Function: Retrieves whether NULL values are sorted high.
Notes: Sorted high means that NULL values sort higher than any other value in a domain. In an ascending order, if this method returns true, NULL values will appear at the end. By contrast, the method nullsAreSortedAtEnd indicates whether NULL values are sorted at the end regardless of sort order.

109.6.105 nullsAreSortedLow as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether NULL values are sorted low.
Notes: Sorted low means that NULL values sort lower than any other value in a domain. In an ascending order, if this method returns true, NULL values will appear at the beginning. By contrast, the method nullsAreSortedAtStart indicates whether NULL values are sorted at the beginning regardless of sort order.

109.6.106 othersDeletesAreVisible(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether deletes made by others are visible.
Notes: Parameters:
type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns:
true if deletes made by others are visible for the given result set type; false otherwise

109.6.107 othersInsertsAreVisible(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether inserts made by others are visible.
Notes: Parameters:
type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns:
true if inserts made by others are visible for the given result set type; false otherwise

109.6.108 othersUpdatesAreVisible(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether updates made by others are visible.
Notes: Parameters:
type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns:
true if updates made by others are visible for the given result set type; false otherwise

109.6.109 ownDeletesAreVisible(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a result set's own deletes are visible.
Notes: type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns true if deletes are visible for the given result set type; false otherwise

109.6.110 ownInsertsAreVisible(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a result set's own inserts are visible.
Notes: type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns true if inserts are visible for the given result set type; false otherwise

109.6.111 ownUpdatesAreVisible(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether for the given type of ResultSet object, the result set's own updates are visible.
Notes: type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

109.6.112 procedureColumnIn as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the column stores IN parameters.
Notes: A possible value for the column COLUMN_TYPE in the ResultSet returned by the method getProcedureColumns.

109.6.113 procedureColumnInOut as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the column stores INOUT parameters.
Notes: A possible value for the column COLUMN_TYPE in the ResultSet returned by the method getProcedureColumns.

109.6.114 procedureColumnOut as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the column stores OUT parameters.
Notes: A possible value for the column COLUMN_TYPE in the ResultSet returned by the method get-

ProcedureColumns.

109.6.115 procedureColumnResult as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the column stores results.
Notes: A possible value for the column COLUMN_TYPE in the ResultSet returned by the method getProcedureColumns.

109.6.116 procedureColumnReturn as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the column stores return values.
Notes: A possible value for the column COLUMN_TYPE in the ResultSet returned by the method getProcedureColumns.

109.6.117 procedureColumnUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that type of the column is unknown.
Notes: A possible value for the column COLUMN_TYPE in the ResultSet returned by the method getProcedureColumns.

109.6.118 procedureNoNulls as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that NULL values are not allowed.
Notes: A possible value for the column NULLABLE in the ResultSet object returned by the method getProcedureColumns.

109.6.119 procedureNoResult as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the procedure does not return a result.
Notes: A possible value for column PROCEDURE_TYPE in the ResultSet object returned by the method getProcedures.

109.6.120 procedureNullable as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that NULL values are allowed.
Notes: A possible value for the column NULLABLE in the ResultSet object returned by the method getProcedureColumns.

109.6.121 procedureNullableUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that whether NULL values are allowed is unknown.
Notes: A possible value for the column NULLABLE in the ResultSet object returned by the method getProcedureColumns.

109.6.122 procedureResultUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that it is not known whether the procedure returns a result.
Notes: A possible value for column PROCEDURE_TYPE in the ResultSet object returned by the method getProcedures.

109.6.123 procedureReturnsResult as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the procedure returns a result.
Notes: A possible value for column PROCEDURE_TYPE in the ResultSet object returned by the method getProcedures.

109.6.124 sqlStateSQL99 as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the value is an SQL99 SQLSTATE value.
Notes: A possible return value for the method SQLException.getSQLState.

109.6.125 sqlStateXOpen as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the value is an X/Open (now know as Open Group) SQL CLI SQLSTATE value.
Notes: A possible return value for the method SQLException.getSQLState.

109.6.126 storesLowerCaseIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database treats mixed case unquoted SQL identifiers as case insensitive and stores them in lower case.

109.6.127 storesLowerCaseQuotedIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database treats mixed case quoted SQL identifiers as case insensitive and stores them in lower case.

109.6.128 storesMixedCaseIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database treats mixed case unquoted SQL identifiers as case insensitive and stores them in mixed case.

109.6.129 storesMixedCaseQuotedIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database treats mixed case quoted SQL identifiers as case sensitive and as a result stores them in mixed case.

109.6.130 storesUpperCaseIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database treats mixed case unquoted SQL identifiers as case insensitive and stores them in upper case.

109.6.131 storesUpperCaseQuotedIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database treats mixed case quoted SQL identifiers as case insensitive and stores them in upper case.

109.6.132 supportsAlterTableWithAddColumn as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports ALTER TABLE with add column.

109.6.133 supportsAlterTableWithDropColumn as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports ALTER TABLE with drop column.

109.6.134 supportsANSI92EntryLevelSQL as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the ANSI92 entry level SQL grammar.

109.6.135 supportsANSI92FullSQL as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the ANSI92 full SQL grammar supported.

109.6.136 supportsANSI92IntermediateSQL as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the ANSI92 intermediate SQL grammar supported.

109.6.137 supportsBatchUpdates as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports batch updates.
Notes: Returns:
true if this database supports batch upcates; false otherwise

109.6.138 supportsCatalogsInDataManipulation as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a catalog name can be used in a data manipulation statement.

109.6.139 supportsCatalogsInIndexDefinitions as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a catalog name can be used in an index definition statement.

109.6.140 supportsCatalogsInPrivilegeDefinitions as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a catalog name can be used in an index definition statement.

109.6.141 supportsCatalogsInProcedureCalls as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a catalog name can be used in a procedure call statement.

109.6.142 supportsCatalogsInTableDefinitions as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a catalog name can be used in a table definition statement.

109.6.143 supportsColumnAliasing as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports column aliasing.
Notes: If so, the SQL AS clause can be used to provide names for computed columns or to provide alias names for columns as required.

109.6.144 supportsConvert as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the CONVERT function between SQL types.
See also:

- 109.6.145 supportsConvert(fromType as Integer, toType as Integer) as boolean 16700

109.6.145 supportsConvert(fromType as Integer, toType as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the CONVERT for two given SQL types.
Notes: Parameters:
fromType - the type to convert from; one of the type codes from the class JavaDatabaseMBS
toType - the type to convert to; one of the type codes from the class JavaDatabaseMBS

Returns:
true if so; false otherwise
See also:

- 109.6.144 supportsConvert as boolean 16700

109.6.146 supportsCoreSQLGrammar as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the ODBC Core SQL grammar.

109.6.147 supportsCorrelatedSubqueries as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports correlated subqueries.

109.6.148 supportsDataDefinitionAndDataManipulationTransactions as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports both data definition and data manipulation statements within a transaction.

109.6.149 supportsDataManipulationTransactionsOnly as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports only data manipulation statements within a transaction.

109.6.150 supportsDifferentTableCorrelationNames as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether, when table correlation names are supported, they are restricted to being different from the names of the tables.

109.6.151 supportsExpressionsInOrderBy as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports expressions in ORDER BY lists.

109.6.152 supportsExtendedSQLGrammar as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the ODBC Extended SQL grammar.

109.6.153 supportsFullOuterJoins as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports full nested outer joins.

109.6.154 supportsGetGeneratedKeys as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether auto-generated keys can be retrieved after a statement has been executed.
Notes: Returns:
true if auto-generated keys can be retrieved after a statement has executed; false otherwise

109.6.155 supportsGroupBy as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports some form of GROUP BY clause.

109.6.156 supportsGroupByBeyondSelect as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports using columns not included in the SELECT statement in a GROUP BY clause provided that all of the columns in the SELECT statement are included in the GROUP BY clause.

109.6.157 supportsGroupByUnrelated as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports using a column that is not in the SELECT statement in a GROUP BY clause.

109.6.158 supportsIntegrityEnhancementFacility as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the SQL Integrity Enhancement Facility.

109.6.159 supportsLikeEscapeClause as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports specifying a LIKE escape clause.

109.6.160 supportsLimitedOuterJoins as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database provides limited support for outer joins.
Notes: (This will be true if the method supportsFullOuterJoins returns true).

109.6.161 supportsMinimumSQLGrammar as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the ODBC Minimum SQL grammar.

109.6.162 supportsMixedCaseIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database treats mixed case unquoted SQL identifiers as case sensitive and as a result stores them in mixed case.

109.6.163 supportsMixedCaseQuotedIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database treats mixed case quoted SQL identifiers as case sensitive and as a result stores them in mixed case.

109.6.164 supportsMultipleOpenResults as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether it is possible to have multiple ResultSet objects returned from a CallableStatement object simultaneously.
Notes: Returns:
true if a CallableStatement object can return multiple ResultSet objects simultaneously; false otherwise

109.6.165 supportsMultipleResultSets as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports getting multiple ResultSet objects from a single call to the method execute.

109.6.166 supportsMultipleTransactions as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database allows having multiple transactions open at once (on different connections).

109.6.167 supportsNamedParameters as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports named parameters to callable statements.
Notes: Returns:

true if named parameters are supported; false otherwise

109.6.168 supportsNonNullableColumns as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether columns in this database may be defined as non-nullable.

109.6.169 supportsOpenCursorsAcrossCommit as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports keeping cursors open across commits.

109.6.170 supportsOpenCursorsAcrossRollback as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports keeping cursors open across rollbacks.

109.6.171 supportsOpenStatementsAcrossCommit as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports keeping statements open across commits.

109.6.172 supportsOpenStatementsAcrossRollback as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports keeping statements open across rollbacks.

109.6.173 supportsOrderByUnrelated as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports using a column that is not in the SELECT statement in an ORDER BY clause.

109.6.174 supportsOuterJoins as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports some form of outer join.

109.6.175 supportsPositionedDelete as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a catalog name can be used in an index definition statement.

109.6.176 supportsPositionedUpdate as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports positioned UPDATE statements.

109.6.177 supportsResultSetConcurrency(type as Integer, concurrency as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the given concurrency type in combination with the given result set type.

109.6.178 supportsResultSetHoldability(holdability as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the given result set holdability.
Notes: Parameters:
holdability - one of the following constants: ResultSet.HOLD_CURSORS_OVER_COMMIT or ResultSet.CLOSE_CURSORS_AT_COMMIT
Returns:
true if so; false otherwise

109.6.179 supportsResultSetType(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the given result set type.

109.6.180 supportsSavepoints as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports savepoints.
Notes: Returns:
true if savepoints are supported; false otherwise

109.6.181 supportsSchemasInDataManipulation as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a schema name can be used in a data manipulation statement.

109.6.182 supportsSchemasInIndexDefinitions as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a schema name can be used in an index definition statement.

109.6.183 supportsSchemasInPrivilegeDefinitions as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a schema name can be used in a privilege definition statement.

109.6.184 supportsSchemasInProcedureCalls as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a schema name can be used in a procedure call statement.

109.6.185 supportsSchemasInTableDefinitions as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a schema name can be used in a table definition statement.

109.6.186 supportsSelectForUpdate as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports SELECT FOR UPDATE statements.

109.6.187 supportsStatementPooling as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports statement pooling.
Notes: Returns:
true if so; false otherwise

109.6.188 supportsStoredProcedures as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports stored procedure calls that use the stored procedure escape syntax.

109.6.189 supportsSubqueriesInComparisons as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports subqueries in comparison expressions.

109.6.190 supportsSubqueriesInExists as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports subqueries in EXISTS expressions.

109.6.191 supportsSubqueriesInIns as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports subqueries in IN statements.

109.6.192 supportsSubqueriesInQuantifieds as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports subqueries in quantified expressions.

109.6.193 supportsTableCorrelationNames as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports table correlation names.

109.6.194 supportsTransactionIsolationLevel(level as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the given transaction isolation level.
Notes: Parameters:
level - one of the transaction isolation levels defined in javaConnectionMBS

Returns:
true if so; false otherwise

109.6.195 supportsTransactions as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports transactions.
Notes: If not, invoking the method commit is a noop, and the isolation level is TRANSACTION_NONE.

109.6.196 supportsUnion as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports SQL UNION.

109.6.197 supportsUnionAll as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports SQL UNION ALL.

109.6.198 tableIndexClustered as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that this table index is a clustered index.
Notes: A possible value for column TYPE in the ResultSet object returned by the method getIndexInfo.

109.6.199 tableIndexHashed as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that this table index is a hashed index.
Notes: A possible value for column TYPE in the ResultSet object returned by the method getIndexInfo.

109.6.200 tableIndexOther as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that this table index is not a clustered index, a hashed index, or table statistics; it is something other than these.
Notes: A possible value for column TYPE in the ResultSet object returned by the method getIndexInfo.

109.6.201 tableIndexStatistic as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that this column contains table statistics that are returned in conjunction with a table's index descriptions.
Notes: A possible value for column TYPE in the ResultSet object returned by the method getIndexInfo.

109.6.202 typeNoNulls as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that a NULL value is NOT allowed for this data type.
Notes: A possible value for column NULLABLE in the ResultSet object returned by the method getType-

Info.

109.6.203 typeNullable as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that a NULL value is allowed for this data type.
Notes: A possible value for column NULLABLE in the ResultSet object returned by the method getTypeInfo.

109.6.204 typeNullableUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that it is not known whether a NULL value is allowed for this data type.
Notes: A possible value for column NULLABLE in the ResultSet object returned by the method getTypeInfo.

109.6.205 typePredBasic as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that one can base all WHERE search clauses except WHERE . . . LIKE on this data type.
Notes: A possible value for column SEARCHABLE in the ResultSet object returned by the method getTypeInfo.

109.6.206 typePredChar as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the only WHERE search clause that can be based on this type is WHERE . . . LIKE.
Notes: A possible value for column SEARCHABLE in the ResultSet object returned by the method getTypeInfo.

109.6.207 typePredNone as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that WHERE search clauses are not supported for this type.
Notes: A possible value for column SEARCHABLE in the ResultSet object returned by the method getTypeInfo.

109.6.208 typeSearchable as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that all WHERE search clauses can be based on this type.
Notes: A possible value for column SEARCHABLE in the ResultSet object returned by the method getTypeInfo.

109.6.209 updatesAreDetected(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether or not a visible row update can be detected by calling the method ResultSet.rowUpdated.
Notes: Parameters:
type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns:
true if changes are detected by the result set type; false otherwise

109.6.210 usesLocalFilePerTable as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database uses a file for each table.

109.6.211 usesLocalFiles as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database stores tables in a local file.

109.6.212 versionColumnNotPseudo as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that this version column is NOT a pseudo column.
Notes: A possible value for the column PSEUDO_COLUMN in the ResultSet object returned by the method getVersionColumns.

109.6.213 versionColumnPseudo as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that this version column is a pseudo column.
Notes: A possible value for the column PSEUDO_COLUMN in the ResultSet object returned by the method getVersionColumns.

109.6.214 versionColumnUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that this version column may or may not be a pseudo column.
Notes: A possible value for the column PSEUDO_COLUMN in the ResultSet object returned by the method getVersionColumns.

109.7 class JavaExceptionMBS

109.7.1 class JavaExceptionMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The exception class used to report java exception.
Notes: For SQLExceptions the ErrorNumber property will be filled.
For all java exceptions the message property is filled.
Subclass of the RuntimeException class.
Blog Entries

- Encrypted Access database in Xojo

109.7.2 Methods

109.7.3 RaiseJavaException(message as string)

MBS Java Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A method to test exception handling.
Example:

JavaExceptionMBS.RaiseJavaException "Just a test!"

Notes: This method raises a new JavaExceptionMBS with the given message.

109.8 class JavaInputStreamMBS

109.8.1 class JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The plugin class for an inputstream.
Example:

```
// your result set
Var r as JavaResultSetMBS

// get binary data for BLOB column nameed 'data'
Var myInputStream as JavaInputStreamMBS = r.getBinaryStream( "data" )
if myInputStream <>nil Then

// read byte for byte in a loop
// better use other read() method with buffer
Var data as string

Do
Var c as Integer = myInputStream.read
If c = -1 then exit

data = data + chrb(c)
Loop

Var myPicture as Picture = Picture.FromData(data)

// work with picture here
End If
```

Notes: This abstract class in java is the superclass of all classes representing an input stream of bytes.
Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MonkeyBread Software Releases the MBS Real Studio plug-ins in version 13.1

- MBS Real Studio Plugins, version 13.1pr7

109.8.2 Methods

109.8.3 available as Integer

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns an estimate of the number of bytes that can be read (or skipped over) from this input stream without blocking by the next invocation of a method for this input stream.
Notes: The next invocation might be the same thread or another thread. A single read or skip of this many bytes will not block, but may read or skip fewer bytes.
Note that while some implementations of InputStream will return the total number of bytes in the stream, many will not. It is never correct to use the return value of this method to allocate a buffer intended to hold all data in this stream.

A subclass' implementation of this method may choose to throw an IOException if this input stream has been closed by invoking the close() method.

The available method for class InputStream always returns 0.

This method should be overridden by subclasses.

Returns an estimate of the number of bytes that can be read (or skipped over) from this input stream without blocking or 0 when it reaches the end of the input stream.

Throws:
IOException - if an I/O error occurs.

109.8.4 close

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes this input stream and releases any system resources associated with the stream.

109.8.5 Constructor

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

109.8.6 mark(readlimit as Integer)

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Marks the current position in this input stream.
Notes: A subsequent call to the reset method repositions this stream at the last marked position so that subsequent reads re-read the same bytes.
The readlimit arguments tells this input stream to allow that many bytes to be read before the mark position gets invalidated.

The general contract of mark is that, if the method markSupported returns true, the stream somehow remembers all the bytes read after the call to mark and stands ready to supply those same bytes again if and whenever the method reset is called. However, the stream is not required to remember any data at all if more than readlimit bytes are read from the stream before reset is called.

Marking a closed stream should not have any effect on the stream.

The mark method of InputStream does nothing.

Parameters:
readlimit - the maximum limit of bytes that can be read before the mark position becomes invalid.

109.8.7 markSupported as boolean

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Tests if this input stream supports the mark and reset methods.
Notes: Whether or not mark and reset are supported is an invariant property of a particular input stream instance. The markSupported method of InputStream returns false.

Returns true if this stream instance supports the mark and reset methods; false otherwise.

109.8.8 read as Integer

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the next byte of data from the input stream.
Notes: The value byte is returned as an int in the range 0 to 255. If no byte is available because the end of the stream has been reached, the value -1 is returned. This method blocks until input data is available,

the end of the stream is detected, or an exception is thrown.
A subclass must provide an implementation of this method.

Returns the next byte of data, or -1 if the end of the stream is reached.

Throws:
IOException - if an I/O error occurs.
See also:

- 109.8.9 read(bytes as JavaByteArrayMBS) as Integer 16720
- 109.8.10 read(bytes as JavaByteArrayMBS, Offset as Integer, Length as Integer) as Integer 16721

109.8.9 read(bytes as JavaByteArrayMBS) as Integer

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads some number of bytes from the input stream and stores them into the buffer array bytes.
Notes: The number of bytes actually read is returned as an integer. This method blocks until input data is available, end of file is detected, or an exception is thrown.
If the length of bytes is zero, then no bytes are read and 0 is returned; otherwise, there is an attempt to read at least one byte. If no byte is available because the stream is at the end of the file, the value -1 is returned; otherwise, at least one byte is read and stored into bytes.

The first byte read is stored into element bytes [0] , the next one into bytes [1] , and so on. The number of bytes read is, at most, equal to the length of bytes. Let k be the number of bytes actually read; these bytes will be stored in elements bytes [0] through bytes [k-1] , leaving elements bytes [k] through bytes [bytes.length-1] unaffected.

The read(bytes) method for class InputStream has the same effect as:

read(bytes, 0, bytes.length)

Parameters:
bytes: the buffer into which the data is read.

Returns the total number of bytes read into the buffer, or -1 is there is no more data because the end of the stream has been reached.

Throws:
IOException - If the first byte cannot be read for any reason other than the end of the file, if the input stream has been closed, or if some other I/O error occurs.

NullPointerException - if bytes is null.
See also:

- 109.8.8 read as Integer 16719
- 109.8.10 read(bytes as JavaByteArrayMBS, Offset as Integer, Length as Integer) as Integer 16721

109.8.10 read(bytes as JavaByteArrayMBS, Offset as Integer, Length as Integer) as Integer

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads up to Length bytes of data from the input stream into an array of bytes.
Notes: An attempt is made to read as many as Length bytes, but a smaller number may be read. The number of bytes actually read is returned as an integer.
This method blocks until input data is available, end of file is detected, or an exception is thrown.

If Length is zero, then no bytes are read and 0 is returned; otherwise, there is an attempt to read at least one byte. If no byte is available because the stream is at end of file, the value -1 is returned; otherwise, at least one byte is read and stored into bytes.

The first byte read is stored into element bytes [Offset] , the next one into bytes [Offset+1] , and so on. The number of bytes read is, at most, equal to Length. Let k be the number of bytes actually read; these bytes will be stored in elements bytes [Offset] through bytes [Offset+k-1] , leaving elements bytes [Offset+k] through bytes [Offset+Length-1] unaffected.

In every case, elements bytes [0] through bytes [Offset] and elements bytes [Offset+Length] through bytes [bytes.length-1] are unaffected.

The read(bytes, Offset, Length) method for class InputStream simply calls the method read() repeatedly. If the first such call results in an IOException, that exception is returned from the call to the read(bytes, Offset, Length) method. If any subsequent call to read() results in a IOException, the exception is caught and treated as if it were end of file; the bytes read up to that point are stored into bytes and the number of bytes read before the exception occurred is returned. The default implementation of this method blocks until the requested amount of input data len has been read, end of file is detected, or an exception is thrown. Subclasses are encouraged to provide a more efficient implementation of this method.

Parameters:
bytes: the buffer into which the data is read.
Offset: the start offset in array bytes at which the data is written.
Length: the maximum number of bytes to read.

Returns the total number of bytes read into the buffer, or -1 if there is no more data because the end of the

stream has been reached.

Throws:
IOException - If the first byte cannot be read for any reason other than end of file, or if the input stream has been closed, or if some other I/O error occurs.
NullPointerException - If bytes is null.
IndexOutOfBoundsException - If Offset is negative, Length is negative, or Length is greater than bytes.length - Offset
See also:

- 109.8.8 read as Integer 16719
- 109.8.9 read(bytes as JavaByteArrayMBS) as Integer 16720

109.8.11 reset

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Repositions this stream to the position at the time the mark method was last called on this input stream.
Notes: The general contract of reset is:

- If the method markSupported returns true, then:
- If the method mark has not been called since the stream was created, or the number of bytes read from the stream since mark was last called is larger than the argument to mark at that last call, then an IOException might be thrown.
- If such an IOException is not thrown, then the stream is reset to a state such that all the bytes read since the most recent call to mark (or since the start of the file, if mark has not been called) will be resupplied to subsequent callers of the read method, followed by any bytes that otherwise would have been the next input data as of the time of the call to reset.
- If the method markSupported returns false, then:
- The call to reset may throw an IOException.
- If an IOException is not thrown, then the stream is reset to a fixed state that depends on the particular type of the input stream and how it was created. The bytes that will be supplied to subsequent callers of the read method depend on the particular type of the input stream.

The method reset for class InputStream does nothing except throw an IOException.

Throws:
IOException - if this stream has not been marked or if the mark has been invalidated.

109.8.12 skip(count as Int64) as Int64

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Skips over and discards count bytes of data from this input stream.
Notes: The skip method may, for a variety of reasons, end up skipping over some smaller number of bytes, possibly 0. This may result from any of a number of conditions; reaching end of file before count bytes have been skipped is only one possibility. The actual number of bytes skipped is returned. If count is negative, no bytes are skipped.
The skip method of this class creates a byte array and then repeatedly reads into it until count bytes have been read or the end of the stream has been reached. Subclasses are encouraged to provide a more efficient implementation of this method. For instance, the implementation may depend on the ability to seek.

Parameters:
count: the number of bytes to be skipped.

Returns the actual number of bytes skipped.

Throws:
IOException - if the stream does not support seek, or if some other I/O error occurs.

109.9 class JavaParameterMetaDataMBS

109.9.1 class JavaParameterMetaDataMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An object that can be used to get information about the types and properties of the parameters in a PreparedStatement object.
Example:

```
// ask the JDBC driver which types the parameters of a prepared statement have
// conn is a JavaConnectionMBS from JavaDatabaseMBS.getConnection, see there
Var conn As JavaConnectionMBS // your connection
If conn = Nil Then Return

Var statement As JavaPreparedStatementMBS = conn.prepareStatement("UPDATE customers SET city = ? WHERE id = ?")
Var meta As JavaParameterMetaDataMBS = statement.getParameterMetaData
For i As Integer = 1 To meta.getParameterCount // parameters start at 1
System.DebugLog "Parameter " + i.ToString + ": " + meta.getParameterTypeName(i) + If(meta.isNullable(i) = meta.parameterNullable, ", nullable", "")
Next
```

Notes: Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

109.9.2 Methods

109.9.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

109.9.4 getParameterClassName(param as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the fully-qualified name of the Java class whose instances should be passed to the method PreparedStatement.setObject.
Notes: Parameters:

param - the first parameter is 1, the second is 2, ...
Returns:
the fully-qualified name of the class in the Java programming language that would be used by the method PreparedStatement.setObject to set the value in the specified parameter. This is the class name used for custom mapping.

109.9.5 getParameterCount as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the number of parameters in the PreparedStatement object for which this ParameterMetaData object contains information.
Notes: Returns:
the number of parameters

109.9.6 getParameterMode(param as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the designated parameter's mode.
Notes: Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
mode of the parameter; one of ParameterMetaData.parameterModeIn, ParameterMetaData.parameterModeOut, or ParameterMetaData.parameterModeInOut ParameterMetaData.parameterModeUnknown.

109.9.7 getParameterType(param as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the designated parameter's SQL type.
Notes: Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
SQL type from java.sql.Types

109.9.8 getParameterTypeName(param as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the designated parameter's database-specific type name.
Notes: Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
type the name used by the database. If the parameter type is a user-defined type, then a fully-qualified type name is returned.

109.9.9 getPrecision(param as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the designated parameter's number of decimal digits.
Notes: Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
precision

109.9.10 getScale(param as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the designated parameter's number of digits to right of the decimal point.
Notes: Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
scale

109.9.11 isNullable(param as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether null values are allowed in the designated parameter.
Notes: Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:

the nullability status of the given parameter; one of ParameterMetaData.parameterNoNulls, ParameterMetaData.parameterNullable, or ParameterMetaData.parameterNullableUnknown

109.9.12 isSigned(param as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether values for the designated parameter can be signed numbers.
Notes: Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
true if so; false otherwise

109.9.13 parameterModeIn as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the parameter's mode is IN.

109.9.14 parameterModeInOut as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the parameter's mode is INOUT.

109.9.15 parameterModeOut as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the parameter's mode is OUT.

109.9.16 parameterModeUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the mode of the parameter is unknown.

109.9.17 parameterNoNulls as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that a parameter will not allow NULL values.

109.9.18 parameterNullable as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that a parameter will allow NULL values.

109.9.19 parameterNullableUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the nullability of a parameter is unknown.

109.10 class JavaPreparedStatementMBS

109.10.1 class JavaPreparedStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An object that represents a precompiled SQL statement.
Example:

```
// query with parameters over JDBC, safe against SQL injection
// conn is a JavaConnectionMBS from JavaDatabaseMBS.getConnection, see there
Var conn As JavaConnectionMBS // your connection
If conn = Nil Then Return

Var statement As JavaPreparedStatementMBS = conn.prepareStatement("SELECT name FROM customers
WHERE city = ? AND orders >?")
statement.setString(1, "Berlin")
statement.setInt(2, 5)

Var rs As JavaResultSetMBS = statement.executeQuery
While rs.NextRecord
System.DebugLog rs.getString(1)
Wend
```

Notes: A SQL statement is precompiled and stored in a PreparedStatement object. This object can then be used to efficiently execute this statement multiple times.

Note: The setter methods (setShort, setString, and so on) for setting IN parameter values must specify types that are compatible with the defined SQL type of the input parameter. For instance, if the IN parameter has SQL type INTEGER, then the method setInt should be used.

If arbitrary parameter type conversions are required, the method setObject should be used with a target SQL type.

In the following example of setting a parameter, con represents an active connection:

```
PreparedStatement pstmt = con.prepareStatement("UPDATE EMPLOYEES SET SALARY = ? WHERE
ID = ?");
pstmt.setBigDecimal(1, 153833.00)
pstmt.setInt(2, 110592)
```

Subclass of the JavaStatementMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 24.4pr3
- MBS Real Studio Plugins, version 11.3pr1

109.10.2 Methods

109.10.3 addBatch

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds a set of parameters to this PreparedStatement object's batch of commands.

109.10.4 clearParameters

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clears the current parameter values immediately.
Notes: In general, parameter values remain in force for repeated use of a statement. Setting a parameter value automatically clears its previous value. However, in some cases it is useful to immediately release the resources used by the current parameter values; this can be done by calling the method clearParameters.

109.10.5 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

109.10.6 execute as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Executes the SQL statement in this PreparedStatement object, which may be any kind of SQL statement.
Notes: Some prepared statements return multiple results; the execute method handles these complex statements as well as the simpler form of statements handled by the methods executeQuery and executeUpdate. The execute method returns a boolean to indicate the form of the first result. You must call either the method getResultSet or getUpdateCount to retrieve the result; you must call getMoreResults to move to any subsequent result(s).

Returns:
true if the first result is a ResultSet object; false if the first result is an update count or there is no result

109.10.7 executeQuery as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Executes the SQL query in this PreparedStatement object and returns the ResultSet object generated by the query.
Notes: Returns:
a ResultSet object that contains the data produced by the query; never null

109.10.8 executeUpdate as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Executes the SQL statement in this PreparedStatement object, which must be an SQL INSERT, UPDATE or DELETE statement; or an SQL statement that returns nothing, such as a DDL statement.
Notes: Returns:
either (1) the row count for INSERT, UPDATE, or DELETE statements or (2) 0 for SQL statements that return nothing.

109.10.9 getMetaData as JavaResultSetMetaDataMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a ResultSetMetaData object that contains information about the columns of the ResultSet object that will be returned when this PreparedStatement object is executed.
Notes: Because a PreparedStatement object is precompiled, it is possible to know about the ResultSet object that it will return without having to execute it. Consequently, it is possible to invoke the method getMetaData on a PreparedStatement object rather than waiting to execute it and then invoking the ResultSet.getMetaData method on the ResultSet object that is returned.

NOTE: Using this method may be expensive for some drivers due to the lack of underlying DBMS support.

Returns:
the description of a ResultSet object's columns or null if the driver cannot return a ResultSetMetaData object

109.10.10 getParameterMetaData as JavaParameterMetaDataMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the number, types and properties of this PreparedStatement object's parameters.
Notes: Returns:
a ParameterMetaData object that contains information about the number, types and properties of this PreparedStatement object's parameters

109.10.11 setBlob(parameterIndex as Integer, value as JavaBlobMBS)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Blob object.
Notes: The driver converts this to an SQL BLOB value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
value - a Blob object that maps an SQL BLOB value

109.10.12 setBoolean(parameterIndex as Integer, value as boolean)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java boolean value.
Notes: The driver converts this to an SQL BIT value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
value - the parameter value

109.10.13 setByte(parameterIndex as Integer, value as Integer)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java byte value.
Notes: The driver converts this to an SQL TINYINT value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
value - the parameter value

109.10.14 setBytes(parameterIndex as Integer, Value as String)

MBS Java Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java array of bytes.
Notes: The driver converts this to an SQL VARBINARY or LONGVARBINARY (depending on the argument's size relative to the driver's limits on VARBINARY values) when it sends it to the database.

parameterIndex: the first parameter is 1, the second is 2, ...
Value: the parameter value as a string.

109.10.15 setClob(parameterIndex as Integer, value as JavaClobMBS)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Clob object.
Notes: The driver converts this to an SQL CLOB value when it sends it to the database.

Parameters:
i - the first parameter is 1, the second is 2, ...
value - a Clob object that maps an SQL CLOB value

109.10.16 setDate(parameterIndex as integer, value as JavaObjectMBS)

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Date object.
Notes: You need to create a java.sql.Date object yourself to use this.

109.10.17 setDouble(parameterIndex as Integer, value as Double)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java double value.
Notes: The driver converts this to an SQL DOUBLE value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
value - the parameter value

109.10.18 setFloat(parameterIndex as Integer, value as single)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java float value.
Notes: The driver converts this to an SQL FLOAT value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
value - the parameter value

109.10.19 setInt(parameterIndex as Integer, value as Integer)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java int value.
Notes: The driver converts this to an SQL INTEGER value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
value - the parameter value

109.10.20 setLong(parameterIndex as Integer, value as Int64)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java long value.
Notes: The driver converts this to an SQL BIGINT value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...

value - the parameter value

109.10.21 setNull(parameterIndex as Integer, sqlType as Integer)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to SQL NULL.
Notes: You must specify the parameter's SQL type.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
sqlType - the SQL type code defined in java.sql.Types

109.10.22 setShort(parameterIndex as Integer, value as Integer)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java short value.
Notes: The driver converts this to an SQL SMALLINT value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
value - the parameter value

109.10.23 setString(parameterIndex as Integer, value as string)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java String value.
Notes: The driver converts this to an SQL VARCHAR or LONGVARCHAR value (depending on the argument's size relative to the driver's limits on VARCHAR values) when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
value - the parameter value

109.10.24 setTime(parameterIndex as integer, value as JavaObjectMBS)

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given time object.
Notes: You need to create a java.sql.Time object yourself to use this.

109.10.25 setTimestamp(parameterIndex as integer, value as JavaObjectMBS)

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Timestamp object.
Notes: You need to create a java.sql.Timestamp object yourself to use this.

109.11 class JavaResultSetMBS

109.11.1 class JavaResultSetMBS

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a recordset in Java.
Example:

```
// read all columns of a query result over JDBC
// conn is a JavaConnectionMBS from JavaDatabaseMBS.getConnection, see there
Var conn As JavaConnectionMBS // your connection
If conn = Nil Then Return

Var rs As JavaResultSetMBS = conn.createStatement.executeQuery("SELECT * FROM customers")
Var meta As JavaResultSetMetaDataMBS = rs.getMetaData
Var columnCount As Integer = meta.getColumnCount

While rs.NextRecord
Var values() As String
For c As Integer = 1 To columnCount // JDBC columns start at 1
values.Add meta.getColumnName(c) + "=" + rs.getString(c)
Next
System.DebugLog String.FromArray(values, ", ")
Wend
```

Notes: Nearly all methods on this class can raise java exceptions which you can get using the error property. (and errorstring and errorcode)
Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

109.11.2 Methods

109.11.3 absolute(row as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves the cursor to the given row number in this ResultSet object.
Example:

```
Var db as JavaConnectionMBS // your database
Var r as JavaResultSetMBS
Var s as JavaStatementMBS

// check second row
s=db.createStatement
r=s.executeQuery("SELECT * from myTable")

if r<>Nil then
if r.absolute(2) then
MessageBox str(R.getInt("test_id"))+" "+r.getString("test_val")
end if
end if
```

Notes: See the java documentation for details on java.sql.ResultSet.absolute.

109.11.4 afterLast

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves the cursor to the end of this ResultSet object, just after the last row.
Notes: See the java documentation for details on java.sql.ResultSet.afterLast.

109.11.5 beforeFirst

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves the cursor to the front of this ResultSet object, just before the first row.
Notes: See the java documentation for details on java.sql.ResultSet.beforeFirst.

109.11.6 cancelRowUpdates

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Cancels the updates made to the current row in this ResultSet object.
Notes: This method may be called after calling an updater method(s) and before calling the method updateRow to roll back the updates made to a row. If no updates have been made or updateRow has already been called, this method has no effect.

See the java documentation for details on java.sql.ResultSet.cancelRowUpdates.

109.11.7 clearWarnings

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clears all warnings reported on this ResultSet object.
Notes: See the java documentation for details on java.sql.ResultSet.clearWarnings.

109.11.8 CLOSE_CURSORS_AT_COMMIT as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that ResultSet objects should be closed when the method Connection.commit is called.

109.11.9 CONCUR_READ_ONLY as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating the concurrency mode for a ResultSet object that may NOT be updated.

109.11.10 CONCUR_UPDATABLE as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating the concurrency mode for a ResultSet object that may be updated.

109.11.11 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

109.11.12 deleteRow

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Deletes the current row from this ResultSet object and from the underlying database.
Notes: See the java documentation for details on java.sql.ResultSet.deleteRow.

109.11.13 FETCH_FORWARD as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the rows in a result set will be processed in a forward direction; first-to-last.
Notes: This constant is used by the method setFetchDirection as a hint to the driver, which the driver may ignore.

109.11.14 FETCH_REVERSE as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the rows in a result set will be processed in a reverse direction; last-to-first.
Notes: This constant is used by the method setFetchDirection as a hint to the driver, which the driver may ignore.

109.11.15 FETCH_UNKNOWN as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the order in which rows in a result set will be processed is unknown.
Notes: This constant is used by the method setFetchDirection as a hint to the driver, which the driver may ignore.

109.11.16 findColumn(column as string) as Integer

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maps the given ResultSet column name to its ResultSet column index.
Example:

```
Var r as JavaResultSetMBS // your result set
MessageBox str(r.findColumn("test_id"))+" "+str(r.findColumn("test_val"))
```

Notes: Returns 0 on any error.
See the java documentation for details on java.sql.ResultSet.findColumn.

109.11.17 first as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves the cursor to the first row in this ResultSet object.
Notes: See the java documentation for details on java.sql.ResultSet.first.

109.11.18 getAsciiStream(column as Integer) as JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a stream of ASCII characters.
Notes: Retrieves the value of the designated column in the current row of this ResultSet object as a stream of ASCII characters. The value can then be read in chunks from the stream. This method is particularly suitable for retrieving large LONGVARCHAR values. The JDBC driver will do any necessary conversion from the database format into ASCII.
Note: All the data in the returned stream must be read prior to getting the value of any other column. The

next call to a getter method implicitly closes the stream. Also, a stream may return 0 when the method InputStream.available is called whether there is data available or not.

Parameters:
column: the first column is 1, the second is 2, ...

Returns a Java input stream that delivers the database column value as a stream of one-byte ASCII characters; if the value is SQL NULL, the value returned is null

Throws:
SQLException - if the columnIndex is not valid; if a database access error occurs or this method is called on a closed result set.
See also:

- 109.11.19 getAsciiStream(column as string) as JavaInputStreamMBS 16742

109.11.19 getAsciiStream(column as string) as JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as an Array object in the Java programming language.
Notes: Retrieves the value of the designated column in the current row of this ResultSet object as a stream of ASCII characters. The value can then be read in chunks from the stream. This method is particularly suitable for retrieving large LONGVARCHAR values. The JDBC driver will do any necessary conversion from the database format into ASCII.
Note: All the data in the returned stream must be read prior to getting the value of any other column. The next call to a getter method implicitly closes the stream. Also, a stream may return 0 when the method available is called whether there is data available or not.

Parameters:
column: the label for the column specified with the SQL AS clause. If the SQL AS clause was not specified, then the label is the name of the column

Returns a Java input stream that delivers the database column value as a stream of one-byte ASCII characters. If the value is SQL NULL, the value returned is null.

Throws:
SQLException - if the columnLabel is not valid; if a database access error occurs or this method is called on a closed result set
See also:

- 109.11.18 getAsciiStream(column as Integer) as JavaInputStreamMBS 16741

109.11.20 getBinaryStream(column as Integer) as JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a stream of uninterpreted bytes.
Notes: Retrieves the value of the designated column in the current row of this ResultSet object as a stream of uninterpreted bytes. The value can then be read in chunks from the stream. This method is particularly suitable for retrieving large LONGVARBINARY values.
Note: All the data in the returned stream must be read prior to getting the value of any other column. The next call to a getter method implicitly closes the stream. Also, a stream may return 0 when the method InputStream.available is called whether there is data available or not.

Parameters:
column: the first column is 1, the second is 2, ...

Returns a Java input stream that delivers the database column value as a stream of uninterpreted bytes; if the value is SQL NULL, the value returned is null

Throws:
SQLException - if the columnIndex is not valid; if a database access error occurs or this method is called on a closed result set
See also:

- 109.11.21 getBinaryStream(column as string) as JavaInputStreamMBS 16743

109.11.21 getBinaryStream(column as string) as JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a stream of uninterpreted bytes.
Notes: Retrieves the value of the designated column in the current row of this ResultSet object as a stream of uninterpreted bytes. The value can then be read in chunks from the stream. This method is particularly suitable for retrieving large LONGVARBINARY values.
Note: All the data in the returned stream must be read prior to getting the value of any other column. The next call to a getter method implicitly closes the stream. Also, a stream may return 0 when the method available is called whether there is data available or not.

Parameters:
column: the label for the column specified with the SQL AS clause. If the SQL AS clause was not specified, then the label is the name of the column

Returns a Java input stream that delivers the database column value as a stream of uninterpreted bytes; if the value is SQL NULL, the result is null.

Throws SQLException - if the columnLabel is not valid; if a database access error occurs or this method is called on a closed result set
See also:

- 109.11.20 getBinaryStream(column as Integer) as JavaInputStreamMBS 16743

109.11.22 getBlob(column as Integer) as JavaBlobMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a Blob object in the Java programming language.
Notes: Column: the first column is 1, the second is 2, ...

Returns a Blob object representing the SQL BLOB value in the specified column
See also:

- 109.11.23 getBlob(column as string) as JavaBlobMBS 16744

109.11.23 getBlob(column as string) as JavaBlobMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a Blob object in the Java programming language.
Notes: column: the name of the column from which to retrieve the value
Returns a Blob object representing the SQL BLOB value in the specified column
See also:

- 109.11.22 getBlob(column as Integer) as JavaBlobMBS 16744

109.11.24 getBoolean(column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the value of the designated column in the current row of this ResultSet object as a boolean.
Notes: See the java documentation for details on java.sql.ResultSet.getBoolean.
See also:

- 109.11.25 getBoolean(column as string) as boolean 16745

109.11.25 getBoolean(column as string) as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the value of the designated column in the current row of this ResultSet object as a boolean.
Notes: See the java documentation for details on java.sql.ResultSet.getBoolean.
See also:

- 109.11.24 getBoolean(column as Integer) as boolean 16744

109.11.26 getByte(column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a byte in the Java programming language.
Notes: Parameters:
columnIndex - the first column is 1, the second is 2, ...
Returns:
the column value; if the value is SQL NULL, the value returned is 0
See also:

- 109.11.27 getByte(column as string) as Integer 16745

109.11.27 getByte(column as string) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a byte in the Java programming language.
Notes: Parameters:
columnName - the SQL name of the column
Returns:
the column value; if the value is SQL NULL, the value returned is 0
See also:

- 109.11.26 getByte(column as Integer) as Integer 16745

109.11.28 getBytes(column as Integer) as string

MBS Java Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a byte array in the Java programming language.
Notes: column: the first column is 1, the second is 2, ...
the plugin gives you the bytes as a string with no encoding.
See also:

- 109.11.29 getBytes(column as string) as string 16746

109.11.29 getBytes(column as string) as string

MBS Java Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a byte array in the Java programming language.
Notes: the plugin gives you the bytes as a string with no encoding.
See also:

- 109.11.28 getBytes(column as Integer) as string 16746

109.11.30 getClob(column as Integer) as JavaClobMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a Clob object in the Java programming language.
Notes: Column: the first column is 1, the second is 2, ...
Returns a Clob object representing the SQL CLOB value in the specified column
See also:

- 109.11.31 getClob(column as string) as JavaClobMBS 16746

109.11.31 getClob(column as string) as JavaClobMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a Clob object in the Java programming language.
Notes: column: the name of the column from which to retrieve the value

Returns a Clob object representing the SQL CLOB value in the specified column
See also:

- 109.11.30 getClob(column as Integer) as JavaClobMBS 16746

109.11.32 getConcurrency as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the concurrency mode of this ResultSet object.
Notes: The concurrency used is determined by the Statement object that created the result set.
Returns:
the concurrency type, either ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE

109.11.33 getCursorName as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the name of the SQL cursor used by this ResultSet object.
Notes: In SQL, a result table is retrieved through a cursor that is named. The current row of a result set can be updated or deleted using a positioned update/delete statement that references the cursor name. To insure that the cursor has the proper isolation level to support update, the cursor's SELECT statement should be of the form SELECT FOR UPDATE. If FOR UPDATE is omitted, the positioned updates may fail.

