trim Box.

78.59 class DynaPDFPageStatisticMBS

78.59.1 class DynaPDFPageStatisticMBS

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for page statistics.
Example:

```
// count text, images and vector objects on the pages of a PDF
Var pdf As New DynaPDFMBS
Call pdf.CreateNewPDF(Nil)
Call pdf.OpenImportFile(SpecialFolder.Desktop.Child("test.pdf"))
Call pdf.ImportPDFFile(1)

Var lines() As String
For i As Integer = 1 To pdf.GetPageCount
Var s As DynaPDFPageStatisticMBS = pdf.PageStatistic(i)
If s = Nil Then Continue
lines.Add "Page " + i.ToString + ": " + s.TextCount.ToString + " texts with " + s.TextLength.ToString
+ " characters, " + _
s.ImageCount.ToString + " images, " + s.LineCount.ToString + " lines, " + s.FontCount.ToString + "
fonts"
Next
MessageBox String.FromArray(lines, EndOfLine)
```

Notes: You could count yourself with DynaPDFParseInterfaceMBS class and using the events.
This is just a convenience way to learn about whether for example there is an image on the page.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- 11.1, page 9: News

78.59.2 Methods

78.59.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.59.4 Properties

78.59.5 BezierCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bezier curves.
Notes: (Read and Write property)

78.59.6 ClipPathCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of path clippings.
Notes: (Read and Write property)

78.59.7 ClosePathCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of paths closed.
Notes: (Read and Write property)

78.59.8 DrawShadingCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of shading drawings.
Notes: (Read and Write property)

78.59.9 FontCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of fonts used.
Notes: (Read and Write property)

78.59.10 ImageCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of images used.
Notes: (Read and Write property)

78.59.11 LayerCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of layers used.
Notes: (Read and Write property)

78.59.12 LineCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of lines.
Notes: (Read and Write property)

78.59.13 PatternCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of patterns used.
Notes: (Read and Write property)

78.59.14 RectangleCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of rectangles.
Notes: (Read and Write property)

78.59.15 TemplateCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of templates.
Notes: (Read and Write property)

78.59.16 TextCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of text fragments.
Notes: (Read and Write property)

78.59.17 TextLength as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The length in characters of the text on the page.
Notes: (Read and Write property)

78.60 class DynaPDFParseInterfaceMBS

78.60.1 class DynaPDFParseInterfaceMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for parsing pdf content.
Notes: You need to implement the BeginTemplate event in order to get events for images, vector graphics and text on the templates used on the page.

All events which return an integer value can break processing if necessary. A return value of zero indicates success and processing continues. A return value of 1 of the BeginTemplate or BeginPattern events indicates that the object should be skipped. The corresponding content streams are not executed in this case. This can be useful when extracting images. Any other return value breaks processing.

Please check the newer DynaPDFParserMBS class. There you can use DynaPDFParserContentMBS subclasses to inspect all the page content without all the events. And you can make a couple of modifications on the fly.

78.60.2 Events

78.60.3 ApplyPattern(ObjectPtr as Integer, Type as Integer, PatternPtr as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

kptColored	= 0
kptUnColored	= 1
kptShadingPattern	= 2

Function: One of the parser events.
Notes: Type is one of the following constants:

You can break processing if necessary by returning a negative value. A return value of zero indicates success and processing continues.

78.60.4 BeginLayer(OCHandle as Integer, InVisible as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Called when the PDF parser found a begin layer command.
Notes: The plugin will process the OCG object for you. So if handle is -1, there is no layer handle. If it is >= 0, you have a handle. If it is <0, something failed.

You can break processing if necessary by returning a negative value. A return value of zero indicates success and processing continues.

78.60.5 BeginMarkedContent(MarkedContentType as integer, Invisible as boolean, Dict as String, ObjectHandle as Ptr) as integer

MBS DynaPDF Plugin, Plugin Version: 25.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Called for marked content sequences including layers.
Notes: The BeginMarkedContent and EndMarkedContent events are called for marked content sequences including layers. The older BeginLayer / EndLayer events are executed only if BeginMarkedContent / EndMarkedContent are not implemented.

Note also that BeginMarkedContent / EndMarkedContent or BeginLayer / EndLayer are executed as usual but no drawing operator is executed if the current visibility state is invisible. Images and templates (Form XObject in PDF terms) are ignored if the visibility state is invisible.

In addition, path operators and the corresponding callback functions are executed if the visibility state is invisible but an operator that draws a path is not executed. This is because the terminating operator specifies how the path must be processed. Since clipping paths are pushed to the graphics state as usual path operators cannot be ignored. The visibility state does not affect the graphics state at all. Every operator that changes the graphics state must be considered.

If you implement this event, the BeingLayer and EndLayer events are not called.

78.60.6 BeginPattern(ObjectPtr as Integer, Fill as Boolean, PatternType as Integer, BBox as DynaPDFRectMBS, Matrix as DynaPDFMatrixMBS, XStep as Double, YStep as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.
Notes: PatternType is one of the following constants:

kptColored	= 0
kptUnColored	= 1
kptShadingPattern	= 2

Return 1 to skip this pattern.
You can break processing if necessary by returning a negative value. A return value of zero indicates success and processing continues.

78.60.7 BeginTemplate(ObjectPtr as Integer, Handle as Integer, BBox as DynaPDFRectMBS, Matrix as DynaPDFMatrixMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.
Notes: You need to implement this event in order to get text, images and vector graphics from inside templates.

Return 1 to skip this template.
You can break processing if necessary by returning a negative value. A return value of zero indicates success and processing continues.

78.60.8 BezierTo1(ObjectPtr as Integer, x1 as Double, y1 as Double, x3 as Double, y3 as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.

Notes: You can break processing if necessary by returning a negative value. A return value of zero indicates success and processing continues.

78.60.9 BezierTo2(ObjectPtr as Integer, x2 as Double, y2 as Double, x3 as Double, y3 as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.
Notes: You can break processing if necessary by returning a negative value. A return value of zero indicates success and processing continues.

78.60.10 BezierTo3(ObjectPtr as Integer, x1 as Double, y1 as Double, x2 as Double, y2 as Double, x3 as Double, y3 as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.
Notes: You can break processing if necessary by returning a negative value. A return value of zero indicates success and processing continues.

78.60.11 ClipPath(ObjectPtr as Integer, EvenOdd as boolean, Mode as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.
Notes: For the Mode parameter, the kfm* constants are used.

You can break processing if necessary by returning a negative value. A return value of zero indicates success and processing continues.

78.60.12 ClosePath(ObjectPtr as Integer, Mode as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.
Notes: For the Mode parameter, the kfm* constants are used.

You can break processing if necessary by returning a negative value. A return value of zero indicates success and processing continues.

78.60.13 DrawShading(ObjectPtr as Integer, Type as Integer, Shading as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.
Notes: For the type parameter you use the kst* constants.

You can break processing if necessary by returning a negative value. A return value of zero indicates success and processing continues.

78.60.14 EndLayer(OCHandle as Integer, InVisible as boolean)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Called when the PDF parser found an end layer command.

78.60.15 EndMarkedContent(MarkedContentType as integer, Invisible as boolean)

MBS DynaPDF Plugin, Plugin Version: 25.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Called for marked content sequences including layers.
Notes: If you implement this event, the BeingLayer and EndLayer events are not called.

78.60.16 EndPattern

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.

78.60.17 EndTemplate

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.

78.60.18 InsertImage(image as DynaPDFImageMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.
Notes: You can return zero on success or 1 to stop processing.

You can break processing if necessary by returning a negative value. A return value of zero indicates success and processing continues.

78.60.19 LineTo(ObjectPtr as Integer, x as Double, y as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.
Notes: You can break processing if necessary by returning a negative value. A return value of zero indicates success and processing continues.

78.60.20 MoveTo(ObjectPtr as Integer, x as Double, y as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.
Notes: You can break processing if necessary by returning a negative value. A return value of zero indicates success and processing continues.

78.60.21 MulMatrix(ObjectPtr as Integer, matrix as DynaPDFMatrixMBS)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: A matrix multiplication was found.

78.60.22 Rectangle(ObjectPtr as Integer, x as Double, y as Double, w as Double, h as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parser found a rectangle.
Notes: You can break processing if necessary by returning a negative value. A return value of zero indicates success and processing continues.

78.60.23 RestoreGraphicState as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.
Notes: You need to handle your own stack of graphics states to keep track of what the current graphics state is. Otherwise you can't know the matrix of the current item when drawing.

You can break processing if necessary by returning a negative value. A return value of zero indicates success and processing continues.

78.60.24 SaveGraphicState as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.
Notes: You need to handle your own stack of graphics states to keep track of what the current graphics state is. Otherwise you can't know the matrix of the current item when drawing.

You can break processing if necessary by returning a negative value. A return value of zero indicates success and processing continues.

78.60.25 SetCharSpacing(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.

78.60.26 SetExtGState(ObjectPtr as Integer, GS as DynaPDFExtGState2MBS)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.

78.60.27 SetFillColor(ObjectPtr as Integer, NumComps as Integer, Color1 as Double, Color2 as Double, Color3 as Double, Color4 as Double, Colors() as Double, ColorspaceType as Integer, ColorSpace as DynaPDFColorSpaceMBS)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.
Notes: Colors array contains NumComps color values. First four values are provided directly with Color1, Color2, Color3 and Color4 parameters.
ColorSpaceType uses the kes* constants.
You can use ConvColor to convert colors to RGB or CMYK if needed.

78.60.28 SetFont(ObjectPtr as Integer, fontType as Integer, Embedded as boolean, FontName as string, Style as Integer, FontSize as Double, FontHandle as Integer, FontInfo as DynaPDFFontInfoMBS)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.

78.60.29 SetLeading(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.

78.60.30 SetLineCapStyle(ObjectPtr as Integer, Style as Integer)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.

78.60.31 SetLineDashPattern(ObjectPtr as integer, dash() as Double, NumValues as integer, Phase as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.

78.60.32 SetLineJoinStyle(ObjectPtr as Integer, Style as Integer)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.

78.60.33 SetLineWidth(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.

78.60.34 SetMiterLimit(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.

78.60.35 SetStrokeColor(ObjectPtr as Integer, NumComps as Integer, Color1 as Double, Color2 as Double, Color3 as Double, Color4 as Double, Colors() as Double, ColorspaceType as Integer, ColorSpace as DynaPDFColorSpaceMBS)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.
Notes: Colors array contains NumComps color values. First four values are provided directly with Color1, Color2, Color3 and Color4 parameters.
ColorSpaceType uses the kes* constants.
You can use ConvColor to convert colors to RGB or CMYK if needed.

78.60.36 SetTextDrawMode(ObjectPtr as Integer, Mode as Integer)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.

78.60.37 SetTextScale(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.

78.60.38 SetWordSpacing(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.

78.60.39 ShowTextArrayA(ObjectPtr as Integer, Matrix as DynaPDFMatrixMBS, Kerning() as DynapdfTextRecordAMBS, Count as Integer, Width as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.
Notes: You can break processing if necessary by returning a negative value. A return value of zero indicates success and processing continues.

78.60.40 ShowTextArrayW(Source() as DynaPDFTextRecordAMBS, Matrix as DynapdfMatrixMBS, Kerning() as DynapdfTextRecordWMBS, Count as Integer, Width as Double, Decoded as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the parser events.

78.61 class DynaPDFParserContentBeginMarkedContentMBS

78.61.1 class DynaPDFParserContentBeginMarkedContentMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for marked content.
Notes: Subclass of the DynaPDFParserContentMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.61.2 Properties

78.61.3 MCType as Integer

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The type of marked content.
Notes: (Read and Write property)

78.61.4 Name as String

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Internal link name of a named resource.
Notes: (Read only property)

78.61.5 OCGHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: MCID or handle of an OCG or OCMD.
Notes: (Read and Write property)

78.61.6 Parms as String

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Optional parameters (string if present (inline dictionary)).
Notes: (Read only property)

78.61.7 ParmsLen as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Length in bytes.
Notes: (Read only property)

78.61.8 Tag as String

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The marked content tag.
Notes: (Read only property)

78.61.9 TagLen as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Length in bytes.
Notes: (Read only property)

78.61.10 Visible as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Current visibility state.
Notes: (Read and Write property)

78.61.11 Constants

Marked Content Types

Constant	Value	Description
kmctMarkedContSeq	2	A marked content sequence of no specific type.
kmctOCG	0	The Handle parameter is a Optional Content Group (also called Layer).
kmctOCMD	1	The Handle parameter is a Optional Content Membership Dictionary (an OCMD represents a visibility expression).
kmctStructElem	3	A marked content sequence having a MCID (Marked Content ID) to access a structure element.

78.62 class DynaPDFParserContentClipPathExtMBS

78.62.1 class DynaPDFParserContentClipPathExtMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a path clipping extension.
Notes: Subclass of the DynaPDFParserContentMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.62.2 Properties

78.62.3 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The bounding box.
Notes: (Read and Write property)

78.62.4 EvenOdd as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: A clipping path has its own even odd flag.
Notes: This flag must be considered when creating the clipping area.
(Read and Write property)

78.62.5 Index as Int32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The index was returned by the ClipPath event.
Notes: (Read and Write property)

78.62.6 Mode as Integer

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Path fill mode.
Notes: (Read and Write property)

78.63 class DynaPDFParserContentClipPathMBS

78.63.1 class DynaPDFParserContentClipPathMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a path clipping.
Notes: Subclass of the DynaPDFParserContentMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.63.2 Methods

78.63.3 OP as UInt8()

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Operant array that specifies the type of data in the Elems array.

78.63.4 Vertices as DynaPDFPointMBS()

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The vertices which define the path.

78.63.5 Properties

78.63.6 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The bounding box.
Notes: (Read and Write property)

78.63.7 EvenOdd as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: A clipping path has its own even odd flag.
Notes: This flag must be considered when creating the clipping area.
(Read and Write property)

78.63.8 Mode as Integer

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Path fill mode.
Notes: (Read and Write property)

78.63.9 OPCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The number of operants in the array ElemOP.
Notes: (Read only property)

78.63.10 VerticesCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of vertices in the array.
Notes: (Read only property)

78.64 class DynaPDFParserContentColorMBS

78.64.1 class DynaPDFParserContentColorMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a color for the content parser.
Notes: Subclass of the DynaPDFParserContentMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.64.2 Methods

78.64.3 Values as Single()

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Array of floating point values.
Notes: One value per component.

78.64.4 Properties

78.64.5 BaseColorSpace as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The base color space.
Notes: Calculated from CS property.
(Read only property)

78.64.6 ColorSpace as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The color space.
Notes: Calculated from CS property.
(Read only property)

78.64.7 CS as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Color space and various flags.
Notes: (Read and Write property)

78.64.8 DeviceColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The device color.
Notes: Set only if the flag kcpfCalcDeviceColors is set.
(Read and Write property)

78.64.9 NumComponents as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of components.
Notes: (Read and Write property)

78.64.10 Value(index as Integer) as Single

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Array of floating point values.
Notes: One value per component.
Index is zero based.
(Read and Write computed property)

78.65 class DynaPDFParserContentColorSpaceMBS

78.65.1 class DynaPDFParserContentColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a color space.
Notes: Subclass of the DynaPDFParserContentMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.65.2 Properties

78.65.3 CS as Integer

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The color space.
Notes: The color space is encoded in the lower 8 bits ->(CS and 255);
If bit 16 is set, the color space is a default color space ->(CS and &h20000).
The underlying base color space is encoded in the upper 8 bits ->(CS shift right 24).
(Read and Write property)

78.65.4 CSObj as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Color space object.
Notes: (Read only property)

78.65.5 Invisible as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: If true, the color space is fully invisible ->special colorant None.
Notes: (Read and Write property)

78.65.6 Name as String

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Internal link name.
Notes: (Read only property)

78.66 class DynaPDFParserContentDrawGroupMBS

78.66.1 class DynaPDFParserContentDrawGroupMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for drawing a group.
Notes: Subclass of the DynaPDFParserContentMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.66.2 Methods

78.66.3 Elems as DynaPDFParserContentMBS()

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The elements which draw the soft mask or transparency group.
See also:

- 78.66.4 Elems(Index as Integer) as DynaPDFParserContentMBS 13436

78.66.4 Elems(Index as Integer) as DynaPDFParserContentMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The elements which draw the soft mask or transparency group.
Notes: Index from 0 to ElemsCount-1.
See also:

- 78.66.3 Elems as DynaPDFParserContentMBS() 13436

78.66.5 MatrixValues as Single()

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Pre-multiplied matrix to map form space to user space.
See also:

- 78.66.19 MatrixValues(Index as Integer) as Single 13439

78.66.6 Properties

78.66.7 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The bounding box to enable fast skipping of invisible objects.
Notes: (Read and Write property)

78.66.8 BlendCS as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The blend colorspace.
Notes: This can be any device or ICC based color space.
(Read and Write property)

78.66.9 BlendCSObj as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Set only if BlendCS is a non-device space.
Notes: (Read only property)

78.66.10 ElemsCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The number of elements.
Notes: (Read only property)

78.66.11 Flags as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loading state, visibility state, isolated or non-isolated group, knockout flag. Invisible groups are not loaded by default.
Notes: (Read and Write property)

78.66.12 IsIsolated as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether this is isolated.
Notes: Calculated From Flags property with knfIsolated constant.
(Read only property)

78.66.13 IsKnockout as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether this group has knockout enabled.
Notes: Calculated From Flags property with knfKnockout constant.
(Read only property)

78.66.14 IsVisible as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether this group is visible.
Notes: Calculated From Flags property with knfVisible constant.
(Read only property)

78.66.15 Matrix as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Pre-multiplied matrix to map form space to user space.
Notes: (Read and Write property)

78.66.16 Name as String

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Internal link name.
Notes: (Read only property)

78.66.17 OC as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The optional content reference.
Notes: OC or OCMD handle or -1 if not set (requires version 4.0.71.196 or higher)
(Read and Write property)

78.66.18 TemplateHandle as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Template handle.
Notes: (Read and Write property)

78.66.19 MatrixValues(Index as Integer) as Single

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Pre-multiplied matrix to map form space to user space.
Notes: Index from 0 to 5.
(Read and Write computed property)
See also:

- 78.66.5 MatrixValues as Single() 13436

78.67 class DynaPDFParserContentDrawImageMBS

78.67.1 class DynaPDFParserContentDrawImageMBS

MBS DynaPDF Plugin, Plugin Version: 26.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a draw image operator.
Example:

```
Var pdf As New DynapdfMBS
// ... load some PDF

Var Parser As New DynaPDFParserMBS(pdf)
Var ContentParsingFlags As Integer = 0
Var page As Integer = 0

If parser.ParsePage(page, ContentParsingFlags) Then

Var u As Integer = parser.OperatorCount-1
For j As Integer = 0 To u
Var content As variant = parser.Content(j)
if content isa DynaPDFParserContentDrawImageMBS then
var ContentDrawImage as DynaPDFParserContentDrawImageMBS = content

MessageBox "Image "+ContentDrawImage.ImageHandle.ToString+" is on the page"
End If
Next
End If
```

Notes: Subclass of the DynaPDFParserContentMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.68.2 Methods

78.68.3 Decode as Single()

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Min/max per component.

78.68.4 Properties

78.68.5 BaseColorSpace as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The color space in which the buffer or color table is defined.
Notes: (Read and Write property)

78.68.6 BitsPerComponent as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Valid values are 1, 2, 4, 8, or 16 bits per component.
Notes: (Read only property)

78.68.7 Buffer as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Image buffer.
Notes: (Read only property)

78.68.8 BufSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Buffer size in bytes.
Notes: (Read only property)

78.68.9 ColorCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of colors in the table.
Notes: (Read only property)

78.68.10 ColorSpace as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: If the image uses an extended color space, like Separation, DeviceN or Indexed, BaseColorSpace is the color space in which the buffer or color table is defined.
Notes: (Read and Write property)

78.68.11 ColorSpaceName as String

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Internal link name if not defined inline.
Notes: (Read only property)

78.68.12 ColorSpaceObj as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The color space object.
Notes: (Read only property)

78.68.13 ColorTable as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Indexed color space only.
Notes: (Read only property)

78.68.14 ColorTableLen as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: It is guaranteed that the table contains ColorCount values.
Notes: (Read only property)

78.68.15 Height as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Image height.
Notes: (Read and Write property)

78.68.16 ImageMask as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: 1 bit images only.
Notes: If true, non-zero pixel values must be drawn with the current fill color.
(Read and Write property)

78.68.17 Index as Int32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This index is set by the DrawInlineImage event, -1 otherwise.
Notes: It can be used to access the cached image if created.
(Read and Write property)

78.68.18 Intent as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Rendering intent.
Notes: (Read and Write property)

78.68.19 Interpolate as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: If true, the image should be interpolated.
Notes: (Read and Write property)

78.68.20 NumComponents as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The number of components in the pixel buffer or color table if one is present.
Notes: (Read and Write property)

78.68.21 OrgFilter as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The image was compressed with this filter. The image is always returned uncompressed.
Notes: (Read and Write property)

78.68.22 Visible as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Layer visibility.
Notes: If false, the object can be skipped.
(Read and Write property)

78.68.23 Width as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Image width.
Notes: (Read and Write property)

78.69 class DynaPDFParserContentDrawPathExtMBS

78.69.1 class DynaPDFParserContentDrawPathExtMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for extended draw path data.
Notes: Subclass of the DynaPDFParserContentMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.69.4 Index as Int32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The index was returned by the DrawPath event.
Notes: (Read and Write property)

78.69.5 Mode as Integer

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Path fill mode.
Notes: (Read and Write property)

78.70 class DynaPDFParserContentDrawPathMBS

78.70.1 class DynaPDFParserContentDrawPathMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a path draw operation.
Notes: Subclass of the DynaPDFParserContentMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.70.2 Methods

78.70.3 OP as UInt8()

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Operant array that specifies the type of data in the Elems array.

78.70.4 Vertices as DynaPDFPointMBS()

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The vertices which define the path.

78.70.5 Properties

78.70.6 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The bounding box.
Notes: (Read and Write property)

78.70.7 Mode as Integer

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Path fill mode.
Notes: (Read and Write property)

78.70.8 OPCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The number of operants in the array OP.
Notes: (Read only property)

78.70.9 VerticesCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of vertices in the array.
Notes: (Read only property)

78.71 class DynaPDFParserContentDrawShadingMBS

78.71.1 class DynaPDFParserContentDrawShadingMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a shading draw operator.
Notes: Subclass of the DynaPDFParserContentMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.71.2 Properties

78.71.3 Name as String

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Internal link name.
Notes: (Read only property)

78.71.4 ShadingType as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Shading type.
Notes: (Read and Write property)

78.72 class DynaPDFParserContentDrawTemplateMBS

78.72.1 class DynaPDFParserContentDrawTemplateMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a template drawing operator.
Notes: Subclass of the DynaPDFParserContentMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.72.2 Methods

78.72.3 Elems as DynaPDFParserContentMBS()

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the content of the template.
See also:

- 78.72.4 Elems(Index as Integer) as DynaPDFParserContentMBS 13451

78.72.4 Elems(Index as Integer) as DynaPDFParserContentMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the content of the template.
Notes: Index from 0 to ElemsCount-1.
See also:

- 78.72.3 Elems as DynaPDFParserContentMBS() 13451

78.72.5 MatrixValues as Single()

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Pre-multiplied matrix to map form space to user space.
See also:

- 78.72.14 MatrixValues(Index as Integer) as Single 13453

78.72.6 Properties

78.72.7 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The bounding box.
Notes: (Read and Write property)

78.72.8 ElemsCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The number of elements.
Notes: (Read only property)

78.72.9 Flags as Integer

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loading state, visibility state.
Notes: Invisible templates are not loaded by default.
(Read and Write property)

78.72.10 Matrix as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Pre-multiplied matrix to map form space to user space.
Notes: (Read and Write property)

78.72.11 Name as String

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Internal link name.
Notes: (Read only property)

78.72.12 OC as Int32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The optional content reference.
Notes: OC or OCMD handle or -1 if not set (requires version 4.0.71.196 or higher)
(Read and Write property)

78.72.13 TemplateHandle as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Template handle.
Notes: (Read and Write property)

78.72.14 MatrixValues(Index as Integer) as Single

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Pre-multiplied matrix to map form space to user space.
Notes: Index from 0 to 5.
(Read and Write computed property)

78.73.2 Properties

78.73.3 AlphaIsShape as Integer

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether alpha is shape.
Notes: PDF_MAX_INT if not set.
(Read only property)

78.73.4 AutoStrokeAdjust as Integer

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to auto adjust stroke.
Notes: PDF_MAX_INT if not set.
(Read only property)

78.73.5 BlendMode as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Blend mode.
Notes: (Read only property)

78.73.6 FillAlpha as Single

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The alpha value for fill.
Notes: -1.0 if not set.
(Read only property)

78.73.7 FlatnessTol as Single

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The flatness tool value.
Notes: -1.0 if not set.
(Read only property)

78.73.8 Name as String

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Internal link name.
Notes: (Read only property)

78.73.9 OverPrintFill as Integer

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to use overprint for fillings.
Notes: PDF_MAX_INT if not set.
(Read only property)

78.73.10 OverPrintMode as Integer

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The overprint mode.
Notes: PDF_MAX_INT if not set.
(Read only property)

78.73.11 OverPrintStroke as Integer

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to use overprint for strokes.
Notes: PDF_MAX_INT if not set.
(Read only property)

78.73.12 RenderingIntent as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The rendering intent.
Notes: kriNone if not set.
(Read only property)

78.73.13 SmoothnessTol as Single

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The smoothness tool.
Notes: -1.0 if not set.
(Read only property)

78.73.14 SoftMask as DynaPDFParserContentSoftMaskMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Soft mask.
Notes: (Read only property)

78.73.15 SoftMaskNone as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: If true, the softmask must be disabled.
Notes: (Read only property)

78.73.16 StrokeAlpha as Single

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The stroke alpha value.
Notes: -1.0 if not set.
(Read only property)

78.73.17 TextKnockout as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether the text knockout is used.
Notes: PDF_MAX_INT if not set.
(Read only property)

78.73.18 UseBlackPTComp as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to use black point compensation.s
Notes: PDF_MAX_INT if not set, 0 = OFF, 1 = ON, 2 = Default.
(Read only property)

78.74 class DynaPDFParserContentFloatMBS

78.74.1 class DynaPDFParserContentFloatMBS

MBS DynaPDF Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The content operator with a float value.
Notes: For SetCharSpacing, SetTextScale, SetWordSpacing, SetLineWidth, SetMiterLimit and SetFlatnessTolerance.
Subclass of the DynaPDFParserContentMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.75.2 Properties

78.75.3 Font as DynaPDFFontMBS

MBS DynaPDF Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries font object for the font used.
Notes: (Read only property)

78.75.4 FontBBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries font bounding box for the font used.
Notes: (Read and Write property)

78.75.5 FontInfo as DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries font info object for the font used.
Notes: (Read only property)

78.75.6 FontSize as Single

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The font size.
Notes: (Read and Write property)

78.75.7 Name as String

MBS DynaPDF Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries internal link name.
Notes: (Read only property)

78.76 class DynaPDFParserContentInitType3GlyphMBS

78.76.1 class DynaPDFParserContentInitType3GlyphMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for InitType3Glyph.
Notes: The first operator in a Type3 content stream must initialize the type of glyph.

InitType3Glyph0OP	The glyph defines the shape and color.
InitType3Glyph1OP	The glyph defines the shape but no color.

Subclass of the DynaPDFParserContentMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.79.2 Methods

78.79.3 Dash as Single()

MBS DynaPDF Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries dash pattern.

78.79.4 setDash(values() as Single)

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets the dash values.
Notes: Can overwrite existing dash values.

78.79.5 Properties

78.79.6 DashLen as UInt32

MBS DynaPDF Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries length of dash arrays.
Notes: (Read and Write property)

78.79.7 Phase as Single

MBS DynaPDF Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries dash phase.
Notes: (Read and Write property)

78.80 class DynaPDFParserContentMarkedContPntMBS

78.80.1 class DynaPDFParserContentMarkedContPntMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for marked content.
Notes: Subclass of the DynaPDFParserContentMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- DynaPDF Content Parser

78.80.2 Properties

78.80.3 Name as String

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Internal link name of a named resource.
Notes: (Read only property)

78.80.4 Parms as String

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Optional parameters (string if present (inline dictionary)).
Notes: (Read only property)

78.80.5 ParmsLen as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The length in bytes.
Notes: (Read only property)

78.80.6 Tag as String

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The tag string.
Notes: (Read only property)

78.80.7 TagLen as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The tag string length.
Notes: (Read only property)

78.80.8 Visible as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether this is visible.
Notes: Information only.
(Read only property)

78.81 class DynaPDFParserContentMBS

78.81.1 class DynaPDFParserContentMBS

MBS DynaPDF Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for an operator on a page.
Example:

```
// remove all images
Var needWrite As Boolean
Var ContentParsingFlags as integer = 0

If parser.ParsePage(page, ContentParsingFlags) Then

Var u as integer = parser.OperatorCount-1
for j as integer = 0 to u
Var content As DynaPDFParserContentMBS = parser.Content(j)

if content.Operator = DynaPDFParserContentMBS.kopDrawImage then
content.Delete
needWrite = True
end if
next

If needWrite Then
Call Parser.WriteToPage
End If
End If
```

Notes: The parser provides all operators used to construct a page and we can remove selected items here. This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.81.2 Methods

78.81.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

78.81.4 Delete

MBS DynaPDF Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Marks this content item to be deleted.
Example:

```
// remove all images
Var needWrite As Boolean
Var ContentParsingFlags as integer = 0

If parser.ParsePage(page, ContentParsingFlags) Then

var u as integer = parser.OperatorCount-1
for j as integer = 0 to u
Var content As DynaPDFParserContentMBS = parser.Content(j)

if content.Operator = DynaPDFParserContentMBS.kopDrawImage then
content.Delete
needWrite = True
end if
next

If needWrite Then
Call Parser.WriteToPage
End If
End If
```

78.81.5 Properties

78.81.6 Index as Integer

MBS DynaPDF Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The index of this content item.
Notes: Used internally to find the item in the array.

(Read only property)

78.81.7 Operator as Integer

MBS DynaPDF Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The operator value.
Example:

```
// remove all text
Var needWrite As Boolean
Var ContentParsingFlags as integer = 0

If parser.ParsePage(page, ContentParsingFlags) Then

var u as integer = parser.OperatorCount-1
for j as integer = 0 to u
Var content As DynaPDFParserContentMBS = parser.Content(j)

if content.Operator = DynaPDFParserContentMBS.kopShowText then
content.Delete
needWrite = True
end if
next

If needWrite Then
Call Parser.WriteToPage
End If
End If
```

Notes: See op* constants.
(Read and Write property)

78.81.8 OperatorName as String

MBS DynaPDF Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The operator name.
Notes: For debugging.
(Read only property)

78.81.9 Parent as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 26.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The parent DynaPDF object.
Notes: (Read only property)

78.81.10 Constants

Operators

Constant	Value	Description
kopBeginCompatibility	1	Ignore unknown operators until the section is terminated with opEndCompatibility.
kopBeginMarkedContent	2	Begins marked content.
kopBeginText	3	Begins text.
kopClipPath	4	Clip current path.
kopClipPathExt	5	Clip path with extended options.
kopDrawImage	6	Draw an image.
kopDrawInlineImage	7	Draw an inline image.
kopDrawPath	8	Draw a path.
kopDrawPathExt	9	Draw a path with more options.
kopDrawShading	10	Draw shading.
kopDrawTemplate	11	Draw a template.
kopDrawTranspGroup	12	Draw a transparent group.
kopEndCompatibility	13	Compatibility section ends.
kopEndMarkedContent	14	End marked content.
kopEndText	15	End text.
kopInitType3Glyph0	16	Init 3D Glyph
kopInitType3Glyph1	17	Init 3D Glyph
kopInsertPostscript	18	Insert PostScript. Can be considered when printing on a Postscript device.
kopMarkedContPoint	19	Marked content point.
kopMulMatrix	20	Multiply matrix.
kopNull	0	This represents a deleted node.
kopPageHeader	21	Page Header
kopRestoreGS	22	Restore Graphics State
kopSaveGS	23	Save Graphics State
kopSetCharSpacing	24	Set character spacing
kopSetExtGState	25	Set extended graphics state.
kopSetFillColor	26	Set fill color.
kopSetFillColorSpace	27	Set fill color space.
kopSetFillPattern	28	Set fill pattern.
kopSetFlatnessTolerance	29	Set flatness tolerance.
kopSetFont	30	Set font
kopSetLineCapStyle	31	Set line cap style.
kopSetLineDashPattern	32	Set line dash pattern.
kopSetLineJoinStyle	33	Set line join style.
kopSetLineWidth	34	Set line width.
kopSetMiterLimit	35	Set miter limit.
kopSetRenderingIntent	36	Set rendering intent.
kopSetStrokeColor	37	Set stroke color.
kopSetStrokeColorSpace	38	Set stroke color space.
kopSetStrokePattern	39	Set stroke pattern.
kopSetTextDrawMode	40	Set text drawing mode.
kopSetTextScale	41	Set text scale.
kopSetWordSpacing	42	Set word spacing.
kopShowText	43	Shows text.

78.82 class DynaPDFParserContentMulMatrixMBS

78.82.1 class DynaPDFParserContentMulMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a multiply matrix operation.
Notes: Subclass of the DynaPDFParserContentMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.84.2 Methods

78.84.3 Actions as UInt32()

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Array of action handles.
Notes: Top level handles, excluding further actions which can be referenced by the Next key.

78.84.4 Annots as UInt32()

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Array of annotation handles.
Notes: This array includes form fields. A form field has the 31st bit set as flag.

78.84.5 Properties

78.84.6 ActionsCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of actions in the array.
Notes: (Read only property)

78.84.7 AnnotsCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of annotation handles in the array.
Notes: (Read only property)

78.84.8 HaveBBoxes as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: If true, bounding boxes of all objects were computed.
Notes: (Read only property)

78.84.9 HaveBlackGeneration as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: If true, one or more black generation functions are defined in extended graphics state dictionaries.
Notes: (Read only property)

78.84.10 HaveTransferFuncs as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: If true, one or more transfer functions are defined in extended graphics state dictionaries.
Notes: (Read only property)

78.84.11 HaveTransparency as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: If true, transparent objects are drawn on the page.
Notes: (Read only property)

78.84.12 HaveUnderColorRemoval as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: If true, one or more undercolor-removal functions are defined in extended graphics state dictionaries.
Notes: (Read only property)

78.84.13 NumClipPaths as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of used clipping paths.
Notes: (Read only property)

78.84.14 NumColorants as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Maximum number of colorants used in all referenced color spaces.
Notes: (Read only property)

78.84.15 NumGroups as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of transparency groups.
Notes: (Read only property)

78.84.16 NumImages as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of images.
Notes: (Read only property)

78.84.17 NumPaths as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of paths.
Notes: (Read only property)

78.84.18 NumPatterns as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of patterns.
Notes: (Read only property)

78.84.19 NumTemplates as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of templates.
Notes: (Read only property)

78.84.20 NumTextRecords as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of text records.
Notes: (Read only property)

78.84.21 TabOrder as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Optional tab order for annotations and form fields.
Notes: Default is ktoNone.
(Read only property)

78.85 class DynaPDFParserContentPatternMBS

78.85.1 class DynaPDFParserContentPatternMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a pattern definition.
Notes: Subclass of the DynaPDFParserContentMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.85.7 setColor(values() as Single)

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Overwrites existing color with new values.

78.85.8 Properties

78.85.9 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Bounding box of the pattern.
Notes: (Read and Write property)

78.85.10 CS as Integer

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The color space in which the color is defined.
Notes: It was already set with a TSetColorSpaceOP record.
(Read and Write property)

78.85.11 CSObj as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Corresponding color space object.
Notes: (Read only property)

78.85.12 ElemsCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The number of elements.
Notes: Tiling patterns only.
(Read only property)

78.85.13 ExtGState as DynaPDFParserContentExtGStateMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The extended graphics state for Shading patterns only.
Notes: (Read only property)

78.85.14 Flags as Integer

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loading state.
Notes: (Read and Write property)

78.85.15 Matrix as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Matrix to map pattern space to user space.
Notes: (Read and Write property)

78.85.16 Name as String

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Internal link name.
Notes: (Read only property)

78.85.17 NumComponents as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of color components.
Notes: (Read and Write property)

78.85.18 PatternType as Integer

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Pattern type.
Notes: (Read and Write property)

78.85.19 StepX as Single

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The step in x direction.
Notes: Tiling patterns only.
(Read and Write property)

78.85.20 StepY as Single

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The step in y direction.
Notes: Tiling patterns only.
(Read and Write property)

78.85.21 TilingType as Integer

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The way how a tiling pattern should be drawn.
Notes: (Read and Write property)

78.85.22 MatrixValues(Index as Integer) as Single

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Matrix to map pattern space to user space.
Notes: Index from 0 to 5.

(Read and Write computed property)
See also:

- 78.85.6 MatrixValues as Single() 13483

78.86 class DynaPDFParserContentShowTextExtMBS

78.86.1 class DynaPDFParserContentShowTextExtMBS

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for show text operation.
Notes: This class is set if the flag kcpfEnableTextSelection was set.

The matrix DeviceSpace is calculated for text extraction. This is the vertically mirrored and de-rotated page space matrix as it would be calculated when rendering a page. This coordinate system flows from top to down and from left to right.

The members PosX, PosY, SpaceWidthU, are calculated in DeviceSpace since we need these members to efficiently calucalte the visible position of text on a page independent of the object in which it is stored, e.g. in a template or pattern.

PageSpace maps text space to page space. This matrix is required by psrReplaceSelText() in order to place new text on a page.
New text is always placed on the page independent on where it was found, e.g. in the page or in a template or pattern.
Subclass of the DynaPDFParserContentMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.89.12 UniCodeLengths as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The number of source bytes required to encode the Unicode text.
Notes: One entry for every character in UniText.
(Read only property)

78.89.13 UniText as String

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Translated Unicode text.
Notes: You may need to load CMaps to get proper text with Chinese, Japanese and Korean encodings.
(Read only property)

78.89.14 UniTextLength as UInt32

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of characters in UniText.
Notes: (Read only property)

78.89.15 Width as Single

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Full text width measured in text space!
Notes: (Read and Write property)

78.89.16 Widths(Index as Integer) as Single

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Glyph widths measured in text space.
Notes: Index is zero based.
(Read and Write computed property)
See also:

- 78.89.4 Widths as Single() 13497

78.90 class DynaPDFParserMBS

78.90.1 class DynaPDFParserMBS

MBS DynaPDF Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for the DynaPDF Parser.
Example:

```
Var pdf As New MyDynapdfMBS
... load some PDF

Var FindText As String = "PDF"
Var ReplaceText As String = "Test"

Var count As Integer = pdf.GetPageCount
Var Parser As New DynaPDFParserMBS(pdf)
Var area As DynaPDFRectMBS = Nil // whole page
Var SearchType As Integer = DynaPDFParserMBS.kstCaseInSensitive
Var ContentParsingFlags As Integer = DynaPDFParserMBS.kcpfEnableTextSelection

For i As Integer = 1 To count

Var needWrite As Boolean

If parser.ParsePage(i, ContentParsingFlags) Then

Var found As Boolean = Parser.FindText(area, SearchType, FindText)
While found
If Parser.ReplaceSelText(ReplaceText) Then
needWrite = True
End If

found = Parser.FindText(area, SearchType, FindText, True)
Wend

If needWrite Then
Call Parser.WriteToPage
End If
End If
next
```

Notes: Allows you to do Find and Replace, text extraction and deletion of text.

78.90.2 Methods

78.90.3 Abort

MBS DynaPDF Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Cancels parsing.
Notes: The function can be used to abort parsing whenever needed. However, parsing can be aborted only if ParsePage() was called in a separate thread. Note that it is not allowed to execute different functions of the same PDF instance in different threads. Every thread requires either its own PDF instance or function calls must be synchronized.

78.90.4 ChangeAltFont(FontHandle as integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Changes alternative font to use.
Notes: Changes the active alternate font that is used by ReplaceSelText() when the original font is not available. The font handle must be a handle that was returned by SetFont(), SetFontEx(), SetCIDFont(), or SetAltFont().

78.90.5 Constructor(PDF as DynaPDFMBS, OptimizeFlags as Integer = 0, OptimizeParams as DynaPDFOptimizeParamsMBS = nil)

MBS DynaPDF Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.
Notes: The function creates a parser context that can be used to edit and extract text, or do delete arbitrary operators of a page.

The content parser is used by Optimize() too. Therefore, the same flags and optimization parameters are supported. Please have a look at Optimize() for a description of the available flags and parameters. The parameter OptimizeParams can be set to nil and OptimizeFlags to kofDefault if nothing special should be achieved.

The flags and parameters for optimize are kept in properties for later review in debugger.

Raises exception in case creating the context fails.

78.90.6 Content(index as Integer) as DynaPDFParserContentMBS

MBS DynaPDF Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the given operator on the page.
Notes: Index is zero based up to OperatorCount-1.

78.90.7 Contents as DynaPDFParserContentMBS()

MBS DynaPDF Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Builds an array with all operators.

78.90.8 DeleteAllImage as Integer

MBS DynaPDF Plugin, Plugin Version: 24.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Delete all images.
Notes: This deletes inline and regular image drawing commands from the page.

You need to call WriteToPage later to save changes back to page.

Returns number of images deleted.

78.90.9 DeleteContent(index as Integer)

MBS DynaPDF Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Marks the given operator as deleted.
Notes: You need to use WriteToPage to write changes back to the PDF page.

78.90.10 DeleteImage(ImageHandle as UInt32, Nth as UInt32 = 0) as Boolean

MBS DynaPDF Plugin, Plugin Version: 24.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Deletes one image from the page.
Notes: We look for the first image on the page matching the given handle number and remove it.

If the same image is shown multiple times on the page, it appears multiple time in the array returned by ListImages and you need to call DeleteImage multiple times.

You need to call WriteToPage later to save changes back to page.

Returns true for success or false for failure.

Nth: The offset of the image in the list. Default is 0.

78.90.11 DeleteText(area as DynaPDFRectMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Deletes text in the area.
Example:

```
Var pdf As New MyDynapdfMBS
... load some PDF

Var count As Integer = pdf.GetPageCount
Var Parser As New DynaPDFParserMBS(pdf)
Var ContentParsingFlags As Integer = DynaPDFParserMBS.kcpfEnableTextSelection

For i As Integer = 1 To count

If parser.ParsePage(i, ContentParsingFlags) Then

// rectangle at 200x200 with 200x200 size
Var area As New DynaPDFRectMBS(200, 200+200, 200+200, 200)
```

```
Var needWrite As Boolean = parser.DeleteText(area)

If needWrite Then
Call Parser.WriteToPage
End If
End If

next
```

Notes: The function deletes every glyph or character that touches or lies inside the rectangle Area.

Area must be defined as if the page would be viewed in a PDF viewer. That means in bottom up coordinates and the orientation must be considered (see Orientation in DynaPDFPageMBS class). The width and height of a page must be calculated from the crop box if set, or from the media box otherwise (see BBox() in DynaPDFPageMBS class). Note also that the width and height must be exchanged if the orientation is 90, -90, 270, or -270 degrees.

Note that this function deletes text only. Text can also occur in form of images or vector graphics. There are no functions yet to identify and delete text in such objects.

If the function succeeds the return value is true. If the function fails the return value is false.

78.90.12 ExtractText(TextExtractionFlags as Integer, byref Text as String, area as DynaPDFRectMBS = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Extracts text from parser.
Notes: The function extracts the text of a page with the same algorithm that FindText() uses to find text on a page. In order to get exactly the same result the flag ktefSortTextX must be set.

The function ExtractText() of the PDF instance calles in fact this function internally.

The optional parameter Area can be set to restrict text extraction to that rectangle. The rectangle must be defined as if the page would be viewed in a PDF viewer. That means in bottom up coordinates and the orientation must be considered. The page coordinate system is de-rotated before text extraction starts since this produces better results. The width and height must be calculated from the crop box if set, or from the media box otherwise. Note also that the width and height must be exchanged if the orientation is 90, -90, 270, or -270 degrees.

Returns true on success or false for failure.

78.90.13 FindText(area as DynaPDFRectMBS, SearchType as Integer, findText as String, continueSearch as boolean = false) as Boolean

MBS DynaPDF Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Searches for text and stores the result so that further editing actions can be applied.
Notes: Area must be defined as if the page would be viewed in a PDF viewer. That means in bottom up coordinates and the orientation must be considered (see GetPageOrientation()). The width and height of a page must be calculated from the crop box if set, or from the media box otherwise (see GetPageBBox()). Note also that the width and height must be exchanged if the orientation is 90, -90, 270, or -270 degrees.

The page coordinate system is de-rotated since this produces better results and it is much easier to find the location of text in rotated pages.

FindText() is usually called inside a loop until no more occurrences of the search string can be found. In the first call, continueSearch must be false. That means start at the beginning. The continue searches with continueSearch = true.

78.90.14 ListImages as Integer()

MBS DynaPDF Plugin, Plugin Version: 24.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Lists all images on the page.
Notes: This function returns a list of image handle numbers.

Does not include inline images.

You can use GetImageObj() in DynaPDFMBS class with the given image handles to query information about the image.

78.90.15 ParsePage(PageNum as Integer, ContentParseFlags as Integer = 0) as Boolean

MBS DynaPDF Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Parses a page.
Notes: The function parses a page and stores the page contents in a objects internally. Once a page was parsed various functions can be called, e.g. to extract the text of a page, to find and replace text, or to delete arbitrary operators.

The page that should be parsed should be closed, that means it should not be opened for editing beforehand with EditPage() or Append(). The function can parse an open page too but this can lead to errors and is

not recommended.

If the function succeeds the return value is true. If the function fails the return value is false.

78.90.16 ReplaceSelText(NewText as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Replaces text on the page.
Notes: The function replaces or deletes the text that was found by FindText(). Coordinates of surrounding text are not changed, this means that the new text can overlap surrounding text if the width of the new text is larger than the original text.

So, text replacement has its limitations since at some point text must might be new formatted or re-aligned. However, replacing placeholders with text is usually no problem as long as there is enough room for the new text.

Note that placeholders should not contain space characters since spaces are often not stored in PDF files and this can lead to issues finding the text.

Font substitution
Text replacement depends on the availability of the fonts which are used in a PDF file. If the original font is not available the function loads an alternate font that matches the characteristics of the original font as close as possible. However, font substitution is not perfect and a substituted font looks sometimes more different as expected.