The JDBC API supports this SQL feature by providing the name of the SQL cursor used by a ResultSet object. The current row of a ResultSet object is also the current row of this SQL cursor.

Note: If positioned update is not supported, a SQLException is thrown.

Returns:
the SQL name for this ResultSet object's cursor

109.11.34 getDate(column as integer) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries date value.
See also:

- 109.11.35 getDate(column as string) as JavaObjectMBS 16748

109.11.35 getDate(column as string) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries date value.
See also:

- 109.11.34 getDate(column as integer) as JavaObjectMBS 16747

109.11.36 getDouble(column as Integer) as Double

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the value of the designated column in the current row of this ResultSet object as a double.
Notes: See the java documentation for details on java.sql.ResultSet.getDouble.
See also:

- 109.11.37 getDouble(column as string) as Double 16748

109.11.37 getDouble(column as string) as Double

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the value of the designated column in the current row of this ResultSet object as a double.
Notes: See the java documentation for details on java.sql.ResultSet.getDouble.
See also:

- 109.11.36 getDouble(column as Integer) as Double 16748

109.11.38 getFloat(column as Integer) as single

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a float in the Java programming language.
Notes: Parameters:
columnIndex - the first column is 1, the second is 2, ...
Returns:

the column value; if the value is SQL NULL, the value returned is 0
See also:

- 109.11.39 getFloat(column as string) as single 16749

109.11.39 getFloat(column as string) as single

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a float in the Java programming language.
Notes: Parameters:
columnName - the SQL name of the column
Returns:
the column value; if the value is SQL NULL, the value returned is 0
See also:

- 109.11.38 getFloat(column as Integer) as single 16748

109.11.40 getInt(column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the value of the designated column in the current row of this ResultSet object as an int.
Notes: Parameters:
columnIndex - the first column is 1, the second is 2, ...
Returns:
the column value; if the value is SQL NULL, the value returned is 0

See the java documentation for details on java.sql.ResultSet.getInt.
See also:

- 109.11.41 getInt(column as string) as Integer 16749

109.11.41 getInt(column as string) as Integer

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the value of the designated column in the current row of this ResultSet object as an int.
Example:

```
Var r as JavaResultSetMBS // your result set
MessageBox str(R.getInt("test_id"))+" "+r.getString("test_val")
```

Notes: See the java documentation for details on java.sql.ResultSet.getInt.
See also:

- 109.11.40 getInt(column as Integer) as Integer 16749

109.11.42 getLong(column as Integer) as int64

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the value of the designated column in the current row of this ResultSet object as an int64.
Notes: See the java documentation for details on java.sql.ResultSet.getLong.
See also:

- 109.11.43 getLong(column as string) as int64 16750

109.11.43 getLong(column as string) as int64

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the value of the designated column in the current row of this ResultSet object as an int64.
Notes: See the java documentation for details on java.sql.ResultSet.getLong.
See also:

- 109.11.42 getLong(column as Integer) as int64 16750

109.11.44 getMetaData as JavaResultSetMetaDataMBS

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the number, types and properties of this ResultSet object's columns.
Notes: Returns:
the description of this ResultSet object's columns

109.11.45 getRow as Integer

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the current row number.
Notes: See the java documentation for details on java.sql.ResultSet.getRow.

109.11.46 getShort(column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a short in the Java programming language.
Notes: Parameters:
columnIndex - the first column is 1, the second is 2, ...
Returns:
the column value; if the value is SQL NULL, the value returned is 0.
See also:

- 109.11.47 getShort(column as string) as Integer 16751

109.11.47 getShort(column as string) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a short in the Java programming language.
Notes: Parameters:
columnName - the SQL name of the column
Returns:
the column value; if the value is SQL NULL, the value returned is 0
See also:

- 109.11.46 getShort(column as Integer) as Integer 16751

109.11.48 getString(column as Integer) as string

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the value of the designated column in the current row of this ResultSet object as a String.
Notes: See the java documentation for details on java.sql.ResultSet.getString.
See also:

- 109.11.49 getString(column as string) as string 16752

109.11.49 getString(column as string) as string

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the value of the designated column in the current row of this ResultSet object as a String.
Example:

```
Var r as JavaResultSetMBS // your result set
MessageBox str(R.getInt("test_id"))+" "+r.getString("test_val")
```

Notes: See the java documentation for details on java.sql.ResultSet.getString.
See also:

- 109.11.48 getString(column as Integer) as string 16751

109.11.50 getTime(column as integer) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries time value.
See also:

- 109.11.51 getTime(column as string) as JavaObjectMBS 16752

109.11.51 getTime(column as string) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries time value.
See also:

- 109.11.50 getTime(column as integer) as JavaObjectMBS 16752

109.11.52 getTimestamp(column as integer) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries timestamp value.
See also:

- 109.11.53 getTimestamp(column as string) as JavaObjectMBS 16753

109.11.53 getTimestamp(column as string) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries timestamp value.
See also:

- 109.11.52 getTimestamp(column as integer) as JavaObjectMBS 16752

109.11.54 getType as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the type of this ResultSet object.
Notes: The type is determined by the Statement object that created the result set.
Returns:
ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

109.11.55 getUnicodeStream(column as Integer) as JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Deprecated. use getCharacterStream in place of getUnicodeStream
Notes: Retrieves the value of the designated column in the current row of this ResultSet object as as a stream of two-byte 3 characters. The first byte is the high byte; the second byte is the low byte. The value can then be read in chunks from the stream. This method is particularly suitable for retrieving large LONGVARCHARvalues. The JDBC driver will do any necessary conversion from the database format into Unicode.
Note: All the data in the returned stream must be read prior to getting the value of any other column. The next call to a getter method implicitly closes the stream. Also, a stream may return 0 when the method InputStream.available is called, whether there is data available or not.

Parameters:
column: the first column is 1, the second is 2, ...

Returns a Java input stream that delivers the database column value as a stream of two-byte Unicode characters; if the value is SQL NULL, the value returned is null

Throws:
SQLException - if the columnIndex is not valid; if a database access error occurs or this method is called on

a closed result set
SQLFeatureNotSupportedException - if the JDBC driver does not support this method
See also:

- 109.11.56 getUnicodeStream(column as string) as JavaInputStreamMBS 16754

109.11.56 getUnicodeStream(column as string) as JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Deprecated. use getCharacterStream instead
Notes: Retrieves the value of the designated column in the current row of this ResultSet object as a stream of two-byte Unicode characters. The first byte is the high byte; the second byte is the low byte. The value can then be read in chunks from the stream. This method is particularly suitable for retrieving large LONGVARCHAR values. The JDBC technology-enabled driver will do any necessary conversion from the database format into Unicode.
Note: All the data in the returned stream must be read prior to getting the value of any other column. The next call to a getter method implicitly closes the stream. Also, a stream may return 0 when the method InputStream.available is called, whether there is data available or not.

Parameters:
column: the label for the column specified with the SQL AS clause. If the SQL AS clause was not specified, then the label is the name of the column

Returns a Java input stream that delivers the database column value as a stream of two-byte Unicode characters. If the value is SQL NULL, the value returned is null.

Throws:
SQLException - if the columnLabel is not valid; if a database access error occurs or this method is called on a closed result set
SQLFeatureNotSupportedException - if the JDBC driver does not support this method
See also:

- 109.11.55 getUnicodeStream(column as Integer) as JavaInputStreamMBS 16753

109.11.57 HOLD_CURSORS_OVER_COMMIT as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that ResultSet objects should not be closed when the method Connection.commit is called.

109.11.58 insertRow

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Inserts the contents of the insert row into this ResultSet objaect and into the database.
Notes: See the java documentation for details on java.sql.ResultSet.insertRow.

109.11.59 isAfterLast as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates whether the cursor is after the last row in this ResultSet object.
Notes: See the java documentation for details on java.sql.ResultSet.isAfterLast.

109.11.60 isBeforeFirst as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether the cursor is before the first row in this ResultSet object.
Notes: Returns:
true if the cursor is before the first row; false if the cursor is at any other position or the result set contains no rows

See the java documentation for details on java.sql.ResultSet.isBeforeFirst.

109.11.61 isFirst as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates whether the cursor is on the first row of this ResultSet object.
Notes: See the java documentation for details on java.sql.ResultSet.isFirst.

109.11.62 isLast as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates whether the cursor is on the last row of this ResultSet object.
Notes: See the java documentation for details on java.sql.ResultSet.isLast.

109.11.63 last as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves the cursor to the last row in this ResultSet object.
Notes: See the java documentation for details on java.sql.ResultSet.last.

109.11.64 moveToCurrentRow

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves the cursor to the remembered cursor position, usually the current row.
Notes: This method has no effect if the cursor is not on the insert row.

See the java documentation for details on java.sql.ResultSet.moveToCurrentRow.

109.11.65 moveToInsertRow

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves the cursor to the insert row.
Notes: The current cursor position is remembered while the cursor is positioned on the insert row. The insert row is a special row associated with an updatable result set. It is essentially a buffer where a new row may be constructed by calling the updater methods prior to inserting the row into the result set. Only the updater, getter, and insertRow methods may be called when the cursor is on the insert row. All of the columns in a result set must be given a value each time this method is called before calling insertRow. An updater method must be called before a getter method can be called on a column value.

See the java documentation for details on java.sql.ResultSet.moveToInsertRow.

109.11.66 NextRecord as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves the cursor down one row from its current position.
Notes: See the java documentation for details on java.sql.ResultSet.next.

109.11.67 previousRecord as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves the cursor to the previous row in this ResultSet object.
Notes: See the java documentation for details on java.sql.ResultSet.previous.

109.11.68 refreshRow

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Refreshes the current row with its most recent value in the database.
Notes: This method cannot be called when the cursor is on the insert row.
The refreshRow method provides a way for an application to explicitly tell the JDBC driver to refetch a row(s) from the database. An application may want to call refreshRow when caching or prefetching is being done by the JDBC driver to fetch the latest value of a row from the database. The JDBC driver may actually refresh multiple rows at once if the fetch size is greater than one.

All values are refetched subject to the transaction isolation level and cursor sensitivity. If refreshRow is called after calling an updater method, but before calling the method updateRow, then the updates made to the row are lost. Calling the method refreshRow frequently will likely slow performance.

109.11.69 relative(row as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves the cursor a relative number of rows, either positive or negative.
Notes: See the java documentation for details on java.sql.ResultSet.relative.

109.11.70 rowDeleted as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a row has been deleted.
Notes: A deleted row may leave a visible "hole" in a result set. This method can be used to detect holes in a result set. The value returned depends on whether or not this ResultSet object can detect deletions.
Returns:
true if a row was deleted and deletions are detected; false otherwise

109.11.71 rowInserted as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether the current row has had an insertion.
Notes: The value returned depends on whether or not this ResultSet object can detect visible inserts.
Returns:
true if a row has had an insertion and insertions are detected; false otherwise

109.11.72 rowUpdated as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether the current row has been updated.
Notes: The value returned depends on whether or not the result set can detect updates.
Returns:
true if both (1) the row has been visibly updated by the owner or another and (2) updates are detected

109.11.73 TYPE_FORWARD_ONLY as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating the type for a ResultSet object whose cursor may move only forward.

109.11.74 TYPE_SCROLL_INSENSITIVE as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating the type for a ResultSet object that is scrollable but generally not sensitive to changes made by others.

109.11.75 TYPE_SCROLL_SENSITIVE as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating the type for a ResultSet object that is scrollable and generally sensitive to changes made by others.

109.11.76 updateBlob(column as Integer, value as JavaBlobMBS)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a java.sql.Blob value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

column: the first column is 1, the second is 2, ...
value: the new column value
See also:

- 109.11.77 updateBlob(column as string, value as JavaBlobMBS) 16759

109.11.77 updateBlob(column as string, value as JavaBlobMBS)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a java.sql.Blob value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

column: the name of the column
value: the new column value
See also:

- 109.11.76 updateBlob(column as Integer, value as JavaBlobMBS) 16759

109.11.78 updateBoolean(column as Integer, value as boolean)

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a boolean value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:

- 109.11.79 updateBoolean(column as string, value as boolean) 16760

109.11.79 updateBoolean(column as string, value as boolean)

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a boolean value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnName - the name of the column
x - the new column value
See also:

- 109.11.78 updateBoolean(column as Integer, value as boolean) 16759

109.11.80 updateByte(column as Integer, value as Integer)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a byte value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:

- 109.11.81 updateByte(column as string, value as Integer) 16761

109.11.81 updateByte(column as string, value as Integer)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a byte value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnName - the name of the column
x - the new column value
See also:

- 109.11.80 updateByte(column as Integer, value as Integer) 16760

109.11.82 updateBytes(column as Integer, Value as String)

MBS Java Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a byte array value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
column: column index starting at 1.
Value: The new byte array as a string.
See also:

- 109.11.83 updateBytes(column as string, Value as String) 16761

109.11.83 updateBytes(column as string, Value as String)

MBS Java Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a byte array value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
column: The column name.
Value: The new byte array as a string.
See also:

- 109.11.82 updateBytes(column as Integer, Value as String) 16761

109.11.84 updateClob(column as Integer, value as JavaClobMBS)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a java.sql.Clob value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

column: the first column is 1, the second is 2, ...
value: the new column value
See also:

- 109.11.85 updateClob(column as string, value as JavaClobMBS) 16762

109.11.85 updateClob(column as string, value as JavaClobMBS)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a java.sql.Clob value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

column: the name of the column
value: the new column value
See also:

- 109.11.84 updateClob(column as Integer, value as JavaClobMBS) 16762

109.11.86 updateDate(column as integer, value as JavaObjectMBS)

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates date value.
Notes: You need to create a java.sql.Date object yourself to use this.
See also:

- 109.11.87 updateDate(column as string, value as JavaObjectMBS) 16763

109.11.87 updateDate(column as string, value as JavaObjectMBS)

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates date value.
Notes: You need to create a java.sql.Date object yourself to use this.
See also:

- 109.11.86 updateDate(column as integer, value as JavaObjectMBS) 16762

109.11.88 updateDouble(column as Integer, value as Double)

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a double value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:

- 109.11.89 updateDouble(column as string, value as Double) 16763

109.11.89 updateDouble(column as string, value as Double)

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a double value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnName - the name of the column
x - the new column value
See also:

- 109.11.88 updateDouble(column as Integer, value as Double) 16763

109.11.90 updateFloat(column as Integer, value as single)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a float value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:

- 109.11.91 updateFloat(column as string, value as single) 16764

109.11.91 updateFloat(column as string, value as single)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a float value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnName - the name of the column
x - the new column value
See also:

- 109.11.90 updateFloat(column as Integer, value as single) 16764

109.11.92 updateInt(column as Integer, value as Integer)

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with an int value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnIndex - the first column is 1, the second is 2, ...

x - the new column value
See also:

- 109.11.93 updateInt(column as string, value as Integer) 16765

109.11.93 updateInt(column as string, value as Integer)

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with an int value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnName - the name of the column
x - the new column value
See also:

- 109.11.92 updateInt(column as Integer, value as Integer) 16764

109.11.94 updateLong(column as Integer, value as int64)

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a long value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:

- 109.11.95 updateLong(column as string, value as int64) 16765

109.11.95 updateLong(column as string, value as int64)

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a long value.
Notes: The updater methods are used to update column values in the current row or the insert row. The

updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnName - the name of the column
x - the new column value
See also:

- 109.11.94 updateLong(column as Integer, value as int64) 16765

109.11.96 updateNull(column as Integer)

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gives a nullable column a null value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnIndex - the first column is 1, the second is 2, ...
See also:

- 109.11.97 updateNull(column as string) 16766

109.11.97 updateNull(column as string)

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a null value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnName - the name of the column
See also:

- 109.11.96 updateNull(column as Integer) 16766

109.11.98 updateRow

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the underlying database with the new contents of the current row of this ResultSet object.
Example:

```
Var r as JavaResultSetMBS
Var db as JavaConnectionMBS // your database
Var s as JavaStatementMBS

s=db.createStatement
r=s.executeQuery("SELECT test_id from myTable")

if r<>Nil then
while r.NextRecord
r.updateInt("test_id",10+r.getInt("test_id"))
r.updateRow
wend
end if
```

Notes: This method cannot be called when the cursor is on the insert row.

See the java documentation for details on java.sql.ResultSet.updateRow.

109.11.99 updateShort(column as Integer, value as Integer)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a short value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:

- 109.11.100 updateShort(column as string, value as Integer) 16767

109.11.100 updateShort(column as string, value as Integer)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a short value.
Notes: The updater methods are used to update column values in the current row or the insert row. The

updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnName - the name of the column
x - the new column value
See also:

- 109.11.99 updateShort(column as Integer, value as Integer) 16767

109.11.101 updateString(column as Integer, value as string)

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a String value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:

- 109.11.102 updateString(column as string, value as string) 16768

109.11.102 updateString(column as string, value as string)

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a String value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnName - the name of the column
x - the new column value
See also:

- 109.11.101 updateString(column as Integer, value as string) 16768

109.11.103 updateTime(column as integer, value as JavaObjectMBS)

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates time value.
Notes: You need to create a java.sql.Time object yourself to use this.
See also:

- 109.11.104 updateTime(column as string, value as JavaObjectMBS) 16769

109.11.104 updateTime(column as string, value as JavaObjectMBS)

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates time value.
Notes: You need to create a java.sql.Time object yourself to use this.
See also:

- 109.11.103 updateTime(column as integer, value as JavaObjectMBS) 16769

109.11.105 updateTimestamp(column as integer, value as JavaObjectMBS)

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates timestamp value.
Notes: You need to create a java.sql.Timestamp object yourself to use this.
See also:

- 109.11.106 updateTimestamp(column as string, value as JavaObjectMBS) 16769

109.11.106 updateTimestamp(column as string, value as JavaObjectMBS)

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates timestamp value.
Notes: You need to create a java.sql.Timestamp object yourself to use this.
See also:

- 109.11.105 updateTimestamp(column as integer, value as JavaObjectMBS) 16769

109.11.107 wasNull as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reports whether the last column read had a value of SQL NULL.
Notes: See the java documentation for details on java.sql.ResultSet.wasNull.

109.11.108 Properties

109.11.109 FetchDirection as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gives a hint as to the direction in which the rows in this ResultSet object will be processed.
Notes: The initial value is determined by the Statement object that produced this ResultSet object. The fetch direction may be changed at any time.

Parameters:
direction - an int specifying the suggested fetch direction; one of ResultSet.FETCH_FORWARD, ResultSet.FETCH_REVERSE, or ResultSet.FETCH_UNKNOWN
(Read and Write computed property)

109.11.110 FetchSize as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gives the JDBC driver a hint as to the number of rows that should be fetched from the database when more rows are needed for this ResultSet object.
Notes: If the fetch size specified is zero, the JDBC driver ignores the value and is free to make its own best guess as to what the fetch size should be. The default value is set by the Statement object that created the result set. The fetch size may be changed at any time.

Parameters:
rows - the number of rows to fetch
(Read and Write computed property)

109.12 class JavaResultSetMetaDataMBS

109.12.1 class JavaResultSetMetaDataMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An object that can be used to get information about the types and properties of the columns in a ResultSet object.
Example:

```
// show name, type and size of all columns of a table over JDBC
// conn is a JavaConnectionMBS from JavaDatabaseMBS.getConnection, see there
Var conn As JavaConnectionMBS // your connection
If conn = Nil Then Return

Var rs As JavaResultSetMBS = conn.createStatement.executeQuery("SELECT * FROM customers WHERE
1 = 0") // no rows needed
Var meta As JavaResultSetMetaDataMBS = rs.getMetaData
Var lines() As String
For c As Integer = 1 To meta.getColumnCount // JDBC columns start at 1
lines.Add meta.getColumnName(c) + ": " + meta.getColumnTypeName(c) + "(" + meta.getColumnDis-
playSize(c).ToString + ")" + _
If(meta.isNullable(c) = meta.columnNoNulls, " NOT NULL", "")
Next
MessageBox String.FromArray(lines, EndOfLine)
```

Notes: Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

109.12.2 Methods

109.12.3 columnNoNulls as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that a column does not allow NULL values.

109.12.4 columnNullable as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that a column allows NULL values.

109.12.5 columnNullableUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the nullability of a column's values is unknown.

109.12.6 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

109.12.7 getCatalogName(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the designated column's table's catalog name.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
the name of the catalog for the table in which the given column appears or "" if not applicable

109.12.8 getColumnClassName(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the fully-qualified name of the Java class whose instances are manufactured if the method ResultSet.getObject is called to retrieve a value from the column.
Notes: ResultSet.getObject may return a subclass of the class returned by this method.

Parameters:
column - the first column is 1, the second is 2, ...
Returns:
the fully-qualified name of the class in the Java programming language that would be used by the method ResultSet.getObject to retrieve the value in the specified column. This is the class name used for custom

mapping.

109.12.9 getColumnCount as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the number of columns in this ResultSet object.

109.12.10 getColumnDisplaySize(Column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates the designated column's normal maximum width in characters.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
the normal maximum number of characters allowed as the width of the designated column

109.12.11 getColumnLabel(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the designated column's suggested title for use in printouts and displays.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
the suggested column title

109.12.12 getColumnName(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the designated column's name.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:

column name

109.12.13 getColumnType(Column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the designated column's SQL type.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
SQL type from java.sql.Types

109.12.14 getColumnTypeName(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the designated column's database-specific type name.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
type name used by the database. If the column type is a user-defined type, then a fully-qualified type name is returned.

109.12.15 getPrecision(Column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the designated column's number of decimal digits.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
precision

109.12.16 getScale(Column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the designated column's number of digits to right of the decimal point.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
scale

109.12.17 getSchemaName(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the designated column's table's schema.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
schema name or "" if not applicable

109.12.18 getTableName(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the designated column's table name.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
table name or "" if not applicable

109.12.19 isAutoIncrement(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates whether the designated column is automatically numbered, thus read-only.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise

109.12.20 isCaseSensitive(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates whether a column's case matters.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise

109.12.21 isCurrency(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates whether the designated column is a cash value
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise

109.12.22 isDefinitelyWritable(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates whether a write on the designated column will definitely succeed.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise

109.12.23 isNullable(Column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates the nullability of values in the designated column.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:

the nullability status of the given column; one of columnNoNulls, columnNullable or columnNullableUnknown

109.12.24 isReadOnly(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates whether the designated column is definitely not writable.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise

109.12.25 isSearchable(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates whether the designated column can be used in a where clause.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise

109.12.26 isSigned(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates whether values in the designated column are signed numbers.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise

109.12.27 isWritable(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates whether it is possible for a write on the designated column to succeed.

Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise

109.13 class JavaRuntimeMBS

109.13.1 class JavaRuntimeMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The java class for runtime information.
Notes: Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

109.13.2 Methods

109.13.3 availableProcessors as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the number of processors available to the Java virtual machine.
Notes: This value may change during a particular invocation of the virtual machine. Applications that are sensitive to the number of available processors should therefore occasionally poll this property and adjust their resource usage appropriately.

109.13.4 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

109.13.5 freeMemory as Int64

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the amount of free memory in the Java Virtual Machine.
Notes: Calling the gc method may result in increasing the value returned by freeMemory.

109.13.6 gc

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Invokes the garbage collection.
Notes: Calls "System.gc" in Java.

109.13.7 maxMemory as Int64

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the maximum amount of memory that the Java virtual machine will attempt to use.
Notes: If there is no inherent limit then the value Long.MAX_VALUE will be returned.

109.13.8 totalMemory as Int64

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the total amount of memory in the Java virtual machine.
Notes: The value returned by this method may vary over time, depending on the host environment.
Note that the amount of memory required to hold an object of any given type may be implementation-dependent.

109.14 class JavaSavepointMBS

109.14.1 class JavaSavepointMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The representation of a savepoint, which is a point within the current transaction that can be referenced from the Connection.rollback method. When a transaction is rolled back to a savepoint all changes made after that savepoint are undone.
Notes: Savepoints can be either named or unnamed. Unnamed savepoints are identified by an ID generated by the underlying data source.
Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

109.14.2 Methods

109.14.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

109.14.4 getSavepointId as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the generated ID for the savepoint that this Savepoint object represents.

109.14.5 getSavepointName as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the name of the savepoint that this Savepoint object represents.

109.15 class JavaStatementMBS

109.15.1 class JavaStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The object used for executing a static SQL statement and returning the results it produces.
Example:

```
// run several SQL commands at once as a batch over JDBC
// conn is a JavaConnectionMBS from JavaDatabaseMBS.getConnection, see there
Var conn As JavaConnectionMBS // your connection
If conn = Nil Then Return

Var statement As JavaStatementMBS = conn.createStatement
Call statement.executeUpdate("CREATE TABLE IF NOT EXISTS log (id INTEGER, message VARCHAR(100))")
statement.addBatch "INSERT INTO log VALUES (1, 'start')"
statement.addBatch "INSERT INTO log VALUES (2, 'done')"
Var counts() As Integer = statement.executeBatch
MessageBox counts.Count.ToString + " commands executed."
```

Notes: By default, only one ResultSet object per Statement object can be open at the same time. Therefore, if the reading of one ResultSet object is interleaved with the reading of another, each must have been generated by different Statement objects. All execution methods in the Statement interface implicitly close a statment's current ResultSet object if an open one exists.
Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- Prefetching records from databases
- MBS Xojo / Real Studio Plugins, version 15.1pr1

109.15.2 Methods

109.15.3 addBatch(sql as string)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds the given SQL command to the current list of commmands for this Statement object.
Notes: The commands in this list can be executed as a batch by calling the method executeBatch.

NOTE: This method is optional.

Parameters:
sql - typically this is a static SQL INSERT or UPDATE statement

109.15.4 cancel

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Cancels this Statement object if both the DBMS and driver support aborting an SQL statement.
Notes: This method can be used by one thread to cancel a statement that is being executed by another thread.

109.15.5 clearBatch

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Empties this Statement object's current list of SQL commands.
Notes: NOTE: This method is optional.

109.15.6 clearWarnings

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clears all the warnings reported on this Statement object.
Notes: After a call to this method, the method getWarnings will return null until a new warning is reported for this Statement object.

109.15.7 close

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Releases this Statement object's database and JDBC resources immediately instead of waiting for this to happen when it is automatically closed.
Notes: It is generally good practice to release resources as soon as you are finished with them to avoid tying up database resources.
Calling the method close on a Statement object that is already closed has no effect.

Note: A Statement object is automatically closed when it is garbage collected. When a Statement object is closed, its current ResultSet object, if one exists, is also closed.

109.15.8 CLOSE_ALL_RESULTS as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that all ResultSet objects that have previously been kept open should be closed when calling getMoreResults.

109.15.9 CLOSE_CURRENT_RESULT as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the current ResultSet object should be closed when calling getMoreResults.

109.15.10 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

109.15.11 execute(sql as string) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Executes the given SQL statement, which may return multiple results.
Notes: In some (uncommon) situations, a single SQL statement may return multiple result sets and/or update counts. Normally you can ignore this unless you are (1) executing a stored procedure that you know may return multiple results or (2) you are dynamically executing an unknown SQL string.
The execute method executes an SQL statement and indicates the form of the first result. You must then use the methods getResultSet or getUpdateCount to retrieve the result, and getMoreResults to move to any subsequent result(s).

Parameters:
sql - any SQL statement

Returns:
true if the first result is a ResultSet object; false if it is an update count or there are no results
See also:

- 109.15.12 execute(sql as string, autoGeneratedKeys as Integer) as boolean 16785

109.15.12 execute(sql as string, autoGeneratedKeys as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Executes the given SQL statement, which may return multiple results, and signals the driver that any auto-generated keys should be made available for retrieval.
Notes: The driver will ignore this signal if the SQL statement is not an INSERT statement.
In some (uncommon) situations, a single SQL statement may return multiple result sets and/or update counts. Normally you can ignore this unless you are (1) executing a stored procedure that you know may return multiple results or (2) you are dynamically executing an unknown SQL string.

The execute method executes an SQL statement and indicates the form of the first result. You must then use the methods getResultSet or getUpdateCount to retrieve the result, and getMoreResults to move to any subsequent result(s).

Parameters:
sql - any SQL statement
autoGeneratedKeys - a constant indicating whether auto-generated keys should be made available for retrieval using the method getGeneratedKeys; one of the following constants: Statement.RETURN_GENERATED_KEYS or Statement.NO_GENERATED_KEYS
Returns:
true if the first result is a ResultSet object; false if it is an update count or there are no results
See also:

- 109.15.11 execute(sql as string) as boolean 16784

109.15.13 executeBatch as Integer()

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Submits a batch of commands to the database for execution and if all commands execute successfully, returns an array of update counts.

109.15.14 executeQuery(sql as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Executes the given SQL statement, which returns a single ResultSet object.
Notes: Parameters:
sql - an SQL statement to be sent to the database, typically a static SQL SELECT statement
Returns:
a ResultSet object that contains the data produced by the given query; never null

109.15.15 executeUpdate(Sql as string) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Executes the given SQL statement, which may be an INSERT, UPDATE, or DELETE statement or an SQL statement that returns nothing, such as an SQL DDL statement.
Notes: Parameters:
sql - an SQL INSERT, UPDATE or DELETE statement or an SQL statement that returns nothing
Returns:
either the row count for INSERT, UPDATE or DELETE statements, or 0 for SQL statements that return nothing
See also:

- 109.15.16 executeUpdate(Sql as string, autoGeneratedKeys as Integer) as Integer 16786

109.15.16 executeUpdate(Sql as string, autoGeneratedKeys as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Executes the given SQL statement and signals the driver with the given flag about whether the auto-generated keys produced by this Statement object should be made available for retrieval.
Notes: Parameters:
sql - must be an SQL INSERT, UPDATE or DELETE statement or an SQL statement that returns nothing
autoGeneratedKeys - a flag indicating whether auto-generated keys should be made available for retrieval; one of the following constants: Statement.RETURN_GENERATED_KEYS Statement.NO_GENERATED_KEYS
Returns:
either the row count for INSERT, UPDATE or DELETE statements, or 0 for SQL statements that return nothing
See also:

- 109.15.15 executeUpdate(Sql as string) as Integer 16786

109.15.17 EXECUTE_FAILED as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that an error occurred while executing a batch statement.

109.15.18 getGeneratedKeys as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves any auto-generated keys created as a result of executing this Statement object.
Notes: If this Statement object did not generate any keys, an empty ResultSet object is returned.

Returns:
a ResultSet object containing the auto-generated key(s) generated by the execution of this Statement object

109.15.19 getMoreResults as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves to this Statement object's next result, returns true if it is a ResultSet object, and implicitly closes any current ResultSet object(s) obtained with the method getResultSet.
Notes: There are no more results when the following is true:

```
// stmt is a Statement object
((stmt.getMoreResults() == false) && (stmt.getUpdateCount() == -1))
```

Returns:
true if the next result is a ResultSet object; false if it is an update count or there are no more results
See also:

- 109.15.20 getMoreResults(current as Integer) as boolean 16787

109.15.20 getMoreResults(current as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves to this Statement object's next result, deals with any current ResultSet object(s) according to the instructions specified by the given flag, and returns true if the next result is a ResultSet object.

Notes: There are no more results when the following is true:

```
// stmt is a Statement object
((stmt.getMoreResults() == false) && (stmt.getUpdateCount() == -1))
```

Parameters:
current - one of the following Statement constants indicating what should happen to current ResultSet objects obtained using the method getResultSet: Statement.CLOSE_CURRENT_RESULT, Statement.KEEP_CURRENT_RESULT, or Statement.CLOSE_ALL_RESULTS
Returns:
true if the next result is a ResultSet object; false if it is an update count or there are no more results
See also:

- 109.15.19 getMoreResults as boolean 16787

109.15.21 getResultSet as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the current result as a ResultSet object.
Notes: This method should be called only once per result.

Returns:
the current result as a ResultSet object or null if the result is an update count or there are no more results

109.15.22 getResultSetConcurrency as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the result set concurrency for ResultSet objects generated by this Statement object.
Notes: Returns:
either ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE

109.15.23 getResultSetHoldability as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the result set holdability for ResultSet objects generated by this Statement object.
Notes: Returns:

either ResultSet.HOLD_CURSORS_OVER_COMMIT or ResultSet.CLOSE_CURSORS_AT_COMMIT

109.15.24 getResultSetType as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the result set type for ResultSet objects generated by this Statement object.
Notes: Returns:
one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_S
SITIVE

109.15.25 getUpdateCount as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the current result as an update count; if the result is a ResultSet object or there are no more results, -1 is returned.
Notes: This method should be called only once per result.

Returns:
the current result as an update count; -1 if the current result is a ResultSet object or there are no more results

109.15.26 KEEP_CURRENT_RESULT as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the current ResultSet object should not be closed when calling getMoreResults.

109.15.27 NO_GENERATED_KEYS as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that generated keys should not be made available for retrieval.

109.15.28 RETURN_GENERATED_KEYS as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that generated keys should be made available for retrieval.

109.15.29 setCursorName(name as string)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the SQL cursor name to the given String, which will be used by subsequent Statement object execute methods.
Notes: This name can then be used in SQL positioned update or delete statements to identify the current row in the ResultSet object generated by this statement. If the database does not support positioned update/delete, this method is a noop. To insure that a cursor has the proper isolation level to support updates, the cursor's SELECT statement should have the form SELECT FOR UPDATE. If FOR UPDATE is not present, positioned updates may fail.
Note: By definition, the execution of positioned updates and deletes must be done by a different Statement object than the one that generated the ResultSet object being used for positioning. Also, cursor names must be unique within a connection.

Parameters:
name - the new cursor name, which must be unique within a connection

109.15.30 SUCCESS_NO_INFO as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that a batch statement executed successfully but that no count of the number of rows it affected is available.

109.15.31 Properties

109.15.32 EscapeProcessing as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether escape processing is on or off.

Notes: If escape scanning is on (the default), the driver will do escape substitution before sending the SQL statement to the database. Note: Since prepared statements have usually been parsed prior to making this call, disabling escape processing for PreparedStatements objects will have no effect.
Parameters:
enable - true to enable escape processing; false to disable it
(Read and Write computed property)

109.15.33 FetchDirection as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The fetch direction.
Notes: Gives the driver a hint as to the direction in which rows will be processed in ResultSet objects created using this Statement object. The default value is ResultSet.FETCH_FORWARD.
Note that this method sets the default fetch direction for result sets generated by this Statement object. Each result set has its own methods for getting and setting its own fetch direction.

Parameters:
direction - the initial direction for processing rows
(Read and Write computed property)

109.15.34 FetchSize as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gives the JDBC driver a hint as to the number of rows that should be fetched from the database when more rows are needed.
Notes: The number of rows specified affects only result sets created using this statement. If the value specified is zero, then the hint is ignored. The default value is zero.
Parameters:
rows - the number of rows to fetch
(Read and Write computed property)

109.15.35 MaxFieldSize as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum number of bytes that can be returned for character and binary column values in a ResultSet object produced by this Statement object.

Notes: This limit applies only to BINARY, VARBINARY, LONGVARBINARY, CHAR, VARCHAR, and LONGVARCHAR columns. If the limit is exceeded, the excess data is silently discarded.
(Read and Write computed property)

109.15.36 MaxRows as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum number of rows that a ResultSet object produced by this Statement object can contain.
Notes: If this limit is exceeded, the excess rows are silently dropped.
(Read and Write computed property)

109.15.37 QueryTimeout as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of seconds the driver will wait for a Statement object to execute. If the limit is exceeded, a SQLException is thrown.
Notes: Returns:
the current query timeout limit in seconds; zero means there is no limit
(Read and Write computed property)

Chapter 110

JavaScript

110.1 class JavaScriptDateComponentsMBS

110.1.1 class JavaScriptDateComponentsMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for date components in JavaScript.
Example:

```
Var j As New JavaScriptEngineMBS

// get now
Var t1 As Double = j.Now

// as components
Var d1 As JavaScriptDateComponentsMBS = j.TimeToDateComponents(t1)
Var s1 As String = d1.SQLDateTime
// looks right?

// now convert back
Var t2 As Double = j.DateComponentsToTime(d1)
Var d2 As JavaScriptDateComponentsMBS = j.TimeToDateComponents(t2)
Var s2 As String = d2.SQLDateTime
// still looks right?

Var t3 As Double = j.DateComponentsToTime(d2)
// should be same time as above, but without fractions

Break
```

110.1.2 Properties

110.1.3 DateTimeValue as DateTime

MBS Tools Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The components as Xojo dateTime.
Notes: Convenience function to create date with UTC and values from this object.
(Read only property)

110.1.4 DateValue as Date

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The components as Xojo date.
Notes: Convenience function to create date with UTC and values from this object.
(Read only property)

110.1.5 Day as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The day value.
Notes: Ranges from 1 to 31.
(Read and Write property)

110.1.6 Hour as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The hour.
Notes: (Read and Write property)

110.1.7 Millisecond as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The milliseconds.
Notes: (Read and Write property)

110.1.8 Minute as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minutes.
Notes: (Read and Write property)

110.1.9 Month as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The month value.
Notes: Range is 1 to 12.
(Read and Write property)

110.1.10 Second as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The seconds.
Notes: (Read and Write property)

110.1.11 SQLDateTime as String

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SQL date and time.
Notes: Convenience property to see value in debugger.
(Read only property)

110.1.12 WeekDay as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The week day value.
Notes: Range is 0 to 6. Sunday is 0, Monday is 1, Tuesday is 2, Wednesday is 3, Thursday is 4, Friday is 5 and Saturday is 6.
(Read and Write property)

110.1.13 Year as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The year value.
Notes: (Read and Write property)

110.2 class JavaScriptEngineExceptionMBS

110.2.1 class JavaScriptEngineExceptionMBS

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a fatal exception in our JavaScript engine.
Notes: See message property for reason of the exception.
Subclass of the RuntimeException class.
Blog Entries

- Our JavaScript engine for Xojo

110.3 class JavaScriptEngineMBS

110.3.1 class JavaScriptEngineMBS

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for our embedded JavaScript engine.
Example:

```
// run JavaScript code and call a Xojo method from JavaScript
Var js As New JavaScriptEngineMBS
js.RegisterFunction("greet", AddressOf Greet, 1)

Var sum As Variant = js.Evaluate("var a = [ 3, 4, 5 ] ; a.reduce(function(x, y) { return x + y; } , 0)")
Var text As Variant = js.Evaluate("greet('Bob')")
MessageBox "Sum: " + sum.StringValue + EndOfLine + text.StringValue

// a method in the window:
Function Greet(Name As String, Params() As Variant, tag As Variant) As Variant
Return "Hello " + Params(0).StringValue + " from Xojo"
End Function
```

Notes: We use DukTape, an embeddable Javascript engine, with a focus on portability and compact footprint.
https://duktape.org

Your own JavaScript engine is useful for:

- Running some snippet of JavaScript code without HTMLViewer.
- Using various JavaScript libraries
- Providing a scripting language to your own application.
- An lightweight alternative to XojoScript.
- Working with JSON data
- Enjoy using regular expressions, unicode text functions, number parsing and formatting with no platform dependencies

MBS Plugin added Input(), Yield() and Print() functions for your convenience.
Yield will pass CPU control to other threads, so background tasks continue to run.

MBS Plugin can convert JavaScript values to variant.
Boolean ->Boolean
Number ->Double

String ->String
Buffer ->MemoryBlock
Pointer ->Ptr
Array ->Variant array
Object ->JSON string
null ->nil

We convert variant to JavaScript:
nil ->null
Int32, Int64, Single, Double, Currency ->Number
Boolean ->Boolean
String, Text, Date ->String
Ptr ->Pointer
all other ->undefined

This class is like XojoScript, but using JavaScript as language.

Warning: error handling is broken in version 21.1 of the MBS Plugin. Please update to 22.2 for a fix.

See also JSContextMBS class to use JavaScript with the engine from WebKit in your projects. Since DukTape is only ES6, you may prefer the newer JavaScriptCore library with JSContextMBS class.

110.3.2 Methods

110.3.3 AddFunction(Name as String, JavaScript as String, FileName as String = "")

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a global function defined as a text string.
Example:

```
Var j As New JavaScriptEngineMBS
j.AddFunction "adder", "function (x,y) { return x+y; } "
```

Notes: Optional provide a file name to show in stack traces.
Function source code may contain a function name, but we use only the name parameter to register the function as global one.

110.3.4 CallFunction(Name as String, ParamArray Params as Variant) as Variant

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a global function given the name.
Example:

```
Var j As New JavaScriptEngineMBS

// just add a function
j.AddFunction "adder", "function (x,y) { return x+y; } "

// call it
Var r As Variant = j.CallFunction("adder", 2, 3)
Break // check result in debugger
```

Notes: Parameters are passed to the function.
If the function needs more parameter, undefined values are used to fill up.
If the function needs less parameters, additional ones are dropped.

Returns the result of the function converted to a variant.
See also:

- 110.3.5 CallFunction(Name as String, Params() as Variant) as Variant 16801

110.3.5 CallFunction(Name as String, Params() as Variant) as Variant

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a global function given the name.
Example:

```
Var j As New JavaScriptEngineMBS

// just add a function
j.AddFunction "adder", "function (x,y) { return x+y; } "

// call it
Var Params() As Variant
params.Add 3
params.Add 4
params.Add 5 // one too much ->will be ignored
Var r As Variant = j.CallFunction("adder", params)
Break // check result in debugger
```

Notes: Parameters are passed to the function.
If the function needs more parameter, undefined values are used to fill up.
If the function needs less parameters, additional ones are dropped.

Returns the result of the function converted to a variant.
See also:

- 110.3.4 CallFunction(Name as String, ParamArray Params as Variant) as Variant 16800

110.3.6 CallFunctionMT(Name as String, ParamArray Params as Variant) as Variant

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a global function given the name.
Notes: Threaded version of CallFunction. If events or delegates are called on main thread, the preemptive

thread waits for answer.

Parameters are passed to the function.
If the function needs more parameter, undefined values are used to fill up.
If the function needs less parameters, additional ones are dropped.

Returns the result of the function converted to a variant.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 110.3.7 CallFunctionMT(Name as String, Params() as Variant) as Variant 16802

110.3.7 CallFunctionMT(Name as String, Params() as Variant) as Variant

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a global function given the name.
Notes: Threaded version of CallFunction. If events or delegates are called on main thread, the preemptive thread waits for answer.

Parameters are passed to the function.
If the function needs more parameter, undefined values are used to fill up.
If the function needs less parameters, additional ones are dropped.

Returns the result of the function converted to a variant.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 110.3.6 CallFunctionMT(Name as String, ParamArray Params as Variant) as Variant 16801

110.3.8 DateComponentsToTime(date as JavaScriptDateComponentsMBS) as Double

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts date components to time.
Example:

```
Var j As New JavaScriptEngineMBS

Var d As New JavaScriptDateComponentsMBS
d.Year = 1970
d.Month = 1
d.day = 1

// shows zero as that's the start point in time for unix
MessageBox "Start Time: "+Str(j.DateComponentsToTime(d))
```

Notes: Convert components (year, month, day, etc), interpreted in UTC, into a time value. The weekday argument is ignored in the conversion. If the component values are invalid, an error is thrown.

There are some differences to the ECMAScript Date.UTC() built-in:

- There's no special handling of two-digit years. For example, Date.UTC(99, 0, 1) gets interpreted as 1999-01-01. If time is 99, it's interpreted as the year 99.
- The milliseconds component is allowed fractions (sub-millisecond resolution) so that the resulting time value may have fractions.

Like the ECMAScript primitives, the components can exceed their natural range and are normalized. For example, specifying minute as 120 is interpreted as adding 2 hours to the time value. The components are expressed as Integers to allow large and negative values to be used.

110.3.9 Destructor

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

110.3.10 Evaluate(JavaScript as String) as Variant

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates a JavaScript expression.
Example:

```
Var j As New JavaScriptEngineMBS

Var v As Variant = j.Evaluate("2+3")
MessageBox v.StringValue
```

Notes: This may include definition of functions and objects and using them.
Result is converted to variant and returned.

110.3.11 EvaluateMT(JavaScript as String) as Variant

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates a JavaScript expression.
Notes: Threaded version of Evaluate. If events or delegates are called on main thread, the preemptive thread waits for answer.

This may include definition of functions and objects and using them.
Result is converted to variant and returned.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

110.3.12 EvaluateToString(JavaScript as String) as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates a JavaScript expression.
Example:

```
Var j As New JavaScriptEngineMBS

Var s As String = j.EvaluateToString("2+3")
MessageBox s
```

Notes: This may include definition of functions and objects and using them.
Result is converted to string in JavaScript and returned as Xojo string.

110.3.13 InitModules

MBS Tools Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Installs Duktape module loading.
Notes: Only calls JS.InitModules once on a new instance of the JavaScript engine.
Define your own Duktape.modSearch() to provide environment specific module lookups.
After these steps, require() will be registered to the global object and the module system is ready to use.

110.3.14 LoadFunction(Name as String, Data as Memoryblock) as Boolean

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads a global function from byte code.
Example:

```
Var j As New JavaScriptEngineMBS

// just add a function
j.AddFunction "adder", "function (x,y) { return x+y; } "

// get byte code
Var m As MemoryBlock = j.SaveFunction("adder")

// and load back with new name
Var b as Boolean = j.LoadFunction("adder2", m)

// call it
Var r As Variant = j.CallFunction("adder2", 2, 3)
break // check result in debugger
```

Notes: Load a buffer containing bytecode, recreating the original ECMAScript function (with some limitations). You must ensure that the bytecode has been dumped with a compatible Duktape version and that the bytecode has not been modified since. Loading bytecode from an untrusted source is memory unsafe and may lead to exploitable vulnerabilities.

Returns true in case of success or false on failure.

110.3.15 Now as Double

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries current time as double value.
Notes: This is seconds since 1st January 1970 multiplied by 1000 and may contain fraction with microseconds.

Get current time in POSIX milliseconds, as seen by the ECMAScript environment. The return value matches Date.now() with the reservation that sub-millisecond resolution may be available.

110.3.16 RegisterFunction(Name as String, theDelegate as JavaScriptEngineDelegateMBS, ArgCount as Integer = -1, tag as Variant = nil)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Registers a global function with given name to call delegate.
Example:

```
Var j As New JavaScriptEngineMBS

j.RegisterFunction "MyFunction", AddressOf testFunction, 1, Nil

// call in JavaScript
Var x As Variant = j.Evaluate("MyFunction(123);")

// call via plugin
Var r As Variant = j.CallFunction("MyFunction", "Hello")

Break

'Public Function testFunction(Name as String, Params() as Variant, tag as Variant) as Variant
' MessageBox params(0).StringValue
' Return "ok"
'End Function
```

Notes: ArgCount can be in range from -1 to 15.
If -1 is passed, we allow variable number of arguments.
Tag is passed to delegate and allows you to pass a context object to the delegate.

You can use UnregisterFunction later to unregister.
Raises exception if there is a function already with that name.

110.3.17 SaveFunction(Name as String) as MemoryBlock

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries byte code for global JavaScript function.
Example:

```
Var j As New JavaScriptEngineMBS

// just add a function
j.AddFunction "adder", "function (x,y) { return x+y; } "

// get byte code
Var m As MemoryBlock = j.SaveFunction("adder")
```

```
// and load back with new name
Var b as Boolean = j.LoadFunction("adder2", m)

// call it
Var r As Variant = j.CallFunction("adder2", 2, 3)
break // check result in debugger
```

Notes: Dump an ECMAScript function at stack top into bytecode, replacing the function with a buffer containing the bytecode data. The bytecode can be loaded back using LoadFunction().

110.3.18 TimeToDateComponents(time as Double) as JavaScriptDateComponentsMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts time to date components.
Example:

```
Var j As New JavaScriptEngineMBS

// get now
Var t1 As Double = j.Now

// as components
Var d1 As JavaScriptDateComponentsMBS = j.TimeToDateComponents(t1)
Var s1 As String = d1.SQLDateTime
// looks right?

Break
```

Notes: Convert a time value to components (year, month, day, etc) interpreted in UTC. If the time value is invalid, e.g. beyond the valid ECMAScript time range, an error is thrown.

There are some differences to the ECMAScript Date UTC accessors like Date.prototype.getUTCMinutes():

The time value is allowed to have fractions (sub-millisecond resolution) so that the millisecond component may also have fractions.

110.3.19 UnregisterFunction(Name as String) as Boolean

MBS Tools Plugin, Plugin Version: 26.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unregisters the function.
Notes: Returns true if function was removed.

Raises exception if there is a function with that name and it is running.

110.3.20 Properties

110.3.21 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

110.3.22 MemoryBlocks as Dictionary

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the dictionary with references memoryblocks.
Notes: Just for debugging to inspect.
Memoryblocks need to stay here to avoid them being destructed too early, which can cause crashes.
(Read only property)

110.3.23 ObjectCount as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries global object counter.
Notes: A fresh JavaScript engine already has about 400 objects for the built-in functionality.
(Read only property)

110.3.24 StringCount as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries global string counter.
Notes: A fresh JavaScript engine already has about 1000 strings.
(Read only property)

110.3.25 GlobalMemoryBlock(PropertyName as String) as MemoryBlock

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Query or assign a global property to reference memoryblock.
Notes: A normal memoryblock passed as parameter to a function or property would be copied.
This method allows you to define a buffer in JavaScript to reference the bytes in a memoryblock, so all changes are visible in Xojo directly.

You can assign nil as value to clear a memoryblock.
(Read and Write computed property)

110.3.26 GlobalProperty(PropertyName as String) as Variant

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set a global property.
Example:

```
Var j As New JavaScriptEngineMBS

j.GlobalProperty("Hello") = "World"
MessageBox j.GlobalProperty("Hello")
```

Notes: Values are converted to/from variant.
(Read and Write computed property)

110.3.27 GlobalPropertyJSON(PropertyName as String) as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set a global property as JSON.
Example:

```
Var j As New JavaScriptEngineMBS

j.GlobalProperty("Hello") = "World"
MessageBox j.GlobalPropertyJSON("Hello")

j.GlobalPropertyJSON("test") = " [ 1,2,3 ] "
MessageBox j.GlobalPropertyJSON("test")
```

Notes: Same as GlobalProperty, but needs JSON text.
(Read and Write computed property)

110.3.28 Events

110.3.29 Input(values() as Variant) as Variant

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The input event.
Notes: Called in JavaScript with Input() function call.
Takes variable number of arguments, which are provided as variants here.
Return a value, which we pass through to JavaScript as function result.

110.3.30 Print(values() as Variant)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The print event.
Notes: Called in JavaScript with Print() function call.
Takes variable number of arguments, which are provided as variants here.

110.3.31 Delegates

110.3.32 JavaScriptEngineDelegateMBS(Name as String, Params() as Variant, tag as Variant) as Variant

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The delegate definition for RegisterFunction function.
Example:

```
Public Function testFunction(Name as String, Params() as Variant, tag as Variant) as Variant
MessageBox params(0).StringValue
Return "ok"
End Function
```

Notes: We pass name of function, parameters and tag value.
Result is returned to JavaScript.

110.4 class JSClassMBS

110.4.1 class JSClassMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a class in javascript.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 26.5pr4

110.4.2 Methods

110.4.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

110.4.4 NewObject as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript object for current class.

110.4.5 Properties

110.4.6 context as JSContextMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The context for this class.
Notes: (Read only property)

110.4.7 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The handle for the class object.
Notes: (Read only property)

110.4.8 Tag as Variant

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The tag value.
Notes: You can store anything here and as long as the JSClass object exists, this value is kept referenced. (Read and Write property)

110.5 class JSContextGroupMBS

110.5.1 class JSContextGroupMBS

MBS MacFrameworks Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a JavaScript context group.
Notes: A group that associates JavaScript contexts with one another.
Contexts in the same group may share and exchange JavaScript objects.

Function: The constructor.

110.5.4 Properties

110.5.5 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

110.6 class JSContextMBS

110.6.1 class JSContextMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a javascript execution context.
Example:

```
Var c as new JSContextMBS
Var e as JSValueMBS
Var v as JSValueMBS = c.EvaluateScript("1+2", "", nil, e)

if e <>nil then
// show error
MessageBox e.StringValue
else
// show result
MessageBox str(v.doubleValue)
end if
```

Notes: This is the JavaScript engine used for WebKit, e.g. Safari.
See also JavaScriptEngineMBS class for cross platform projects.

Updated for version 23.1 to work on Windows and Linux if you have a JavaScriptCore library to load.

110.6.2 Methods

110.6.3 CheckScriptSyntax(script as string, sourceURL as String, startingLineNumber as Integer = 1, byref JSException as JSValueMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Checks for syntax errors in a string of JavaScript.
Example:

```
Var c as new JSContextMBS
Var e as JSValueMBS
if c.CheckScriptSyntax("1+", "", e) then
MessageBox "OK"
else
// show error

MessageBox e.StringValue
end if
```

Notes: Script: A string containing the script to check for syntax errors.
sourceURL: A string containing a URL for the script's source file. This is only used when reporting exceptions. Pass "" if you do not care to include source file information in exceptions.
startingLineNumber: An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions. The value is one-based, so the first line is line 1 and invalid values are clamped to 1.
exception: A JSValue in which to store a syntax error exception, if any.

Returns true if the script is syntactically correct, otherwise false.

110.6.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.
Example:

```
// create new context
Var c as new JSContextMBS
```

Notes: Creates a global JavaScript execution context.
See also:

- 110.6.5 Constructor(Group as JSContextGroupMBS) 16816

110.6.5 Constructor(Group as JSContextGroupMBS)

MBS MacFrameworks Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a global JavaScript execution context in the context group provided.
See also:

- 110.6.4 Constructor 16815

110.6.6 EvaluateScript(script as string, sourceURL as String, thisObject as JSObjectMBS, startingLineNumber as Integer = 1, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Evaluates a string of JavaScript.
Example:

```
Var c as new JSContextMBS
Var e as JSValueMBS
Var v as JSValueMBS = c.EvaluateScript("1+", "", nil, e)

if e <>nil then
// show error
MessageBox e.StringValue
else
// show result
MessageBox str(v.doubleValue)
end if
```

Notes: script: A string containing the script to evaluate.
thisObject: The object to use as "this," or nil to use the global object as "this."
sourceURL: A string containing a URL for the script's source file. This is used by debuggers and when reporting exceptions. Pass "" if you do not care to include source file information.
startingLineNumber: An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions. The value is one-based, so the first line is line 1 and invalid values are clamped to 1.
exception: A JSValueMBS in which to store an exception, if any.

Returns the JSValue that results from evaluating script, or nil if an exception is thrown.

110.6.7 GarbageCollect

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a JavaScript garbage collection.
Notes: JavaScript values that are on the machine stack, in a register, protected by JSValueProtect, set as the global object of an execution context, or reachable from any such value will not be collected.

During JavaScript execution, you are not required to call this function; the JavaScript engine will garbage collect as needed. JavaScript values created within a context group are automatically destroyed when the last reference to the context group is released.

110.6.8 LoadLibrary(File as folderItem) as boolean

MBS MacFrameworks Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads the library.
Notes: Does nothing on macOS or iOS since we use the library provided by Apple with the operating system.

You can load JavaScriptCore.dll on Windows here.
Make sure all dependencies are honored and you may use Dependency Walker application to look for dependencies.

You can load libjavascriptcoregtk.so on Linux here.
e.g. "/usr/lib/aarch64-Linux-gnu/libjavascriptcoregtk-4.1.so" for Linux 64-bit on ARM

Returns true on success.
See also:

- 110.6.9 LoadLibrary(Path as String) as boolean 16817

110.6.9 LoadLibrary(Path as String) as boolean

MBS MacFrameworks Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads the library.
Example:

```
#If TargetLinux Then

// you may need to check what version you have
If JSContextMBS.LoadLibraryPath("libjavascriptcoregtk-4.1.so") Then
MessageBox "Okay"
Else
MessageBox "Failed to load: "+JSContextMBS.LibraryError
End If

#ElseIf TargetWindows
```

```
// you may find somewhere a JavaScriptCore.dll for use here

// we just load the DLLs from iTunes into our folder with exe file:
// ASL.dll
// CoreFoundation.dll
// icudt62.dll
// JavaScriptCore.dll
// libdispatch.dll
// libicuin.dll
// libicuuc.dll
// objc.dll
// WTF.dll

If JSContextMBS.LoadLibraryPath("JavaScriptCore.dll") Then
MessageBox "Okay"
Else
MessageBox "Failed to load: "+JSContextMBS.LibraryError
End If

#endif
```

Notes: You can load JavaScriptCore.dll on Windows here.
Make sure all dependencies are honored and you may use Dependency Walker application to look for dependencies.

You can load libjavascriptcoregtk.so on Linux here.
e.g. "/usr/lib/aarch64-Linux-gnu/libjavascriptcoregtk-4.1.so" for Linux 64-bit on ARM

Returns true on success.
See also:

- 110.6.8 LoadLibrary(File as folderItem) as boolean 16817

110.6.10 NewArray(arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript Array object.
Example:

```
Var c as new JSContextMBS

Var e as JSValueMBS
```

```
Var v as JSObjectMBS = c.NewArray(nil, e)
v.SetPropertyAtIndex(0, c.valueWithString("Hello"), e)
v.SetPropertyAtIndex(1, c.valueWithString("World"), e)
MessageBox v.JSONString
```

Notes: arguments: A JSValue array of data to populate the Array with.
JSException: A JSValueMBS in which to store an exception, if any.
Returns a JSObject that is an Array.
The behavior of this function does not exactly match the behavior of the built-in Array constructor. Specifically, if one argument is supplied, this function returns an array with one element.
Requires Mac OS X 10.6 or newer.

110.6.11 NewDate(arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript Date object, as if by invoking the built-in Date constructor.
Example:

```
Var c as new JSContextMBS

Var year as JSValueMBS = c.valueWithDouble(2015)
Var month as JSValueMBS = c.valueWithDouble(5)
Var day as JSValueMBS = c.valueWithDouble(12)

Var e as JSValueMBS // exception
Var d as JSValueMBS = c.NewDate(array(year, month, day), e)

MessageBox d.JSONString
```

Notes: arguments: A JSValue array of arguments to pass to the Date Constructor.
JSException: A JSValueMBS in which to store an exception, if any.
Returns a JSObject that is a Date.
Requires Mac OS X 10.6 or newer.

110.6.12 NewError(arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript Error object, as if by invoking the built-in Error constructor.
Example:

```
Var c as new JSContextMBS

Var parameters() as JSValueMBS
Parameters.Add c.valueWithString("Hello")

Var ex as JSValueMBS
Var e as JSValueMBS = c.NewError(Parameters, ex)
MessageBox e.StringValue
```

Notes: arguments: A JSValue array of arguments to pass to the Error Constructor.
JSException: A JSValueMBS in which to store an exception, if any.

Returns a JSObject that is a Error.
Requires Mac OS X 10.6 or newer.

110.6.13 NewFunction(name as string) as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Convenience method for creating a JavaScript function which raises FunctionCalled event on invokation.
Notes: name: A string containing the function's name. This will be used when converting the function to string. Pass NULL to create an anonymous function.
Returns a JSObject that is a function. The object's prototype will be the default function prototype.
See also:

- 110.6.14 NewFunction(name as string, parameterNames() as string, Body as String, SourceURL as string = "", startingLineNumber as Integer = 0, byref JSException as JSValueMBS) as JSValueMBS 16820

110.6.14 NewFunction(name as string, parameterNames() as string, Body as String, SourceURL as string = "", startingLineNumber as Integer = 0, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a function with a given script as its body.
Example:

```
Var c as new JSContextMBS

// create a function
Var parameterNames() as string = array("value")
Var body as string = "return value*value;"
```

```
Var name as string = "test"

Var e as JSValueMBS
Var v as JSValueMBS = c.NewFunction(name, parameterNames, body, e )

MessageBox v.StringValue

// put it in global memory
c.globalObject.SetProperty "test", v, e

// and call it
Var r as JSValueMBS = c.EvaluateScript("test(5)", "", nil, e)
MessageBox r.StringValue
```

Notes: name: A string containing the function's name. This will be used when converting the function to string. Pass "" to create an anonymous function.
parameterNames: A string array containing the names of the function's parameters.
body: A string containing the script to use as the function's body.
sourceURL: A string containing a URL for the script's source file. This is only used when reporting exceptions. Pass "" if you do not care to include source file information in exceptions.
startingLineNumber: An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions. The value is one-based, so the first line is line 1 and invalid values are clamped to 1.
exception: A JSValueMBS in which to store a syntax error exception, if any. Pass nil if you do not care to store a syntax error exception.
A JSObject that is a function, or nil if either body or parameterNames contains a syntax error. The object's prototype will be the default function prototype.
Use this method when you want to execute a script repeatedly, to avoid the cost of re-parsing the script before each execution.
See also:

- 110.6.13 NewFunction(name as string) as JSObjectMBS 16820

110.6.15 NewObject as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new object.

110.6.16 NewRegExp(arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript RegExp object, as if by invoking the built-in RegExp constructor.

Notes: arguments: A JSValue array of arguments to pass to the RegExp Constructor.
JSException: A JSValueMBS in which to store an exception, if any.
Returns a JSObject that is a RegExp.
Requires Mac OS X 10.6 or newer.

110.6.17 SetExecutionTimeLimit(limit as double)

MBS MacFrameworks Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets the script execution time limit.
Example:

```
Var c As New JSContextMBS
Var e As JSValueMBS

// allow 5 seconds
c.SetExecutionTimeLimit 5

System.DebugLog DateTime.Now.ToString
Var v As JSValueMBS = c.EvaluateScript("while(true) { } ", "", Nil, e)
System.DebugLog DateTime.Now.ToString
```

Notes: Limit: The time limit of allowed script execution time in seconds.

If you implement the ShouldTerminate event, it will be invoked when the time limit has been reached. This will give you a chance to decide if you want to terminate the script or not.

If you don't implement the event, the script will be terminated unconditionally when the time limit has been reached.

In order to guarantee that the execution time limit will take effect, you will need to call SetExecutionTime-Limit before you start executing any scripts.

110.6.18 valueWithBool(value as boolean) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript value of the boolean type.
Example:

```
Var c as new JSContextMBS
Var v as JSValueMBS = c.valueWithBool(true)
MessageBox v.JSONString
```

110.6.19 valueWithDouble(value as Double) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript value of the number type.
Example:

```
Var c as new JSContextMBS

Var v as JSValueMBS = c.valueWithDouble(5.6)
MessageBox v.StringValue
```

110.6.20 valueWithJSON(JSON as string) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript value from a JSON formatted string.
Example:

```
Var c as new JSContextMBS

Var v as JSValueMBS = c.valueWithJSON(" [ 1,2,3 ] ")
Var o as JSObjectMBS = JSObjectMBS(v) // arrays are objects

Var e as JSValueMBS
Var p as JSValueMBS = o.GetProperty("length", e)

MessageBox p.StringValue // shows 3
```

Notes: Returns a JSValue containing the parsed value, or nil if the input is invalid.
Available on Mac OS X 10.7 and newer

110.6.21 valueWithNull as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript value of the null type.
Example:

```
Var c as new JSContextMBS
Var j as JSValueMBS = c.valueWithNull

if j.Type = JSValueMBS.kJSTypeNull then
```

```
MessageBox "null"
end if
```

110.6.22 valueWithString(value as string) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript value of the string type.
Example:

```
Var c as new JSContextMBS

Var v as JSValueMBS = c.valueWithString("Hello")
MessageBox v.StringValue
```

110.6.23 valueWithUndefined as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript value of the undefined type.
Example:

```
Var c as new JSContextMBS
Var j as JSValueMBS = c.valueWithUndefined

if j.Type = JSValueMBS.kJSTypeUndefined then
MessageBox "undefined"
end if
```

110.6.24 Properties

110.6.25 Available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Checks whether the JavaScriptCore library is loaded.
Notes: Checks whether the JavaScriptCore library is loaded.
Always loaded on macOS since we use the one coming with macOS.

For Windows you can load JavaScriptCore.dll and for Linux you can load the libjavascriptcoregtk.so file with LoadLibrary function.

Returns always true on macOS and iOS.
(Read only property)

110.6.26 globalObject as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Gets the global object of a JavaScript execution context.
Example:

```
Var c as new JSContextMBS

Var v as JSObjectMBS = c.globalObject
Var e as JSValueMBS

v.SetProperty "Hello", c.valueWithString("World"), e
v.SetProperty "Value", c.valueWithDouble(5), e

MessageBox c.globalObject.JSONString
```

Notes: (Read only property)

110.6.27 Group as JSContextGroupMBS

MBS MacFrameworks Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Gets the context group to which a JavaScript execution context belongs.
Notes: (Read only property)

110.6.28 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

110.6.29 Inspectable as Boolean

MBS MacFrameworks Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether the context is inspectable in Web Inspector.

Notes: Default is false.

Requires macos 13.3, iOS 16.4 or newer.
(Read and Write property)

110.6.30 LibraryError as String

MBS MacFrameworks Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The error message from loading the library.
Notes: (Read only property)

110.6.31 Name as String

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The name.
Example:

```
Var c as new JSContextMBS

c.Name = "Hello"
MessageBox c.Name
```

Notes: Requires Mac OS X 10.10 and newer.
(Read and Write property)

110.6.32 Tag as Variant

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The tag value.
Notes: You can store anything here and as long as the JSContext object exists, this value is kept referenced.
(Read and Write property)

110.6.33 Events

110.6.34 FunctionCalled(functionObject as JSObjectMBS, thisObject as JSObjectMBS, arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The event called when your custom function is called.
Notes: Please return a value and in case of error set exception.

110.6.35 ShouldTerminate as Boolean

MBS MacFrameworks Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The event invoked when script execution has exceeded the allowed time limit previously specified via SetExecutionTimeLimit.
Notes: If you return true, the timed out script will terminate.
If you return false, the script will run for another period of the allowed time limit specified via SetExecutionTimeLimit.

Within this event, you may call SetExecutionTimeLimit to set a new time limit.

110.7 class JSObjectMBS

110.7.1 class JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a Javascript Object.
Example:

```
// evaluate JavaScript with JavaScriptCore and read the properties of the resulting object
Var context As New JSContextMBS
Var jsError As JSValueMBS
Var value As JSValueMBS = context.EvaluateScript("( { name: 'Bob', age: 42, city: 'Berlin' } )", "", Nil,
1, jsError)
If jsError <>Nil Then Return

Var obj As JSObjectMBS = value.ObjectValue(jsError)
Var lines() As String
For Each name As String In obj.PropertyNames
lines.Add name + " = " + obj.GetProperty(name, jsError).StringValue
Next
MessageBox String.FromArray(lines, EndOfLine)
```

Notes: Subclass of the JSValueMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 26.5pr4

110.7.2 Methods

110.7.3 CallAsConstructor(arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Calls an object as a constructor.
Notes: self: The JSObject to call as a constructor.
arguments: A JSValueMBS array of arguments to pass to the constructor.
JSException A pointer to a JSValueMBS in which to store an exception, if any.
Returns the JSObject that results from calling object as a constructor, or nil if an exception is thrown or object is not a constructor.

110.7.4 CallAsFunction(thisObject as JSObjectMBS, arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Calls an object as a function.
Notes: self: The JSObject to call as a function.
thisObject: The object to use as "this," or nil to use the global object as "this."
arguments: A JSValueMBS array of arguments to pass to the function.
JSException: A JSValueMBS in which to store an exception, if any.

Returns the JSValue that results from calling object as a function, or nil if an exception is thrown or object is not a function.

110.7.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

110.7.6 DeleteProperty(name as string, byref JSException as JSValueMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Deletes a property from an object.
Example:

```
Var c as new JSContextMBS

Var v as JSObjectMBS = c.globalObject
Var e as JSValueMBS

v.SetProperty "Hello", c.valueWithString("World"), e
v.SetProperty "Value", c.valueWithDouble(5), e

MessageBox v.JSONString

call v.DeleteProperty "Hello", e

MessageBox v.JSONString
```

Notes: Name: A string containing the property's name.
JSException: A JSValueMBS in which to store an exception, if any.

Returns true if the delete operation succeeds, otherwise false (for example, if the property has the kJSPropertyAttributeDontDelete attribute set).

110.7.7 GetProperty(name as string, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Gets a property from an object.
Example:

```
Var c as new JSContextMBS

Var v as JSObjectMBS = c.globalObject
Var e as JSValueMBS

v.SetProperty "Hello", c.valueWithString("World"), e

MessageBox v.GetProperty("Hello", e).StringValue
```

Notes: object: The JSObject whose property you want to get.
Name: A string containing the property's name.
JSException: A JSValueMBS in which to store an exception, if any.
Returns the property's value if object has the property, otherwise the undefined value.

110.7.8 GetPropertyAtIndex(propertyIndex as Integer, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Gets a property from an object by numeric index.
Example:

```
Var c as new JSContextMBS

Var v as JSValueMBS = c.valueWithJSON(" [ 1,2,3 ] ")
Var o as JSObjectMBS = JSObjectMBS(v) // arrays are objects

Var e as JSValueMBS
Var p as JSValueMBS = o.GetProperty("length", e)

MessageBox "Length: "+p.StringValue

Var n as JSValueMBS = o.GetPropertyAtIndex(2, e)
```

```
MessageBox "3rd value in array: "+n.StringValue
```

Notes: The JSObject whose property you want to get.
propertyIndex: An integer value that is the property's name.
JSException: A JSValueMBS in which to store an exception, if any.

Returns the property's value if object has the property, otherwise the undefined value.

Calling GetPropertyAtIndex is equivalent to calling GetProperty with a string containing propertyIndex, but GetPropertyAtIndex provides optimized access to numeric properties.

110.7.9 HasProperty(name as string) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether an object has a given property.
Example:

```
Var c as new JSContextMBS

Var e as JSValueMBS
Var v as JSObjectMBS = c.NewArray(nil, e)
MessageBox str(v.HasProperty("length"))
```

Notes: name: A string containing the property's name.
Returns true if the object has a property whose name matches propertyName, otherwise false.

110.7.10 PropertyNames as String()

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Gets the names of an object's enumerable properties.
Example:

```
Var c as new JSContextMBS

Var v as JSObjectMBS = c.globalObject
Var e as JSValueMBS

v.SetProperty "Hello", c.valueWithString("World"), e
v.SetProperty "Value", c.valueWithDouble(5), e

MessageBox Join(v.PropertyNames, EndOfLine)
```

110.7.11 SetProperty(name as string, value as JSValueMBS, byref JSException as JSValueMBS)

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets a property on an object.
Example:

```
Var c as new JSContextMBS

Var v as JSObjectMBS = c.globalObject
Var e as JSValueMBS

v.SetProperty "Hello", c.valueWithString("World"), e
v.SetProperty "Value", c.valueWithDouble(5), e
```

Notes: Name: A string containing the property's name.
Value: A JSValue to use as the property's value.
JSException A pointer to a JSValueRef in which to store an exception, if any.

110.7.12 SetPropertyAtIndex(propertyIndex as Integer, value as JSValueMBS, byref JSException as JSValueMBS)

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets a property on an object by numeric index.
Notes: propertyIndex: The property's name as a number.
value: A JSValue to use as the property's value.
exception: A JSValueMBS in which to store an exception, if any.

Calling SetPropertyAtIndex is equivalent to calling SetProperty with a string containing propertyIndex, but SetPropertyAtIndex provides optimized access to numeric properties.

110.7.13 Properties

110.7.14 isConstructor as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether an object can be called as a constructor.
Notes: Returns true if the object can be called as a constructor, otherwise false.

(Read only property)

110.7.15 isFunction as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether an object can be called as a function.
Example:

```
Var c as new JSContextMBS
Var f as JSObjectMBS = c.NewFunction("Hello")

MessageBox str(f.isFunction)
```

Notes: Returns true if the object can be called as a function, otherwise false.
(Read only property)

110.7.16 Prototype as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: An object's prototype.
Example:

```
Var c as new JSContextMBS
Var j as JSValueMBS = c.valueWithJSON(" { ""tag"": 1 } ")

Var o as JSObjectMBS = JSObjectMBS(j)
MessageBox "object prototyp: "+o.Prototype.StringValue
```

Notes: (Read and Write property)

110.8 class JSValueMBS

110.8.1 class JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a Javascript value.
Example:

```
Var c as new JSContextMBS
Var j as JSValueMBS = c.valueWithDouble(1)
MessageBox j.StringValue
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 26.5pr4

110.8.2 Methods

110.8.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

110.8.4 DoubleValue(byref JSException as JSValueMBS) as Double

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts a JavaScript value to number and returns the resulting number.
Notes: Returns the numeric result of conversion, or NaN if an exception is thrown.
See also:

- 110.8.15 doubleValue as Double 16837

110.8.5 IsEqual(OtherValue as JSValueMBS, byref JSException as JSValueMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether two JavaScript values are equal, as compared by the JS == operator.
Example:

```
Var c as new JSContextMBS
Var s1 as JSValueMBS = c.valueWithJSON("""Hello""")
Var s2 as JSValueMBS = c.valueWithJSON("""Hello""")
Var e as JSValueMBS
MessageBox str(s1.IsEqual(s2, e))
```

Notes: OtherValue The second value to test.
exception: A JSValueMBS in which to store an exception, if any.
Returns true if the two values are equal, false if they are not equal or an exception is thrown.

110.8.6 IsInstanceOfConstructor(ConstructorFunction as JSObjectMBS, byref JSException as JSValueMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether a JavaScript value is an object constructed by a given constructor, as compared by the JS instanceof operator.
Notes: ConstructorFunction: The constructor to test against.
JSException: A JSValueMBS in which to store an exception, if any.
Returns true if value is an object constructed by constructor, as compared by the JS instanceof operator, otherwise false.

110.8.7 IsObjectOfClass(ClassObject as JSClassMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether a JavaScript value is an object with a given class in its class chain.
Notes: ClassObject The JSClass to test against.
Returns true if value is an object and has jsClass in its class chain, otherwise false.

110.8.8 IsStrictEqual(OtherValue as JSValueMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether two JavaScript values are strict equal, as compared by the JS === operator.
Example:

```
Var c as new JSContextMBS
Var j1 as JSValueMBS = c.valueWithDouble(1)
Var j2 as JSValueMBS = c.valueWithDouble(2)

MessageBox str(j1.IsStrictEqual(j2)) // false
```

```
MessageBox str(j1.IsStrictEqual(j1)) // true
```

Notes: OtherValue: The second value to test.
Returns true if the two values are strict equal, otherwise false.

110.8.9 JSONString(indent as Integer = 0, byref JSException as JSValueMBS) as string

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript string containing the JSON serialized representation of a JS value.
Example:

```
Var c as new JSContextMBS
Var j as JSValueMBS = c.valueWithJSON(" { ""tag"":""Hello"", ""value"":1 } ")
Var e as JSValueMBS
MessageBox j.JSONString(5, e)
```

Notes: Requires Mac OS X 10.7 and newer.

The number of spaces to indent when nesting. If 0, the resulting JSON will not contains newlines. The size of the indent is clamped to 10 spaces.
JSException: A JSValueMBS in which to store an exception, if any.
Returns a JSString with the result of serialization, or nil if an exception is thrown.
See also:

- 110.8.25 JSONString as string 16841

110.8.10 ObjectValue(byref JSException as JSValueMBS) as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts a JavaScript value to object and returns the resulting object.
Notes: JSException: A JSValueMBS in which to store an exception, if any.
Returns the JSObject result of conversion, or nil if an exception is thrown.

110.8.11 StringValue(byref JSException as JSValueMBS) as string

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts a JavaScript value to string and copies the result into a JavaScript string.
Notes: JSException: A JSValueMBS in which to store an exception, if any.

Returns a JSString with the result of conversion, or nil if an exception is thrown.
See also:

- 110.8.26 StringValue as String 16841

110.8.12 Properties

110.8.13 booleanValue as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts a JavaScript value to boolean and returns the resulting boolean.
Example:

```
Var c as new JSContextMBS
Var j as JSValueMBS = c.valueWithBool(true)
MessageBox str(j.booleanValue)
```

Notes: (Read only property)

110.8.14 context as JSContextMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The context for this value.
Notes: (Read only property)

110.8.15 doubleValue as Double

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts a JavaScript value to number and returns the resulting number.
Example:

```
Var c as new JSContextMBS
Var j as JSValueMBS = c.valueWithDouble(5.3)
MessageBox str(j.doubleValue)
```

Notes: Returns the numeric result of conversion, or NaN if an exception is thrown.
(Read only property)
See also:

- 110.8.4 DoubleValue(byref JSException as JSValueMBS) as Double 16834

110.8.16 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

110.8.17 isArray as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether a JavaScript value is an array.
Example:

```
Var c as new JSContextMBS

Var e as JSValueMBS
Var v as JSValueMBS = c.NewArray(nil, e)

MessageBox str(v.isArray)
```

Notes: Returns true if value is an array, otherwise false.
Requires OS X 10.11 or newer.
(Read only property)

110.8.18 isBoolean as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether a JavaScript value's type is the boolean type.
Example:

```
Var c as new JSContextMBS
Var j as JSValueMBS = c.valueWithBool(true)
MessageBox str(j.isBoolean)
```

Notes: Returns true if value's type is the boolean type, otherwise false.
(Read only property)

110.8.19 isDate as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether a JavaScript value is a date.
Example:

```
Var c as new JSContextMBS

Var year as JSValueMBS = c.valueWithDouble(2015)
Var month as JSValueMBS = c.valueWithDouble(5)
Var day as JSValueMBS = c.valueWithDouble(12)

Var e as JSValueMBS // exception
Var d as JSValueMBS = c.NewDate(array(year, month, day), e)

MessageBox str(d.isDate)
```

Notes: Returns true if value is a date, otherwise false.
Requires OS X 10.11 or newer.
(Read only property)

110.8.20 isNull as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether a JavaScript value's type is the null type.
Example:

```
Var c as new JSContextMBS
Var n as JSValueMBS = c.valueWithNull

MessageBox str(n.isNull)
```

Notes: Returns true if value's type is the null type, otherwise false.
(Read only property)

110.8.21 isNumber as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether a JavaScript value's type is the number type.
Example:

```
Var c as new JSContextMBS

Var j as JSValueMBS = c.valueWithDouble(5)
MessageBox str(j.isNumber)
```

Notes: Returns true if value's type is the number type, otherwise false.
(Read only property)

110.8.22 isObject as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether a JavaScript value's type is the object type.
Example:

```
Var c as new JSContextMBS

Var e as JSValueMBS
Var v as JSValueMBS = c.NewArray(nil, e)

MessageBox str(v.isObject)
```

Notes: Returns true if value's type is the object type, otherwise false.
(Read only property)

110.8.23 isString as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether a JavaScript value's type is the string type.
Example:

```
Var c as new JSContextMBS
Var s as JSValueMBS = c.valueWithJSON("""Hello""")
MessageBox str(s.isString)
```

Notes: Returns true if value's type is the string type, otherwise false.
(Read only property)

110.8.24 isUndefined as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether a JavaScript value's type is the undefined type.
Example:

```
Var c as new JSContextMBS
```

```
Var j as JSValueMBS = c.valueWithUndefined
MessageBox str(j.isUndefined)
```

Notes: Returns true if value's type is the undefined type, otherwise false.
(Read only property)

110.8.25 JSONString as string

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript string containing the JSON serialized representation of a JS value.
Example:

```
Var c as new JSContextMBS

Var v as JSValueMBS = c.valueWithString("Hello")
MessageBox v.JSONString
```

Notes: Requires Mac OS X 10.7 and newer.
(Read only property)
See also:

- 110.8.9 JSONString(indent as Integer = 0, byref JSException as JSValueMBS) as string 16836

110.8.26 StringValue as String

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts a JavaScript value to string and copies the result into a JavaScript string.
Example:

```
Var c as new JSContextMBS

Var v as JSValueMBS = c.valueWithString("Hello")
MessageBox v.StringValue
```

Notes: Returns a JSString with the result of conversion, or NULL if an exception is thrown.
(Read only property)
See also:

- 110.8.11 StringValue(byref JSException as JSValueMBS) as string 16836

110.8.27 Tag as Variant

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The tag value.
Notes: You can store anything here and as long as the JSValue object exists, this value is kept referenced. (Read and Write property)

110.8.28 Type as Integer

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns a JavaScript value's type.
Example:

```
Var c as new JSContextMBS
Var j as JSValueMBS

j = c.valueWithDouble(1) // double
'j = c.valueWithNull // null
'j = c.valueWithUndefined // undefined
'j = c.valueWithString("Hello") // string
'j = c.valueWithJSON(" { ""tag"": 1 } ") // object
'j = c.valueWithBool(true)

Select case j.Type
case JSValueMBS.kJSTypeUndefined
MessageBox "undefined"
case JSValueMBS.kJSTypeNull
MessageBox "null"
case JSValueMBS.kJSTypeBoolean
MessageBox "boolean "+str(j.booleanValue)
case JSValueMBS.kJSTypeNumber
MessageBox "number "+str(j.doubleValue)
case JSValueMBS.kJSTypeString
MessageBox "string "+j.StringValue
case JSValueMBS.kJSTypeObject
MessageBox "object "+j.JSONString
else
Break
end Select
```

Notes: (Read only property)

110.8.29 Constants

Types

Constant	Value	Description
kJSTypeBigInt	7	A primitive BigInt value.
kJSTypeBoolean	2	A primitive boolean value, one of true or false.
kJSTypeNull	1	The unique null value.
kJSTypeNumber	3	A primitive number value.
kJSTypeObject	5	An object value (meaning that this JSValueMBS is a JSObjectMBS).
kJSTypeString	4	A primitive string value.
kJSTypeSymbol	6	A primitive symbol value.
kJSTypeUndefined	0	The unique undefined value.

Chapter 111

JavaScript Object Notation

111.1 class JSONEntryMBS

111.1.1 class JSONEntryMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for an entry in a JSON object or array.
Example:

```
Var o As New JSONMBS

o.add 1
o.add 2
o.add 3

For Each v As JSONEntryMBS In o.IterateEntries
Break
// watch in debugger
Next
```

Notes: For objects, we use the keys as names here and for arrays the index.

111.1.2 Methods

111.1.3 Constructor

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.
See also:

- 111.1.4 Constructor(other as JSONEntryMBS) 16846

111.1.4 Constructor(other as JSONEntryMBS)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The copy constructor.
See also:

- 111.1.3 Constructor 16846

111.1.5 Properties

111.1.6 Item as Variant

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The value of the entry as variant.
Notes: (Read only property)

111.1.7 Name as String

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The key name in the JSON object.
Notes: (Read only property)

111.2 class JSONIteratorMBS

111.2.1 class JSONIteratorMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The iterator object use for for-each loops in Xojo.
Notes: Implements Iterable and Iterator interfaces.

This class is hidden for auto complete as you don't need to use it manually. Please use it using for each loops.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 23.6pr1
- News from the MBS Xojo Plugins Version 23.5
- Embracing for each loops

Interfaces: Iterator, Iterable

111.2.2 Methods

111.2.3 Constructor

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

111.2.4 Iterator as Iterator

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the iterator object.
Example:

```
Var o As New JSONMBS

o.add 1
o.add 2
o.add 3

For Each v As JSONMBS In o.Iterate
Break
```

```
// watch in debugger
Next
```

Notes: Returns self and is used internally by Xojo for the for each loops.
Part of the Iterable interface and needed for for-each loops.

111.2.5 MoveNext as Boolean

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Moves to next object for iterator.
Notes: Returns true on success and false in case of an error like end of iterator.
Part of the Iterator interface and needed for for-each loops.

111.2.6 Value as Variant

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Current value for the iterator.
Notes: For an iterator over objects, this is a JSONMBS object.
For an iterator over entries, this is a JSONEntryMBS object.
For an iterator over values, this is a variant with the value.

Part of the Iterator interface and needed for for-each loops.

111.2.7 Properties

111.2.8 Index as Integer

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Current index in array or object.
Notes: We iterate over the items in an array or object.
Going by index avoids crashing if you edit the object/array, but going by index may skip an item if you added one before the current one or skip one if you remove one.
(Read only property)

111.2.9 Root as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The root object reference.
Notes: (Read only property)

111.3 class JSONMBS

111.3.1 class JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for JSON object parsing and creating.
Example:

```
Var o as JSONMBS = JSONMBS.NewObjectNode

o.AddItemToObject "Hello", JSONMBS.NewNumberNode(1)
o.AddItemToObject "World", JSONMBS.NewNumberNode(2)

MessageBox o.toString
```

Notes: Our JSON class

- has a high performance.
- is based on a modern C++ library
- supports Xojo features like for-each loops with iterators
- is almost compatible to the old JSONMBS class from before
- is almost compatible to JSONItem class
- automatically converts between variant and JSONMBS as needed.
- reports errors with JSONException class.
- can query, search and replace JSON values with JSON Paths.
- can flatten and unflatten JSON.
- can create patches and merge them back with two ways.
- provides a lot of convenience functions.
- can convert from JSON to/from dictionaries and arrays.
- handles currency better and preserves digits.
- has a lot of duplicate method/property names for API 1 and 2 compatibility and you can choose whether you prefer Append vs Add, Insert vs. AddAt or Key vs. NameAt.
- preserves the order of object entries and allows explicit sorting.
- can convert to HTML for displaying itself.
- prefers case sensitive, but can optionally do case insensitive.

We can convert integer, boolean, string, double, arrays, dictionaries to JSON internally.
And convert back to variant containing integer, boolean, string, double, arrays and dictionaries.

We back ported things like GetChildNode, GetNextNode and GetPreviousNode, but those are not very efficient and you may want to move to using iterators, query values/entries/keys arrays or access items by index.

The old class is still available in a separated OldJSON Plugin for our customers for compatibility with class renamed to OldJSONMBS.

111.3.2 Methods

111.3.3 Add(Value as Variant)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value to an array.
Example:

```
Var o As New JSONMBS

o.Add 1
o.Add "Hello"
o.Add JSONMBS.NewNullNode

MessageBox o.toString
```

Notes: Variant is converted to JSONMBS if needed.

If the self is an empty object, we replace it with an empty array and add the value.

Same as Add method.

111.3.4 AddAt(index As Integer, value As Variant)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Insert a value to an array at the given index.
Example:

```
Var o As New JSONMBS

o.Append 1
o.AddAt 1,2

MessageBox o.toString

o.AddAt 1,3
```

```
MessageBox o.toString
```

Notes: Variant is converted to JSONMBS if needed.

If the self is an empty object, we replace it with an empty array and insert the value.

Same as Insert method.

111.3.5 AddItemToArray(item as JSONMBS)

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an item to an array.
Example:

```
Var subscriptionId As Integer = 123456
Var Quantity As Integer = 1

// build inner object
Var ji As JSONMBS = JSONMBS.NewObjectNode

ji.AddItemToObject "subscriptionId", JSONMBS.NewNumberNode(subscriptionId)
ji.AddItemToObject "newQuantity", JSONMBS.NewNumberNode(Quantity)

// array around it
Var ja As JSONMBS = JSONMBS.NewArrayNode
ja.AddItemToArray ji

// and object around
Var jo As JSONMBS = JSONMBS.NewObjectNode
jo.AddItemToObject "subscriptionAmendmentParameters", ja

Var json As String = jo.toString
MessageBox json

' {
' "subscriptionAmendmentParameters": [
' {
' "subscriptionId": 123456,
' "newQuantity": 1
' }
' ]
' }
```

Notes: If you add item from new nodes created with plugin, we add them to the tree.
If you add items from existing node from other JSON tree, we add references.

111.3.6 AddItemToObject(label as string, value as JSONMBS)

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an item to an object with given label.
Example:

```
Var subscriptionId As Integer = 123456
Var Quantity As Integer = 1

// build inner object
Var ji As JSONMBS = JSONMBS.NewObjectNode

ji.AddItemToObject "subscriptionId", JSONMBS.NewNumberNode(subscriptionId)
ji.AddItemToObject "newQuantity", JSONMBS.NewNumberNode(Quantity)

// array around it
Var ja As JSONMBS = JSONMBS.NewArrayNode
ja.AddItemToArray ji

// and object around
Var jo As JSONMBS = JSONMBS.NewObjectNode
jo.AddItemToObject "subscriptionAmendmentParameters", ja

Var json As String = jo.toString
MessageBox json

' {
' "subscriptionAmendmentParameters": [
' {
' "subscriptionId": 123456,
' "newQuantity": 1
' }
' ]
' }
```

Notes: If you add item from new nodes created with plugin, we add them to the tree.
If you add items from existing node from other JSON tree, we add references.

111.3.7 AddOrReplaceItemToObject(label as string, value as JSONMBS)

MBS Util Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an item to an object with given label.
Notes: Same as AddItemToObject, but removes old item for the label if it exists.

111.3.8 Append(Value as Variant)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Appends a value to an array.
Example:

```
Var o As New JSONMBS

o.Append 1
o.Append "Hello"
o.Append JSONMBS.NewNullNode

MessageBox o.toString
```

Notes: Variant is converted to JSONMBS if needed.

If the self is an empty object, we replace it with an empty array and add the value.

Same as Add method.

111.3.9 ApplyMergePatch(target as JSONMBS, patch as JSONMBS) as JSONMBS

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a merge patch to a json document.
Example:

```
Var source As New JSONMBS(" { "+_
" ""title"": ""Goodbye!"","+_
" ""author"" : { "+_
" ""givenName"" : ""John"","+_
" ""familyName"" : ""Doe""""+_
" } ,"+_
" ""tags"": [ ""example"", ""sample"" ] ,"+_
" ""content"": ""This will be unchanged""""+_
```

```
" } ")

Var patch As New JSONMBS(" { "+_
" ""title"": ""Hello!"","+_
" ""phoneNumber"": ""+01-123-456-7890"","+_
" ""author"": { "+_
" ""familyName"": null"+_
" } ,"+_
" ""tags"": [ ""example"" ] "+_
" } ")

Var result As JSONMBS = JSONMBS.ApplyMergePatch(source, patch)

Var sourceText As String = source.toString(True)
Var resultText As String = result.toString(True)
Var PatchText As String = Patch.toString(True)

Break
```

Notes: The mergepatch function implement the IETF standard JSON Merge Patch

111.3.10 ApplyPatch(target as JSONMBS, patch as JSONMBS) as JSONMBS

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a patch to a json document.
Example:

```
Var source As New JSONMBS(" { ""foo"": ""bar"" } ")
Var patch As New JSONMBS(" [ "+_
" { ""op"": ""add"", ""path"": ""/baz"", ""value"": ""qux"" } ,"+_
" { ""op"": ""add"", ""path"": ""/foo"", ""value"": [ ""bar"", ""baz"" ] } "+_
" ] ")

Var result As JSONMBS = JSONMBS.ApplyPatch(source, patch)

Var sourceText As String = source.toString(True)
Var resultText As String = result.toString(True)
Var PatchText As String = Patch.toString(True)

Break
```

Notes: The jsonpatch functions implement the IETF standard JavaScript Object Notation (JSON) Patch.

The JSON Patch IETF standard requires that the JSON Patch method is atomic, so that if any JSON

Patch operation results in an error, the target document is unchanged. The patch function implements this requirement by generating the inverse commands and building an undo stack, which is executed if any part of the patch fails.

111.3.11 ArrayItem(index as integer, Clone as Boolean = false) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries array item with given index.
Notes: Added Clone parameter for version 20.4.
If Clone is true, we duplicate the JSON, so the new JSONMBS object does not point to origin JSONMBS object and exist independent.

111.3.12 ArrayItems(Clone as Boolean = false) as JSONMBS()

MBS Util Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries array items.
Notes: If Clone is true, we duplicate the JSON, so the new JSONMBS objects do not point to origin JSONMBS object and exist independent.

111.3.13 Clear

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the JSON object.
Example:

```
Var j As New JSONMBS

j.add 1
j.add 2
j.Clear // remove all
j.add 3

MessageBox j.toString(false)
```

Notes: Removes all entries from array or object.

111.3.14 Clone as JSONMBS

MBS Util Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clones the JSON tree.

111.3.15 Close

MBS Util Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Frees node.
Notes: No need to call this as destructor does the same.
But this call allows you to release circular references.

111.3.16 Compare(Other as JSONMBS) as Integer

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two objects and returns
Example:

```
Var o As New JSONMBS

o.add 1
o.add 2

Var j As New JSONMBS

j.add 1
j.add 2

If j.Compare(o) = 0 Then
MessageBox "equal"
Else
MessageBox "not equal"
End If
```

Notes: Returns 0 if both are equal, 1 if bigger and -1 if smaller.

111.3.17 Constructor

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an empty object.
Example:

```
Var c As Currency = 1.2345
Var d as Double = c

Var j As New JSONItem
j.Value("test") = d // can't use c here!