To improve text replacement it is possible to set one or more alternate fonts which should be used if the original font cannot be found on the system. Alternate fonts can be loaded with SetAltFont(). However, a font loaded by SetFont(), SetFontEx() or SetCIDFont() works too. In order to activate a font loaded by a regular font loading function call ChangeAltFont().

It is possible to load more than one alternate font but only the active font will be used when replacing text. If more than one font must be loaded, store the handle returned by SetAltFont() and change the font with ChangeAltFont() whenever needed.

Returns true on success and false on failure.

78.90.17 Reset

MBS DynaPDF Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Resets the parser.

78.90.18 SelBBox2 as DynaPDFPointMBS()

MBS DynaPDF Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the bounding box as quad points of a single node or glyph of the current selection. This function is useful for rotated text.

78.90.19 SetAltFont(Name as string, Style as integer = 0, Size as double = 12, Embed as boolean = true, CP as integer = &h27) as integer

MBS DynaPDF Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets the font as alternate font that is used by ReplaceText() if the original font is not available.
Notes: Although the parameter Size must be greater zero, the value is in fact not used when replacing text. The parameter is reserved for future use.
Please note that the replacement text must be defined in the code page with which the font was loaded.

To effiently change the font whenever needed, call ChangeAltFont(). It is also possible to call SetAltFont() but this would require more processing time.

If the function succeeds the return value is the font handle, a value greater of equal zero. If the function fails the return value is 0.

78.90.20 WriteToPage(OptimizeFlags as Integer = 0, OptimizeParams as DynaPDFOptimizeParamsMBS = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Writes changes back to the page.
Notes: Writes the objects, that was created by ParsePage(), back to the page. The flags and optional parameters were taken from Optimize() because Optimize() uses the very same parser to optimize pages. Please have a look at this function to determine which flags and parameters are available.

Unchanged pages can be left unchanged or written back to the page. This is up to you. If WriteToPage() is called then the content stream will be optimized. If nothing special should be achieved set Flags to kofDefault and Parms to nil.

The constructor accepts already its own flags and DynaPDFOptimizeParamsMBS object. The parameters

that was passed to this function is used for all pages unless WritePage() contains its own version.

If the OptimizeParams parameters is passes then this parameters becomes the new default until it is overriden again by a WriteToPage() call. The flags are always overriden.
The function makes a copy of the parameters if set.

This function needs the Pro license.

78.90.21 Properties

78.90.22 InitMatrix as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The initial matrix to use.
Notes: Must be set if kcpfInitMatrix flag is used for ParsePage() function.
(Read and Write property)

78.90.23 OperatorCount as Integer

MBS DynaPDF Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The number of operators in current page.
Notes: If zero, the page would be empty.
(Read only property)

78.90.24 OptimizeFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The optimize flags used.
Notes: Set by Constructor or WritePage if you pass them.
(Read only property)

78.90.25 OptimizeParams as DynaPDFOptimizeParamsMBS

MBS DynaPDF Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The optimize parmeters used.
Notes: Set by Constructor or WritePage if you pass them.

(Read only property)

78.90.26 PageNumber as Integer

MBS DynaPDF Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The current page number.
Notes: Set by ParsePage function to the number you pass.
(Read only property)

78.90.27 PDF as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The DynaPDFMBS object reference.
Notes: (Read only property)

78.90.28 SelBBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Computes the bounding box of the current selection created by FindText().
Notes: The bounding box is calculated in top down coordinates! This differs in comparison to almost all other functions which return PDF coordinates.

In order to place objects on this position it is usually best to enable visible coordinates with SetUseVisibleCoords() and to rotate the coordinate system with SetOrientationEx() according to the page orientation after the page was opened for editing.
(Read only property)

78.90.29 SelText as String

MBS DynaPDF Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Retrieves the text and text length of the current selection or found text.
Notes: The function is useful if FindText() was called with the search type kstMatchAlways. In this case, and only in this case, it is not known which text FindText() has found.
(Read only property)

78.90.30 TextLine as Integer

MBS DynaPDF Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Index of the text line.
Notes: Can be called after FindText function found something.
(Read only property)

78.90.31 TextMatrix as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Text matrix pre-calculated in user space.
Notes: Can be called after FindText function found something.
This defines where the current text is on the page.
(Read only property)

78.90.32 TextSelectionLength as Integer

MBS DynaPDF Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: How many characters of this record are selected?
Notes: Can be called after FindText function found something.
(Read only property)

78.90.33 Constants

Content Parser Flags

Constant	Value	Description
kcpfCalcDeviceColors	32	Compute device colors of all colors which are set in the content streams.
kcpfComputeBBox	1	Compute bounding boxes of all objects.
kcpfDefault	0	Nothing special to do.
kcpfEnableTextSelection	&h00000100	This flag is required to enable text selection and text extraction.
kcpfFlattenLayers	2	Flatten layers.
kcpfFullRecursive	8	Parse all objects recursively.
kcpfInitMatrix	&h00000200	Use an initial matrix, which must be set with InitMatrix property.
kcpfNoInlineTemplate	16	Do not resolve templates with a reference count of 1.
kcpfSkipClipPaths	&h00000400	Useful for debugging purposes.
kcpfSkipImages	&h00000800	Ignore all images. This flag is useful for text extraction.
kcpfSkipInvisibleObjects	4	Ignore invisible objects.
kcpfSkipShadings	&h00001000	Useful for debugging purposes.
kcpfSkipText	&h00002000	Useful for debugging purposes.
kcpfSkipVector	&h00004000	Useful for debugging purposes. Exclude vector graphics with exception of clipping paths.

Search Types

Constant	Value	Description
kstCaseInSensitive	2	Case insensitive search
kstDefault	0	Case sensitive search
kstMatchAlways	4	Return on every single character. Text is ignored when this flag is set.
kstSearchAsIs	8	Disable sorting on the x-axis.
kstWholeWord	1	Only whole words

Text Extraction Flags

Constant	Value	Description
ktefDefault	0	Create text lines in the original order.
ktefDeleteOverlappingText	4	Delete duplicate text records on same position.
ktefNoHeuristic	8	If set, text is sorted on the x-axis as specified. If absent, a heuristic is used to determine whether it is might be better to leave a line unsorted.
ktefSortTextX	1	Sort text records in x-direction.
ktefSortTextXY	3	Sort text records in x and y-direction.
ktefSortTextY	2	Sort text records in y-direction.

78.91 class DynaPDFPointDataDictionaryMBS

78.91.1 class DynaPDFPointDataDictionaryMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a dictionary with point data.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

78.91.2 Methods

78.91.3 Arrays as DynaPDFPointDataMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of entries in the point data dictionary.

78.91.4 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.91.5 Properties

78.91.6 Count as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of point data arrays
Notes: (Read and Write property)

78.91.7 Subtype as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sub type for the point data.
Notes: Should be Cloud.
(Read and Write property)

78.92 class DynaPDFPointDataMBS

78.92.1 class DynaPDFPointDataMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data class for point data dictionary entries.
Notes: A point data dictionary specifies points in 2D space for geospatical measures. The parameter DataType specifies the type of points, such as LAT for latitude in degrees, LON for longitute in degrees, or ALT for altitude in metres.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

78.92.2 Methods

78.92.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.92.4 values as Single()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Array with values.

78.92.5 Properties

78.92.6 DataType as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Data type as string.
Notes: Specifies the type of points, such as LAT for latitude in degrees, LON for longitute in degrees, or ALT for altitude in metres.
(Read and Write property)

78.92.7 Index as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The index in the dictionary.
Notes: (Read and Write property)

78.92.8 ValCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of values in the array.
Notes: (Read and Write property)

78.93 class DynaPDFPointMBS

78.93.1 class DynaPDFPointMBS

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a point.
Example:

```
// calculate with points
Var a As New DynaPDFPointMBS(10, 20)
Var b As New DynaPDFPointMBS(40, 60)

Var sum As DynaPDFPointMBS = a + b
Var delta As DynaPDFPointMBS = b - a
Var twice As DynaPDFPointMBS = a * 2.0

MessageBox "Sum: " + sum.X.ToString + ", " + sum.Y.ToString + EndOfLine + _
"Distance: " + Sqrt(delta.SqDist).ToString + EndOfLine + _
"Twice: " + twice.X.ToString + ", " + twice.Y.ToString
```

78.93.2 Methods

78.93.3 Constructor(other as DynaPDFPointMBS)

MBS DynaPDF Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the point.
Example:

```
Var p As New DynaPDFPointMBS(3, 4)
Var c As New DynaPDFPointMBS(p)

// modify first one
p.X = 5

// show values from copy
MessageBox str(c.X)+"/"+str(c.Y)
```

See also:

- 78.93.4 Constructor(x as Double = 0.0, y as Double = 0.0) 13517

78.93.4 Constructor(x as Double = 0.0, y as Double = 0.0)

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
See also:

- 78.93.3 Constructor(other as DynaPDFPointMBS) 13516

78.93.5 Operator_Add(other as DynaPDFPointMBS) as DynaPDFPointMBS

MBS DynaPDF Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds one point the other.
Example:

```
Var p As New DynaPDFPointMBS(3, 4)
Var o As New DynaPDFPointMBS(2, 3)
var r as DynaPDFPointMBS = p + o

// show values
MessageBox Str(r.X)+"/"+Str(r.Y) // shows 5/7
```

78.93.6 Operator_Compare(other as DynaPDFPointMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two points.
Example:

```
Var p As New DynaPDFPointMBS(3, 4)
Var o As New DynaPDFPointMBS(2, 3)
var c as new DynaPDFPointMBS(p)

If p = c Then
// okay
Else
Break
End If

If p <>o Then
```

```
// okay
Else
Break
End If
```

Notes: Sorts based on Squared Distance.

78.93.7 Operator_Multiply(other as DynaPDFPointMBS) as DynaPDFPointMBS

MBS DynaPDF Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies the point with the given other point.
Example:

```
Var p As New DynaPDFPointMBS(3, 4)
Var o As New DynaPDFPointMBS(2, 3)
var r as DynaPDFPointMBS = p * o

// show values
MessageBox Str(r.X)+"/"+Str(r.Y) // shows 6/12
```

See also:

- 78.93.8 Operator_Multiply(value as double) as DynaPDFPointMBS 13518

78.93.8 Operator_Multiply(value as double) as DynaPDFPointMBS

MBS DynaPDF Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies the point with the given value.
Example:

```
Var p As New DynaPDFPointMBS(3, 4)

p = p * 2

// show values
MessageBox Str(p.X)+"/"+Str(p.Y) // shows 6/8
```

See also:

- 78.93.7 Operator_Multiply(other as DynaPDFPointMBS) as DynaPDFPointMBS 13518

78.93.9 Operator_Subtract(other as DynaPDFPointMBS) as DynaPDFPointMBS

MBS DynaPDF Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts one point from the other.
Example:

```
Var p As New DynaPDFPointMBS(3, 4)
Var o As New DynaPDFPointMBS(2, 3)
var r as DynaPDFPointMBS = p - o

// show values
MessageBox Str(r.X)+"/"+Str(r.Y) // shows 1/1
```

78.93.10 Properties

78.93.11 SqDist as Double

MBS DynaPDF Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the square distance for this point.
Example:

```
Var p As New DynaPDFPointMBS(3, 4)

MessageBox str(p.SqDist)+" squared distance to 0/0"
```

Notes: (Read only property)

78.93.12 X as Double

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The X value.
Notes: (Read and Write property)

78.93.13 Y as Double

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Y value.
Notes: (Read and Write property)

78.94 class DynaPDFPrintParamsMBS

78.94.1 class DynaPDFPrintParamsMBS

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for additional print parameters.
Notes: The DynaPDFPrintParamsMBS defines parameters for rendering a page for printing in DynaPDF.

Do not confuse with DynaPDFPrintSettingsMBS class, which stores wishes for printing in Adobe Reader within the PDF document.

For settings to print a PDF, use a DevMode data block to pass print settings to PrintSetDevMode() for printing. And use WindowsDeviceModeMBS class to edit the settings.
Blog Entries

- MBS Xojo Plugins, version 19.5pr6
- MBS Xojo Plugins, version 17.2pr4

78.94.2 Properties

78.94.3 Compress as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to compress images sent to printer.
Notes: Meaningful only for image output. If true, compressed images are send to the printer.
(Read and Write property)

78.94.4 FilterColor as Integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compression filter to use for color images.
Notes: Meaningful only for image output. Supported filters on Windows: kcfFlate and kcfJPEG.
(Read and Write property)

78.94.5 FilterGray as Integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compression filter to use for grayscale images.
Notes: Meaningful only for image output. Supported filters on Windows: kcfFlate and kcfJPEG.
(Read and Write property)

78.94.6 IgnoreDCSize as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, PageSize is used to calculate the output format.
Notes: (Read and Write property)

78.94.7 JPEGQuality as Integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: JPEG Quality in percent (1..100).
Notes: Zero means Default, which is 60%.
(Read and Write property)

78.94.8 MaxRes as Integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum print resolution.
Notes: Zero means Default, which is 600 DPI.
(Read and Write property)

78.94.9 PageSize as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The page size to use.
Notes: Considered only, if IgnoreDCSize is set to true.
(Read and Write property)

78.95 class DynaPDFPrintSettingsMBS

78.95.1 class DynaPDFPrintSettingsMBS

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for the print settings in a PDF document.
Notes: This requires PDF 1.7.

The DynaPDFPrintSettingsMBS class stores wishes for printing in Adobe Reader within the PDF document.

Do not confuse with the DynaPDFPrintParamsMBS class, which defines parameters for rendering a page for printing in DynaPDF.

78.95.2 Methods

78.95.3 PrintRanges(index as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of print ranges.
Notes: If set, the array contains PrintRangesCount * 2 values. Each pair consists of the first and last pages in the sub-range. The first page in the PDF file is denoted by 0.

78.95.4 Properties

78.95.5 DuplexMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The duplex mode.
Notes: Use the kdpm* constants.
(Read only property)

78.95.6 NumCopies as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of copies.
Notes: -1 means not set. Values larger than 5 are ignored in viewer applications.

(Read only property)

78.95.7 PickTrayByPDFSize as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The setting for picking the tray by the PDF size.
Notes: -1 means not set. 0 = false, 1 = true.
(Read only property)

78.95.8 PrintRangesCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of ranges available in PrintRanges.
Notes: (Read only property)

78.95.9 PrintScaling as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The print scaling setting.
Notes: kdpmNone means not set.
(Read only property)

78.96 class DynaPDFRasterImageMBS

78.96.1 class DynaPDFRasterImageMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for advanced rendering options.
Example:

```
Var pdf as new DynaPDFMBS // make subclass to catch error event

Var f as FolderItem = SpecialFolder.Desktop.Child("dynapdf_help.pdf")

// create PDF
call pdf.CreateNewPDF(nil)
// set import flags
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)

// open import file
call pdf.OpenImportFile(f, 0, "")

// import all pdf pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

Var PageCount as Integer = pdf.GetPageCount

// create rasterizer.
Var r as new DynaPDFRasterizerMBS(pdf, 1000,1000)

// create options
Var o as new DynaPDFRasterImageMBS

// fill white
o.InitWhite = true

// scale to fit
o.DefScale = o.kpsFitBest

// rotate
o.Flags = o.krfRotate90

// render all pages
for i as Integer = 1 to PageCount

Var p as DynaPDFPageMBS = pdf.GetPage(i)
if r.RenderPage(p, o) then
// save to disc
Var outfile as FolderItem = SpecialFolder.Desktop.Child("page "+Format(i,"0")+".jpg")
```

```
call outfile.SaveAsJPEGMBS(r.Pic, 75)
end
next
```

Notes: This class is named RasterImage due to the name in the underlying DynaPDF library. A better name would be RasterizerOptions as it includes options for the rasterizer engine.

78.96.2 Properties

78.96.3 ClipRect as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional clipping rectangle defined in device coordinates (Pixels)
Notes: (Read and Write property)

78.96.4 DefScale as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies how the page should be scaled into the image buffer.
Notes: can be kpsFitBest, kpsFitHeight or kpsFitWidth.
(Read and Write property)

78.96.5 DrawFrameRect as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the area outside the page's bounding box is filled with the frame color.
Notes: InitWhite can still be used, with or without a clipping rectangle.

(Read and Write property)

78.96.6 Flags as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flags for the raster operation.
Notes: This is a bit mask. Flags can be combined with a binary or operator.
Use a combination of krf* constants.
(Read and Write property)

78.96.7 FrameColor as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color for drawing the frame.
Notes: Must be defined in the color space of the pixel format but in the natural component order, e.g. RGB.
(Read and Write property)

78.96.8 InitWhite as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to clear the buffer first.
Notes: If true, the buffer is initialized with white color (default).
Must be set to false if you want to raster the page over an existing image.

When a clipping rectangle is set, only the area inside the clipping rectangle is initialized to white.
(Read and Write property)

78.96.9 Matrix as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional transformation matrix.
Notes: The matrix can be used to zoom into the page or to move the picture to a specific area in the image buffer.
(Read and Write property)

78.96.10 NumAnnots as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of rendered form annotations (excluding invisible annotation but annotations with no appearance are included)
Notes: (Read and Write property)

78.96.11 NumBezierCurves as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of bezier curves which where rendered. Glyph outlines are not taken into account.
Notes: (Read and Write property)

78.96.12 NumClipPaths as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of clipping paths used in the page. Should be small as possible!
Notes: (Read and Write property)

78.96.13 NumFormFields as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of rendered form fields (excluding invisible fields but fields with no appearance are included)
Notes: (Read and Write property)

78.96.14 NumGlyphs as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: When the number of glyphs equals NumTextRecords then there is probably some room for optimization...
Notes: (Read and Write property)

78.96.15 NumImages as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of images that were rendered.
Notes: (Read and Write property)

78.96.16 NumLineTo as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of LineTo operators.
Notes: (Read and Write property)

78.96.17 NumPaths as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of paths which were processed.
Notes: (Read and Write property)

78.96.18 NumPatterns as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of pattern which were processed.
Notes: (Read and Write property)

78.96.19 NumRectangles as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of rectangle operators.
Notes: (Read and Write property)

78.96.20 NumRestoreGState as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Should be equal to NumSaveGraphicStates.
Notes: (Read and Write property)

78.96.21 NumSaveGState as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of save graphics state operators.
Notes: (Read and Write property)

78.96.22 NumShadings as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of shadings.
Notes: (Read and Write property)

78.96.23 NumSoftMasks as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of soft masks that were processed.
Notes: Alpha channels of images are not taken into account.
(Read and Write property)

78.96.24 NumTextRecords as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of independent text records which were rendered.
Notes: (Read and Write property)

78.96.25 PageSpace as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The matrix represents the mapping from page space to device space.
Notes: Output parameter.
This matrix is required when further objects should be drawn on the page, e.g. the bounding boxes.

(Read and Write property)

78.96.26 UpdateOnImageCoverage as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: DynaPDF multiplies the output image area with this factor to determine when the window should be updated.
Notes: The factor should be around 0.5 through 5.0. Larger values cause less frequently update events.
(Read and Write property)

78.96.27 UpdateOnPathCount as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Call OnUpdateWindow event when the UpdateOnPathCount limit was reached.
Notes: Clipping paths increment the number too.
Only full paths are considered, independent of the number of vertices they contain. The value should be larger than 50 and smaller than 10000.
(Read and Write property)

78.96.28 Yield as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to yield time to other threads.
Notes: Set to true if you render page in a thread, so time is given to other threads.
(Read and Write property)

78.96.29 Events

78.96.30 UpdateWindow(r as DynaPDFRectMBS, pic as Variant) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This event is called regularly so you can update your GUI.
Notes: Please set UpdateOnPathCount and UpdateOnImageCoverage to use this event.
If you draw to a picture, the picture is passed as parameter for your convenience.

Pic is a variant so the plugin compiles in older Xojo versions for console targets.

Returns -1 to stop the processing.

78.96.31 Constants

Picture Scaling Constants

Constant	Value	Description
kpsFitBest	2	Scale the page so that it fits fully into the image buffer.
kpsFitHeight	1	Scale the page to the height of the image buffer.
kpsFitWidth	0	Scale the page to the width of the image buffer.
kpsFitZoom	3	This mode must be used if the scaling factors of the transformation matrix are <>1.0

Raster Flag Constants

Constant	Value	Description
krfClipToArtBox	4	Clip the page to the art box if any. Only one of these clip flags must be set at time!
krfClipToBleedBox	8	Clip the page to the bleed box if any. Only one of these clip flags must be set at time!
krfClipToTrimBox	16	Clip the page to the bleed box if any. Only one of these clip flags must be set at time!
krfCompositeWhite	&h00001000	Composite pixel formats with an alpha channel finally with a white background. The alpha channel is 255 everywhere after composition. This flag is mainly provided for debug purposes but it can also be useful if the image must be copied on screen with a function that doesn't support alpha blending.
krfDefault	0	Render the page as usual
krfDisableAAClipping	&h00200000	Disable Anti-Aliasing for clipping paths. This flag is the most important one since clipping paths cause often visible artefacts in PDF files with flattened transparency.
krfDisableAAText	&h00400000	Disable Anti-Aliasing for text.
krfDisableAAVector	&h00800000	Disable Anti-Aliasing for vector graphics.
krfDisableAntiAliasing	&h00E00000	Fully disable Anti-Aliasing.
krfDisableBiLinearFilter	&h01000000	Disable the BiLevel filter for images. Sometetimes useful if sharp images are needed, e.g. for barcodes.
krfExclAnnotations	32	Don't render annotations.
krfExclButtons	&h00004000	If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude buttons. If all fields should be skipped then set the flag rfExclFormFields instead.
krfExclCheckBoxes	&h00008000	Exclude check boxes. If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude checkboxes. If all fields should be skipped then set the flag rfExclFormFields instead.
krfExclComboBoxes	&h00010000	Exclude combo boxes. If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude combobox. If all fields should be skipped then set the flag rfExclFormFields instead.
krfExclFormFields	64	Don't render form fields.
krfExclListBoxes	&h00020000	Exclude listbox fields. If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude listbox. If all fields should be skipped then set the flag rfExclFormFields instead.
krfExclPageContent	&h00002000	If set, only annotations and form fields will be rendered (if any).
krfExclSigFields	&h00080000	Exclude signature fields. If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude signature fields. If all fields should be skipped then set the flag rfExclFormFields instead.
krfExclTextFields	&h00040000	Exclude text fields. If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude text fields. If all fields should be skipped then set the flag rfExclFormFields instead.
krfForceInterpolation	&h40000000	If set, image interpolation will be applied.
krfIgnoreCropBox	2	Ignore the crop box and render anything inside the media box without clipping.
krfInitBlack	&h00000800	Initialize the image buffer to black before rendering (RGBA or GrayA must be initialized to black)
krfPremulAlpha	&h80000000	If set, an image with pre-multiplied alpha values will be created.
krfRenderInvisibleText	&h02000000	If set, treat text rendering mode Invisible as Normal.
krfRenderPrintState	&h20000000	If set, the print state of layers, annotations, and form fields will be rendered.
krfRotate180	&h00000200	Rotate the page 180 degrees.
krfRotate270	&h00000400	Rotate the page 270 degrees.
krfRotate90	&h00000100	Rotate the page 90 degrees.
krfScaleToBBox	&h00100000	Considered only, if the flag rfClipToArtBox, rfClipToBleedBox, or rfClipToTrimBox is set. If set, the picture size is set to the size of the whished bounding box.

Raster Flags

Constant	Value	Description
krfEnableBlendCS	&h10000000	If set, the page is rendered in the color space of the page group, soft proof color space, or output intent (if set), and finally converted to the destination colorspace.

78.97 class DynaPDFRasterizerMBS

78.97.1 class DynaPDFRasterizerMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for the rasterizer interface.
Example:

```
// render the first page of a PDF into a picture
Var pdf As New DynaPDFMBS
pdf.SetLicenseKey "Starter" // your license key
Call pdf.CreateNewPDF(Nil)
Call pdf.SetImportFlags(DynaPDFMBS.kifImportAll + DynaPDFMBS.kifImportAsPage)
If pdf.OpenImportFile(SpecialFolder.Desktop.Child("test.pdf")) <0 Then Return
Call pdf.ImportPDFFile(1)

Var pic As New Picture(800, 1000)
Var rasterizer As New DynaPDFRasterizerMBS(pdf, pic)
Var params As New DynaPDFRasterParmsMBS
params.DefScale = DynaPDFMBS.kpsFitBest

If rasterizer.RenderPageV2(pdf.GetPage(1), params) Then
// show pic in a Canvas or ImageViewer
End If
```

- 17.2, page 10: News

78.97.2 Methods

78.97.3 Abort

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Aborts raster process.
Notes: Stops the function RenderPage as soon as possible when RenderPage() is running in a separate thread.

78.97.4 AddRasImage(Filter as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function adds an image from the rasterizer to the current open image file.
Notes: The output image must be opened with CreateImage() beforehand.

78.97.5 AttachImageBuffer(Pic as Picture, RenderWithAlpha as boolean = false) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Attaches a new image buffer of the same pixelformat.
Notes: Returns true on success.
Added RenderWithAlpha parameter in plugin version 19.0.
If RenderWithAlpha is true, we render with alpha channel. If the destination is a picture has alpha channel, you should get the alpha there. Otherwise for picture without alpha channel, we only copy RGB channels.
See also:

- 78.97.6 AttachImageBuffer(Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32) as boolean

78.97.6 AttachImageBuffer(Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Attaches a new image buffer of the same pixelformat.
Notes: For Pixelformat pass one of the kpx* constants.
You can pass Rows or Buffer, but the other memoryblock should be nil.
Returns true on success.
See also:

- 78.97.5 AttachImageBuffer(Pic as Picture, RenderWithAlpha as boolean = false) as boolean 13535

78.97.7 Constructor(PDF as DynaPDFMBS, DeviceContextHandle as Integer, Width as UInt32, Height as UInt32, PixFmt as UInt32)

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes rasterizer targeting a device context.
Notes: Special version to simplify rendering into a device context. It creates a DIB Section into which pages can be rendered.
See also:

- 78.97.8 Constructor(PDF as DynaPDFMBS, Pic as Picture, RenderWithAlpha as boolean = false) 13536
- 78.97.9 Constructor(PDF as DynaPDFMBS, Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32) 13537
- 78.97.10 Constructor(PDF as DynaPDFMBS, Width as Integer, Height as Integer) 13537

78.97.8 Constructor(PDF as DynaPDFMBS, Pic as Picture, RenderWithAlpha as boolean = false)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new rasterizer object targeting the given picture.
Notes: Added RenderWithAlpha parameter in plugin version 19.0.
If RenderWithAlpha is true, we render with alpha channel. If the destination is a picture has alpha channel, you should get the alpha there. Otherwise for picture without alpha channel, we only copy RGB channels.
See also:

- 78.97.7 Constructor(PDF as DynaPDFMBS, DeviceContextHandle as Integer, Width as UInt32, Height as UInt32, PixFmt as UInt32) 13536

- 78.97.9 Constructor(PDF as DynaPDFMBS, Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32) 13537
- 78.97.10 Constructor(PDF as DynaPDFMBS, Width as Integer, Height as Integer) 13537

78.97.9 Constructor(PDF as DynaPDFMBS, Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new rasterizer object targeting the given memory area.
Notes: For Pixelformat pass one of the kpx* constants.
You can pass Rows or Buffer, but the other memoryblock should be nil.
See also:

- 78.97.7 Constructor(PDF as DynaPDFMBS, DeviceContextHandle as Integer, Width as UInt32, Height as UInt32, PixFmt as UInt32) 13536
- 78.97.8 Constructor(PDF as DynaPDFMBS, Pic as Picture, RenderWithAlpha as boolean = false) 13536
- 78.97.10 Constructor(PDF as DynaPDFMBS, Width as Integer, Height as Integer) 13537

78.97.10 Constructor(PDF as DynaPDFMBS, Width as Integer, Height as Integer)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes: Creates a new picture as buffer for you with the given size.
PDF must not be nil and point to a valid DynaPDF context.
See also:

- 78.97.7 Constructor(PDF as DynaPDFMBS, DeviceContextHandle as Integer, Width as UInt32, Height as UInt32, PixFmt as UInt32) 13536
- 78.97.8 Constructor(PDF as DynaPDFMBS, Pic as Picture, RenderWithAlpha as boolean = false) 13536
- 78.97.9 Constructor(PDF as DynaPDFMBS, Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32) 13537

78.97.11 Redraw(DeviceContextHandle as Integer, DestX as Integer, DestY as Integer)

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Because there is no direct access to the internal DIB Sesction when rendering into a device context, this function can be used to redraw the bitmap on the device context.
Notes: If RenderPageEx() was called in a separate thread then this function can be called after the thread returned. While the thread is running you can change the position by directly manipulating the coordinate variables which were passed to RenderPageEx().
The function calls the system function SetDIBitsToDevice() to copy the image into the device context.

78.97.12 RenderPage(page as DynaPDFPageMBS, options as DynaPDFRasterImageMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders a page of a PDF Document with the given options.
Notes: Returns true on success and false on failure.

78.97.13 RenderPageEx(DeviceContextHandle as Integer, byref DestX as Integer, byref DestY as Integer, page as DynaPDFPageMBS, options as DynaPDFRasterImageMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders a page into a device context.
Notes: Only valid if you called Constructor with DeviceContextHandle.
Returns true on success.

78.97.14 RenderPageMT(page as DynaPDFPageMBS, options as DynaPDFRasterImageMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders a page of a PDF Document with the given options.
Notes: Returns true on success and false on failure.

Same as RenderPage, but with additional multithreading.

As the actual transfer runs on a preemptive thread, the event UpdateWindow is called asynchrounously and run a few milliseconds later.

Do not call other functions on this DynaPDFRasterizerMBS instance while RenderPageMT is running!

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

78.97.15 RenderPageV2(page as DynaPDFPageMBS, RasterParams as DynaPDFRasterParmsMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: renders a page into the buffer associated with the rasterizer.
Notes: The caller supplies the image buffer and its dimensions when creating the rasterizer.

Overprint simulation and supersampling require a license of the DynaPDF Rendering Extension. Overprint simulation can be enabled with the flag rf2Overprint. Supersampling is used if the member Supersampling is 2 or 4.

Please check pdfRenderPageV2 in the DynaPDF manual.

78.97.16 ResizeBitmap(DeviceContextHandle as Integer, Width as Integer, Height as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the size of the DIB Section.
Notes: Only valid if you called Constructor with DeviceContextHandle.
Returns true on success.

78.97.17 Properties

78.97.18 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference to the rasterizer object.
Notes: If the constructor is successful, this value is not zero.
(Read only property)

78.97.19 Height as Integer

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture or buffer.
Notes: (Read only property)

78.97.20 MinLineWidth as Double

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minimum line width in which thin lines are rendered.
Notes: The value should be in the range 0.1 through 1.0.
Default value: 0.5
(Read and Write property)

78.97.21 PDF as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reference back to parent dynaPDF object.
Notes: (Read only property)

78.97.22 Pic as Picture

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The target picture.
Notes: (Read only property)

78.97.23 PixelFormat as Integer

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The pixel format of picture.
Notes: (Read only property)

78.97.24 Premultiply as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to premultiply pixels.
Notes: This is used when we render ARGB or ABGR and copy it to the Xojo picture.
Some picture formats in Xojo need pre-multiplied pixel values, so this is turned on automatically when needed.
(Read and Write property)

78.97.25 ScanlineLen as Integer

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The scan line length in bytes of the picture.
Notes: (Read only property)

78.97.26 ScreenResolution as Integer

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the screen resolution in DPI.
Notes: The screen resolution is sometimes required, e.g. to render Text annotations correctly. This type of annotation has a fixed size that is independent of the current scaling factor. However, the correct size depends on the screen resolution on which the image is rendered.

Default is zero.
(Read and Write property)

78.97.27 TempBuffer as Ptr

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The temporary buffer data pointer.
Notes: If the picture pixel format is not directly supported with DynaPDF, we render in a temporary buffer and copy it to the picture.
(Read only property)

78.97.28 TempPixelFormat as Integer

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The temporary buffer pixel format.
Notes: (Read only property)

78.97.29 TempScanlineLen as Integer

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The temporary buffer scan line length in bytes.
Notes: (Read only property)

78.97.30 Width as Integer

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the picture or buffer.
Notes: (Read only property)

78.97.31 Constants

Pixel formats for raster functions.

Constant	Value	Description
kpxf1Bit	0	1 bit per pixel black and white.
kpxfABGR	7	ABGR.
kpxfARGB	6	ARGB
kpxfBGR	3	BGR
kpxfBGRA	5	BGRA
kpxfCMYK	9	CMYK without alpha
kpxfCMYKA	10	CMYK with alpha
kpxfGray	1	8 bit grayscale.
kpxfGrayA	8	8 bit grayscale with alpha.
kpxfRGB	2	RGB
kpxfRGBA	4	RGBA

78.98 class DynaPDFRasterParmsMBS

78.98.1 class DynaPDFRasterParmsMBS

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Parameters for PDF rasterizing.
Example:

```
// parameters for rendering a page fitted into the picture with smoothing
Var params As New DynaPDFRasterParmsMBS
params.DefScale = DynaPDFMBS.kpsFitBest // keep the aspect ratio
params.Supersampling = 2 // smoother lines and text
params.ThreadCount = 4 // render in parallel

// pass params to DynaPDFRasterizerMBS.RenderPageV2, see there
```

Blog Entries

- MBS Xojo Plugins, version 26.5pr5

78.98.2 Methods

78.98.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.
Notes: Sets the default parameters.

78.98.4 Properties

78.98.5 Bilinear1Bit as Integer

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The bilinear filter setting for Black & White.
Notes: Default is kbfmAuto
(Read and Write property)

78.98.6 BilinearColor as Integer

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The bilinear filter setting for color.
Notes: Default is kbfmAuto
(Read and Write property)

78.98.7 BilinearGray as Integer

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The bilinear filter setting for gray.
Notes: Default is kbfmAuto
(Read and Write property)

78.98.8 ClearBuffer as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: If true, the image buffer is initialized before rendering.
Notes: (Read and Write property)

78.98.9 DefScale as Integer

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Specifies how the page should be scaled into the image buffer.
Notes: Use kpsFit* constants.
(Read and Write property)

78.98.10 Flags1 as Integer

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This is a bit mask.
Notes: Flags can be combined with a binary or operator.
(Read and Write property)

78.98.11 Flags2 as Integer

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Additional flags
Notes: (Read and Write property)

78.98.12 Matrix as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Optional transformation matrix.
Notes: Initialize the variable to the identity matrix (1,0,0,1,0,0)
(Read and Write property)

78.98.13 MinLineWidth as Single

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The minimum line width.
Notes: Default 0.75 device pixels.
(Read and Write property)

78.98.14 PageSpace as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The matrix represents the mapping from page space to device space.
Notes: An output parameter.
This matrix is required when further objects should be drawn on the page, e.g. the bounding boxes.
(Read and Write property)

78.98.15 Supersampling as Integer

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to use super sampling.
Notes: Allowed values: 0 and 1 == No supersampling, 2 or 4 == Supersampling
(Read and Write property)

78.98.16 ThreadCount as Integer

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The number of threads to use.
Notes: Default = 0 == 16 threads.
The number of threads should be at least one lower than the number of physical cores.
(Read and Write property)

78.98.17 WorkingPixelFormat as Integer

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The working pixel format.
Notes: An output parameter.

This value is set depending on the flags krfEnableBlendCS or krf2Overprint, and depending on the output intent.
(Read and Write property)

78.98.18 Constants

Constants

Constant	Value	Description
kpsFitHeight	1	ConstantsGroup: Picture Scaling Constants

Bilinear Filter

Constant	Value	Description
kbfmAuto	0	Auto
kbfmForce	2	Force
kbfmOff	1	No bilinear filter

Picture Scaling Constants

Constant	Value	Description
kpsFitBest	2	Scale the page so that it fits fully into the image buffer.
kpsFitWidth	0	Scale the page to the width of the image buffer.
kpsFitZoom	3	This mode must be used if the scaling factors of the transformation matrix are <>1.0

Pixel formats for raster functions.

Constant	Value	Description
kpxf1Bit	0	1 bit per pixel black and white.
kpxfABGR	7	ABGR
kpxfARGB	6	ARGB
kpxfBGR	3	BGR
kpxfBGRA	5	BGRA
kpxfCMYK	9	CMYK without alpha
kpxfCMYKA	10	CMYK with alpha
kpxfGray	1	8 bit grayscale.
kpxfGrayA	8	8 bit grayscale with alpha.
kpxfRGB	2	RGB
kpxfRGBA	4	RGBA.

Raster Flags

Constant	Value	Description
krf2AcrobatTintPreview	1	If set, empirical spot color preview; requires Overprint, default false.
krf2BuildHitData	2	Used by the rendering control to enable text and object selection
krf2CreateSeparations	4	Considered by RenderPageToImage V2 only. If set, separations are rendered. If OutFile is a directory, the function separate images for each color channel. The naming sheme is as follows: If the PDF file was opened from file, the image files get the names %filename%_cyan.png, %filename%_magenta.png, and so on. The extension depends on the image file format. If the PDF file was opened from a buffer, the very same sheme is used, with the exception that %filename% is absents since no file name is known. If OutFile is a file path, then a multi-page TIFF will be created. One page for every color channel. Since TIFF is the only multi-page image format that is currently supported, the parameter Format is ignored in this case.
krf2Default	0	Default
krf2Overprint	8	If set, overprinting will be simulated
krfClipBoxMask	28	The mask for Clip flags.
krfClipToArtBox	4	Clip the page to the art box if any. Only one of these clip flags must be set at time!
krfClipToBleedBox	8	Clip the page to the bleed box if any. Only one of these clip flags must be set at time!
krfClipToTrimBox	16	Clip the page to the bleed box if any. Only one of these clip flags must be set at time!
krfCompositeWhite	&h00001000	Composite pixel formats with an alpha channel finally with a white background. The alpha channel is 255 everywhere after composition. This flag is mainly provided for debug purposes but it can also be useful if the image must be copied on screen with a function that doesn't support alpha blending.
krfDefault	0	Render the page as usual.
krfDisableAAClipping	&h00200000	Disable Anti-Aliasing for clipping paths. This flag is the most important one since clipping paths cause often visible artefacts in PDF files with flattened transparency.
krfDisableAAText	&h00400000	Disable Anti-Aliasing for text.
krfDisableAAVector	&h00800000	Disable Anti-Aliasing for vector graphics.
krfDisableAntiAliasing	&h00E00000	Combination of krfDisableAAVector, krfDisableAAText and krfDisableAAClipping.s
krfDisableBiLinearFilter	&h01000000	Disable the BiLevel filter for images. Sometetimes useful if sharp images are needed, e.g. for barcodes.
krfEnableBlendCS	&h10000000	If set, the page is rendered in the color space of the page group, soft proof color space, or output intent (if set), and finally converted to the destination colorspace.
krfExclAnnotations	32	Don't render annotations.
krfExclButtons	&h00004000	If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude buttons. If all fields should be skipped then set the flag rfExclFormFields instead.
krfExclCheckBoxes	&h00008000	If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude combobox. If all fields should be skipped then set the flag rfExclFormFields instead.
krfExclComboBoxes	&h00010000	If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude combobox. If all fields should be skipped then set the flag rfExclFormFields instead.
krfExclFormFields	64	Don't render form fields.
krfExclListBoxes	&h00020000	If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude listbox. If all fields should be skipped then set the flag rfExclFormFields instead.
krfExclPageContent	&h00002000	If set, only annotations and form fields will be rendered (if any).
krfExclSigFields	&h00080000	If set, only annotations and form fields will be rendered (if any).
krfExclTextFields	&h00040000	If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude text fields. If all fields should be skipped then set the flag rfExclFormFields instead.
krfForceInterpolation	&h40000000	If set, image interpolation will be applied.

78.99 class DynaPDFRawImageMBS

78.99.1 class DynaPDFRawImageMBS

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class to hold information about a raw image.
Notes: Used with InsertRawImageEx.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.4pr4

78.99.2 Methods

78.99.3 setBuffer(data as MemoryBlock)

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the buffer to point to the bytes in the memoryblock.
Notes: Size is optional. Some memoryblocks have no known size and there you need to specify one.
See also:

- 78.99.4 setBuffer(data as MemoryBlock, size as Int64) 13549
- 78.99.5 setBuffer(data as Ptr) 13550
- 78.99.6 setBuffer(data as Ptr, size as Int64) 13550
- 78.99.7 setBuffer(data as string) 13550
- 78.99.8 setBuffer(data as string, size as Int64) 13551

78.99.4 setBuffer(data as MemoryBlock, size as Int64)

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the buffer to point to the bytes in the memoryblock.
Notes: Size is optional. Some memoryblocks have no known size and there you need to specify one.
See also:

- 78.99.3 setBuffer(data as MemoryBlock) 13549
- 78.99.5 setBuffer(data as Ptr) 13550
- 78.99.6 setBuffer(data as Ptr, size as Int64) 13550
- 78.99.7 setBuffer(data as string) 13550
- 78.99.8 setBuffer(data as string, size as Int64) 13551

78.99.5 setBuffer(data as Ptr)

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Private method to set the buffer using a pointer to some memory.
Notes: This is a private method to make sure nobody passes a ptr instead of memoryblock or ptr+size.
See also:

- 78.99.3 setBuffer(data as MemoryBlock) 13549
- 78.99.4 setBuffer(data as MemoryBlock, size as Int64) 13549
- 78.99.6 setBuffer(data as Ptr, size as Int64) 13550
- 78.99.7 setBuffer(data as string) 13550
- 78.99.8 setBuffer(data as string, size as Int64) 13551

78.99.6 setBuffer(data as Ptr, size as Int64)

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the buffer using a pointer to some memory.
Notes: Please provide the right size.
See also:

- 78.99.3 setBuffer(data as MemoryBlock) 13549
- 78.99.4 setBuffer(data as MemoryBlock, size as Int64) 13549
- 78.99.5 setBuffer(data as Ptr) 13550
- 78.99.7 setBuffer(data as string) 13550
- 78.99.8 setBuffer(data as string, size as Int64) 13551

78.99.7 setBuffer(data as string)

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets buffer to point to contents of this string.
Notes: If you specify a size, the size can be smaller than thing length to use only first part.
See also:

- 78.99.3 setBuffer(data as MemoryBlock) 13549
- 78.99.4 setBuffer(data as MemoryBlock, size as Int64) 13549
- 78.99.5 setBuffer(data as Ptr) 13550
- 78.99.6 setBuffer(data as Ptr, size as Int64) 13550
- 78.99.8 setBuffer(data as string, size as Int64) 13551

78.99.8 setBuffer(data as string, size as Int64)

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets buffer to point to contents of this string.
Notes: If you specify a size, the size can be smaller than thing length to use only first part.
See also:

- 78.99.3 setBuffer(data as MemoryBlock) 13549
- 78.99.4 setBuffer(data as MemoryBlock, size as Int64) 13549
- 78.99.5 setBuffer(data as Ptr) 13550
- 78.99.6 setBuffer(data as Ptr, size as Int64) 13550
- 78.99.7 setBuffer(data as string) 13550

78.99.9 Properties

78.99.10 BitsPerComponent as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bits per component.
Notes: For example 8 for the usual RGB images.
(Read and Write property)

78.99.11 Buffer as Ptr

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The buffer as pointer.
Notes: Please use setBuffer methods to set this.
(Read only property)

78.99.12 BufSize as Int64

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The buffer size.
Notes: (Read only property)

78.99.13 CS as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image color space.
Notes: (Read and Write property)

78.99.14 CSHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color space handle or -1.
Notes: (Read and Write property)

78.99.15 HasAlpha as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image has an alpha channel?
Notes: (Read and Write property)

78.99.16 Height as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Height in pixels.
Notes: (Read and Write property)

78.99.17 IsBGR as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Windows bitmap format?
Notes: (Read and Write property)

78.99.18 Memory as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The memoryblock used with setBuffer.
Notes: (Read only property)

78.99.19 MinIsWhite as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether image has value zero for white instead of black.
Notes: One bit images only.
(Read and Write property)

78.99.20 NumComponents as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of components.
Notes: Maximum is 32 for DynaPDF.
(Read and Write property)

78.99.21 Stride as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes per row.
Notes: A negative value mirrors the image.
(Read and Write property)

78.99.22 String as String

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The String used with setBuffer.
Notes: (Read only property)

78.99.23 Width as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width in pixels.
Notes: (Read and Write property)

78.100 class DynaPDFRectMBS

78.100.1 class DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A rectangle for DynaPDF.
Example:

```
// work with rectangles in PDF coordinates
Var a As New DynaPDFRectMBS(0, 0, 200, 100) // left, top, right, bottom
Var b As New DynaPDFRectMBS(150, 50, 300, 200)

Var c As New DynaPDFRectMBS(a)
c.Intersect(b)
a.Widen(b) // a now covers both

MessageBox "Union: " + a.Width.ToString + " x " + a.Height.ToString + EndOfLine + _
"Intersection: " + c.Width.ToString + " x " + c.Height.ToString
```

- 19.6, page 14: Things you can do with DynaPDF, The MBS DynaPDF Plugin is more powerful than you think by Stefanie Juchmes

78.100.2 Methods

78.100.3 Constructor(left as Double = 0.0, top as Double = 0.0, right as Double = 0.0, bottom as Double = 0.0)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new rectangle with the given values.
See also:

- 78.100.4 Constructor(other as DynaPDFRectMBS) 13556

78.100.4 Constructor(other as DynaPDFRectMBS)

MBS DynaPDF Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the rectangle.
Example:

```
Var p As New DynaPDFRectMBS(1,2,3,4)
Var c As New DynaPDFRectMBS(p)
Var o As New DynaPDFRectMBS(2,3,4,5)

If p = c Then
// okay
Else
Break
End If

If p <>o Then
// okay
Else
Break
end if
```

See also:

- 78.100.3 Constructor(left as Double = 0.0, top as Double = 0.0, right as Double = 0.0, bottom as Double = 0.0) 13556

78.100.5 Intersect(other as DynaPDFRectMBS)

MBS DynaPDF Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Intersects the array with the other one.
Example:

```
Var p As New DynaPDFRectMBS(1,2,3,4)
var o as new DynaPDFRectMBS(2,2,4,4)

p.Intersect(o)

MessageBox p.Left.ToString+"/"+p.top.ToString+" "+p.Right.ToString+"/"+p.bottom.ToString
```

See also:

- 78.100.6 Intersect(X1 as Int32, Y1 as Int32, X2 as Int32, Y2 as Int32) 13557

78.100.6 Intersect(X1 as Int32, Y1 as Int32, X2 as Int32, Y2 as Int32)

MBS DynaPDF Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Intersects the array with the other one.
Example:

```
Var p As New DynaPDFRectMBS(1,2,3,4)

p.Intersect(2,2,4,4)

MessageBox p.Left.ToString+"/"+p.top.ToString+" "+p.Right.ToString+"/"+p.bottom.ToString
```

See also:

- 78.100.5 Intersect(other as DynaPDFRectMBS) 13556

78.100.7 IsInside(other as DynaPDFRectMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the given rectangle is inside the other rectangle.
Example:

```
Var p As New DynaPDFRectMBS(1,2,3,4)
var r as new DynaPDFRectMBS(2,2,4,4)

If p.IsInside(r) Then
MessageBox "Inside"
Else
MessageBox "outside"
end if
```

See also:

• 78.100.8 IsInside(X1 as double, Y1 as double, X2 as double, Y2 as double) as Boolean 13558

78.100.8 IsInside(X1 as double, Y1 as double, X2 as double, Y2 as double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the given rectangle is inside the other rectangle.
Example:

```
Var p As New DynaPDFRectMBS(1,2,3,4)

If p.IsInside(2,2,4,4) Then
MessageBox "Inside"
Else
MessageBox "outside"
end if
```

See also:

• 78.100.7 IsInside(other as DynaPDFRectMBS) as Boolean 13557

78.100.9 MoveX(x as double)

MBS DynaPDF Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves X coordinates.
Example:

```
Var p As New DynaPDFRectMBS(1,2,3,4)

p.MoveX 5
p.MoveY 3

MessageBox p.Left.ToString+"/"+p.top.ToString+" "+p.Right.ToString+"/"+p.bottom.ToString
```

78.100.10 MoveY(y as double)

MBS DynaPDF Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves Y coordinates.
Example:

```
Var p As New DynaPDFRectMBS(1,2,3,4)
```

```
p.MoveX 5
p.MoveY 3

MessageBox p.Left.ToString+"/"+p.top.ToString+" "+p.Right.ToString+"/"+p.bottom.ToString
```

78.100.11 Normalize

MBS DynaPDF Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Normalizes rectangles.
Example:

```
Var p As New DynaPDFRectMBS(3,4,1,2)

p.Normalize

MessageBox p.Left.ToString+"/"+p.top.ToString+" "+p.Right.ToString+"/"+p.bottom.ToString
```

Notes: If right is left, we swap them.
If bottom is above top, we swap them.