Var m As New JSONMBS
m.Value("test") = c

MessageBox j.ToString+EndOfLine+m.toString
// shows { "test":1.2344999999999999307 } vs { "test":1.2345 } since we store currency exactly.
```

- 111.3.18 Constructor(dic As Dictionary) 16859
- 111.3.19 Constructor(JSONString as String) 16860
- 111.3.20 Constructor(other as JSONMBS) 16860

111.3.18 Constructor(dic As Dictionary)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object with the content of the dictionary.
Example:

```
Var d As New Dictionary
d.Value(1) = 2
d.Value("Hello") = "World"

Var j As New JSONMBS(d)

MessageBox j.toString(False)
```

Notes: Converts all dictionary values to JSON objects internally.
See also:

- 111.3.17 Constructor 16858
- 111.3.19 Constructor(JSONString as String) 16860
- 111.3.20 Constructor(other as JSONMBS) 16860

111.3.19 Constructor(JSONString as String)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses the given JSON String into the tree where this node is the root.
Example:

```
Var o as new JSONMBS(" { ""text"":""Hello World"" } ")
MessageBox o.toString
```

Notes: Text should be UTF-8.
Raises an exception in case of error.
See also:

- 111.3.17 Constructor 16858
- 111.3.18 Constructor(dic As Dictionary) 16859
- 111.3.20 Constructor(other as JSONMBS) 16860

111.3.20 Constructor(other as JSONMBS)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copy constructor.
Notes: Makes a copy of all the nodes.
See also:

- 111.3.17 Constructor 16858
- 111.3.18 Constructor(dic As Dictionary) 16859
- 111.3.19 Constructor(JSONString as String) 16860

111.3.21 Convert as Variant

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts JSON object to Xojo variant.
Example:

```
// build some JSON:

Var j As New JSONMBS

j.AddItemToObject "test", JSONMBS.NewNumberNode(123)
j.AddItemToObject "name", JSONMBS.NewStringNode("Joe")
```

```
// convert to Dictionary
Var v As Variant = j.Convert

// and back
Var o As JSONMBS = JSONMBS.Convert(v)

// show
MessageBox o.toString
```

Notes: Depending on the JSON content, you get variants containing values (string, double, boolean or nil), dictionaries or array of variants.

Dictionary is not case sensitive, so may not work correctly if you have duplicate keys with only different in case.

With version v24.3 we also convert JSONItem and convert folderitem, date or DateTime objects to strings.
See also:

- 111.3.22 Convert(value as variant) as JSONMBS 16861

111.3.22 Convert(value as variant) as JSONMBS

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts Xojo variant to JSON object.
Example:

```
Var d As New Dictionary
Var n as Double = 1/3

d.Value("number") = n // default double handling

// custom formatted number
Var j As JSONMBS = JSONMBS.NewNumberNode(Str(n, "-0.0000000000"))

d.value("customNumber") = j
d.Value( "int64") = 1000000000000000000
d.Value("uint64") = 8000000000000000000

Var a() As String
a.Add "Hello"
a.Add "World"

d.Value("array") = a
d.Value("dictionary") = New Dictionary("a":1, "b":2, "c":3)
```

```
Var r As JSONMBS = JSONMBS.Convert(d)
MessageBox r.toString
```

Notes: Converts values in variant to matching JSON structures.
Currency is converted to double. Color is converted to integer. Dates are converted to string.
We detect arrays of String, Object, Variant, Single, Double, Int32, Int64, Boolean and Currency and convert them to JSON arrays. Dictionaries are converted to JSON objects with texts for keys.
Anything else can raise an exception about an unsupported type.

Please note that Xojo variants don't make a difference between signed and unsigned integers, so we always convert using signed integers.

With version v19.3, the array/dictionary can also contain JSONMBS objects.
With version v24.3 we also convert JSONItem and convert folderitem, date or DateTime objects to strings.
See also:

- 111.3.21 Convert as Variant 16860

111.3.23 DeleteItem(index as Integer)

MBS Util Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes an item from an array/object by index.
Example:

```
Var j As New JSONMBS

j.AddItemToObject "Hello", j.NewStringNode("Testing")
j.AddItemToObject "World", j.NewStringNode("Another node")

MessageBox j.toString

// delete named item
j.DeleteItem "Hello"

MessageBox j.toString

// delete first item
j.DeleteItem 0

MessageBox j.toString
```

Notes: Index is zero based.
See also:

• 111.3.24 DeleteItem(label as string) 16863

111.3.24 DeleteItem(label as string)

MBS Util Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes a named item from an object.
Example:

```
Var j As New JSONMBS

j.AddItemToObject "Hello", j.NewStringNode("Testing")
j.AddItemToObject "World", j.NewStringNode("Another node")

MessageBox j.toString

// delete named item
j.DeleteItem "Hello"

MessageBox j.toString

// delete first item
j.DeleteItem 0

MessageBox j.toString
```

See also:

• 111.3.23 DeleteItem(index as Integer) 16862

111.3.25 Entries as JSONEntryMBS()

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries all entries.
Example:

```
Var j As New JSONMBS

j.Value("Hello") = "World"
j.Value("Test") = "Value"
j.Value("abc") = "cde"

Var entries() As JSONEntryMBS = j.Entries

Break
```

Notes: Convenience function to get all entries.
Converts values to variants as needed.

Works for both objects and arrays.

111.3.26 Equals(Other as JSONMBS) as Boolean

MBS Util Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if two JSON are equal.
Example:

```
Var j1 as JSONMBS = JSONMBS.NewNumberNode(5)
Var j2 as JSONMBS = JSONMBS.NewNumberNode(5)
Var j3 as JSONMBS = JSONMBS.NewNumberNode(6)

if not j1.Equals(j2) then
break // failed
end if

if j3.Equals(j2) then
break // failed
end if

Break // okay
```

Notes: We compare recursively all nodes.
If structure and values are the same, we return true, otherwise false.
Objects do not need to have same order for entries.

111.3.27 FilterObjectArray(Name as String, Other as JSONMBS) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Filters JSON object array to find matching entries.
Example:

```
Var j As JSONMBS = JSONMBS.NewArrayNode

Var j1 As JSONMBS = JSONMBS.NewObjectNode
j1.AddItemToObject "id", JSONMBS.NewNumberNode(122)
j1.AddItemToObject "name", JSONMBS.NewStringNode("John")
j.AddItemToArray j1
```

```
Var j2 As JSONMBS = JSONMBS.NewObjectNode
j2.AddItemToObject "id", JSONMBS.NewNumberNode(123)
j2.AddItemToObject "name", JSONMBS.NewStringNode("Matt")
j.AddItemToArray j2

Var j3 As JSONMBS = JSONMBS.NewObjectNode
j3.AddItemToObject "id", JSONMBS.NewNumberNode(124)
j3.AddItemToObject "name", JSONMBS.NewStringNode("Bob")
j.AddItemToArray j3

Var resultArray As JSONMBS = j.FilterObjectArray("id", JSONMBS.NewNumberNode(123))
Var firstEntry As JSONMBS = resultArray.ArrayItem(0)

Break
```

Notes: Similar as if you loop and look for index of matching items with FindValueInObjectArray and transfer it yourself to a new array.

111.3.28 FindValueInArray(Other as JSONMBS, StartIndex as Integer = 0) as Integer

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries index of value in array.
Example:

```
Var j1 as JSONMBS = JSONMBS.NewIntegerArray(array(3,4,5,6,7))
Var j2 as JSONMBS = JSONMBS.NewNumberNode(5)
Var j3 as JSONMBS = JSONMBS.NewNumberNode(8)
Var j4 as JSONMBS = JSONMBS.NewStringNode("5")

Var index1 as integer = j1.FindValueInArray(j2) // we can find this
Var index2 as integer = j1.FindValueInArray(j3) // value not found
Var index3 as integer = j1.FindValueInArray(j4) // can't find string in number array

if index1 = 2 and index2 = -1 and index3 = -1 then
Break // okay
else
Break // failed
end if
```

Notes: Returns zero based index or -1 if not found.

Version 20.0 or newer allows with ByContent parameter = true to find by content, so number can be found

via text.

StartIndex parameter added in version 21.5: Index of first element to check. Zero if not specified.
If you like to continue searching, you can pass last result + 1.

111.3.29 FindValueInObjectArray(Name as String, Other as JSONMBS, StartIndex as Integer = 0) as Integer

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries index of value in object array.
Example:

```
Var j1 as JSONMBS = JSONMBS.NewArrayNode
Var j2 as JSONMBS = JSONMBS.NewObjectNode

j2.AddItemToObject "Hello", JSONMBS.NewStringNode("World")
j2.AddItemToObject "ID", JSONMBS.NewStringNode("123")

j1.AddItemToArray j2

Var index1 as integer = j1.FindValueInObjectArray("ID", JSONMBS.NewStringNode("123")) // we can find this
Var index2 as integer = j1.FindValueInObjectArray("ID", JSONMBS.NewStringNode("456")) // value not found
Var index3 as integer = j1.FindValueInObjectArray("xxx", JSONMBS.NewStringNode("123")) // value not found

if index1 = 0 and index2 = -1 and index3 = -1 then
Break // okay
else
Break // failed
end if
```

Notes: Returns zero based index or -1 if not found.
We look into each object in the array, check if it has a value for the given label and compare that to the one to find.

Version 20.0 or newer allows with ByContent parameter = true to find by content, so number can be found via text.

StartIndex parameter added in version 21.5: Index of first element to check. Zero if not specified.
If you like to continue searching, you can pass last result + 1.

111.3.30 Flatten(value as JSONMBS) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flattens a json object or array to a single depth object of key-value pairs.
Example:

```
Var j As New JSONMBS

j.Value("Hello") = "World"
j.Value("test") = 123

Var f As JSONMBS = JSONMBS.Flatten(j)
Var s As String = f.toString

MessageBox s
// shows: { "$ [ 'Hello' ] ":"World","$ [ 'test' ] ":123 }
```

Notes: The keys in the flattened object are normalized json paths. The values are primitive (string, number, boolean, or null), empty object ({ }) or empty array ([ ]).

111.3.31 FromToon(toon as Memoryblock) as JSONMBS

MBS Util Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts TOON to JSON.
Notes: If valid toon is recognized, we return a JSON object.
See also:

- 111.3.32 FromToon(toon as String) as JSONMBS 16867

111.3.32 FromToon(toon as String) as JSONMBS

MBS Util Plugin, Plugin Version: 26.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts TOON to JSON.
Example:

```
Var j As JSONMBS
Var toon As String

toon = _
" task: Our favorite hikes together" + EndOfLine + _
" location: Boulder" + EndOfLine + _
" season: spring_2025" + EndOfLine + _
"friends [ 3 ] : ana,luis,sam" + EndOfLine + _
```

```
"hikes [ 3 ] { id,name,distanceKm,elevationGain,companion,wasSunny } :" + EndOfLine + _
" 1,Blue Lake Trail,7.5,320,ana,true" + EndOfLine + _
" 2,Ridge Overlook,9.2,540,luis,false" + EndOfLine + _
" 3,Wildflower Loop,5.1,180,sam,true"

j = JSONMBS.FromToon(toon)

MessageBox j.toString(true)
```

Notes: If valid toon is recognized, we return a JSON object.
See also:

- 111.3.31 FromToon(toon as Memoryblock) as JSONMBS 16867

111.3.33 HasChild(label as string) as Boolean

MBS Util Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if a child node for the node with the given label exists.
Example:

```
Var jv as JSONMBS = JSONMBS.NewStringNode("value")
Var jo as JSONMBS = JSONMBS.NewObjectNode

jo.AddItemToObject("key", jv)

// shows { "key": "value" }
MessageBox jo.toString
MessageBox str(jo.hasChild("key"))
```

Notes: Returns true if the entry exists or false if not.
Only for objects, not arrays.

Same as HasKey and HasName methods.

111.3.34 HasKey(Key as string) as boolean

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if a an object has the given key.
Example:

```
Var jv as JSONMBS = JSONMBS.NewStringNode("value")
Var jo as JSONMBS = JSONMBS.NewObjectNode
```

```
jo.AddItemToObject("key", jv)

// shows { "key": "value" }
MessageBox jo.toString
MessageBox str(jo.HasKey("key"))
```

Notes: Returns true if the entry exists or false if not.
Only for objects, not arrays.

Same as HasChild and HasName methods.

111.3.35 HasName(Name as string) as boolean

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if a an object has the given key.
Example:

```
Var jv as JSONMBS = JSONMBS.NewStringNode("value")
Var jo as JSONMBS = JSONMBS.NewObjectNode

jo.AddItemToObject("key", jv)

// shows { "key": "value" }
MessageBox jo.toString
MessageBox str(jo.HasName("key"))
```

Notes: Returns true if the entry exists or false if not.
Only for objects, not arrays.

Same as HasKey and HasChild methods.

111.3.36 Insert(index as integer, value as variant)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value into the index.
Example:

```
Var o As New JSONMBS

o.Append 1
o.Insert 1,2
```

```
MessageBox o.toString

o.Insert 1,3

MessageBox o.toString
```

Notes: Variant is converted to JSONMBS if needed.

If the self is an empty object, we replace it with an empty array and insert the value.

Same as AddAt method.

111.3.37 isValidJSON(JSON as string) as Boolean

MBS Util Plugin, Plugin Version: 24.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if JSON text is valid.
Notes: This parses the JSON text and returns true on success or false on failure.

This checks if the given text is a valid JSON fragment and can be e.g. added as value to a JSON object or array. So this returns true for proper formatted boolean, number and text pieces, too.

111.3.38 Iterate as JSONIteratorMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Iterate about child nodes.
Example:

```
Var o As New JSONMBS

o.add 1
o.add 2
o.add 3

For Each v As JSONMBS In o.Iterate
Break
// watch in debugger
Next
```

Notes: Provides JSONMBS objects for inspection.

Warning: If you iterate while the JSONMBS is changed you may skip some entries or get duplicates, so please avoid editing it while iterating.

111.3.39 IterateEntries as JSONIteratorMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Iterate about child entries.
Example:

```
Var o As New JSONMBS

o.add 1
o.add 2
o.add 3

For Each v As JSONEntryMBS In o.IterateEntries
Break
// watch in debugger
Next
```

Notes: Entries are provided with JSONEntryMBS objects and include key and value.
For arrays, the key name is the index value.

Warning: If you iterate while the JSONMBS is changed you may skip some entries or get duplicates, so please avoid editing it while iterating.

111.3.40 IterateValues as JSONIteratorMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Iterate about child values.
Example:

```
Var o As New JSONMBS

o.add 1
o.add 2
o.add 3

For Each v As Variant In o.IterateValues
Break
// watch in debugger
```

// v has values like 1, 2 and 3
Next

Notes: The values are provided and converted to variant.

Warning: If you iterate while the JSONMBS is changed you may skip some entries or get duplicates, so please avoid editing it while iterating.

111.3.41 JSONObjectCount as Integer

MBS Util Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: For debugging, the plugin counts how many JSONMBS objects we have.

111.3.42 KeyAt(index As Integer) as String

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries key name at given index.
Example:

Var o As New JSONMBS

o.Value("Hello") = "World"

MessageBox o.KeyAt(0)

Notes: Raises an exception if index is out of range.

Same as Name or NameAt methods.
The order of keys can change if you add/remove values in the JSON object.

111.3.43 Keys as String()

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the key names for an object.
Example:

Var o As New JSONMBS

```
o.Value("Hello") = "World"
o.Value("Test") = "Value"

Var Keys() As String = o.Keys
MessageBox string.FromArray(Keys)
```

Notes: The order is as stored in memory currently and that order changes if you edit the JSON object.
We cache the array so multiple calls would return the same array and you should not modify it.

Same as Names method.

111.3.44 Load(JSONString as String)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses the given JSON String into the tree where this node is the root.
Example:

```
Var o As New JSONMBS
o.load(" { ""text"":""Hello World"" } ")
MessageBox o.toString
```

Notes: Text should be UTF-8.
Raises an exception in case of error.

111.3.45 Lookup(Key As String, defaultValue As Variant = nil) as Variant

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the value for the key.
Notes: Variant is converted to JSONMBS if needed.
Returns default value if key is not found.

111.3.46 Merge(Other as JSONMBS)

MBS Util Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Merges two JSON objects or arrays.
Example:

```
// merge two arrays
Var j1 As New JSONMBS(" [ 1,2,3 ] ")
```

```
Var j2 As New JSONMBS(" [ 4,2,5 ] ")

j1.Merge(j2)

MessageBox j1.toString(False)

// merge two objects
Var j3 As New JSONMBS(" { ""a"": 1, ""b"": [ 1 ] } ")
Var j4 As New JSONMBS(" { ""c"": 3, ""b"": [ 2 ] } ")

j3.Merge(j4)

MessageBox j3.toString(True)
```

Notes: For arrays, we check if the value is already there and if not, we add it.
For objects, we check the values for each key. If it doesn't exist, we copy it over. If it exists, we check arrays and objects again, but other values just get replaced.

Raises exception if you try to merge object with array.

111.3.47 MergePatchFromDiff(source as JSONMBS, target as JSONMBS) as JSONMBS

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create a JSON Merge Patch from a diff of two json documents.
Example:

```
Var source As New JSONMBS(" { "+_
" ""title"": ""Goodbye!"","+_
" ""author"" : { "+_
" ""givenName"" : ""John"","+_
" ""familyName"" : ""Doe""""+_
" } ,"+_
" ""tags"": [ ""example"", ""sample"" ] ,"+_
" ""content"": ""This will be unchanged""""+_
" } ")

Var target As New JSONMBS(" { "+_
" ""title"": ""Hello!"","+_
" ""author"": { "+_
" ""givenName"": ""John""""+_
" } ,"+_
" ""tags"": [ "+_
" ""example""""+_
```

```
" ] ,"+_
" ""content"": ""This will be unchanged"",+_
" ""phoneNumber"": ""\u002B01-123-456-7890""+_
" } ")

Var patch As JSONMBS = JSONMBS.MergePatchFromDiff(source, target)

Var sourceText As String = source.toString(True)
Var targetText As String = target.toString(True)
Var PatchText As String = Patch.toString(True)

Break
```

Notes: The mergepatch function implement the IETF standard JSON Merge Patch
Returns a JSON Merge Patch.

111.3.48 Name(index As Integer) as String

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries key name at given index.
Example:

```
Var o As New JSONMBS

o.Value("Hello") = "World"

MessageBox o.Name(0)
```

Notes: Raises an exception if index is out of range.

Same as NameAt or KeyAt methods.
See also:

- 111.3.113 Name as String 16903

111.3.49 NameAt(index As Integer) as String

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries key name at given index.
Example:

```
Var o As New JSONMBS
```

```
o.Value("Hello") = "World"

MessageBox o.NameAt(0)
```

Notes: Raises an exception if index is out of range.

Same as Name or KeyAt methods.

111.3.50 Names as String()

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the key names for an object.
Example:

```
Var o As New JSONMBS

o.Value("Hello") = "World"
o.Value("Test") = "Value"

Var Names() As String = o.Names
MessageBox string.FromArray(Names)
```

Notes: The order is as stored in memory currently and that order changes if you edit the JSON object. We cache the array so multiple calls would return the same array and you should not modify it.

Same as Keys method.

111.3.51 NewArrayNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new node for an array.
Example:

```
Var n as JSONMBS = JSONMBS.NewArrayNode
MessageBox str(n.Type)+" = "+str(n.kTypeArray)
```

111.3.52 NewBooleanNode(value as Boolean) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a json array object with the given values.
Notes: This is a convenience method to quickly create an array.

111.3.53 NewBoolNode(value as boolean) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new boolean node.
Example:

```
Var j as JSONMBS = JSONMBS.NewBoolNode(true)
MessageBox j.toString
```

111.3.54 NewByteStringNode(Bytes as MemoryBlock) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new node for a byte string.
Example:

```
Var m As MemoryBlock = "Hello World"
Var j As JSONMBS = JSONMBS.NewByteStringNode(m)

MessageBox j.toString
// "SGVsbG8gV29ybGQ"
```

Notes: Creates a new JSONMBS object with type = kTypeByteString.
See also:

- 111.3.55 NewByteStringNode(Bytes as ptr, Length as UInt64) as JSONMBS 16877
- 111.3.56 NewByteStringNode(Bytes as String) as JSONMBS 16878

111.3.55 NewByteStringNode(Bytes as ptr, Length as UInt64) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new node for a byte string.
Example:

```
Var m As MemoryBlock = "Hello World"
Var p As ptr = m
Var size as integer = m.size
Var j As JSONMBS = JSONMBS.NewByteStringNode(p,size)
```

```
MessageBox j.toString
// "SGVsbG8gV29ybGQ"
```

Notes: Creates a new JSONMBS object with type = kTypeByteString.
See also:

- 111.3.54 NewByteStringNode(Bytes as MemoryBlock) as JSONMBS 16877
- 111.3.56 NewByteStringNode(Bytes as String) as JSONMBS 16878

111.3.56 NewByteStringNode(Bytes as String) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new node for a byte string.
Example:

```
Var j As JSONMBS = JSONMBS.NewByteStringNode("Hello World")

MessageBox j.toString
// "SGVsbG8gV29ybGQ"
```

Notes: Creates a new JSONMBS object with type = kTypeByteString.
See also:

- 111.3.54 NewByteStringNode(Bytes as MemoryBlock) as JSONMBS 16877
- 111.3.55 NewByteStringNode(Bytes as ptr, Length as UInt64) as JSONMBS 16877

111.3.57 NewCurrencyNode(value as Currency) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new currency value node.
Example:

```
Var c As Currency = 152.5678

Var j As JSONMBS = JSONMBS.NewCurrencyNode(c)

MessageBox j.toString
```

Notes: Internally we store number as string with a tag marking it as big decimal, so we output it as number. If you ask for double value, we convert it of course.

111.3.58 NewDoubleArray(values() as Double) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a json array object with the given values.
Example:

```
Var n() as Double = array(1.0,2,3)
Var j as JSONMBS = JSONMBS.NewDoubleArray(n)
MessageBox j.toString
```

Notes: This is a convenience method to quickly create an array.

Version 17.0 and newer return empty JSON array node in case of empty string array.
Older versions returned nil.

111.3.59 NewFalseNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new false node.
Example:

```
Var n as JSONMBS = JSONMBS.NewFalseNode
MessageBox str(n.Type)+" = "+str(n.kTypeFalse)
```

Notes: This is a node which represents a boolean false value.

111.3.60 NewInt32Array(values() as Int32) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a json array object with the given values.
Notes: This is a convenience method to quickly create an array.

111.3.61 NewInt64Array(values() as Int64) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a json array object with the given values.
Notes: This is a convenience method to quickly create an array.

111.3.62 NewInt64Node(value as Int64) as JSONMBS

MBS Util Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new node based on Int64 value.
Example:

```
Var x as int64 = 92233720368547758
Var n as JSONMBS = JSONMBS.NewInt64Node(x)

MessageBox "String: "+n.ValueString+EndOfLine+"ToString: "+n.toString+EndOfLine+"Double: "+str(n.ValueDouble,"-0")+EndOfLine+"Int64: "+str(n.ValueInteger,"-0")
```

111.3.63 NewIntegerArray(values() as Integer) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a json array object with the given values.
Example:

```
Var n() as Integer = array(1,2,3)
Var j as JSONMBS = JSONMBS.NewIntegerArray(n)
MessageBox j.toString
```

Notes: This is a convenience method to quickly create an array.

Version 17.0 and newer return empty JSON array node in case of empty string array.
Older versions returned nil.

111.3.64 NewNullNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new null node.
Example:

```
Var n as JSONMBS = JSONMBS.NewNullNode
MessageBox str(n.Type)+" = "+str(n.kTypeNull)
```

Notes: This is a node which represents a nil value.

111.3.65 NewNumberNode(value as Double) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number node.
Example:

```
Var n as JSONMBS = JSONMBS.NewNumberNode(123)
MessageBox str(n.Type)+" = "+str(n.kTypeNumber)
```

See also:

- 111.3.66 NewNumberNode(value as string) as JSONMBS 16881

111.3.66 NewNumberNode(value as string) as JSONMBS

MBS Util Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number node with given number as text.
Example:

```
Var n as JSONMBS = JSONMBS.NewNumberNode("92233720368547758")

MessageBox "String: "+n.ValueString+EndOfLine+"ToString: "+n.toString+EndOfLine+"Double: "+str(n.ValueDouble,"-0")+EndOfLine+"Int64: "+str(n.ValueInteger,"-0")
```

Notes: This allows you to control formatting of large integer and floating point values.
See also:

- 111.3.65 NewNumberNode(value as Double) as JSONMBS 16881

111.3.67 NewObjectNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object node.
Example:

```
Var n as JSONMBS = JSONMBS.NewObjectNode
MessageBox str(n.Type)+" = "+str(n.kTypeObject)
```

111.3.68 NewStringArray(values() as string) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a json array object with the given values.
Example:

```
Var n() as string = array("Hello", "World")
Var j as JSONMBS = JSONMBS.NewStringArray(n)
MessageBox j.toString
```

Notes: This is a convenience method to quickly create an array.

Version 17.0 and newer return empty JSON array node in case of empty string array.
Older versions returned nil.

111.3.69 NewStringNode(value as string) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string node.
Example:

```
// some string with single/double quote and EndOfLine
Var s as string = "Hello'World"+EndOfLine+"this is "" a test."

// make string node
Var j as JSONMBS = JSONMBS.NewStringNode(s)

// get as JSON
Var d as string = j.toString
// show
MessageBox d

// parse again
j = new JSONMBS(d)

MessageBox j.ValueString
```

111.3.70 NewTrueNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new true node.
Example:

```
Var n as JSONMBS = JSONMBS.NewTrueNode
MessageBox str(n.Type)+" = "+str(n.kTypeTrue)
```

Notes: This is a node which represents a boolean true value.

111.3.71 NewUInt32Array(values() as UInt32) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a json array object with the given values.
Notes: This is a convenience method to quickly create an array.

111.3.72 NewUInt64Array(values() as UInt64) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a json array object with the given values.
Notes: This is a convenience method to quickly create an array.

111.3.73 NewUInt64Node(value as UInt64) as JSONMBS

MBS Util Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new node based on UInt64 value.
Example:

```
Var x as UInt64 = 92233720368547758
Var n as JSONMBS = JSONMBS.NewUInt64Node(x)

MessageBox "String: "+n.ValueString+EndOfLine+"ToString: "+n.toString+EndOfLine+"Double: "+str(n.ValueDouble,"-0")+EndOfLine+"Int64: "+str(n.ValueInteger,"-0")
```

111.3.74 Operator_Compare(Other as JSONMBS) as Integer

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two JSONMBS objects.
Example:

```
Var o As New JSONMBS

o.add 1
o.add 2

Var j As New JSONMBS
```

```
j.add 1
j.add 2

If j = o Then
MessageBox "equal"
Else
MessageBox "not equal"
End If
```

Notes: Called automatically by Xojo if you use =, >and <operators.
Same as Compare method.

111.3.75 Operator_Convert as Variant()

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries all values as an array.
Example:

```
Var o As New JSONMBS

o.add 1
o.add 2

// auto convert on assignment
Var values() As Variant = o
Break // see debugger
```

Notes: Convenience function to get all values.
Converts values to variants as needed.

Works for both objects and arrays.
Same as Values method.
See also:

- 111.3.76 Operator_Convert(dic As Dictionary) 16884

111.3.76 Operator_Convert(dic As Dictionary)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object with the content of the dictionary.
Example:

```
Var d As New Dictionary
d.Value(1) = 2
d.Value("Hello") = "World"

Var j as JSONMBS = d

MessageBox j.toString(False)
```

Notes: Converts all dictionary values to JSON objects internally.
See also:

- 111.3.75 Operator_Convert as Variant() 16884

111.3.77 PatchFromDiff(source as JSONMBS, target as JSONMBS) as JSONMBS

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create a JSON Patch from a diff of two json documents.
Example:

```
Var source As New JSONMBS(" { ""/"": 9, ""foo"": ""bar"" } ")
Var target As New JSONMBS(" { ""baz"":""qux"", ""foo"": [ ""bar"", ""baz"" ] } ")

Var Patch As JSONMBS = JSONMBS.PatchFromDiff(source, target)

Var sourceText As String = source.toString(True)
Var targetText As String = target.toString(True)
Var PatchText As String = Patch.toString(True)

Break
```

Notes: Returns a JSON Patch.

The jsonpatch functions implement the IETF standard JavaScript Object Notation (JSON) Patch.

The JSON Patch IETF standard requires that the JSON Patch method is atomic, so that if any JSON Patch operation results in an error, the target document is unchanged. The patch function implements this requirement by generating the inverse commands and building an undo stack, which is executed if any part of the patch fails.
See also:

- 111.3.78 PatchFromDiff(source as JSONMBS, target as JSONMBS, KeyToCopy as String) as JSONMBS 16886

111.3.78 PatchFromDiff(source as JSONMBS, target as JSONMBS, KeyToCopy as String) as JSONMBS

MBS Util Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create a JSON Patch from a diff of two json documents.
Notes: Same as normal PatchFromDiff, but copies the given primary key field from JSON entries to the diff.
See also:

- 111.3.77 PatchFromDiff(source as JSONMBS, target as JSONMBS) as JSONMBS 16885

111.3.79 Query(Path as string, Options as Integer = 0) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a JSON Path query.
Example:

```
Var book1 As New JSONMBS
book1.Value("title") = "Sayings Of the Century"
book1.Value("price") = 8.95

Var book2 As New JSONMBS
book2.Value("title") = "Sword Of Honour"
book2.Value("price") = 12.99

Var bookArray As New JSONMBS
bookArray.Append book1
bookArray.Append book2

Var j As New JSONMBS
j.Value("book") = bookArray

MessageBox j.toString(True)
// shows
// {
// "book": [
// {
// "title": "Sayings Of the Century",
// "price": 8.95
// } ,
// {
// "title": "Sword Of Honour",
// "price": 12.99
// }
// ]
// }
```

```
Var r as JSONMBS = j.Query("$ .book [ ?(@.price <10) ] .title")
Var s As String = r.toString

MessageBox s
// shows [ "Sayings Of the Century" ]
```

Notes: Evaluates the root value against the JSONPath expression and returns an array of values or normalized path expressions.

Returns a JSON with an array containing either values or normalized path expressions matching the JSONPath expression, or an empty array if there is no match.

For options use kPathResultOptions* constants. Use OR to combine multiple flags.

kPathResultOptionsValue	Return values.
kPathResultOptionsNoDuplicates	Remove duplicates.
kPathResultOptionsSort	Sort results.
kPathResultOptionsPath	Return paths.

To learn more about JSONPath, please check this website:
https://goessner.net/articles/JsonPath/

Learn more about the JSONPath implementation here:
https://danielaparker.github.io/JsonCons.Net/articles/JsonPath/JsonConsJsonPath.html

See also Replace() to replace found values with new values.

111.3.80 Remove(Index as Integer)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes an entry by index.
Example:

```
Var o As New JSONMBS

o.add 1
o.add 2
o.add 3

MessageBox o.toString(False)
```

```
// remove middle item
o.Remove 1

MessageBox o.toString(false)
```

Notes: Works for arrays or objects.
For objects, prefer to delete by key name since removing an entry changes the order.

Same as RemoveAt method.
See also:

- 111.3.81 Remove(Key as string) 16888

111.3.81 Remove(Key as string)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the node with the given name.
Notes: Only for JSONMBS of type object.
See also:

- 111.3.80 Remove(Index as Integer) 16887

111.3.82 RemoveAt(Index as Integer)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes an entry by index.
Example:

```
Var o As New JSONMBS

o.add 1
o.add 2
o.add 3

MessageBox o.toString(False)

// remove middle item
o.RemoveAt 1

MessageBox o.toString(false)
```

Notes: Works for arrays or objects.

For objects, prefer to delete by key name since removing an entry changes the order.

Same as Remove method.

111.3.83 Replace(Path as string, NewValue as Variant) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for all values that match the JSONPath expression and replaces them with the specified value.
Example:

```
Var json As String = " { " +_
" ""books"":" +_
" [ " +_
" { " +_
" ""category"": ""fiction"","" +_
" ""title"" : ""A Wild Sheep Chase"","" +_
" ""author"" : ""Haruki Murakami"","" +_
" ""price"" : 22.72" +_
" } ," +_
" { " +_
" ""category"": ""fiction"","" +_
" ""title"" : ""The Night Watch"","" +_
" ""author"" : ""Sergei Lukyanenko"","" +_
" ""price"" : 23.58" +_
" } ," +_
" { " +_
" ""category"": ""fiction"","" +_
" ""title"" : ""The Comedians"","" +_
" ""author"" : ""Graham Greene"","" +_
" ""price"" : 21.99" +_
" } ," +_
" { " +_
" ""category"": ""memoir"","" +_
" ""title"" : ""The Night Watch"","" +_
" ""author"" : ""Phillips, David Atlee""" +_
" } " +_
" ] " +_
" } "

Var j As New JSONMBS(json)
Var n As JSONMBS = j.Replace("$ .books [ ?(@.title == 'A Wild Sheep Chase') ] .price", 123.0)

MessageBox n.toString(True)
```

Notes: Throws a JSONExceptionMBS if JSONPath evaluation fails.
Returns the modified copy of the JSON.

See also Query() function to just search without replace.

111.3.84 Search(Path as string) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a JMESPath query.
Example:

```
Var json As String = " { ""locations"": [ "+EndOfLine+_
" { ""name"": ""Seattle"", ""state"": ""WA"" } ,"+EndOfLine+_
" { ""name"": ""New York"", ""state"": ""NY"" } ,"+EndOfLine+_
" { ""name"": ""Bellevue"", ""state"": ""WA"" } ,"+EndOfLine+_
" { ""name"": ""Olympia"", ""state"": ""WA"" } "+EndOfLine+_
" ] } "
Var query As String = "locations [ ?state == 'WA' ] .name | sort(@) | { WashingtonCities: join(', ', @) } "

Var j As New JSONMBS(json)
Var r As JSONMBS = j.Search(query)

MessageBox r.toString
// { "WashingtonCities": "Bellevue, Olympia, Seattle" }
```

Notes: The jmespath extension implements JMESPath. JMESPath is a query language for transforming JSON documents into other JSON documents. It's supported in both the AWS and Azure CLI and has libraries available in a number of languages.

To learn more about JMESPath, please check this website:
https://jmespath.org

See also Query() for queries with JSONPath expressions.

111.3.85 Sort(Reverse as boolean = false)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sorts values in the array by values or objects by key names.
Example:

```
Var o As New JSONMBS
```

```
o.add 3
o.add 4
o.Add 1

o.Sort

MessageBox o.toString(False) // shows 1,3,4
```

Notes: Reverse can be set to true in order to reverse the order.

111.3.86 ToHTML(NoHeader as boolean = false, CSS as string = "") as String

MBS Util Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts JSON to HTML.
Notes: We build for you a HTML with tables for each array and object. We include values and tag rows with even/odd CSS classes.
If NoHeader is true, you get just the raw table without header/footer.
Anything in CSS parameter is inserted before the table.
Returns HTML, which can be loaded in htmlviewer.

Example for CSS to do even/odd line backgrounds:

```
/* CSS style to include */
"<style>
td
{
vertical-align:top;
}

.odd
{
background-color: white;
}

.even
{
background-color: #DDD;
}
</style>"
```

111.3.87 toString(formatted as boolean) as string

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Produces a JSON markup text document from a document tree.
Example:

```
Var o as JSONMBS = JSONMBS.NewObjectNode

o.AddItemToObject "text", JSONMBS.NewStringNode("Hello World")

MessageBox o.toString // shows " { "text":"Hello World" } "
```

Notes: Returns "" on any error. Lasterror is set.
See also:

- 111.3.119 toString as String 16905

111.3.88 ToToon as String

MBS Util Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the JSON to TOON.
Example:

```
Var j As JSONMBS = JSONMBS.NewObjectNode

j.Value("hello") = "world"
j.Value("test") = 123
j.value("values") = Array(1,2,3)

Var s As String = j.ToToon

Break
// produces this toon:

// hello: world
// test: 123
// values [ 3 ] : 1,2,3
```

Notes: The Token-Oriented Object Notation is a human-readable encoding of the JSON data model that minimizes tokens and makes structure easy for models to read. You can use it with LLM instead of JSON.

see also
https://github.com/toon-format/toon

111.3.89 Unflatten(value as JSONMBS) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unflattens that object back to the original json.
Example:

```
Var t As String = " { ""$ [ 'Hello' ] "":""World"",""$ [ 'test' ] "":123 } "

Var f As New JSONMBS(t)
Var j As JSONMBS = JSONMBS.Unflatten(f)

Var s As String = j.toString

MessageBox s
// shows: { "Hello":"World","test":123 }
```

Notes: The keys in the flattened object are normalized json paths. The values are primitive (string, number, boolean, or null), empty object ({ }) or empty array ([ ]).

111.3.90 Values as Variant()

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries all values as an array.
Notes: Convenience function to get all values.
Converts values to variants as needed.

Works for both objects and arrays.
Same as Operator_Convert method.

111.3.91 Properties

111.3.92 ArraySize as Integer

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries size of array.
Notes: For objects returns number of keys.
Same as Count property.
(Read only property)

111.3.93 ByteStringEncoding as Integer

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Which byte string encoding to use.
Example:

```
Var mem As MemoryBlock = "Hello World"

Var dic As New Dictionary
dic.Value("test") = mem

Var j As New JSONMBS(dic)
j.ByteStringEncoding = j.kByteStringEncodingBase64
MessageBox j.toString
// { "test":"SGVsbG8gV29ybGQ=" }
```

Notes: Mainly used for encoding MemoryBlocks included in Dictionaries.
Default is Base64.
(Read and Write property)

111.3.94 CaseSensitive as Boolean

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to find keys with wrong case.
Example:

```
JSONMBS.CaseSensitive = False

Var f As New JSONMBS

f.value("Hello") = "World"

// finds match
Var b1 As Boolean = f.HasKey("hello")
Var v1 As Variant = f.Value("hello")

JSONMBS.CaseSensitive = True

Var b2 As Boolean = f.HasKey("Hello")
Var v2 As Variant = f.Value("Hello")

// now try with wrong case...
Var b3 As Boolean = f.HasKey("hello")
Var v3 As Variant = f.Value("hello") // ->exception
```

```
Break
```

Notes: By default JSON is case sensitive. You can have a key "a" and another key "A" with different values in an object.
If you set CaseSensitive to true, the plugin will look case insensitive to find a match.
(Read and Write property)

111.3.95 ChildNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first child node.
Example:

```
Var o as JSONMBS = JSONMBS.NewArrayNode

o.AddItemToArray JSONMBS.NewNumberNode(1)
o.AddItemToArray JSONMBS.NewNumberNode(2)
o.AddItemToArray JSONMBS.NewNumberNode(3)
o.AddItemToArray JSONMBS.NewNumberNode(4)

Var n as JSONMBS = o.ChildNode // first child
MessageBox n.ValueString // shows 1
```

Notes: Please move to newer iterator functions instead.
(Read only property)

111.3.96 Compact as Boolean

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to prefer compact output for toString property.
Example:

```
Var j As New JSONMBS
j.Value("Hello") = "World"

Var s As String = j.toString
j.compact = false
Var f As String = j.toString

Break // see difference?
```

Notes: Default is true.

Set to false to get formatted output.
Or call ToString method with parameter.
(Read and Write property)

111.3.97 Count as Integer

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries size of array.
Example:

```
Var o As New JSONMBS

o.add 1
o.add 2
o.add 3

MessageBox o.Count.ToString // shows 3
```

Notes: For objects returns number of keys.
Same as ArraySize property.
(Read only property)

111.3.98 Handle as Integer

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal handle to the JSON object.
Notes: It is possible to have two Xojo objects with the same handle pointing to the same JSON node.
(Read only property)

111.3.99 IndentSize as Integer

MBS Util Plugin, Plugin Version: 26.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The indent size.
Notes: Default to 4 for 4 spaces.
(Read and Write property)

111.3.100 IsArray as Boolean

MBS Util Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this object represents an array.
Notes: Returns true if type is kTypeArray.
(Read only property)

111.3.101 IsBoolean as Boolean

MBS Util Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this object represents a boolean value.
Notes: Returns true if type is kTypeTrue or kTypeFalse.
(Read only property)

111.3.102 IsEmpty as Boolean

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the value is empty.
Example:

```
Var j As New JSONMBS

Var empty1 As Boolean = j.IsEmpty // true

j.Value("hello") = "world"

Var empty2 As Boolean = j.IsEmpty // false

Break
```

Notes: Whether a string, array or object is empty and has no content.
Boolean or numerical values are not empty.
(Read only property)

111.3.103 IsInt32 as Boolean

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is an 64-bit integer number.
Example:

```
Var j1 As JSONMBS = JSONMBS.NewNumberNode(1234)
Var j2 As JSONMBS = JSONMBS.NewNumberNode(1234.4)
Var j3 As JSONMBS = JSONMBS.NewNumberNode(12343456789435234523)
Var j4 As JSONMBS = JSONMBS.NewNumberNode(-6578904953445453)
Var j5 as JSONMBS = JSONMBS.NewStringNode("Hello")

Var b1 As Boolean = j1.IsInt32 // okay
Var b2 As Boolean = j2.IsInt32 // has decimals
Var b3 As Boolean = j3.IsInt32 // too big
Var b4 As Boolean = j4.IsInt32 // too small
Var b5 As Boolean = j5.IsInt32 // is string

Break
```

Notes: Returns true if

- it is type number
- it is in the range for int32.
- it is not with decimal digits after the dot.

(Read only property)

111.3.104 IsInt64 as Boolean

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is an 64-bit integer number.
Example:

```
Var j1 As JSONMBS = JSONMBS.NewNumberNode(1234)
Var j2 As JSONMBS = JSONMBS.NewNumberNode(1234.4)
Var j3 As JSONMBS = JSONMBS.NewNumberNode(1234345673389435234523.0)
Var j4 As JSONMBS = JSONMBS.NewNumberNode(-65789049333353445453.0)
Var j5 As JSONMBS = JSONMBS.NewStringNode("Hello")

Var b1 As Boolean = j1.IsInt64 // okay
Var b2 As Boolean = j2.IsInt64 // has decimals
Var b3 As Boolean = j3.IsInt64 // too big
Var b4 As Boolean = j4.IsInt64 // too small
Var b5 As Boolean = j5.IsInt64 // is string

Break
```

Notes: Returns true if

- it is type number
- it is in the range for int64.
- it is not with decimal digits after the dot.

(Read only property)

111.3.105 IsNull as Boolean

MBS Util Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this object represents a NULL value.
Notes: Returns true if type is kTypeNull.
(Read only property)

111.3.106 IsNumber as Boolean

MBS Util Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this object represents a numberic value.
Notes: Returns true if type is int64, uint64, half or double.

If type is string, we check semantic tag and return true for big decimal, big int, big float ot float 128bit, so this is a numeric type.
(Read only property)

111.3.107 IsObject as Boolean

MBS Util Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this object represents an object.
Notes: Returns true if type is kTypeObject.
(Read only property)

111.3.108 IsUInt32 as Boolean

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is an 32-bit unsigned integer number.
Example:

```
Var j1 As JSONMBS = JSONMBS.NewNumberNode(1234)
Var j2 As JSONMBS = JSONMBS.NewNumberNode(1234.4)
Var j3 As JSONMBS = JSONMBS.NewNumberNode(12343456789435234523)
Var j4 As JSONMBS = JSONMBS.NewNumberNode(-6578904953445453)
Var j5 as JSONMBS = JSONMBS.NewStringNode("Hello")

Var b1 As Boolean = j1.IsUInt32 // okay
Var b2 As Boolean = j2.IsUInt32 // has decimals
Var b3 As Boolean = j3.IsUInt32 // too big
Var b4 As Boolean = j4.IsUInt32 // too small
Var b5 As Boolean = j5.IsUInt32 // is string

Break
```

Notes: Returns true if

- it is type number
- it is in the range for uint32.
- it is not with decimal digits after the dot.

(Read only property)

111.3.109 IsUInt64 as Boolean

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is an 64-bit unsigned integer number.
Example:

```
Var j1 As JSONMBS = JSONMBS.NewNumberNode(1234)
Var j2 As JSONMBS = JSONMBS.NewNumberNode(1234.4)
Var j3 As JSONMBS = JSONMBS.NewNumberNode(1234345673389435234523.0)
Var j4 As JSONMBS = JSONMBS.NewNumberNode(-65789049333353445453.0)
Var j5 As JSONMBS = JSONMBS.NewStringNode("Hello")

Var b1 As Boolean = j1.IsUInt64 // okay
Var b2 As Boolean = j2.IsUInt64 // has decimals
Var b3 As Boolean = j3.IsUInt64 // too big
Var b4 As Boolean = j4.IsUInt64 // too small
Var b5 As Boolean = j5.IsUInt64 // is string

Break
```

Notes: Returns true if

- it is type number
- it is in the range for uint64.
- it is not with decimal digits after the dot.

(Read only property)

111.3.110 LastChildNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last child node.
Example:

```
Var o as JSONMBS = JSONMBS.NewArrayNode

o.AddItemToArray JSONMBS.NewNumberNode(1)
o.AddItemToArray JSONMBS.NewNumberNode(2)
o.AddItemToArray JSONMBS.NewNumberNode(3)
o.AddItemToArray JSONMBS.NewNumberNode(4)

Var k as JSONMBS = o.LastChildNode
```

```
MessageBox k.ValueString // shows 4
```

Notes: (Read only property)

111.3.111 LastRowIndex as Integer

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries last row index.
Example:

```
Var j As New JSONMBS

j.add 1
j.add 2
j.add 3

MessageBox j.LastRowIndex.ToString // shows 2
```

Notes: Same as Count-1.
(Read only property)

111.3.112 LineLengthLimit as Integer

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The line length limit.
Example:

```
Var jj As New JSONMBS
For i As Integer = 1 To 20
jj.Append i
next

Var j As New JSONMBS
j.Compact = False
j.Value("Hello") = jj
Var s1 As String = j.toString
j.LineLengthLimit = 60
Var s2 As String = j.toString

// second text has a line break after 14
MessageBox s1+EndOfLine+s2
```

Notes: By default is 120.
(Read and Write property)

111.3.113 Name as String

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of this node.
Notes: (Read only property)
See also:

- 111.3.48 Name(index As Integer) as String 16875

111.3.114 NewLineCharacters as String

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The new line character to use.
Example:

```
Var j As New JSONMBS
j.Compact = false
j.Value("Hello") = "World"
Var s1 As String = j.toString
j.NewLineCharacters = EndOfLine.Windows
Var s2 As String = j.toString

MessageBox s1.len.toString+EndOfLine+s2.len.toString // 24 vs 26
```

Notes: Default is EndOfLine.Unix which is Chr(10).
Can be set to others like EndOfLine.Windows if needed.
(Read and Write property)

111.3.115 NextNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The next node on the same level.
Example:

```
Var o as JSONMBS = JSONMBS.NewArrayNode

o.AddItemToArray JSONMBS.NewNumberNode(1)
o.AddItemToArray JSONMBS.NewNumberNode(2)
```

```
o.AddItemToArray JSONMBS.NewNumberNode(3)
o.AddItemToArray JSONMBS.NewNumberNode(4)

Var k as JSONMBS = o.ChildNode
while k<>nil
MessageBox k.ValueString // shows 1, 2, 3, 4

k=k.NextNode
wend
```

Notes: Please move to newer iterator functions instead.
(Read only property)

111.3.116 PreviousNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The previous node on the same level.
Example:

```
Var o as JSONMBS = JSONMBS.NewArrayNode

o.AddItemToArray JSONMBS.NewNumberNode(1)
o.AddItemToArray JSONMBS.NewNumberNode(2)
o.AddItemToArray JSONMBS.NewNumberNode(3)
o.AddItemToArray JSONMBS.NewNumberNode(4)

Var k as JSONMBS = o.LastChildNode
while k<>nil
MessageBox k.valuestring // shows 4, 3, 2, 1

k=k.PreviousNode
wend
```

Notes: Please move to newer iterator functions instead.
(Read only property)

111.3.117 Root as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The root object.
Notes: The root node owns the references to all children.
(Read only property)

111.3.118 Tag as Integer

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The semantic tag.
Notes: This can give a value as more detailed meaning on the usage.
e.g. we often have strings to hold numbers to preserve all digits.
(Read only property)

111.3.119 toString as String

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Produces a JSON markup text document from a document tree.
Example:

```
Var o as JSONMBS = JSONMBS.NewObjectNode

o.AddItemToObject "text", JSONMBS.NewStringNode("Hello World")

MessageBox o.toString // shows " { "text":"Hello World" } "
```

Notes: Returns "" on any error. Lasterror is set.
(Read only property)
See also:

- 111.3.87 toString(formatted as boolean) as string 16892

111.3.120 Type as Integer

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the node.
Example:

```
Var n as JSONMBS = JSONMBS.NewNullNode

MessageBox str(n.Type)
```

Notes: (Read only property)

111.3.121 TypeName as String

MBS Util Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shows type of this node as string.
Example:

```
Var o as JSONMBS = JSONMBS.NewArrayNode
MessageBox o.TypeName
```

Notes: This property was added for debugging so you can see type in debugger.
(Read only property)

111.3.122 Valid as Boolean

MBS Util Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether node is valid.
Notes: The handle is not zero and there are no error nodes in JSON tree.
Returns true if valid, else false.
(Read only property)

111.3.123 Value as Variant

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the value of this JSON.
Example:

```
Var j1 As JSONMBS = JSONMBS.NewStringNode("Hello World")
Var v1 As Variant = j1.Value
Var j2 As JSONMBS = JSONMBS.NewNumberNode(123)
Var v2 As Variant = j2.Value
Var j3 As JSONMBS = JSONMBS.NewNumberNode("1234.567")
Var v3 As Variant = j3.Value
Var j4 As JSONMBS = JSONMBS.NewCurrencyNode(123.4567)
Var v4 As Variant = j4.Value

Break
```

Notes: Converts value to variant.
(Read only property)
See also:

- 111.3.135 Value(index As Integer) as Variant 16911

• 111.3.136 Value(Key As String) as Variant 16911

111.3.124 ValueBoolean as Boolean

MBS Util Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The boolean value of this json node.
Notes: Returns true if type is kTypeTrue, false if kTypeFalse or true if ValueInteger <>0.
(Read only property)

111.3.125 ValueByteString as MemoryBlock

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries byte string as MemoryBlock
Example:

```
Var mem As MemoryBlock = "Hello World"

// we send a MemoryBlock into our JSON
Var dic As New Dictionary
dic.Value("test") = mem

Var j As New JSONMBS(dic)
MessageBox j.toString // auto encodes it as base64

// let's query value from child()
Var jm As JSONMBS = j.Child("test")
Var m1 As MemoryBlock = jm.ValueByteString

// and query via value()
Var m2 As MemoryBlock = j.Value("test")

Break
```

Notes: Returns nil if type is not kTypeByteString.
(Read only property)

111.3.126 ValueDouble as Double

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the node.
Notes: (Read only property)

111.3.127 ValueInt64 as Int64

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Int64 value of the node.
Notes: If the node is an Int64, we return it.
Otherwise we try to convert it.
May raise exception if value can't be converted.
(Read only property)

111.3.128 ValueInteger as Integer

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Integer value of the node.
Notes: If the node is an integer, we return it.
Otherwise we try to convert it.
May raise exception if value can't be converted.
(Read only property)

111.3.129 ValueString as String

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the node.
Notes: (Read only property)

111.3.130 ValueUInt64 as UInt64

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The UInt64 value of the node.
Notes: If the node is an UInt64, we return it.
Otherwise we try to convert it.
May raise exception if value can't be converted.
(Read only property)

111.3.131 Child(index As Integer) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set child node.
Example:

```
Var o As New JSONMBS

o.add 1
o.add 2
o.add 3

o.Child(1) = JSONMBS.NewNullNode

Var v As JSONMBS = o.Child(2) // see in debugger

MessageBox o.toString
```

Notes: If the self is an empty object, we replace it with an empty array and add the value.

Same as ChildAt method
Raises exception if index is out of range.
(Read and Write computed property)
See also:

- 111.3.132 Child(Key As String) as JSONMBS 16909

111.3.132 Child(Key As String) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set the child node.
Notes: If the self is an empty array, we replace it with an empty object and add the value.
Raises an exception if the value is not found.
(Read and Write computed property)
See also:

- 111.3.131 Child(index As Integer) as JSONMBS 16909

111.3.133 ChildAt(index As Integer) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set child node.
Example:

```
Var o As New JSONMBS

o.add 1
o.add 2
o.add 3

o.ChildAt(1) = JSONMBS.NewNullNode

Var v As JSONMBS = o.ChildAt(2) // see in debugger

MessageBox o.toString
```

Notes: If the self is an empty object, we replace it with an empty array and add the value.

Same as ChildAt method.
Raises exception if index is out of range.
(Read and Write computed property)

111.3.134 Operator_Subscript(index As Integer) as Variant

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set value at given index.
Example:

```
Var o As New JSONMBS

o(0) = "Hello"
o(1) = "World"
o(2) = "test"

MessageBox o.toString
MessageBox o(1)
```

Notes: Variant is converted to JSONMBS if needed.
Index must be in range from 0 to Count. If index is equal to count, we append the value on setting.

If the self is an empty object, we replace it with an empty array and add the value.

Same as ValueAt or Operator_Subscript.
(Read and Write computed property)

111.3.135 Value(index As Integer) as Variant

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set value at given index.
Example:

```
Var o As New JSONMBS

o.value(0) = "Hello"
o.value(1) = "World"
o.value(2) = "test"

MessageBox o.toString
MessageBox o.Value(1)
```

Notes: Variant is converted to JSONMBS if needed.
Index must be in range from 0 to Count. If index is equal to count, we append the value on setting.

If the self is an empty object, we replace it with an empty array and add the value.

Same as ValueAt or Operator_Subscript.
Raises exception if index is out of range.
(Read and Write computed property)
See also:

- 111.3.123 Value as Variant 16906
- 111.3.136 Value(Key As String) as Variant 16911

111.3.136 Value(Key As String) as Variant

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set a value in an object by key name.
Example:

```
Var c As Currency = 1.2345
Var d as Double = c

Var j As New JSONItem
j.Value("test") = d // can't use c here!

Var m As New JSONMBS
m.Value("test") = c

MessageBox j.ToString+EndOfLine+m.toString
```

// shows { "test":1.2344999999999999307 } vs { "test":1.2345 } since MBS stores currency exactly.

Notes: Variant is converted to or from JSONMBS if needed.
Return value as variant.
Raises an exception if the value is not found.
(Read and Write computed property)
See also:

- 111.3.123 Value as Variant 16906
- 111.3.135 Value(index As Integer) as Variant 16911

111.3.137 ValueAt(index As Integer) as Variant

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set value at given index.
Example:

```
Var o As New JSONMBS

o.ValueAt(0) = "Hello"
o.ValueAt(1) = "World"
o.ValueAt(2) = "test"

MessageBox o.toString
MessageBox o.ValueAt(1)
```

Notes: Variant is converted to JSONMBS if needed.
Index must be in range from 0 to Count. If index is equal to count, we append the value on setting.

If the self is an empty object, we replace it with an empty array and set the value.

Same as Value or Operator_Subscript.
Raises exception if index is out of range.
(Read and Write computed property)

111.3.138 Constants

Byte String Encoding

Constant	Value	Description
kByteStringEncodingBase64	2	Base64 encoding
kByteStringEncodingBase64URL	3	Base64 URL encoding
kByteStringEncodingHex	1	Hex encoding.
kByteStringEncodingNone	0	Fallback to default behavior.

Query Result Options

Constant	Value	Description
kPathResultOptionsNoDuplicates	1	Remove duplicates.
kPathResultOptionsPath	4	Return paths.
kPathResultOptionsSort	2	Sort results.
kPathResultOptionsValue	0	Return value.

Tags

Constant	Value	Description
kTagBase16	&h1a	Base16 (Hex)
kTagBase64	&h1b	base64
kTagBase64url	&h1c	base64 URL
kTagBigDec	7	Big decimal
kTagBigFloat	8	Big Float
kTagBigInt	6	Big Integer
kTagClamped	&h0e	clamped
kTagCode	&h14	code
kTagDateTime	2	DateTime
kTagEpochMilli	4	epoch-milli
kTagEpochNano	5	epoch-nano
kTagEpochSecond	3	epoch-second
kTagExt	&h11	ext
kTagFloat128	9	Float 128 bit
kTagId	&h12	id
kTagMultiDimColumnMajor	&h10	multi-dim-column-major
kTagMultiDimRowMajor	&h0f	multi-dim-row-major
kTagNone	0	n/a
kTagRegex	&h13	regex
kTagUndefined	1	undefined
kTagURI	&h0d	URI

Types

Constant	Value	Description
kTypeArray	8	For an array node.
kTypeBoolean	1	For a boolean node.
kTypeByteString	7	For a byte string node. Currently only used for MemoryBlocks passed via Variant.
kTypeDouble	5	For a double node.
kTypeInt64	2	For a Int64 node.
kTypeNull	0	For a null node.
kTypeObject	9	For a object node.
kTypeSingle	4	For a single node.
kTypeString	6	For a string node. Also applies to big numbers.
kTypeUInt64	3	For an uint64 node.

Chapter 112

JPEG

112.1 class JPEG2000MBS

112.1.1 class JPEG2000MBS

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for compress/decompress of JPEG 2000 images.
Example:

```
Var file as FolderItem = New FolderItem("test.jp2")
Var stream as BinaryStream = BinaryStream.Open(file)
Var data as string = stream.Read(stream.Length)

Var jp2 as new JPEG2000MBS
if jp2.InitDecompress(data) then
MessageBox str(jp2.Width)+" x "+str(jp2.Height)
end if
```

Notes: Currently only supports RGB, RGBA and Grayscale images.

Please note that Jasper library used here is not very memory efficient and may run out of memory with huge images.
Blog Entries

- MBS Xojo Plugins, version 25.6pr2

- MBS Xojo / Real Studio Plugins, version 15.4pr4

112.1.2 Methods

112.1.3 Close

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs cleanup.
Notes: Called automatically by destructor for you.
You can call it after you are done to free memory now.

112.1.4 Compress as Boolean

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compresses image.
Notes: Please use first InitCompress, than loop over rows and use SetRow to fill in data.
This method will compress image and set ImageData property.
Returns true on success and false on failure.

112.1.5 Decode(Data as MemoryBlock) as Picture

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a JPEG 2000 images.
Example:

```
Var p as Picture = LogoMBS(200)

Var j80 as MemoryBlock = JPEG2000MBS.Encode(p, 80)
Var p80 as Picture = JPEG2000MBS.Decode(j80)

Window1.Backdrop = p80
```

Notes: Returns on success the picture object.
Can raise exception if data is invalid.
See also:

- 112.1.6 Decode(Data as string) as Picture

112.1.6 Decode(Data as string) as Picture

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a JPEG 2000 images.
Notes: Returns on success the picture object.
Can raise exception if data is invalid.
See also:

- 112.1.5 Decode(Data as MemoryBlock) as Picture 16916

112.1.7 Encode(pic as picture, Quality as Integer = 80) as MemoryBlock

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encodes a picture as JPEG 2000 image.
Example:

```
Var p as Picture = LogoMBS(200)

Var j80 as MemoryBlock = JPEG2000MBS.Encode(p, 80)
Var p80 as Picture = JPEG2000MBS.Decode(j80)

Window1.Backdrop = p80
```

Notes: Returns image data on success or nil on failure.

112.1.8 GetRow(Index as Integer, Row as MemoryBlock = nil) as MemoryBlock

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries image data for a row.
Notes: If you pass in a memoryblock, we use it, else we create a new one.
So you can pass in memoryblock from last call to GetRow.
Returns nil in case of error.

112.1.9 InitCompress(Width as Integer, Height as Integer, BytesPerPixel as Integer, BytesPerRow as Integer = 0) as Boolean

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the compression for a new image.
Example:

```
Var p as Picture = LogoMBS(200)
Var pp as new PictureMBS(p)
```

```
// compress RGB in PictureMBS
Var je as new JPEG2000MBS
if je.InitCompress(pp.Width, pp.Height, 3, pp.RowSize) then
Var h as Integer = pp.Height-1

for i as Integer = 0 to h
Var rowData as MemoryBlock = pp.RowInFormat(i, pp.ImageFormatRGB)
if not je.SetRow(i, rowData) then
Break
exit
end if
next
if je.Compress then
Var ImageData as MemoryBlock = je.ImageData
if ImageData <>nil then
// and decode to show
Var pic as Picture = JPEG2000MBS.Decode(ImageData)
Window1.Backdrop = pic
end if
end if
end if
```

Notes: Returns true on success or false on failure.
If BytesPerRow is zero, we calculate it based on BytesPerPixel and Width.
BytesPerPixel can be 1 for gray, 3 for RGB and 4 for RGBA.

112.1.10 InitDecompress(ImageData as MemoryBlock) as Boolean

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the decompression for given image data.
Example:

```
Var p as Picture = LogoMBS(200)

Var j80 as MemoryBlock = JPEG2000MBS.Encode(p, 80)

// decompress to PictureMBS
Var jd as new JPEG2000MBS

if jd.InitDecompress(j80) then
Var pi as new PictureMBS(jd.Width, jd.Height, PictureMBS.ImageFormatRGB)
Var h as Integer = pi.Height-1

Var r as MemoryBlock
for i as Integer = 0 to h
```

```
// get row. Recycle MemoryBlock, so we don't create new one each row.
r = jd.getRow(i, r)
pi.RowInFormat(i, pi.ImageFormatRGB) = r
next

// get picture
Window1.Backdrop = pi.CopyPicture
end if
```

Notes: Returns true on success or false on failure.
BytesPerPixel is set to 1 for gray, 3 for RGB and 4 for RGBA.

112.1.11 SetRow(Index as Integer, Row as MemoryBlock) as Boolean

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets data for a row.
Notes: Returns true on success.

112.1.12 Properties

112.1.13 BytesPerPixel as Integer

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes per pixel.
Notes: One for gray, 3 for RGB and 4 for RGBA.
Set by InitCompress or InitDecompress.
(Read only property)

112.1.14 BytesPerRow as Integer

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The bytes per row.
Notes: Only used to create memoryblock or check memoryblock size.
Set by InitCompress or InitDecompress.
(Read only property)

112.1.15 Height as Integer

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the image.
Notes: Set by InitCompress or InitDecompress.
(Read only property)

112.1.16 ImageData as MemoryBlock

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image data.
Notes: Set by Compress method on success.
(Read only property)

112.1.17 Options as String

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Options to pass to Jasper library for compression.
Notes: e.g. "rate=80"
(Read and Write property)

112.1.18 Width as Integer

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the image.
Notes: Set by InitCompress or InitDecompress.
(Read only property)

112.2 class JPEGExporterMBS

112.2.1 class JPEGExporterMBS

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for JPEG Exporting.
Example:

```
Var g as FolderItem
Var ji as JPEGImporterMBS
Var je as JPEGExporterMBS
Var f as FolderItem
Var m as MemoryBlock

// this code copies a JPG: CMYK or RGB

// import it
g=SpecialFolder.Desktop.Child("PICT1533.JPG")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.CMYK=true // if it is cmyk
if ji.InitJPEG then
do
loop until ji.LoopJPEG<>0
ji.FinishJPEG
end if

// export it
f=SpecialFolder.Desktop.child("PICT1533 copy.JPG")
je=new JPEGExporterMBS
je.File=f
je.Quality=75

if ji.CMYK then
m=ji.PictureData
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
else
je.Picture=ji.Picture
je.Export
end if
```

Notes: This class is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 100 KB big!

Bases on libjpeg.

112.2.2 Methods

112.2.3 Export

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Exports the picture.
Example:

```
Var g as FolderItem
Var ji as JPEGImporterMBS
Var je as JPEGExporterMBS
Var f as FolderItem
Var m as MemoryBlock

// this code copies a JPG: CMYK or RGB

// import it
g=SpecialFolder.Desktop.Child("PICT1533.JPG")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.CMYK=true // if it is cmyk
if ji.InitJPEG then
do
loop until ji.LoopJPEG<>0
ji.FinishJPEG
end if
```

```
// export it
f=SpecialFolder.Desktop.child("PICT1533 copy.JPG")
je=new JPEGExporterMBS
je.File=f
je.Quality=75

if ji.CMYK then
m=ji.PictureData
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
else
je.Picture=ji.Picture
je.Export
end if
```

Notes: This methods saves 32bit pictures to a file using JPEG Compression. Using the properties of the class you can specify the quality in range between 0 and 100%

This method is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 100 KB big!

You may use the function picture.bitmap to make sure that the picture is a bitmap, because this function works only for bitmap pictures.

This method uses the YieldTicks property and may yield time to other threads.

112.2.4 ExportCMYK(data as memoryblock, width as UInt32, height as UInt32, rowbytes as UInt32)

MBS Images Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Exports a picture from CMYK data in a memoryblock.
Example:

```
Var g as FolderItem
Var ji as JPEGImporterMBS
Var je as JPEGExporterMBS
Var f as FolderItem
Var m as MemoryBlock

// import it
g=FolderItem.ShowOpenFileDialog("image/jpeg")
ji=new JPEGImporterMBS
ji.File=g
```

```
ji.AllowDamaged=true
ji.ImportCMYK

m=ji.PictureData

// export it
f=SpecialFolder.Desktop.child("test.jpg")
je=new JPEGExporterMBS
je.HorizontalResolution=300
je.VerticalResolution=300
je.ResolutionUnit=1
je.File=f
je.Quality=75
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
```

Notes: This methods saves 32bit CMYK pictures to a file using JPEG Compression. Using the properties of the class you can specify the quality in range between 0 and 100%

This method is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 100 KB big!

The picture must be in the format that one byte is used for each channel and the channels are ordered in memory in Cyan, Magenta, Yellow and Black.
If rowbytes is 0, the plugin uses width*4 for rowbytes.

This method uses the YieldTicks property and may yield time to other threads.

112.2.5 ExportGray

MBS Images Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Exports an 8 bit grayscale picture.
Notes: Same as Export, but writes grayscale picture. The picture from picture property is converted to grayscale internally for this.
See also:

- 112.2.6 ExportGray(data as memoryblock, width as UInt32, height as UInt32, rowbytes as UInt32) 16924

112.2.6 ExportGray(data as memoryblock, width as UInt32, height as UInt32, rowbytes as UInt32)

MBS Images Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Exports an 8 bit grayscale picture.
Notes: Same as Export, but writes grayscale picture using data in memoryblock.
If rowbytes is 0, the plugin uses width for rowbytes.
This method uses the YieldTicks property and may yield time to other threads.
See also:

- 112.2.5 ExportGray 16924

112.2.7 ExportRGB(data as memoryblock, width as UInt32, height as UInt32, rowbytes as UInt32)

MBS Images Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Exports a picture from RGB data in a memoryblock.
Example:

```
Var f as FolderItem
Var ji as new JPEGImporterMBS
Var je as new JPEGExporterMBS
Var m as MemoryBlock
Var i,c as Integer

// read jpeg
f=SpecialFolder.Desktop.Child("input.jpg")

ji.Mode=ji.ModeRGB // read RGB to memoryblock
ji.File=f
ji.Import

m=ji.PictureData

// add red
c=m.Size-1
for i=0 to c step 3
m.Byte(i)=255
next

// write jpeg
f=SpecialFolder.Desktop.Child("test.jpg")

je.File=f
je.ExportRGB(m,ji.Width, ji.Height, ji.Width*3)
```

Notes: The memoryblock data must be in the format with bytes in the order RGB.

112.2.8 ExportRGBwithRowDataEvent(width as UInt32, height as UInt32, rowbytes as UInt32)

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Exports a picture from RGB data in memoryblocks from the GetRowData event.
Notes: You need to implement the GetRowData event by subclassing this class.
The memoryblock data must be in the format with bytes in the order RGB.

112.2.9 GetJPEGVersion as String

MBS Images Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries JPEG library version.
Notes: Currently reporting 9.1 for version 9b.

112.2.10 SetAPI(API as Ptr = nil)

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets API to use.
Example:

```
// switch API to libjpeg-turbo:
JPEGExporterMBS.SetAPI JPEGTurboMBS.API
JPEGImporterMBS.SetAPI JPEGTurboMBS.API
```

Notes: Set to nil to use built in jpeglib.
Can be set to JPEGTurboMBS.API to use libjpeg-turbo.

Changing API while you have instances of JPEGExporterMBS or methods in use on other thread using the JPEG Library, may result in a crash.

112.2.11 Properties

112.2.12 API as String

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries name of API used.
Notes: Either libjpeg or libjpeg-turbo.

(Read only property)

112.2.13 data as string

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination string.
Notes: If file is nil, the compressed data is saved in this property.

The returned string has the encoding set to MacRoman. If you want to concat the string with another you should change the encoding, so both strings have the same encoding. If you don't handle that RB may convert the JPEG data to UTF8 (Unicode) which will destroy it.
(Read and Write property)

112.2.14 DCTMethod as Integer

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Which DCT/IDCT algorithm to use.
Notes: Possible values:

-1	Plugin does not change setting
0	slow but accurate integer algorithm (default)
1	faster, less accurate integer method
2	floating-point: accurate, fast on fast Hardware

Default is Integer slow.
(Read and Write property)

112.2.15 ErrorCode as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error code from the Export method.
Example:

```
Var j as new JPEGExporterMBS

// do something
```

```
MessageBox str(j.ErrorCode)+" "+j.ErrorMessage
```

Notes: The last function was successful if ErrorCode is 0.
If the parameters are not valid, the value is set to -1.
Other values are Mac OS error codes.
(Read and Write property)

112.2.16 ErrorMessage as string

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message reported.
Example:

```
Var j as new JPEGExporterMBS

// do something

MessageBox j.ErrorMessage
```

Notes: (Read and Write property)

112.2.17 EXIFData as String

MBS Images Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The EXIF data for this file.
Example:

```
// Read a picture file
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var ji as new JPEGImporterMBS

ji.ReadExifData=true
ji.File=f
ji.Import

// Write a new picture file
Var o as FolderItem = SpecialFolder.Desktop.Child("out.jpg")
Var je as new JPEGExporterMBS

je.File=o
je.EXIFData = ji.ExifData
je.Picture = ji.Picture
```

```
je.Export
```

Notes: The export methods use this property.
(Read and Write property)

112.2.18 file as folderitem

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination file.
Example:

```
Var p as Picture = LogoMBS(500)

'Save the scan
Var je as new JPEGExporterMBS
je.file = SpecialFolder.Desktop.Child("just a test.jpg")
je.quality = 75
je.picture = p
je.VerticalResolution = 72
je.HorizontalResolution = 72
je.ResolutionUnit = 1
je.export
```

Notes: If file is nil and path is "", the destination is the data property.
(Read and Write property)

112.2.19 HorizontalResolution as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The horizontal resolution.
Example:

```
Var j as new JPEGExporterMBS

// setup 300 dpi
j.VerticalResolution = 300
j.HorizontalResolution = 300
j.ResolutionUnit = 1
```

Notes: (Read and Write property)

112.2.20 OptimizeCoding as Boolean

MBS Images Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the plugin should ask the compressor to optimize the huffman coding tables.
Example:

```
Var j as new JPEGExporterMBS
j.OptimizeCoding = true
```

Notes: This usually provides a small percentage decrease in file size.
(Read and Write property)

112.2.21 Path as String

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination file.
Example:

```
Var p As Picture = LogoMBS(500)

'Save the scan
Var je As New JPEGExporterMBS

// using file
'je.file = SpecialFolder.Desktop.Child("just a test via file.jpg")

// using path
Var f As folderitem = SpecialFolder.Desktop.Child("just a test via path.jpg")
Var pa As String = f.NativePath
je.path = pa

je.quality = 75
je.picture = p
je.VerticalResolution = 72
je.HorizontalResolution = 72
je.ResolutionUnit = 1
je.export
```

Notes: If file is nil and path is "", the destination is the data property.
(Read and Write property)

112.2.22 Picture as Picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The picture to use.
Example:

```
Var MyPic as Picture = LogoMBS(500)
Var j as JPEGExporterMBS // your exporter
j.picture=MyPic
```

Notes: Should be a bitmap picture without alpha channel or mask.
(Read and Write property)

112.2.23 ProfileData as String

MBS Images Plugin, Plugin Version: 7.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An ICC profile to write to the file.
Example:

```
Var f as FolderItem
Var j as JPEGImporterMBS
Var p as LCMS2ProfileMBS
Var e as JPEGExporterMBS

f=SpecialFolder.Desktop.Child("test2.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // else no metadata is read at all
j.ReadProfileData=true // needed to fill ProfileData property
j.file=f

j.Import

if j.ProfileData="" then
MessageBox "no profile"
Return
end if

p=LCMS2ProfileMBS.CreatesRGBProfile

f=SpecialFolder.Desktop.Child("test3.jpg")
e=new JPEGExporterMBS
e.File=f
e.Picture=j.Picture
e.ProfileData=p.SaveProfileToString
```

```
e.Quality=75
e.Export
```

Notes: the string must contain the binary data of the profile. For example SaveProfileToString of the CMProfileMBS class returns such a string.
If the string is empty, no profile is written.
(Read and Write property)

112.2.24 Progressive as Boolean

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to make a progressive compressed image.
Example:

```
Var j as new JPEGExporterMBS
j.Progressive = true
```

Notes: Default is true.
(Read and Write property)

112.2.25 Quality as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The quality to use.
Example:

```
Var je as new JPEGExporterMBS
je.quality = 75
```

Notes: Range from 0 to 100. Default is 75.
(Read and Write property)

112.2.26 ResolutionUnit as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The unit of the resolution properties.
Example:

```
Var j as new JPEGExporterMBS
```

```
// setup 300 dpi
j.VerticalResolution = 300
j.HorizontalResolution = 300
j.ResolutionUnit = 1
```

Notes: Values:

0	unknown
1	dots per inch
2	dots per cm

(Read and Write property)

112.2.27 VerticalResolution as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The vertical resolution.
Example:

```
Var j as new JPEGExporterMBS

// setup 300 dpi
j.VerticalResolution = 300
j.HorizontalResolution = 300
j.ResolutionUnit = 1
```

Notes: (Read and Write property)

112.2.28 WarningMessage as String

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last warning message reported.
Example:

```
Var j as new JPEGExporterMBS

// do something
```

MessageBox j.WarningMessage

Notes: (Read and Write property)

112.2.29 XMPData as String

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The XMP data for this file.
Notes: The export methods use this property.
(Read and Write property)

112.2.30 YieldTicks as Integer

MBS Images Plugin, Plugin Version: 7.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: How much time is given back to Xojo for other ticks.
Example:

```
Var j as JPEGExporterMBS // your exporter

j.YieldTicks=6 // only use 1/10th of a second
```

Notes: If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.
(Read and Write property)

112.2.31 Markers(Index as Integer) as string

MBS Images Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Additional markers.
Example:

```
Var j as new JPEGExporterMBS

j.Picture = LogoMBS(500)
j.Markers(5) = "Hello World"
j.File = SpecialFolder.Desktop.Child("test.jpg")
j.Export
```

// now open jpeg file in text editor and you see hello world near beginning

Notes: Index from 0 to 15.
Index zero is used for JFIF header.
Index one is normally used for EXIF or XMP.
Index 13 is often used for Photoshop.

see also
http://www.ozhiker.com/electronics/pjmt/jpeg_info/app_segments.html

You can use this markers to embed a given string in the file. You can encrypt data and store it next to the image as you like.
Of course this will not survive if image is loaded and saved again. But can work as a container to hide data and user sees only image.
(Read and Write computed property)

112.2.32 Events

112.2.33 Error(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This events reports all error messages from the jpeg library.

112.2.34 GetRowData(index as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event called to query for the next data block.
Notes: The memoryblock data must be in the format with bytes in the order RGB.
Index is from 0 to height-1.
Returning nil will result in an error on the JPEG compression.

112.2.35 Info(message as string, msglevel as Integer, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This events reports all information messages from the jpeg library.
Notes: msglevel is one of:

-1:	recoverable corrupt-data warning, may want to abort.
0:	important advisory messages (always display to user).
1:	first level of tracing detail.
2,3,...:	successively more detailed tracing messages.

112.2.36 Warning(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This events reports all warning messages from the jpeg library.

112.2.37 Constants

Resolution Unit

Constant	Value	Description
ResolutionUnitDotsPerCentimeter	2	Dots per centimeter
ResolutionUnitDotsPerInch	1	Dots per inch
ResolutionUnitUnknown	0	Undefined

112.3 class JPEGImporterMarkerMBS

112.3.1 class JPEGImporterMarkerMBS

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a JPEG marker.

112.3.2 Properties

112.3.3 Data as String

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The actual data read as a binary string.
Example:

```
Var j as JPEGImporterMBS
Var f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // needed to fill ExifData property

// do the import

Var data as string = j.MarkerItem(0).Data

// work with data
```

Notes: (Read and Write property)

112.3.4 DataLength as Integer

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data length in bytes of the data string.
Example:

```
Var j as JPEGImporterMBS
Var f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
```

```
j=new JPEGImporterMBS

j.ReadMarkers=true // needed to fill ExifData property

// do the import

MessageBox str(j.MarkerItem(0).DataLength)

// work with data
```

Notes: (Read and Write property)

112.3.5 Marker as Integer

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of this datablock.
Example:

```
Var j as JPEGImporterMBS
Var f as folderitem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // needed to fill ExifData property

// do the import

MessageBox str(j.MarkerItem(0).Marker)

// work with data
```

Notes: For example &hE0 for the first user defined block.
(Read and Write property)

112.3.6 OriginalLength as Integer

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The original data length in the file.
Example:

```
Var j as JPEGImporterMBS
```

```
Var f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // needed to fill ExifData property

// do the import

MessageBox str(j.MarkerItem(0).OriginalLength)

// work with data
```

Notes: Maybe smaller than datalength because of compression.
(Read and Write property)

112.4 class JPEGImporterMBS

112.4.1 class JPEGImporterMBS

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for JPEG Importing.
Example:

```
Var g as FolderItem
Var ji as JPEGImporterMBS
Var je as JPEGExporterMBS
Var f as FolderItem
Var m as MemoryBlock

// this code copies a JPG: CMYK or RGB

// import it
g=SpecialFolder.Desktop.Child("PICT1533.JPG")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.CMYK=true // if it is cmyk
if ji.InitJPEG then
do
loop until ji.LoopJPEG<>0
ji.FinishJPEG
end if

// export it
f=SpecialFolder.Desktop.child("PICT1533 copy.JPG")
je=new JPEGExporterMBS
je.File=f
je.Quality=75

if ji.CMYK then
m=ji.PictureData
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
else
je.Picture=ji.Picture
je.Export
end if
```

Notes: This class is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 100 KB big!

Bases on libjpeg.

Xojo Developer Magazine

- 18.3, page 10: News
- 17.5, page 40: What's New in the MBS Plugins, With the Plugins growing every year, here are new capabilities you may have missed by Stefanie Juchmes

112.4.2 Methods

112.4.3 BlueTestPicture as picture

MBS Images Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a 100x100 pixel big picture filles with RGB(0,0,255).
Notes: Just for testing how well the plugin picture code works.

112.4.4 CleanMarkers

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the marker list.

112.4.5 FinishJPEG

MBS Images Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Releases all memory buffers needed for the JPEG decompression.
Notes: This must be called if you used InitJPEG!
Else you have a memory leak.

112.4.6 GetJPEGVersion as String

MBS Images Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries JPEG library version.
Notes: Currently reporting 9.1 for version 9b.

112.4.7 GreenTestPicture as picture

MBS Images Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a 100x100 pixel big picture filles with RGB(0,255,0).
Notes: Just for testing how well the plugin picture code works.

112.4.8 Import

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Imports the picture.
Example:

```
Var f as FolderItem
Var ji as new JPEGImporterMBS
Var je as new JPEGExporterMBS
Var m as MemoryBlock
Var i,c as Integer

// read jpeg
f=SpecialFolder.Desktop.Child("input.jpg")

ji.Mode=ji.ModeRGB // read RGB to memoryblock
ji.File=f
ji.Import

m=ji.PictureData
```

```
// add red
c=m.Size-1
for i=0 to c step 3
m.Byte(i)=255
next

// write jpeg
f=SpecialFolder.Desktop.Child("test.jpg")

je.File=f
je.ExportRGB(m,ji.Width, ji.Height, ji.Width*3)
```

Notes: This methods should read all JPEG files you can get, but I've only tested it for 32 bit color and 8 bit grayscale.

I wrote it mainly because Xojo's built in OpenAsJPEG code crashes badly if your picture is not full downloaded. For example if you have a webbrowser you can now show JPEGs while you download them. Normally you can see a good picture allready with 50% of the data.

Xojo's OpenAsPicture in contrast crashes if the picture is not 100% downloaded or instead of a crash you get a white picture.

This method uses the YieldTicks property and may yield time to other threads.
Depending on the mode this method can read CMYK and RGB. RGB either to memoryblock or to a picture object.
The memoryblock data must be in the format with bytes in the order RGB.

112.4.9 ImportCMYK

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Imports a CMYK picture.
Example:

```
Var g as FolderItem
Var ji as JPEGImporterMBS
Var je as JPEGExporterMBS
Var f as FolderItem
Var m as MemoryBlock

// import it
g=FolderItem.ShowOpenFileDialog("image/jpeg")
ji=new JPEGImporterMBS
ji.File=g
```

```
ji.AllowDamaged=true
ji.ImportCMYK

m=ji.PictureData

// export it
f=SpecialFolder.Desktop.child("test.jpg")
je=new JPEGExporterMBS
je.HorizontalResolution=300
je.VerticalResolution=300
je.ResolutionUnit=1
je.File=f
je.Quality=75
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
```

Notes: This methods should read all JPEG files you can get, but I've only tested it for 32 bit color and 8 bit grayscale.

The read CMYK values are stored in the picturedata property.

This method uses the YieldTicks property and may yield time to other threads.

112.4.10 InitJPEG as boolean

MBS Images Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the JPEG decompressor for use with LoopJPEG.
Example:

```
Var g as FolderItem
Var ji as JPEGImporterMBS
Var je as JPEGExporterMBS
Var f as FolderItem
Var m as MemoryBlock

// this code copies a JPG: CMYK or RGB

// import it
g=SpecialFolder.Desktop.Child("PICT1533.JPG")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.CMYK=true // if it is cmyk
if ji.InitJPEG then
do
```

```
loop until ji.LoopJPEG<>0
ji.FinishJPEG
end if

// export it
f=SpecialFolder.Desktop.child("PICT1533 copy.JPG")
je=new JPEGExporterMBS
je.File=f
je.Quality=75

if ji.CMYK then
m=ji.PictureData
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
else
je.Picture=ji.Picture
je.Export
end if
```

Notes: Call FinishJPEG even if this failes.
Returns true if you can loop using LoopJPEG.

112.4.11 LoopJPEG as Integer

MBS Images Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decompresses one line of the picture.
Example:

```
Var j as new JPEGImporterMBS
// fill properties...

if j.initJPEG then
do
loop until j.LoopJPEG<>0
end if
j.FinishJPEG

backdrop=j.Picture // nil if failed
```

Notes: Return values:

0	Decompression was okay
1	Finished decompression
2	if there was an error.
3	Not initialized
4	Header only was requested

112.4.12 MarkerCount as Integer

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of markers found in the JPEG data stream.
Example:

```
Var j as JPEGImporterMBS
Var f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // else no metadata is read at all

// do the import

MessageBox str(j.MarkerCount)
```

Notes: Only available if ReadMarkers was true on reading the JPEG data.

112.4.13 MarkerItem(index as Integer) as JPEGImporterMarkerMBS

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the marker with the given index.
Example:

```
Var j as JPEGImporterMBS
Var f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // needed to fill ExifData property

// do the import
```

```
Var data as string = j.MarkerItem(0).Data

// work with data
```

Notes: Only available if ReadMarkers was true on reading the JPEG data.

112.4.14 ReadHeader as boolean

MBS Images Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read the header of the JPEG data in a file or a memoryblock.
Example:

```
Var f as FolderItem
Var j as JPEGImporterMBS

f=SpecialFolder.Desktop.Child("Jaguar1600.jpg")
j=new JPEGImporterMBS
j.file=f
if j.ReadHeader then
MessageBox str(j.Width)+" x "+str(j.Height)
else
MessageBox "no JPEG"
end if
```

Notes: You can use this function to see if the file is a JPEG image and which dimension it has. This function calls InitJPEG and FinishJPEG, so we get all the metadata, but no picture.

112.4.15 RedTestPicture as picture

MBS Images Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a 100x100 pixel big picture filles with RGB(255,0,0).
Notes: Just for testing how well the plugin picture code works.

112.4.16 SetAPI(API as Ptr = nil)

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets API to use.
Example:

```
// switch API to libjpeg-turbo:
JPEGExporterMBS.SetAPI JPEGTurboMBS.API
JPEGImporterMBS.SetAPI JPEGTurboMBS.API
```

Notes: Set to nil to use built in jpeglib.
Can be set to JPEGTurboMBS.API to use libjpeg-turbo.

Changing API while you have instances of JPEGImporterMBS or methods in use on other thread using the JPEG Library, may result in a crash.

112.4.17 Properties

112.4.18 AllowDamaged as boolean

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether you want damaged pictures to be returned.
Notes: If AllowDamaged is false, nil will be returned if the picture is damaged.
Default value is false.
(Read and Write property)

112.4.19 API as String

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries name of API used.
Notes: Either libjpeg or libjpeg-turbo.
(Read only property)

112.4.20 BlockSmoothing as Boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to do interblock smoothing.
Notes: Default value is true.

This setting is relevant only when decoding a progressive JPEG image. During the first DC-only scan, block smoothing provides a very "fuzzy" look instead of the very "blocky" look seen without it; which is better seems a matter of personal taste. But block smoothing is nearly always a win during later stages, especially when decoding a successive-approximation image: smoothing helps to hide the slight blockiness that otherwise shows up on smooth gradients until the lowest coefficient bits are sent.

(Read and Write property)

112.4.21 CMYK as Boolean

MBS Images Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the decompressor has imported the picture as a CMYK image into a memoryblock.
Example:

```
Var g as FolderItem
Var ji as JPEGImporterMBS

g=New FolderItem("a_auf")
ji=new JPEGImporterMBS
ji.File=g
if ji.InitJPEG then

if ji.CMYK then
MessageBox "CMYK"
else
MessageBox "not"
end if
end if
```

Notes: This property sets the Mode property to ModeCMYK.
(Read and Write property)

112.4.22 ColorComponentCount as Integer

MBS Images Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of color components.
Notes:

1	Grayscale
3	RGB
4	CMYK

(Read and Write property)

112.4.23 ColorSpace as Integer

MBS Images Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color space of the image.
Example:

```
Var j as new JPEGImporterMBS

j.File = SpecialFolder.Desktop.Child("cmyk.jpg")

if j.InitJPEG then

Select case j.ColorSpace
case j.ColorSpaceCMYK, j.ColorSpaceYCCK
MessageBox "CMYK"
case j.ColorSpaceRGB, j.ColorSpaceYCbCr
MessageBox "RGB"
case j.ColorSpaceGrayScale
MessageBox "Gray"
else
MessageBox "unknown? "+str(j.ColorSpace)
end Select

j.FinishJPEG
end if
```

Notes: See also the Colorspace constants.
(Read and Write property)

112.4.24 CurrentDepth as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The depth of the picture property.
Notes: In the current implementation always 32bit.
0 if the loading of the picture failed.
(Read and Write property)

112.4.25 data as string

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source string.
Notes: If file is nil, the compressed data is taken from this property.

(Read and Write property)

112.4.26 ErrorMessage as string

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message reported.
Notes: (Read and Write property)

112.4.27 ExifData as String

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exif data stored in the file.
Example:

```
Var j as JPEGImporterMBS
Var f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadExifData=true // needed to fill ExifData property

// do the import

Var data as string = j.ExifData

// work with data
```

Notes: Only used when ReadExifData is set to true before you import the image.
The string contains the binary content of a exif data on disc.
Value is "" if no data was found.
(Read and Write property)

112.4.28 ExifOrientation as Integer

MBS Images Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries orientation from EXIF data.
Notes: ReadExifData property must be set earlier to have the import process load EXIF data.
Returns -1 in case of error.

Valid values are in range of 1 to 8. See kOrientation* constants.

For new development, please use ExifTagsMBS class instead.
(Read only property)

112.4.29 ExifThumbnail as String

MBS Images Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts an embedded thumbnail in EXIF data.
Example:

```
Var g As New JPEGImporterMBS

g.File = SpecialFolder.Desktop.Child("test.jpg")
g.ReadExifData = True

// not load, but just read header & metadata
If g.ReadHeader Then

// get thumbnail
Var Thumbnail As String = g.ExifThumbnail

// show it
Window1.Backdrop = picture.FromData(Thumbnail)

// if nil, use ScaleFactor and read scaled down version
End If
```

Notes: ReadExifData property must be set earlier to have the import process load EXIF data.
Returns string containing JPEG compressed image data.

For new development, please use ExifTagsMBS class instead.
(Read only property)

112.4.30 FancyUpsampling as Boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to do fancy upsampling.
Notes: Default value is true.

If true, use direct DCT scaling with DCT size >8 for downsampling of chroma components. If false, use only

DCT size <= 8 and simple separate downsampling. Default is true. For better image stability in multiple generation compression cycles it is preferable that this value matches the corresponding FancyUpsampling value in decompression.
(Read and Write property)

112.4.31 file as folderitem

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source file.
Example:

```
Var ji As New JPEGImporterMBS

ji.file = SpecialFolder.Desktop.Child("test.jpg")
ji.Import

Backdrop = ji.Picture
```

Notes: If file is nil and path is "", the source is taken from the data property.
(Read and Write property)

112.4.32 FileOffset as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The offset inside the file.
Notes: (Read and Write property)

112.4.33 Height as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture.
Notes: 0 if the loading of the picture failed.
(Read and Write property)

112.4.34 HorizontalResolution as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The horizontal resolution.
Notes: (Read and Write property)

112.4.35 Mode as Integer

MBS Images Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The operation mode.
Notes: Can be either ModePicture (Default), ModeRGB or ModeCMYK.
(Read and Write property)

112.4.36 OriginalDepth as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The original depth of the picture.
Notes: Value maybe 8 for grayscale pictures and 24 or 32 for colored pictures.
0 if the loading of the picture failed.
(Read and Write property)

112.4.37 Path as String

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source file.
Example:

```
Var ji As New JPEGImporterMBS

// try with path
Var f As FolderItem = SpecialFolder.Desktop.Child("test.jpg")
ji.path = f.NativePath
ji.Import

Backdrop = ji.Picture
```

Notes: If file is nil and path is "", the source is taken from the data property.
(Read and Write property)

112.4.38 Picture as Picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The picture as the result.
Notes: Set to nil on any error.
(Read and Write property)

112.4.39 PictureData as MemoryBlock

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The cmyk picture data after importing.
Example:

```
Var g as FolderItem
Var ji as JPEGImporterMBS
Var je as JPEGExporterMBS
Var f as FolderItem
Var m as MemoryBlock

// import it
g=New FolderItem("CMYK Example.jpg")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.ImportCMYK

m=ji.PictureData
MessageBox g.name
// export it
f=SpecialFolder.Desktop.child("CMYK Example2.jpg")
je=new JPEGExporterMBS
je.File=f
je.Quality=75
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
```

Notes: Basicly a memoryblock with one byte for each channel.
For ReadByRow methods this property contains memoryblock for a row of the image.
(Read and Write property)

112.4.40 ProfileData as String

MBS Images Plugin, Plugin Version: 7.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ICC profile stored in the file.
Example:

```
Var f as FolderItem
Var j as JPEGImporterMBS
Var p as LCMS2ProfileMBS

f=SpecialFolder.Desktop.Child("test2.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // else no metadata is read at all
j.ReadProfileData=true // needed to fill ProfileData property
j.file=f

j.Import

if j.ProfileData="" then
MessageBox "no profile"
Return
end if

p=LCMS2ProfileMBS.OpenProfileFromString(j.ProfileData)
MessageBox p.Name
```

Notes: Only used when ReadProfileData is set to true before you import the image.
The string contains the binary content of a profile file on disc. So you can pass it to the CMOpenProfileFromDataMBS function or write it to a file using the binarystream class.
Value is "" if no profile was found.
(Read and Write property)

112.4.41 ProgressiveMode as Boolean

MBS Images Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a progressive jpeg file.
Notes: Loading progressive files needs more memory.
(Read and Write property)

112.4.42 ReadExifData as Boolean

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the plugin should read in the exif data.
Example:

```
Var j as JPEGImporterMBS
Var f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadExifData=true // needed to fill ExifData property

// do the import

Var data as string = j.ExifData

// work with data
```

Notes: If there is exif data, it will be stored in the ExifData property.
Setting this value to true will set ReadMarkers to true, too.
The data is stored in one or more markers, so it is needed to read them before extracting the data.
(Read and Write property)

112.4.43 ReadMarkers as Boolean

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether importer should read markers.
Example:

```
Var j as JPEGImporterMBS
Var f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // else no metadata is read at all

// do the import

MessageBox str(j.MarkerCount)
```

Notes: (Read and Write property)

112.4.44 ReadProfileData as Boolean

MBS Images Plugin, Plugin Version: 7.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the plugin should read in the icc profile.
Example:

```
Var j as JPEGImporterMBS
Var f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadProfileData=true // needed to fill ProfileData property

// do the import

Var Profile as string = j.ProfileData

// work with profile data
```

Notes: If there is a profile, it will be stored in the ProfileData property.
Setting this value to true will set ReadMarkers to true, too.
A profile is stored in one or more markers, so it is needed to read them before extracting the profile.
(Read and Write property)

112.4.45 ReadXMPData as Boolean

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the plugin should read in the xmp data.
Notes: If there is xmp data, it will be stored in the XMPData property.
Setting this value to true will set ReadMarkers to true, too.
The data is stored in one or more markers, so it is needed to read them before extracting the data.
(Read and Write property)

112.4.46 ResolutionUnit as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The unit of the resolution properties.
Notes: Values:

(Read and Write property)

0 unknown
1 dots per inch
2 dots per cm

112.4.47 ScaleFactor as Integer

MBS Images Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The JPEG Library can scale down the picture on the fly.
Notes: Allowed values: 0, 1, 2, 4, 8
0 and 1 disable scaling.
Default valus is 0 for no scaling.
(Read and Write property)

112.4.48 VerticalResolution as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The vertical resolution.
Notes: (Read and Write property)

112.4.49 WarningMessage as String

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last warning message reported.
Notes: (Read and Write property)

112.4.50 Width as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the picture.
Notes: 0 if the loading of the picture failed.
(Read and Write property)

112.4.51 XMPData as String

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The XMP Data stored in the file.
Notes: Only used when ReadXMPData is set to true before you import the image.
The string contains the binary content of a xmp data on disc.
Value is "" if no data was found.
(Read and Write property)

112.4.52 YieldTicks as Integer

MBS Images Plugin, Plugin Version: 7.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: How much time is given back to Xojo for other ticks.
Example:

```
Var j as JPEGImporterMBS // your importer
j.YieldTicks=6 // only use 1/10th of a second
```

Notes: If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.
(Read and Write property)

112.4.53 Events

112.4.54 Error(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This events reports all error messages from the jpeg library.

112.4.55 HeadersRead as boolean

MBS Images Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Event called when headers are read.
Notes: This allows you to set Mode, ScaleFactor, FancyUpsampling, BlockSmoothing properties.
Return true to cancel Import/InitJPEG methods early.

112.4.56 Info(message as string, msglevel as Integer, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This events reports all information messages from the jpeg library.
Notes: msglevel is one of:

-1:	recoverable corrupt-data warning, may want to abort.
0:	important advisory messages (always display to user).
1:	first level of tracing detail.
2,3,...:	successively more detailed tracing messages.

112.4.57 Warning(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This events reports all warning messages from the jpeg library.

112.4.58 Constants

Color Spaces

Constant	Value	Description
ColorSpaceCMYK	4	C/M/Y/K
ColorSpaceGrayScale	1	Gray
ColorSpaceRGB	2	red/green/blue
ColorSpaceUnknown	0	Not set.
ColorSpaceYCbCr	3	Y/Cb/Cr (also known as YUV)
ColorSpaceYCCK	5	Y/Cb/Cr/K

Orientation Constants

Constant	Value	Description
kOrientationBottomLeft	4	row 0 bottom, col 0 lhs
kOrientationBottomRight	3	row 0 bottom, col 0 rhs
kOrientationLeftBottom	8	row 0 lhs, col 0 bottom
kOrientationLeftTop	5	row 0 lhs, col 0 top
kOrientationRightBottom	7	row 0 rhs, col 0 bottom
kOrientationRightTop	6	row 0 rhs, col 0 top
kOrientationTopLeft	1	row 0 top, col 0 lhs
kOrientationTopRight	2	row 0 top, col 0 rhs

Modes

Constant	Value	Description
ModeAuto	30	Load the image into the picturedata property. Switches on import to RGB, Gray or CMYK depending on color space of JPEG file.
ModeAutoByRow	31	Load the image into the picturedata property. Switches on import to RGB, Gray or CMYK depending on color space of JPEG file.
ModeCMYK	2	Load the image into the picturedata property. The PictureData Memoryblock uses 4 bytes per pixel.
ModeCMYKbyRow	12	Same as ModeCMYK, but PictureData contains only the current row The PictureData Memoryblock uses 4 bytes per pixel.
ModeGray	3	Load the image into the picturedata property. The PictureData Memoryblock uses one byte per pixel.
ModeGraybyRow	13	Same as ModeGray, but PictureData contains only the current row The PictureData Memoryblock uses one byte per pixel.
ModePicture	0	Load the image into the picture property.
ModeRaw	20	Load the image into the picturedata property. The PictureData Memoryblock uses 1 to 4 bytes per pixel. Check the colorspace property to know which color space is used.
ModeRGB	1	Load the image into the picturedata property. The PictureData Memoryblock uses 3 bytes per pixel.
ModeRGBbyRow	11	Same as ModeRGB, but PictureData contains only the current row The PictureData Memoryblock uses 3 bytes per pixel.

112.5 class JPEGMovieMBS

112.5.1 class JPEGMovieMBS

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to write a movie with JPEGs.
Example:

```
// get a picture
Var p as Picture = LogoMBS(500)

// start movie building
Var m as new JPEGMovieMBS

m.Width = 500
m.Height = 500
m.SecondsPerFrame = 0.5

// add frames where we count up
for i as integer = 1 to 20
Var c as new Picture(500, 500)
Var g as Graphics = c.Graphics
g.ForeColor = &c000000
g.TextSize = 50
g.DrawPicture p, 0, 0
g.DrawString str(i), 20, 50

Var j as string = c.GetData(c.FormatJPEG)
m.AddFrame j

next

// generate movie
Var MovieData as string = m.BuildMovie

// and write to file
Var f as FolderItem = SpecialFolder.Desktop.Child("test.mov")
Var b as BinaryStream = BinaryStream.Create(f, true)
b.Write MovieData
```

Notes: This is a self written class to create a QuickTime Movie with one video track using JPEG images. You can use this to quickly write a slideshow video if needed.

Does play in Quicktime player and VLC, but not Windows Media Player.

112.5.2 Methods

112.5.3 AddFrame(Image as MemoryBlock)

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a frame.
Notes: Image must be a JPEG compressed image.
See also:

- 112.5.4 AddFrame(Image as String) 16964

112.5.4 AddFrame(Image as String)

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a frame.
Notes: Image must be a JPEG compressed image.
See also:

- 112.5.3 AddFrame(Image as MemoryBlock) 16964

112.5.5 BuildMovie as String

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds the movie.
Notes: Either you get an exception or you get a movie which you can write to a file on disk.

112.5.6 Properties

112.5.7 Duration as Double

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The duration of the video.
Notes: In Seconds.
(Read only property)

112.5.8 FrameCount as Integer

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of frames.
Notes: (Read only property)

112.5.9 Height as Integer

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the video.
Notes: Must match the JPEGs you use.
(Read and Write property)

112.5.10 SecondsPerFrame as Double

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The seconds to show a frame.
Notes: Default 1 second.
(Read and Write property)

112.5.11 TimeScale as Integer

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time scale to use.
Notes: Defines how fine granular you can define time.
Default is 600 units per second.

(Read and Write property)

112.5.12 Width as Integer

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The target width of the video.
Notes: Must match the JPEGs you use.
(Read and Write property)

112.6 class JPEGTransformationMBS

112.6.1 class JPEGTransformationMBS

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to wrap the jpegtran utility.
Example:

```
// rotate a JPEG by 90 degrees without recompressing it (lossless)
Var t As New JPEGTransformationMBS
t.InputFile = SpecialFolder.Desktop.Child("photo.jpg")
t.OutputFile = SpecialFolder.Desktop.Child("photo rotated.jpg")
t.Rotate90 = True
t.Trim = True // drop edge blocks which can't be rotated
t.Progressive = True

If Not t.Transform Then MessageBox "Error: " + t.ErrorMessage
```

Notes: Although rotating and flipping data expressed as DCT coefficients is not hard, there is an asymmetry in the JPEG format specification for images whose dimensions aren't multiples of the iMCU size. The right and bottom image edges are padded out to the next iMCU boundary with junk data; but no padding is possible at the top and left edges. If we were to flip the whole image including the pad data, then pad garbage would become visible at the top and/or left, and real pixels would disappear into the pad margins — perhaps permanently, since encoders & decoders may not bother to preserve DCT blocks that appear to be completely outside the nominal image area. So, we have to exclude any partial iMCUs from the basic transformation.

Transpose is the only transformation that can handle partial iMCUs at the right and bottom edges completely cleanly. Mirror horizontal can flip partial iMCUs at the bottom, but leaves any partial iMCUs at the right edge untouched. Similarly mirror vertical leaves any partial iMCUs at the bottom edge untouched. The other transforms are defined as combinations of these basic transforms and process edge blocks in a way that preserves the equivalence.

The "trim" option causes untransformable partial iMCUs to be dropped; this is not strictly lossless, but it usually gives the best-looking result for odd-size images. Note that when this option is active, the expected mathematical equivalences between the transforms may not hold. (For example, -rot 270 -trim trims only the bottom edge, but -rot 90 -trim followed by -rot 180 -trim trims both edges.)

We also offer a "force to grayscale" option, which simply discards the chrominance channels of a YCbCr image. This is lossless in the sense that the luminance channel is preserved exactly. It's not the same kind of thing as the rotate/flip transformations, but it's convenient to handle it as part of this package, mainly because the transformation routines have to be aware of the option to know how many components to work on.

Bases on libjpeg.
Blog Entries

- MBS REALbasic Plugins, version 11.2pr1

112.6.2 Methods

112.6.3 close

MBS Images Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

112.6.4 Transform as boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the transformation.
Notes: Outputfile and Inputfile should never be identical, because this will corrupt the file.

Returns only false if the file specifications are invalid.
So after true is returned you still need to check the errorcode property.

112.6.5 Properties

112.6.6 CopyOption as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: What to copy from the meta information.
Notes: Values:

JCOPYOPT_NONE	0	copy no optional markers
JCOPYOPT_COMMENTS	1	copy only comment (COM) markers
JCOPYOPT_ALL	2	copy all optional markers

(Read and Write property)

112.6.7 DebugLevel as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The debug level for the jpeg library.
Notes: (Read and Write property)

112.6.8 ErrorCode as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code reported.
Notes: (Read and Write property)

112.6.9 ErrorMessage as String

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message reported.
Notes: (Read and Write property)

112.6.10 Grayscale as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to reduce to grayscale (omit color data).
Notes: If true the a color image is converted to grayscale.
(Read and Write property)

112.6.11 InputFile as FolderItem

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The input file.
Notes: Outputfile and Inputfile should never be identical, because this will corrupt the file.
(Read and Write property)

112.6.12 MaxMemoryToUse as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum memory to use.
Notes: Unit is bytes.
(Read and Write property)

112.6.13 MirrorHorizonal as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to use the left-right mirror transformation.
Notes: Only one transformation can be used.
(Read and Write property)

112.6.14 MirrorVertical as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to use the top-bottom mirror transformation.
Notes: Only one transformation can be used.
(Read and Write property)

112.6.15 OptimizeCoding as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optimize Huffman table (smaller file, but slow compression)
Notes: (Read and Write property)

112.6.16 OutputFile as FolderItem

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output file.
Notes: On Mac OS X, this function uses the short file name (31 characters).
So you may consider to save to a temporary file and rename it after the transformation was successful.

Outputfile and Inputfile should never be identical, because this will corrupt the file.
(Read and Write property)

112.6.17 Progressive as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to create progressive JPEG file.
Notes: (Read and Write property)

112.6.18 Rotate180 as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to use the 180¬∞ clockwise rotation transformation.
Notes: Only one transformation can be used.
(Read and Write property)

112.6.19 Rotate270 as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to use the 270¬∞ clockwise rotation transformation.
Notes: Only one transformation can be used.
(Read and Write property)

112.6.20 Rotate90 as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to use the 90¬∞ clockwise rotation transformation.
Notes: Only one transformation can be used.
(Read and Write property)

112.6.21 Transpose as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to transpose the image across UR-to-LL axis.
Notes: Only one transformation can be used.
(Read and Write property)

112.6.22 Transverse as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to tanspose the image across UL-to-LR axis.
Notes: Only one transformation can be used.
(Read and Write property)

112.6.23 Trim as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to drop non-transformable edge blocks.
Notes: if true, trim partial MCUs as needed.
(Read and Write property)

112.6.24 WarningMessage as String

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last warning message reported.
Notes: (Read and Write property)

112.6.25 Events

112.6.26 Error(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This events reports all error messages from the jpeg library.

112.6.27 Info(message as string, msglevel as Integer, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This events reports all information messages from the jpeg library.
Notes: msglevel is one of:

-1:	recoverable corrupt-data warning, may want to abort.
0:	important advisory messages (always display to user).
1:	first level of tracing detail.
2,3,...:	successively more detailed tracing messages.

112.6.28 Warning(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This events reports all warning messages from the jpeg library.

112.7 module JPEGTurboMBS

112.7.1 module JPEGTurboMBS

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module to use libjpeg-turbo in Xojo.
Example:

```
// switch API to libjpeg-turbo:
JPEGExporterMBS.SetAPI JPEGTurboMBS.API
JPEGImporterMBS.SetAPI JPEGTurboMBS.API
```

Blog Entries

- MBS Xojo Plugins, version 19.5pr7
- libjpeg-turbo for Xojo

112.7.2 Methods

112.7.3 API as Ptr

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns API pointer.
Notes: This returns pointer to internal MBS data structure with function pointers to JPEG library functions.

112.7.4 GetJPEGVersion as String

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries JPEG library version.
Notes: Currently reporting 8.0 for version 8.0.

112.7.5 Constants

Constants

Constant	Value	Description
Version	"2.0.3"	The version string for JPEG Turbo library.

112.8 Globals

112.8.1 JPEGStringToPictureMBS(buf as string) as picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a picture from a JPEG file.
Example:

```
Var s as string
Var h as new HTTPSocket

s=h.Get("http://www.monkeybreadsoftware.de/xojo/images/rbplugin.jpg",90)

Backdrop=JPEGStringToPictureMBS(s)
```

Notes: Short version of the "JPEGStringToPicture(buf as string,allowdamaged as Boolean) as picture" method. allowdamaged is set to false.
See also:

- 112.8.2 JPEGStringToPictureMBS(buf as string,allowdamaged as Boolean) as picture 16975

112.8.2 JPEGStringToPictureMBS(buf as string,allowdamaged as Boolean) as picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a picture from a JPEG file.
Example:

```
Var p as Picture = LogoMBS(500)
Var s as string = PictureToJPEGStringMBS(p, 80)

s = leftb(s, lenb(s)-1000) // remove last 1000 bytes

Var q as Picture = JPEGStringToPictureMBS(s, true)

Backdrop = q
```

Notes: This methods should read all JPEG file data you can get, but I've only tested it for 32 bit color and 8 bit grayscale.

I wrote it mainly because Xojo's built in OpenAsJPEG code crashes badly if your picture is not full downloaded. For example if you have a webbrowser you can now show JPEGs while you download them. Normally you can see a good picture allready with 50% of the data.

Xojo's OpenAsPicture in contrast crashes if the picture is not 100% downloaded or instead of a crash you get a white picture.

See the "JPEGToString example", "jpeg load crashtest" and "SaveJPEG without QuickTime" examples.
Blog Entries

See also:

- 112.8.1 JPEGStringToPictureMBS(buf as string) as picture 16975

112.8.3 PictureToJPEGStringMBS(pic as picture, quality as Integer = 80) as string

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves a picture into a string using JPEG compression.
Example:

```
Var p as Picture = LogoMBS(500)
Var s as string = PictureToJPEGStringMBS(p, 80)
Var q as Picture = JPEGStringToPictureMBS(s)

Backdrop = q
```

Notes: This methods saves 32bit pictures to a file using JPEG Compression. Using the parameter you can specify the quality in range between 25 and 100%

The picture should be a bitmap picture without alpha channel or mask.
Use the JPEGExporterMBS class for more options.

The returned string has the encoding set to binary (no encoding). If you want to concat the string with another you should change the encoding, so both strings have the same encoding. If you don't handle that RB may convert the JPEG data to UTF8 (Unicode) which will destroy it.

The picture is always encoded with 72 dpi. If you want to set a different dpi value, please use the JPEGExporterMBS class.

Chapter 113

Keychain

113.1 class KeychainAccessControlMBS

113.1.1 class KeychainAccessControlMBS

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Defines access rights for items.
Example:

```
// store a password in the keychain that needs Touch ID or the user's password to read
Var error As Variant
Var access As KeychainAccessControlMBS = KeychainAccessControlMBS.CreateWithFlags(KeychainAccessControlMBS.kSecAttrAccessibleWhenUnlockedThisDeviceOnly, KeychainAccessControlMBS.kSecAccessControlUserPresence, error)
If access = Nil Then Return

Var d As New Dictionary
d.Value(KeychainManagerMBS.kSecClass) = KeychainManagerMBS.kSecClassGenericPassword
d.Value(KeychainManagerMBS.kSecAttrService) = "MyApp"
d.Value(KeychainManagerMBS.kSecAttrAccount) = "john"
d.Value(KeychainManagerMBS.kSecValueData) = "secret"
d.Value(KeychainManagerMBS.kSecAttrAccessControl) = access

If KeychainManagerMBS.AddItem(d) Then MessageBox "Password stored."
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

113.1.2 Methods

113.1.3 Constructor

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.

113.1.4 CreateWithFlags(protection as String, Flags as Integer, byref error as Variant) as KeychainAccessControlMBS

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Creates new access control object based on protection type and additional flags.
Notes: Created access control object should be used as a value for kSecAttrAccessControl attribute in AddItem or UpdateItem functions. Accessing keychain items or performing operations on keys which are protected by access control objects can block the execution because of UI which can appear to satisfy the access control conditions, therefore it is recommended to either move those potentially blocking operations out of the main application thread or use combination of kSecUseAuthenticationContext and kSecUseAuthenticationUI attributes to control where the UI interaction can appear.

protection: Protection class to be used for the item. One of kSecAttrAccessible constants.
flags: If no flags are set then all operations are allowed.
error: Additional error information filled in case of failure. a CFErrorMBS object.

Returns newly created access control object.

113.1.5 kSecAttrAccessibleAfterFirstUnlock as String

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the Accessible values.
Notes: Item data can only be accessed once the device has been unlocked after a restart. This is recommended for items that need to be accesible by background applications. Items with this attribute will migrate to a new device when using encrypted backups.

113.1.6 kSecAttrAccessibleAfterFirstUnlockThisDeviceOnly as String

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the Accessible values.
Notes: Item data can only be accessed once the device has been unlocked after a restart. This is recommended for items that need to be accessible by background applications. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device these items will be missing.

113.1.7 kSecAttrAccessibleAlways as String

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the Accessible values.
Notes: Item data can always be accessed regardless of the lock state of the device. This is not recommended for anything except system use. Items with this attribute will migrate to a new device when using encrypted backups.

113.1.8 kSecAttrAccessibleAlwaysThisDeviceOnly as String

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the Accessible values.
Notes: Item data can always be accessed regardless of the lock state of the device. This option is not recommended for anything except system use. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device, these items will be missing.

113.1.9 kSecAttrAccessibleWhenPasscodeSetThisDeviceOnly as String

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the Accessible values.
Notes: Item data can only be accessed while the device is unlocked. This is recommended for items that only need to be accessible while the application is in the foreground and requires a passcode to be set on the device. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device, these items will be missing. This attribute will not be available on devices without a passcode. Disabling the device passcode will cause all previously protected items to be deleted.

113.1.10 kSecAttrAccessibleWhenUnlocked as String

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the Accessible values.
Notes: Item data can only be accessed while the device is unlocked. This is recommended for items that only need be accesible while the application is in the foreground. Items with this attribute will migrate to a new device when using encrypted backups.

113.1.11 kSecAttrAccessibleWhenUnlockedThisDeviceOnly as String

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the Accessible values.
Notes: Item data can only be accessed while the device is unlocked. This is recommended for items that only need be accesible while the application is in the foreground. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device, these items will be missing.

113.1.12 Properties

113.1.13 Handle as Integer

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

113.1.14 Constants

Control Flags

Constant	Value	Description
kSecAccessControlAnd	&h8000	Constraint logic operation: when using more than one constrain satisfied.
kSecAccessControlApplicationPassword	&h80000000	Application provided password for data encryption key generatio a constraint but additional item encryption mechanism.
kSecAccessControlBiometryAny	2	Touch ID (any finger) or Face ID. Touch ID or Face ID must With Touch ID at least one finger must be enrolled. With Face I be enrolled. Item is still accessible by Touch ID even if fingers removed. Item is still accessible by Face ID if user is re-enrolled.
kSecAccessControlBiometryCurrentSet	8	Touch ID from the set of currently enrolled fingers. Touch ID mus and at least one finger must be enrolled. When fingers are adde the item is invalidated. When Face ID is re-enrolled this item is
kSecAccessControlDevicePasscode	16	Device passcode
kSecAccessControlOr	&h4000	Constraint logic operation: when using more than one constraint of them must be satisfied.
kSecAccessControlPrivateKeyUsage	&h40000000	Create access control for private key operations (i.e. sign operati
kSecAccessControlTouchIDAny	2	Touch ID (any finger) or Face ID. Touch ID or Face ID must With Touch ID at least one finger must be enrolled. With Face I be enrolled. Item is still accessible by Touch ID even if fingers removed. Item is still accessible by Face ID if user is re-enrolled.
kSecAccessControlTouchIDCurrentSet	8	Touch ID from the set of currently enrolled fingers. Touch ID mus and at least one finger must be enrolled. When fingers are adde the item is invalidated. When Face ID is re-enrolled this item is
kSecAccessControlUserPresence	1	User presence policy using biometry or Passcode. Biometry doe be available or enrolled. Item is still accessible by Touch ID even added or removed. Item is still accessible by Face ID if user is re

113.2 class KeychainItemMBS

113.2.1 class KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a keychain item.
Example:

```
Const kDomain = "koingosw.com"
Const kUsername = "koingosoftware"
Const kPath = ""
Const kProtocol = "http"

Var xPassword As MemoryBlock = "testpassword"
Var xAdded As KeychainItemMBS

Var dQuery as new Dictionary
dQuery.Value(KeychainManagerMBS.kSecAttrAuthenticationType) = KeychainManagerMBS.kSecAttrAuthen-
ticationTypeHTMLForm
dQuery.Value(KeychainManagerMBS.kSecClass) = KeychainManagerMBS.kSecClassInternetPassword
If Len(kDomain) <>0 Then dQuery.Value(KeychainManagerMBS.kSecAttrServer) = kDomain
If Len(kUsername) <>0 Then dQuery.Value(KeychainManagerMBS.kSecAttrAccount) = kUsername
If Len(kProtocol) <>0 Then dQuery.Value(KeychainManagerMBS.kSecAttrProtocol) = kProtocol
dQuery.Value(KeychainManagerMBS.kSecAttrComment) = "default"
dQuery.Value(KeychainManagerMBS.kSecAttrDescription) = "Web form password"
dQuery.Value(KeychainManagerMBS.kSecAttrLabel) = kDomain + " (" + kUsername + ")"
dQuery.Value(KeychainManagerMBS.kSecValueData) = xPassword

If Not KeychainManagerMBS.AddItem(KeychainManagerMBS.Default,dQuery) Then
Break
End If
```

113.2.2 Methods

113.2.3 Delete

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Deletes a keychain item from the default keychain's permanent data store.
Notes: Lasterror is set.

113.2.4 ItemClass as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries the item class for this item.
Example:

```
Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var keychain as KeychainMBS = nil // use default

Var item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)
MessageBox item.itemclass // shows genp for generic password
```

Notes: Lasterror is set.

113.2.5 Keychain as KeychainMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the keychain object of a given keychain item.
Notes: Lasterror is set.

113.2.6 PersistentReference as Memoryblock

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a persistent reference for a keychain item.
Notes: Unlike normal references, a persistent reference may be stored on disk or passed between processes. You can convert a persistent reference into an ordinary keychain item reference (KeychainItemMBS) by calling the KeychainManagerMBS.ItemFromPersistentReference function.
Lasterror is set.

113.2.7 Properties

113.2.8 Handle as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

113.2.9 Lasterror as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code returned by one of the methods.
Notes: You can use KeychainManagerMBS.ErrorMessageString function to get a text message.
The error code -1 is set by plugin if function is missing or parameters are wrong.
(Read and Write property)

113.2.10 Account as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Convenience property to get/set the account attribute as UTF-8 text.
Example:

```
Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var keychain as KeychainMBS = nil // use default

Var item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

MessageBox "Label: "+item.label+EndOfLine+_
"Comment: "+item.comment+EndOfLine+_
"Account: "+item.Account
```

Notes: Lasterror is set.
(Read and Write computed property)

113.2.11 AttributeData(attributeName as string) as memoryblock

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Get or set an attribute as raw data (memoryblock).
Example:

```
Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var keychain as KeychainMBS = nil // use default
```

```
Var item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

Var data as MemoryBlock = item.AttributeData(item.kSecCreationDateItemAttr)
Var text as string = DefineEncoding(data, encodings.UTF8)
MessageBox text
```

Notes: Lasterror is set.
(Read and Write computed property)

113.2.12 AttributeText(attributeName as string) as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Get or set an attribute as an UTF-8 text.
Example:

```
Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var keychain as KeychainMBS = nil // use default

Var item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

Var text as string = item.AttributeText(item.kSecCreationDateItemAttr)
MessageBox text
```

Notes: Lasterror is set.
(Read and Write computed property)

113.2.13 Comment as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Convenience property to get/set the comment attribute as UTF-8 text.
Example:

```
Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var keychain as KeychainMBS = nil // use default

Var item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)
```

```
MessageBox "Label: "+item.label+EndOfLine+_
"Comment: "+item.comment+EndOfLine+_
"Account: "+item.Account
```

Notes: Lasterror is set.
(Read and Write computed property)

113.2.14 Description as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Convenience property to get/set the description attribute as UTF-8 text.
Example:

```
Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var keychain as KeychainMBS = nil // use default

Var item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)
MessageBox item.Description
```

Notes: Lasterror is set.
(Read and Write computed property)

113.2.15 Label as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Convenience property to get/set the label attribute as UTF-8 text.
Example:

```
Var items() as KeychainItemMBS = KeychainManagerMBS.AllItems(nil, KeychainManagerMBS.kSecGenericPasswordItemClass)
Var labels() as string

for each item as KeychainItemMBS in items
labels.Add item.label
next

break // see array of labels
```

Notes: Lasterror is set.

(Read and Write computed property)

113.2.16 Password as memoryblock

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries the password or sets a new one.
Example:

```
Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var keychain as KeychainMBS = nil // use default

Var item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

Var passwordData as MemoryBlock = item.Password
Var password as string = DefineEncoding(passwordData, encodings.UTF8)
MessageBox Password
```

Notes: Lasterror is set.
(Read and Write computed property)

113.2.17 Service as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Convenience property to get/set the service attribute as UTF-8 text.
Example:

```
Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var keychain as KeychainMBS = nil // use default

Var item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)
MessageBox item.Service
```

Notes: Lasterror is set.
(Read and Write computed property)

113.2.18 Constants

Keychain Attribute Names

Constant	Value	Description
kSecAccountItemAttr	"acct"	Identifies the account attribute. You use this tag to set or get a string that represents the user account. It a applies to generic, Internet, and AppleShare password items. Keychain strin should use UTF-8 encoding.
kSecAddressItemAttr	"addr"	Identifies the address attribute. You use this tag to set or get a value of type string that represents the AppleT zone name, or the IP or domain name that represents the server address. This unique to AppleShare password attributes. Keychain strings should use UTF encoding.
kSecAlias	"alis"	Indicates an alias.
kSecAuthenticationTypeItemAttr	"atyp"	Identifies the authentication type attribute. You use this tag to set or get a value of type SecAuthenticationType th represents the Internet authentication scheme. For possible authentication v ues, see "Keychain Authentication Type Constants." This is unique to Intern password attributes.
kSecCertificateEncoding	"cenc"	Indicates a CSSM_CERT_ENCODING type.
kSecCertificateType	"ctyp"	Indicates a CSSM_CERT_TYPE type.
kSecCommentItemAttr	"icmt"	Identifies the comment attribute. You use this tag to set or get a string value that represents a user-edita string containing comments for this item. Keychain strings should use UTF encoding.
kSecCreationDateItemAttr	"cdat"	Identifies the creation date attribute. You use this tag to get a string value that represents the date the it was created, expressed in Zulu Time format ("YYYYMMDDhhmmssZ This is the native format for stored time values in the CDSA specifi tion (defined as CSSM_DB_ATTRIBUTE_FORMAT_TIME_DATE in t CSSM_DB_ATTRIBUTE_FORMAT enumeration, Section 17.2.6.). Wh specifying the creation date as input to a function (for example, SecKeycha SearchCreateFromAttributes), you may alternatively provide a numeric va of type UInt32 or SInt64, expressed as seconds since 01 January 1904.
kSecCreatorItemAttr	"crtr"	Identifies the creator attribute. You use this tag to set or get a value of type FourCharCode that represe the item's creator.
kSecCrlEncoding	"crnc"	Indicates a CSSM_CRL_ENCODING type.
kSecCrlType	"crtp"	Indicates a CSSM_CRL_TYPE type.
kSecCustomIconItemAttr	"cusi"	Identifies the custom icon attribute. Use of this attribute is deprecated. Custom icons for keychains are not su ported in OS X.
kSecDescriptionItemAttr	"desc"	Identifies the description attribute. You use this tag to set or get a string value that represents a user-visible stri describing this particular kind of item, for example "disk image passwor Keychain strings should use UTF-8 encoding.
kSecGenericItemAttr	"gena"	Identifies the generic attribute. You use this tag to set or get a value of untyped bytes that represents a us defined attribute. This is unique to generic password attributes.
kSecInvisibleItemAttr	"invi"	Identifies the invisible attribute. You use this tag to set or get a value of type Boolean that indicates whet the item is invisible (that is, should not be displayed).
kSecLabelItemAttr	"labl"	Identifies the label attribute. You use this tag to set or get a string value that represents a user-edita string containing the label for this item. Keychain strings should use UTF encoding.
kSecModDateItemAttr	"mdat"	Identifies the modification date attribute. You use this tag to get a string value that represents the date the it was created, expressed in Zulu Time format ("YYYYMMDDhhmmssZ This is the native format for stored time values in the CDSA specifi tion (defined as CSSM_DB_ATTRIBUTE_FORMAT_TIME_DATE in t CSSM_DB_ATTRIBUTE_FORMAT enumeration, Section 17.2.6.). Wh

113.3 module KeychainManagerMBS

113.3.1 module KeychainManagerMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The module for global keychain functions.
Example:

```
// build query
Var query as new Dictionary

Var domain as string = "test.test"
Var username as string = "testuser"

query.value( KeychainManagerMBS.kSecAttrServer ) = Domain
query.value( KeychainManagerMBS.kSecAttrAccount ) = Username
query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassInternetPassword
query.Value( KeychainManagerMBS.kSecMatchLimit ) = KeychainManagerMBS.kSecMatchLimitOne

// Build Dictionary with new values
Var newValues as new Dictionary
newValues.value( KeychainManagerMBS.kSecAttrComment ) = "Just a test"

// and update
if KeychainManagerMBS.UpdateItem(query, newValues) then
MessageBox "OK"
else
MessageBox "Failed."
end if
```

Notes: For iOS please define a keychain access group in Xojo build settings. Then prefix it with your developer ID as you can see it in the generated entitlement file inside your app. Pass the prefixed string to our functions with kSecAttrAccessGroup key.

113.3.2 Methods

113.3.3 AddGenericPassword(keychain as KeychainMBS, serviceName as string, accountName as string, password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new generic password to a keychain.
Example:

```
// add password with password in MemoryBlock
Var Password as string = "mysecret"
Var PasswordData as MemoryBlock = ConvertEncoding(Password, encodings.UTF8)
Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var keychain as KeychainMBS = nil // use default

call KeychainManagerMBS.AddGenericPassword(keychain, ServiceName, Username, PasswordData)

Var e as Integer = KeychainManagerMBS.LastError
MessageBox str(e)+": "+KeychainManagerMBS.ErrorMessageString(e)
```

Notes: keychain: A reference to the keychain in which to store a generic password. Pass nil to specify the default keychain.
serviceName: The service name.
accountName: The account name.
password: A buffer containing the password data to be stored in the keychain.

Returns the new keychain item.
Lasterror is set.

The result code errSecNoDefaultKeychain indicates that no default keychain could be found. The result code errSecDuplicateItem indicates that you tried to add a password that already exists in the keychain. The result code errSecDataTooLarge indicates that you tried to add more data than is allowed for a structure of this type. Call ErrorMessageString function to get a human-readable string explaining the result.

This function adds a new generic password to the specified keychain. Required parameters to identify the password are serviceName and accountName, which are application-defined strings.

You can use this function to add passwords for accounts other than the Internet. For example, you might

add AppleShare passwords, or passwords for your database or scheduling programs.

This function sets the initial access rights for the new keychain item so that the application creating the item is given trusted access.

This function automatically calls the function Unlock to display the Unlock Keychain dialog box if the keychain is currently locked.
Available in OS X v10.2 and later.

- 113.3.4 AddGenericPassword(keychain as KeychainMBS, serviceName as string, accountName as string, password as string) as KeychainItemMBS 16994

113.3.4 AddGenericPassword(keychain as KeychainMBS, serviceName as string, accountName as string, password as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new generic password to a keychain.
Example:

```
// add password with password in string
Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var Password as string = "mysecret"
Var keychain as KeychainMBS = nil // use default

call KeychainManagerMBS.AddGenericPassword(keychain, ServiceName, Username, Password)

Var e as Integer = KeychainManagerMBS.LastError
MessageBox str(e)+": "+KeychainManagerMBS.ErrorMessageString(e)
```

Notes: Takes UTF-8 text from password string for the password. Else the same as AddGenericPassword with memoryblock.
See also:

- 113.3.3 AddGenericPassword(keychain as KeychainMBS, serviceName as string, accountName as string, password as memoryblock) as KeychainItemMBS 16993

113.3.5 AddInternetPassword(keychain as KeychainMBS, serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new Internet password to a keychain.
Notes: keychain: A reference to the keychain in which to store an Internet password. Pass nil to specify the user's default keychain.
serverName: The server name.
securityDomain: The security domain. This parameter is optional. Pass "" if the protocol does not require it.
accountName: The account name.
path: The character string representing the path.
port: The TCP/IP port number. If no specific port number is associated with this password, pass 0.
protocol: The protocol associated with this password. See Protocol Type Constants for a description of possible values.
authenticationType: The authentication scheme used. See Keychain Authentication Type Constants for a description of possible values. Pass the constant kSecAuthenticationTypeDefault, to specify the default authentication scheme.
password: A buffer containing the password data to be stored in the keychain.

Returns the new keychain item.
Lasterror is set.

This function adds a new Internet server password to the specified keychain. Required parameters to identify the password are serverName and accountName (you cannot pass "" for both parameters). In addition, some protocols may require an optional securityDomain when authentication is requested. This function optionally returns a reference to the newly added item.

This function sets the initial access rights for the new keychain item so that the application creating the item is given trusted access.

This function automatically calls the function Unlock to display the Unlock Keychain dialog box if the keychain is currently locked.
Available in OS X v10.2 and later.

- 113.3.6 AddInternetPassword(keychain as KeychainMBS, serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as string) as KeychainItemMBS 16996

113.3.6 AddInternetPassword(keychain as KeychainMBS, serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new Internet password to a keychain.
Example:

```
// add password with password in string
Var serverName as string = "mytest.com"
Var Password as string = "mysecret"
Var PasswordData as MemoryBlock = ConvertEncoding(Password, encodings.UTF8)
Var keychain as KeychainMBS = nil // use default
Var securityDomain as string = "ftp://mytest.com"
Var accountName as string = "myusername"
Var path as string = "/test"
Var port as Integer = 22
Var protocol as string = KeychainManagerMBS.kSecAttrProtocolFTP
Var authenticationType as string = KeychainManagerMBS.kSecAttrAuthenticationTypeDefault

call KeychainManagerMBS.AddInternetPassword(keychain, serverName, securityDomain, accountName, path,
port, protocol, authenticationType, PasswordData)

Var e as Integer = KeychainManagerMBS.LastError
MessageBox str(e)+": "+KeychainManagerMBS.ErrorMessageString(e)
```

Notes: See KeychainManagerMBS.AddInternetPassword for details.
The password is stored as data with UTF-8 encoding.
See also:

- 113.3.5 AddInternetPassword(keychain as KeychainMBS, serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as memoryblock) as KeychainItemMBS 16995

113.3.7 AddItem(attributesDictionary as dictionary) as boolean

MBS MacClassic Plugin, Plugin Version: 21.0, Platform: macOS, Targets: All.