78.100.12 Operator_Compare(other as DynaPDFRectMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two rectangles.
Example:

```
Var p As New DynaPDFRectMBS(1,2,3,4)
Var c As New DynaPDFRectMBS(p)
Var o As New DynaPDFRectMBS(2,3,4,5)

If p = c Then
// okay
Else
Break
End If

If p <>o Then
// okay
Else
Break
end if
```

78.100.13 Scale(v as double)

MBS DynaPDF Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales
Example:

```
Var p As New DynaPDFRectMBS(1,2,3,4)

p.Scale(1.5)

MessageBox p.Left.ToString+"/"+p.top.ToString+" "+p.right.ToString+"/"+p.bottom.ToString
```

78.100.14 Translate(x as double, y as double)

MBS DynaPDF Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the rectangle by X/Y.
Example:

```
Var p As New DynaPDFRectMBS(1,2,3,4)

p.Translate 5,3

MessageBox p.Left.ToString+"/"+p.top.ToString+" "+p.Right.ToString+"/"+p.bottom.ToString
```

78.100.15 Widen(other as DynaPDFRectMBS)

MBS DynaPDF Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Widens the rectangle to include the given one.
Example:

```
Var p As New DynaPDFRectMBS(1,2,3,4)

var r as new DynaPDFRectMBS(2,3,4,5)

// this will change Right/Bottom to 4 and 5 as that is bigger in the second one
p.Widen r

MessageBox p.Left.ToString+"/"+p.top.ToString+" "+p.Right.ToString+"/"+p.bottom.ToString
```

78.100.16 Properties

78.100.17 Bottom as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The bottom coordinate.
Notes: (Read and Write property)

78.100.18 Height as Double

MBS DynaPDF Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates height.
Example:

```
Var p As New DynaPDFRectMBS(1,2,3,4)

MessageBox p.Width.ToString+"/"+p.Height.ToString
```

Notes: (Read only property)

78.100.19 HeightAbs as Double

MBS DynaPDF Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates absolute height.
Example:

```
Var p As New DynaPDFRectMBS(3,4,2,1)

MessageBox p.Width.ToString+"/"+p.Height.ToString+EndOfLine+_
p.WidthAbs.ToString+"/"+p.HeightAbs.ToString
```

Notes: Same as height, but without sign.
(Read only property)

78.100.20 Left as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The left coordinate.

Notes: (Read and Write property)

78.100.21 Right as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The right coordinate.
Notes: (Read and Write property)

78.100.22 Top as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The top coordinate.
Notes: (Read and Write property)

78.100.23 Width as Double

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the rectangle.
Notes: This is the difference between right and left.

Height property is missing as it depends on the coordinate origin. For top-down coordinates you would calculate bottom - top while for bottom-up coordinates you calculate top - bottom.
(Read only property)

78.100.24 WidthAbs as Double

MBS DynaPDF Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates absolute width.
Example:

```
Var p As New DynaPDFRectMBS(3,4,2,1)

MessageBox p.Width.ToString+"/"+p.Height.ToString+EndOfLine+_
p.WidthAbs.ToString+"/"+p.HeightAbs.ToString
```

Notes: Same as width, but without sign.

(Read only property)

78.101 class DynaPDFRelFileNodeMBS

78.101.1 class DynaPDFRelFileNodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The information on a related file node.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.101.2 Methods

78.101.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.101.4 Properties

78.101.5 EF as DynaPDFFileSpecMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Embedded file.
Notes: (Read only property)

78.101.6 Name as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of this file spcification.
Notes: (Read only property)

78.101.7 NextNode as DynaPDFRelFileNodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Next node if any.
Notes: (Read only property)

78.102 class DynaPDFRenderImageParmsMBS

78.102.1 class DynaPDFRenderImageParmsMBS

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Parameters for rendering images.
Example:

```
// render page 1 of a PDF as JPEG file with quality 90
Var pdf As New DynaPDFMBS
pdf.SetLicenseKey "Starter" // your license key
Call pdf.CreateNewPDF(Nil)
Call pdf.SetImportFlags(DynaPDFMBS.kifImportAll + DynaPDFMBS.kifImportAsPage)
If pdf.OpenImportFile(SpecialFolder.Desktop.Child("test.pdf")) <0 Then Return
Call pdf.ImportPDFFile(1)

Var params As New DynaPDFRenderImageParmsMBS
params.JPEGQuality = 90
params.Supersampling = 2

Var file As FolderItem = SpecialFolder.Desktop.Child("page1.jpg")
If pdf.RenderPageToImage(1, file, 150, 0, 0, DynaPDFMBS.kpxfRGB, DynaPDFMBS.kcfJPEG, DynaPDFMBS.kifmJPEG,
params) Then
MessageBox "Saved."
End If
```

- MBS Xojo Plugins, version 26.5pr5

78.102.2 Methods

78.102.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.
Notes: Sets default parameters.

78.102.4 Properties

78.102.5 Bilinear1Bit as Integer

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The bilinear filter setting for Black & White.
Notes: Default is kbfmAuto
(Read and Write property)

78.102.6 BilinearColor as Integer

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The bilinear filter setting for color.
Notes: Default is kbfmAuto
(Read and Write property)

78.102.7 BilinearGray as Integer

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The bilinear filter setting for gray.
Notes: Default is kbfmAuto
(Read and Write property)

78.102.8 DefScale as Integer

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Specifies how the page should be scaled into the image buffer.
Notes: Use kpsFit* constants.
(Read and Write property)

78.102.9 Flags1 as Integer

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This is a bit mask.
Notes: Flags can be combined with a binary or operator.

(Read and Write property)

78.102.10 Flags2 as Integer

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Additional flags
Notes: (Read and Write property)

78.102.11 JPEGQuality as Integer

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The JPEG quality level.
Notes: Range is 1 to 100 for JPEG.

0 = Use the value that was set by SetJPEGQuality().
(Read and Write property)

78.102.12 MaxBandBytes as Integer

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The maximum size for bands.
Notes: 0 = 16 MB; bounds output bands only.
(Read and Write property)

78.102.13 MinLineWidth as Single

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The minimum line width.
Notes: Default 0.75 device pixels.
(Read and Write property)

78.102.14 Supersampling as Integer

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to use super sampling.
Notes: Allowed values: 0 and 1 == No supersampling, 2 or 4 == Supersampling
(Read and Write property)

78.102.15 ThreadCount as Integer

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The number of threads to use.
Notes: Default = 0 == 16 threads.
The number of threads should be at least one lower than the number of physical cores.
(Read and Write property)

78.102.16 Constants

Bilinear Filter

Constant	Value	Description
kbfmAuto	0	Auto
kbfmForce	2	Force
kbfmOff	1	No bilinear filter

Picture Scaling Constants

Constant	Value	Description
kpsFitBest	2	Scale the page so that it fits fully into the image buffer.
kpsFitHeight	1	Scale the page to the height of the image buffer.
kpsFitWidth	0	Scale the page to the width of the image buffer.
kpsFitZoom	3	This mode must be used if the scaling factors of the transformation matrix are <>1.0

Raster Flags

Constant	Value	Description
krf2AcrobatTintPreview	1	If set, empirical spot color preview; requires Overprint, default false.
krf2BuildHitData	2	Used by the rendering control to enable text and object selection
krf2CreateSeparations	4	Considered by RenderPageToImage V2 only. If set, separations are rendered. If OutFile is a directory, the function separate images for each color channel. The naming sheme is as follows: If the PDF file was opened from file, the image files get the names %filename%_cyan.png, %filename%_magenta.png, and so on. The extension depends on the image file format. If the PDF file was opened from a buffer, the very same sheme is used, with the exception that %filename% is absents since no file name is known. If OutFile is a file path, then a multi-page TIFF will be created. One page for every color channel. Since TIFF is the only multi-page image format that is currently supported, the parameter Format is ignored in this case.
krf2Default	0	Default
krf2Overprint	8	If set, overprinting will be simulated
krfClipBoxMask	28	The mask for Clip flags.
krfClipToArtBox	4	Clip the page to the art box if any. Only one of these clip flags must be set at time!
krfClipToBleedBox	8	Clip the page to the bleed box if any. Only one of these clip flags must be set at time!
krfClipToTrimBox	16	Clip the page to the bleed box if any. Only one of these clip flags must be set at time!
krfCompositeWhite	&h00001000	Composite pixel formats with an alpha channel finally with a white background. The alpha channel is 255 everywhere after composition. This flag is mainly provided for debug purposes but it can also be useful if the image must be copied on screen with a function that doesn't support alpha blending.
krfDefault	0	Render the page as usual.
krfDisableAAClipping	&h00200000	Disable Anti-Aliasing for clipping paths. This flag is the most important one since clipping paths cause often visible artefacts in PDF files with flattened transparency.
krfDisableAAText	&h00400000	Disable Anti-Aliasing for text.
krfDisableAAVector	&h00800000	Disable Anti-Aliasing for vector graphics.
krfDisableAntiAliasing	&h00E00000	Combination of krfDisableAAVector, krfDisableAAText and krfDisableAAClipping.
krfDisableBiLinearFilter	&h01000000	Disable the BiLevel filter for images. Sometetimes useful if sharp images are needed, e.g. for barcodes.
krfEnableBlendCS	&h10000000	If set, the page is rendered in the color space of the page group, soft proof color space, or output intent (if set), and finally converted to the destination colorspace.
krfExclAnnotations	32	Don't render annotations.
krfExclButtons	&h00004000	If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude buttons. If all fields should be skipped then set the flag rfExclFormFields instead.
krfExclCheckBoxes	&h00008000	If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude combobox. If all fields should be skipped then set the flag rfExclFormFields instead.
krfExclComboBoxes	&h00010000	If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude combobox. If all fields should be skipped then set the flag rfExclFormFields instead.
krfExclFormFields	64	Don't render form fields.
krfExclListBoxes	&h00020000	If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude listbox. If all fields should be skipped then set the flag rfExclFormFields instead.
krfExclPageContent	&h00002000	If set, only annotations and form fields will be rendered (if any).
krfExclSigFields	&h00080000	If set, only annotations and form fields will be rendered (if any).
krfExclTextFields	&h00040000	If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude text fields. If all fields should be skipped then set the flag rfExclFormFields instead.
krfForceInterpolation	&h40000000	If set, image interpolation will be applied.

78.103 class DynaPDFRenderJobMBS

78.103.1 class DynaPDFRenderJobMBS

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class to render PDF pages on a background thread.
Example:

```
// render all pages of a PDF to JPEG images on a background thread
// MyRenderJob is a subclass of DynaPDFRenderJobMBS with the events implemented.
// Job is a property of the window: Job As MyRenderJob
Job = New MyRenderJob
Job.InputPath = SpecialFolder.Desktop.Child("test.pdf").NativePath
Job.Resolution = 150 // DPI
Job.Format = DynaPDFMBS.kifmJPEG
Job.PixFmt = DynaPDFMBS.kpxfRGB
Job.JPEGQuality = 80
Job.Run

// in MyRenderJob:
Sub PageRendered(Page As Integer) Handles PageRendered
Var data As String = Me.ImageData(Page)
Var output As BinaryStream = BinaryStream.Create(SpecialFolder.Desktop.Child("page " + Page.ToString
+ ".jpg"), True)
output.Write data
output.Close
End Sub

Sub Finished() Handles Finished
If Me.ErrorCode <>0 Then
System.DebugLog "Error " + Me.ErrorCode.ToString
Else
System.DebugLog Me.PageCount.ToString + " pages rendered."
End If
End Sub
```

- MBS Xojo Plugins, version 25.2pr1

78.103.2 Methods

78.103.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.

78.103.4 Destructor

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

78.103.5 ImageData(Page as Integer) as String

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The image data for the given page.
Notes: As more and more pages get rendered, you can query image data for more pages.

78.103.6 Run

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Starts the background thread.

78.103.7 Properties

78.103.8 Cancel as Boolean

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The cancel flag.
Notes: Set to true to quickly shut down the background thread.
(Read and Write property)

78.103.9 DefInCMYK as String

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The CMYK Profile.
Notes: Optional, CMYK colors are the problematic ones.
The other profiles can be created on demand but this is not possible with a CMYK profile. So, this is the most important input profile.

This is for the profile content as string, not the path.
(Read and Write property)

78.103.10 DefInGray as String

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The gray profile.
Notes: Optional
This is for the profile content as string, not the path.
(Read and Write property)

78.103.11 DefInRGB as String

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The RGB profile.
Notes: Optional, sRGB is the default.
This is for the profile content as string, not the path.
(Read and Write property)

78.103.12 DestSpace as Integer

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destination color space for color management.
Notes: Defaults to device RGB.
(Read and Write property)

78.103.13 DeviceProfile as String

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The output device profile.
Notes: Optional, the output profile must be compatible with the output color space.
At this time only Gray or RGB profiles are supported. This is the monitor profile! Default is sRGB.

This is for the profile content as string, not the path.
(Read and Write property)

78.103.14 ErrorCode as Integer

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The error code in case of an error.
Notes: (Read and Write property)

78.103.15 ErrorMessage as String

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The error message in case an error happened.
Notes: (Read only property)

78.103.16 ErrorType as Integer

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The type of error.
Notes: (Read and Write property)

78.103.17 Filter as Integer

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The compression filter to use.
Notes: Defaults to kcfFlate.
(Read and Write property)

78.103.18 Finished as Boolean

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether the thread is finished.
Notes: (Read only property)
See also:

- 78.103.38 Finished 13579

78.103.19 Flags as Integer

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The raster flags.
Notes: Defaults to krfDefault.
(Read and Write property)

78.103.20 Format as Integer

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The output image format.
Notes: Defaults to kifmJPEG.
(Read and Write property)

78.103.21 Height as Integer

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The output height.
Notes: (Read and Write property)

78.103.22 InitCMFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The flags for InitColorManagement call.
Notes: You can provide profiles with the DefInGray, DefInRGB, DefInCMYK, DeviceProfile and SoftProof properties.

Default is kicmBPCompensation.
(Read and Write property)

78.103.23 InputData as String

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The input data.
Notes: Here you can put in the content of a PDF document.

For in-memory PDF data, you can assign either InputData with a string or InputDataMemory with a MemoryBlock.
(Read and Write property)

78.103.24 InputDataMemory as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The input data.
Notes: Here you can put in the content of a PDF document.

For in-memory PDF data, you can assign either InputData with a string or InputDataMemory with a MemoryBlock.
(Read and Write property)

78.103.25 InputPath as String

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The input file path.
Notes: Here you can pass a file path to a PDF file.
(Read and Write property)

78.103.26 JPEGQuality as Integer

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The JPEG quality to use.
Notes: Leave at zero to use default.
(Read and Write property)

78.103.27 PageCount as Integer

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The page count of the imported document once known.
Notes: (Read and Write property)

78.103.28 PageRangeLength as Integer

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The range of pages to process.
Notes: Set to the maximum page number you like to handle.
Defaults to -1.
(Read and Write property)

78.103.29 PageRangeStart as Integer

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The range of pages to process.
Notes: Defaults to 1.
(Read and Write property)

78.103.30 Password as String

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The password needed to open the input PDF.
Notes: Default is empty for no password.
(Read and Write property)

78.103.31 PasswordType as Integer

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The type of password, either open or owner.
Notes: e.g. kptOpen or kptOwner
(Read and Write property)

78.103.32 PixFmt as Integer

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The output pixel format.
Notes: Default is kpxfRGB.
(Read and Write property)

78.103.33 Resolution as Integer

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The resolution in DPI.
Notes: (Read and Write property)

78.103.34 Running as Boolean

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether the thread is running.
Notes: (Read only property)

78.103.35 SoftProof as String

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The proofing profile.
Notes: Optional but very important. This profile emulates the output device.
This is for the profile content as string, not the path.
(Read and Write property)

78.103.36 Width as Integer

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The output width.
Notes: (Read and Write property)

78.103.37 Events

78.103.38 Finished

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The finished event.
Notes: Called when the thread ends.
See also:

- 78.103.18 Finished as Boolean 13574

78.103.39 PageRendered(Page as Integer)

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The event to let you know that a page is rendered.

78.103.40 PagesImported(Count as Integer)

MBS DynaPDF Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The event called once pages are imported.

78.104 class DynaPDFResetFormActionMBS

78.104.1 class DynaPDFResetFormActionMBS

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for reset form action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.104.2 Methods

78.104.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.104.4 Fields(index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries array of fields.
Notes: Index is from 0 to FieldsCount-1.

78.104.5 Properties

78.104.6 FieldsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of fields in the array.
Notes: (Read only property)

78.104.7 Include as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Include or exclude given fields?
Notes: If true, the fields in the array must be reset. If false, these fields must be excluded.

(Read only property)

78.104.8 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The next action.
Notes: -1 or next action handle to be executed if any.
(Read only property)

78.104.9 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the next action.
Notes: See kat* constants.
(Read only property)

78.105 class DynaPDFSigDictMBS

78.105.1 class DynaPDFSigDictMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for details on signature fields.
Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

78.105.2 Properties

78.105.3 Cert as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: X.509 Certificate when SubFilter is adbe.x509.rsa_sha1.
Notes: (Read and Write property)

78.105.4 ContactInfo as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional contact info string, e.g. an email address
Notes: (Read and Write property)

78.105.5 Contents as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature.
Notes: This is either a DER encoded PKCS#1 binary data object or a DER-encoded PKCS#7 binary data object depending on the used SubFilter.
(Read and Write property)

78.105.6 Filter as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the security handler, usually Adobe.PPKLite.
Notes: (Read and Write property)

78.105.7 Location as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional location of the signer.
Notes: (Read and Write property)

78.105.8 Name as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional signers name.
Notes: (Read and Write property)

78.105.9 PropAuthTime as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional. The number of seconds since the signer was last authenticated.
Notes: (Read and Write property)

78.105.10 PropAuthType as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional. The method that shall be used to authenticate the signer.
Notes: Valid values are PIN, Password, and Fingerprint.
(Read and Write property)

78.105.11 Reason as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional reason.
Notes: (Read and Write property)

78.105.12 Revision as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, The version of the signature handler that was used to create the signature.
Notes: (Read and Write property)

78.105.13 SignTime as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Date/Time string.
Notes: (Read and Write property)

78.105.14 SubFilter as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A name that describes the encoding of the signature value.
Notes: Should be adbe.x509.rsa_sha1, adbe.pkcs7.detached, or adbe.pkcs7.sha1.
(Read and Write property)

78.105.15 Version as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of the signature dictionary format.
Notes: (Read and Write property)

78.106 class DynaPDFSigParmsMBS

78.106.1 class DynaPDFSigParmsMBS

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for PDF signature parameters.
Blog Entries

- Sign PDF with DynaPDF and your custom signature
- MBS REALbasic Plugins, version 11.1pr4

78.106.2 Properties

78.106.3 ContactInfo as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, e.g. an email address.
Notes: Internally this string is converted to ANSI or Unicode encoding.
(Read and Write property)

78.106.4 Encrypt as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the file will be encrypted.
Notes: (Read and Write property)

78.106.5 HashType as Integer

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The hash type: khtDetached or khtSHA1.
Notes: (Read and Write property)

78.106.6 KeyLen as Integer

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Key length to encrypt the file.
Notes: This value is ignored if Encrypt is set to false.
On of the kkl* constants like kkl128bit.
(Read and Write property)

78.106.7 Location as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional location of the signer.
Notes: Internally this string is converted to ANSI or Unicode encoding.
(Read and Write property)

78.106.8 OpenPwd as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional open password.
Notes: This value is ignored if Encrypt is set to false.
(Read and Write property)

78.106.9 OwnerPwd as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional owner password.
Notes: This value is ignored if Encrypt is set to false.
(Read and Write property)

78.106.10 PKCS7ObjLen as Integer

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Max length of the signed PKCS#7 object.
Notes: (Read and Write property)

78.106.11 Range1 as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Hash or byte range.
Notes: (Read and Write property)

78.106.12 Range1Length as Integer

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the buffer Range1.
Notes: (Read and Write property)

78.106.13 Range2 as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Second range value.
Notes: Set only if HashType = htDetached.
(Read and Write property)

78.106.14 Range2Length as Integer

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of buffer Range2.
Notes: (Read and Write property)

78.106.15 Reason as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional reason why the file was signed.
Notes: Internally this string is converted to ANSI or Unicode encoding.
(Read and Write property)

78.106.16 Restrict as Integer

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: What should be restricted?
Notes: This value is ignored if Encrypt is set to false.
A combination of krs* constants.

(Read and Write property)

78.106.17 Signer as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, see manual.
Notes: Internally this string is converted to ANSI or Unicode encoding.
(Read and Write property)

78.107 class DynaPDFStackMBS

78.107.1 class DynaPDFStackMBS

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for the current text found by GetPageText.
Notes: Before you can use it, call InitStack.
Blog Entries

- MBS Xojo Plugins, version 17.1pr5
- MBS Xojo / Real Studio Plugins, version 16.2pr1
- MBS REALbasic Plugins, version 11.1pr4

78.107.2 Methods

78.107.3 KerningAdvance(index as UInt32) as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negative values move the cursor to the right.

78.107.4 KerningLength(index as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length in characters.

78.107.5 KerningText(index as UInt32) as string

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translated Unicode string.
Notes: May contain chr(0) characters.
Encoding is UTF8.

78.107.6 KerningWidth(index as UInt32) as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: String width measured in text space.

78.107.7 RawKernAdvance(index as UInt32) as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negative values move the cursor to the right.

78.107.8 RawKernLength(index as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raw text length in bytes.

78.107.9 RawKernText(index as UInt32) as string

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raw text.

78.107.10 Properties

78.107.11 CharSP as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Current character spacing, info only.
Notes: (Read only property)

78.107.12 CIDFont as Boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, a CID font is used to render the text.
Notes: It is not possible to replace a text with ReplacePageText() in this case. However, it is still possible to delete the text. If the text should be replaced use either ReplacePageTextEx() or WriteTextMatrixEx().
(Read only property)

78.107.13 ConvColors as Boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function:

If true (default), all colors are converted to the destination color space
DestSpace.
Notes:

The default color space is DeviceRGB. This variable can be changed after the structure has been initialized with InitStack(). If set to false, colors of complex color spaces are still converted into the alternate color space but the color space can then be changed arbitrary often. See also the description of FillCS.
(Read and Write property)

78.107.14 ctm as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The transformation matrix.
Notes: Pre-multiplied global transformation matrix.
(Read only property)

78.107.15 DeleteKerningAt as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: This member can be used in combination with ReplacePageText().
Notes: ReplacePageText() deletes or replaces normally always a complete text record but this is often not required especially if a text must be deleted or replaced in the middle or end of a kerning array. To make text replacement easier it is possible to preserve an arbitrary number of kerning records from deletion. The value of DeleteKerningAt represents the first array index which should be deleted. All kerning records above this index will be deleted too. Take a look into the demo examples/edit_text which is delivered with DynaPDF to determine how this member can be used.
(Read and Write property)

78.107.16 DestSpace as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination color space in which all colors should be converted.
Notes: If
ConvColor is set to false, the value of this member is ignored. If the destination color space should be DeviceCMYK initialize the members FillColor and StrokeColor with PDF_CMYK(0,0,0,255); which represents

black.
(Read and Write property)

78.107.17 DrawMode as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The draw mode used to render the text.
Notes: See SetTextDrawMode() for further information.
(Read only property)

78.107.18 Embedded as Boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the font is embedded.
Notes: This information is very important if the text should be replaced. The function ReplacePageText() can be used if the font is not embedded and if the member CIDFont is false. Otherwise, the function ReplacePageTextEx() or WriteTextMatrixEx() must be used to replace the text, see the examples on the following pages for further information.
(Read only property)

78.107.19 FillColor as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The fill color represents the text color if the text draw mode is dmNormal.
Notes: Depending on the draw mode the fill and stroke color can be invoked to
render the text.
(Read only property)

78.107.20 FillCS as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function:

This is the current color space in which the color value of FillColor is
defined.
Notes:

If ConvColor is set to true (default) the value is always equal to

DestSpace. If ConvColor is set to false the fill color is still returned in a device color space but the color space can be changed arbitrary often. Colors of complex color spaces, such as Separation or DeviceN, are always converted into the alternate color space. If the original or alternate color space is an ICC based color space the color value is returned as is and the color space is set depending on the number of components. The ICC profile is not invoked to calculate the color value in the device color space. Future versions of DynaPDF maybe use the ICC profile to convert the color into device color space.
(Read only property)

78.107.21 Font as DynaPDFFontMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font object used to print the string.
Notes: Deprecated. Better use FontInfo property.

Reading this property creates a new object each time.
Please put object in local variable and avoid querying the property value several times.
(Read only property)

78.107.22 FontFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The PDF font flags.
Notes: (Read and Write property)

78.107.23 FontHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal font object handle.
Notes: In DynaPDF documentation named IFont, a pointer to the C object for the font.
(Read only property)

78.107.24 FontInfo as DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font object used to print the string.
Notes: Reading this property creates a new object each time.
Please put object in local variable and avoid querying the property value several times.
(Read only property)

78.107.25 FontSize as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font size used to display the text.
Notes: (Read only property)

78.107.26 HScale as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Current horizontal scaling, info only.
Notes: (Read only property)

78.107.27 KerningCount as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of kerning records.
Notes: RawKern and Kerning contain always the same number of records.
(Read only property)

78.107.28 Leading as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The leading is already included in the text transformation matrix tm.
Notes: The value of leading must not be considered to calculate the text position.
(Read only property)

78.107.29 LineWidth as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current line width; it can be ignored if the text is not stroked.
Notes: (Read only property)

78.107.30 SpaceWidth as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The space width.
Notes: The space width can be used to determine whether a space character is emulated at a given position. A default space width is set if the font does not contain a space character. Note that many documents emulate spaces with kerning space. Such documents contain usually no space character. It is usually best to use the half space width to determine whether a space character is emulated. This is especially important if a document uses condensed fonts which contain no space character.
(Read only property)

78.107.31 StrokeColor as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The stoke color.
Notes: The stroke color can be ignored if the text draw mode is not dmStroke, dmFillStroke, dmStrokeClip or dmFillStrokeClip since it is then not used to render the text.
(Read only property)

78.107.32 StrokeCS as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function:

This is the current color space in which the color value of StrokeColor is defined.
Notes:

The color space is set in an identical manner like FillCS.
(Read only property)

78.107.33 Text as String

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The raw text line that was found in the content stream.
Notes: This string can contain single or multi-byte characters. This member should no longer be used to extract or replace text. Use the Kerning array instead.
(Read only property)

78.107.34 TextLen as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string length in bytes, not characters!
Notes: If TextLen is zero no text was found or an error occurred.
(Read only property)

78.107.35 TextRise as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text rise is already included in the text transformation matrix tm.
Notes: The
value is always 0.0.
(Read only property)

78.107.36 TextWidth as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text width measured in text space.
Notes: This is the width of the entire kerning array incl. kerning space.
(Read only property)

78.107.37 tm as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The transformation matrix.
Notes: Pre-multiplied text transformation matrix.
(Read only property)

78.107.38 WordSP as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Current word spacing, info only.
Notes: (Read only property)

78.107.39 x as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The position.
Notes: These members are no longer used. All positioning operators are already included in the text transformation matrix tm.
(Read only property)

78.107.40 y as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The position.
Notes: These members are no longer used. All positioning operators are already included in the text transformation matrix tm.
(Read only property)

78.108 class DynaPDFSubmitFormActionMBS

78.108.1 class DynaPDFSubmitFormActionMBS

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for submit form action details.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.108.2 Methods

78.108.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.108.4 Fields(index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries array of field.
Notes: Index is from 0 to FieldCount-1.

78.108.5 Properties

78.108.6 CharSet as String

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional charset in which the form should be submitted.
Notes: (Read only property)

78.108.7 FieldsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of fields in the array.
Notes: (Read only property)

78.108.8 Flags as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Various flags.
Notes: See CreateSubmitAction() for further information.
(Read only property)

78.108.9 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The next action.
Notes: -1 or next action handle to be executed if any.
(Read only property)

78.108.10 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the next action.
Notes: See kat* constants.
(Read only property)

78.108.11 URL as String

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The URL of the script at the Web server that will process the submission.
Notes: (Read only property)

78.109 class DynaPDFSVGMBS

78.109.1 class DynaPDFSVGMBS

MBS DynaPDF Plugin, Plugin Version: 26.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a loaded SVG image.
Example:

```
Var pdf As New DynaPDFMBS
Call pdf.CreateNewPDF

// load a SVG
var file as FolderItem = SpecialFolder.Desktop.Child("dinosaur.svg")
Var svg As DynaPDFSVGMBS = pdf.LoadSVG(file)

// add page and place SVG
Call pdf.Append
Call pdf.InsertSVG(svg, 50, 50, 500, 500)
Call pdf.EndPage

// save it
Call pdf.OpenOutputFile(SpecialFolder.Desktop.Child("dinosaur.pdf"))
Call pdf.CloseFile
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- News from the MBS Xojo Plugin version 26.4
- Add SVG to PDF pages as vector graphics in Xojo
- MBS Xojo Plugins, version 26.4pr2

78.109.2 Methods

78.109.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 26.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

78.109.4 Size(byref width as double, byref height as double, SymbolID as String = "") as Boolean

MBS DynaPDF Plugin, Plugin Version: 26.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Retrieves the width and height of a SVG graphic.
Example:

```
Var svg As DynaPDFSVGMBS = pdf.LoadSVG(item)
If svg <>Nil Then
// we query size of main item
Var width, height As Double
If svg.Size(width, height) Then
MessageBox width.ToString+" x "+height.ToString
End If
End If
```

Notes: The parameter SymbolID is optional, it can be used to load a specific symbol of a SVG symbol file. SVG files are available in different flavors. Regular SVG files contain exactly one graphic but SVG files can also contain more than one graphic or symbol. Such symbol files contain no visible graphic if loaded without a symbol name. The number of symbols that a SVG file contains can be determined with the function GetSVGSymbolCount(). The parameter SymbolID must be the name of the desired symbol or "".

Errors and warnings are passed to the error log. See GetErrLogMessage() for further information.

If the function succeeds the return value is true. If the function fails the return value is false.

78.109.5 SymbolName(Index as UInt32) as String

MBS DynaPDF Plugin, Plugin Version: 26.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Retrieves the name of a SVG symbol.
Notes: A symbol name is usually just some kind of unique string with no further meaning.

78.109.6 SymbolNames as String()

MBS DynaPDF Plugin, Plugin Version: 26.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Retrieves the name of all SVG symbols.
Notes: A symbol name is usually just some kind of unique string with no further meaning.

78.109.7 Properties

78.109.8 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 26.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

78.109.9 SymbolCount as Integer

MBS DynaPDF Plugin, Plugin Version: 26.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the number of symbols or separate SVG files which are included in the file.
Example:

```
Var file As FolderItem = SpecialFolder.Desktop.Child("test.svg")
Var svg As DynaPDFSVGMBS = pdf.LoadSVG(item)
If svg <>Nil Then
// you can check for symbols to loop over all images in the SVG
Var count As Integer = svg.SymbolCount
If count = 0 Then
MessageBox "Failed to load SVG file."
End If
End If
```

Notes: The function considers <svg>elements with an id only. <symbol>elements are not considered because such elements are usually private.

The name of the symbols in the list is returned by the function GetSVGSymbolName().

Please note that SVG files with a symbol count >0 contain usually no visible element if loaded without a valid symbol name.

If the return value is zero, call InsertSVG() without a symbol name. If the return value is greater zero, get the symbol names with GetSVGSymbolName() and pass the desired name to InsertSVG.
(Read only property)

78.109.10 Constants

SVG Flags

Constant	Value	Description
ksvfDefault	0	Default settings.

78.110 class DynaPDFSysFontMBS

78.110.1 class DynaPDFSysFontMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for system font info.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 18.4pr1
- MBS Xojo / Real Studio Plugins, version 15.0pr8

78.110.2 Methods

78.110.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.110.4 NextFont as DynaPDFSysFontMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries next font in the chain of fonts.
Notes: Returns nil on the end of list.

78.110.5 Properties

78.110.6 BaseType as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font type.
Notes: Can be kfbtTrueType, kfbtType1, kfbtOpenType or kfbtStdFont.
(Read and Write property)

78.110.7 CIDOrdering as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: CID Ordering.
Notes: OpenType CID fonts only.
(Read and Write property)

78.110.8 CIDRegistry as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CID Registry.
Notes: OpenType CID fonts only
(Read and Write property)

78.110.9 CIDSupplement as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CID Supplement.
Notes: OpenType CID fonts only
(Read and Write property)

78.110.10 DataOffset as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Data offset.
Notes: (Read and Write property)

78.110.11 FamilyName as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Family name.
Notes: (Read and Write property)

78.110.12 FilePath as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font file path.
Notes: (Read and Write property)

78.110.13 FileSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: File size in bytes.
Notes: (Read and Write property)

78.110.14 Flags as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags.
Notes: Can be combination of kefpAnsiPath, kefpUnicodePath, kefpEmbeddable and kefpEditable. (Read and Write property)

78.110.15 FullName as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Full name.
Notes: (Read and Write property)

78.110.16 Index as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Zero based font index if stored in a TrueType collection.
Notes: (Read and Write property)

78.110.17 IsFixedPitch as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the font is a fixed pitch font.
Notes: (Read and Write property)

78.110.18 Length1 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the clear text portion of a Type1 font.
Notes: (Read and Write property)

78.110.19 Length2 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the eexec encrypted binary portion of a Type1 font.
Notes: (Read and Write property)

78.110.20 PostScriptName as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Postscript mame.
Notes: (Read and Write property)

78.110.21 Style as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font style.
Notes: See kfs* constants.
(Read and Write property)

78.110.22 UnicodeRange1 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Supported unicode ranges, part 1.
Notes: (Read and Write property)

78.110.23 UnicodeRange2 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Supported unicode ranges, part 2.
Notes: (Read and Write property)

78.110.24 UnicodeRange3 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Supported unicode ranges, part 3.
Notes: (Read and Write property)

78.110.25 UnicodeRange4 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Supported unicode ranges, part 4.
Notes: (Read and Write property)

78.111 class DynaPDFTableMBS

78.111.1 class DynaPDFTableMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a table in DynaPDF.
Example:

```
// draw a table with a header row into a new PDF
Var pdf As New DynaPDFMBS
Var file As FolderItem = SpecialFolder.Desktop.Child("table.pdf")
Call pdf.CreateNewPDF(file)
Call pdf.Append

Var table As DynaPDFTableMBS = pdf.CreateTable(4, 3, 500, 20) // 4 rows, 3 columns, 500 pt wide
Call table.AddRows(4, 20)
Var rows() As String = Array("Product", "Count", "Price", "Apple", "5", "2.50", "Melon", "1", "3.20",
"Lemon", "8", "0.80")
For r As Integer = 0 To 3
For c As Integer = 0 To 2
Call table.SetCellText(r, c, DynaPDFMBS.ktaLeft, DynaPDFMBS.kcoCenter, rows(r * 3 + c))
Next
Next
Call table.SetFont(0, -1, "Helvetica", DynaPDFMBS.kfsBold) // -1 = all columns of row 0
Call table.DrawTable(50, 50)

Call pdf.EndPage
Call pdf.CloseFile
```

Notes: This tables are more for doing a layout, but can also be used to show a list or a worksheet like in Excel.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.111.2 Methods

78.111.3 AddColumn(left as boolean, width as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a column to the table.
See also AddColumn function in DynaPDF manual.

78.111.4 AddRow(height as Double = 0.0) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a row with given height.
See also AddRow function in DynaPDF manual.

78.111.5 AddRows(count as UInt32, height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a couple of rows with given height.
See also AddRows function in DynaPDF manual.

78.111.6 ClearColumn(Col as Integer, Types as Integer)

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function deletes the content in the specified column in all rows.
Notes: The parameter Types is described in ClearContent() below.
See also ClearColumn function in DynaPDF manual.

78.111.7 ClearContent(Types as Integer)

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears content of table.
Notes: See kdc constants for possible flags.
See also ClearContent function in DynaPDF manual.

78.111.8 ClearRow(Row as Integer, Types as Integer)

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function deletes the content in the specified row.
Notes: The parameter Types is described in ClearContent().
See also ClearRow function in DynaPDF manual.

78.111.9 Constructor

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.111.10 DeleteColumn(column as UInt32)

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes the column.

78.111.11 DeleteRow(row as UInt32)

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes the row with the given index.
See also DeleteRow function in DynaPDF manual.

78.111.12 DeleteRows

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes all rows.
See also DeleteRows function in DynaPDF manual.

78.111.13 DrawTable(x as Double, y as Double, MaxHeight as Double = 0.0) as Double

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the table at the given position into the PDF:
Notes: The function draws the table on the specified position. The x/y-coordinates specify the top left cornerof the table. The table flows always from top to bottom.

The function must be executed in a while statement if the parameter MaxHeight is set to a value greater than zero.

The function draws the header rows if any and at least one row to avoid an endless loop if themaximum height would be smaller as the first row height.

If the function succeeds the return value is the height of the table that was drawn so that additionalcontents can be drawn below the table if necessary. If the function fails the return value is -1.
See also DrawTable function in DynaPDF manual.

78.111.14 GetFirstRow as Integer

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries first row from last draw operation.
See also GetFirstRow function in DynaPDF manual.

78.111.15 GetFlags(Row as Integer, Column as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries flag for a cell, a column or a row.
Notes: If Row is -1, only column flags are returned. If Column is -1, the row flags are returned for given row.
See also GetFlags function in DynaPDF manual.

78.111.16 GetNextHeight(MaxHeight as Double, byref NextRow as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the next row.
Example:

```
Var pdf as new DynaPDFMBS
call pdf.CreateNewPDF(nil)
call pdf.Append

// create dummy table with 20 rows, 1 column and 500 points width. 20 points per row by default.
Var table as DynaPDFTableMBS = pdf.CreateTable(20, 1, 500.0, 20.0)

// fill in dummy data
for i as Integer = 1 to 20
Var rowNum as Integer = table.AddRow
call table.SetCellText(rowNum, 0, pdf.ktaLeft, table.kcoCenter, str(i))
next

// and do some calculations
Var nextrow as Integer
Var h as Double = table.GetNextHeight(0, nextrow)

MessageBox str(h)+" with no limit."