Function: Adds one or more items to default keychain.
Notes: See other method variant for details.
See also:

- 113.3.8 AddItem(attributesDictionary as dictionary, byref result as variant) as boolean 16997
- 113.3.9 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary) as boolean 16997

- 113.3.10 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary, byref result as Variant) as boolean 16998

113.3.8 AddItem(attributesDictionary as dictionary, byref result as variant) as boolean

MBS MacClassic Plugin, Plugin Version: 21.0, Platform: macOS, Targets: All.

Function: Adds one or more items to default keychain.
Notes: See other method variant for details.
See also:

- 113.3.7 AddItem(attributesDictionary as dictionary) as boolean 16996
- 113.3.9 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary) as boolean 16997
- 113.3.10 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary, byref result as Variant) as boolean 16998

113.3.9 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary) as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds one or more items to a keychain.
Example:

```
Var a as new Dictionary

Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var Password as string = "mysecret"
Var PasswordData as MemoryBlock = ConvertEncoding(Password, encodings.UTF8)

a.value( KeychainManagerMBS.kSecAttrAccount ) = Username
a.value( KeychainManagerMBS.kSecAttrService ) = ServiceName
a.value( KeychainManagerMBS.kSecValueData ) = PasswordData
a.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword

if KeychainManagerMBS.AddItem(nil, a) then
MessageBox "OK"
else
MessageBox "Failed."
end if
```

Notes: See other method variant for details.
See also:

- 113.3.7 AddItem(attributesDictionary as dictionary) as boolean 16996
- 113.3.8 AddItem(attributesDictionary as dictionary, byref result as variant) as boolean 16997
- 113.3.10 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary, byref result as Variant) as boolean 16998

113.3.10 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary, byref result as Variant) as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds one or more items to a keychain.
Example:

```
Var a as new Dictionary

Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var Password as string = "mysecret"
Var PasswordData as MemoryBlock = ConvertEncoding(Password, encodings.UTF8)

a.value( KeychainManagerMBS.kSecAttrAccount ) = Username
a.value( KeychainManagerMBS.kSecAttrService ) = ServiceName
a.value( KeychainManagerMBS.kSecValueData ) = PasswordData
a.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword

Var r as Variant
if KeychainManagerMBS.AddItem(nil, a, r) then
Var item as KeychainItemMBS = r
MessageBox "OK"
else
MessageBox "Failed."
end if
```

Notes: attributesDictionary: A dictionary containing an item class key-value pair ("Keychain Item Class Keys and Values") and optional attribute key-value pairs ("Attribute Item Keys and Values") specifying the item's attribute values.
result: Optional. On return, a reference to the newly added items. The exact type of the result is based on the values supplied in attributes, as discussed below.

Lasterror is set.

You specify attributes defining an item by adding key-value pairs to the attributes dictionary. To add multiple items to a keychain at once use the kSecUseItemList key (see section "Item List Key") with an array of items as its value. This is currently only supported for non-password items.

If you want the new keychain item to be shared among multiple applications, include the kSecAttrAccessGroup key in the attributes dictionary. The value of this key must be the name of a keychain access group to which all of the programs that will share this item belong.

When you use Xcode to create an application, Xcode adds an application-identifier entitlement to the application bundle. Keychain Services uses this entitlement to grant the application access to its own keychain items. You can also add a keychain-access-groups entitlement to the application and, in the entitlement property list file, specify an array of keychain access groups to which the application belongs. The property list file can have any name you like (for example, keychain-access-groups.plist). The Xcode build variable CODE_SIGN_ENTITLEMENTS should contain the SRCROOT relative path to the entitlement property list file. The property list file itself should be a dictionary with a top-level key called keychain-access-groups whose value is an array of strings. If you add such a property-list file to the application bundle, then the access group corresponding to the application-identifier entitlement is treated as the last element in the access groups array. If you do not include the kSecAttrAccessGroup key in the attributes dictionary when you call the AddItem function to add an item to the keychain, the function uses the first access group in the array by default. If there is no kSecAttrAccessGroup key in the attributes dictionary and there is no keychain-access-groups entitlement in the application bundle, then the access group of a newly created item is the value of the application-identifier entitlement.

For example, a development group in Apple might have the ID:

659823F3DC53.com.apple

and the application identifiers of their two applications might be:

659823F3DC53.com.apple.oneappleapp and

659823F3DC53.com.apple.twoappleapp

If both applications add a keychain-access-groups entitlement with one value in the array of access groups:

659823F3DC53.com.apple.netaccount

then both applications would add new keychain items to the 659823F3DC53.com.apple.netaccount access group by default and both applications would have access to keychain items in that group. In addition, each application would still have access to its own private keychain items: OneAppleApp would have access to items in keychain access group 659823F3DC53.com.apple.oneappleapp and TwoAppleApp would have access to items in 659823F3DC53.com.apple.twoappleapp.

Return types (”Search Results Constants”) are specified as follows:

To obtain the data of the added item as an object of type Memoryblock, specify the return type key kSecReturnData with a value of true.
To obtain all the attributes of the added item as objects of type Dictionary, specify kSecReturnAttributes with a value of true.
To obtain a reference to the added item of type KeychainItemMBS, SecKeyRef, SecCertificateRef, or SecIdentityRef), specify kSecReturnRef with a value of True. This is the default behavior if a return type is not explicitly specified.
To obtain a persistent reference to the added item (an object of type Memoryblock), specify kSecReturnPersistentRef with a value of True. Note that unlike normal references, a persistent reference may be stored on disk or passed between processes.
If more than one of these return types is specified, the result is returned as an object of type Dictionary containing all the requested data.

Available in OS X v10.6 and later.
See also:

- 113.3.7 AddItem(attributesDictionary as dictionary) as boolean 16996
- 113.3.8 AddItem(attributesDictionary as dictionary, byref result as variant) as boolean 16997
- 113.3.9 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary) as boolean 16997

113.3.11 AddItemAsync(attributesDictionary as dictionary, handler as AddItemAsyncCompletedMBS, tag as Variant = nil)

MBS MacClassic Plugin, Plugin Version: 21.0, Platform: macOS, Targets: All.

Function: Asynchronous version of AddItem.
Notes: Work performs on a thread and the given delegate handler is called with result.
See also:

- 113.3.12 AddItemAsync(Keychain as KeychainMBS, attributesDictionary as dictionary, handler as AddItemAsyncCompletedMBS, tag as Variant = nil) 17000

113.3.12 AddItemAsync(Keychain as KeychainMBS, attributesDictionary as dictionary, handler as AddItemAsyncCompletedMBS, tag as Variant = nil)

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Asynchronous version of AddItem.
Notes: Work performs on a thread and the given delegate handler is called with result.
See also:

- 113.3.11 AddItemAsync(attributesDictionary as dictionary, handler as AddItemAsyncCompletedMBS, tag as Variant = nil) 17000

113.3.13 AllItems(keychain as KeychainMBS, itemClass as string) as KeychainItemMBS()

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries all items.
Notes: Keychain: If not nil, searches only this keychain.
ItemClass: The item class to find. For example kSecGenericPasswordItemClass.
Lasterror is set.
Returns array of keychain items.

113.3.14 CopyMatching(Query as dictionary, byref result as Variant) as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns one or more keychain items that match a search query, or copies attributes of specific keychain items.
Example:

```
Var ServiceName as string = "mytest"
Var Username as string = "myusername"

// Build query
Var query as new Dictionary

query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword
query.Value( KeychainManagerMBS.kSecReturnAttributes ) = true
query.Value( KeychainManagerMBS.kSecMatchLimit ) = KeychainManagerMBS.kSecMatchLimitOne
query.value( KeychainManagerMBS.kSecAttrAccount ) = Username
query.value( KeychainManagerMBS.kSecAttrService ) = ServiceName

// search the item and show values from attribute dictionary
Var r as Variant
if KeychainManagerMBS.CopyMatching(query, r) then
if r isa Dictionary then
Var d as Dictionary = r

// show values
MessageBox "Creation Date: "+d.value(KeychainManagerMBS.kSecAttrCreationDate).dateValue.shortdate
MessageBox "Modification Date: "+d.value(KeychainManagerMBS.kSecAttrModificationDate).dateValue.short-
date
end if
end if
```

Notes: query: A dictionary containing an item class specification and optional attributes for controlling the search. See
result: On return, a reference to the found items. The exact type of the result is based on the search

attributes supplied in the query, as discussed below.

Lasterror is set.

You specify attributes defining a search by adding key-value pairs to the query dictionary.

A typical query consists of:

- The class key ("Item Class Key Constant") and a class value constant ("Item Class Value Constants"), which specifies the class of items for which to search.
- One or more attribute key-value pairs ("Attribute Item Keys and Values"), which specify the attribute data to be matched.
- One or more search key-value pairs ("Search Keys"), which specify values that further refine the search.
- A return-type key-value pair ("Search Results Constants"), specifying the type of results you desire.

Return types ("Search Results Constants") are specified as follows:

- To obtain a reference (of type Memoryblock) to the data of a matching item, specify kSecReturnData with a value of true.
- To obtain a dictionary (of type Dictionary) containing the attributes of a matching item, specify kSecReturnAttributes with a value of true.
- To obtain a reference (of type KeychainItemMBS, SecKeyRef, SecCertificateRef, or SecIdentityRef) to a matching item, specify kSecReturnRef with a value of true.
- To obtain a persistent reference (of type Memoryblock) to a matching item, specify kSecReturnPersistentRef with a value of true. Note that unlike normal references, a persistent reference may be stored on disk or passed between processes.
- If more than one return type is specified (for example, kSecReturnRef and kSecReturnAttributes), the results are returned as a dictionary (that is, an object of type Dictionary) containing all the requested data.

By default, this function returns only the first match found. To obtain more than one matching item at a time, specify the search key kSecMatchLimit with a value greater than 1. The result will be an object of type Array containing up to that number of matching items.

Note: You cannot combine the kSecReturnData and kSecMatchLimitAll options when copying password items (items of class kSecInternetPasswordItemClass or kSecGenericPasswordItemClass), because copying each password item could require additional authentication. Instead, request a reference or persistent reference to the items, then request the data for only the specific passwords that you actually require.

By default, this function searches for items in the keychain. To instead provide your own set of items to be filtered by this search query, specify the search key kSecMatchItemList and provide as its value a Array containing items of type SecKeychainItemRef, SecKeyRef, SecCertificateRef, or SecIdentityRef. The objects in the provided array must all be of the same type.

To convert from persistent item references to normal item references, specify the search key kSecMatchItemList with a value that consists of an object of type array referencing an array containing one or more elements of type Memoryblock (the persistent references), and a return-type key of kSecReturnRef whose value is true. The objects in the provided array must all be of the same type.

When you use Xcode to create an application, Xcode adds an application-identifier entitlement to the application bundle. Keychain Services uses this entitlement to grant the application access to its own keychain items. You can also add a keychain-access-groups entitlement to the application and, in the entitlement property list file, specify an array of keychain access groups to which the application belongs. The property list file can have any name you like (for example, keychain-access-groups.plist). The Xcode build variable CODE_SIGN_ENTITLEMENTS should contain the SRCROOT relative path to the entitlement property list file. The property list file itself should be a dictionary with a top-level key called keychain-access-groups whose value is an array of strings. When you call the SecItemAdd function to add an item to the keychain, you can specify the access group to which that item should belong. By default, the SecItemCopyMatching function searches all the access groups to which the application belongs. However, you can add the kSecAttrAccessGroup key to the search dictionary to specify which access group to search for keychain items.

Availability
Available in OS X v10.6 and later.

113.3.15 CopyMatchingAsync(Query as dictionary, handler as CopyMatchingAsyncCompletedMBS, tag as Variant = nil)

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Asynchronous version of CopyMatching.
Notes: Work performs on a thread and the given delegate handler is called with result.

113.3.16 CopyMatchingDictionaries(Query as dictionary) as Dictionary()

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns one or more keychain items that match a search query, or copies attributes of specific keychain items.
Example:

```
// Build query
Var query as new Dictionary
```

```
query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword
query.Value( KeychainManagerMBS.kSecReturnAttributes ) = true
query.Value( KeychainManagerMBS.kSecMatchLimit ) = KeychainManagerMBS.kSecMatchLimitAll

// search all items
Var dics() as Dictionary = KeychainManagerMBS.CopyMatchingDictionaries(query)

// pick first
Var dic as Dictionary = dics(0)

// and display
MessageBox "Service: "+dic.Value(KeychainManagerMBS.kSecAttrService)+EndOfLine+_
"Account: "+dic.Value(KeychainManagerMBS.kSecAttrAccount)
```

Notes: This is a variant of CopyMatching which uses kSecReturnAttributes to query array of dictionaries.

113.3.17 CopyMatchingItems(Query as dictionary) as KeychainItemMBS()

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns one or more keychain items that match a search query, or copies attributes of specific keychain items.
Example:

```
// Build query
Var query as new Dictionary

query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword
query.Value( KeychainManagerMBS.kSecMatchLimit ) = KeychainManagerMBS.kSecMatchLimitAll
query.Value( KeychainManagerMBS.kSecAttrAccount ) = "myusername"

// search all items
Var items() as KeychainItemMBS = KeychainManagerMBS.CopyMatchingItems(query)

if items.LastIndex = -1 then
MessageBox "nothing found."
else

// pick first
Var item as KeychainItemMBS = items(0)

// and display
MessageBox "Service: "+item.Service+EndOfLine+"Account: "+item.Account
end if
```

Notes: This is a variant of CopyMatching which uses kSecReturnRef to query array of KeychainItemMBS.

113.3.18 Default as KeychainMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Retrieves the default keychain.
Example:

```
MessageBox KeychainManagerMBS.Default.Path
```

Notes: Lasterror is set.

113.3.19 DeleteItem(Query as Dictionary) as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Deletes items that match a search query.
Example:

```
Var ServiceName as string = "mytest"
Var Username as string = "myusername"

// Build query
Var query as new Dictionary

query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword
query.value( KeychainManagerMBS.kSecAttrAccount ) = Username
query.value( KeychainManagerMBS.kSecAttrService ) = ServiceName

// search the item and delete it

if KeychainManagerMBS.DeleteItem(query) then
MessageBox "Deleted"
else
MessageBox "Failed."
end if
```

Notes: query: A dictionary containing an item class specification and optional attributes for controlling the search.
Lasterror is set.

See the discussion section of the CopyMatching function for information about how to construct a search dictionary.

By default, this function deletes all items matching the specified query. You can change this behavior by specifying a key, as follows:

- To delete an item identified by a transient reference, specify the kSecMatchItemList search key with a reference returned by using the kSecReturnRef return type key in a previous call to the SecItemCopyMatching or SecItemAdd functions.
- To delete an item identified by a persistent reference, specify the kSecMatchItemList search key with a persistent reference returned by using the kSecReturnPersistentRef return type key to the SecItemCopyMatching or SecItemAdd functions.
- If more than one of these return keys is specified, the behavior is undefined.

Available in OS X v10.6 and later.

113.3.20 DomainDefault(domain as Integer) as KeychainMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Retrieves the default keychain from a specified preference domain.
Example:

Var SystemKeychain as KeychainMBS = KeychainManagerMBS.DomainDefault(KeychainManagerMBS.kSecPreferencesDomainSystem)
MessageBox SystemKeychain.name

Notes: domain: The preference domain from which you wish to retrieve the default keychain. See Preference Domain Constants for possible domain values.

Returns the keychain object of the default keychain in the specified preference domain.
Lasterror is set.

A preference domain is a set of security-related preferences, such as the default keychain and the current keychain search list. Use this function if you want to retrieve the default keychain for a specific preference domain. Use the KeychainManagerMBS.Default function if you want the default keychain for the current preference domain. See the PreferenceDomain function for a discussion of current and default preference domains.
Available in OS X v10.3 and later.

113.3.21 DomainSearchList(domain as Integer) as KeychainMBS()

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Retrieves the keychain search list for a specified preference domain.
Example:

```
Var SearchList() as KeychainMBS = KeychainManagerMBS.DomainSearchList(KeychainManagerMBS.kSecPreferencesDomainUser)
Var names() as String

for each k as KeychainMBS in SearchList
names.Add k.Name
next

MessageBox Join(names, EndOfLine)
```

Notes: domain: The preference domain from which you wish to retrieve the keychain search list. See Preference Domain Constants for possible domain values.

Returns the keychain search list of the specified preference domain.
Lasterror is set.

A preference domain is a set of security-related preferences, such as the default keychain and the current keychain search list. Use this function if you want to retrieve the keychain search list for a specific preference domain. Use the SearchList function if you want the keychain search list for the current preference domain. See the PreferenceDomain function for a discussion of current and default preference domains.
Available in OS X v10.3 and later.

113.3.22 ErrorMessageString(error as Integer) as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns a string explaining the meaning of a security result code.
Notes: status: A result code of type OSStatus or CSSM_RETURN, returned by a security or CSSM function.

Returns a human-readable string describing the result, or empty string if no string is available for the specified result code.
Available in OS X v10.5 and later.

113.3.23 FindGenericItem(keychain as KeychainMBS, serviceName as string, accountName as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first generic keychain item based on the attributes passed.
Example:

```
Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var keychain as KeychainMBS = nil // use default

Var item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

MessageBox "Label: "+item.label+EndOfLine+_
"Comment: "+item.comment+EndOfLine+_
"Account: "+item.Account
```

Notes: Same as KeychainManagerMBS.FindGenericPassword, but returns item instead of password.

113.3.24 FindGenericPassword(keychain as KeychainMBS, serviceName as string, accountName as string, byref password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first generic password based on the attributes passed.
Notes: keychain: A reference to a single keychain, or nil to search the user's default keychain search list.
serviceName: The service name.
accountName: The account name.
password: A memoryblock that holds the password data.

Returns the item object of the generic password.
Lasterror is set.

This function finds the first generic password item that matches the attributes you provide. Most attributes are optional; you should pass only as many as you need to narrow the search sufficiently for your application's intended use. This function optionally returns a reference to the found item.

This function decrypts the password before returning it to you. If the calling application is not in the list of trusted applications, the user is prompted before access is allowed. If the access controls for this item do not allow decryption, the function returns the errSecAuthFailed result code.

This function automatically calls the function Unlock to display the Unlock Keychain dialog box if the key-

chain is currently locked.

113.3.25 FindInternetItem(keychain as KeychainMBS, serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first Internet password item based on the attributes passed.
Notes: See KeychainManagerMBS.FindInternetPassword for details.

113.3.26 FindInternetPassword(keychain as KeychainMBS, serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, byref password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first Internet password based on the attributes passed.
Notes: keychain: A single keychain or nil to search the user's default keychain search list.
serverName: The server name.
securityDomain: The security domain. This parameter is optional, as not all protocols require it. Pass "" if it is not required.
accountName: The account name.
path: The string representing the path.
port: The TCP/IP port number. Pass 0 to ignore the port number.
protocol: The protocol associated with this password. See Keychain Protocol Type Constants for a description of possible values.
authenticationType: The authentication scheme used. See Keychain Authentication Type Constants for a description of possible values. Pass the constant kSecAuthenticationTypeDefault, to specify the default authentication scheme.
password: On return, a memoryblock containing the password data.

Returns the item object of the Internet password.
Lasterror is set.

This function finds the first Internet password item that matches the attributes you provide. This function optionally returns a reference to the found item.

This function decrypts the password before returning it to you. If the calling application is not in the list of trusted applications, the user is prompted before access is allowed. If the access controls for this item do

not allow decryption, the function returns the errSecAuthFailed result code.

This function automatically calls the function Unlock to display the Unlock Keychain dialog box if the keychain is currently locked.
Available in OS X v10.2 and later.

113.3.27 GetPassword(Query as dictionary, byref result as Memoryblock) as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns one keychain item that match a search query.
Example:

```
// build query
Var query as new Dictionary

Var ServiceName as string = "mytest"
Var Username as string = "myusername"

query.value( KeychainManagerMBS.kSecAttrAccount ) = Username
query.value( KeychainManagerMBS.kSecAttrService ) = ServiceName
query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword

// query password
Var passwordData as MemoryBlock
if KeychainManagerMBS.GetPassword(query, passwordData) then
// and show it
Var password as string = DefineEncoding(passwordData, Encodings.utf8)
MessageBox "OK: "+password
else
MessageBox "Failed."
end if
```

Notes: This is a variant of CopyMatching which uses kSecReturnData to query the data of one keychain item.
Returns password of first item found in result parameter. If you expect text, be sure to use DefineEncoding to define as encodings.UTF8.

113.3.28 ItemFromPersistentReference(data as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Provides a keychain item reference, given a persistent reference.

Notes: Returns a keychain item reference for the item for which you provided a persistent reference.
Available in OS X v10.6 and later.

113.3.29 kSecAttrAccess as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: A SecAccessRef object describing the access control settings for this item.
Available in OS X v10.7 and later.

113.3.30 kSecAttrAccessControl as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: Specifies a dictionary key whose value is KeychainAccessControlMBS instance which contains access control conditions for item.
Notes: Available on Mac OS X 10.10 and newer.
IMPORTANT: This attribute is mutually exclusive with kSecAttrAccess attribute.

See KeychainAccessControlMBS class.

113.3.31 kSecAttrAccessGroup as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: Specifies a dictionary key whose value is a CFStringRef indicating which access group a item is in.
Notes: Available on Mac OS X 10.9 and newer.
The access groups that a particular application has membership in are determined by two entitlements for that application. The application-identifier entitlement contains the application's single access group, unless there is a keychain-access-groups entitlement present. The latter has as its value a list of access groups; the first item in this list is the default access group. Unless a specific access group is provided as the value of kSecAttrAccessGroup when SecItemAdd is called, new items are created in the application's default access group. Specifying this attribute in SecItemCopyMatching, SecItemUpdate, or SecItemDelete calls limits the search to the specified access group (of which the calling application must be a member to obtain matching results.) To share keychain items between multiple applications, each application must have a common group listed in its keychain-access-groups entitlement, and each must specify this shared access group name as the value for the kSecAttrAccessGroup key in the dictionary passed to SecItem functions.

For iOS please define a keychain access group in Xojo build settings. Then prefix it with your developer ID as you can see it in the generated entitlement file inside your app. Pass the prefixed string to our functions

with kSecAttrAccessGroup key.

113.3.32 kSecAttrAccessible as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: Specifies a dictionary key whose value indicates when your application needs access to an item's data.
Notes: You should choose the most restrictive option that meets your application's needs to allow the system to protect that item in the best way possible. See the kSecAttrAccessible* methods for a list of values which can be specified.

IMPORTANT: This attribute is currently not supported for OS X keychain items, unless the kSecAttrSynchronizable attribute is also present. If both attributes are specified on either OS X or iOS, the value for the kSecAttrAccessible key may only be one whose name does not end with "ThisDeviceOnly", as those cannot sync to another device.

113.3.33 kSecAttrAccessibleAfterFirstUnlock as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: One of the values for kSecAttrAccessible key.
Notes: Item data can only be accessed once the device has been unlocked after a restart. This is recommended for items that need to be accesible by background applications. Items with this attribute will migrate to a new device when using encrypted backups.

113.3.34 kSecAttrAccessibleAfterFirstUnlockThisDeviceOnly as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: One of the values for kSecAttrAccessible key.
Notes: Item data can only be accessed once the device has been unlocked after a restart.
This is recommended for items that need to be accessible by background applications. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device these items will be missing.
Available on Mac OS X 10.9 and newer.

113.3.35 kSecAttrAccessibleAlways as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: One of the values for kSecAttrAccessible key.
Notes: Item data can always be accessed regardless of the lock state of the device. This is not recommended for anything except system use. Items with this attribute will migrate to a new device when using encrypted backups.
Available on Mac OS X 10.9 and newer.

113.3.36 kSecAttrAccessibleAlwaysThisDeviceOnly as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: One of the values for kSecAttrAccessible key.
Notes: Item data can always be accessed regardless of the lock state of the device. This option is not recommended for anything except system use. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device, these items will be missing.
Available on Mac OS X 10.9 and newer.

113.3.37 kSecAttrAccessibleWhenPasscodeSetThisDeviceOnly as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: One of the values for kSecAttrAccessible key.
Notes: Item data can only be accessed while the device is unlocked. This is recommended for items that only need to be accessible while the application is in the foreground and requires a passcode to be set on the device. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device, these items will be missing. This attribute will not be available on devices without a passcode. Disabling the device passcode will cause all previously protected items to be deleted.
Available on Mac OS X 10.9 and newer.

113.3.38 kSecAttrAccessibleWhenUnlocked as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: One of the values for kSecAttrAccessible key.
Notes: Item data can only be accessed while the device is unlocked. This is recommended for items that only need be accesible while the application is in the foreground. Items with this attribute will migrate to a new device when using encrypted backups.
Available on Mac OS X 10.9 and newer.

113.3.39 kSecAttrAccessibleWhenUnlockedThisDeviceOnly as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: One of the values for kSecAttrAccessible key.
Notes: Item data can only be accessed while the device is unlocked. This is recommended for items that only need be accesible while the application is in the foreground. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device, these items will be missing.
Available on Mac OS X 10.9 and newer.

113.3.40 kSecAttrAccount as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Account attribute key.
The corresponding value is of type String and contains an account name. Items of class kSecClassGenericPassword and kSecClassInternetPassword have this attribute.
Available in OS X v10.6 and later.

113.3.41 kSecAttrApplicationLabel as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Application label attribute key.
The corresponding value is of type String and contains a label for this item. This attribute is different from the kSecAttrLabel attribute, which is intended to be human-readable. This attribute is used to look up a key programmatically; in particular, for keys of class kSecAttrKeyClassPublic and kSecAttrKeyClassPrivate, the value of this attribute is the hash of the public key.
Available in OS X v10.6 and later.

113.3.42 kSecAttrApplicationTag as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Private tag attribute key.
The corresponding value is of type Memoryblock and contains private tag data.
Available in OS X v10.6 and later.

113.3.43 kSecAttrAuthenticationType as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Authentication type attribute key.
The corresponding value is of type integer and denotes the authentication scheme for this item (see "Authentication Type Values").
Available in OS X v10.6 and later.

113.3.44 kSecAttrAuthenticationTypeDefault as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes: The default authentication type.
Available in OS X v10.6 and later.

113.3.45 kSecAttrAuthenticationTypeDPA as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes: Distributed Password authentication.
Available in OS X v10.6 and later.

113.3.46 kSecAttrAuthenticationTypeHTMLForm as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes: HTML form based authentication.
Available in OS X v10.6 and later.

113.3.47 kSecAttrAuthenticationTypeHTTPBasic as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes: HTTP Basic authentication.
Available in OS X v10.6 and later.

113.3.48 kSecAttrAuthenticationTypeHTTPDigest as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes: HTTP Digest Access authentication.
Available in OS X v10.6 and later.

113.3.49 kSecAttrAuthenticationTypeMSN as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes: Microsoft Network default authentication.
Available in OS X v10.6 and later.

113.3.50 kSecAttrAuthenticationTypeNTLM as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes: Windows NT LAN Manager authentication.
Available in OS X v10.6 and later.

113.3.51 kSecAttrAuthenticationTypeRPA as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes: Remote Password authentication.
Available in OS X v10.6 and later.

113.3.52 kSecAttrCanDecrypt as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Decryption attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to decrypt data.
Available in OS X v10.6 and later.

113.3.53 kSecAttrCanDerive as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Derivation attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to derive another key.
Available in OS X v10.6 and later.

113.3.54 kSecAttrCanEncrypt as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Encryption attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to encrypt data.
Available in OS X v10.6 and later.

113.3.55 kSecAttrCanSign as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Signature attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to create a digital signature.
Available in OS X v10.6 and later.

113.3.56 kSecAttrCanUnwrap as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Unwrap attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to unwrap another key.
Available in OS X v10.6 and later.

113.3.57 kSecAttrCanVerify as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Signature verification attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to verify a digital signature.
Available in OS X v10.6 and later.

113.3.58 kSecAttrCanWrap as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Wrap attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to wrap another key.
Available in OS X v10.6 and later.

113.3.59 kSecAttrCertificateEncoding as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Certificate encoding attribute key.
The corresponding value is of type integer and denotes the certificate encoding (see the CSSM_CERT_ENCODING enumeration in cssmtype.h). Items of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.

113.3.60 kSecAttrCertificateType as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Certificate type attribute key.
The corresponding value is of type integer and denotes the certificate type (see the CSSM_CERT_TYPE enumeration in cssmtype.h). Items of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.

113.3.61 kSecAttrComment as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Comment attribute key.
The corresponding value is of type string and contains the user-editable comment for this item.
Available in OS X v10.6 and later.

113.3.62 kSecAttrCreationDate as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Creation date key.
The corresponding value is of type date and represents the date the item was created. Read only.
Available in OS X v10.6 and later.

113.3.63 kSecAttrCreator as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Creator attribute key.
The corresponding value is of type integer and represents the item's creator. This number is the unsigned integer representation of a four-character code (for example, 'aCrt').
Available in OS X v10.6 and later.

113.3.64 kSecAttrDescription as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Description attribute key.
The corresponding value is of type String and specifies a user-visible string describing this kind of item (for example, "Disk image password").
Available in OS X v10.6 and later.

113.3.65 kSecAttrEffectiveKeySize as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Effective number of bits attribute key.
The corresponding value is of type Integer and indicates the effective number of bits in this cryptographic key. For example, a DES key has a kSecAttrKeySizeInBits of 64, but a kSecAttrEffectiveKeySize of 56 bits.
Available in OS X v10.6 and later.

113.3.66 kSecAttrGeneric as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Generic attribute key.
The corresponding value is of type Memoryblock and contains a user-defined attribute. Items of class kSecClassGenericPassword have this attribute.
Available in OS X v10.6 and later.

113.3.67 kSecAttrIsInvisible as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Invisible attribute key.
The corresponding value is of type boolean and is true if the item is invisible (that is, should not be displayed).
Available in OS X v10.6 and later.

113.3.68 kSecAttrIsNegative as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Negative attribute key.
The corresponding value is of type Boolean and indicates whether there is a valid password associated with this keychain item. This is useful if your application doesn't want a password for some particular service to be stored in the keychain, but prefers that it always be entered by the user.
Available in OS X v10.6 and later.

113.3.69 kSecAttrIsPermanent as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Permanence attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key is to be stored permanently.
Available in OS X v10.6 and later.

113.3.70 kSecAttrIssuer as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Issuer attribute key.
The corresponding value is of type Date and contains the X.500 issuer name of a certificate. Items of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.

113.3.71 kSecAttrKeyClass as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Key class attribute key.
The corresponding value is of type CFTypeRef and specifies a type of cryptographic key. Possible values are listed in "Key Class Values." Read only.
Available in OS X v10.6 and later.

113.3.72 kSecAttrKeyClassPrivate as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyClass attribute key.
Notes: A private key of a public-private pair.
Available in OS X v10.6 and later.

113.3.73 kSecAttrKeyClassPublic as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyClass attribute key.
Notes: A public key of a public-private pair.

Available in OS X v10.6 and later.

113.3.74 kSecAttrKeyClassSymmetric as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyClass attribute key.
Notes: A private key used for symmetric-key encryption and decryption.
Available in OS X v10.6 and later.

113.3.75 kSecAttrKeySizeInBits as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Number of bits attribute key.
The corresponding value is of type Integer and indicates the total number of bits in this cryptographic key.
Compare with kSecAttrEffectiveKeySize.
Available in OS X v10.6 and later.

113.3.76 kSecAttrKeyType as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Algorithm attribute key.
The corresponding value is of type integer and indicates the algorithm associated with this cryptographic key (see the CSSM_ALGORITHMS enumeration in cssmtype.h and "Key Type Values").
Available in OS X v10.6 and later.

113.3.77 kSecAttrKeyType3DES as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyType attribute key.

113.3.78 kSecAttrKeyTypeAES as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes: AES algorithm.
Available in OS X v10.7 and later.

113.3.79 kSecAttrKeyTypeCAST as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes: CAST algorithm.
Available in OS X v10.7 and later.

113.3.80 kSecAttrKeyTypeDES as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes: DES algorithm.
Available in OS X v10.7 and later.

113.3.81 kSecAttrKeyTypeDSA as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes: DSA algorithm.
Available in OS X v10.7 and later.

113.3.82 kSecAttrKeyTypeEC as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes: Elliptic curve algorithm.
Available in OS X v10.9 and later.

113.3.83 kSecAttrKeyTypeECDSA as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes: Elliptic curve DSA algorithm.
Available in OS X v10.7 and later.

113.3.84 kSecAttrKeyTypeRC2 as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes: RC2 algorithm.
Available in OS X v10.7 and later.

113.3.85 kSecAttrKeyTypeRC4 as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes: RC4 algorithm.
Available in OS X v10.7 and later.

113.3.86 kSecAttrKeyTypeRSA as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes: RSA algorithm.
Available in OS X v10.6 and later.

113.3.87 kSecAttrLabel as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Label attribute key.
The corresponding value is of type String and contains the user-visible label for this item.
Available in OS X v10.6 and later.

113.3.88 kSecAttrModificationDate as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Modification date key.
The corresponding value is of type date and represents the last time the item was updated. Read only.
Available in OS X v10.6 and later.

113.3.89 kSecAttrPath as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Path attribute key.
The corresponding value is of type String and represents a path, typically the path component of the URL. Items of class kSecClassInternetPassword have this attribute.
Available in OS X v10.6 and later.

113.3.90 kSecAttrPort as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Port attribute key.
The corresponding value is of type integer and represents an Internet port number. Items of class kSecClassInternetPassword have this attribute.
Available in OS X v10.6 and later.

113.3.91 kSecAttrPRF as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Pseudorandom function attribute. Possible values are described in "kSecAttrPRF Value Constants."
Available in OS X v10.7 and later.

113.3.92 kSecAttrPRFHmacAlgSHA1 as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Constants used for the kSecAttrPRF key in the parameters dictionary passed to KeyDeriveFromPassword.
Notes: Use the SHA1 algorithm.
Available in OS X v10.7 and later.

113.3.93 kSecAttrPRFHmacAlgSHA224 as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Constants used for the kSecAttrPRF key in the parameters dictionary passed to KeyDeriveFromPassword.
Notes: Use the SHA224 algorithm.
Available in OS X v10.7 and later.

113.3.94 kSecAttrPRFHmacAlgSHA256 as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Constants used for the kSecAttrPRF key in the parameters dictionary passed to KeyDeriveFromPassword.
Notes: Use the SHA256 algorithm.
Available in OS X v10.7 and later.

113.3.95 kSecAttrPRFHmacAlgSHA384 as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Constants used for the kSecAttrPRF key in the parameters dictionary passed to KeyDeriveFromPassword.
Notes: Use the SHA384 algorithm.
Available in OS X v10.7 and later.

113.3.96 kSecAttrPRFHmacAlgSHA512 as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Constants used for the kSecAttrPRF key in the parameters dictionary passed to KeyDeriveFromPassword.
Notes: Use the SHA512 algorithm.
Available in OS X v10.7 and later.

113.3.97 kSecAttrProtocol as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Protocol attribute key.
The corresponding value is of type integer and denotes the protocol for this item (see "Protocol Values").
Items of class kSecClassInternetPassword have this attribute.
Available in OS X v10.6 and later.

113.3.98 kSecAttrProtocolAFP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: AFP over TCP.
Available in OS X v10.6 and later.

113.3.99 kSecAttrProtocolAppleTalk as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: AFP over AppleTalk.
Available in OS X v10.6 and later.

113.3.100 kSecAttrProtocolDAAP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: DAAP protocol.
Available in OS X v10.6 and later.

113.3.101 kSecAttrProtocolEPPC as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: Remote Apple Events.
Available in OS X v10.6 and later.

113.3.102 kSecAttrProtocolFTP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: FTP protocol.
Available in OS X v10.6 and later.

113.3.103 kSecAttrProtocolFTPAccount as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: A client side FTP account.
Available in OS X v10.6 and later.

113.3.104 kSecAttrProtocolFTPProxy as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: FTP proxy.
Available in OS X v10.6 and later.

113.3.105 kSecAttrProtocolFTPS as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: FTP over TLS/SSL.
Available in OS X v10.6 and later.

113.3.106 kSecAttrProtocolHTTP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: HTTP protocol.
Available in OS X v10.6 and later.

113.3.107 kSecAttrProtocolHTTPProxy as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: HTTP proxy.
Available in OS X v10.6 and later.

113.3.108 kSecAttrProtocolHTTPS as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: HTTP over TLS/SSL.
Available in OS X v10.6 and later.

113.3.109 kSecAttrProtocolHTTPSProxy as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: HTTPS proxy.
Available in OS X v10.6 and later.

113.3.110 kSecAttrProtocolIMAP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: IMAP protocol.
Available in OS X v10.6 and later.

113.3.111 kSecAttrProtocolIMAPS as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: IMAP over TLS/SSL.
Available in OS X v10.6 and later.

113.3.112 kSecAttrProtocolIPP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: IPP protocol.
Available in OS X v10.6 and later.

113.3.113 kSecAttrProtocolIRC as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: IRC protocol.
Available in OS X v10.6 and later.

113.3.114 kSecAttrProtocolIRCS as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: IRC over TLS/SSL.
Available in OS X v10.6 and later.

113.3.115 kSecAttrProtocolLDAP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: LDAP protocol.
Available in OS X v10.6 and later.

113.3.116 kSecAttrProtocolLDAPS as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: LDAP over TLS/SSL.
Available in OS X v10.6 and later.

113.3.117 kSecAttrProtocolNNTP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: NNTP protocol.
Available in OS X v10.6 and later.

113.3.118 kSecAttrProtocolNNTPS as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: NNTP over TLS/SSL.
Available in OS X v10.6 and later.

113.3.119 kSecAttrProtocolPOP3 as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: POP3 protocol.
Available in OS X v10.6 and later.

113.3.120 kSecAttrProtocolPOP3S as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: POP3 over TLS/SSL.
Available in OS X v10.6 and later.

113.3.121 kSecAttrProtocolRTSP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: RTSP protocol.
Available in OS X v10.6 and later.

113.3.122 kSecAttrProtocolRTSPProxy as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: RTSP proxy.
Available in OS X v10.6 and later.

113.3.123 kSecAttrProtocolSMB as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: SMB protocol.
Available in OS X v10.6 and later.

113.3.124 kSecAttrProtocolSMTP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: SMTP protocol.
Available in OS X v10.6 and later.

113.3.125 kSecAttrProtocolSOCKS as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: SOCKS protocol.
Available in OS X v10.6 and later.

113.3.126 kSecAttrProtocolSSH as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: SSH protocol.
Available in OS X v10.6 and later.

113.3.127 kSecAttrProtocolTelnet as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: Telnet protocol.
Available in OS X v10.6 and later.

113.3.128 kSecAttrProtocolTelnetS as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: Telnet over TLS/SSL.
Available in OS X v10.6 and later.

113.3.129 kSecAttrPublicKeyHash as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Public key hash attribute key.
The corresponding value is of type memoryblock and contains the hash of a certificate's public key. Items of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.

113.3.130 kSecAttrRounds as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: The number of rounds for the pseudorandom function specified by kSecAttrPRF.
Available in OS X v10.7 and later.

113.3.131 kSecAttrSalt as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: A memoryblock object containing the salt to use for this key.
Available in OS X v10.7 and later.

113.3.132 kSecAttrSecurityDomain as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Security domain attribute key.
The corresponding value is of type String and represents the Internet security domain. Items of class kSecClassInternetPassword have this attribute.

Available in OS X v10.6 and later.

113.3.133 kSecAttrSerialNumber as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Serial number attribute key.
The corresponding value is of type Date and contains the serial number data of a certificate. Items of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.

113.3.134 kSecAttrServer as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Server attribute key.
The corresponding value is of type String and contains the server's domain name or IP address. Items of class kSecClassInternetPassword have this attribute.
Available in OS X v10.6 and later.

113.3.135 kSecAttrService as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Service attribute key.
The corresponding value is a string of type String that represents the service associated with this item. Items of class kSecClassGenericPassword have this attribute.
Available in OS X v10.6 and later.

113.3.136 kSecAttrSubject as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Subject attribute key.
The corresponding value is of type CFDataRef and contains the X.500 subject name of a certificate. Items of class kSecClassCertificate have this attribute. Read only.

Available in OS X v10.6 and later.

113.3.137 kSecAttrSubjectKeyID as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Subject key ID attribute key.
The corresponding value is of type date and contains the subject key ID of a certificate. Items of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.

113.3.138 kSecAttrSynchronizable as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: Specifies a dictionary key whose value is a Boolean indicating whether the item in question can be synchronized.
Notes: To add a new item which can be synced to other devices, or to obtain synchronizable results from a query, supply this key with a value of true. If the key is not supplied, or has a value of false, then no synchronizable items will be added or returned. A predefined value, kSecAttrSynchronizableAny, may be provided instead of true if both synchronizable and non-synchronizable results are desired.

IMPORTANT: Specifying the kSecAttrSynchronizable key has several caveats:

- Updating or deleting items using the kSecAttrSynchronizable key will affect all copies of the item, not just the one on your local device. Be sure that it makes sense to use the same password on all devices before deciding to make a password synchronizable.
- Only password items can currently be synchronized. Keychain syncing is not supported for certificates or cryptographic keys.
- Items stored or obtained using the kSecAttrSynchronizable key cannot specify SecAccessRef-based access control with kSecAttrAccess. If a password is intended to be shared between multiple applications, the kSecAttrAccessGroup key must be specified, and each application using this password must have a 'keychain-access-groups' entitlement with the specified access group value.
- Items stored or obtained using the kSecAttrSynchronizable key may not also specify a kSecAttrAccessible value which is incompatible with syncing (namely, those whose names end with "ThisDeviceOnly".)
- Items stored or obtained using the kSecAttrSynchronizable key cannot be specified by reference. You must pass kSecReturnAttributes and/or kSecReturnData to retrieve results; kSecReturnRef is currently not supported for synchronizable items.

- Persistent references to synchronizable items should be avoided; while they may work locally, they cannot be moved between devices, and may not resolve if the item is modified on some other device.
- When specifying a query that uses the kSecAttrSynchronizable key, search keys are limited to the item's class and attributes. The only search constant which may be used is kSecMatchLimit; other constants using the kSecMatch prefix are not supported at this time.

Available on Mac OS X 10.9 and newer.

113.3.139 kSecAttrSynchronizableAny as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: Specifies that both synchronizable and non-synchronizable results should be returned from this query.
Notes: This may be used as a value for the kSecAttrSynchronizable dictionary key in a call to SecItemCopyMatching, SecItemUpdate, or SecItemDelete.
Available on Mac OS X 10.9 and newer.

113.3.140 kSecAttrType as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes: Type attribute key.
The corresponding value is of type integer and represents the item's type. This number is the unsigned integer representation of a four-character code (for example, 'aTyp').
Available in OS X v10.6 and later.

113.3.141 kSecClass as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Key constant used to set the item class value in a search dictionary.
Notes: Dictionary key whose value is the item's class code.
Possible values for this key are listed in Item Class Value Constants.
Available in OS X v10.6 and later.

113.3.142 kSecClassCertificate as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the values used with the kSecClass key in a search dictionary.
Notes: Certificate item.
The following attribute types ("Attribute Item Keys and Values") can be used with an item of this type:

kSecAttrAccessible
kSecAttrAccessGroup
kSecAttrCertificateType
kSecAttrCertificateEncoding
kSecAttrLabel
kSecAttrSubject
kSecAttrIssuer
kSecAttrSerialNumber
kSecAttrSubjectKeyID
kSecAttrPublicKeyHash

Available in OS X v10.7 and later.

113.3.143 kSecClassGenericPassword as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the values used with the kSecClass key in a search dictionary.
Notes: Generic password item.

The following attribute types ("Attribute Item Keys and Values") can be used with an item of this type:

kSecAttrAccessible
kSecAttrAccessGroup
kSecAttrCreationDate
kSecAttrModificationDate
kSecAttrDescription
kSecAttrComment
kSecAttrCreator
kSecAttrType
kSecAttrLabel
kSecAttrIsInvisible
kSecAttrIsNegative
kSecAttrAccount
kSecAttrService
kSecAttrGeneric

Available in OS X v10.7 and later.

113.3.144 kSecClassIdentity as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the values used with the kSecClass key in a search dictionary.
Notes: Identity item.