Var h2 as Double = table.GetNextHeight(200, nextrow)

MessageBox str(h2)+" with limit of 200 and rows till "+str(nextrow-1)

break
```

Notes: If MaxHeight is zero, returns the height of table.
If MaxHeight is the height of space available, plugin calculates the effective height of table and which row would be the next one.
Returns negative number on error.
See also GetNextHeight function in DynaPDF manual.

78.111.17 GetNextRow as Integer

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries next row of last draw operation.
See also GetNextRow function in DynaPDF manual.

78.111.18 GetNumCols as Integer

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of columns of last draw operation.
See also GetNumCols function in DynaPDF manual.

78.111.19 GetNumRows as Integer

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of rows of last draw operation.
See also GetNumRows function in DynaPDF manual.

78.111.20 GetTableHeight as Double

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the table height.
See also GetTableHeight function in DynaPDF manual.

78.111.21 GetTableWidth as Double

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates table width.
See also GetTableWidth function in DynaPDF manual.

78.111.22 HaveMore as boolean

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether there are more rows to draw.
Notes: If you draw a table, you can loop and fill pages until the whole table is drawn.
See also HaveMore function in DynaPDF manual.

78.111.23 SetBackColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the back color of the table, a row or cells.
Example:

```
Var pdf as DynaPDFMBS // your PDF environment
Var tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 20.0) // make some table

const allRows = -1
const allColumns = -1

// add a few rows
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)

// row 0 in 100% Cyan
call tbl.SetBackColor(0, allColumns, array(255,0,0,0), pdf.kcsDeviceCMYK)
// row 1 in 100% Cyan
call tbl.SetBackColor(1, allColumns, array(0, 255, 0, 0), pdf.kcsDeviceCMYK)
// row 2 in 100% Cyan
call tbl.SetBackColor(2, allColumns, array(0, 0, 255, 0), pdf.kcsDeviceCMYK)
// row 3 in RGB red with 50% transparency
call tbl.SetBackColor(3, allColumns, array(255, 0, 0))
```

Notes: Default is none (transparent)
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 78.111.24 SetBackColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean 13616

78.111.24 SetBackColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the back color of the table, a row or cells.
Example:

```
Var pdf as DynaPDFMBS // your PDF environment
Var tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 20.0) // make some table

// now fill all rows and columns with RGB red specified by integer values
const allRows = -1
const allColumns = -1
call tbl.SetBackColor(allRows, allColumns, 255, 0, 0)
```

Notes: Default is none (transparent)
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 78.111.23 SetBackColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 13616

78.111.25 SetBackColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the back color of the table, a row or cells.
Example:

```
Var pdf as DynaPDFMBS // your PDF environment
Var tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 100.0) // make some table

const allRows = -1
const allColumns = -1

// add a few rows
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)

// row 0 in 100% Cyan
call tbl.SetBackColorFloat(0, allColumns, array(1.0, 0.0, 0.0, 0.0), pdf.kcsDeviceCMYK)
// row 1 in 100% Cyan
call tbl.SetBackColorFloat(1, allColumns, array(0.0, 1.0, 0.0, 0.0), pdf.kcsDeviceCMYK)
// row 2 in 100% Cyan
call tbl.SetBackColorFloat(2, allColumns, array(0.0, 0.0, 1.0, 0.0), pdf.kcsDeviceCMYK)
// row 3 in RGB red
call tbl.SetBackColorFloat(3, allColumns, array(1.0, 0.0, 0.0))
```

Notes: Default is none (transparent)
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 78.111.26 SetBackColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean 13618

78.111.26 SetBackColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the back color of the table, a row or cells.
Example:

```
Var pdf as DynaPDFMBS // your PDF environment
Var tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 20.0) // make some table

// now fill all rows and columns with RGB red specified by double values
const allRows = -1
const allColumns = -1
call tbl.SetBackColorFloat(allRows, allColumns, 1.0, 0.0, 0.0)
```

Notes: Default is none (transparent)
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 78.111.25 SetBackColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 13617

78.111.27 SetBackColorValue(Row as Integer, Column as Integer, TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the back color of the table, a row or cells.
Example:

```
Var pdf as DynaPDFMBS // your PDF environment
Var tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 20.0) // make some table
```

```
// now fill all rows and columns with RGB red specified by RGB() call
const allRows = -1
const allColumns = -1

Var c as Integer = DynaPDFMBS.RGB(255, 0, 0)
call tbl.SetBackColorValue(allRows, allColumns, DynaPDFMBS.kcsDeviceRGB, c)
```

Notes: Default is none (transparent)
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

78.111.28 SetBorderColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the border color of the table, a row or cells.
Example:

```
// set color in CMYK with cyan (255 = 100%)
Call tbl.SetBorderColor(-1, -1, Array(255, 0, 0, 0), pdf.kesDeviceCMYK)
Call tbl.SetBorderWidth(-1, -1, 2.0, 2.0, 2.0, 2.0)
```

Notes: Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 78.111.29 SetBorderColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean 13619

78.111.29 SetBorderColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the border color of the table, a row or cells.

Example:

```
const AllRows = -1
const AllColumns = -1

// set gray color for all borders to RGB(100,100,100)
call tbl.SetBorderColor(AllRows, AllColumns, 100, 100, 100)

// set border for all cells with fine line
call table.SetBorderWidth(AllRows, AllColumns, 0.5, 0.5, 0.5, 0.5)
```

Notes: Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 78.111.28 SetBorderColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 13619

78.111.30 SetBorderColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the border color of the table, a row or cells.
Example:

```
// set color in CMYK with magenta (1.0 = 100%)
Call tbl.SetBorderColorFloat(-1, -1, Array(0.0, 1.0, 0.0, 0.0), pdf.kesDeviceCMYK)
Call tbl.SetBorderWidth(-1, -1, 2.0, 2.0, 2.0, 2.0)
```

Notes: Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 78.111.31 SetBorderColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean 13621

78.111.31 SetBorderColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the border color of the table, a row or cells.
Example:

```
// set color in RGB with blue (1.0 = 100%)
Call tbl.SetBorderColorFloat(-1, -1, 0.0, 0.0, 1.0)
Call tbl.SetBorderWidth(-1, -1, 2.0, 2.0, 2.0, 2.0)
```

Notes: Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 78.111.30 SetBorderColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 13620

78.111.32 SetBorderColorValue(Row as Integer, Column as Integer, TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the border color of the table, a row or cells.
Example:

```
// set color in CMYK with magenta (255 = 100%)
Call tbl.SetBorderColorValue(-1, -1, pdf.kesDeviceCMYK, pdf.CMYK(0, 255, 0, 0))
Call tbl.SetBorderWidth(-1, -1, 2.0, 2.0, 2.0, 2.0)

// set color in RGB with green (255 = 100%)
Call tbl.SetBorderColorValue(row, -1, pdf.kesDeviceRGB, pdf.RGB(0, 255, 0))
Call tbl.SetBorderWidth(row, -1, 2.0, 2.0, 2.0, 2.0)
```

Notes: Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

78.111.33 SetBorderWidth(Row as Integer, Column as Integer, left as Double, top as Double, right as Double, bottom as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the border width of the table, a row or cells.
Example:

```
// set border for a row to right/bottom with fine line
call table.SetBorderWidth(rowNum, -1, 0.0, 0.0, 0.5, 0.5)
```

Notes: Default value is 0.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

78.111.34 SetCellAction(Row as Integer, Column as Integer, ActionHandle as UInt32, Mode as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an invisible link annotation for the specified cell or table and associates the provided action with that annotation.
Notes: The result is an interactive area that executes the action if the user clicks on cell or table.
A cell action is always a background object that is created in the size of the background area when the table is drawn.

Unlike other cell objects like images, text, and so on, a cell link is no persistent object because the action will be deleted when then PDF file in memory will be closed or when destructor will be called.
If the table should be drawn into more than one PDF file then re-create the actions and cell action before drawing the table into the next PDF file.

Actions can be created with functions like CreateGoToAction(), CreateGoToRAction(), and so on.

If the function succeeds the return value is true. If the function fails the return value is false.
See also SetCellAction function in DynaPDF manual.

78.111.35 SetCellDashPattern(Row as Integer, Column as Integer, CellSide as Integer, LineCapStyle as Integer, values() as Double, Phase as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Apply a line dash pattern to cell, row, and table borders.

Notes: Pass kcsTop, kcsBottom, kcsLeft or kcsRight for CellSide parameter.
See also SetCellDashPattern function in DynaPDF manual.

78.111.36 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as FolderItem, index as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the cell image.
See also SetCellImage function in DynaPDF manual.
See also:

- 78.111.37 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as string, index as Integer = 0) as boolean 13623

78.111.37 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as string, index as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the cell image.
See also SetCellImage function in DynaPDF manual.
See also:

- 78.111.36 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as FolderItem, index as Integer = 0) as boolean 13623

78.111.38 SetCellImageAnsi(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as string, index as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets cell image.
See also SetCellImage function in DynaPDF manual.
See also:

- 78.111.36 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer,

VAlign as Integer, Width as Double, Height as Double, path as FolderItem, index as Integer = 0) as boolean 13623

- 78.111.37 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as string, index as Integer = 0) as boolean 13623

78.111.39 SetCellImageData(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, ImageData as MemoryBlock, index as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets cell image.
Example:

```
Var PictureData as memoryblock // from database maybe?
Var w as Double = 300 // destination size
Var h as Double = 200
Var row as Integer
Var column as Integer

Var table as DynaPDFTableMBS // your table

call table.SetCellImageData(row, column, true, table.kcoCenter, table.kcoCenter, w, h, PictureData, 0)
```

Notes: Returns true on success.
See also:

- 78.111.40 SetCellImageData(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, ImageData as string, index as Integer = 0) as boolean 13624

78.111.40 SetCellImageData(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, ImageData as string, index as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets cell image.
Example:

```
Var PictureData as string // from database maybe?
Var w as Double = 300 // destination size
```

```
Var h as Double = 200
Var row as Integer
Var column as Integer

Var table as DynaPDFTableMBS // your table

call table.SetCellImageData(row, column, true, table.kcoCenter, table.kcoCenter, w, h, PictureData, 0)
```

See also:

- 78.111.39 SetCellImageData(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, ImageData as MemoryBlock, index as Integer = 0) as boolean 13624

78.111.41 SetCellOrientation(Row as Integer, Column as Integer, Orientation as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the cell orientation.
Notes: See dynapdf_help.pdf for details.
See also SetCellOrientation function in DynaPDF manual.

78.111.42 SetCellPadding(Row as Integer, Column as Integer, left as Double, top as Double, right as Double, bottom as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the cell padding of the table, a row or cells.
Notes: Default is zero.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

78.111.43 SetCellPicture(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as double, Height as Double, Pic as Picture) as boolean

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets cell image with given picture.
Example:

```
Var Pic as picture // your picture from database maybe?
Var w as Double = 300 // destination size
```

```
Var h as Double = 200
Var row as Integer
Var column as Integer

Var table as DynaPDFTableMBS // your table

call table.SetCellPicture(row, column, true, table.kcoCenter, table.kcoCenter, w, h, Pic)
```

Notes: Returns true on success.

78.111.44 SetCellSpacing(Row as Integer, Column as Integer, left as Double, top as Double, right as Double, bottom as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the cell spacing of the table, a row or cells.
Notes: Default is zero.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

78.111.45 SetCellTable(Row as Integer, Column as Integer, HAlign as Integer, VAlign as Integer, SubTable as DynaPDFTableMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a sub table into the specfied cell.
Notes: A sub table is always a foreground object that has a strong width and height. That means, if the cell is not large enough then it will be expanded.
Note that the function creates no copy of the table. Do not delete the sub table when it is used by another table.
In programming languages which use reference counting like Xojo, it is important to delete the tables in right order. Delete first the tables which contain references to sub tables. Finally, delete the sub tables.

If the function succeeds the return value is true. If the function fails the return value is false.
See dynapdf_help.pdf for details.
See also SetCellTable function in DynaPDF manual.

78.111.46 SetCellTemplate(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, TmplHandle as Integer, Width as Double = 0, Height as Double = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a template into the specified cell.
Notes: See dynapdf_help.pdf for details.
See also SetCellTemplate function in DynaPDF manual.

78.111.47 SetCellText(Row as Integer, Column as Integer, HTextAlign as Integer, VAlign as Integer, text as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the text of a cell.
Notes: Use DynaPDFMBS.ktaLeft and similar text align constants for HAlign.
But use DynaPDFTableMBS.kcoCenter and similar cell orientation constants for Valign.
See also SetCellText function in DynaPDF manual.

78.111.48 SetCellTextAnsi(Row as Integer, Column as Integer, HTextAlign as Integer, VAlign as Integer, text as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the text of a cell with ANSI text.
Notes: Use DynaPDFMBS.ktaLeft and similar text align constants for HAlign.
But use DynaPDFTableMBS.kcoCenter and similar cell orientation constants for Valign.
See also SetCellText function in DynaPDF manual.

78.111.49 SetColOrRowSpan(Row as Integer, Column as Integer, Value as UInt32, IsColSpan as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets col or row span for a specific cell.
Notes: The parameter Value must be greater 1 and Row and Col must be valid row and column indexes.

Contents of spanned cells will be deleted. Only contents of the cell that defines col or row span is drawn.

It is allowed to set Value to a higher value than columns or rows are currently available. The value is adjusted to the valid range when the table is drawn or when the height is calculated.

Note that spanned cells cannot overlap. The function checks whether col or row span was already defined in the desired range.

On success returns true, other false.
See also SetColOrRowSpan function in DynaPDF manual.

78.111.50 SetColWidth(column as UInt32, Width as Double, ExtTable as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the column width for a column.
See also SetColWidth function in DynaPDF manual.

78.111.51 SetFlags(Row as Integer, Column as Integer, Flags as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the flags for a cell.
Example:

```
Var table as DynaPDFTableMBS // your table

// mark this row as being a header row, so it's repeated on all pages
call table.SetFlags(rowNum, 0, table.ktfHeaderRow)
```

Notes: If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetFlags function in DynaPDF manual.

78.111.52 SetFont(Row as Integer, Column as Integer, name as string, Style as Integer = 0, Embed as Boolean = true, CodePage as Integer = &h27) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the font of the table, a row or cells.
Example:

```
Var tbl as DynaPDFTableMBS // your table

// set font for all cells
call tbl.SetFont -1, -1, "Helvetica", pdf.kfsNone, true, pdf.kcpUnicode
// set bold font for a special cell
call tbl.SetFont rowNum, 2, "Helvetica", pdf.kfsBold, true, pdf.kcpUnicode
```

Notes: Default is Helvetica, Code page 1252, Embed false.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetFont function in DynaPDF manual.

78.111.53 SetFontAnsi(Row as Integer, Column as Integer, name as string, Style as Integer = 0, Embed as Boolean = true, CodePage as Integer = &h27) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the font of the table, a row or cells.
Notes: Default is Helvetica, Code page 1252, Embed false.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetFont function in DynaPDF manual.

78.111.54 SetFontSelMode(Row as Integer, Column as Integer, value as Int32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the font selection mode of the table, a row or cells.
Notes: Default is ksmFamilyName.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetFontSelMode function in DynaPDF manual.

78.111.55 SetFontSize(Row as Integer, Column as Integer, size as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the font size of the table, a row or cells.
Notes: Default is 10.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetFontSize function in DynaPDF manual.

78.111.56 SetGridHorizontalColor(channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the horizontal grid color.
Notes: Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 78.111.57 SetGridHorizontalColor(paramarray channels as Integer) as boolean 13630

78.111.57 SetGridHorizontalColor(paramarray channels as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the horizontal grid color.
Notes: Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 78.111.56 SetGridHorizontalColor(channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 13629

78.111.58 SetGridHorizontalColorFloat(channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the horizontal grid color.
Notes: Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 78.111.59 SetGridHorizontalColorFloat(paramarray channels as Double) as boolean 13630

78.111.59 SetGridHorizontalColorFloat(paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the horizontal grid color.
Notes: Default is black.

If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 78.111.58 SetGridHorizontalColorFloat(channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 13630

78.111.60 SetGridHorizontalColorValue(TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the horizontal grid color.
Notes: Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

78.111.61 SetGridVerticalColor(channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the vertical grid color.
Notes: Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 78.111.62 SetGridVerticalColor(paramarray channels as Integer) as boolean 13631

78.111.62 SetGridVerticalColor(paramarray channels as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the vertical grid color.
Notes: Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 78.111.61 SetGridVerticalColor(channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 13631

78.111.63 SetGridVerticalColorFloat(channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the vertical grid color.
Notes: Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 78.111.64 SetGridVerticalColorFloat(paramarray channels as Double) as boolean 13632

78.111.64 SetGridVerticalColorFloat(paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the vertical grid color.
Notes: Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 78.111.63 SetGridVerticalColorFloat(channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 13632

78.111.65 SetGridVerticalColorValue(TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the vertical grid color.
Notes: Default is black.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with

gray color.

78.111.66 SetGridWidth(h as Double, v as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the grid width.
Notes: Default is 0.
See also SetGridWidth function in DynaPDF manual.

78.111.67 SetImageColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the image color of the table, a row or cells.
Notes: Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 78.111.68 SetImageColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean 13633

78.111.68 SetImageColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the image color of the table, a row or cells.
Notes: Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 78.111.67 SetImageColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 13633

78.111.69 SetImageColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the image color of the table, a row or cells.
Notes: Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 78.111.70 SetImageColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean 13634

78.111.70 SetImageColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the image color of the table, a row or cells.
Notes: Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 78.111.69 SetImageColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 13634

78.111.71 SetImageColorValue(Row as Integer, Column as Integer, TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the image color.
Notes: Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

78.111.72 SetPDF(pdf as DynaPDFMBS)

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the target PDF for this table.

78.111.73 SetRowHeight(Row as Integer, value as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the row height of a row.
See also SetRowHeight function in DynaPDF manual.

78.111.74 SetTableWidth(Value as single, AdjustType as Integer, MinColWidth as single)

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the width of the table.
Notes: At least one column must be modified when the width will be changed. The parameter AdjustType specifies how the column width should be modified. If the new width is larger, then the difference can be added to the left or right column, or all columns can get a unique width (TableWidth / NumColumns). The parameter MinColWidth is ignored in this case.
If the new width is smaller then the difference must be subtracted from the columns. The parameter MinColWidth specifies in this case the minimum width of columns that must be adjusted. It is only used if AdjustType is not set to kcoaUniqueWidth. The column widths are adjusted starting from the left or right side as specified. If the width of the first column is not large enough to subtract the difference, then the minimum column width is set to the column. This adjustment continues until the gap is zero. If the new table width is smaller as MinColWidth * NumColumns then the widths of the remaining columns will be set to zero. Such cases should be avoided since the column widths must be adjusted again when the table is drawn.

kcoaUniqueWidth	Set the column widths to TableWidth / NumColumns
kcoaAdjLeft	Adjust the widths starting from the left side
kcoaAdjRight	Adjust the widths starting from the right side

See dynapdf_help manual for details.
Returns true on success or false on failure.
See also SetTableWidth function in DynaPDF manual.

78.111.75 SetTextColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the text color of the table, a row or cells.
Notes: Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 78.111.76 SetTextColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean 13636

78.111.76 SetTextColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the text color of the table, a row or cells.
Notes: Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 78.111.75 SetTextColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 13636

78.111.77 SetTextColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the text color of the table, a row or cells.
Notes: Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 78.111.78 SetTextColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean 13637

78.111.78 SetTextColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the text color of the table, a row or cells.
Notes: Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 78.111.77 SetTextColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 13636

78.111.79 SetTextColorValue(Row as Integer, Column as Integer, TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the horizontal grid color.
Notes: Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

78.111.80 Properties

78.111.81 Parent as Variant

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reference to parent object.
Notes: (Read only property)

78.111.82 PDF as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reference to parent PDF object.
Notes: (Read only property)

78.111.83 Constants

Cell Content Type Constants

Constant	Value	Description
kcctAction	4	Action
kcctImage	1	Image.
kcctTable	2	Table.
kcctTemplate	3	Template.
kcctText	0	Text

Column Adjustment Constants

Constant	Value	Description
kcoaAdjLeft	1	Adjust the widths starting from the left side.
kcoaAdjRight	2	Adjust the widths starting from the right side.
kcoaUniqueWidth	0	Set the column widths to TableWidth / NumColumns.

Cell Orientation

Constant	Value	Description
kcoBottom	1	Bottom
kcoCenter	2	Center
kcoLeft	0	Left
kcoRight	1	Right
kcoTop	0	Top

Cell Sides

Constant	Value	Description
kcsBottom	1	Bottom side
kcsLeft	0	Left side
kcsRight	2	Right side
kcsTop	3	Top side

Delete Content Options

Constant	Value	Description
kdcAction	16	Delete action.
kdcAllCont	31	Delete all content types
kdcBackGround	&h20000000	Delete background objects
kdcBoth	&h30000000	Delete both foreground and background objects
kdcForeGround	&h10000000	Delete foreground objects
kdcImage	2	Delete image.
kdcTable	8	Delete table.
kdcTemplate	4	Template table.
kdcText	1	Delete text. Text is always a foreground object

Cell flags Constants

Constant	Value	Description
ktfAddFlags	32	If used when setting flags, the flags are not replacing existing values, but added. This way a call can set one flag and later another call can add a second flag without clearing first one.
ktfDefault	0	Default flag.
ktfFixedTextHeight	64	If set, text does not increase the row height if necessary. The row height must be non-zero in this case. The flag is ignored otherwise.
ktfHeaderRow	2	Header rows are drawn first after a page break occurred
ktfNoLineBreak	4	Prohibit line breaks in cells whith text ->Can be set to the entire table, columns, rows, and cells.
ktfScaleToRect	8	If set, the specified output width and height represents the maximum size of the image or template. The image or template is scaled into this rectangle without changing the aspect ratio.
ktfStatic	1	This flag marks a row, column, or cell as static to avoid the deletion of the content with ClearContent().
ktfUseImageCS	16	If set, images are inserted in the native image color space.

78.112 class DynaPDFTextRecordAMBS

78.112.1 class DynaPDFTextRecordAMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an ANSI text.
Blog Entries

- DynaPDF Text Position Examples updated
- DynaPDF Text Position Examples

78.112.2 Properties

78.112.3 Advance as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The advance value for this text.
Notes: Negative values move the cursor the right, positive to the left
(Read only property)

78.112.4 Length as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raw text length in bytes.
Notes: (Read and Write property)

78.112.5 Text as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raw text.
Notes: (Read and Write property)

78.113 class DynaPDFTextRecordWMBS

78.113.1 class DynaPDFTextRecordWMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an unicode text.
Blog Entries

- DynaPDF Text Position Examples updated
- DynaPDF Text Position Examples

78.113.2 Properties

78.113.3 Advance as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The advance value for this text.
Notes: Negative values move the cursor the right, positive to the left
(Read only property)

78.113.4 Length as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length in characters.
Notes: (Read and Write property)

78.113.5 Text as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Already translated Unicode string.
Notes: (Read and Write property)

78.113.6 Width as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: String width measured in text space.
Notes: (Read only property)

78.114 class DynaPDFURIActionMBS

78.114.1 class DynaPDFURIActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an URL action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.114.2 Methods

78.114.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.114.4 Properties

78.114.5 BaseURL as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, if defined in the Catalog object.
Notes: (Read only property)

78.114.6 IsMap as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A flag specifying whether to track the mouse position when the URI is resolved.
Notes: e.g. http://test.org?50,70.
(Read only property)

78.114.7 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle to the next action.
Notes: -1 or next action handle to be executed if any
(Read only property)

78.114.8 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the next action.
Notes: Only set if NextAction is >= 0.
(Read only property)

78.114.9 URI as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Uniform Resource Identifier.
Notes: (Read only property)

78.115 class DynaPDFVersionInfoMBS

78.115.1 class DynaPDFVersionInfoMBS

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for version information.
Example:

```
Var d As New DynaPDFMBS
Var v As DynaPDFVersionInfoMBS = d.GetPDFVersionEx

Break // check in debugger
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

78.115.2 Methods

78.115.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

78.115.4 Properties

78.115.5 FXConfLevel as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The conformance level for ZUGFeRD, Factur-X or XRechnung.
Notes: (Read only property)

78.115.6 FXDocName as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The document file name for ZUGFeRD, Factur-X or XRechnung.
Notes: (Read only property)

78.115.7 FXDocType as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The document type for ZUGFeRD, Factur-X or XRechnung.
Notes: (Read only property)

78.115.8 FXVersion as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The version for ZUGFeRD, Factur-X or XRechnung.
Notes: (Read only property)

78.115.9 MainVer as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The main version.
Notes: Set only if the file conforms to a specific PDF standard, e.g. "PDF/X // 1a:2003", "PDF/A 3b", and so on.
(Read only property)

78.115.10 Major as Integer

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: PDF major version.
Notes: e.g. 1
(Read only property)

78.115.11 Minor as Integer

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: PDF minor version.
Notes: e.g. 7
(Read only property)

78.115.12 PDFAConformance as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The PDF/A conformance.
Notes: e.g. A, B, E, F, U, or UA.
(Read only property)

78.115.13 PDFAVersion as Integer

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The PDF/A version.
Notes: If greater zero, this is a PDF/A file.
(Read only property)

78.115.14 PDFEVersion as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The PDF/E version.
Notes: e.g. PDF/E-1
(Read only property)

78.115.15 PDFVTModDate as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The PDF/VT Modification date.
Notes: e.g. 2016-05-07T15:42:23+01:00
(Read only property)

78.115.16 PDFVTVersion as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The PDF/VT version.
Notes: e.g. PDF/VT-2
(Read only property)

78.115.17 PDFXConformance as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The PDF/X conformance.
Notes: e.g. PDF/X-1a:2001 or PDF/X-1a:2003. PDF/X 3 and above do not set this key anymore.
(Read only property)

78.115.18 PDFXVersion as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The PDF/X Version string.
Notes: e.g. PDF/X-1:2001, PDF/X-1:2003, and so on.
(Read only property)

78.115.19 SubVer as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The sub version string.
Notes: e.g. "ZUGFeRD 2.0", "Factur-X", and so on
(Read only property)

78.115.20 VersionConst as Integer

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The version number constant for DynaPDF.
Notes: If >= 0 this is the TPDFVersion constant as integer.
If the version is not supported by DynaPDF, this member is set to -1.
(Read only property)

78.116 class DynaPDFViewportMBS

78.116.1 class DynaPDFViewportMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The viewport details class.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

78.116.4 Properties

78.116.5 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Bounding box.
Notes: (Read and Write property)

78.116.6 Measure as DynaPDFMeasureMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional measure dictionary.
Notes: (Read and Write property)

78.116.7 Name as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional name.
Notes: (Read and Write property)

78.116.8 PtData as DynaPDFPointDataDictionaryMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Point Data dictionary.
Notes: (Read and Write property)

78.117 class DynaPDFXFAStreamMBS

78.117.1 class DynaPDFXFAStreamMBS

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a XFA stream.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

Function: The private constructor.

78.117.4 Properties

78.117.5 Buffer as String

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: XML Stream.
Notes: (Read and Write property)

78.117.6 Index as Integer

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The stream index.
Notes: (Read and Write property)

78.117.7 Name as String

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Stream name.
Notes: (Read and Write property)

78.117.8 Size as Integer

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Buffer size in bytes.
Notes: (Read and Write property)

Chapter 79

EmailParser

79.1 class MimeAddressListMBS

79.1.1 class MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a list of addresses.
Example:

```
// parse the recipients of an email header
Var list As New MimeAddressListMBS("John Smith <john@example.com>, Team: anna@example.com, bert@example.com;")
Var lines() As String
For Each a As MimeAddressMBS In list.Addresses
If a.isGroup Then
lines.Add "Group: " + a.StringValue
Else
lines.Add a.Mailbox.LabelDecoded + " <" + a.Mailbox.Email + ">"
End If
Next
MessageBox list.Count.ToString + " addresses" + EndOfLine + String.FromArray(lines, EndOfLine)
```

Xojo Developer Magazine

- 22.1, page 80: Parse your Mails in Xojo, Using EmailParser by Stefanie Juchmes

79.1.2 Methods

79.1.3 Addresses as MimeAddressMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of addresses.
See also:

- 79.1.4 Addresses(index as Integer) as MimeAddressMBS 13654

79.1.4 Addresses(index as Integer) as MimeAddressMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries address by index.
Notes: Index is zero based.
See also:

- 79.1.3 Addresses as MimeAddressMBS() 13654

79.1.5 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses a text with addresses.

79.1.6 Properties

79.1.7 AddressesVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of addresses.
Notes: This property is only to see array in debugger.
(Read only property)

79.1.8 Count as Integer

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of addresses in this list.
Notes: (Read only property)

79.1.9 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The address list as a string.
Notes: (Read only property)

79.2 class MimeAddressMBS

79.2.1 class MimeAddressMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an address which can be an email or a group.
Xojo Developer Magazine

- 22.1, page 80: Parse your Mails in Xojo, Using EmailParser by Stefanie Juchmes

79.2.2 Methods

79.2.3 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses an address from text.
Example:

```
Var m as new MimeAddressMBS("=?utf-8?Q?M=C3=BCller?= <zivi@mac.com>")
MessageBox m.Mailbox.LabelDecoded
```

79.2.4 Properties

79.2.5 Group as MimeGroupMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The group for this address.
Notes: (Read only property)

79.2.6 isGroup as Boolean

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this address is a group.
Notes: (Read only property)

79.2.7 Mailbox as MimeMailboxMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mailbox for this address.
Notes: (Read only property)

79.2.8 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The address as a string.
Notes: (Read only property)

79.3 class MimeAttachmentMBS

79.3.1 class MimeAttachmentMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an attachment.
Example:

```
// save all attachments of an email file to a folder
Var mail As New MimeEmailMBS(SpecialFolder.Desktop.Child("mail.eml"))
Var folder As FolderItem = SpecialFolder.Desktop.Child("Attachments")
If Not folder.Exists Then folder.CreateFolder

For Each a As MimeAttachmentMBS In mail.Attachments
If a.Filename = "" Then Continue
Var stream As BinaryStream = BinaryStream.Create(folder.Child(a.Filename), True)
stream.Write a.Data
stream.Close
System.DebugLog "Saved " + a.Filename + " (" + a.MimeType + ", " + a.Data.Bytes.ToString + " bytes)"
Next
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

79.3.2 Methods

79.3.3 Constructor

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

79.3.4 Properties

79.3.5 Body as MimeBodyMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reference to the body of this attachment.
Notes: The StringValue of the body has the attachment's encoded data.
(Read only property)

79.3.6 ContentDescription as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content description.
Notes: (Read only property)

79.3.7 ContentDisposition as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content disposition.
Notes: e.g. inline; filename="agb.pdf"
(Read only property)

79.3.8 contentId as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content ID for inline graphics.
Notes: e.g. c1441531740.48804.1@MacbookPro-Christian.local
(Read only property)

79.3.9 ContentTransferEncoding as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content transfer encoding.
Notes: e.g. base64
(Read only property)

79.3.10 ContentType as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content type.
Notes: e.g. text/plain, charset=utf-8 or application/pdf; name="agb.pdf"
(Read only property)

79.3.11 Data as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data for this attachment.
Notes: Decoded for your convenience.
(Read only property)

79.3.12 Filename as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The filename for this attachment.
Notes: The class pulls this from various header fields and decodes it if necessary.
The file name may contain invalid characters for your platform.
Like double colons for OS X or backslash for Windows.
(Read only property)

79.3.13 Header as MimeHeaderMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The header details for this attachment.
Notes: (Read only property)

79.3.14 MimeType as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime type of the attachment.
Notes: e.g. "application/pdf" for a PDF file
See also MimeTypeToFileExtensionMBS function.
(Read only property)

79.3.15 MimeVersion as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime version of the attachment.
Notes: e.g. "1.0"
(Read only property)

79.4 class MimeBodyMBS

79.4.1 class MimeBodyMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a body of a mime entity.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

79.4.2 Methods

79.4.3 Constructor

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

79.4.4 Parts as MimeEntityMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of parts.
Notes: Mime Entities are organized often in a tree. The email is an entity and has sub entities for html, plain text and attachments.
See also:

- 79.4.5 Parts(index as Integer) as MimeEntityMBS 13662

79.4.5 Parts(index as Integer) as MimeEntityMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries part by index.
Notes: Index is zero based.
See also:

- 79.4.4 Parts as MimeEntityMBS() 13662

79.4.6 Properties

79.4.7 epilogue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The epilogue of the body.
Notes: (Read only property)

79.4.8 PartsVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of parts.
Notes: Mime Entities are organized often in a tree. The email is an entity and has sub entities for html, plain text and attachments.
This property is only to see array in debugger.
(Read only property)

79.4.9 preamble as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The preamble of the body.
Notes: This is sometimes a message like: "This is a MIME encoded message."
(Read only property)

79.4.10 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string value of the body.
Notes: (Read only property)

79.5 class MimeEmailMBS

79.5.1 class MimeEmailMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an email.
Example:

```
// parse an email file and save its attachments
Var mail As New MimeEmailMBS(SpecialFolder.Desktop.Child("message.eml"))

Var lines() As String
lines.Add "Subject: " + mail.Subject
lines.Add "Text: " + mail.PlainText.Left(200)

For Each att As MimeAttachmentMBS In mail.Attachments
lines.Add "Attachment: " + att.Filename + " (" + att.MimeType + ", " + att.Data.Bytes.ToString + "
bytes)"

Var stream As BinaryStream = BinaryStream.Create(SpecialFolder.Desktop.Child(att.Filename), True)
stream.Write att.Data
stream.Close
Next

MessageBox String.FromArray(lines, EndOfLine)
```

Notes: Subclass of the MimeEntityMBS class.

79.5.2 Methods

79.5.3 Attachments as MimeAttachmentMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of attachments.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
Var m as new MimeEmailMBS(f)

MessageBox str(m.Attachments.Count)+" attachments and "+str(m.Inlines.Count)+" inlines"

for each a as MimeAttachmentMBS in m.Inlines
MessageBox "Inline: " + a.Filename
next
```

See also:

- 79.5.4 Attachments(index as Integer) as MimeAttachmentMBS 13665

79.5.4 Attachments(index as Integer) as MimeAttachmentMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries attachment by index.
Notes: Index is zero based.
See also:

- 79.5.3 Attachments as MimeAttachmentMBS() 13665

79.5.5 Constructor(Content as MemoryBlock)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses an email from a memoryblock.
See also:

- 79.5.6 Constructor(Content as string) 13666
- 79.5.7 Constructor(File as FolderItem) 13666

79.5.6 Constructor(Content as string)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses an email from a string.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
Var b as BinaryStream = BinaryStream.Open(f)
Var s as string = b.Read(b.Length)
Var m as new MimeEmailMBS(s)

MessageBox m.Subject
```

Notes: This is to parse raw email text, e.g. eml file.
To parse emlx, open the text file and read the first line. The first line contains the length of the email. Then read the following number of bytes of that value and that is the eml content. Followed by a plist structure.
See also:

- 79.5.5 Constructor(Content as MemoryBlock) 13665
- 79.5.7 Constructor(File as FolderItem) 13666

79.5.7 Constructor(File as FolderItem)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses an email from a text file.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
Var m as new MimeEmailMBS(f)

MessageBox m.Subject
```

Notes: You can pass here an EML file.
See also:

- 79.5.5 Constructor(Content as MemoryBlock) 13665
- 79.5.6 Constructor(Content as string) 13666

79.5.8 DecodeInline(Text as String) as String

MBS CURL Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a text with inline encoded text.
Example:

```
Var e,s as string

s = "=?UTF-8?B?WW91ciBBY2NvdW50IFNuYXBzaG90?="
e = MimeEmailMBS.DecodeInline(s)

MessageBox e
```

Notes: This is the function our plugin uses to decode names and subject in the email.
You don't need to use it unless you got subject/name encoded from somewhere else.

79.5.9 HTMLToPlainText(HTMLText as String) as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts html to plain text.
Notes: This is the function our plugin uses internally to fill PlainText field for html only email.
Removes HTML tags, decodes entities and adds returns where appropriated.

79.5.10 Inlines as MimeAttachmentMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of inline items.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
Var m as new MimeEmailMBS(f)

MessageBox str(m.Attachments.Count)+" attachments and "+str(m.Inlines.Count)+" inlines"

for each a as MimeAttachmentMBS in m.Inlines
MessageBox "Inline: " + a.Filename
next
```

Notes: Inline items are like attachments, but shown in the email and normally referenced by ID from the html text.
See also:

- 79.5.11 Inlines(index as Integer) as MimeAttachmentMBS

79.5.11 Inlines(index as Integer) as MimeAttachmentMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries inline by index.
Notes: Index is zero based.
See also:

- 79.5.10 Inlines as MimeAttachmentMBS() 13667

79.5.12 SourceWithoutAttachments as String

MBS CURL Plugin, Plugin Version: 25.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the source of the email without attachments.
Example:

```
Var f As New FolderItem("/Users/cs/Desktop/test.eml", FolderItem.PathModes.Native)
Var m As New MimeEmailMBS(f)

// get original source and a variant without attachments.
Var s1 As String = m.Source
Var s2 As String = m.SourceWithoutAttachments

// normalize line endings for split
s1 = ReplaceLineEndings(s1, EndOfLine)
s2 = ReplaceLineEndings(s2, EndOfLine)

Var l1() As String = s1.Split(EndOfLine)
Var l2() As String = s2.Split(EndOfLine)

MessageBox _
"original "+s1.Bytes.ToString+" bytes and "+l1.Count.toString + " lines" + _
"without attachments "+s2.Bytes.ToString+" bytes and "+l2.Count.toString + " lines"

// without attachments, the number of bytes and lines should be much smaller.
```

Notes: The plugin passes the email, removes attachments and produces this source for you.
Can be useful to archive emails without attachments.

79.5.13 Properties

79.5.14 AttachmentsVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of attachments.
Notes: This property is only to see array in debugger.
(Read only property)

79.5.15 Date as Date

MBS CURL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the sent date of the email.
Notes: Can be undefined and return nil.
The plugin looks in email headers for a Date: header and parses the date.
The returned date is normalized to current time zone.
(Read only property)

79.5.16 HTMLText as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The html text of the email.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
Var m as new MimeEmailMBS(f)

MessageBox m.HTMLText
```

Notes: Decoded for your convenience.
You may want to use ReplaceLineEndings to make sure the line endings are what you need them to be.
(Read only property)

79.5.17 InlinesVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of inline items.
Notes: Inline items are like attachments, but shown in the email and normally referenced by ID from the html text.
This property is only to see array in debugger.
(Read only property)

79.5.18 PlainText as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The plain text of the email.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
Var m as new MimeEmailMBS(f)

MessageBox m.PlainText
```

Notes: Decoded for your convenience.
You may want to use ReplaceLineEndings to make sure the line endings are what you need them to be.
(Read only property)

79.5.19 RaiseUnknownFormatExceptions as Boolean

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to raise an exception when plugin finds encoding in email which is not in list of known encodings.
Notes: Used to find unknown encodings.
(Read and Write property)

79.5.20 ReceivedDate as Date

MBS CURL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the receive date of the email.
Notes: Can be undefined and return nil.
The plugin looks in email headers for a Receive: header and parses the date.
The returned date is normalized to current time zone.
(Read only property)

79.5.21 Source as String

MBS CURL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source code of the email parsed.
Notes: (Read only property)

79.5.22 Subject as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The decoded subject line of the email.
Notes: (Read only property)

79.6 class MimeEntityMBS

79.6.1 class MimeEntityMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a mime entity.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

79.6.2 Methods

79.6.3 Constructor

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

79.6.4 Properties

79.6.5 Body as MimeBodyMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The raw content of this entity.
Notes: This may be quoted printable, base64 or otherwise encoded.
(Read only property)

79.6.6 BodyDecoded as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The decoded body content.
Notes: (Read only property)

79.6.7 Header as MimeHeaderMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The header for this entity.
Notes: The email itself has header, but each entity in the mime tree has also headers.
(Read only property)

79.7 class MimeFieldMBS

79.7.1 class MimeFieldMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a header field.

79.7.2 Methods

79.7.3 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses the text in a field.

79.7.4 Properties

79.7.5 Name as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The field name.
Notes: (Read only property)

79.7.6 Value as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The field value.
Notes: (Read only property)

79.8 class MimeGroupMBS

79.8.1 class MimeGroupMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an email group.
Example:

```
Var g as new MimeGroupMBS("clients:=?utf-8?Q?Josef=20M=C3=BCller?= <josef@test.test>, =?utf-8?Q?Peter=20M=C3=BCller?= <peter@test.test>;")

MessageBox g.NameDecoded+" "+str(g.Count)
MessageBox g.Mailboxes(0).LabelDecoded
MessageBox g.Mailboxes(1).LabelDecoded
```

79.8.2 Methods

79.8.3 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses a group.
Example:

```
Var g as new MimeGroupMBS("clients:=?utf-8?Q?Josef=20M=C3=BCller?= <josef@test.test>, =?utf-8?Q?Peter=20M=C3=BCller?= <peter@test.test>;")

MessageBox g.NameDecoded+" "+str(g.Count)
```

79.8.4 Mailboxes as MimeMailboxMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of mailboxes in this group.
See also:

- 79.8.5 Mailboxes(index as Integer) as MimeMailboxMBS 13675

79.8.5 Mailboxes(index as Integer) as MimeMailboxMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a mailbox in the group.
Example:

```
Var g as new MimeGroupMBS("clients:=?utf-8?Q?Josef=20M=C3=BCller?= <josef@test.test>, =?utf-8?Q?Peter=20M=C3=BCller?= <peter@test.test>;")

MessageBox g.Mailboxes(0).LabelDecoded
MessageBox g.Mailboxes(1).LabelDecoded
```

See also:

- 79.8.4 Mailboxes as MimeMailboxMBS() 13675

79.8.6 Properties

79.8.7 Count as Integer

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of emails in this group.
Notes: (Read only property)

79.8.8 MailboxesVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of mailboxes in this group.
Notes: This property is only to see array in debugger.
(Read only property)

79.8.9 Name as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the group.
Notes: The name property has the raw name while the NameDecoded property has the decoded version for displaying to user.
(Read only property)

79.8.10 NameDecoded as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the group.
Notes: The name property has the raw name while the NameDecoded property has the decoded version for displaying to user.
(Read only property)

79.8.11 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The group as a string.
Notes: (Read only property)

79.9 class MimeHeaderMBS

79.9.1 class MimeHeaderMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for headers of a mime entity.
Example:

```
// read an email file and show content type and size of each attachment
Var mail As New MimeEmailMBS(SpecialFolder.Desktop.Child("mail.eml"))
Var lines() As String
lines.Add "Subject: " + mail.Subject

For Each a As MimeAttachmentMBS In mail.Attachments
Var h As MimeHeaderMBS = a.Header
lines.Add a.Filename + ": " + h.ContentType + ", " + h.ContentTransferEncoding + ", " + h.ContentDis-
position
Next
MessageBox String.FromArray(lines, EndOfLine)
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- 22.1, page 80: Parse your Mails in Xojo, Using EmailParser by Stefanie Juchmes

79.9.2 Methods

79.9.3 Constructor

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

79.9.4 FieldByName(name as string) as MimeFieldMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds a field by name.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
Var m as new MimeEmailMBS(f)

Var h as MimeHeaderMBS = m.Header
MessageBox h.FieldByName("Date").Value
```

Notes: e.g. "Sat, 5 Sep 2015 23:52:13 +0200" for the date field.

79.9.5 Fields as MimeFieldMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of fields in this header.
See also:

- 79.9.6 Fields(index as Integer) as MimeFieldMBS 13679

79.9.6 Fields(index as Integer) as MimeFieldMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries field by index.
Notes: Index is zero based.
See also:

- 79.9.5 Fields as MimeFieldMBS() 13679

79.9.7 hasField(name as string) as boolean

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether a certain field exists.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
Var m as new MimeEmailMBS(f)

Var h as MimeHeaderMBS = m.Header
if h.hasField("Date") then
MessageBox "Has date: "+h.FieldByName("Date").Value
end if
```

79.9.8 Properties

79.9.9 bcc as MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The BCC address list.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
Var m as new MimeEmailMBS(f)

Var h as MimeHeaderMBS = m.Header
// get BCC
Var l as MimeAddressListMBS = h.BCC
// get addresses
Var a() as MimeAddressMBS = l.Addresses
// get first one
Var b as MimeAddressMBS = a(0)
// assume it's an email and get it
Var x as MimeMailboxMBS = b.Mailbox
// and show to user with name and email
MessageBox x.LabelDecoded+" "+x.Email
```

Notes: (Read only property)

79.9.10 cc as MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CC address list.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
Var m as new MimeEmailMBS(f)

Var h as MimeHeaderMBS = m.Header
// get CC
Var l as MimeAddressListMBS = h.CC
// get addresses
Var a() as MimeAddressMBS = l.Addresses
// get first one
Var b as MimeAddressMBS = a(0)
// assume it's an email and get it
Var x as MimeMailboxMBS = b.Mailbox
// and show to user with name and email
```

```
MessageBox x.LabelDecoded+" "+x.Email
```

Notes: (Read only property)

79.9.11 ContentDescription as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content description.
Notes: (Read only property)

79.9.12 ContentDisposition as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content disposition.
Notes: (Read only property)

79.9.13 contentId as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content ID for an inline graphic.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
Var m as new MimeEmailMBS(f)

Var h as MimeHeaderMBS = m.Header
MessageBox h.contentId
```

Notes: (Read only property)

79.9.14 ContentTransferEncoding as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content transfer encoding.
Notes: e.g. base64
(Read only property)

79.9.15 ContentTransferEncodingMechanism as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content transfer encoding mechanism.
Notes: base64
(Read only property)

79.9.16 ContentType as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content type.
Notes: e.g. "multipart/alternative; boundary="Apple-Mail=_F9738882-571C-4469-8349-574115CE32F4""
(Read only property)

79.9.17 from as MimeMailboxListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The from address list.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
Var m as new MimeEmailMBS(f)

Var h as MimeHeaderMBS = m.Header
// get from
Var l as MimeMailboxListMBS = h.from
// get mailboxes
Var a() as MimeMailboxMBS = l.Mailboxes
// get first one
Var b as MimeMailboxMBS = a(0)
// and show to user with name and email
MessageBox b.LabelDecoded+" "+b.Email
```

Notes: (Read only property)

79.9.18 messageid as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The message ID for this email.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
Var m as new MimeEmailMBS(f)

Var h as MimeHeaderMBS = m.Header
MessageBox h.messageid
```

Notes: e.g. "<599782DA-09A0-4461-8474-2BE9F3197CAF@macsw.de>"
(Read only property)

79.9.19 MimeVersion as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime version.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
Var m as new MimeEmailMBS(f)

Var h as MimeHeaderMBS = m.Header
MessageBox h.MimeVersion
```

Notes: e.g. "1.0"
(Read only property)

79.9.20 replyto as MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The replyto address field.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
Var m as new MimeEmailMBS(f)

Var h as MimeHeaderMBS = m.Header
// get replyto
Var l as MimeAddressListMBS = h.replyto
// get addresses
Var a() as MimeAddressMBS = l.Addresses
// get first one
Var b as MimeAddressMBS = a(0)
```

```
// assume it's an email and get it
Var x as MimeMailboxMBS = b.Mailbox
// and show to user with name and email
MessageBox x.LabelDecoded+" "+x.Email
```

Notes: (Read only property)

79.9.21 sender as MimeMailboxMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sender of the email.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
Var m as new MimeEmailMBS(f)

Var h as MimeHeaderMBS = m.Header
Var b as MimeMailboxMBS = h.sender
MessageBox b.Email
```

Notes: May be different from "from" field.
(Read only property)

79.9.22 subject as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The original subject line.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
Var m as new MimeEmailMBS(f)

Var h as MimeHeaderMBS = m.Header
MessageBox h.subject
```

Notes: The subject property has the original subject line while the plugin provides the decoded subjected line in the subjectDecoded for display to user.
(Read only property)

79.9.23 subjectDecoded as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The decoded subject line.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
Var m as new MimeEmailMBS(f)

Var h as MimeHeaderMBS = m.Header
MessageBox h.subjectDecoded
```

Notes: The subject property has the original subject line while the plugin provides the decoded subjected line in the subjectDecoded for display to user.
(Read only property)

79.9.24 too as MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The TO receivers.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
Var m as new MimeEmailMBS(f)

Var h as MimeHeaderMBS = m.Header
// get to
Var l as MimeAddressListMBS = h.too
// get addresses
Var a() as MimeAddressMBS = l.Addresses
// get first one
Var b as MimeAddressMBS = a(0)
// assume it's an email and get it
Var x as MimeMailboxMBS = b.Mailbox
// and show to user with name and email
MessageBox x.LabelDecoded+" "+x.Email
```

Notes: Named "too" in this class as "to" is a reserved word.
(Read only property)

79.10 class MimeMailboxListMBS

79.10.1 class MimeMailboxListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a list of mailboxes.
Example:

```
// split a list of mailboxes into name and email address
Var list As New MimeMailboxListMBS("""Smith, John"" <john@example.com>, anna@example.org")
Var lines() As String
For Each m As MimeMailboxMBS In list.Mailboxes
lines.Add "Name: " + m.LabelDecoded + ", mailbox: " + m.Mailbox + ", domain: " + m.Domain
Next
MessageBox String.FromArray(lines, EndOfLine)
```

Xojo Developer Magazine

- 22.1, page 80: Parse your Mails in Xojo, Using EmailParser by Stefanie Juchmes

79.10.2 Methods

79.10.3 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses a list of mailboxes.
Example:

```
Var m as new MimeMailboxListMBS("=?utf-8?Q?M=C3=BCller?= <test@test.com>")
MessageBox str(m.Count)
```

79.10.4 Mailboxes as MimeMailboxMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of mailboxes.
See also:

- 79.10.5 Mailboxes(index as Integer) as MimeMailboxMBS

79.10.5 Mailboxes(index as Integer) as MimeMailboxMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries mailbox by index.
Notes: Index is zero based.
See also:

- 79.10.4 Mailboxes as MimeMailboxMBS() 13686

79.10.6 Properties

79.10.7 Count as Integer

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of mailboxes in list.
Example:

```
Var m as new MimeMailboxListMBS("=?utf-8?Q?M=C3=BCller?= <test@test.com>")
MessageBox str(m.Count)
```

Notes: (Read only property)

79.10.8 MailboxesVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of mailboxes.
Notes: This property is only to see array in debugger.
(Read only property)

79.10.9 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content of this list as a string.
Notes: (Read only property)

79.11 class MimeMailboxMBS

79.11.1 class MimeMailboxMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an email address.
Example:

```
Var m as new MimeMailboxMBS("=?utf-8?Q?M=C3=BCller?= <zivi@mac.com>")
MessageBox m.LabelDecoded+" "+m.Email
```

79.11.2 Methods

79.11.3 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses an email address.
Example:

```
Var m as new MimeMailboxMBS("=?utf-8?Q?M=C3=BCller?= <zivi@mac.com>")
MessageBox m.LabelDecoded+" "+m.Email
```

79.11.4 Properties

79.11.5 Domain as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The domain name of the email address.
Notes: (Read only property)

79.11.6 Email as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The email address.
Notes: Mailbox and Domain together.
(Read only property)

79.11.7 Label as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The label for this email address.
Notes: Label is the raw value and LabelDecoded is the decoded value.
So please use LabelDecoded for display.
(Read only property)

79.11.8 LabelDecoded as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The label for this email address.
Notes: Label is the raw value and LabelDecoded is the decoded value.
So please use LabelDecoded for display.
(Read only property)

79.11.9 Mailbox as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the email mailbox.
Notes: (Read only property)

79.11.10 Sourceroute as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source route parameter.
Notes: (Read only property)

79.11.11 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The email address as a string.
Notes: (Read only property)

Chapter 80

Encryption and Hash

80.1 class AESMBS

80.1.1 class AESMBS

MBS Encryption Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use CipherMBS instead.
Function: A class for AES encryption.
Example:

```
Var a as AESMBS
Var key as MemoryBlock
Var data as MemoryBlock

key=NewMemoryBlock(20)
key.CString(0)="Hello World!1234" // 16 byte key for 128bit

a=new AESMBS

if a.SetKey(key, 128) then

data=NewMemoryBlock(20)
data.StringValue(0,16)="Hello World!"
MessageBox "Before: "+data.StringValue(0,16)
a.Encrypt(data)
MessageBox "After encryption: "+data.StringValue(0,16)
a.Decrypt(data)
MessageBox "After decryption: "+data.StringValue(0,16)
else
MessageBox "Failed"
end if
```

Notes: For newer projects we recommend switching to CipherMBS class.

This class has low level functions like Encrypt. It also has mid level functions like EncryptCFB/CBC. For your convenience, we also have high level functions like EncryptString.

80.1.2 Methods

80.1.3 Decrypt(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the first 16 bytes in the input memoryblock at the given offset and stores the result in the output memoryblock at the given offset.
Notes: If odata is nil, idata is used for output.
This is ECB mode.

80.1.4 DecryptCBC(idata as memoryblock, LengthBytes as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the 16 byte data blocks within LengthBytes bytes in the data.
Notes: If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.

80.1.5 DecryptCFB1(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the data in CFB1 mode.
Notes: If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.
See also:

- 80.1.6 DecryptCFB1(idata as string, IVector as memoryblock=nil) as string 13693

80.1.6 DecryptCFB1(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the data in CFB1 mode.
Example:

```
Var a as new AESMBS

if a.SetKey("Hello World") then
Var input as string = "Hello World"
Var encrypted as string = a.EncryptCFB1(input)

if a.SetKey("Hello World") then
Var decrypted as string = a.DecryptCFB1(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
MessageBox "OK"
end if
end if
end if
```

Notes: If IVector is nil, a vector filled with zeros is used.
See also:

- 80.1.5 DecryptCFB1(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0) 13693

80.1.7 DecryptCFB128(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the data in CFB128 mode.
Notes: If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.

Older plugin version had problems that they didn't use key at all. So if you want to read old data encrypted with them, you need simply to decrypt without setting key.
See also:

- 80.1.8 DecryptCFB128(idata as string, IVector as memoryblock=nil) as string 13694

80.1.8 DecryptCFB128(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the data in CFB128 mode.
Example:

```
Var a as new AESMBS

if a.SetKey("Hello World") then
Var input as string = "Hello World"
Var encrypted as string = a.EncryptCFB128(input)

if a.SetKey("Hello World") then
Var decrypted as string = a.DecryptCFB128(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
```

```
MessageBox "OK"
end if
end if
end if
```

Notes: If IVector is nil, a vector filled with zeros is used.

Older plugin version had problems that they didn't use key at all. So if you want to read old data encrypted with them, you need simply to decrypt without setting key.
See also:

- 80.1.7 DecryptCFB128(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0) 13694

80.1.9 DecryptCFB8(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the data in CFB8 mode.
Notes: If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.
See also:

- 80.1.10 DecryptCFB8(idata as string, IVector as memoryblock=nil) as string 13695

80.1.10 DecryptCFB8(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the data in CFB8 mode.
Example:

```
Var a as new AESMBS

if a.SetKey("Hello World") then
Var input as string = "Hello World"
Var encrypted as string = a.EncryptCFB8(input)
```

```
if a.SetKey("Hello World") then
Var decrypted as string = a.DecryptCFB8(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
MessageBox "OK"
end if
end if
end if
```

Notes: If IVector is nil, a vector filled with zeros is used.
See also:

- 80.1.9 DecryptCFB8(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0) 13695

80.1.11 DecryptECB(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the 16 byte data block in the data.
Notes: If odata is nil, idata is used for output.

80.1.12 Encrypt(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the first 16 bytes in the input memoryblock at the given offset and stores the result in the output memoryblock at the given offset.
Notes: If odata is nil, idata is used for output.
This is ECB mode.

80.1.13 EncryptCBC(idata as memoryblock, LengthBytes as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the 16 byte data blocks within LengthBytes bytes in the data.
Notes: If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.

80.1.14 EncryptCFB1(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the data in CFB1 mode.
Notes: If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.
See also:

- 80.1.15 EncryptCFB1(idata as string, IVector as memoryblock=nil) as string 13697

80.1.15 EncryptCFB1(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the data in CFB1 mode.
Example:

```
Var a as new AESMBS

if a.SetKey("Hello World") then
Var input as string = "Hello World"
Var encrypted as string = a.EncryptCFB1(input)

if a.SetKey("Hello World") then
Var decrypted as string = a.DecryptCFB1(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
MessageBox "OK"
end if
end if
end if
```

Notes: If IVector is nil, a vector filled with zeros is used.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 80.1.14 EncryptCFB1(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0) 13697

80.1.16 EncryptCFB128(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the data in CFB128 mode.
Notes: If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.
See also:

- 80.1.17 EncryptCFB128(idata as string, IVector as memoryblock=nil) as string 13698

80.1.17 EncryptCFB128(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the data in CFB128 mode.
Example:

```
Var a as new AESMBS

if a.SetKey("Hello World") then
Var input as string = "Hello World"
Var encrypted as string = a.EncryptCFB128(input)

if a.SetKey("Hello World") then
Var decrypted as string = a.DecryptCFB128(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)
```

```
if decrypted = input then
MessageBox "OK"
end if
end if
end if
```

Notes: If IVector is nil, a vector filled with zeros is used.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 80.1.16 EncryptCFB128(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0) 13698

80.1.18 EncryptCFB8(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the data in CFB8 mode.
Notes: If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.
See also:

- 80.1.19 EncryptCFB8(idata as string, IVector as memoryblock=nil) as string 13699

80.1.19 EncryptCFB8(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the data in CFB8 mode.
Example:

```
Var a as new AESMBS

if a.SetKey("Hello World") then
Var input as string = "Hello World"
```

```
Var encrypted as string = a.EncryptCFB8(input)

if a.SetKey("Hello World") then
Var decrypted as string = a.DecryptCFB8(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
MessageBox "OK"
end if
end if
end if
```

Notes: If IVector is nil, a vector filled with zeros is used.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 80.1.18 EncryptCFB8(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0) 13699

80.1.20 EncryptECB(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the 16 byte data block in the data.
Notes: If odata is nil, idata is used for output.

80.1.21 EncryptOFB(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the data in OFB mode.
Notes: If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.

LengthBytes: Length of data in idata and odata.

80.1.22 SetKey(key as memoryblock, nBits as Integer) as boolean

MBS Encryption Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the key.
Notes: possible values for the bitcount:

128	key is 16 bytes long
192	key is 24 bytes long
256	key is 32 bytes long

Plugin version 13.4 and newer pads this memoryblock with 00 bytes if string is shorter.
See also:

- 80.1.23 SetKey(key as string) as boolean 13701

80.1.23 SetKey(key as string) as boolean

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the key.
Example:

```
Var x,u,s as string
Var iv as MemoryBlock

s="Hello World"

// encrypt
s=ConvertEncoding(s,encodings.UTF8)

Var a as new AESMBS

call a.SetKey("1234567890123456")

iv=NewMemoryBlock(16)
x=a.EncryptCFB128(s,iv)

MessageBox x

// decrypt
```

```
iv=NewMemoryBlock(16)
u=a.DecryptCFB128(x,iv)

u=DefineEncoding(u,encodings.UTF8)

MessageBox u
```

Notes: Please use 16, 24 or 32 byte long key strings.
Plugin version 13.4 and newer pads this string with 00 bytes if string is shorter.
See also:

- 80.1.22 SetKey(key as memoryblock, nBits as Integer) as boolean 13701

80.2 class Argon2MBS

80.2.1 class Argon2MBS

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class to calculate hashes using Argon2.
Example:

```
Var a as new Argon2MBS

a.OutputLength = 24
a.Password = "password"
a.Salt = "somesalt"
a.cost = 2
a.MemoryCost = 65536 // 64 Megabytes
a.Lanes = 4
a.Threads = 4

Var hash as string = a.Calc(a.kTypeI)
Var t as string = EncodeHex(hash)

if t = "45d7ac72e76f242b20b77b9bf9bf9d5915894e669a24e6c6" then
// ok
else
Break // failed
end if
```

Notes: You can use this class to calculate password hashes.
Due to the cost associated to calculate it, the hash is difficult to brute force.

80.2.2 Methods

80.2.3 Calc(type as Integer = 0) as String

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Function that performs memory-hard hashing with certain degree of parallelism.
Example:

```
Var a as new Argon2MBS

a.OutputLength = 24
a.Password = "password"
a.Salt = "somesalt"
a.cost = 2
a.MemoryCost = 65536 // 64 Megabytes
a.Lanes = 4
a.Threads = 4

Var hash as string = a.Calc(a.kTypeI)
Var t as string = EncodeHex(hash)

if t = "45d7ac72e76f242b20b77b9bf9bf9d5915894e669a24e6c6" then
// ok
else
Break // failed
end if
```

Notes: Returns hash on success or empty string in case of error.
Lasterror is set.

80.2.4 Constructor

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

80.2.5 Destructor

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destructor.

80.2.6 Verify(Hash as String, type as Integer = 0) as boolean

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies a password hash.
Example:

```
Var a as new Argon2MBS

a.OutputLength = 24
a.Password = "password"
a.Salt = "somesalt"
a.cost = 2
a.MemoryCost = 65536
a.Lanes = 4
a.Threads = 4

Var h as string = DecodeHex("45d7ac72e76f242b20b77b9bf9bf9d5915894e669a24e6c6")
if a.Verify(h, a.kTypeI) then
// ok
break
else
// failed
break
end if
```

Notes: Returns true on success.
Lasterror is set.

80.2.7 Properties

80.2.8 AssociatedData as String

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The associated data.
Notes: (Read and Write property)

80.2.9 Cost as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of passes.
Notes: (Read and Write property)

80.2.10 Flags as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags.
Notes: (Read and Write property)

80.2.11 Lanes as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of lanes.
Notes: (Read and Write property)

80.2.12 LastError as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

80.2.13 LastErrorMessage as String

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message.
Notes: (Read and Write property)

80.2.14 MemoryCost as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Amount of memory requested (KB).
Notes: In kilo bytes. Default is 1 MB.
(Read and Write property)

80.2.15 OutputLength as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The length of the hash.
Notes: (Read and Write property)

80.2.16 Password as String

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The password to hash.
Notes: (Read and Write property)

80.2.17 Salt as String

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The salt.
Notes: (Read and Write property)

80.2.18 Secret as String

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The secret.
Notes: (Read and Write property)

80.2.19 Threads as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum number of threads.
Notes: (Read and Write property)

80.2.20 Version as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of argon to use.
Notes: Can be kVersion10 or kVersion13.
(Read and Write property)

80.2.21 Constants

Constants

Constant	Value	Description
kMaxAssociatedDataLength	&hFFFFFFFF	Maximum associated data length in bytes.
kMaxLanes	&hFFFFFF	Maximum number of lanes (degree of parallelism)
kMaxMemory	&hFFFFFFFF	Maximum memory size.
kMaxOutputLength	&hFFFFFFFF	Maximum digest size in bytes.
kMaxPasswordLength	&hFFFFFFFF	Maximum password length in bytes.
kMaxSaltLength	&hFFFFFFFF	Maximum salt length in bytes
kMaxSecretLength	&hFFFFFFFF	Maximum key length in bytes.
kMaxThreads	&hFFFFFF	Maximum number of threads.
kMaxTime	&hFFFFFFFF	Maximum number of passes.
kMinAssociatedDataLength	0	Minimum associated data length in bytes.
kMinLanes	1	Minimum number of lanes (degree of parallelism)
kMinMemory	8	Minimum and maximum number of memory blocks (each of BLOCK_ bytes)
kMinOutputLength	4	Minimum digest size in bytes.
kMinPasswordLength	0	Minimum password length in bytes.
kMinSaltLength	0	Minimum salt length in bytes
kMinSecretLength	0	Minimum key length in bytes.
kMinThreads	1	Minimum number of threads.
kMinTime	1	Minimum number of passes.
kSyncPoints	4	Number of synchronization points between lanes per pass.

Errors

Constant	Value	Description
kErrorAdPtrMismatch	-21	AssociatedData ptr is nil, but size >0.
kErrorAdTooLong	-9	AssociatedData too long.
kErrorAdTooShort	-8	AssociatedData too short.
kErrorAllocateMemoryCbkNull	-24	Allocation failed.
kErrorDecodingFail	-32	Decoding failed.
kErrorDecodingLengthFail	-34	Decoding length failed.
kErrorEncodingFail	-31	Encoding failed.
kErrorFreeMemoryCbkNull	-23	Free memory failed.
kErrorIncorrectParameter	-25	Incorrect parameter.
kErrorIncorrectType	-26	Incorrect type.
kErrorLanesTooFew	-16	Lanes too small.
kErrorLanesTooMany	-17	Too many lanes.
kErrorMemoryAllocationError	-22	Memory allocation failed.
kErrorMemoryTooLittle	-14	Memory too little.
kErrorMemoryTooMuch	-15	Memory too big.
kErrorMissingArgs	-30	Missing Argument.
kErrorOk	0	Okay.
kErrorOutPtrMismatch	-27	Output ptr is nil, but size >0.
kErrorOutputPtrNull	-1	Output Ptr is nil.
kErrorOutputTooLong	-3	Output too long.
kErrorOutputTooShort	-2	Output too short.
kErrorPwdPtrMismatch	-18	Password ptr is nil, but size >0.
kErrorPwdTooLong	-5	Password too long.
kErrorPwdTooShort	-4	Password too short.
kErrorSaltPtrMismatch	-19	Salt ptr is nil, but size >0.
kErrorSaltTooLong	-7	Salt too long.
kErrorSaltTooShort	-6	Salt too short.
kErrorSecretPtrMismatch	-20	Secret ptr is nil, but size >0.
kErrorSecretTooLong	-11	Secret too long.
kErrorSecretTooShort	-10	Secret too short.
kErrorThreadFail	-33	Threads failed.
kErrorThreadsTooFew	-28	Threads too small.
kErrorThreadsTooMany	-29	Too many threads.
kErrorTimeTooLarge	-13	Time too large.
kErrorTimeTooSmall	-12	Time too small.
kErrorVerifyMismatch	-35	Verify Mismatch

Flags

Constant	Value	Description
kFlagClearMemory	4	Clear memory.
kFlagClearPassword	1	Clear password.
kFlagClearSecret	2	Clear Secret after hashing.
kFlagDefault	4	Default flags.

Type Codes

Constant	Value	Description
kTypeD	0	Argon2d is faster and uses data-depending memory access, which makes it highly resistant against GPU cracking attacks and suitable for applications with no threats from side-channel timing attacks (eg. cryptocurrencies).
kTypeI	1	Argon2i instead uses data-independent memory access, which is preferred for password hashing and password-based key derivation, but it is slower as it makes more passes over the memory to protect from tradeoff attacks.
kTypeID	2	Argon2id is a hybrid of i and d. * Starts with Argon2i-style accesses and later uses Argon2d-style accesses. * Balances resistance to both side-channel attacks and GPU cracking. * Recommended by the Argon2 designers and many security guidelines for password hashing.

Version

Constant	Value	Description
kVersion10	&h10	Version 1.0
kVersion13	&h13	Version 1.3

80.3 module BCryptMBS

80.3.1 module BCryptMBS

MBS Encryption Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The module for bcrypt encryption.
Example:

```
// store a password as bcrypt hash and check a login against it
Var hash As String = BCryptMBS.BCrypt("secret123", BCryptMBS.BCryptSalt(12)) // 12 rounds
// save hash in your user table

If BCryptMBS.Verify("secret123", hash) Then MessageBox "Password correct."
```

80.3.2 Methods

80.3.3 BCrypt(Pass as String, Salt as String) as String

MBS Encryption Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Hashes password with bcrypt based on given salt.
Example:

```
Var salt As String = BCryptMBS.BCryptSalt(11)
Var hash As String = BCryptMBS.BCrypt("password", salt)

Break
```

80.3.4 BCryptSalt(Rounds as Integer) as String

MBS Encryption Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates salt based on given numbers of rounds.

80.3.5 Verify(Pass as String, Hash as String) as Boolean

MBS Encryption Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies a hash to be right.
Example:

```
// check various levels
For i As Integer = 4 To 15
Var salt As String = BCryptMBS.BCryptSalt(i)
Var hash As String = BCryptMBS.BCrypt("password", salt)

Var b As Boolean = BCryptMBS.Verify("password", hash)

System.DebugLog Str(i)+" "+Str(b)+" "+hash

If Not b Then Break
Next
```

Notes: Check is case sensitive!
Returns true on success.

80.4 class BlowfishMBS

80.4.1 class BlowfishMBS

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for blowfish encryption.
Example:

```
Var s as string

// create string with known encoding so we can later define encoding after decryption!
s=ConvertEncoding("Hello",Encodings.UTF8)

// encrypt with a key
s=BlowfishMBS.Encrypt("MyKey",s)

// encoding is not set for the result string, still RB can guess the encoding when displaying
MessageBox s

// decrypt with same key
s=BlowfishMBS.Decrypt("MyKey",s)

// encoding is not set for the result string, so change it back:
s=DefineEncoding(s,encodings.UTF8)

// show original Hello
MessageBox s
```

Notes: For newer projects we recommend switching to CipherMBS class.

80.4.2 Methods

80.4.3 Decrypt(iodata as memoryblock)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Lowest level function to decrypt data in a memoryblock.
Notes: input and output are in host endian format.
memoryblock must be not nil and has a size of 8 bytes.
See also:

- 80.4.4 Decrypt(key as string, data as string) as string 13714

80.4.4 Decrypt(key as string, data as string) as string

MBS Encryption Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts the data using blowfish and the given key.
Example:

```
Var s as string

// create string with known encoding so we can later define encoding after decryption!
s=ConvertEncoding("Hello",Encodings.UTF8)

// encrypt with a key
s=BlowfishMBS.Encrypt("MyKey",s)

// encoding is not set for the result string, still RB can guess the encoding when displaying
MessageBox s

// decrypt with same key
s=BlowfishMBS.Decrypt("MyKey",s)

// encoding is not set for the result string, so change it back:
s=DefineEncoding(s,encodings.UTF8)

// show original Hello
MessageBox s
```

Notes: This is our convenience function to encode a string quickly. Using CFB64 mode and an all zero initializing vector.
If the lenb(result) is zero and lenb(data) is not zero, the memory was not sufficient.

Key can have any length, but 32 bytes (256 bits) are quite good.
The length of data is limited by the amount of available memory.
See also:

- 80.4.3 Decrypt(iodata as memoryblock) 13713

80.4.5 DecryptCBC(data as string, byref temp as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish decryption function.
Example:

```
Var b as new BlowfishMBS

Var s as string = "UTYbBEZSMLfa0kvNDSla/n/GSUcA/545gp7LcA330Nw="
Var x as string = DecodeBase64(s)

Var m as MemoryBlock = nil
b = new BlowfishMBS
b.SetKey "geheim"
Var t1 as string = b.DecryptCBC(x,m)

// shows SD10003$ $ 2012.03.16 11:00
MessageBox t1
```

Notes: data: data to be decrypted
temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to allow data to be shared between function calls.

Returns "" on invalid input.
You can create yourself an eight byte memoryblock with a starting value you want.
Be aware that this CBC method works with data in 8 byte blocks, so you need to unpad data if needed.
See also:

- 80.4.6 DecryptCBC(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock) 13715

80.4.6 DecryptCBC(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish decryption function.
Notes: idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
ivec: memoryblock for temporary data, 8 bytes in size and not nil.

ivec should be a memoryblock of 8 bytes size which you create before calling the function for the first time. On the next time you passed the same block, so the function can store data inside this memoryblock between

function calls.
Be aware that this CBC method works with data in 8 byte blocks, so you need to unpad data if needed.
See also:

- 80.4.5 DecryptCBC(data as string, byref temp as memoryblock) as string 13715

80.4.7 DecryptCFB64(data as string, byref temp as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish decryption function.
Notes: data: data to be decrypted
temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to allow data to be shared between function calls.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.
See also:

- 80.4.8 DecryptCFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer) 13716

80.4.8 DecryptCFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish decryption function.
Example:

```
Var b as BlowfishMBS

b=new BlowfishMBS
b.SetKey "Key"

Var temp as MemoryBlock
Var s as string

s=b.EncryptCFB64("Hello World",temp)

MessageBox s

temp=nil // reset
s=b.DecryptCFB64(s,temp)
```

MessageBox s

Notes: idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
ivec: memoryblock for temporary data, 8 bytes in size and not nil.
num: current position in ivec. Pass 0 as start value and pass the value you get back to the next function call.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.
See also:

- 80.4.7 DecryptCFB64(data as string, byref temp as memoryblock) as string 13716

80.4.9 DecryptECB(data as string) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The basic Blowfish decryption function.
Notes: This function decrypts only 8 bytes. For more, please use other functions!

data: data to be decrypted
Returns "" on invalid input.
See also:

- 80.4.10 DecryptECB(idata as memoryblock, odata as memoryblock, offset as Integer) 13717

80.4.10 DecryptECB(idata as memoryblock, odata as memoryblock, offset as Integer)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The basic Blowfish encryption function.
Notes: idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
See also:

- 80.4.9 DecryptECB(data as string) as string 13717

80.4.11 DecryptOFB64(data as string, byref temp as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish decryption function.
Notes: data: data to be decrypted
temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to allow data to be shared between function calls.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.

This is output feedback mode. Encryption is the same a decryption.
See also:

- 80.4.12 DecryptOFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer) 13718

80.4.12 DecryptOFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish decryption function.
Example:

```
Var b as BlowfishMBS

b=new BlowfishMBS
b.SetKey "Key"

Var temp as MemoryBlock
Var s as string

s=b.EncryptCFB64("Hello World",temp)

MessageBox s

temp=nil // reset
s=b.DecryptCFB64(s,temp)

MessageBox s
```

Notes: idata: memoryblock for input data, 8 bytes in size and not nil.

odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
ivec: memoryblock for temporary data, 8 bytes in size and not nil.
num: current position in ivec. Pass 0 as start value and pass the value you get back to the next function call.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.

This is output feedback mode. Encryption is the same a decryption.
See also:

- 80.4.11 DecryptOFB64(data as string, byref temp as memoryblock) as string 13718

80.4.13 Encrypt(iodata as memoryblock)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Lowest level function to encrypt data in a memoryblock.
Notes: input and output are in host endian format.
memoryblock must be not nil and has a size of 8 bytes.
See also:

- 80.4.14 Encrypt(key as string, data as string) as string 13719

80.4.14 Encrypt(key as string, data as string) as string

MBS Encryption Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts the data using blowfish and the given key.
Example:

```
Var v as string = "Hello World, this is just a test string"

// encrypt CFB64 with BlowfishMBS
Var b as new BlowfishMBS
Var Key as string = "1234567812345678"
Var r as string = b.Encrypt( key , v )
Var h as string = EncodeHex( r )

// and decrypt with OpenSSL
Var c as CipherMBS = CipherMBS.bf_cfb64

c.DecryptInit key
```

```
Var d as string = c.ProcessString(r)
d = d + c.FinalizeAsString

Break // see in debugger, v and d have same content
```

Notes: This is our convenience function to decode a string quickly. Using CFB64 mode and an all zero initializing vector.
If the lenb(result) is zero and lenb(data) is not zero, the memory was not sufficient.

Key can have any length, but 32 bytes (256 bits) are quite good.
The length of data is limited by the amount of available memory.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 80.4.13 Encrypt(iodata as memoryblock) 13719

80.4.15 EncryptCBC(data as string, byref temp as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish encryption function.
Example:

```
Var m as memoryblock // temporary storage of current state
Var b as blowfishmbs
Var s as string

b=new blowfishmbs
b.SetKey "EinKey1234567890" // some key

s=b.EncryptCBC("Hallo",m)
s=s+b.EncryptCBC(" ",m)
s=s+b.EncryptCBC("Leute",m)
s=s+b.EncryptCBC("!",m)
```

Notes: data: data to be encrypted
temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to allow data to be shared between function calls.

Returns "" on invalid input.
You can create yourself an eight byte memoryblock with a starting value you want.
Be aware that this CBC method works with data in 8 byte blocks, so you need to pad data if needed.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.

- 80.4.21 EncryptOFB64(data as string, byref temp as memoryblock) as string 13723

80.4.23 SetKey(key as string)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the key to be used.
Notes: The longer the key, the better. Suggested is at least 16 bytes.

80.5 Globals

80.5.1 CalculateCRC16MemoryMBS(data as MemoryBlock, Start as UInt16 = 65535, Polynomial as UInt16 = &h1021, FinalXOR as UInt16 = 0, ReflectInput as boolean = false, ReflectOutput as boolean = false) as UInt16

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided memoryblock.
Example:

```
// calculate a CRC16 (CCITT-FALSE) for a data packet
Var m As MemoryBlock = "123456789"
Var crc As UInt16 = CalculateCRC16MemoryMBS(m) // start &hFFFF, polynomial &h1021
MessageBox Hex(crc) // 29B1
```

Notes: Start is the start value.
Polynominal is what is xored to the value in each round.
FinalXOR is an XOR we do on the end.
If ReflectInput is true, we swap bits in input.
If ReflectOutput is true, we swap bits in output (before final XOR).

Returns CRC value.

80.5.2 CalculateCRC16StringMBS(data as string, Start as UInt16 = 65535, Polynomial as UInt16 = &h1021, FinalXOR as UInt16 = 0, ReflectInput as boolean = false, ReflectOutput as boolean = false) as UInt16

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided string.
Example:

```
Var Input As String = "123456789"
Var result As Integer

// CRC 16
result = CalculateCRC16StringMBS(Input, &h0000, &h8005, &h0000, True, True)
```

```
If &hBB3D = result Then
// okay
Else
Break
end if

// Modbus
result = CalculateCRC16StringMBS(Input, &hFFFF, &h8005, &h0000, True, True)
If &h4B37 = result Then
// okay
Else
Break
End If

// CCITT XModem
result = CalculateCRC16StringMBS(Input, &h0000, &h1021, &h0000, False, False)
If &h31C3 = result Then
// okay
Else
Break
End If

// CCITT with &hFFFF
result = CalculateCRC16StringMBS(Input, &hFFFF, &h1021, &h0000, False, False)
If &h29B1 = result Then
// okay
Else
Break
End If

Var c as string = DecodeHex("3E4400026201000D")
Var p as UInt16 = CalculateCRC16StringMBS(c, &hFFFF, &h1021, 0, true, true)
MessageBox hex(p)+" = 3E5A"
```

Notes: Start is the start value.
Polynominal is what is xored to the value in each round.
FinalXOR is an XOR we do on the end.
If ReflectInput is true, we swap bits in input.
If ReflectOutput is true, we swap bits in output (before final XOR).

Returns CRC value.

80.5.3 Adler32MemoryMBS(adler as UInt32, Buffer as memoryblock, offset as Integer, length as Integer) as UInt32

MBS Compression Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The adler32 hash function from the zlib library.
Example:

```
// calculate the Adler-32 checksum as used by zlib
Var m As MemoryBlock = "Wikipedia"
Var adler As UInt32 = Adler32MemoryMBS(1, m, 0, m.Size) // start value is 1
MessageBox Hex(adler) // 11E60398
```

Notes: Offset and length must be correct for your memoryblock or you will crash your application!

Update a running Adler-32 checksum with the bytes and return the updated checksum. If buf is nil, this function returns the required initial value for the checksum.
An Adler-32 checksum is almost as reliable as a CRC32 but can be computed much faster.

80.5.4 Adler32StringMBS(adler as UInt32, Buffer as string) as UInt32

MBS Compression Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The adler32 hash function from the zlib library.
Example:

```
Var b as binarystream // some stream
Var adler as Integer
Var data as string
Var originalAdler as Integer = 12345

adler=Adler32MemoryMBS(0,nil,0,0)

data=b.read(10000)
while data<>""
adler=Adler32StringMBS(adler, data)
data=b.read(10000)
wend

if adler <>originalAdler then MessageBox "Error in checksum!"
```

Notes: Update a running Adler-32 checksum with the bytes and return the updated checksum. If buf is nil, this function returns the required initial value for the checksum.
An Adler-32 checksum is almost as reliable as a CRC32 but can be computed much faster.

80.5.5 CRC32MemoryMBS(crc as UInt32, Buffer as memoryblock, offset as Integer, length as Integer) as UInt32

MBS Compression Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The crc32 hash function from the zlib library.
Example:

```
// calculate the CRC32 checksum of a file in chunks
Var stream As BinaryStream = BinaryStream.Open(SpecialFolder.Desktop.Child("test.zip"))
Var crc As UInt32 = 0
While Not stream.EndOfFile
Var chunk As MemoryBlock = stream.Read(65536)
crc = CRC32MemoryMBS(crc, chunk, 0, chunk.Size)
Wend
stream.Close
MessageBox "CRC32: " + Hex(crc)
```

Notes: Offset and length must be correct for your memoryblock or you will crash your application!

Update a running crc with the bytes and return the updated crc. If buf is nil, this function returns the required initial value for the crc. Pre- and post-conditioning (one's complement) is performed within this function so it shouldn't be done by the application.

80.5.6 CRC32StringMBS(crc as UInt32, Buffer as string) as UInt32

MBS Compression Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The crc32 hash function from the zlib library.
Example:

```
Var originalCrc as Integer// original CRC
Var crc as Integer // new crc
Var data as string
Var b as binarystream

crc=0

data=b.read(10000)
while data<>""
crc=CRC32StringMBS(crc, data)
data=b.read(10000)
wend

if crc <>originalCrc then MessageBox "Error in checksum!"
```

Notes: Update a running crc with the bytes and return the updated crc. If buf is nil, this function returns the required initial value for the crc. Pre- and post-conditioning (one's complement) is performed within this function so it shouldn't be done by the application.

80.5.7 CRC16MBS(data as string) as UInt16

MBS Util Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided string.
Example:

```
Var n1 as Integer = CRC16MBS("Hello World")
Var n2 as Integer = CRC16MBS("Hallo World")

MessageBox str(n1)+" "+str(n2)
```

Notes: Please note: Different CRC functions give different result. This is one specific 16 bit CRC function which may be or not be the one you need for your application.
Blog Entries

- MBS Real Studio Plugins, version 12.1pr1

80.5.8 CRC_32InMemContMBS(address as Ptr, length as Integer, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 32bit Checksum about the provided memory address.
Example:

```
// calculate one CRC32 over two memory areas
Var a As MemoryBlock = "Hello "
Var b As MemoryBlock = "World"
Var crc As UInt32 = CRC_32InMemContMBS(a, a.Size, 0)
crc = CRC_32InMemContMBS(b, b.Size, crc)
MessageBox Hex(crc)
```

80.5.9 CRC_32InMemMBS(address as Ptr, length as Integer) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 32bit Checksum about the provided memory address.
Example:

```
// calculate the CRC32 of the bytes in a MemoryBlock via its pointer
Var m As MemoryBlock = "Hello World"
MessageBox Hex(CRC_32InMemMBS(m, m.Size))
```

80.5.10 CRC_32OfStrContMBS(s as String, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 32bit Checksum about the provided block of data.
Example:

```
// calculate one CRC32 over several strings
Var crc As UInt32 = CRC_32OfStrContMBS("Hello ", 0)
crc = CRC_32OfStrContMBS("World", crc)
MessageBox Hex(crc) + " = " + Hex(CRC_32OfStrContMBS("Hello World", 0))
```

80.5.11 CRC_32OfStrMBS(s as String) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 32bit Checksum about the provided string.
Example:

```
Var n as Integer
n=CRC_32OfStrMBS("Hello World")
' n is now 1243066710
```

Notes: See the text "About-CRC" for details about this Checksum things.
This function is also available as part of the memoryblock class.

About Checksums:

These functions calculate CRCs over a range of bytes in a MemoryBlock or in a String.

There are three versions of CRC calculation: One for 16 Bit, one for 32 Bit and one for 16 to 64 Bit wide checksums. If you are free to choose, I suggest that you use the 32 Bit version because of its accuracy and performance.

Some background on using checksums/CRCs:
Checksums, such as CRCs, are used to quickly verify that a chunk of data has not been modified somehow without your control. To use it, you'd calculate the checksum (CRC) of your data, then store that checksum value (which only needs 2 to 8 bytes of storage) somewhere. Later, when retrieving your data, you calculate

its checksum again and compare its value with the previously stored value. If it does not match, the data got somehow corrupted. If it matches, that it is quite likely, although not 100% sure, that the data is still in its original state.

There are 3 different CRC algorithms available:

- CRC_CCITT...() as Integer
- CRC_32...() as Integer
- CRC_Dillon...(bitWidth as Integer, ...) as String

The CCITT version calculates a rather classic 16 bit CRC. Unless you need that CRC for legacy data, I recomment not to use it, but rather use the CRC_32 version.

CRC_32 is the most common used algorithm for 32 bit wide CRCs. Be aware there are theoretically many other ways to calculate a CRC 32, however.

The Dillon algorithm is a smart routine to calculate CRCs in any width between 16 and 64 bit. This one is only useful if you find that a 32 bit CRC is not sufficient for your needs. If you can live with a plain 32 bit CRC, you should prefer the CRC_32 routines, because they are faster than the Dillon code.

The result, since it can be up to 64 bit in size, cannot be returned in an Integer (they can only hold 32 bit). Instead, the result is returned as a 8 byte value, stored in a 8 byte long string. To get the value of that string, you can copy the string into a MemoryBlock, and then access the parts opf the 8 byte long value there. The demo project shows how to accomplish this.

The CRC code was developed and published by Matthew Dillon. Here's his web page with more information about it:
http://www.backplane.com/diablo/crc64.html

80.5.12 CRC_CCITTInMemContMBS(address as Ptr, length as Integer, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided memory address.
Example:

```
// calculate the CRC-CCITT over a packet received in two parts
Var part1 As MemoryBlock = "1234"
Var part2 As MemoryBlock = "56789"
Var crc As UInt32 = CRC_CCITTInMemContMBS(part1, part1.Size, &hFFFF)
```

```
crc = CRC_CCITTInMemContMBS(part2, part2.Size, crc)
MessageBox Hex(crc)
```

80.5.13 CRC_CCITTInMemMBS(address as Ptr, length as Integer) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided memory address.
Example:

```
// calculate the CRC-CCITT of a data packet in memory
Var m As MemoryBlock = "123456789"
MessageBox Hex(CRC_CCITTInMemMBS(m, m.Size))
```

80.5.14 CRC_CCITTOfStrContMBS(s as String, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided string.
Example:

```
// calculate a 16 bit CRC-CCITT checksum over a message in two parts
Var crc As UInt32 = CRC_CCITTOfStrContMBS("123", &hFFFF)
crc = CRC_CCITTOfStrContMBS("456789", crc)
MessageBox Hex(crc)
```

80.5.15 CRC_CCITTOfStrMBS(s as String) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided string.
Example:

```
Var n as Integer
n=CRC_CCITTOfStrMBS("Hello World")
' n is now 39210
```

80.5.16 CRC_DillonInMemMBS(bitWidth as Integer, address as Ptr, length as Integer) as String

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16 to 64bit Checksum about the provided memory address.
Example:

```
// calculate a 64 bit checksum of data in memory
Var m As MemoryBlock = "Hello World"
Var crc As String = CRC_DillonInMemMBS(64, m, m.Size)
MessageBox EncodeHex(crc)
```

80.5.17 CRC_DillonOfStrMBS(bitWidth as Integer, s as String) as String

MBS Util Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16 to 64bit Checksum about the provided string.
Example:

```
Var s as string
s=CRC_DillonOfStrMBS(64,"Hello World")
' s has now the 64bit checksum inside an 8 byte binary string
```

80.5.18 CRC_DillonUInt64InMemMBS(bitWidth as Integer, address as Ptr, length as Integer) as UInt64

MBS Util Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16 to 64bit Checksum about the provided memory address.
Example:

```
// calculate a 32 bit checksum of data in memory as integer
Var m As MemoryBlock = "Hello World"
MessageBox Hex(CRC_DillonUInt64InMemMBS(32, m, m.Size))
```

80.5.19 CRC_DillonUInt64OfStrMBS(bitWidth as Integer, s as String) as UInt64

MBS Util Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16 to 64bit Checksum about the provided string.
Example:

```
// calculate a 64 bit checksum of a string, e.g. as quick hash for a cache key
MessageBox Hex(CRC_DillonUInt64OfStrMBS(64, "https://www.monkeybreadsoftware.de/"))
```

80.5.20 GetHash32MBS(s as string) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates some special Hash value.
Example:

```
MessageBox hex(GetHash32MBS("xskin-b013fafit_01-PELVIS-BODY.skn")) // should show 67A53A4D
```

Notes: The 255 char limit was in the original C function, but should be resolved for this plugin, so string longer than 255 chars will work.
The original C code looks like this:

```
static UInt32 GetHash32 (StringPtr inString)
{
int length = inString [ 0 ] ;
UInt32 hash = length + 1;
int i;

for (i = 1; i <= length; i++)
{
hash = ___rlwinm(hash, 3, 0, 31) ^tolower(inString [ i ] );
}

return hash;
}
```

Originally this was added for Cherie Benoit, which describes it like this:

"GetHash32MBS" duplicates the hashing function of Westlake
Interactive's "Namer" application which creates LFN-style short
filenames for use with the Macintosh version of "The Sims."

80.5.21 ModBusCalculateRTUMessageCRCMBS(data as string) as UInt16

MBS Util Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the RTU Message CRC string.
Example:

```
Var m as new MemoryBlock(9)

m.UInt8Value(0) = 1 // start of package
m.UInt8Value(1) = 6 // command code
m.UInt8Value(2) = 0 // some data...
```

```
m.UInt8Value(3) = 0
m.UInt8Value(4) = 0
m.UInt8Value(5) = &h21
m.UInt8Value(6) = 0 // checksum comes here
m.UInt8Value(7) = 0
m.UInt8Value(8) = 4 // end of package

Var Data as string = m.StringValue(0,6)
Var CheckSum as Int16 = ModBusCalculateRTUMessageCRCMBS(data)

m.UInt16Value(6) = checksum

MessageBox EncodeHex(m)
```

80.5.22 MD5MBS(data as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MD5 message digest value of a memoryblock as 16 byte string.
Example:

```
// calculate the MD5 hash of some data, e.g. to compare with a published checksum
Var data As MemoryBlock = "Hello World"
MessageBox EncodeHex(MD5MBS(data)) // B10A8DB164E0754105B7A99BE72E3FE5
```

80.5.23 MD5StringMBS(data as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MD5 message digest value of a string as hex string.
Example:

```
// get the MD5 hash of data as hex string
Var data As MemoryBlock = "Hello World"
MessageBox MD5StringMBS(data)
```

80.5.24 ValidateUUIDMBS(UUID as string, mode as Integer = 0, requiredVersion as Integer = 0) as string

MBS Util Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Validates the given UUID/GUID.
Example:

```
// wrong
Var w1 as string = ValidateUUIDMBS("hello") // wrong due to missing {
Var w2 as string = ValidateUUIDMBS("550e8400-z29b-11d4-a716-446655440000",1) // wrong with, with z
Var w3 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d40716-446655440000 } ") // wrong with missing minus
Var w4 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-44665544000 } ") // wrong with being too short
Var w5 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-446655440000 } dssdsd",1) // wrong as it has extra chars on end
Var w6 as string = ValidateUUIDMBS("550e8400-e29b-11d4-a716-446655440000",1,4) // wrong as not version 4
Var w7 as string = ValidateUUIDMBS("6a12a4d5-e9e6-4568-ffcc-34c70b24a668",1,4) // wrong as not version 4

// okay
Var o1 as string = ValidateUUIDMBS("550e8400-e29b-11d4-a716-446655440000",1)
Var o2 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-446655440000 } ")
Var o3 as string = ValidateUUIDMBS("6a12a4d5-e9e6-4568-afcc-34c70b24a668", 1)
Var o4 as string = ValidateUUIDMBS("6a12a4d5-e9e6-4568-afcc-34c70b24a668", 3)
Var o5 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-446655440000 } ", 2)
Var o6 as string = ValidateUUIDMBS(" { 550e8400e29b11d4a716446655440000 } ", 2)
Var o7 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d40716-446655440000 } ",4) // wrong with missing minus, but fixed
Var o8 as string = ValidateUUIDMBS("550e8400-e29b-11d40716-446655440000 } ",4) // wrong with missing { , but fixed
Var o9 as string = ValidateUUIDMBS("6a12a4d5-e9e6-4568-afcc-34c70b24a668", 4, 4) // is version 4
Var o10 as string = ValidateUUIDMBS("6a12a4d5-e9e6-1568-afcc-34c70b24a668", 4, 1) // is version 1
Var o11 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-446655440000 } dssdsd",1+4) // wrong as it has extra chars on end, but fixed

break // check in debugger
```

Notes: If the UUID is valid, you get it back.
If the UUID is invalid, you get an empty string back.

Pass 1 in mode to not require braces around UUID. Pass 2 to ignore minus characters. Pass 3 to combine those two.
You can add 4 to have the GUID fixed a bit like adding braces and minus chars if missing.
The requiredVersion parameter can be 1 to 5 to indicate the required GUID version you want to have.

80.5.25 MD5MBS(data as string) as string

MBS Encryption Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MD5 message digest value of a string.
Example:

```
// Compare RB5 MD5 to the one from MBS

Var a,b as String

a=MD5("Hallo")

b=MD5MBS("Hallo")

MessageBox str(StrComp(a,b,0))
```

Notes: Same as the MD5 function in RB5.

80.5.26 MD5StringMBS(data as string) as string

MBS Encryption Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MD5 message digest value of a string as hex string.
Example:

```
// Compare RB5 MD5 to the one from MBS

Var a,b as String

a=EncodingToHexMBS(MD5("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern"))
b=MD5StringMBS("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern")

MessageBox a+EndOfLine+b+EndOfLine+str(StrComp(a,b,0))
```

- REAL Server Plugin 0.2

80.5.27 CRC_DillonUInt64MBS(extends mem as memoryblock, bitWidth as Integer, offset as Integer, numBytes as Integer) as UInt64

MBS Util Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16 to 64bit Checksum about the provided memory address.
Example:

```
// calculate a 48 bit checksum over part of a MemoryBlock
Var m As MemoryBlock = "Header:Hello World"
Var crc As UInt64 = m.CRC_DillonUInt64MBS(48, 7, m.Size - 7) // skip the header
MessageBox Hex(crc)
```

Notes: The 64bit integer version for RB 2006r4 and newer.

80.5.28 CalculateTOTPMBS(Key as String, timeNow as UInt64, timeStart as UInt64, timeStep as UInt64, digitCount as Integer, DecodeBase32 as Boolean = false) as UInt32

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Calculates a Time-based one-time password.
Example:

```
// calculate the current 6 digit one time password for two factor authentication
Var secret As String = "JBSWY3DPEHPK3PXP" // base32 secret from the QR code
Var code As UInt32 = CalculateTOTPMBS(secret, CurrentUnixTimeMBS, 0, 30, 6, True)
MessageBox Format(code, "000000")
```

Notes: Key is the secret to use.
timeNow the current time in seconds, e.g. pass CurrentUnixTimeMBS.
timeStart the start time in seconds, e.g. zero.
timeStep the duration the code is valid in seconds, e.g. 30 seconds.
digitCount: the number of digits to generate, e.g. 6.

Uses SHA-1 as hash algorithm.
Added DecodeBase32 parameter in v22.5 to specify whether the password is base32 encoded and should be decoded.

The result is returned as number and may miss leading zeros, if you just convert it to text.

80.5.29 CurrentUnixTimeMBS as UInt64

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries unix time stamp.
Example:

```
// get the current unix time stamp (seconds since 1970)
Var stamp As UInt64 = CurrentUnixTimeMBS
Var d As New DateTime(stamp) // seconds since 1970
MessageBox stamp.ToString + " = " + d.ToString
```

Notes: Seconds since 1970.
Useful for CalculateTOTPMBS function.

80.5.30 DecodeFromBase32MBS(data as string) as String

MBS Util Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Decode a base 32 string.
Example:

```
Var s As String = EncodeToBase32MBS("The quick brown fox jumps over the lazy dog.")

If s = "KRUGKIDROVUWG2ZAMJZG653OEBTG66BANJ2W24DTEBXXMZLSEB2GQZJANRQXU6JAM-
RXWOLQ=" Then
// okay
Var d As String = DecodeFromBase32MBS(s)

MessageBox d
Else
Break
End If
```

Notes: You may need to use DefineEncoding to specify what encoding the decoded text should have.

80.5.31 EncodeToBase32MBS(data as string) as String

MBS Util Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Encode a base32 string.
Example:

```
Var s As String = EncodeToBase32MBS("The quick brown fox jumps over the lazy dog.")

If s = "KRUGKIDROVUWG2ZAMJZG653OEBTG66BANJ2W24DTEBXXMZLSEB2GQZJANRQXU6JAM-
RXWOLQ=" Then
// okay
Var d As String = DecodeFromBase32MBS(s)

MessageBox d
Else
Break
End If
```

Notes: Please check what text encoding you want to use. Especially what the software processing the base32 string expects.

80.6 class CCCryptorMBS

80.6.1 class CCCryptorMBS

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Generic interface for symmetric encryption.
Example:

```
// initialize
Var h as new CCCryptorMBS(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, 0,
"Hello12312345678")

if h.Lasterror<>0 then break

// destination memoryblock

Var m as new MemoryBlock(100)
Var Position as Uint64 = 0
Var BytesLeft as UInt64 = m.Size
```

```
// add a few bytes
Var q as UInt64 = 0

h.Update "Hello World!1234", m, BytesLeft, q
if h.Lasterror<>0 then break

Position = Position + q
BytesLeft = BytesLeft - q

// now finalize:
q = 0

Var dp as ptr = m.AddressPtrMBS(Position)

h.Final dp, BytesLeft, q
if h.Lasterror<>0 then break

Position = Position + q
BytesLeft = BytesLeft - q

// and show result
Var d as string = m.StringValue(0, Position)
MessageBox EncodingToHexMBS(d)
```

Notes: This interface provides access to a number of symmetric encryption algorithms. Symmetric encryption algorithms come in two "flavors" - block ciphers, and stream ciphers. Block ciphers process data (while both encrypting and decrypting) in discrete chunks of data called blocks; stream ciphers operate on arbitrary sized data.

The object declared in this interface, CCCryptorMBS, provides access to both block ciphers and stream ciphers with the same API; however some options are available for block ciphers that do not apply to stream ciphers.

The general operation of a CCCryptor is: initialize it with raw key data and other optional fields with Constructor(); process input data via one or more calls to Update(), each of which may result in output data being written to caller-supplied memory; and obtain possible remaining output data with Final(). The CCCryptor is disposed of via Destructor(), or it can be reused (with the same key data as provided to Constructor()) by calling Reset().

One option for block ciphers is padding, as defined in PKCS7; when padding is enabled, the total amount of data encrypted does not have to be an even multiple of the block size, and the actual length of plaintext is calculated during decryption.

Another option for block ciphers is Cipher Block Chaining, known as CBC mode. When using CBC mode,

an Initialization Vector (IV) is provided along with the key when starting an encrypt or decrypt operation. If CBC mode is selected and no IV is provided, an IV of all zeroes will be used.

CCCryptorMBS also implements block bufferring, so that individual calls to Update() do not have to provide data whose length is aligned to the block size. (If padding is disabled, encrypting with block ciphers does require that the *total* length of data input to Update() call(s) be aligned to the block size.)

A given CCCryptorMBS can only be used by one thread at a time; multiple threads can use safely different CCCryptors at the same time.

This class uses the CommonCrypto interface which is available on Mac OS X 10.5 or newer and also on iOS. So you can use it to get the same results on both operating systems. Also as you simply use Apple provided encryption, you don't need to apply for an export license for this classes here.

80.6.2 Methods

80.6.3 Constructor(operation as Integer, Algorithm as Integer, options as Integer, key as Ptr, keyLength as UInt64, iv as Ptr = nil)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Create a cryptographic context.
Notes: operation: Defines the basic operation: kCCEncrypt or kCCDecrypt.
Algorithm: Defines the algorithm.
options: A word of flags defining options.
key: Raw key material, length keyLength bytes.
keyLength: Length of key material. Must be appropriate for the selected operation and algorithm. Some algorithms provide for varying key lengths.
iv: Initialization vector, optional. Used by block ciphers when Cipher Block Chaining (CBC) mode is enabled. If present, must be the same length as the selected algorithm's block size. If CBC mode is selected (by the absence of the kCCOptionECBMode bit in the options flags) and no IV is present, a NULL (all zeroes) IV will be used. This parameter is ignored if ECB mode is used or if a stream cipher algorithm is selected.

Possible error is lasterror are kCCParamError and kCCMemoryFailure.
See also:

- 80.6.4 Constructor(operation as Integer, Algorithm as Integer, options as Integer, key as String, iv as Ptr = nil) 13743

80.6.4 Constructor(operation as Integer, Algorithm as Integer, options as Integer, key as String, iv as Ptr = nil)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Create a cryptographic context.
Example:

```
// key length must be 16 bytes for AES128
Var key as string = "1234567890123456"

Var h as new CCCryptorMBS(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, 0, key)

if h.Lasterror<>0 then
MessageBox "error: "+str(h.Lasterror)
else
MessageBox "OK"
end if
```

Notes: operation: Defines the basic operation: kCCEncrypt or kCCDecrypt.
Algorithm: Defines the algorithm.
options: A word of flags defining options.
key: Raw key material, length keyLength bytes.
keyLength: Length of key material. Must be appropriate for the selected operation and algorithm. Some algorithms provide for varying key lengths.
iv: Initialization vector, optional. Used by block ciphers when Cipher Block Chaining (CBC) mode is enabled. If present, must be the same length as the selected algorithm's block size. If CBC mode is selected (by the absence of the kCCOptionECBMode bit in the options flags) and no IV is present, a NULL (all zeroes) IV will be used. This parameter is ignored if ECB mode is used or if a stream cipher algorithm is selected.

Possible error is lasterror are kCCParamError and kCCMemoryFailure.
See also:

- 80.6.3 Constructor(operation as Integer, Algorithm as Integer, options as Integer, key as Ptr, keyLength as UInt64, iv as Ptr = nil) 13742

80.6.5 Crypt(Operation as Integer, Algorithm as Integer, Options as Integer, key as Ptr, KeyLength as UInt64, IV as Ptr, DataIn as Ptr, DataInLength as UInt64, DataOut as Ptr, DataOutAvailable as UInt64, byref DataOutMoved as UInt64) as Integer

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Stateless, one-shot encrypt or decrypt operation.
Example:

```
Var KeyString as string = "Hello12312345678"
Var InputString as string = "Hello World!1234"

Var InputMemory as MemoryBlock = InputString
Var KeyMemory as MemoryBlock = KeyString
Var IV as ptr = nil // default to zeros
Var OutputMemory as new MemoryBlock(100)
Var Size as UInt64 = 0

Var e as Integer = CCCryptorMBS.Crypt(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128,
0, KeyMemory, KeyMemory.size, IV, InputMemory, InputMemory.size, OutputMemory, OutputMemory.size,
size)

if e = CCCryptorMBS.kCCSuccess then
Var result as string = OutputMemory.StringValue(0, size)
MessageBox EncodingToHexMBS(result)
else
MessageBox "Error: "+str(e)
end if
```

Notes: This basically performs a sequence of Constructor, Update, Final and Destructor.

Parameters:

Possible errors in lasterror:
kCCBufferTooSmall indicates insufficient space in the dataOut buffer. In this case, the dataOutMoved parameter will indicate the size of the buffer needed to complete the operation. The operation can be retried with minimal runtime penalty.
kCCAlignmentError indicates that dataInLength was not properly aligned. This can only be returned for block ciphers, and then only when decrypting or when encrypting with block with padding disabled.

See also:

- 80.6.6 Crypt(Operation as Integer, Algorithm as Integer, Options as Integer, key as string, IV as Ptr, DataIn as string, byref DataOut as string) as Integer

Operation	Defines the basic operation: kCCEncrypt or kCCDecrypt.
Algorithm	Defines the encryption algorithm.
Options	A word of flags defining options. See kCCOption constants.
Key	Raw key material, length keyLength bytes.
keyLength	Length of key material. Must be appropriate for the select algorithm. Some algorithms may provide for varying key lengths.
IV	Initialization vector, optional. Used for Cipher Block Chaining (CBC) mode. If present, must be the same length as the selected algorithm's block size. If CBC mode is selected (by the absence of any mode bits in the options flags) and no IV is present, a nil (all zeroes) IV will be used. This is ignored if ECB mode is used or if a stream cipher algorithm is selected.
dataIn	Data to encrypt or decrypt, length dataInLength bytes.
dataInLength	Length of data to encrypt or decrypt.
dataOut	Result is written here. Allocated by caller. Encryption and decryption can be performed "in-place", with the same buffer used for input and output.
dataOutAvailable	The size of the dataOut buffer in bytes.
dataOutMoved	On successful return, the number of bytes written to dataOut. If kCCBuffer-TooSmall is returned as a result of insufficient buffer space being provided, the required buffer space is returned here.

kCCDecodeError	Indicates improperly formatted ciphertext or a "wrong key" error; occurs only during decrypt operations.

80.6.6 Crypt(Operation as Integer, Algorithm as Integer, Options as Integer, key as string, IV as Ptr, DataIn as string, byref DataOut as string) as Integer

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Stateless, one-shot encrypt or decrypt operation.
Example:

```
Var KeyString as string = "Hello12312345678"
Var InputString as string = "Hello World!1234"
Var IV as ptr = nil // default to zeros
Var Output as string = ""

Var e as Integer = CCCryptorMBS.Crypt(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128,
0, KeyString, IV, InputString, Output)

if e = CCCryptorMBS.kCCSuccess then
MessageBox EncodingToHexMBS(Output)
else
MessageBox "Error: "+str(e)
```

end if

Notes: This basically performs a sequence of Constructor, Update, Final and Destructor. This is the convenience function for Xojo with using strings instead of data pointers.

Parameters:

Operation	Defines the basic operation: kCCEncrypt or kCCDecrypt.
Algorithm	Defines the encryption algorithm.
Options	A word of flags defining options. See kCCOption constants.
Key	Raw Key.
IV	Initialization vector, optional. Used for Cipher Block Chaining (CBC) mode. If present, must be the same length as the selected algorithm's block size. If CBC mode is selected (by the absence of any mode bits in the options flags) and no IV is present, a nil (all zeroes) IV will be used. This is ignored if ECB mode is used or if a stream cipher algorithm is selected.
dataIn	Data to encrypt or decrypt.
dataOut	Result is written here.

Possible errors in lasterror:
kCCBufferTooSmall indicates insufficient space in the dataOut buffer. In this case, the dataOutMoved parameter will indicate the size of the buffer needed to complete the operation. The operation can be retried with minimal runtime penalty.
kCCAlignmentError indicates that dataInLength was not properly aligned. This can only be returned for block ciphers, and then only when decrypting or when encrypting with block with padding disabled.

kCCDecodeError	Indicates improperly formatted ciphertext or a "wrong key" error; occurs only during decrypt operations.

See also:

- 80.6.5 Crypt(Operation as Integer, Algorithm as Integer, Options as Integer, key as Ptr, KeyLength as UInt64, IV as Ptr, DataIn as Ptr, DataInLength as UInt64, DataOut as Ptr, DataOutAvailable as UInt64, byref DataOutMoved as UInt64) as Integer 13744

80.6.7 Final(DataOut as Ptr, dataOutAvailable as UInt64, byref dataOutMoved as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Finish an encrypt or decrypt operation, and obtain the (possible) final data output.
Notes: dataOut: Result is written here. Allocated by caller. Pass a memoryblock of right size.
dataOutAvailable: The size of the dataOut buffer in bytes.
dataOutMoved: On successful return, the number of bytes written to dataOut.

Lasterror is set to:
kCCBufferTooSmall indicates insufficient space in the dataOut buffer. The caller can use GetOutputLength() to determine the required output buffer size in this case. The operation can be retried; no state is lost when this is returned.
kCCAlignmentError When decrypting, or when encrypting with a block cipher with padding disabled, kCCAlignmentError will be returned if the total number of bytes provided to Update() is not an integral multiple of the current algorithm's block size.
kCCDecodeError Indicates garbled ciphertext or the wrong key during decryption. This can only be returned while decrypting with padding enabled.

Except when kCCBufferTooSmall is returned, the CCCryptorMBS can no longer be used for subsequent operations unless Reset() is called on it.
It is not necessary to call Final() when performing symmetric encryption or decryption if padding is disabled, or when using a stream cipher.

80.6.8 GetOutputLength(inputLength as UInt64, Final as Boolean = true) as UInt64

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Determine output buffer size required to process a given input size.
Example:

```
Var h as new CCCryptorMBS(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, 0, "Hello12312345678")

MessageBox str(h.GetOutputLength(1000))
```

Notes: inputLength: The length of data which will be provided to Update().
Final: If false, the returned value will indicate the output buffer space needed when 'inputLength' bytes are provided to CCCryptorMBS.Update(). When 'final' is true, the returned value will indicate the total combined buffer space needed when 'inputLength' bytes are provided to CCCryptorMBS.Update() and then CCCryptorMBS.Final() is called.

Returns the maximum buffer space need to perform CCCryptorMBS.Update() and optionally CCCryptorMBS.Final().

Some general rules apply that allow clients of this module to know a priori how much output buffer space

will be required in a given situation. For stream ciphers, the output size is always equal to the input size, and CCCryptorMBS.Final() never produces any data. For block ciphers, the output size will always be less than or equal to the input size plus the size of one block. For block ciphers, if the input size provided to each call to CCCryptorMBS.Update() is an integral multiple of the block size, then the output size for each call to CCCryptorMBS.Update() is less than or equal to the input size for that call to CCCryptorMBS.Update(). CCCryptorMBS.Final() only produces output when using a block cipher with padding enabled.

80.6.9 RandomGenerateBytes(data as MemoryBlock) as integer

MBS MacOSX Plugin, Plugin Version: 21.4, Platform: macOS, Targets: All.

Function: Return random bytes in a buffer allocated by the caller.
Example:

```
Var m As New MemoryBlock(16)

Var r As Integer = CCCryptorMBS.RandomGenerateBytes(m)

If r = CCCryptorMBS.kCCSuccess Then
MessageBox EncodeHex(m)
Else
MessageBox "Error " + Str(r)
End If
```

Notes: The PRNG returns cryptographically strong random bits suitable for use as cryptographic keys, IVs, nonces etc.

Return kCCSuccess on success.

80.6.10 Reset(iv as Ptr = nil)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Reinitializes an existing CCCryptorRef with a (possibly) new initialization vector.
Notes: The key is unchanged. Not implemented for stream ciphers.

iv: Optional initialization vector; if present, must be the same size as the current algorithm's block size.

the only possible errors are kCCParamError and kCCUnimplemented.
This can be called on a CCCryptorMBS with data pending (i.e. in a padded mode operation before Final is called); however any pending data will be lost in that case.

80.6.11 Update(dataIn as Ptr, dataInLength as UInt64, dataOut as Ptr, dataOutAvailable as UInt64, byref dataOutMoved as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Process (encrypt, decrypt) some data.
Notes: The result, if any, is written to a caller-provided buffer.

Parameters:

dataIn	Data to process, length dataInLength bytes.
dataInLength	Length of data to process.
dataOut	Result is written here. Allocated by caller. Encryption and decryption can be performed "in-place", with the same buffer used for input and output.
dataOutAvailable	The size of the dataOut buffer in bytes.
dataOutMoved	On successful return, the number of bytes written to dataOut.

Possible error codes:
kCCBufferTooSmall indicates insufficient space in the dataOut buffer. The caller can use CCCryptorMBS.GetOutputLength() to determine the required output buffer size in this case. The operation can be retried; no state is lost when this is returned.

This routine can be called multiple times. The caller does not need to align input data lengths to block sizes; input is bufferred as necessary for block ciphers. When performing symmetric encryption with block ciphers, and padding is enabled via kCCOptionPKCS7Padding, the total number of bytes provided by all the calls to this function when encrypting can be arbitrary (i.e., the total number of bytes does not have to be block aligned). However if padding is disabled, or when decrypting, the total number of bytes does have to be aligned to the block size; otherwise CCCryptMBS.Final() will return kCCAlignmentError. A general rule for the size of the output buffer which must be provided by the caller is that for block ciphers, the output length is never larger than the input length plus the block size. For stream ciphers, the output length is always exactly the same as the input length. See the discussion for CCCryptorMBS.GetOutputLength() for more information on this topic. Generally, when all data has been processed, call CCCryptorMBS.Final(). In the following cases, the CCCryptorMBS.Final() is superfluous as it will not yield any data nor return an error:
1. Encrypting or decrypting with a block cipher with padding disabled, when the total amount of data provided to CCCryptorMBS.Update() is an integral multiple of the block size.
2. Encrypting or decrypting with a stream cipher.
See also:

- 80.6.12 Update(dataIn as String, dataOut as Ptr, dataOutAvailable as UInt64, byref dataOutMoved as UInt64) 13750

80.6.12 Update(dataIn as String, dataOut as Ptr, dataOutAvailable as UInt64, byref dataOutMoved as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Process (encrypt, decrypt) some data.
Notes: The result, if any, is written to a caller-provided buffer.

Parameters:

dataIn	Data to process, length dataInLength bytes.
dataInLength	Length of data to process.
dataOut	Result is written here. Allocated by caller. Encryption and decryption can be performed "in-place", with the same buffer used for input and output.
dataOutAvailable	The size of the dataOut buffer in bytes.
dataOutMoved	On successful return, the number of bytes written to dataOut.

Possible error codes:
kCCBufferTooSmall indicates insufficient space in the dataOut buffer. The caller can use CCCryptorMBS.GetOutputLength() to determine the required output buffer size in this case. The operation can be retried; no state is lost when this is returned.

This routine can be called multiple times. The caller does not need to align input data lengths to block sizes; input is bufferred as necessary for block ciphers. When performing symmetric encryption with block ciphers, and padding is enabled via kCCOptionPKCS7Padding, the total number of bytes provided by all the calls to this function when encrypting can be arbitrary (i.e., the total number of bytes does not have to be block aligned). However if padding is disabled, or when decrypting, the total number of bytes does have to be aligned to the block size; otherwise CCCryptMBS.Final() will return kCCAlignmentError. A general rule for the size of the output buffer which must be provided by the caller is that for block ciphers, the output length is never larger than the input length plus the block size. For stream ciphers, the output length is always exactly the same as the input length. See the discussion for CCCryptorMBS.GetOutputLength() for more information on this topic. Generally, when all data has been processed, call CCCryptorMBS.Final(). In the following cases, the CCCryptorMBS.Final() is superfluous as it will not yield any data nor return an error:
1. Encrypting or decrypting with a block cipher with padding disabled, when the total amount of data provided to CCCryptorMBS.Update() is an integral multiple of the block size.
2. Encrypting or decrypting with a stream cipher.

80.6.13 Properties

80.6.14 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The internal handle for the crypter instance.
Notes: (Read and Write property)

80.6.15 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Last error code.
Notes: (Read and Write property)

80.6.16 Constants

Encryption Algorithms Constants.

Constant	Value	Description
kCCAlgorithm3DES	2	Triple-DES, three key, EDE configuration
kCCAlgorithmAES128	0	Advanced Encryption Standard, 128-bit block. Key length 128 to 256 bits.
kCCAlgorithmBlowfish	6	Blowfish encryption.
kCCAlgorithmCAST	3	CAST
kCCAlgorithmDES	1	Data Encryption Standard
kCCAlgorithmRC2	5	RC2 stream cipher
kCCAlgorithmRC4	4	RC4 stream cipher

Error codes.

Constant	Value	Description
kCCAlignmentError	-4303	Input size was not aligned properly.
kCCBufferTooSmall	-4301	Insufficient buffer provided for specified operation.
kCCCallSequenceError	-4309	Functions called in wrong order.
kCCDecodeError	-4304	Input data did not decode or decrypt properly.
kCCInvalidKey	-4311	Key is not valid.
kCCKeySizeError	-4310	The key size is incorrect.
kCCMemoryFailure	-4302	Memory allocation failure.
kCCOverflow	-4306	Buffer overflow.
kCCParamError	-4300	Illegal parameter value.
kCCRNGFailure	-4307	Random number generator failed.
kCCSuccess	0	Operation completed normally.
kCCUnimplemented	-4305	Function not implemented for the current algorithm.
kCCUnspecifiedError	-4308	An error occurred, but not matching one of the other error codes.

Block Size Constants.

Constant	Value	Description
kCCBlockSize3DES	8	Triple DES block size.
kCCBlockSizeAES128	16	AES block size (currently, only 128-bit blocks are supported).
kCCBlockSizeBlowfish	8	Blowfish block size.
kCCBlockSizeCAST	8	CAST block size.
kCCBlockSizeDES	8	DES block size.
kCCBlockSizeRC2	8	RC2 block size.

Operation Modes

Constant	Value	Description
kCCDecrypt	1	Symmetric decryption.
kCCEncrypt	0	Symmetric encryption.

Key Size Constants

Constant	Value	Description
kCCKeySize3DES	24	Triple DES key size. DES and TripleDES have fixed key sizes.
kCCKeySizeAES128	16	128 bit AES key size. AES has three discrete key sizes.
kCCKeySizeAES192	24	192 bit AES key size. AES has three discrete key sizes.
kCCKeySizeAES256	32	256 bit AES key size. AES has three discrete key sizes.
kCCKeySizeDES	8	DES key size. DES and TripleDES have fixed key sizes.
kCCKeySizeMaxBlowfish	56	Maximum key size for blowfish. You may better do a hash on the key and use the hash.
kCCKeySizeMaxCAST	16	CAST maximum key size. CAST and RC4 have variable key sizes.
kCCKeySizeMaxRC2	128	RC2 maximum key size. CAST and RC4 have variable key sizes.
kCCKeySizeMaxRC4	512	RC4 maximum key size. CAST and RC4 have variable key sizes.
kCCKeySizeMinBlowfish	8	Minimum key size for blowfish.
kCCKeySizeMinCAST	5	CAST minimum key size. CAST and RC4 have variable key sizes.
kCCKeySizeMinRC2	1	RC2 minimum key size. CAST and RC4 have variable key sizes.
kCCKeySizeMinRC4	1	RC4 minimum key size. CAST and RC4 have variable key sizes.

Option Constants

Constant	Value	Description
kCCOptionCBCMode	0	Cipher Block Chaining Mode. Default is CBC.
kCCOptionECBMode	2	Electronic Code Book Mode. Default is CBC. Stream ciphers currently have no options
kCCOptionPKCS7Padding	1	Perform PKCS7 padding. Stream ciphers currently have no options

80.7 class CCHMacMBS

80.7.1 class CCHMacMBS

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Keyed Message Authentication Code (HMAC) functions.
Example:

```
Var h as new CCHMacMBS(CCHMacMBS.kCCHmacAlgSHA1, "Hello")
h.Update "Hello World!"
Var m as MemoryBlock = h.Finalize
MessageBox EncodingToHexMBS(m)
```

Notes: This class uses the CommonCrypto interface which is available on Mac OS X 10.5 or newer and also on iOS. So you can use it to get the same results on both operating systems. Also as you simply use Apple provided encryption, you don't need to apply for an export license for this classes here.

80.7.2 Methods

80.7.3 Constructor(algorithm as Integer, key as memoryblock)

MBS MacOSX Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Initializes the hmac engine with the given algorithm and key.
See also:

- 80.7.4 Constructor(algorithm as Integer, key as Ptr, keyLength as UInt64) 13754
- 80.7.5 Constructor(algorithm as Integer, key as string) 13755

80.7.4 Constructor(algorithm as Integer, key as Ptr, keyLength as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Initializes the hmac engine with the given algorithm and key.
See also:

- 80.7.3 Constructor(algorithm as Integer, key as memoryblock) 13754
- 80.7.5 Constructor(algorithm as Integer, key as string) 13755

80.7.5 Constructor(algorithm as Integer, key as string)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Initializes the hmac engine with the given algorithm and key.
Example:

```
Var h as new CCHMacMBS(CCHMacMBS.kCCHmacAlgMD5, "Hello")
h.Update "Hello World!"
Var m as MemoryBlock = h.Finalize
MessageBox EncodingToHexMBS(m)
```

- 80.7.4 Constructor(algorithm as Integer, key as Ptr, keyLength as UInt64) 13754

80.7.6 Final(macOut as Ptr)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Obtain the final Message Authentication Code.
Notes: Writes mac to given pointer.
Please pass a memoryblock with 16 bytes for MD5 and 20 bytes for SHA1.

80.7.7 Finalize as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Obtain the final Message Authentication Code.
Notes: Returns digest. 16 bytes for MD5 and 20 bytes for SHA1.

80.7.8 Hmac(algorithm as Integer, key as Ptr, keyLength as Integer, data as Ptr, dataLength as Integer, MacOut as Ptr)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Stateless, one-shot HMAC function.
Notes: Make sure your memoryblock for key, data and macout have the right size and are not nil!
keyLength and dataLength are the size of key and data in bytes.
See also:

- 80.7.9 Hmac(algorithm as Integer, key as String, data as String) as String 13756

80.7.9 Hmac(algorithm as Integer, key as String, data as String) as String

MBS MacOSX Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Stateless, one-shot HMAC function.
See also:

- 80.7.8 Hmac(algorithm as Integer, key as Ptr, keyLength as Integer, data as Ptr, dataLength as Integer, MacOut as Ptr) 13755

80.7.10 Update(data as memoryblock)

MBS MacOSX Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Process some data.
Notes: Takes bytes in memoryblock.
See also:

- 80.7.11 Update(data as Ptr, dataLength as UInt64) 13756
- 80.7.12 Update(data as string) 13756

80.7.11 Update(data as Ptr, dataLength as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Process some data.
Notes: Takes given bytes from pointer. You can pass a memoryblock there and pass the size of the memoryblock as length.
See also:

- 80.7.10 Update(data as memoryblock) 13756
- 80.7.12 Update(data as string) 13756

80.7.12 Update(data as string)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Process some data.
Notes: Takes bytes in string.
See also:

- 80.7.10 Update(data as memoryblock) 13756
- 80.7.11 Update(data as Ptr, dataLength as UInt64) 13756

80.7.13 Properties

80.7.14 Algorithm as Integer

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The algorithm passed in the constructor.
Notes: see kCCHmacAlg* constants.
(Read and Write property)

80.7.15 Constants

Algorithms Constants

Constant	Value	Description
kCCHmacAlgMD5	1	
kCCHmacAlgSHA1	0	
kCCHmacAlgSHA224	5	
kCCHmacAlgSHA256	2	
kCCHmacAlgSHA384	3	
kCCHmacAlgSHA512	4	

Digest Length Constants

Constant	Value	Description
kCCMD5DigestLength	16	
kCCSHA1DigestLength	20	

80.8 class CCMD2MBS

80.8.1 class CCMD2MBS

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The class for MD2 hash.
Example:

```
Var s as new CCMD2MBS
s.Update "The quick brown fox jumps over the lazy dog"

Var m as MemoryBlock = s.Finalize
MessageBox EncodingToHexMBS(m)
```

Notes: This class uses the CommonCrypto interface which is available on Mac OS X 10.4 or newer and also on iOS. So you can use it to get the same results on both operating systems. Also as you simply use Apple provided encryption, you don't need to apply for an export license for this classes here.

80.8.2 Methods

80.8.3 Constructor

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Initializes the hash engine.

80.8.4 Finalize as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Finalizes hash and returns digest as memoryblock.
Notes: If you want to show the value to a human, please use EncodingToHexMBS function.

80.8.5 MD2(data as Ptr, dataLength as Integer) as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One-shot hash calculation with MD2.
Notes: Simply pass in a memoryblock with data and the size in bytes and receive digest as memoryblock.

If you need to show digest to human, please use EncodingToHexMBS function.
See also:

- 80.8.6 MD2(data as String) as Memoryblock 13759

80.8.6 MD2(data as String) as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One-shot hash calculation with MD2.
Example:

```
Var m as MemoryBlock = CCMD2MBS.MD2("The quick brown fox jumps over the lazy dog")
MessageBox EncodingToHexMBS(m)
```

Notes: Simply pass in a string and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.

80.9 class CCMD4MBS

80.9.1 class CCMD4MBS

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The class for MD4 hash.
Example:

```
Var s as new CCMD4MBS
s.Update "The quick brown fox jumps over the lazy dog"

Var m as MemoryBlock = s.Finalize
MessageBox EncodingToHexMBS(m)
```

Notes: This class uses the CommonCrypto interface which is available on Mac OS X 10.4 or newer and also on iOS. So you can use it to get the same results on both operating systems. Also as you simply use Apple provided encryption, you don't need to apply for an export license for this classes here.

80.16 class CipherMBS

80.16.1 class CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The high level cipher class using OpenSSL encryption.
Example:

```
Var c as CipherMBS = CipherMBS.aes_128_cfb128
Var CKey as MemoryBlock = "1234567812345678"
Var CIV as MemoryBlock
Var data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

Var output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

Var a as new AESMBS

call a.SetKey CKey, 128
Var output2 as string = a.EncryptCFB128(data, CIV)

MessageBox EncodeHex(output1)+EndOfLine+EncodeHex(output2)
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

80.16.2 Methods

80.16.3 aes_128_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
Var key as string = "mysecretkey"
Var encrypted as string = "6IcB9bpDwOjjONErhYQ6c7+Fb4qszsUNZVU0iThLYqOu7chJ7MG2nwSpRBUY0ZC3"

encrypted = DecodeBase64(encrypted)

Var c as CipherMBS = CipherMBS.aes_128_cbc
call c.DecryptInit key

Var s as string = c.ProcessString(Encrypted)+c.FinalizeAsString

Break // "In welcher Stadt steht das Bundeshaus?" is now in s.
```

80.16.4 aes_128_cbc_hmac_sha256 as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.5 aes_128_ccm as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.6 aes_128_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.7 aes_128_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
Var c as CipherMBS = CipherMBS.aes_128_cfb128
Var CKey as MemoryBlock = "1234567812345678"
Var CIV as MemoryBlock
Var data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

Var output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

Var a as new AESMBS

call a.SetKey CKey, 128
Var output2 as string = a.EncryptCFB128(data, CIV)

MessageBox EncodeHex(output1)+EndOfLine+EncodeHex(output2)
```

80.16.8 aes_128_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.9 aes_128_ctr as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.10 aes_128_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.11 aes_128_gcm as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.12 aes_128_ocb as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.13 aes_128_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.14 aes_128_wrap as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.15 aes_128_wrap_pad as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.16 aes_128_xts as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
Var CKey as MemoryBlock = "1234567812345678"
Var CIV as MemoryBlock
Var data as string = "Hello World. Just a test!"

Var c as CipherMBS = CipherMBS.aes_128_xts
call c.EncryptInit Ckey, CIV

Var output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.aes_128_xts
call c.DecryptInit Ckey, CIV

Var output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MessageBox "Encrypred via "+c.Name+" as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

80.16.17 aes_192_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.18 aes_192_ccm as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.19 aes_192_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.20 aes_192_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.21 aes_192_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.22 aes_192_ctr as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.23 aes_192_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.24 aes_192_gcm as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.25 aes_192_ocb as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.26 aes_192_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.27 aes_192_wrap as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.28 aes_192_wrap_pad as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.29 aes_256_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
Var CKey as MemoryBlock = "1234567812345678"
Var CIV as MemoryBlock
Var data as string = "Hello World. Just a test!"

Var c as CipherMBS = CipherMBS.aes_256_cbc
call c.EncryptInit Ckey, CIV

Var output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
```

```
c = CipherMBS.aes_256_cbc
call c.DecryptInit Ckey, CIV

Var output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MessageBox "Encrypred via "+c.Name+" as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

80.16.30 aes_256_cbc_hmac_sha256 as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.31 aes_256_ccm as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.32 aes_256_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.33 aes_256_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
Var CKey as MemoryBlock = "1234567812345678"
Var CIV as MemoryBlock
Var data as string = "Hello World. Just a test!"

Var c as CipherMBS = CipherMBS.aes_256_cfb128
call c.EncryptInit Ckey, CIV

Var output1 as string = c.ProcessString(data)
```

```
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.aes_256_cfb128
call c.DecryptInit Ckey, CIV

Var output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MessageBox "Encrypred via "+c.Name+" as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

80.16.34 aes_256_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.35 aes_256_ctr as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.36 aes_256_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
Var c as CipherMBS = CipherMBS.aes_256_ecb
Var CKey as MemoryBlock = "1234567812345678"
Var CIV as MemoryBlock
Var data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

Var output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

c = CipherMBS.aes_256_ecb
CIV = nil
```

```
call c.DecryptInit Ckey, CIV

Var output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MessageBox "Encrypred as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

80.16.37 aes_256_gcm as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.38 aes_256_ocb as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.39 aes_256_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.40 aes_256_wrap as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.41 aes_256_wrap_pad as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.42 aes_256_xts as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.43 aria_128_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.44 aria_128_ccm as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.45 aria_128_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.46 aria_128_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.47 aria_128_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.48 aria_128_ctr as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.49 aria_128_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.50 aria_128_gcm as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.51 aria_128_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.52 aria_192_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.53 aria_192_ccm as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.54 aria_192_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.55 aria_192_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.56 aria_192_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.57 aria_192_ctr as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.58 aria_192_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.59 aria_192_gcm as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.60 aria_192_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.61 aria_256_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.62 aria_256_ccm as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.63 aria_256_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.64 aria_256_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.65 aria_256_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.66 aria_256_ctr as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.67 aria_256_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.68 aria_256_gcm as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.69 aria_256_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.70 bf_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for Blowfish with CBC mode.
Example:

```
Var key As String = "Hello World"
Var iv As MemoryBlock = "12345678"

// encrypt it
Var c As CipherMBS = CipherMBS.bf_cbc

Call c.EncryptInit(key, iv)
Var Input As String = "Hello World. Just a test."

Var encrypted As String = c.ProcessString(Input) + c.FinalizeAsString
```

```
// decrypt it
Var d As CipherMBS = CipherMBS.bf_cbc

Call d.DecryptInit(key, iv)
Var unencrypted As String = d.ProcessString(encrypted) + d.FinalizeAsString

break // check in debugger
```

80.16.71 bf_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for Blowfish with CFB64 mode.
Example:

```
Var CKey as MemoryBlock = "1234567812345678"
Var CIV as MemoryBlock
Var data as string = "Hello World. Just a test!"

Var c as CipherMBS = CipherMBS.bf_cfb64
call c.EncryptInit Ckey, CIV

Var output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.bf_cfb64
call c.DecryptInit Ckey, CIV

Var output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MessageBox "Encrypred via "+c.Name+" as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

80.16.72 bf_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for Blowfish with ECB mode.

80.16.73 bf_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for Blowfish with OFB mode.

80.16.74 BytesToKey(cipher as CipherMBS, digest as DigestMBS, Salt as MemoryBlock, InputKey as Memoryblock, IterationCount as Integer, byref OutputKey as memoryblock, byref IV as memoryblock) as boolean

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Derives a key and IV from a given input data.
Notes: Returns true on success or false on failure.

BytesToKey() derives a key and IV from various parameters. type is the cipher to derive the key and IV for. md is the message digest to use. The salt parameter is used as a salt in the derivation: it should point to an 8 byte buffer or nil if no salt is used. data is a buffer containing datal bytes which is used to derive the keying data. count is the iteration count to use. The derived key and IV will be written to key and iv respectively.

A typical application of this function is to derive keying material for an encryption algorithm from a password in the data parameter.

Increasing the count parameter slows down the algorithm which makes it harder for an attacker to peform a brute force attack using a large number of candidate passwords.

If the total key and IV length is less than the digest length and MD5 is used then the derivation algorithm is compatible with PKCS#5 v1.5 otherwise a non standard extension is used to derive the extra data.

Newer applications should use more standard algorithms such as PBKDF2 as defined in PKCS#5v2.1 for key derivation.

Key Derivation Algorithm

The key and IV is derived by concatenating D_1, D_2, etc until enough data is available for the key and IV. D_i is defined as:

D_i = HASH^count(D_(i-1) | | data | | salt)

where | | denotes concatentaion, D_0 is empty, HASH is the digest algorithm in use, HASH^1(data) is simply HASH(data), HASH^2(data) is HASH(HASH(data)) and so on.

The initial bytes are used for the key and the subsequent bytes for the IV.

80.16.75 camellia_128_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.76 camellia_128_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.77 camellia_128_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.78 camellia_128_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.79 camellia_128_ctr as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.80 camellia_128_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.81 camellia_128_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.82 camellia_192_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.83 camellia_192_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.84 camellia_192_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.85 camellia_192_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.86 camellia_192_ctr as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.87 camellia_192_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.88 camellia_192_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.89 camellia_256_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
Var CKey as MemoryBlock = "1234567812345678"
Var CIV as MemoryBlock
Var data as string = "Hello World. Just a test!"

Var c as CipherMBS = CipherMBS.camellia_256_cbc
call c.EncryptInit Ckey, CIV

Var output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.camellia_256_cbc
call c.DecryptInit Ckey, CIV

Var output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MessageBox "Encrypred via "+c.Name+" as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

80.16.90 camellia_256_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.91 camellia_256_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.92 camellia_256_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.93 camellia_256_ctr as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.94 camellia_256_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.95 camellia_256_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.96 cast5_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.97 cast5_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.98 cast5_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.99 cast5_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.100 chacha20 as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.101 chacha20_poly1305 as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.102 CipherByName(name as string) as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds a cipher by name.
Notes: Possible names:
AES-128-CFB, BF-CBC, BF-CFB, BF-ECB, BF-OFB, AES-128-CBC, id-aes128-CCM, AES-128-CFB1, AES-128-CFB8, AES-128-CTR, AES-128-ECB, id-aes128-GCM, AES-128-OFB, AES-128-XTS, AES-192-CBC, id-aes192-CCM, AES-192-CFB1, AES-192-CFB8, AES-192-CFB, AES-192-CTR, AES-192-ECB, id-aes192-GCM, AES-192-OFB, AES-256-CBC, id-aes256-CCM, AES-256-CFB1, AES-256-CFB8, AES-256-

CFB, AES-256-CTR, AES-256-ECB, id-aes256-GCM, AES-256-OFB, AES-256-XTS, CAMELLIA-128-CBC, CAMELLIA-128-CFB1, CAMELLIA-128-CFB8, CAMELLIA-128-CFB, CAMELLIA-128-ECB, CAMELLIA-128-OFB, CAMELLIA-192-CBC, CAMELLIA-192-CFB1, CAMELLIA-192-CFB8, CAMELLIA-192-CFB, CAMELLIA-192-ECB, CAMELLIA-192-OFB, CAMELLIA-256-CBC, CAMELLIA-256-CFB1, CAMELLIA-256-CFB8, CAMELLIA-256-CFB, CAMELLIA-256-ECB, CAMELLIA-256-OFB, CAST5-CBC, CAST5-CFB, CAST5-ECB, CAST5-OFB, DES-EDE, DES-EDE-CBC, DES-EDE-CFB, DES-EDE, DES-EDE-OFB, DES-EDE3, DES-EDE3-CBC, DES-EDE3-CFB1, DES-EDE3-CFB8, DES-EDE3-CFB, DES-EDE3, DES-EDE3-OFB, RC2-40-CBC, RC2-64-CBC, RC2-CBC, RC2-CFB, RC2-ECB, RC2-OFB, RC4, RC4-40, RC4-HMAC-MD5, IDEA-CFB, IDEA-ECB, IDEA-OFB, IDEA-CBC, DES-CFB1, DES-CFB8, DES-CFB, DES-OFB, DES-ECB, DES-CBC or DESX-CBC.

80.16.103 CipherInit(key as memoryblock, IV as memoryblock, Encrypt as boolean) as Boolean

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the cipher for encryption or decryption.
Notes: We added for 17.3 a new boolean result:

Returns true in case of success and key length is okay.
Returns false in case of failures like out of memory, wrong key length.

Even if key length is wrong, we initialize (as with older versions before) but may crop the key length to default length.
AES 128 uses 16 byte key length, AES 256 uses 32 byte key length.
Key and IV are both filled with zeros to reach the minimum length.

key: The key to use.
IV: Optional, the initial vector.

You can use IVLength and KeyLength properties to learn how long those should be.

80.16.104 CipherNames as String()

MBS Encryption Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of all ciphers.
Example:

```
// see hash and encryption algorithms available
Var CipherNames() as string = CipherMBS.CipherNames
Var DigestNames() as string = DigestMBS.DigestNames
Break
```

Notes: The list may not be the same for Mac, Windows and Linux.

Current list:

aes-128-cbc, aes-128-cbc-hmac-sha1, aes-128-ccm, aes-128-cfb, aes-128-cfb1, aes-128-cfb8, aes-128-ctr, aes-128-ecb, aes-128-gcm, aes-128-ocb, aes-128-ofb, aes-128-xts, aes-192-cbc, aes-192-ccm, aes-192-cfb, aes-192-cfb1, aes-192-cfb8, aes-192-ctr, aes-192-ecb, aes-192-gcm, aes-192-ocb, aes-192-ofb, aes-256-cbc, aes-256-cbc-hmac-sha1, aes-256-ccm, aes-256-cfb, aes-256-cfb1, aes-256-cfb8, aes-256-ctr, aes-256-ecb, aes-256-gcm, aes-256-ocb, aes-256-ofb, aes-256-xts, aes128, aes128-wrap, aes192, aes192-wrap, aes256, aes256-wrap, aria-128-cbc, aria-128-ccm, aria-128-cfb, aria-128-cfb1, aria-128-cfb8, aria-128-ctr, aria-128-ecb, aria-128-gcm,

aria-128-ofb, aria-192-cbc, aria-192-ccm, aria-192-cfb, aria-192-cfb1, aria-192-cfb8, aria-192-ctr, aria-192-ecb, aria-192-gcm, aria-192-ofb, aria-256-cbc, aria-256-ccm, aria-256-cfb, aria-256-cfb1, aria-256-cfb8, aria-256-ctr, aria-256-ecb, aria-256-gcm, aria-256-ofb, aria128, aria192, aria256, bf, bf-cbc, bf-cfb, bf-ecb, bf-ofb, blowfish, camellia-128-cbc, camellia-128-cfb, camellia-128-cfb1, camellia-128-cfb8, camellia-128-ctr, camellia-128-ecb, camellia-128-ofb, camellia-192-cbc, camellia-192-cfb, camellia-192-cfb1, camellia-192-cfb8, camellia-192-ctr, camellia-192-ecb, camellia-192-ofb, camellia-256-cbc, camellia-256-cfb, camellia-256-cfb1, camellia-256-cfb8, camellia-256-ctr, camellia-256-ecb, camellia-256-ofb, camellia128, camellia192, camellia256, cast, cast-cbc, cast5-cbc, cast5-cfb, cast5-ecb, cast5-ofb, chacha20, chacha20-poly1305, des, des-cbc, des-cfb, des-cfb1, des-cfb8, des-ecb, des-ede, des-ede-cbc, des-ede-cfb, des-ede-ecb, des-ede-ofb, des-ede3, des-ede3-cbc, des-ede3-cfb, des-ede3-cfb1, des-ede3-cfb8, des-ede3-ecb, des-ede3-ofb, des-ofb, des3, des3-wrap, desx, desx-cbc, id-aes128-CCM, id-aes128-GCM, id-aes128-wrap, id-aes128-wrap-pad, id-aes192-CCM, id-aes192-GCM, id-aes192-wrap, id-aes192-wrap-pad, id-aes256-CCM, id-aes256-GCM, id-aes256-wrap, id-aes256-wrap-pad, id-smime-alg-CMS3DESwrap, idea, idea-cbc, idea-cfb, idea-ecb, idea-ofb, rc2, rc2-128, rc2-40, rc2-40-cbc, rc2-64, rc2-64-cbc, rc2-cbc, rc2-cfb, rc2-ecb, rc2-ofb, rc4, rc4-40, rc4-hmac-md5, RC5, rc5-cbc, rc5-cfb, rc5-ecb, rc5-ofb, seed, seed-cbc, seed-cfb, seed-ecb, seed-ofb, sm4, sm4-cbc, sm4-cfb, sm4-ctr, sm4-ecb, sm4-ofb

80.16.105 Clear

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the current state.

80.16.106 Constructor

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

80.16.107 Control(Type as Integer, Arg as Integer, Data as Ptr)

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allows various cipher specific parameters to be determined and set.
Notes: See OpenSSL documentation for EVP_CIPHER_CTX_ctrl function.

80.16.108 DecryptInit(key as memoryblock, IV as memoryblock = nil) as Boolean

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the cipher for decrypting.
Example:

```
Var key as string = "mysecretkey"
Var encrypted as string = "6IcB9bpDwOjjONErhYQ6c7+Fb4qszsUNZVU0iThLYqOu7chJ7MG2nwSpRBUY0ZC3"

encrypted = DecodeBase64(encrypted)

Var c as CipherMBS = CipherMBS.aes_128_cbc
call c.DecryptInit key

Var s as string = c.ProcessString(Encrypted)+c.FinalizeAsString

Break // "In welcher Stadt steht das Bundeshaus?" is now in s.
```

Notes: We added for 17.3 a new boolean result:

Returns true in case of success and key length is okay.
Returns false in case of failures like out of memory, wrong key length.

Even if key length is wrong, we initialize (as with older versions before) but may crop the key length to default length.
AES 128 uses 16 byte key length, AES 256 uses 32 byte key length.
Key and IV are both filled with zeros to reach the minimum length.

key: The key to use.
IV: Optional, the initial vector.

You can use IVLength and KeyLength properties to learn how long those should be.

For AES the length of the key defines whether you get 128, 192 or 256 bit encryption. Pass some other key length will return an error. Best is usually to put a hashing algorithm before to make sure the key has the required bit length, e.g. use SHA256MBS class.

80.16.109 desx_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for DESX algorithm in CBC mode.

80.16.110 des_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for DES in CBC.

80.16.111 des_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for DES in CFB.

80.16.112 des_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for DES in CFB.

80.16.113 des_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for DES in CFB.

80.16.114 des_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for DES in ECB.

80.16.115 des_ede as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.116 des_ede3 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.117 des_ede3_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.118 des_ede3_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.119 des_ede3_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.120 des_ede3_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.121 des_ede3_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.122 des_ede3_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.123 des_ede3_wrap as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.124 des_ede_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.125 des_ede_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.126 des_ede_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.127 des_ede_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.128 des_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for DES in OFB.

80.16.129 EncryptInit(key as memoryblock, IV as memoryblock = nil) as Boolean

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the cipher for encrypting.
Example:

```
Var c as CipherMBS = CipherMBS.aes_128_cfb128
Var CKey as MemoryBlock = "1234567812345678"
Var CIV as MemoryBlock
Var data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

Var output as string = c.ProcessString(data)
output = output + c.FinalizeAsString

MessageBox EncodeHex(output)
```

Notes: We added for 17.3 a new boolean result:

Returns true in case of success and key length is okay.
Returns false in case of failures like out of memory, wrong key length.

Even if key length is wrong, we initialize (as with older versions before) but may crop the key length to default length.
AES 128 uses 16 byte key length, AES 256 uses 32 byte key length.
Key and IV are both filled with zeros to reach the minimum length.

key: The key to use.
IV: Optional, the initial vector.

You can use IVLength and KeyLength properties to learn how long those should be.

For AES the length of the key defines whether you get 128, 192 or 256 bit encryption. Pass some other key length will return an error. Best is usually to put a hashing algorithm before to make sure the key has the required bit length, e.g. use SHA256MBS class.

80.16.130 FinalizeAsMemory as memoryblock

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finalizes en/decryption and returns last data.

80.16.131 FinalizeAsString as String

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finalizes en/decryption and returns last data.
Example:

```
Var c as CipherMBS = CipherMBS.aes_128_cfb128
Var CKey as MemoryBlock = "1234567812345678"
Var CIV as MemoryBlock
Var data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

Var output as string = c.ProcessString(data)
output = output + c.FinalizeAsString

MessageBox EncodeHex(output)
```

Notes: Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.

80.16.132 GetGCMTag(Size as Integer = 16) as MemoryBlock

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries tag value for AES GCM.
Example:

```
Var c As CipherMBS = CipherMBS.aes_256_gcm

// encrypt it
Var key As String = "12345678"

Call c.EncryptInit(key)

Var p1 As String = c.ProcessString("Hello World")
Var p2 As String = c.FinalizeAsString
Var encrypted As String = p1 + p2
Var TagValue As MemoryBlock = c.GetGCMTag

Break
```

```
// decrypt it
Var d As CipherMBS = CipherMBS.aes_256_gcm
Call d.DecryptInit key

Var d1 As String = d.ProcessString(encrypted)

d.SetGCMTag TagValue

Var d2 As String = d.FinalizeAsString
Var decrypted As String = d1 + d2

Break
```

Notes: Calls the Control method with type EVP_CTRL_GCM_GET_TAG (16).
Raises exception in case of an error.

80.16.133 idea_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for IDEA encryption algorithm in CBC.

80.16.134 idea_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for IDEA encryption algorithm in CFB.

80.16.135 idea_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for IDEA encryption algorithm in ECB.

80.16.136 idea_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for IDEA encryption algorithm in OFB.

80.16.137 MaxBlockLength as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum possible block length size for any cipher.

80.16.138 MaxIVLength as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum possible IV vector size for any cipher.

80.16.139 MaxKeyLength as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum possible key length size for any cipher.

80.16.140 ProcessFile(InputFile as FolderItem, OutputFile as FolderItem) as boolean

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Processes content of file.
Example:

```
// encrypt and decrypt a Xojo dmg
Var d As CipherMBS = CipherMBS.aes_256_cfb128
Var outfile As FolderItem = GetTemporaryFolderItem

Var CKey As MemoryBlock = "1234567812345678"
Var CIV As MemoryBlock

Call d.EncryptInit Ckey, CIV

Var file As New FolderItem("/Users/cs/Downloads/Xojo2026r3.dmg", FolderItem.PathModes.Native)

If d.ProcessFile(file, outfile) Then

Call d.DecryptInit Ckey, CIV

Var copyfile As New FolderItem("/Users/cs/Downloads/Xojo2026r3out.dmg", FolderItem.PathModes.Native)
```

```
If d.ProcessFile(outfile, copyfile) Then
Break // success
Else
Break // failed
end if
Else
Break // failed
End If
```

Notes: Plugin will start a preemptive thread to read in file and process all data in chunks and write to output file.
Returns true on success or false on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.

80.16.141 ProcessMemory(data as memoryblock) as MemoryBlock

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Processes data in a memory block.
Example:

```
Var key As String = "mysecretkey"
Var data2 As String = "Hello World. Just a test"
Var data1 As String = "encoding=UTF-8;"

// encrypt
Var c As CipherMBS = CipherMBS.aes_128_gcm
Call c.EncryptInit key

Var Encrypted As String = c.ProcessString(data1) + c.ProcessString(data2) + c.FinalizeAsString
var GCMTag as MemoryBlock = c.GetGCMTag

// decrypt
c = CipherMBS.aes_128_gcm

Call c.DecryptInit key

c.SetGCMTag GCMTag
Var Decrypted As String = c.ProcessString(Encrypted) + c.FinalizeAsString

Break // inspect in debugger
```

Notes: Due to block sizes, the result may be longer or shorter than the input size.

80.16.142 ProcessMemoryAAD(data as memoryblock) as Boolean

MBS Encryption Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Processes data in a MemoryBlock.
Notes: This is for Additional Authenticated Data for AES-GCM.

Can be called before ProcessMemory and ProcessString with private data.
The AAD data is not encrypted itself, but counts for encryption and needs to be there to decrypt.

80.16.143 ProcessString(data as String) as string

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Processes data in a string.
Example:

```
Var key as string = "mysecretkey"
Var encrypted as string = "6IcB9bpDwOjjONErhYQ6c7+Fb4qszsUNZVU0iThLYqOu7chJ7MG2nwSpRBUY0ZC3"

encrypted = DecodeBase64(encrypted)

Var c as CipherMBS = CipherMBS.aes_128_cbc
call c.DecryptInit key

Var s as string = c.ProcessString(Encrypted)+c.FinalizeAsString

Break // "In welcher Stadt steht das Bundeshaus?" is now in s.
```

Notes: due to block sizes, the result may be longer or shorter than the input size.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.

Returns true on success.

80.16.144 ProcessStringAAD(data as String) as Boolean

MBS Encryption Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Processes data in a string.
Example:

```
Var key As String = "mysecretkey"
Var data As String = "Hello World. Just a test"
Var AAD As String = "encoding=UTF-8;"

// encrypt
Var c As CipherMBS = CipherMBS.aes_128_gcm
Call c.EncryptInit key

call c.ProcessStringAAD(AAD)
Var Encrypted As String = c.ProcessString(data) + c.FinalizeAsString
var GCMTag as MemoryBlock = c.GetGCMTag

// decrypt
c = CipherMBS.aes_128_gcm

Call c.DecryptInit key

c.SetGCMTag GCMTag
Call c.ProcessStringAAD(AAD)
Var Decrypted As String = c.ProcessString(Encrypted) + c.FinalizeAsString

Break // inspect in debugger
```

Notes: This is for Additional Authenticated Data for AES-GCM.

Can be called before ProcessMemory and ProcessString with private data.
The AAD data is not encrypted itself, but counts for encryption and needs to be there to decrypt.

Returns true on success.

80.16.145 rc2_40_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.146 rc2_64_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.147 rc2_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
Var CKey as MemoryBlock = "1234567812345678"
Var CIV as MemoryBlock
Var data as string = "Hello World. Just a test!"

Var c as CipherMBS = CipherMBS.rc2_cbc
call c.EncryptInit Ckey, CIV

Var output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.rc2_cbc
call c.DecryptInit Ckey, CIV

Var output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MessageBox "Encrypred as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

80.16.148 rc2_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
Var CKey as MemoryBlock = "1234567812345678"
Var CIV as MemoryBlock
Var data as string = "Hello World. Just a test!"

Var c as CipherMBS = CipherMBS.rc2_cfb64
call c.EncryptInit Ckey, CIV

Var output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.rc2_cfb64
call c.DecryptInit Ckey, CIV
```

```
Var output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MessageBox "Encrypred as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

80.16.149 rc2_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
Var CKey as MemoryBlock = "1234567812345678"
Var CIV as MemoryBlock
Var data as string = "Hello World. Just a test!"

Var c as CipherMBS = CipherMBS.rc2_ecb
call c.EncryptInit Ckey, CIV

Var output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.rc2_ecb
call c.DecryptInit Ckey, CIV

Var output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MessageBox "Encrypred as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

80.16.150 rc2_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
Var c as CipherMBS = CipherMBS.rc2_ofb
Var CKey as MemoryBlock = "1234567812345678"
Var CIV as MemoryBlock
Var data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV
```

```
Var output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MessageBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc2_ofb
CIV = nil

call c.DecryptInit Ckey, CIV

Var output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MessageBox "Decrypted: "+output2
```

80.16.151 rc4 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
Var c as CipherMBS = CipherMBS.rc4
Var CKey as MemoryBlock = "1234567812345678"
Var CIV as MemoryBlock
Var data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

Var output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MessageBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc4
CIV = nil

call c.DecryptInit Ckey, CIV

Var output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MessageBox "Decrypted: "+output2
```

80.16.152 rc4_40 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
Var c as CipherMBS = CipherMBS.rc4_40
Var CKey as MemoryBlock = "1234567812345678"
Var CIV as MemoryBlock
Var data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

Var output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MessageBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc4_40
CIV = nil

call c.DecryptInit Ckey, CIV

Var output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MessageBox "Decrypted: "+output2
```

80.16.153 rc4_hmac_md5 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
Var c as CipherMBS = CipherMBS.rc4_hmac_md5
Var CKey as MemoryBlock = "1234567812345678"
Var CIV as MemoryBlock
Var data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

Var output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MessageBox "Encrypred as hex: "+EncodeHex(output1)
```

```
c = CipherMBS.rc4_hmac_md5
CIV = nil

call c.DecryptInit Ckey, CIV

Var output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MessageBox "Decrypted: "+output2
```

80.16.154 rc5_32_12_16_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
Var c as CipherMBS = CipherMBS.rc5_32_12_16_cbc
Var CKey as MemoryBlock = "1234567812345678"
Var CIV as MemoryBlock
Var data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

Var output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MessageBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc5_32_12_16_cbc
CIV = nil

call c.DecryptInit Ckey, CIV

Var output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MessageBox "Decrypted: "+output2
```

Notes: RC5 with CBC. 32 bit word size, 12 rounds, 16 byte key.

80.16.155 rc5_32_12_16_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
Var c as CipherMBS = CipherMBS.rc5_32_12_16_cfb64
Var CKey as MemoryBlock = "1234567812345678"
Var CIV as MemoryBlock
Var data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

Var output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MessageBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc5_32_12_16_cfb64
CIV = nil

call c.DecryptInit Ckey, CIV

Var output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MessageBox "Decrypted: "+output2
```

Notes: RC5 with CFB64. 32 bit word size, 12 rounds, 16 byte key.

80.16.156 rc5_32_12_16_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
Var c as CipherMBS = CipherMBS.rc5_32_12_16_ecb
Var CKey as MemoryBlock = "1234567812345678"
Var CIV as MemoryBlock
Var data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

Var output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString
```

```
MessageBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc5_32_12_16_ecb
CIV = nil

call c.DecryptInit Ckey, CIV

Var output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MessageBox "Decrypted: "+output2
```

Notes: RC5 with ECB. 32 bit word size, 12 rounds, 16 byte key.

80.16.157 rc5_32_12_16_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
Var c as CipherMBS = CipherMBS.rc5_32_12_16_ofb
Var CKey as MemoryBlock = "1234567812345678"
Var CIV as MemoryBlock
Var data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

Var output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MessageBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc5_32_12_16_ofb
CIV = nil

call c.DecryptInit Ckey, CIV

Var output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MessageBox "Decrypted: "+output2
```

Notes: RC5 with OFB. 32 bit word size, 12 rounds, 16 byte key.

80.16.158 seed_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The cipher for a Seed CBC.

80.16.159 seed_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Seed cipher for CFB128 mode.

80.16.160 seed_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cipher for seed ECB.

80.16.161 seed_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Seed cipher for OFB mode.

80.16.162 SetGCMTag(Data as MemoryBlock)

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets tag value for AES GCM.
Example:

```
Var c As CipherMBS = CipherMBS.aes_256_gcm

// encrypt it
Var key As String = "12345678"

Call c.EncryptInit(key)

Var p1 As String = c.ProcessString("Hello World")
```

```
Var p2 As String = c.FinalizeAsString
Var encrypted As String = p1 + p2
Var TagValue As MemoryBlock = c.GetGCMTag

Break

// decrypt it
Var d As CipherMBS = CipherMBS.aes_256_gcm
Call d.DecryptInit key

Var d1 As String = d.ProcessString(encrypted)

d.SetGCMTag TagValue

Var d2 As String = d.FinalizeAsString
Var decrypted As String = d1 + d2

Break
```

Notes: Calls the Control method with type EVP_CTRL_GCM_SET_TAG (17).
Raises exception in case of an error.

80.16.163 SetPadding(padding as boolean)

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enables padding.
Notes: On by default.

80.16.164 sm4_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.165 sm4_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.166 sm4_ctr as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.167 sm4_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.168 sm4_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

80.16.169 Properties

80.16.170 BlockSize as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the block size for this cipher.
Notes: (Read only property)

80.16.171 Encrypting as Boolean

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the class is encrypting or decrypting.
Notes: True if encrypting or false for decrypting.
(Read only property)

80.16.172 Flags as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the flags for the cipher.
Notes: (Read only property)

80.16.173 HasVariableKeyLength as Boolean

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this cipher has variable key length.
Notes: (Read only property)

80.16.174 IVLength as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the size of the initialization vector.
Notes: (Read only property)

80.16.175 KeyLength as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The key length.
Notes: (Read and Write property)

80.16.176 Mode as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries cipher mode.
Notes: (Read only property)

80.16.177 Name as String

MBS Encryption Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the cipher engine.
Notes: (Read only property)

80.16.178 Padding as Boolean

MBS Encryption Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to apply padding or not.
Example:

```
Var c as CipherMBS = CipherMBS.aes_256_ctr

call c.EncryptInit "Hello"

MessageBox "default: "+str(c.Padding)
c.Padding = false

MessageBox "set to false: "+str(c.Padding)
c.Padding = true

MessageBox "set to true: "+str(c.Padding)
```

Notes: On by default.
(Read and Write property)

80.16.179 RC2KeyBits as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bits for RC2.
Notes: (Read and Write property)

80.16.180 RC5Rounds as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of rounds for RC5.
Notes: (Read and Write property)

80.16.181 ZeroPaddingKey as Boolean

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to do zero padding for the key to reach minimum/default length.
Example:

```
Var AESCipher As CipherMBS = CipherMBS.aes_128_cbc
Var BFCipher As CipherMBS = CipherMBS.bf_cbc
Break // look in debugger
```

Notes: Defaults to true, if key is not of variable length for the cipher.
e.g. AES 128 has a 16 byte key size, so we fill up with zeros to reach that.
(Read and Write property)

80.17 class DigestMBS

80.17.1 class DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The OpenSSL class for calculating hashes.
Example:

```
Var d as DigestMBS = DigestMBS.MD5
d.Process "Hello World"
Var result as string = EncodeHex(d.Final)
MessageBox result
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

80.17.2 Methods

80.17.3 blake2b512 as DigestMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for Black 2b 512.
Example:

```
Var d As DigestMBS = DigestMBS.blake2b512

d.Process "The quick brown fox jumps over the lazy dog"

Var hash As String = d.FinalText

Break
// A8ADD4BDDDFD93E4877D2746E62817B116364A1FA7BC148D95090BC7333B3673F82401CF7AA2E4CB1ECD90296E3
```

Notes: see
https://en.wikipedia.org/wiki/BLAKE_(hash_function)

80.17.4 blake2s256 as DigestMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for Black 2s 256.
Example:

```
Var d As DigestMBS = DigestMBS.blake2s256

d.Process "The quick brown fox jumps over the lazy dog"

Var hash As String = d.FinalText

Break
// 606BEEEC743CCBEFF6CBCDF5D5302AA855C256C29B88C8ED331EA1A6BF3C8812
```

80.17.5 Clear

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the current state.

80.17.6 Constructor

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

80.17.7 DigestByName(name as string) as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a digest by name.
Example:

```
Var d as DigestMBS = DigestMBS.DigestByName("md5")
MessageBox str(d.Size)
```

Notes: Returns nil if name is not registered.
May need string to be in upper case.

80.17.8 DigestNames as String()

MBS Encryption Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of all digest algorithms.
Example:

```
// see hash and encryption algorithms available
Var CipherNames() as string = CipherMBS.CipherNames
Var DigestNames() as string = DigestMBS.DigestNames
Break
```

Notes: The list may not be the same for Mac, Windows and Linux.

Current list:

blake2b512, blake2s256, id-rsassa-pkcs1-v1_5-with-sha3-224, id-rsassa-pkcs1-v1_5-with-sha3-256, id-rsassa-pkcs1-v1_5-with-sha3-384, id-rsassa-pkcs1-v1_5-with-sha3-512, md4, md4WithRSAEncryption, md5, md5-sha1, md5WithRSAEncryption, mdc2, mdc2WithRSA, ripemd, ripemd160, ripemd160WithRSA, rmd160, RSA-MD4, RSA-MD5, RSA-MDC2, RSA-RIPEMD160, RSA-SHA1, RSA-SHA1-2, RSA-SHA224, RSA-SHA256, RSA-SHA3-224, RSA-SHA3-256, RSA-SHA3-384, RSA-SHA3-512, RSA-SHA384, RSA-SHA512, RSA-SHA512/224, RSA-SHA512/256, RSA-SM3, sha1, sha1WithRSAEncryption, sha224, sha224WithRSAEncryption, sha256, sha256WithRSAEncryption, sha3-224, sha3-256, sha3-384, sha3-512, sha384, sha384WithRSAEncryption, sha512, sha512-224, sha512-224WithRSAEncryption, sha512-256, sha512-256WithRSAEncryption, sha512WithRSAEncryption, shake128, shake256, sm3, sm3WithRSAEncryption, ssl3-md5, ssl3-sha1, whirlpool

80.17.9 Final as memoryblock

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finalizes the hash and returns it.

80.17.10 FinalText as String

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finalizes the hash and returns it.
Notes: Returns text with hex encoding.

80.17.11 MD4 as DigestMBS

MBS Encryption Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for MD4.
Example:

```
Var d As DigestMBS = DigestMBS.MD4
d.Process "Hello World"
Var result As String = d.FinalText
MessageBox result
```

Notes: MD2, MD4 and MD5 are not safe. They can be easily hacked with modern computers. We only include them for compatibility.

80.17.12 MD5 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for MD5.
Example:

```
Var d as DigestMBS = DigestMBS.MD5
d.Process "Hello World"
Var result as string = d.FinalText
MessageBox result
```

Notes: MD2, MD4 and MD5 are not safe. They can be easily hacked with modern computers. We only include them for compatibility.

80.17.13 MDC2 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for MDC2.
Example:

```
Var d as DigestMBS = DigestMBS.MDC2
d.Process "Hello World"
Var result as string = EncodeHex(d.Final)
MessageBox result
```

80.17.14 Process(data as memoryblock)

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds more data to the hash.
See also:

- 80.17.15 Process(data as string) 13827
- 80.17.16 Process(file as FolderItem) as boolean 13827

80.17.15 Process(data as string)

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds more data to the hash.
See also:

- 80.17.14 Process(data as memoryblock) 13827
- 80.17.16 Process(file as FolderItem) as boolean 13827

80.17.16 Process(file as FolderItem) as boolean

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Processes content of file.
Notes: Plugin will start a preemptive thread to read in file and process all data in chunks.
Returns true on success or false on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.
See also:

- 80.17.14 Process(data as memoryblock) 13827
- 80.17.15 Process(data as string) 13827

80.17.17 RipeMD160 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for RipeMD160.
Example:

```
Var d as DigestMBS = DigestMBS.RipeMD160
d.Process "Hello World"
Var result as string = EncodeHex(d.Final)
MessageBox result
```

80.17.18 SHA1 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA 1.
Example:

```
Var d as DigestMBS = DigestMBS.SHA1
d.Process "Hello World"
Var result as string = EncodeHex(d.Final)
MessageBox result
```

80.17.19 SHA224 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA 224.
Example:

```
Var d as DigestMBS = DigestMBS.SHA224
d.Process "Hello World"
Var result as string = EncodeHex(d.Final)
MessageBox result
```

80.17.20 SHA256 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA 256.
Example:

```
Var d as DigestMBS = DigestMBS.SHA256
d.Process "Hello World"
```

```
Var result as string = EncodeHex(d.Final)
MessageBox result
```

80.17.21 SHA384 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA 384.
Example:

```
Var d as DigestMBS = DigestMBS.SHA384
d.Process "Hello World"
Var result as string = EncodeHex(d.Final)
MessageBox result
```

80.17.22 SHA3_224 as DigestMBS

MBS Encryption Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA-3 with 224 bits.
Example:

```
Var d as DigestMBS = DigestMBS.SHA3_224
d.Process "Hello World"
Var result as string = EncodeHex(d.Final)
MessageBox result
```

80.17.23 SHA3_256 as DigestMBS

MBS Encryption Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA-3 with 256 bits.
Example:

```
Var d as DigestMBS = DigestMBS.SHA3_256
d.Process "Hello World"
Var result as string = EncodeHex(d.Final)
MessageBox result
```

80.17.24 SHA3_384 as DigestMBS

MBS Encryption Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA-3 with 384 bits.
Example:

```
Var d as DigestMBS = DigestMBS.SHA3_384
d.Process "Hello World"
Var result as string = EncodeHex(d.Final)
MessageBox result
```

80.17.25 SHA3_512 as DigestMBS

MBS Encryption Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA-3 with 512 bits.
Example:

```
Var d as DigestMBS = DigestMBS.SHA3_512
d.Process "Hello World"
Var result as string = EncodeHex(d.Final)
MessageBox result
```

80.17.26 SHA512 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA512.
Example:

```
Var d as DigestMBS = DigestMBS.SHA512
d.Process "Hello World"
Var result as string = EncodeHex(d.Final)
MessageBox result
```

80.17.27 SHA512_224 as DigestMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA 512 with 224 bit.
Example:

```
Var d As DigestMBS = DigestMBS.SHA512_224

d.Process "The quick brown fox jumps over the lazy dog"

Var hash As String = d.FinalText
```

```
Break
// 944CD2847FB54558D4775DB0485A50003111C8E5DAA63FE722C6AA37
```

80.17.28 SHA512_256 as DigestMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA 512 with 256 bit.
Example:

```
Var d As DigestMBS = DigestMBS.SHA512_256

d.Process "The quick brown fox jumps over the lazy dog"

Var hash As String = d.FinalText

Break
// DD9D67B371519C339ED8DBD25AF90E976A1EEEFD4AD3D889005E532FC5BEF04D
```

80.17.29 shake128 as DigestMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for shake 128 bit.
Example:

```
Var d As DigestMBS = DigestMBS.shake128

d.Process "The quick brown fox jumps over the lazy dog"

Var hash As String = d.FinalText

Break
// F4202E3C5852F9182A0430FD8144F0A7
```

80.17.30 shake256 as DigestMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for shake 256.
Example:

```
Var d As DigestMBS = DigestMBS.shake256
```

d.Process "The quick brown fox jumps over the lazy dog"

Var hash As String = d.FinalText

Break
// 2F671343D9B2E1604DC9DCF0753E5FE15C7C64A0D283CBBF722D411A0E36F6CA

80.17.31 sm3 as DigestMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for sm3.
Example:

Var d As DigestMBS = DigestMBS.sm3

d.Process "The quick brown fox jumps over the lazy dog"

Var hash As String = d.FinalText

Break
// 5FDFE814B8573CA021983970FC79B2218C9570369B4859684E2E4C3FC76CB8EA

80.17.32 whirlpool as DigestMBS

MBS Encryption Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for whirlpool.
Example:

Var d As DigestMBS = DigestMBS.whirlpool

d.Process "The quick brown fox jumps over the lazy dog"

Var hash As String = d.FinalText

Break
// B97DE512E91E3828B40D2B0FDCE9CEB3C4A71F9BEA8D88E75C4FA854DF36725FD2B52EB6544ED-CACD6F8BEDDFEA403CB55AE31F03AD62A5EF54E42EE82C3FB35

Notes: see
https://en.wikipedia.org/wiki/Whirlpool_(hash_function)

80.17.33 Properties

80.17.34 BlockSize as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries block size.
Example:

```
Var d as DigestMBS = DigestMBS.DigestByName("md5")
MessageBox str(d.BlockSize)
```

Notes: (Read only property)

80.17.35 Name as String

MBS Encryption Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the digest engine.
Notes: (Read only property)

80.17.36 Size as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries size of digest.
Example:

```
Var d as DigestMBS = DigestMBS.SHA512
MessageBox str(d.Size)
```

Notes: (Read only property)

80.17.37 XOFLen as Integer

MBS Encryption Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The digest length for extendable output functions.
Example:

```
Var d As DigestMBS = DigestMBS.shake128

Var s As String = "The quick brown fox jumps over the lazy dog"
```

```
d.Process s

// we default to 16 bytes
Var hash1 As String = d.FinalText
// F4202E3C5852F9182A0430FD8144F0A7

// but you can do it again and ask for 32 bytes
d = DigestMBS.shake128

d.Process s
d.XOFLen = 32

Var hash2 As String = d.FinalText
// F4202E3C5852F9182A0430FD8144F0A74B95E7417ECAE17DB0F8CFEED0E3E66E

Break
```

Notes: For backwards compatibility reasons the default xoflen length for SHAKE-128 is 16 (bytes) which results in a security strength of only 64 bits. To ensure the maximum security strength of 128 bits, the xoflen should be set to at least 32.

For backwards compatibility reasons the default xoflen length for SHAKE-256 is 32 (bytes) which results in a security strength of only 128 bits. To ensure the maximum security strength of 256 bits, the xoflen should be set to at least 64.
(Read and Write property)

80.18 class ECDHEMBS

80.18.1 class ECDHEMBS

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for ECDH key creation.
Example:

```
// two parties agree on a shared secret with elliptic curve Diffie-Hellman
Var alice As New ECDHEMBS(ECDHEMBS.NID_X9_62_prime256v1)
Var bob As New ECDHEMBS(ECDHEMBS.NID_X9_62_prime256v1)

// each side sends its public key to the other side
Var alicePublic As String = alice.PublicKey
Var bobPublic As String = bob.PublicKey

// both compute the same secret, e.g. to use as key for AES
Var secret1 As String = alice.DeriveSecretKey(bobPublic)
Var secret2 As String = bob.DeriveSecretKey(alicePublic)

Var same As Boolean = (secret1 = secret2)
MessageBox "Curve: " + alice.CurveIDName + EndOfLine + _
"Same secret: " + same.ToString + EndOfLine + _
EncodeHex(secret1)
```

Notes: Elliptic Curve Diffie Hellman (ECDH) is an Elliptic Curve variant of the standard Diffie Hellman algorithm. See Elliptic Curve Cryptography for an overview of the basic concepts behind Elliptic Curve algorithms. ECDH is used for the purposes of key agreement.

Constructor to create and map functions into the struct.
EC_Curve_NID An Elliptical Curve ID specified in the openssl header <openssl/obj_mac.h>. (e.g. NID_X9_62_prime256v1)

80.18.2 Methods

80.18.3 Constructor(CurveID as Integer)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes: Creates a new key with the given CurveID, e.g. NID_X9_62_prime256v1.

80.18.4 DeriveSecretKey(peerKey as string) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: After receiving a public key from your peer, derive the secret key by combining the peer key with yours.
Notes: Returns a string (i.e. shared secret) that is the result of the EC DHE secret derivation.
Never use a derived secret directly. Typically it is passed through some hash function to produce a key (e.g. SHA512).
peerKey: A string containing the peer's public key.

80.18.5 Destructor

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: Public keys and shared secrets should be copied before freeing memory as ecdhe owns the public key and shared secret.

80.18.6 LastError as String

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error string.

80.18.7 PublicKey as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the public key.
Example:

```
Var EC_Curve_ID as Integer = 415 // NID_X9_62_prime256v1
Var ec_dhe as new ECDHEMBS(EC_Curve_ID)
Var publicKey as string = ec_dhe.PublicKey

MessageBox publicKey
```

Notes: Returns a string (i.e. public key) to be shared with your peer; this can be accomplished over the network or by file.
Encoding is PEM, so you can write to a file with .pem file name extension.

80.18.8 Properties

80.18.9 CurveID as Integer

MBS Encryption Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Curve ID used in constructor.
Notes: (Read only property)

80.18.10 CurveIDName as String

MBS Encryption Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The textual name of the used curve ID.
Notes: (Read only property)

80.18.11 ParamsInfo as String

MBS Encryption Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Debug Information on the parameters used.
Notes: (Read only property)

80.18.12 PeerKeyInfo as String

MBS Encryption Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Debug Information on the peer key used.
Notes: (Read only property)

80.18.13 PrivateKeyInfo as String

MBS Encryption Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Debug Information on the private key used.
Notes: (Read only property)

80.19 class ECKeyMBS

80.19.1 class ECKeyMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for Elliptic Curve Digital Signature Algorithm.
Example:

```
const NID_secp192k1 = 711
Var key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

MessageBox key.Description
```

Xojo Developer Magazine

- 23.4, page 11: News

80.19.2 Methods

80.19.3 BuiltInCurves(Names as Boolean = false) as Dictionary

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries built in curves.
Example:

```
// This example needs a window with ListBox1.
// show curve IDs with description in listbox
Var d as Dictionary = ECKeyMBS.BuiltInCurves

for each key as Variant in d.keys
```

```
ListBox1.AddRow key, d.Value(key)
next
```

Notes: The dictionary returned has as key the ID and the description as value.

The list looks like this with names = false to show comments:

With Names = true, you get the names:

80.19.4 Constructor

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

80.19.5 Copy as ECKeyMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the key.

80.19.6 CurveNameToID(Name as String) as Integer

MBS Encryption Plugin, Plugin Version: 25.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the name for the curve ID.
Example:

```
Var n1 As Integer = ECKeyMBS.CurveNameToID("secp112r1" )
Var n2 As Integer = ECKeyMBS.CurveNameToID("P-256" )

// shows 704 and 415
```

Notes: Can be curve name or nist name.

80.19.7 ES256Sign(Data as MemoryBlock) as String

MBS Encryption Plugin, Plugin Version: 25.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Signs the given data.
Notes: We perform a hash with SHA256 of the data and sign the hash.

Returns the signature as string on success.
See also:

- 80.19.8 ES256Sign(Data as String) as String 13842

80.19.8 ES256Sign(Data as String) as String

MBS Encryption Plugin, Plugin Version: 25.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Signs the given data.
Example:

```
Var n As Integer = ECKeyMBS.CurveNameToID("P-256" )
Var e As ECKeyMBS = ECKeyMBS.KeyByCurveName(n)
var description as string = e.Description

Var DataToSign As String = "Hello World"

Var SignatureData As String = e.ES256Sign(DataToSign)
Var ok As Boolean = e.ES256Verify(SignatureData, DataToSign)

Break // ok should be true
```

Notes: We perform a hash with SHA256 of the data and sign the hash.

Returns the signature as string on success.
See also:

- 80.19.7 ES256Sign(Data as MemoryBlock) as String 13841

80.19.9 ES256Verify(SignatureData as MemoryBlock, Data as MemoryBlock) as Boolean

MBS Encryption Plugin, Plugin Version: 25.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies the digital signature.
Notes: We perform a hash with SHA256 of the data and verify the result.

Returns true on success. Returns false if data, signature and public key don't belong together.
See also:

- 80.19.10 ES256Verify(SignatureData as String, Data as String) as Boolean 13843

80.19.10 ES256Verify(SignatureData as String, Data as String) as Boolean

MBS Encryption Plugin, Plugin Version: 25.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies the digital signature.
Notes: We perform a hash with SHA256 of the data and verify the result.

Returns true on success. Returns false if data, signature and public key don't belong together.
See also:

- 80.19.9 ES256Verify(SignatureData as MemoryBlock, Data as MemoryBlock) as Boolean 13842

80.19.11 Generate as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates new key and stores in the current object.
Notes: Returns true on success or false on failure.

80.19.12 GetPrivateKey(Hex as Boolean) as String

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries priv key.
Example:

```
// make a key
Const NID_secp192k1 = 711
Var e As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

// show private key
MessageBox e.GetPrivateKey(True)+_
EndOfLine+_
e.GetPrivateKey(False)
```

Notes: The private key is a big number, which can be returned as decimal or hexadecimal value.

80.19.13 GetPublicKey(byref x as String, byref y as String, Hex as Boolean) as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries X and Y of public key.
Example:

```
// make a key
Const NID_secp192k1 = 711
Var e As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

// show public key
Var x,y as string
If e.GetPublicKey(x, y, False) Then
MessageBox x+EndOfLine+y
End If
```

Notes: The public key is made up with two big numbers, which can be returned as decimal or hexadecimal value.
Returns true on success or false on failure.

80.19.14 GetPublicKeyPoint as String

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries Public key as hex string.
Example:

```
// make a key
Const NID_secp192k1 = 711
Var e As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

// show public key
MessageBox e.GetPublicKeyPoint
```

Notes: Can be queried to save/send and later be assigned with SetPublicKeyPoint.

80.19.15 KeyByCurveName(CurveID as Integer, Generate as Boolean = true) as ECKeyMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates a new pair of private and public keys.
Example:

```
const NID_secp192k1 = 711
Var key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
```

MessageBox key.Description

Notes: You can use ReadPrivateKey and ReadPublicKey functions to get the keys.
If Generate is false, we create an empty object with private and public keys.

Some possible curve IDs:

80.19.16 OpenPrivateKey(Data as String) as ECKeyMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a private key.
Example:

```
const NID_secp192k1 = 711
Var key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
Var PrivateKeyData as string = key.PrivateKey

// read again
Var pub as ECKeyMBS = ECKeyMBS.OpenPrivateKey(PrivateKeyData)
MessageBox pub.Description
```

Notes: The key is in binary format and you may need to use EncodeBase64/DecodeBase64.

80.19.17 OpenPublicKey(Data as String, CurveID as Integer) as ECKeyMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a public key.
Example:

```
const NID_secp192k1 = 711
Var key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
Var pubKeyData as string = key.PublicKey

// read again
Var pub as ECKeyMBS = ECKeyMBS.OpenPublicKey(pubKeyData, NID_secp192k1)
MessageBox pub.Description
```

80.19.18 PrivateKey as String

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the priv key.
Example:

```
const NID_secp192k1 = 711
Var key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
Var Data as string = key.PrivateKey
MessageBox EncodeBase64(data)
```

80.19.19 PublicKey as String

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the public key.
Example:

```
const NID_secp192k1 = 711
Var key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
Var Data as string = key.PublicKey
MessageBox EncodeBase64(data)
```

80.19.20 SetPrivateKey(Value as String, Hex as Boolean) as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the key.
Example:

```
// make a key
Const NID_secp192k1 = 711
Var e As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

MessageBox e.Description

// get hex
Var pubk As String = e.GetPublicKeyPoint
Var priv As String = e.GetPrivateKey(False)

// make new empty key and put in the data
Var ee As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1, False)

If ee.SetPrivateKey(priv, False) Then
If ee.SetPublicKeyPoint(pubk) Then
MessageBox ee.Description
Else
Break // failed?
```

```
End If
Else
Break // failed?
End If
```

Notes: Returns true on success or false on failure.

80.19.21 SetPublicKey(x as String, y as String, Hex as Boolean) as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets X and Y of public key.
Example:

```
// make a key
Const NID_secp192k1 = 711
Var e As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

MessageBox e.Description

// get hex
Var pubk As String = e.GetPublicKeyPoint
Var priv As String = e.GetPrivateKey(False)

// make new empty key and put in the data
Var ee As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1, False)

If ee.SetPrivateKey(priv, False) Then
If ee.SetPublicKeyPoint(pubk) Then
MessageBox ee.Description
Else
Break // failed?
End If
Else
Break // failed?
End If
```

Notes: Returns true on success or false on failure.

80.19.22 SetPublicKeyPoint(Value as String) as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets public key.
Notes: Returns true on success or false on failure.

80.19.23 Sign(Data as MemoryBlock) as String

MBS Encryption Plugin, Plugin Version: 25.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Signs the given data.
Notes: We highly recommend to use a hash like SHA-512 to preprocess the data.
Returns the signature as string on success.
See also:

- 80.19.24 Sign(Data as String) as String 13848

80.19.24 Sign(Data as String) as String

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Signs the given data.
Example:

```
const NID_secp192k1 = 711
Var key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
Var text as string = "Hello World"
Var data as string = SHA512MBS.Hash(text)
Var sig as string = key.Sign(data)

if key.Verify(data, sig) then
MessageBox "Signature ok"
end if
```

Notes: We highly recommend to use a hash like SHA-512 to preprocess the data.
Returns the signature as string on success.
See also:

- 80.19.23 Sign(Data as MemoryBlock) as String 13848

80.19.25 Verify(SignatureData as MemoryBlock, Data as MemoryBlock) as Boolean

MBS Encryption Plugin, Plugin Version: 25.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies the digital signature.
Notes: Returns true on success. Returns false if data, signature and public key don't belong together.

We highly recommend to use a hash like SHA-512 to preprocess the data.
See also:

- 80.19.26 Verify(SignatureData as String, Data as String) as Boolean 13849

80.19.26 Verify(SignatureData as String, Data as String) as Boolean

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies the digital signature.
Example:

```
const NID_secp192k1 = 711
Var key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
Var text as string = "Hello World"
Var data as string = SHA512MBS.Hash(text)
Var sig as string = key.Sign(data)

if key.Verify(data, sig) then
MessageBox "Signature ok"
end if
```

Notes: Returns true on success. Returns false if data, signature and public key don't belong together.
We highly recommend to use a hash like SHA-512 to preprocess the data.
See also:

- 80.19.25 Verify(SignatureData as MemoryBlock, Data as MemoryBlock) as Boolean 13848

80.19.27 Properties

80.19.28 CanSign as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Indicates if an ECKey can be used for signing.
Notes: Returns true if can can sign and false otherwise.
(Read only property)

80.19.29 Description as String

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an user readable description text for the current key.
Example:

```
const NID_secp192k1 = 711
Var key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

MessageBox key.Description
```

Notes: (Read only property)

80.19.30 Flags as Integer

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flag field.
Notes: see OpenSSL for details.
(Read and Write property)

80.19.31 Size as Integer

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns size of key.
Notes: (Read only property)

80.19.32 Valid as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies that a private and/or public key is valid.
Notes: Returns true on success and false otherwise.
(Read only property)

704 SECG/WTLS curve over a 112 bit prime field
705 SECG curve over a 112 bit prime field

80.20 class MD5DigestMBS

80.20.1 class MD5DigestMBS

MBS Encryption Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to calculate the message-digest of a string.
Notes: Same class as the one in RB5, so the same documentation:

The MD5Digest class enables you to process a string in segments. Pass each string segment to the Process method. The value property contains the current message digest and the clear method clears the MD5Digest object so that you can repeat the process.

The MD5 message digest algorithm takes a message of any length and produces a 128-bit "fingerprint" or message digest of the input string. The MD5 algorithm is useful for digital signature applications, where a large file must be processed in a secure manner before being encrypted with a secret key under a system such as RSA.

80.20.2 Methods

80.20.3 clear

MBS Encryption Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the MD5Digest object so that you can start with a new data stream.

80.20.4 HashFile(file as FolderItem, Hex as boolean = true) as string

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates hash from whole file.
Notes: Plugin will start a preemptive thread to read in file and process all data in chunks.
Returns hash on success or empty string on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.

If hex is true, the result is encoded as hex string.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

80.20.5 HMAC(key as string, data as string) as string

MBS Encryption Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the a specific HASH based on the key and the data string.

80.20.6 MD5(data as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MD5 message digest value of a string.
See also:

- 80.20.7 MD5(data as string) as string 13855

80.20.7 MD5(data as string) as string

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MD5 message digest value of a string.
Example:

```
// Compare RB5 MD5 to the one from MBS

Var a,b as String

a=MD5("Hallo")

b=MD5DigestMBS.MD5("Hallo")

MessageBox str(StrComp(a,b,0))
```

Notes: Same as the MD5 function in RB5.
See also:

- 80.20.6 MD5(data as memoryblock) as string 13855

80.20.8 MD5String(data as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MD5 message digest value of a memoryblock as hex string.
See also:

- 80.20.9 MD5String(data as string) as string 13856

80.20.9 MD5String(data as string) as string

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MD5 message digest value of a string as hex string.
Example:

```
// Compare RB5 MD5 to the one from MBS

Var a,b as String

a=EncodingToHexMBS(MD5("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern"))
b=MD5DigestMBS.MD5String("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern")

MessageBox a+EndOfLine+b+EndOfLine+str(StrComp(a,b,0))
```

See also:

- 80.20.8 MD5String(data as memoryblock) as string 13856

80.20.10 Process(data as memoryblock)

MBS Encryption Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Processes the given data.
See also:

- 80.20.11 Process(Data as string) 13856

80.20.11 Process(Data as string)

MBS Encryption Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Processes the given data.
Example:

```
Var f as FolderItem
Var b as BinaryStream
Var s as string
Var m as new MD5DigestMBS
Var lines(-1) as string

// process file part by part (big files)

f=SpecialFolder.Desktop.Child("test.jpg")
b=f.OpenAsBinaryFile(False)

while not b.eof
s=b.Read(1000000)
m.Process s
wend

lines.Add EncodingToHexMBS(m.Value)+" using plugin with MD5DigestMBS"

Var d as new MD5Digest

f=SpecialFolder.Desktop.Child("test.jpg")
b=f.OpenAsBinaryFile(False)

while not b.eof
s=b.Read(1000000)
d.Process s
wend

lines.Add EncodingToHexMBS(d.Value)+" using RB with MD5Digest"

// process file in one chunk (small files)

f=SpecialFolder.Desktop.Child("test.jpg")
b=f.OpenAsBinaryFile(False)

s=b.Read(b.Length)

lines.Add EncodingToHexMBS(MD5MBS(s))+" using plugin with MD5MBS()"

f=SpecialFolder.Desktop.Child("test.jpg")
b=f.OpenAsBinaryFile(False)

s=b.Read(b.length)

lines.Add EncodingToHexMBS(MD5(s))+" using RB with MD5()"
```

MessageBox Join(lines,EndOfLine)

See also:

- 80.20.10 Process(data as memoryblock) 13856

80.20.12 Properties

80.20.13 Value as string

MBS Encryption Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Contains the current message digest.
Notes: (Read only property)

80.21 class OpenSSLExceptionMBS

80.21.1 class OpenSSLExceptionMBS

MBS Encryption Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The OpenSSL class for error exceptions.
Notes: Subclass of the RuntimeException class.
Blog Entries

80.22 module OpenSSLMBS

80.22.1 module OpenSSLMBS

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module for OpenSSL functions.
Example:

```
// encrypt a short text with a RSA public key and decrypt it with the private key
Var privateKey As String = TextInputStream.Open(SpecialFolder.Desktop.Child("private.pem")).ReadAll
Var publicKey As String = OpenSSLMBS.GetPublicKey(privateKey)

Var encrypted As String = OpenSSLMBS.RSAPublicEncrypt("Secret message", publicKey)
Var decrypted As String = OpenSSLMBS.RSAPrivateDecrypt(encrypted, privateKey)
MessageBox OpenSSLMBS.OpenSSLVersion + EndOfLine + decrypted
```

Notes: Please request what you miss here.

80.22.2 Methods

80.22.3 CipherNames as String()

MBS Encryption Plugin, Plugin Version: 25.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the list of cipher names.
Example:

```
// see hash and encryption algorithms available
Var CipherNames() as string = OpenSSLMBS.CipherNames
Var DigestNames() as string = OpenSSLMBS.DigestNames
Break
```

Notes: The list may not be the same for Mac, Windows and Linux.

Current list:

blake2b512, blake2s256, id-rsassa-pkcs1-v1_5-with-sha3-224, id-rsassa-pkcs1-v1_5-with-sha3-256, id-rsassa-pkcs1-v1_5-with-sha3-384, id-rsassa-pkcs1-v1_5-with-sha3-512, md4, md4WithRSAEncryption, md5, md5-sha1, md5WithRSAEncryption, mdc2, mdc2WithRSA, ripemd, ripemd160, ripemd160WithRSA, rmd160, RSA-MD4, RSA-MD5, RSA-MDC2, RSA-RIPEMD160, RSA-SHA1, RSA-SHA1-2, RSA-SHA224, RSA-SHA256, RSA-SHA3-224, RSA-SHA3-256, RSA-SHA3-384, RSA-SHA3-512, RSA-SHA384, RSA-SHA512, RSA-SHA512/224, RSA-SHA512/256, RSA-SM3, sha1, sha1WithRSAEncryption, sha224, sha224WithRSAEncryption, sha256, sha256WithRSAEncryption, sha3-224, sha3-256, sha3-384, sha3-512, sha384, sha384WithRSAEncryption, sha512, sha512-224, sha512-224WithRSAEncryption, sha512-256, sha512-256WithRSAEncryption, sha512WithRSAEncryption, shake128, shake256, sm3, sm3WithRSAEncryption, ssl3-md5, ssl3-sha1, whirlpool

80.22.4 ClearMemoryBlock(Mem as MemoryBlock)

MBS Encryption Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears MemoryBlock.
Example:

```
Var m As New MemoryBlock(20)

m.StringValue(0,5) = "Hello"

OpenSSLMBS.ClearMemoryBlock m

break // inspect in debugger
```

Notes: Does nothing if MemoryBlock is nil or has size of zero.

This uses the OpenSSL cleanse method to securely clear memory.
See also:

- 80.22.5 ClearMemoryBlock(P as Ptr, size as Integer) 13862

80.22.5 ClearMemoryBlock(P as Ptr, size as Integer)

MBS Encryption Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears memory at given address.
Notes: Raises exception if size is negative.
Does nothing if ptr is nil or size is zero.

This uses the OpenSSL cleanse method to securely clear memory.
See also:

- 80.22.4 ClearMemoryBlock(Mem as MemoryBlock) 13861

80.22.6 ClearString(s as String)

MBS Encryption Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clear the content of a string.
Example:

```
Var key As String = "mysecretkey"
Var data As String = "Hello World. Just a test"

// does nothing for constant string
OpenSSLMBS.ClearString key

// build string
Var s As String = key + data
OpenSSLMBS.ClearString s

Break // inspect in debugger
```

Notes: Does nothing for constant string.
This uses the OpenSSL cleanse method to securely clear memory.
The string retains the length, but content changes to zero bytes.

80.22.7 DigestNames as String()

MBS Encryption Plugin, Plugin Version: 25.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of all digest algorithms.
Example:

```
// see hash and encryption algorithms available
Var CipherNames() as string = OpenSSLMBS.CipherNames
Var DigestNames() as string = OpenSSLMBS.DigestNames
Break
```

Notes: The list may not be the same for Mac, Windows and Linux.

Current list:

blake2b512, blake2s256, id-rsassa-pkcs1-v1_5-with-sha3-224, id-rsassa-pkcs1-v1_5-with-sha3-256, id-rsassa-pkcs1-v1_5-with-sha3-384, id-rsassa-pkcs1-v1_5-with-sha3-512, md4, md4WithRSAEncryption, md5, md5-sha1, md5WithRSAEncryption, mdc2, mdc2WithRSA, ripemd, ripemd160, ripemd160WithRSA, rmd160, RSA-MD4, RSA-MD5, RSA-MDC2, RSA-RIPEMD160, RSA-SHA1, RSA-SHA1-2, RSA-SHA224, RSA-SHA256, RSA-SHA3-224, RSA-SHA3-256, RSA-SHA3-384, RSA-SHA3-512, RSA-SHA384, RSA-SHA512, RSA-SHA512/224, RSA-SHA512/256, RSA-SM3, sha1, sha1WithRSAEncryption, sha224, sha224WithRSAEncryption, sha256, sha256WithRSAEncryption, sha3-224, sha3-256, sha3-384, sha3-512, sha384, sha384WithRSAEncryption, sha512, sha512-224, sha512-224WithRSAEncryption, sha512-256, sha512-256WithRSAEncryption, sha512WithRSAEncryption, shake128, shake256, sm3, sm3WithRSAEncryption, ssl3-md5, ssl3-sha1, whirlpool

80.22.8 ErrorString(ErrorCode as Integer) as string

MBS Encryption Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the human readable error string for an OpenSSL error.
Example:

```
MessageBox OpenSSLMBS.ErrorString(336109761)
```

80.22.9 GeneratePrivateKey(Bits as Integer = 4096, Exp as Integer = 65537, Password as string = """, Algorithm as string = """) as string

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates a new private key.
Example:

```
Var privateKey as string = OpenSSLMBS.GeneratePrivateKey
Var publicKey as string = OpenSSLMBS.GetPublicKey(privateKey)

break // got key pair
```

Notes: Bit size of key should be high.
See RSA key documentation on the web about details.

In Plugin version 16.2 and later this function yields time to other Xojo threads.
Algorithm specifies the encryption algorithm for key encryption. See CipherMBS for cipher names, e.g. "AES-128-CBC". (new in 17.5)

80.22.10 GetPublicKey(PrivateKey as String, PrivateKeyPassword as string = "") as string

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts public key from private key.
Example:

```
Var privateKey as string = OpenSSLMBS.GeneratePrivateKey
Var publicKey as string = OpenSSLMBS.GetPublicKey(privateKey)

break // got key pair
```

Notes: Optionally you can define a password for private key.

80.22.11 OpenSSLVersion as String

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries version of OpenSSL version.
Example:

```
MessageBox OpenSSLMBS.OpenSSLVersion
```

80.22.12 PKCS7Sign(flags as Integer, InputData as string, SignKey as string, PrivateKey as String, PrivateKeyPassword as string, intermediaCertsData() as string, OutputBinary as boolean) as string

MBS Encryption Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Signs with SMIME.
Example:

```
Var testPrivKey as string = ReadFile("passkey.pem")
Var testCertificate as string = ReadFile("passcertificate.pem")
```

```
Var data as string = ReadFile("test.txt")
Var privKeyPassword as string = "12345"

Var intermediateCertificates() as string
intermediateCertificates.Add ReadFile("WWDR.pem")
Var Sign as string = OpenSSLMBS.PKCS7Sign(0, data, testCertificate, testPrivKey, privKeyPassword, intermediateCertificates, true)

// write result
Var f as FolderItem = SpecialFolder.Desktop.Child("output")
Var b as BinaryStream = BinaryStream.Create(f, true)
b.Write sign
```

Notes: Returns the signature. If OutputBinary is true, we use DER output, else text based output.
intermediaCertsData array can be empty if you have no intermediate certificates.

80.22.13 PKCS7SignData(Certificate as X509MBS, PrivateKey as PKeyMBS, certs() as X509MBS = nil, data as string, flags as Integer = 0) as string

MBS Encryption Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Signs with PKCS7.
Notes: Returns the signature (binary format = DER).
intermediaCertsData array can be empty or nil if you have no intermediate certificates.

80.22.14 PKCS7SignedData(DataP7M as String) as String

MBS Encryption Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads content of signed data in PKCS7 file.
Example:

```
// get a file
Var f As FolderItem = New FolderItem("/Users/cs/Desktop/p7m/work.xml.p7m", FolderItem.PathModes.Native)

// read
Var b As BinaryStream = BinaryStream.Open(f)
Var s As String = b.Read(b.Length)

// decode
Var data As String = OpenSSLMBS.PKCS7SignedData(s)
```

Break

Notes: Please pass content of a P7M file, so we can read signed content.
Returns data or empty string if this failed.

80.22.15 ProviderNames as String()

MBS Encryption Plugin, Plugin Version: 25.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of all ciphers.
Example:

MessageBox join(OpenSSLMBS.ProviderNames, EndOfLine)

Notes: The list may not be the same for Mac, Windows and Linux.

Current list:

aes-128-cbc, aes-128-cbc-hmac-sha1, aes-128-ccm, aes-128-cfb, aes-128-cfb1, aes-128-cfb8, aes-128-ctr, aes-128-ecb, aes-128-gcm, aes-128-ocb, aes-128-ofb, aes-128-xts, aes-192-cbc, aes-192-ccm, aes-192-cfb, aes-192-cfb1, aes-192-cfb8, aes-192-ctr, aes-192-ecb, aes-192-gcm, aes-192-ocb, aes-192-ofb, aes-256-cbc, aes-256-cbc-hmac-sha1, aes-256-ccm, aes-256-cfb, aes-256-cfb1, aes-256-cfb8, aes-256-ctr, aes-256-ecb, aes-256-gcm, aes-256-ocb, aes-256-ofb, aes-256-xts, aes128, aes128-wrap, aes192, aes192-wrap, aes256, aes256-wrap, aria-128-cbc, aria-128-ccm, aria-128-cfb, aria-128-cfb1, aria-128-cfb8, aria-128-ctr, aria-128-ecb, aria-128-gcm, aria-128-ofb, aria-192-cbc, aria-192-ccm, aria-192-cfb, aria-192-cfb1, aria-192-cfb8, aria-192-ctr, aria-192-ecb, aria-192-gcm, aria-192-ofb, aria-256-cbc, aria-256-ccm, aria-256-cfb, aria-256-cfb1, aria-256-cfb8, aria-256-ctr, aria-256-ecb, aria-256-gcm, aria-256-ofb, aria128, aria192, aria256, bf, bf-cbc, bf-cfb, bf-ecb, bf-ofb, blowfish, camellia-128-cbc, camellia-128-cfb, camellia-128-cfb1, camellia-128-cfb8, camellia-128-ctr, camellia-128-ecb, camellia-128-ofb, camellia-192-cbc, camellia-192-cfb, camellia-192-cfb1, camellia-192-cfb8, camellia-192-ctr, camellia-192-ecb, camellia-192-ofb, camellia-256-cbc, camellia-256-cfb, camellia-256-cfb1, camellia-256-cfb8, camellia-256-ctr, camellia-256-ecb, camellia-256-ofb, camellia128, camellia192, camellia256, cast, cast-cbc, cast5-cbc, cast5-cfb, cast5-ecb, cast5-ofb, chacha20, chacha20-poly1305, des, des-cbc, des-cfb, des-cfb1, des-cfb8, des-ecb, des-ede, des-ede-cbc, des-ede-cfb, des-ede-ecb, des-ede-ofb, des-ede3, des-ede3-cbc, des-ede3-cfb, des-ede3-cfb1, des-ede3-cfb8, des-ede3-ecb, des-ede3-ofb, des-ofb, des3, des3-wrap, desx, desx-cbc, id-aes128-CCM, id-aes128-GCM, id-aes128-wrap, id-aes128-wrap-pad, id-aes192-CCM, id-aes192-GCM, id-aes192-wrap, id-aes192-wrap-pad, id-aes256-CCM, id-aes256-GCM, id-aes256-wrap, id-aes256-wrap-pad, id-smime-alg-CMS3DESwrap, idea, idea-cbc, idea-cfb, idea-ecb, idea-ofb, rc2, rc2-128, rc2-40, rc2-40-cbc, rc2-64, rc2-64-cbc, rc2-cbc, rc2-cfb, rc2-ecb, rc2-ofb, rc4, rc4-40, rc4-hmac-md5, RC5, rc5-cbc, rc5-cfb, rc5-ecb, rc5-ofb, seed, seed-cbc, seed-cfb, seed-ecb, seed-ofb, sm4, sm4-cbc, sm4-cfb, sm4-ctr, sm4-ecb, sm4-ofb

80.22.16 RandomBytes(count as Integer) as MemoryBlock

MBS Encryption Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates random bytes.
Example:

```
Var m As MemoryBlock = OpenSSLMBS.RandomBytes(16)
MessageBox EncodeHex(m)
```

Notes: Puts count cryptographically strong pseudo-random bytes into MemoryBlock.

80.22.17 RandomBytesString(count as Integer) as String

MBS Encryption Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates random bytes.
Example:

```
Var p As String = OpenSSLMBS.RandomBytesString(16)
MessageBox EncodeHex(p)
```

Notes: Puts count cryptographically strong pseudo-random bytes into string.

80.22.18 RSAPrivateDecrypt(data as string, PrivateKey as string, padding as Integer = 1, Password as string = "") as String

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts data using private key.
Example:

```
// encrypt with public, decrypt with private key

Var f1 as FolderItem = New FolderItem("test.pem")
Var b1 as BinaryStream = BinaryStream.Open(f1)
Var PrivKey as string = B1.Read(b1.Length)

Var f2 as FolderItem = New FolderItem("test.pub")
Var b2 as BinaryStream = BinaryStream.Open(f2)
Var PubKey as string = B2.Read(b2.Length)

Var UnencryptedData as string = "Hello World. This is just a test."
Var EncryptedData as string = OpenSSLMBS.RSAPublicEncrypt(UnencryptedData, PubKey)
Var decryptedData as string = OpenSSLMBS.RSAPrivateDecrypt(EncryptedData, PrivKey)
```

```
Break // check in debugger
```

Notes: See kPadding constants for Padding parameter.
Password is optional for decrypting encrypted keys.
Returns empty string on failure or raises exceptions.

RSA can only decrypt data if it's <= length of key.

80.22.19 RSAPrivateEncrypt(data as string, PrivateKey as string, padding as Integer = 1, Password as string = "") as String

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts data using private key.
Example:

```
// encrypt with private, decrypt with public key

Var f1 as FolderItem = New FolderItem("test.pem")
Var b1 as BinaryStream = BinaryStream.Open(f1)
Var PrivKey as string = B1.Read(b1.Length)

Var f2 as FolderItem = New FolderItem("test.pub")
Var b2 as BinaryStream = BinaryStream.Open(f2)
Var PubKey as string = B2.Read(b2.Length)

Var UnencryptedData as string = "Hello World. This is just a test."
Var EncryptedData as string = OpenSSLMBS.RSAPrivateEncrypt(UnencryptedData, PrivKey)
Var decryptedData as string = OpenSSLMBS.RSAPublicDecrypt(EncryptedData, PubKey)

Break // check in debugger
```

Notes: See kPadding constants for Padding parameter.
Password is optional for decrypting encrypted keys.
Returns empty string on failure or raises exceptions.

RSA can only encrypt data if it's <= length of key.

80.22.20 RSAPublicDecrypt(data as string, PublicKey as string, padding as Integer = 1, Password as string = "") as String

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts data using public key.
Example:

```
// encrypt with private, decrypt with public key

Var f1 as FolderItem = New FolderItem("test.pem")
Var b1 as BinaryStream = BinaryStream.Open(f1)
Var PrivKey as string = B1.Read(b1.Length)

Var f2 as FolderItem = New FolderItem("test.pub")
Var b2 as BinaryStream = BinaryStream.Open(f2)
Var PubKey as string = B2.Read(b2.Length)

Var UnencryptedData as string = "Hello World. This is just a test."
Var EncryptedData as string = OpenSSLMBS.RSAPrivateEncrypt(UnencryptedData, PrivKey)
Var decryptedData as string = OpenSSLMBS.RSAPublicDecrypt(EncryptedData, PubKey)

Break // check in debugger
```

Notes: See kPadding constants for Padding parameter.
Password is optional for decrypting encrypted keys.
Returns empty string on failure or raises exceptions.

RSA can only decrypt data if it's <= length of key.

80.22.21 RSAPublicEncrypt(data as string, PublicKey as string, padding as Integer = 1, Password as string = "") as String

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts data using public key.
Example:

```
// encrypt with public, decrypt with private key

Var f1 as FolderItem = New FolderItem("test.pem")
Var b1 as BinaryStream = BinaryStream.Open(f1)
Var PrivKey as string = B1.Read(b1.Length)

Var f2 as FolderItem = New FolderItem("test.pub")
Var b2 as BinaryStream = BinaryStream.Open(f2)
```

```
Var PubKey as string = B2.Read(b2.Length)

Var UnencryptedData as string = "Hello World. This is just a test."
Var EncryptedData as string = OpenSSLMBS.RSAPublicEncrypt(UnencryptedData, PubKey)
Var decryptedData as string = OpenSSLMBS.RSAPrivateDecrypt(EncryptedData, PrivKey)

Break // check in debugger
```

Notes: See kPadding constants for Padding parameter.
Password is optional for decrypting encrypted keys.
Returns empty string on failure or raises exceptions.

RSA can only encrypt data if it's <= length of key.

80.22.22 SignData(data as string, key as string, Password as string = "") as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Signs a piece of data with a given private key.
Example:

```
Var data as string // some data
Var test as string // the private key PEM file content
Var Signature as string = OpenSSLMBS.SignData(data, test)
MessageBox EncodeHex(Signature)
```

Notes: Returns signature. Use EncodeHex or EncodeBase64 to make a text representation.

Internally we make a SHA1 hash of the data, open the private RSA key and do a RSA sign operation. We return the raw key as a string bytes.
On any error, we return an empty string.
Optional you can pass a password to read password protected keys.

May fail to read key data if line endings are wrong. Seems not to like Chr(13) and preferes Chr(10). You may want to use ReplaceLineEndings with EndOfLine.Unix to convert before passing key.
See also:

- 80.22.23 SignData(data as string, key as string, Password as string = "", Algorithm as Integer) as string

80.22.23 SignData(data as string, key as string, Password as string = """, Algorithm as Integer) as string

MBS Encryption Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Signs a piece of data with a given private key.
Example:

```
Var test_pem as string = ReadFile("test.pem")
Var test_pub as string = ReadFile("test.pub")
Var data as string = ReadFile("Create Keys.rtf") // some data file
Var signature as string

// create signature

Signature = OpenSSLMBS.SignData(data, test_pem, OpenSSLMBS.kAlgorithmSHA512)
if Signature = "" then
// failed
break
end if

// verify with private key
Var r1 as Boolean = OpenSSLMBS.VerifyData(data, signature, test_pem, OpenSSLMBS.kAlgorithmSHA256)

// verify with public key
Var r2 as Boolean = OpenSSLMBS.VerifyData(data, signature, test_pub, OpenSSLMBS.kAlgorithmSHA256)
```

Notes: Returns signature. Use EncodeHex or EncodeBase64 to make a text representation.

Internally we make a hash of the data with given algorithm, open the private RSA key and do a RSA sign operation. We return the raw signature as a string bytes.
On any error, we return an empty string.
Optional you can pass a password to read password protected keys.

May fail to read key data if line endings are wrong. Seems not to like Chr(13) and preferes Chr(10). You may want to use ReplaceLineEndings with EndOfLine.Unix to convert before passing key.
See also:

- 80.22.22 SignData(data as string, key as string, Password as string = "") as string 13870

80.22.24 SignRSAPSS(data as string, key as string, Password as string = """, Algorithm as Integer, SaltLength as Integer = -1) as string

MBS Encryption Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Signs data with RSA digital signature with PSS padding.

Example:

```
Var data As String = "Hello World"
Var NoPassword As String = ""

// sign it
Var Signature As String = OpenSSLMBS.SignRSAPSS(data, priv, NoPassword, OpenSSLMBS.kAlgorithmSHA512)

// this is valid
Var valid As Boolean = OpenSSLMBS.VerifyRSAPSS(data, Signature, pub,NoPassword, OpenSSLMBS.kAlgorithmSHA512)

// if we alter signature, it becomes invalid
Var notvalid As Boolean = OpenSSLMBS.VerifyRSAPSS(data, "-"+Signature, pub,NoPassword, OpenSSLMBS.kAlgorithmSHA512)

Break
```

Notes: Similar to SignData function.

Returns signature. Use EncodeHex or EncodeBase64 to make a text representation.

Internally we make a hash of the data with given algorithm, open the private RSA key and do a RSA sign operation. We return the raw signature as a string bytes.
On any error, we return an empty string and raise an exception.
Optional you can pass a password to read password protected keys.

May fail to read key data if line endings are wrong. Seems not to like Chr(13) and preferes Chr(10). You may want to use ReplaceLineEndings with EndOfLine.Unix to convert before passing key.

80.22.25 SMimePKCS7Decrypt(InputData as string, Certificate as X509MBS, SignKey as PKeyMBS) as String

MBS Encryption Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts S/Mime PKCS#7 encrypted data.
Notes: Raises nil object exception if certificate or key is nil.
Returns empty text on error.

80.22.26 SMimePKCS7Encrypt(InputData as string, Certificate as X509MBS) as String

MBS Encryption Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts data with S/Mime PKCS#7.
Notes: Raises nil object exception if certificate is nil.
Returns empty text on error.

80.22.27 SMimePKCS7Sign(InputData as string, Certificate as X509MBS, SignKey as PKeyMBS) as String

MBS Encryption Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Signs data with S/Mime PKCS#7.
Notes: Raises nil object exception if certificate or key is nil.
Returns empty text on error.

80.22.28 SMimePKCS7Verify(InputData as string, Certificate as X509MBS) as String

MBS Encryption Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies S/Mime PKCS#7 signature.
Notes: Raises nil object exception if certificate is nil.
Returns empty text on error.

80.22.29 VerifyData(data as string, Signature as string, Key as string, Password as string = "") as boolean

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies a signature with given data and public key.
Notes: Key can be the public or private key, but of course normally you use the public key.
Data is the raw data to compare agains. A SHA1 hash is performed and verified with the signature.
Signature must be the string returned like from SignData function. If you used EncodeHex on it, you now need to do DecodeHex.
Returns true if signature is valid and false on any other error.
Optional you can pass a password to read password protected keys.
See also:

- 80.22.30 VerifyData(data as string, Signature as string, Key as string, Password as string = "", Algorithm as Integer) as boolean

80.22.30 VerifyData(data as string, Signature as string, Key as string, Password as string = """, Algorithm as Integer) as boolean

MBS Encryption Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies a signature with given data and public key.
Example:

```
Var test_pem as string = ReadFile("test.pem")
Var test_pub as string = ReadFile("test.pub")
Var data as string = ReadFile("Create Keys.rtf") // some data file
Var signature as string

// create signature

Signature = OpenSSLMBS.SignData(data, test_pem, OpenSSLMBS.kAlgorithmSHA512)
if Signature = "" then
// failed
break
end if

// verify with private key
Var r1 as Boolean = OpenSSLMBS.VerifyData(data, signature, test_pem, OpenSSLMBS.kAlgorithmSHA512)

// verify with public key
Var r2 as Boolean = OpenSSLMBS.VerifyData(data, signature, test_pub, OpenSSLMBS.kAlgorithmSHA512)
```

Notes: Key can be the public or private key, but of course normally you use the public key.
Data is the raw data to compare agains. A hash is performed with given algorithm and verified with the signature.
Signature must be the string returned like from SignData function. If you used EncodeHex on it, you now need to do DecodeHex.
Returns true if signature is valid and false on any other error.
Optional you can pass a password to read password protected keys.
See also:

- 80.22.29 VerifyData(data as string, Signature as string, Key as string, Password as string = "") as boolean 13873

80.22.31 VerifyRSAPSS(data as string, Signature as string, Key as string, Password as string = ""), Algorithm as Integer, SaltLength as Integer = -1) as boolean

MBS Encryption Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies RSA digital signature with PSS padding.
Notes: Similar to VerifyData function.

Key can be the public or private key, but of course normally you use the public key.
Data is the raw data to compare agains. A hash is performed with given algorithm and verified with the signature.
Signature must be the string returned like from SignData function. If you used EncodeHex on it, you now need to do DecodeHex.
Returns true if signature is valid and false on any other error. May raise exceptions for fatal errors.
Optional you can pass a password to read password protected keys.

80.22.32 Constants

Hash Algorithms

Constant	Value	Description
kAlgorithmSHA1	1	SHA 1.
kAlgorithmSHA224	2	SHA 2 with 224bit.
kAlgorithmSHA256	3	SHA 2 with 256bit.
kAlgorithmSHA384	4	SHA 2 with 384bit.
kAlgorithmSHA512	5	SHA 2 with 512bit.

Padding Options

Constant	Value	Description
kPaddingNone	3	Raw RSA encryption. This mode should only be used to implement cryptographically sound padding modes in the application code. Encrypting user data directly with RSA is insecure.
kPaddingPKCS1	1	PKCS #1 v1.5 padding. This currently is the most widely used mode.
kPaddingPKCS1OAEP	4	EME-OAEP as defined in PKCS #1 v2.0 with SHA-1, MGF1 and an empty encoding parameter. This mode is recommended for all new applications.
kPaddingSSLv23	2	PKCS #1 v1.5 padding with an SSL-specific modification that denotes that the server is SSL3 capable.
kPaddingX931	5	X931 padding.

PSS SaltLengths

Constant	Value	Description
kRSA_PSS_SALTLEN_AUTO	-2	Verify only: auto detect salt length.
kRSA_PSS_SALTLEN_AUTO_DIGEST_MAX	-4	Set salt length to maximum possible
kRSA_PSS_SALTLEN_DIGEST	-1	Salt length matches digest.
kRSA_PSS_SALTLEN_MAX	-3	Auto-detect on verify, set salt length to min(maximum possibl on sign

80.23 module PassSignerMBS

80.23.1 module PassSignerMBS

MBS MacExtras Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The module to sign iOS passes from a Mac app.
Example:

```
// sign a Wallet pass folder (with pass.json and images) into a .pkpass file
// The signing certificate must be in the keychain.
Var passFolder As FolderItem = SpecialFolder.Desktop.Child("MyPass.pass")
Var output As FolderItem = SpecialFolder.Desktop.Child("MyPass.pkpass")
If PassSignerMBS.signPass(passFolder, "pass.com.example.mypass", output) Then
MessageBox "Signed: " + PassSignerMBS.verifyPassSignature(output).ToString
End If
```

80.23.2 Methods

80.23.3 signPass(Pass as folderitem, CertSuffix as String, Output as folderitem, Zip as boolean = true) as boolean

MBS MacExtras Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Sign a pass.
Notes: Pass: Input folder with pass files.
CertSuffix: The certificate suffix.
Output: Where to store the new pass.
Zip: If true, we do the last step to zip the pass.
Returns true if signed or false if failed.

80.23.4 verifyPassSignature(pass as folderitem) as Boolean

MBS MacExtras Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Verify a pass.
Notes: Pass must point to the pass file (a zip archive).
Returns true if verified and false if failed.

80.24 class PKeyMBS

80.24.1 class PKeyMBS

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a public/private key.
Example:

```
// load a private key from a PEM file and show its type and size
Var stream As BinaryStream = BinaryStream.Open(SpecialFolder.Desktop.Child("private.pem"))
Var data As String = stream.Read(stream.Length)
stream.Close

Var key As PKeyMBS = PKeyMBS.Open(data, "my password")
If key = Nil Then
MessageBox "Can't read key."
Return
End If

MessageBox "Type: " + key.TypeString + EndOfLine + _
"Bits: " + key.Bits.ToString + EndOfLine + _
"Public key: " + EncodeBase64(key.PublicKey, 0)
```

Notes: Currently this class only implements a part of the PKey functionality of OpenSSL. If needed, we could add more.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

80.24.2 Methods

80.24.3 Constructor

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.
Notes: Creates a new empty key.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

80.24.4 Copy as PKeyMBS

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the key.

80.24.5 GenerateCertificateSigningRequest(Fields as Dictionary) as String

MBS Encryption Plugin, Plugin Version: 25.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a certificate signing request.
Example:

```
// and a client keys
var clientKey as String = OpenSSLMBS.GeneratePrivateKey
Var pclientKey As PKeyMBS = PKeyMBS.Open(clientKey)

// and we request a client certificate
Var clientCertFields As New Dictionary
```

```
clientCertFields.Value("C") = "US"
clientCertFields.Value("O") = "Client Org"
clientCertFields.Value("CN") = "Client Company"
var clientCSR as String = pclientKey.GenerateCertificateSigningRequest(clientCertFields)

break
```

Notes: The Fields dictionary allows you to pass text strings for company, organization and a few more.
Returns nil in case of failure.

80.24.6 GenerateRootCertificate(Fields as Dictionary, params as SignCertificateParametersMBS = nil) as X509MBS

MBS Encryption Plugin, Plugin Version: 25.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates a root certificate.
Example:

```
// we need a root key
Var RootKey As String = OpenSSLMBS.GeneratePrivateKey
Var pRootKey As PKeyMBS = PKeyMBS.Open(RootKey)

// and a root certificate
Var rootCertFields As New Dictionary
rootCertFields.Value("C") = "US"
rootCertFields.Value("O") = "MyOrg Root CA"
rootCertFields.Value("CN") = "MyRootCA"

Var param As New SignCertificateParametersMBS

param.BasicConstraints = "critical,CA:TRUE"
param.KeyUsage = "critical,keyCertSign,cRLSign"
param.authorityKeyIdentifier = "keyid:always,issuer"
param.expireAfterTime = 31536000 * 2 // 2 years

Var rootCert As X509MBS = pRootKey.GenerateRootCertificate(rootCertFields, param)

var des as string = rootCert.Description

Break
```

Notes: The Fields dictionary allows you to pass text strings for company, organization and a few more.
Returns nil in case of failure.
Expiration time in seconds.

Does not use RootKey or RootCert values in the SignCertificateParametersMBS object.

80.24.7 Open(Data as MemoryBlock, password as String = "") as PKeyMBS

MBS Encryption Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a private or public key.
Notes: Returns key or nil in case of error.
Added optional password parameter for version 24.3.
See also:

- 80.24.8 Open(Data as String, password as String = "") as PKeyMBS 13880

80.24.8 Open(Data as String, password as String = "") as PKeyMBS

MBS Encryption Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a private or public key.
Notes: Returns key or nil in case of error.
Added optional password parameter for version 24.3.
See also:

- 80.24.7 Open(Data as MemoryBlock, password as String = "") as PKeyMBS 13880

80.24.9 PrivateKeyData as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The key as binary representation.
Notes: You can write this to a pem file.

80.24.10 PublicKeyData as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The key as binary representation.
Notes: You can write this to a pem file.

80.24.11 SignCertificate(params as SignCertificateParametersMBS) as X509MBS

MBS Encryption Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Signs a certificate sign request to make a new certificate.
Example:

```
// we need a root key
Var RootKey As String = OpenSSLMBS.GeneratePrivateKey
Var pRootKey As PKeyMBS = PKeyMBS.Open(RootKey)

// and a root certificate
Var rootCertFields As New Dictionary
rootCertFields.Value("C") = "US"
rootCertFields.Value("O") = "MyOrg Root CA"
rootCertFields.Value("CN") = "MyRootCA"
Var rootCert As X509MBS = pRootKey.GenerateRootCertificate(rootCertFields)

// and a client keys
Var clientKey As String = OpenSSLMBS.GeneratePrivateKey
Var pclientKey As PKeyMBS = PKeyMBS.Open(clientKey)

// and we request a client certificate
Var clientCertFields As New Dictionary
clientCertFields.Value("C") = "US"
clientCertFields.Value("O") = "Client Org"
clientCertFields.Value("CN") = "Client Company"
Var clientCSR As String = pclientKey.GenerateCertificateSigningRequest(clientCertFields)

// let's make a client certificate

Var params As New SignCertificateParametersMBS
params.CSR = clientCSR
params.RootKey = pRootKey
params.RootCert = rootCert

Var ClientCert As X509MBS = pRootKey.SignCertificate(params)

Break
```

Notes: Returns nil in case of failure.

SubjectAltName provides the X509v3 Subject Alternative Name and could e.g. be "DNS:example.com,DNS:www.example.com,IP:127.0.0.1"

80.24.12 Properties

80.24.13 Bits as Integer

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of bits of key.
Notes: (Read only property)

80.24.14 DescriptionParams as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The description of the parameters.
Notes: This is only for human to read.
(Read only property)

80.24.15 DescriptionPrivateKey as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The description of private/public key.
Notes: If no private key is there, you only get the public key part here.
This is only for human to read.
(Read only property)

80.24.16 DescriptionPublicKey as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The description of public key.
Notes: This is only for human to read.
(Read only property)

80.24.17 Handle as Integer

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle to the key.
Notes: (Read and Write property)

80.24.18 ID as Integer

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ID (type) of the key.
Notes: (Read only property)

80.24.19 PrivateKey as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the private key.
Notes: This is the binary representation.
(Read only property)

80.24.20 PublicKey as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the public key.
Notes: This is the binary representation.
(Read only property)

80.24.21 Size as Integer

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of the key in bytes.
Notes: (Read only property)

80.24.22 Type as Integer

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of key.
Notes: (Read only property)

80.24.23 TypeString as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of key as string.
Notes: EC, DSA, RSA or DH.
(Read only property)

80.24.24 Constants

Extended Key Usage

Constant	Value	Description
kExtendedKeyUsageAnyEKU	&h100	Any Extended Key Usage (not recommended)
kExtendedKeyUsageCodeSign	8	Code Signing
kExtendedKeyUsageDVCS	&h80	Data Validation and Certification Server
kExtendedKeyUsageOCSPSign	&h20	OCSP Responder Signing
kExtendedKeyUsageSGC	&h10	Server-Gated Cryptography (obsolete —old SSL export-grade hack)
kExtendedKeyUsageSMime	4	Secure Email (S/MIME)
kExtendedKeyUsageSSLClient	2	TLS/SSL Client Authentication
kExtendedKeyUsageSSLServer	1	TLS/SSL Server Authentication
kExtendedKeyUsageTimeStamp	&h40	Trusted Timestamping

Key Usage

Constant	Value	Description
kKeyUsageCrlSign	&h0002	The key can sign CRLs (Certificate Revocation Lists).
kKeyUsageDataEncipherment	&h0010	The key can be used for encrypting application data directly (rare in TLS).
kKeyUsageDecipherOnly	&h8000	The key can only be used for decipherment in key agreement (when kKeyUsageKeyAgreement is also set).
kKeyUsageDigitalSignature	&h0080	The key can be used to verify digital signatures (TLS handshake, signed data, etc).
kKeyUsageEncipherOnly	&h0001	The key can only be used for encipherment in key agreement (when kKeyUsageKeyAgreement is also set).
kKeyUsageKeyAgreement	&h0008	The key can be used for key agreement protocols (e.g., Diffie-Hellman, ECDH).
kKeyUsageKeyCertSign	&h0004	The key can sign other certificates (CA usage).
kKeyUsageKeyEncipherment	&h0020	The key can be used for encrypting other keys (e.g., in RSA TLS key exchange).
kKeyUsageNonRepudiation	&h0040	The key can be used for non-repudiation/signing where proof is required. Rarely used today.

80.25 class RC4MBS

80.25.1 class RC4MBS

MBS Encryption Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: An implementation of the RC4 algorithem.
Example:

```
Var r as RC4MBS

// Encrypt:
r = new RC4MBS("Key")

Var OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
Var EncryptedData as string = r.Crypt(OriginalData)
MessageBox EncodeHex(EncryptedData)

// Same for decrypt:
r = new RC4MBS("Key")

Var UnencryptedData as string = r.Crypt(EncryptedData)
UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MessageBox UnencryptedData
```

Notes: The source in RB is in the examples folder (see Crypto 1.5 via RB). This implementation inside the plugin is only to make the calculation faster.
In case RS will improve RB more to produce faster code, the plugin may be no longer needed.

80.25.2 Methods

80.25.3 Constructor(key as MemoryBlock)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the class with the given key.
See also:

- 80.25.4 Constructor(key as string) 13885

80.25.4 Constructor(key as string)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the class with the given key.
Example:

```
Var r as new RC4MBS("MyKey")
Var s as string = r.Crypt("MyData")

MessageBox EncodeHex(s)
```

Notes: Please make sure the key has right text encoding to avoid unexpected results.
See also:

- 80.25.3 Constructor(key as MemoryBlock) 13885

80.25.5 Crypt(data as Memoryblock) as Memoryblock

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes or decryptes the given Memoryblock.
See also:

- 80.25.6 Crypt(data as string) as string 13886

80.25.6 Crypt(data as string) as string

MBS Encryption Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes or decryptes the given string.
Example:

```
Var r as RC4MBS

// Encrypt:
r = new RC4MBS("Key")

Var OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
Var EncryptedData as string = r.Crypt(OriginalData)
MessageBox EncodeHex(EncryptedData)

// Same for decrypt:
r = new RC4MBS("Key")

Var UnencryptedData as string = r.Crypt(EncryptedData)
UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MessageBox UnencryptedData
```

Notes: Returned string does not contain text, but binary data.

Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 80.25.5 Crypt(data as Memoryblock) as Memoryblock 13886

80.26 class RC5MBS

80.26.1 class RC5MBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for RC5 encryption.
Example:

```
Var r as RC5MBS

// Encrypt:
r = new RC5MBS("Key")

Var iv as MemoryBlock
Var num as Integer
Var OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
Var EncryptedData as string = r.encryptCFB64(OriginalData, iv, num)
MessageBox EncodeHex(EncryptedData)

// Same for decrypt:
r = new RC5MBS("Key")

iv = nil
num = 0
Var UnencryptedData as string = r.decryptCFB64(EncryptedData, iv, num)
UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MessageBox UnencryptedData
```

Notes: Do use to read existing RC5 encrypted things.
New projects may better use a better encryption.

80.26.2 Methods

80.26.3 Constructor(key as MemoryBlock, rounds as Integer = 16)

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Example:

```
Var r as new RC5MBS("MyKey")
Var s as string = r.Encrypt("MyData")

MessageBox EncodeHex(s)
```

See also:

- 80.26.4 Constructor(key as string, rounds as Integer = 16) 13889

80.26.4 Constructor(key as string, rounds as Integer = 16)

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Example:

```
Var r as new RC5MBS("MyKey")
Var s as string = r.Encrypt("MyData")

MessageBox EncodeHex(s)
```

Notes: Please make sure the key has right text encoding to avoid unexpected results.
See also:

- 80.26.3 Constructor(key as MemoryBlock, rounds as Integer = 16) 13888

80.26.5 decrypt(data as Memoryblock) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts some data.
Notes: Low level variant without any block mode.
See also:

- 80.26.6 decrypt(data as string) as string 13889

80.26.6 decrypt(data as string) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts some data.
Notes: Please make sure the key has right text encoding to avoid unexpected results.
Low level variant without any block mode.
See also:

- 80.26.5 decrypt(data as Memoryblock) as Memoryblock 13889

80.26.7 decryptCBC(data as Memoryblock, iv as memoryblock = nil) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts some data.
Notes: With Cipher Block Chaining mode.
See also:

- 80.26.8 decryptCBC(data as string, iv as memoryblock = nil) as string 13890

80.26.8 decryptCBC(data as string, iv as memoryblock = nil) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts some data.
Notes: Please make sure the key has right text encoding to avoid unexpected results.
With Cipher Block Chaining mode.
See also:

- 80.26.7 decryptCBC(data as Memoryblock, iv as memoryblock = nil) as Memoryblock 13890

80.26.9 decryptCFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts some data.
Example:

```
Var r as RC5MBS

// Encrypt:
r = new RC5MBS("Key")

Var iv as MemoryBlock
Var num as Integer
Var OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
Var EncryptedData as string = r.encryptCFB64(OriginalData, iv, num)
MessageBox EncodeHex(EncryptedData)

// Same for decrypt:
r = new RC5MBS("Key")

iv = nil
num = 0
Var UnencryptedData as string = r.decryptCFB64(EncryptedData, iv, num)
```

UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MessageBox UnencryptedData

Notes: with Cipher Feedback mode.
See also:

- 80.26.10 decryptCFB64(data as string, iv as memoryblock, byref num as Integer) as string 13891

80.26.10 decryptCFB64(data as string, iv as memoryblock, byref num as Integer) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts some data.
Notes: Please make sure the key has right text encoding to avoid unexpected results.
with Cipher Feedback mode.
See also:

- 80.26.9 decryptCFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock 13890

80.26.11 encrypt(data as Memoryblock) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts some data.
Notes: Low level variant without any block mode.
See also:

- 80.26.12 encrypt(data as string) as string 13891

80.26.12 encrypt(data as string) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts some data.
Notes: Please make sure the key has right text encoding to avoid unexpected results.
Low level variant without any block mode.
See also:

- 80.26.11 encrypt(data as Memoryblock) as Memoryblock 13891

80.26.13 encryptCBC(data as Memoryblock, iv as memoryblock = nil) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts some data.
Notes: With Cipher Block Chaining mode.
See also:

- 80.26.14 encryptCBC(data as string, iv as memoryblock = nil) as string 13892

80.26.14 encryptCBC(data as string, iv as memoryblock = nil) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts some data.
Notes: Please make sure the key has right text encoding to avoid unexpected results.
With Cipher Block Chaining mode.
See also:

- 80.26.13 encryptCBC(data as Memoryblock, iv as memoryblock = nil) as Memoryblock 13892

80.26.15 encryptCFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts some data.
Example:

```
Var r as RC5MBS

// Encrypt:
r = new RC5MBS("Key")

Var iv as MemoryBlock
Var num as Integer
Var OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
Var EncryptedData as string = r.encryptCFB64(OriginalData, iv, num)
MessageBox EncodeHex(EncryptedData)

// Same for decrypt:
r = new RC5MBS("Key")

iv = nil
num = 0
Var UnencryptedData as string = r.decryptCFB64(EncryptedData, iv, num)
```

UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MessageBox UnencryptedData

Notes: with Cipher Feedback mode.
See also:

- 80.26.16 encryptCFB64(data as string, iv as memoryblock, byref num as Integer) as string 13893

80.26.16 encryptCFB64(data as string, iv as memoryblock, byref num as Integer) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts some data.
Notes: Please make sure the key has right text encoding to avoid unexpected results.
with Cipher Feedback mode.
See also:

- 80.26.15 encryptCFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock 13892

80.26.17 encryptOFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts some data.
Notes: with Output Feedback mode.
See also:

- 80.26.18 encryptOFB64(data as string, iv as memoryblock, byref num as Integer) as string 13893

80.26.18 encryptOFB64(data as string, iv as memoryblock, byref num as Integer) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts some data.
Notes: Please make sure the key has right text encoding to avoid unexpected results.
with Output Feedback mode.
See also:

- 80.26.17 encryptOFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock 13893

80.27 class SHA1MBS

80.27.1 class SHA1MBS

MBS Encryption Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: An implementation of the SHA1 algorithem to calculate hash values.
Example:

```
Var f as FolderItem
Var b as BinaryStream
Var s as string
Var m as new SHA1MBS

// process file part by part (big files)

f=SpecialFolder.Desktop.Child("test.jpg")
b=f.OpenAsBinaryFile(False)

while not b.eof
s=b.Read(1000000)
m.Add s

wend

MessageBox EncodingToHexMBS(m.Result)+" using plugin with SHA1MBS"
```

Notes: The source in RB is in the examples folder (see Crypto 1.5 via RB). This implementation inside the plugin is only to make the calculation faster.
In case RS will improve RB more to produce faster code, the plugin may be no longer needed.

Xojo Developer Magazine

- 10.4, page 44: HOTP Authentication, Generate one-time passwords with Google Authenticator App and validate them in Real Studio by Mattias Sandstr√m

80.27.2 Methods

80.27.3 Add(data as string)

MBS Encryption Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds more input bytes to the current hash.
Example:

```
Var s as new SHA1MBS
s.Reset
s.Add "Hello"
s.Add "World"
Var e as string=s.Result
```

Notes: Lasterror is set.

80.27.4 Hash(data as string) as string

MBS Encryption Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the hash string for the given key.
Example:

```
MessageBox EncodeHex(SHA1MBS.Hash("Hello World"))
```

Notes: The string returned is 20 bytes long (if successful) and has the 5 integer properties stored inside (in big endian format) which make up the key.
Does change the current hash value stored in the class itself.

80.27.5 HashFile(file as FolderItem, Hex as boolean = true) as string

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates hash from whole file.
Notes: Plugin will start a preemptive thread to read in file and process all data in chunks.
Returns hash on success or empty string on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.
If hex is true, the result is encoded as hex string.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

80.27.6 HashText(data as string) as string

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the hash string for the given key.
Example:

```
MessageBox EncodeHex(SHA1MBS.Hash("Hello World"))
```

Notes: The string returned is 20 bytes long (if successful) and has the 5 integer properties stored inside (in big endian format) which make up the key.
Does change the current hash value stored in the class itself.
Returns the digest as text string with hexadecimal digits.

80.27.7 HMAC(key as string, data as string) as string

MBS Encryption Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the a specific HASH based on the key and the data string.
Example:

```
Function HMAC(key as string, data as string) As string
// Implementation by Matthijs van Duin
#pragma DisableBackgroundTasks

Var ikey, okey, k as string
Var temp, i as Integer

if (lenB(key) >64) then
k = Hash(key)
else
k = key
end if

for i = 1 to 64
temp = ascB(midB(k, i, 1))
ikey = ikey + chrB(BitwiseXor(temp, &h36))
okey = okey + chrB(BitwiseXor(temp, &h5C))
next
```

```
return Hash(okey + Hash(ikey + data))
End Function

// test code:

// de7c9b85b8b78aa6bc8a7a36f70a90701c9db4d9
Var s as string = SHA1MBS.HMAC("key", "The quick brown fox jumps over the lazy dog")
MessageBox EncodeHex(s)

// fbdb1d1b18aa6c08324b7d64b71fb76370690e1d
s = SHA1MBS.HMAC("", "")
MessageBox EncodeHex(s)
```

Notes: Above is the source code of this function.

80.27.8 Reset

MBS Encryption Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the current hash value.

80.27.9 Result as string

MBS Encryption Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current hash value.
Notes: Returns "" on any error.
Lasterror is set.

80.27.10 ResultText as string

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current hash value.
Notes: Returns the digest as text string with hexadecimal digits.
Returns "" on any error.
Lasterror is set.

80.28 class SHA256MBS

80.28.1 class SHA256MBS

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to calculate SHA-256 hashes.
Example:

```
Var s3 as string = SHA256MBS.Hash("")
Var e3 as string = EncodingToHexMBS(s3)
Var e4 as string = SHA256MBS.HashText("")

if e3 <>"e3b0c44298fc1c149afbf4c8996fb92427ae41e4649b934ca495991b7852b855" then
break
elseif e3 <>e4 then
break
else
MessageBox "OK"
end if
```

80.28.2 Methods

80.28.3 Add(data as string)

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds data to the hash calculation.
Example:

```
Var s as new SHA256MBS
```

```
s.Add "Franz jagt im komplett"
s.Add " verwahrlosten Taxi quer"
s.Add " durch Bayern"

Var r as string = s.ResultText
if r = "d32b568cd1b96d459e7291ebf4b25d007f275c9f13149beeb782fac0716613f8" then
MessageBox "OK"
else
MessageBox "Failed"
end if
```

Notes: Using this method you can process huge amounts of data by passing them in small portions.

80.28.4 Hash(data as string) as string

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to quickly create a hash for a given string.
Example:

```
Var s2 as string = SHA256MBS.Hash("Frank jagt im komplett verwahrlosten Taxi quer durch Bayern")
Var e2 as string = EncodingToHexMBS(s2)

if e2 = "78206a866dbb2bf017d8e34274aed01a8ce405b69d45db30bafa00f5eeed7d5e" then
MessageBox "OK"
else
MessageBox "Failed"
end if
```

Notes: Returns the digest as binary string.
Before you show it to the user, pass it through EncodingToHexMBS.

80.28.5 HashFile(file as FolderItem, Hex as boolean = true) as string

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates hash from whole file.
Notes: Plugin will start a preemptive thread to read in file and process all data in chunks.
Returns hash on success or empty string on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.
If hex is true, the result is encoded as hex string.

The work is performed on a preemptive thread, so this function does not block the application and can yield

time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

80.28.6 HashText(data as string) as string

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to quickly create a hash for a given string.
Example:

```
Var s1 as string = SHA256MBS.HashText("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern")

if s1 = "d32b568cd1b96d459e7291ebf4b25d007f275c9f13149beeb782fac0716613f8" then
MessageBox "OK"
else
MessageBox "Failed"
end if
```

Notes: Returns the digest as text string with hexadecimal digits.

80.28.7 HMAC(key as string, data as string) as string

MBS Encryption Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the a specific HASH based on the key and the data string.

80.28.8 Reset

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the hash class so you can reuse it for the SHA-256 hash.

80.28.9 Result as string

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The final hash.
Notes: Returns the digest as binary string.

Before you show it to the user, pass it through EncodingToHexMBS.

80.28.10 ResultText as string

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The final hash.
Notes: Returns the digest as text string with hexadecimal digits.

80.29 class SHA3MBS

80.29.1 class SHA3MBS

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to calculate SHA-3 hashes.
Example:

```
Var t as string = "The quick brown fox jumps over the lazy dog"
Var s as new SHA3MBS(1088, 512)

s.Add t
Var h as string = s.ResultText(32)

// shows 4d741b6f1eb29cb2a9b9911c82f56fa8d73b04959d3d9d222895df6c0b28aa15
MessageBox h
```

80.29.2 Methods

80.29.3 Add(data as memoryblock)

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds data to the hash calculation.
Notes: Using this method you can process huge amounts of data by passing them in small portions.
See also:

- 80.29.4 Add(data as string) 13902

80.29.4 Add(data as string)

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds data to the hash calculation.
Notes: Using this method you can process huge amounts of data by passing them in small portions.
See also:

- 80.29.3 Add(data as memoryblock) 13902

80.29.5 Constructor(Rate as UInt32, capacity as UInt32)

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Example:

```
Var s as new SHA3MBS(1088, 256) // 256 bit

s.Add "Compute Me"
s.Add "Me too"

Var h as string = s.ResultText(256/8)

Break
```

Notes: See example project or SHA-3 documentation for useful values for Rate and Capacity.

80.29.6 Hash(data as string, Rate as UInt32, capacity as UInt32, outputLength as Integer) as string

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to quickly create a hash for a given string.
Example:

```
Var t as string = "The quick brown fox jumps over the lazy dog"
Var h as string = SHA3MBS.Hash(t, 1088, 512, 32)

// encode as text to display
h = EncodeHex(h)
// shows 4d741b6f1eb29cb2a9b9911c82f56fa8d73b04959d3d9d222895df6c0b28aa15
MessageBox h
```

Notes: Returns the digest as text string with hexadecimal digits.
Or empty string in case of any error.
Before you show it to the user, pass it through EncodingToHexMBS.

80.29.7 HashText(data as string, Rate as UInt32, capacity as UInt32, outputLength as Integer) as string

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to quickly create a hash for a given string.

Example:

```
Var t as string = "The quick brown fox jumps over the lazy dog"
Var h as string = SHA3MBS.HashText(t, 1088, 512, 32)

// shows 4d741b6f1eb29cb2a9b9911c82f56fa8d73b04959d3d9d222895df6c0b28aa15
MessageBox h
```

Notes: Returns the digest as text string with hexadecimal digits.
Or empty string in case of any error.

80.29.8 Reset(Rate as UInt32, capacity as UInt32)

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the hash class so you can reuse it for another SHA-3 hash.

80.29.9 Result(outputLength as Integer) as string

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The final hash in the requested length.
Notes: Returns the digest as binary string.
Before you show it to the user, pass it through EncodingToHexMBS.

80.29.10 ResultText(outputLength as Integer) as string

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The final hash in the requested length.
Example:

```
Var t as string = "The quick brown fox jumps over the lazy dog"
Var s as new SHA3MBS(1088, 512)

s.Add t
Var h as string = s.ResultText(32)

// shows 4d741b6f1eb29cb2a9b9911c82f56fa8d73b04959d3d9d222895df6c0b28aa15
MessageBox h
```

Notes: Returns the digest as text string with hexadecimal digits.

80.30 class SHA512MBS

80.30.1 class SHA512MBS

MBS Encryption Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to calculate SHA-512 hashes.
Example:

```
Var s3 as string = SHA512MBS.Hash("")
Var e3 as string = EncodingToHexMBS(s3)

if e3 = "CF83E1357EEFB8BDF1542850D66D8007D620E4050B5715DC83F4A921D36CE9CE47D0D13C5D85F2B0FF8318D2
then
MessageBox "OK"
else
MessageBox "Failed"
end if
```

80.30.2 Methods

80.30.3 Add(data as string)

MBS Encryption Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds data to the hash calculation.
Example:

```
Var s as new SHA512MBS
```

```
s.Add "Franz jagt im komplett"
s.Add " verwahrlosten Taxi quer"
s.Add " durch Bayern"

Var r as string = s.ResultText
if r = "AF9ED2DE700433B803240A552B41B5A472A6EF3FE1431A722B2063C75E9F07451F67A28E37D09CDE769424C96A
then
MessageBox "OK"
else
MessageBox "Failed"
end if
```

Notes: Using this method you can process huge amounts of data by passing them in small portions.

80.30.4 Hash(data as string) as string

MBS Encryption Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to quickly create a hash for a given string.
Example:

```