An identity is a certificate together with its associated private key. Because an identity is the combination of a private key and a certificate, this class shares attributes of both kSecClassKey and kSecClassCertificate.

Available in OS X v10.7 and later.

113.3.145 kSecClassInternetPassword as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the values used with the kSecClass key in a search dictionary.
Notes: Internet password item.
The following attribute types ("Attribute Item Keys and Values") can be used with an item of this type:

kSecAttrAccessible
kSecAttrAccessGroup
kSecAttrCreationDate
kSecAttrModificationDate
kSecAttrDescription
kSecAttrComment
kSecAttrCreator
kSecAttrType
kSecAttrLabel
kSecAttrIsInvisible
kSecAttrIsNegative
kSecAttrAccount
kSecAttrSecurityDomain
kSecAttrServer
kSecAttrProtocol
kSecAttrAuthenticationType
kSecAttrPort
kSecAttrPath

Available in OS X v10.6 and later.

113.3.146 kSecClassKey as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the values used with the kSecClass key in a search dictionary.
Notes: Cryptographic key item.
The following attribute types ("Attribute Item Keys and Values") can be used with an item of this type:

kSecAttrAccessible
kSecAttrAccessGroup
kSecAttrKeyClass
kSecAttrLabel
kSecAttrApplicationLabel
kSecAttrIsPermanent
kSecAttrApplicationTag
kSecAttrKeyType
kSecAttrKeySizeInBits
kSecAttrEffectiveKeySize
kSecAttrCanEncrypt
kSecAttrCanDecrypt
kSecAttrCanDerive
kSecAttrCanSign
kSecAttrCanVerify
kSecAttrCanWrap
kSecAttrCanUnwrap

Available in OS X v10.7 and later.

113.3.147 kSecMatchCaseInsensitive as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Case sensitivity attribute key.
The corresponding value is of type Boolean. If this value is False, or if this attribute is not provided, then case-sensitive string matching is performed.
Available in OS X v10.6 and later.

113.3.148 kSecMatchDiacriticInsensitive as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Case sensitivity attribute key.

The corresponding value is of type Boolean. If this value is False, or if this attribute is not provided, then diacritic-sensitive string matching is performed.
Available in OS X v10.7 and later.

113.3.149 kSecMatchEmailAddressIfPresent as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Email address attribute key.
The corresponding value is of type string and contains an RFC822 email address. If provided, returned certificates or identities are limited to those that either contain the address or do not contain any email address.
Available in OS X v10.6 and later.

113.3.150 kSecMatchIssuers as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Issuers attribute key.
The corresponding value is of type array, where the array consists of X.500 names of type Memoryblock. If provided, returned certificates or identities are limited to those whose certificate chain contains one of the issuers provided in this list.
Available in OS X v10.6 and later.

113.3.151 kSecMatchItemList as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Item list attribute key.
To provide your own set of items to be filtered by a search query rather than searching the keychain, specify this search key in a call to the SecItemCopyMatching function with a value that consists of an object of type array where the array contains either KeychainItemMBS, SecKeyRef, SecCertificateRef, SecIdentityRef, or memoryblock items. The objects in the provided array must all be of the same type.
To convert from persistent item references to normal item references, specify this search key in a call to the CopyMatching function with a value of type array where the array contains one or more CFDataRef elements (the persistent references), and a return-type key of kSecReturnRef whose value is True.
To delete an item identified by a transient reference, specify the kSecMatchItemList search key in a call to the SecItemDelete function with a reference returned by using the kSecReturnRef return type key in a previous call to the CopyMatching or SecItemAdd functions.
To delete an item identified by a persistent reference, specify the kSecMatchItemList search key in a call

to the SecItemDelete function with a persistent reference returned by using the kSecReturnPersistentRef return type key to the CopyMatching or SecItemAdd functions.
Available in OS X v10.6 and later.

113.3.152 kSecMatchLimit as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Match limit attribute key.
The corresponding value is of type Integer. If provided, this value specifies the maximum number of results to return or otherwise act upon. For a single item, specify kSecMatchLimitOne. To specify all matching items, specify kSecMatchLimitAll. The default behavior is function-dependent.
Available in OS X v10.6 and later.

113.3.153 kSecMatchLimitAll as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: An unlimited number of results may be returned; used as a value for the kSecMatchLimit attribute key.
Available in OS X v10.6 and later.

113.3.154 kSecMatchLimitOne as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Results are limited to the first item found; used as a value for the kSecMatchLimit attribute key.
Available in OS X v10.6 and later.

113.3.155 kSecMatchPolicy as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Match policy attribute key.
The corresponding value is of type SecPolicyRef. If provided, returned certificates or identities must verify with this policy.

Available in OS X v10.6 and later.

113.3.156 kSecMatchSearchList as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Example:

```
// We pass a keychain for searching only in this keychain
Var keychains() as KeychainMBS = KeychainManagerMBS.SearchList
Var keychain as KeychainMBS = keychains(1) // we pick second keychain
Var keychainname as string = keychain.name

// Build query
Var query as new Dictionary

query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword
query.Value( KeychainManagerMBS.kSecReturnAttributes ) = true
query.Value( KeychainManagerMBS.kSecMatchLimit ) = KeychainManagerMBS.kSecMatchLimitAll
query.Value( KeychainManagerMBS.kSecMatchSearchList ) = array(keychain)

// search all items
Var dics() as Dictionary = KeychainManagerMBS.CopyMatchingDictionaries(query)

// pick first
Var dic as Dictionary = dics(0)

// and display
MessageBox "Service: "+dic.Value(KeychainManagerMBS.kSecAttrService)+EndOfLine+_
"Account: "+dic.Value(KeychainManagerMBS.kSecAttrAccount)
```

Notes: Available in OS X v10.6 and later.

113.3.157 kSecMatchSubjectContains as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Subject attribute key.
The corresponding value is of type string. If provided, returned certificates or identities are limited to those whose subject contains this string.
Available in OS X v10.6 and later.

113.3.158 kSecMatchSubjectEndsWith as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Subject attribute key.
The corresponding value is of type String. If provided, returned certificates or identities are limited to those whose subject ends with this string.
Available in OS X v10.7 and later.

113.3.159 kSecMatchSubjectStartsWith as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Subject attribute key.
The corresponding value is of type String. If provided, returned certificates or identities are limited to those whose subject starts with this string.
Available in OS X v10.7 and later.

113.3.160 kSecMatchSubjectWholeString as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Subject attribute key.
The corresponding value is of type String. If provided, returned certificates or identities are limited to those whose subject is exactly equal to this string.
Available in OS X v10.7 and later.

113.3.161 kSecMatchTrustedOnly as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Trusted anchor attribute key.
The corresponding value is of type Boolean. If this attribute is provided with A value of True, only certificates that can be verified back to a trusted anchor are returned. If this value is False or the attribute is not provided, then both trusted and untrusted certificates may be returned.
Available in OS X v10.6 and later.

113.3.162 kSecMatchValidOnDate as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Valid-on-date attribute key.
The corresponding value is of type Date. If provided, returned keys, certificates or identities are limited to those that are valid for the given date. Pass a value of nil to indicate the current date.
Available in OS X v10.6 and later.

113.3.163 kSecMatchWidthInsensitive as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Case sensitivity attribute key.
The corresponding value is of type Boolean. If this value is False, or if this attribute is not provided, then width-sensitive string matching is performed (for example, the ASCII character a does not match the UTF-8 full-width letter a (U+FF41).
Available in OS X v10.7 and later.

113.3.164 kSecReturnAttributes as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to specify the type of results that should be returned by the CopyMatching or AddItem function.
Notes: Return attributes attribute key.
The corresponding value is of type Boolean. A value of True indicates that a dictionary of the (unencrypted) attributes of an item should be returned in the form of a Dictionary.
Available in OS X v10.6 and later.

113.3.165 kSecReturnData as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to specify the type of results that should be returned by the CopyMatching or AddItem function.
Notes: Return data attribute key.
The corresponding value is of type Boolean. A value of True indicates that the data of an item should be returned in the form of a Memoryblock. For keys and password items, data is secret (encrypted) and may require the user to enter a password for access.

Available in OS X v10.6 and later.

113.3.166 kSecReturnPersistentRef as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to specify the type of results that should be returned by the CopyMatching or AddItem function.
Notes: Return persistent reference attribute key. A persistent reference to a credential can be stored on disk for later use or passed to other processes.
The corresponding value is of type Boolean. A value of True indicates that a persistent reference to an item (Memoryblock) should be returned.
Available in OS X v10.6 and later.

113.3.167 kSecReturnRef as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to specify the type of results that should be returned by the CopyMatching or AddItem function.
Notes: Return reference attribute key.
The corresponding value is of type Boolean. A value of True indicates that a reference should be returned. Depending on the item class requested, the returned references may be of type KeychainItemMBS, SecKeyRef, SecCertificateRef, SecIdentityRef, or Memoryblock.
Available in OS X v10.6 and later.

113.3.168 kSecUseAuthenticationContext as string

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Specifies a dictionary key whose value is LAContextMBS to be used for keychain item authentication.
Notes: As LAContext is 64-bit only for Mac, this will do nothing in 32-bit.

- If the item requires authentication and this key is omitted, a new context will be created just for the purpose of the single call.
- If the specified context has been previously authenticated, the operation will succeed without asking user for authentication.
- If the specified context has not been previously authenticated, the new authentication will be started on this context, allowing caller to eventually reuse the sucessfully authenticated context in subsequent keychain operations.

113.3.169 kSecUseAuthenticationUI as string

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Specifies a dictionary key whose value to define whether UI is allowed.
Notes: Value can be one of kSecUseAuthenticationUIAllow, kSecUseAuthenticationUIFail, kSecUseAuthenticationUISkip.

113.3.170 kSecUseAuthenticationUIAllow as string

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the values for kSecUseAuthenticationUI to allow user interface.

113.3.171 kSecUseAuthenticationUIFail as string

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the values for kSecUseAuthenticationUI to disallow user interface and fail.

113.3.172 kSecUseAuthenticationUISkip as string

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the values for kSecUseAuthenticationUI to disallow user interface and skip.

113.3.173 kSecUseItemList as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Key used to specify a list of items to search or add.
Notes: Item list key.
The corresponding value is of type CFArrayRef, where the array contains either KeychainItemMBS, SecKeyRef, SecCertificateRef, SecIdentityRef, or (for persistent item references) Memoryblock items. If provided, this array is treated as the set of all possible items to search (or to add if the function being called is AddItem). The items in the array must all be of the same type.
Available in OS X v10.6 and later.

113.3.174 kSecUseKeychain as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Key used to specify a list of items to search or add.
Notes: Keychain reference key.
Specifies a SecKeychainRef object that references the keychain to which AddItem should add the provided items.
Available in OS X v10.7 and later.

113.3.175 kSecUseNoAuthenticationUI as string

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether to show authentication user interface.
Notes: OS X only. Specifies a dictionary key whose value is a boolean. If provided with a value of true, the error errSecInteractionNotAllowed will be returned if the item is attempting to authenticate with UI.
Available in macOS 10.10 or newer and deprecated in 10.11 in favor of kSecUseAuthenticationUI.

113.3.176 kSecUseOperationPrompt as string

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Specifies a dictionary key whose value is a string that represents a user-visible string describing the operation for which the application is attempting to authenticate.
Notes: The application is responsible for the text localization.

113.3.177 kSecValueData as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used in the results dictionary for CopyMatching or Additem, indicating the type of values returned.
Notes: Data attribute key. A persistent reference to a credential can be stored on disk for later use or passed to other processes.
The corresponding value is of type memoryblock. For keys and password items, the data is secret (encrypted) and may require the user to enter a password for access.
Available in OS X v10.6 and later.
You can specify zero or more of these types depending on the function you are calling.

113.3.178 kSecValuePersistentRef as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used in the results dictionary for CopyMatching or Additem, indicating the type of values returned.
Notes: Persistent reference attribute key.
The corresponding value is of type CFDataRef. The bytes in this memoryblock can be stored by the caller and used on a subsequent invocation of the application (or even a different application) to retrieve the item referenced by it.
Available in OS X v10.6 and later.
You can specify zero or more of these types depending on the function you are calling.

113.3.179 kSecValueRef as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used in the results dictionary for CopyMatching or Additem, indicating the type of values returned.
Notes: Reference attribute key.
The corresponding value, depending on the item class requested, is of type KeychainItemMBS, SecKeyRef, SecCertificateRef, or SecIdentityRef.
Available in OS X v10.6 and later.
You can specify zero or more of these types depending on the function you are calling.

113.3.180 LockAll

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Locks all keychains belonging to the current user.
Notes: Your application should not call this function unless you are responding to a user's request to lock a keychain. In general, you should leave the keychain unlocked so that the user does not have to unlock it again in another application.
Lasterror is set.

113.3.181 Open(file as folderitem) as KeychainMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Opens a keychain.
Example:

```
Var file as FolderItem = SpecialFolder.Desktop.Child("test.keychain")
Var k as KeychainMBS = KeychainManagerMBS.Open(file)
```

MessageBox k.Name

Notes: You may use this function to retrieve a pointer to a keychain object given the path of the keychain. You do not need to close the keychain, but you should release the memory that the pointer occupies when you are finished with it.
Lasterror is set.
See also:

- 113.3.182 Open(path as string) as KeychainMBS 17050

113.3.182 Open(path as string) as KeychainMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Opens a keychain.
Example:

```
Var file as FolderItem = SpecialFolder.Desktop.Child("test.keychain")
Var k as KeychainMBS = KeychainManagerMBS.Open(file.NativePath)

MessageBox k.Name
```

Notes: You may use this function to retrieve a pointer to a keychain object given the path of the keychain. You do not need to close the keychain, but you should release the memory that the pointer occupies when you are finished with it.
Lasterror is set.
See also:

- 113.3.181 Open(file as folderitem) as KeychainMBS 17049

113.3.183 PreferenceDomain as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Gets or sets the current keychain preference domain.
Example:

```
Var n as Integer = KeychainManagerMBS.PreferenceDomain
Select case n
case KeychainManagerMBS.kSecPreferencesDomainCommon
MessageBox "common"
case KeychainManagerMBS.kSecPreferencesDomainDynamic
MessageBox "dynamic"
case KeychainManagerMBS.kSecPreferencesDomainSystem
MessageBox "system"
```

```
case KeychainManagerMBS.kSecPreferencesDomainUser
MessageBox "user"
else
MessageBox "unknown"
end Select
```

Notes: A preference domain is a set of security-related preferences, such as the default keychain and the current keychain search list. The default preference domain for system daemons (that is, for daemons running in the root session) is the system domain. The default preference domain for all other programs is the user domain. Use the PreferenceDomain function to change the preference domain.

This function changes the preference domain for all subsequent function calls; for example, if you change from the system domain to the user domain and then call Lock specifying nil for the keychain, the function locks the default system keychain rather than the default user keychain. You might want to use this function, for example, when launching a system daemon from a user session so that the daemon uses system preferences rather than user
(Read and Write computed property)

113.3.184 SearchCreateFromAttributes(keychain as KeychainMBS, itemClass as string, AttributeKeys() as string, AttributeValues() as string) as KeychainSearchMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a search object matching a list of zero or more attributes.
Example:

```
Var AttributeKeys() as string
Var AttributeValues() as string
Var keychain as KeychainMBS = nil // default

Var search as KeychainSearchMBS = KeychainManagerMBS.SearchCreateFromAttributes(keychain, "genp",
AttributeKeys, AttributeValues)
Var items() as KeychainItemMBS

Var item as KeychainItemMBS = search.NextItem
while item<>Nil
items.Add item
item = search.NextItem
wend

MessageBox str(items.Count)+" items found."
```

Notes: keychains: An array of keychains to search, a single keychain, or nil to search the user's current

keychain search list. Use the function SearchList to retrieve the user's default search list.
itemClass: The keychain item class. See "Keychain Item Class Constants" for valid constants.
AttributeKeys: List of zero or more keychain attribute keys to match.
AttributeValues: List of zero or more keychain attribute values to match.

Returns the current search object.
Lasterror is set.

Each item stored in the keychain contains data (such as a certificate), which is indexed by the item's attributes. You look up an item in a keychain by its attributes. If you find a match, you can then retrieve the item's data. Use the search object created by this function as input to the SecKeychainSearchCopyNext function to find a a keychain item.

To find and obtain data from a password keychain item, use the FindInternetPassword or FindGenericPassword function.
See also:

- 113.3.185 SearchCreateFromAttributes(keychains() as KeychainMBS, itemClass as string, AttributeKeys() as string, AttributeValues() as string) as KeychainSearchMBS 17052

113.3.185 SearchCreateFromAttributes(keychains() as KeychainMBS, itemClass as string, AttributeKeys() as string, AttributeValues() as string) as KeychainSearchMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a search object matching a list of zero or more attributes.
Example:

```
Var AttributeKeys() as string
Var AttributeValues() as string

Var keychains() as KeychainMBS

AttributeKeys.Add KeychainManagerMBS.kSecAttrAccount
AttributeValues.Add "myusername"
keychains = KeychainManagerMBS.DomainSearchList(KeychainManagerMBS.kSecPreferencesDomainUser)

Var search as KeychainSearchMBS = KeychainManagerMBS.SearchCreateFromAttributes(keychains, "genp",
AttributeKeys, AttributeValues)
Var items() as KeychainItemMBS

Var item as KeychainItemMBS = search.NextItem
while item<>Nil
items.Add item
item = search.NextItem
```

```
wend

MessageBox str(items.Count)+" items found."
```

Notes: keychains: An array of keychains to search, a single keychain, or nil to search the user's current keychain search list. Use the function SearchList to retrieve the user's default search list.
itemClass: The keychain item class. See "Keychain Item Class Constants" for valid constants.
AttributeKeys: List of zero or more keychain attribute keys to match.
AttributeValues: List of zero or more keychain attribute values to match.

Returns the current search object.
Lasterror is set.

Each item stored in the keychain contains data (such as a certificate), which is indexed by the item's attributes. You look up an item in a keychain by its attributes. If you find a match, you can then retrieve the item's data. Use the search object created by this function as input to the SecKeychainSearchCopyNext function to find a a keychain item.

To find and obtain data from a password keychain item, use the FindInternetPassword or FindGenericPassword function.
See also:

- 113.3.184 SearchCreateFromAttributes(keychain as KeychainMBS, itemClass as string, AttributeKeys() as string, AttributeValues() as string) as KeychainSearchMBS 17051

113.3.186 SearchList as KeychainMBS()

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Retrieves a keychain search list.
Example:

```
Var SearchList() as KeychainMBS = KeychainManagerMBS.SearchList
Var names() as String

for each k as KeychainMBS in SearchList
names.Add k.Name
next

MessageBox Join(names, EndOfLine)
```

Notes: Returns keychain search list.
Lasterror is set.

113.3.187 SetDomainDefault(domain as Integer, keychain as KeychainMBS)

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the default keychain for a specified preference domain.
Notes: domain: The preference domain for which you wish to set the default keychain.
keychain: A reference to the keychain you wish to set as default in the specified preference domain.

Lasterror is set.
A preference domain is a set of security-related preferences, such as the default keychain and the current keychain search list. Use this function if you want to set the default keychain for a specific preference domain. Use the SetDefault function if you want to set the default keychain for the current preference domain. See the PreferenceDomain function for a discussion of current and default preference domains.

113.3.188 SetDomainSearchList(domain as Integer, list() as KeychainMBS)

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the keychain search list for a specified preference domain.
Notes: domain: The preference domain for which you wish to set the default keychain search list. See "Keychain Preference Domain Constants"for possible domain values.
searchList: A keychain search list to set in the preference domain.

Lasterror is set.
A preference domain is a set of security-related preferences, such as the default keychain and the current keychain search list. Use this function if you want to set the keychain search list for a specific preference domain. Use the SetSearchList function if you want to set the keychain search list for the current preference domain. See the PreferenceDomain function for a discussion of current and default preference domains.

113.3.189 SetSearchList(list() as KeychainMBS)

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Specifies the list of keychains to use in the default keychain search list.
Notes: searchList: An array of keychain references specifying the list of keychains to use in the default keychain search list. Passing an empty array clears the search list.

Lasterror is set.
The default keychain search list is used by several functions; see for example SearchCreateFromAttributes, FindInternetPassword, or FindGenericPassword. To obtain the current default keychain search list, use the SearchList function.

The default keychain search list is displayed as the keychain list in the Keychain Access utility. If you use SetSearchList to change the keychain search list, the list displayed in Keychain Access changes accordingly.

113.3.190 UpdateItem(Query as Dictionary, attributesToUpdate as dictionary) as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Modifies items that match a search query.
Example:

```
// build query
Var query as new Dictionary

Var ServiceName as string = "mytest"
Var Username as string = "myusername"

query.value( KeychainManagerMBS.kSecAttrAccount ) = Username
query.value( KeychainManagerMBS.kSecAttrService ) = ServiceName
query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword

// Build Dictionary with new values
Var newValues as new Dictionary
newValues.value( KeychainManagerMBS.kSecAttrComment ) = "Just a test"

// and update
if KeychainManagerMBS.UpdateItem(query, newValues) then
MessageBox "OK"
else
MessageBox "Failed."
end if
```

Notes: query: A dictionary containing an item class specification and optional attributes for controlling the search. Specify the items whose values you wish to change. See "Search Keys" for a description of currently defined search attributes.
attributesToUpdate: A dictionary containing the attributes whose values should be changed, along with the new values. Only real keychain attributes are permitted in this dictionary (no "meta" attributes are allowed.) See "Attribute Item Keys and Values" for a description of currently defined value attributes.

Lasterror is set.
See the discussion section of the CopyMatching function for information about how to construct a search dictionary.

Available in OS X v10.6 and later.

113.3.191 UserInteractionAllowed as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Indicates whether Keychain Services functions that normally display a user interaction are allowed to do so.
Example:

```
MessageBox str(KeychainManagerMBS.UserInteractionAllowed)
KeychainManagerMBS.UserInteractionAllowed = false
MessageBox str(KeychainManagerMBS.UserInteractionAllowed)
```

Notes: Lasterror is set.
A Boolean value indicating whether user interaction is permitted. If true, user interaction is allowed, and Keychain Services functions that display a user interface can do so as appropriate.
(Read and Write computed property)

113.3.192 Version as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Determines the version of Keychain Services installed on the user's system.
Example:

```
MessageBox str(KeychainManagerMBS.Version)
```

Notes: Your application can call the Version function to find out which version of Keychain Services is installed on the user's system.
Lasterror is set.

113.3.193 Properties

113.3.194 LastError as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The last error code returned by one of the methods.
Notes: You can use KeychainManagerMBS.ErrorMessageString function to get a text message.
The error code -1 is set by plugin if function is missing or parameters are wrong.
(Read only property)

113.3.195 Constants

Constants

Constant	Value	Description
kSecAppleSharePasswordItemClass	"ashp"	Specifies a keychain item's class code. Indicates that the item is an AppleShare password.
kSecGenericPasswordItemClass	"genp"	Specifies a keychain item's class code. Indicates that the item is a generic password.
kSecInternetPasswordItemClass	"inet"	Specifies a keychain item's class code. Indicates that the item is an Internet password.

Error Codes

Constant	Value	Description
ErrorAuthorizationFailed	-25293	The user name or passphrase you entered is not correct.
ErrorDuplicatedItem	-25299	The specified item already exists in the keychain.
ErrorFailedToAllocated	-108	Failed to allocate memory.
ErrorFailedToDecode	-26275	Unable to decode the provided data.
ErrorInteractionNotAllowed	-25308	User interaction is not allowed.
ErrorInvalidParameter	-50	Invalid Parameters.
ErrorNone	0	No error.
ErrorNotAvailable	-25291	No keychain is available. You may need to restart your computer.
ErrorNotFound	-25300	The specified item could not be found in the keychain.

Keychain Preference Domain Constants

Constant	Value	Description
kSecPreferencesDomainCommon	2	Indicates the preferences are common to everyone. Available in OS X v10.3 and later.
kSecPreferencesDomainDynamic	3	Indicates a dynamic search list (typically provided by removable keychains such as smart cards). Available in OS X v10.4 and later.
kSecPreferencesDomainSystem	1	Indicates the system or daemon preference domain preferences. Available in OS X v10.3 and later.
kSecPreferencesDomainUser	0	Indicates the user preference domain preferences. Available in OS X v10.3 and later.

113.3.196 Delegates

113.3.197 AddItemAsyncCompletedMBS(Keychain as Variant, attributesDictionary as dictionary, Result as Variant, Lasterror as Integer, Tag as Variant)

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The delegate to be called when AddItemAsync is done.
Blog Entries

- MBS Xojo Plugins, version 20.6pr1

113.3.198 CopyMatchingAsyncCompletedMBS(Query as Dictionary, Result as Variant, Lasterror as Integer, Tag as Variant)

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The delegate to be called when CopyMatchingAsync is done.

113.4 class KeychainMBS

113.4.1 class KeychainMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a keychain.
Notes: See WindowsCredentialsMBS module for Windows.
Blog Entries

- MBS Real Studio Plugins, version 13.1pr12
- Keychain Plugin rewritten

113.4.2 Methods

113.4.3 AddGenericPassword(serviceName as string, accountName as string, password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new generic password to a keychain.
Notes: See AddGenericPassword in KeychainManagerMBS for details.
See also:

- 113.4.4 AddGenericPassword(serviceName as string, accountName as string, password as string) as KeychainItemMBS 17059

113.4.4 AddGenericPassword(serviceName as string, accountName as string, password as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new generic password to a keychain.
Notes: See AddGenericPassword in KeychainManagerMBS for details.
See also:

- 113.4.3 AddGenericPassword(serviceName as string, accountName as string, password as memoryblock) as KeychainItemMBS 17059

113.4.5 AddInternetPassword(serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new Internet password to a keychain.
Notes: See KeychainManagerMBS.AddInternetPassword for details.
See also:

- 113.4.6 AddInternetPassword(serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as string) as KeychainItemMBS 17060

113.4.6 AddInternetPassword(serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new Internet password to a keychain.
Notes: See KeychainManagerMBS.AddInternetPassword for details.
See also:

- 113.4.5 AddInternetPassword(serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as memoryblock) as KeychainItemMBS 17060

113.4.7 AllItems(itemClass as string) as KeychainItemMBS()

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries all items.
Notes: Keychain: If not nil, searches only this keychain.
ItemClass: The item class to find. For example kSecGenericPasswordItemClass.
Lasterror is set.
Returns array of keychain items.

113.4.8 Delete

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Deletes one or more keychains from the default keychain search list, and removes the keychain itself if it is a file.

Notes: Lasterror is set.

The keychain may be a file stored locally, a smart card, or retrieved from a network server using non-file-based database protocols. This function deletes the keychain only if it is a local file.

113.4.9 FindGenericItem(serviceName as string, accountName as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first generic keychain item based on the attributes passed.
Notes: See KeychainManagerMBS.FindGenericItem for details.

113.4.10 FindGenericPassword(serviceName as string, accountName as string, byref password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first generic password based on the attributes passed.
Notes: See KeychainManagerMBS.FindGenericPassword for details.

113.4.11 FindInternetItem(serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first Internet password item based on the attributes passed.
Notes: See KeychainManagerMBS.FindInternetPassword for details.

113.4.12 FindInternetPassword(serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, byref password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first Internet password based on the attributes passed.
Notes: See KeychainManagerMBS.FindInternetPassword for details.

113.4.13 IsUnlocked as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns true if keychain is unlocked.
Example:

MessageBox str(KeychainManagerMBS.Default.IsUnlocked)

Notes: Lasterror is set.

113.4.14 Lock

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Locks a keychain.
Notes: Your application should not call this function unless you are responding to a user's request to lock a keychain. In general, you should leave the keychain unlocked so that the user does not have to unlock it again in another application.
Lasterror is set.

113.4.15 Name as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Determines the file name of a keychain.
Example:

MessageBox KeychainManagerMBS.Default.Name

Notes: Similar to path, but name without file extension only.
Lasterror is set.

113.4.16 Path as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Determines the path of a keychain.
Example:

MessageBox KeychainManagerMBS.Default.Path

Notes: Returns POSIX path of the keychain as a UTF-8 encoded string.
Lasterror is set.

113.4.17 SetDefault

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the default keychain.
Notes: Lasterror is set.
In most cases, your application should not need to set the default keychain, because this is a choice normally made by the user. You may call this function to change where a password or other keychain items are added, but since this is a user choice, you should set the default keychain back to the user specified keychain when you are done.

113.4.18 Status as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Retrieves status information of a keychain.
Example:

```
Var values() as string
Var DefaultKeychain as KeychainMBS = KeychainManagerMBS.Default
Var status as Integer = DefaultKeychain.status

if BitwiseAnd(status, KeychainMBS.StatusUnlocked) = KeychainMBS.StatusUnlocked then
values.Add "unlocked"
else
values.Add "locked"
end if

if BitwiseAnd(status, KeychainMBS.StatusReadable) = KeychainMBS.StatusReadable then
values.Add "readable"
else
values.Add "not readable"
end if

if BitwiseAnd(status, KeychainMBS.StatusWritable) = KeychainMBS.StatusWritable then
values.Add "writable"
else
values.Add "not writable"
end if

MessageBox Join(values, ", ")
```

Notes: Lasterror is set.
This function retrieves the status of a specified keychain. You can use this function to determine if the keychain is unlocked, readable, or writable. Note that the lock status of a keychain can change at any time due to user or system activity. Because the system automatically prompts the user to unlock a keychain when necessary, you do not usually have to worry about the lock status of a keychain.

113.4.19 Unlock

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Unlocks a keychain.
Notes: In most cases, your application does not need to call this function directly, since most Keychain Services functions that require an unlocked keychain do so for you. If your application needs to verify that a keychain is unlocked, call the function GetStatus.
Lasterror is set.
See also:

- 113.4.20 Unlock(password as string) 17064

113.4.20 Unlock(password as string)

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Unlocks a keychain.
Notes: password: The password to use.
In most cases, your application does not need to call this function directly, since most Keychain Services functions that require an unlocked keychain do so for you. If your application needs to verify that a keychain is unlocked, call the function GetStatus.
Lasterror is set.
See also:

- 113.4.19 Unlock 17064

113.4.21 Properties

113.4.22 Handle as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

113.4.23 Lasterror as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code returned by one of the methods.
Notes: You can use KeychainManagerMBS.ErrorMessageString function to get a text message.
The error code -1 is set by plugin if function is missing or parameters are wrong.
(Read and Write property)

113.4.24 Settings as KeychainSettingsMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Obtains or sets a keychain's settings.
Example:

```
Var DefaultKeychain as KeychainMBS = KeychainManagerMBS.Default
Var settings as KeychainSettingsMBS = DefaultKeychain.Settings
MessageBox str(settings.useLockInterval)
```

Notes: Lasterror is set.
(Read and Write computed property)

113.4.25 Constants

Status Constants

Constant	Value	Description
StatusReadable	2	Indicates the keychain is readable.
StatusUnlocked	1	Indicates the keychain is unlocked.
StatusWritable	4	Indicates the keychain is writable.

113.5 class KeychainSearchMBS

113.5.1 class KeychainSearchMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a running keychain search.

113.5.2 Methods

113.5.3 NextItem as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the next keychain item matching the given search criteria.
Notes: Returns object of the next matching keychain item, if any.

Each item stored in the keychain contains data (such as a certificate), which is indexed by the item's attributes. Use the SearchCreateFromAttributes function to specify attributes to search for. If the NextItem function finds a match, you can use the methods and properties on the item.

To find and obtain data from a password keychain item, use the FindInternetPassword or FindGenericPassword function.
Lasterror is set.

113.5.4 Properties

113.5.5 Handle as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

113.5.6 Lasterror as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code returned by one of the methods.
Notes: You can use KeychainManagerMBS.ErrorMessageString function to get a text message.
The error code -1 is set by plugin if function is missing or parameters are wrong.

(Read and Write property)

113.6 class KeychainSettingsMBS

113.6.1 class KeychainSettingsMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The class for information about keychain settings.
Example:

```
Var DefaultKeychain as KeychainMBS = KeychainManagerMBS.Default
Var settings as KeychainSettingsMBS = DefaultKeychain.Settings
MessageBox str(settings.useLockInterval)
```

113.6.2 Properties

113.6.3 lockInterval as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: An unsigned 32-bit integer representing the number of seconds before the keychain locks. If you set useLockInterval to false, set lockInterval to INT_MAX to indicate that the keychain never locks.
Example:

```
Var SystemKeychain as KeychainMBS = KeychainManagerMBS.DomainDefault(KeychainManagerMBS.kSecPreferencesDomainSystem)
Var settings as KeychainSettingsMBS = SystemKeychain.Settings
MessageBox str(settings.lockInterval)
```

Notes: (Read and Write property)

113.6.4 lockOnSleep as Boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether the keychain locks when the system sleeps.
Example:

```
Var DefaultKeychain as KeychainMBS = KeychainManagerMBS.Default
Var settings as KeychainSettingsMBS = DefaultKeychain.Settings
MessageBox str(settings.lockOnSleep)
```

Notes: (Read and Write property)

113.6.5 useLockInterval as Boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether the keychain automatically locks after a certain period of time.
Example:

```
Var DefaultKeychain as KeychainMBS = KeychainManagerMBS.Default
Var settings as KeychainSettingsMBS = DefaultKeychain.Settings
MessageBox str(settings.useLockInterval)
```

Notes: (Read and Write property)

113.6.6 version as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: An unsigned 32-bit integer representing the keychain version.
Example:

```
Var DefaultKeychain as KeychainMBS = KeychainManagerMBS.Default
Var settings as KeychainSettingsMBS = DefaultKeychain.Settings
MessageBox str(settings.version)
```

Notes: Is always 1.
(Read and Write property)

Chapter 114

Large Picture

114.1 class PictureFactoryMBS

114.1.1 class PictureFactoryMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The factory class for pictures.
Notes: This class gives you a global event where you can provide your own pictures.
Whenever the plugin needs a new PictureMBS object for the result of a function or for temporary storage, you can provide one.

This is mainly for the case where you use virtual memory or you want to reuse pictures.

Used for temporary or result pictures for BoxBlur, DitherFilter, EngraveFilter, GainFilter, GammaFilter, NeonFiltrer, OilFilter, PictureMatrix, Rotate, SolarizeFilter and TransferFilter.
Blog Entries

- MBS Xojo Plugins, version 19.3pr4

114.1.2 Methods

114.1.3 NewPictureMBS(Width as integer, Height as integer, ImageFormat as integer) as PictureMBS

MBS Images Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new picture.
Notes: This may invoke the event.

If no factory is registered, we use our default implementation.
If the event or our implementation raises exception, you may need to catch it, e.g. OutOfMemoryException.
See also:

- 114.1.8 NewPictureMBS(Width as Integer, Height as Integer, ImageFormat as Integer) as PictureMBS 17072

114.1.4 SetFactory(factory as PictureFactoryMBS)

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the global factory object.
Notes: You can set to nil to delete the existing factory.

114.1.5 Properties

114.1.6 currentFactory as PictureFactoryMBS

MBS Images Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries current factory.
Notes: Use SetFactory method to change it.
(Read only property)

114.1.7 Events

114.1.8 NewPictureMBS(Width as Integer, Height as Integer, ImageFormat as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The factory event.
Example:

```
function NewPictureMBS(Width as Integer, Height as Integer, ImageFormat as Integer) as PictureMBS

return new PictureMBS(width, height, ImageFormat)

end function
```

Notes: This event is called whenever a picture is requested.
Return an picture you created.

The plugin will check the Valid property for this picture and use it only if Valid is true.
See also:

- 114.1.3 NewPictureMBS(Width as integer, Height as integer, ImageFormat as integer) as PictureMBS 17071

114.2 class PictureMBS

114.2.1 class PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The MBS picture class for really large pictures.
Example:

```
Var fSource as FolderItem = SpecialFolder.Desktop.Child("test.png") // some png with alpha
Var oPNGInput as new PNGReaderMBS

If oPNGInput.OpenFile(fSource) Then
If oPNGInput.ApplyOptions(0) Then

Var imgSource as New PictureMBS(oPNGInput.Width, oPNGInput.Height, PictureMBS.ImageFormatRGBA)

' Read row by row the file and puts it in a PictureMBS instance

Var nMax as Integer = oPNGInput.Height - 1
For nInd as Integer = 0 To nMax
imgSource.RowInFormat(nInd, PictureMBS.ImageFormatRGBA, true) = oPNGInput.ReadRow()
Next

' show only alpha/mask channel
Backdrop=imgSource.AlphaChannel.CopyPicture

' show Picture without mask
Backdrop=imgSource.CopyPicture

' show picture with mask
Backdrop=imgSource.CopyPictureWithMask

End If
End If
```

Notes: Using virtual memory you are only limited to hard disc space for swapping.

The Xojo picture class is limited to 2 GB and to width/height being in platform specific ranges. This class works with pictures up to 100 million pixels width and 2 billion pixels height.

114.2.2 Methods

114.2.3 AlphaChannel as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The alpha channel as a new PictureMBS object.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
Var r as PictureMBS = p.AlphaChannel
r.fillrect(100) // fill only alpha channel
```

Notes: Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.

Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

114.2.4 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a 5x5 matrix to the picture.
Example:

```
Var matrix(24) as Integer
Var x,y as Integer
Var value as Integer

for y=0 to 4
for x=0 to 4
matrix(x+y*5)=value // fill matrix
next
next

Var s,d as PictureMBS // make source and dest somewhere

d=s.ApplyMatrix(d, 5, matrix)
```

Notes: MatrixDimension: Size of the matrix: 1 to 50. This is the width and height of the matrix.
matrix: The matrix array must contain exactly MatrixDimension*MatrixDimension values. (ubound(matrix)=MatrixDimension*MatrixDimension-1)
delta: Optional value. Default is 0.
ScaleFactor: Optional value. Default is 1.0.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

For each pixel in the dest image the following operation is done:

- Make sum of all source pixels multiplied with their matrix entry.
- add to the sum the delta value
- multiply the sum by ScaleFactor

See the example project for several example matrices.

A matrix value of 255 or more leaves the dest pixel away from the sum.

Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 114.2.5 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer, delta as Integer) as PictureMBS 17077
- 114.2.6 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer, delta as Integer, ScaleFactor as Double) as PictureMBS 17078

114.2.5 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer, delta as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a 5x5 matrix to the picture.
Example:

```
Var matrix(24) as Integer
Var x,y as Integer
Var value as Integer

for y=0 to 4
for x=0 to 4
matrix(x+y*5)=value // fill matrix
next
next

Var s,d as PictureMBS // make source and dest somewhere

d=s.ApplyMatrix(d, 5, matrix, 5)
```

Notes: MatrixDimension: Size of the matrix: 1 to 50. This is the width and height of the matrix.
matrix: The matrix array must contain exactly MatrixDimension*MatrixDimension values. (ubound(matrix)=MatrixDimension*MatrixDimension-1)
delta: Optional value. Default is 0.
ScaleFactor: Optional value. Default is 1.0.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

For each pixel in the dest image the following operation is done:

- Make sum of all source pixels multiplied with their matrix entry.
- add to the sum the delta value
- multiply the sum by ScaleFactor

See the example project for several example matrices.

A matrix value of 255 or more leaves the dest pixel away from the sum.

Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 114.2.4 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer) as PictureMBS 17076
- 114.2.6 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer, delta as Integer, ScaleFactor as Double) as PictureMBS 17078

114.2.6 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer, delta as Integer, ScaleFactor as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a 5x5 matrix to the picture.
Example:

```
Var matrix(24) as Integer
Var x,y as Integer
Var value as Integer

for y=0 to 4
for x=0 to 4
matrix(x+y*5)=1 // fill matrix
next
next

Var s,d as PictureMBS // make source and dest somewhere

s = new PictureMBS(LogoMBS(500))
d = new PictureMBS(500, 500, PictureMBS.ImageFormatRGB)

// Blur with 5x5 Matrix
d=s.ApplyMatrix(d, 5, matrix, 1, 1.0/25.0)

Backdrop = d.CopyPicture
```

Notes: MatrixDimension: Size of the matrix: 1 to 50. This is the width and height of the matrix.
matrix: The matrix array must contain exactly MatrixDimension*MatrixDimension values. (ubound(matrix)=MatrixDimension*MatrixDimension-1)
delta: Optional value. Default is 0.
ScaleFactor: Optional value. Default is 1.0.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

For each pixel in the dest image the following operation is done:

- Make sum of all source pixels multiplied with their matrix entry.
- add to the sum the delta value
- multiply the sum by ScaleFactor

See the example project for several example matrices.

A matrix value of 255 or more leaves the dest pixel away from the sum.

Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 114.2.4 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer) as PictureMBS 17076
- 114.2.5 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer, delta as Integer) as PictureMBS 17077

114.2.7 AutoLevel as boolean

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies auto levels on the picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
call p.AutoLevel
Window1.Backdrop = p.CopyPicture
```

Notes: The histogram is built, white and back points are searched and all pixels adjusted.
Returns true on success and false on any error.

Works only with RGB pictures.
See also:

- 114.2.8 AutoLevel(x as Integer, y as Integer, w as Integer, h as Integer) as boolean 17080

114.2.8 AutoLevel(x as Integer, y as Integer, w as Integer, h as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies auto levels on the picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
call p.AutoLevel(0,0,50,50)
Window1.Backdrop = p.CopyPicture
```

Notes: The histogram is built, white and back points are searched and all pixels adjusted.
Returns true on success and false on any error.

Works only with RGB pictures.
See also:

- 114.2.7 AutoLevel as boolean 17079

114.2.9 BlackChannel as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The black channel of a CMYK picture as a new PictureMBS object.
Notes: Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

114.2.10 BlendPicturesWithMaskWithBackground(SourceImage as PictureMBS, DestImage as PictureMBS, Mask as PictureMBS, Result as PictureMBS, BackgroundColour as Color) as Boolean

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blend picture with mask and background.
Notes: Works for gray and RGB pictures, not for CMYK.
Returns true on success and false on failure.
Blends source and dest image into result image.
If mask is nil, we just copy pictures.
If mask is not nil, we blend using either DestImage (if non nil) or background color.
Alpha channels are not used.
See also:

- 114.2.11 BlendPicturesWithMaskWithBackground(SourceImage as PictureMBS, DestImage as PictureMBS, Mask as PictureMBS, Result as PictureMBS, BackgroundColour as Color, X As Integer, Y As Integer, Width As Integer, Height As Integer) as Boolean 17081

114.2.11 BlendPicturesWithMaskWithBackground(SourceImage as PictureMBS, DestImage as PictureMBS, Mask as PictureMBS, Result as PictureMBS, BackgroundColour as Color, X As Integer, Y As Integer, Width As Integer, Height As Integer) as Boolean

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blend picture with mask and background.
Notes: Works for gray and RGB pictures, not for CMYK.
Returns true on success and false on failure.
Blends source and dest image into result image.
If mask is nil, we just copy pictures.
If mask is not nil, we blend using either DestImage (if non nil) or background color.
Alpha channels are not used.
See also:

- 114.2.10 BlendPicturesWithMaskWithBackground(SourceImage as PictureMBS, DestImage as PictureMBS, Mask as PictureMBS, Result as PictureMBS, BackgroundColour as Color) as Boolean 17081

114.2.12 BlueChannel as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue channel as a new PictureMBS object.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
Var r as PictureMBS = p.BlueChannel
```

```
r.fillrect(100) // fill only blue channel
```

Notes: Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

114.2.13 BoxBlurFilter(dest as PictureMBS, Radius as Double, Iterations as Integer, Vertical as boolean = true, Horizontal as boolean = true) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The box blur filter.
Example:

```
Var boxPic,tempObj As PictureMBS
Var logo as Picture = LogoMBS(500)
Var pictureObj as new PictureMBS(logo)

tempObj = New PictureMBS(pictureObj.Width, pictureObj.Height, pictureObj.ImageFormat)
boxPic = pictureObj.BoxBlurFilter(tempObj, 3.0, 3)

Backdrop=boxpic.CopyPicture
```

Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Vertical and Horizontal define whether effect is applied horizontal and/or vertical.

Returns nil on any error.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 114.2.14 BoxBlurFilter(dest as PictureMBS, Radius as Double, Vertical as boolean = true, Horizontal as boolean = true) as PictureMBS 17082

114.2.14 BoxBlurFilter(dest as PictureMBS, Radius as Double, Vertical as boolean = true, Horizontal as boolean = true) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The box blur filter.
Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Vertical and Horizontal define whether effect is applied horizontal and/or vertical.

Returns nil on any error.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 114.2.13 BoxBlurFilter(dest as PictureMBS, Radius as Double, Iterations as Integer, Vertical as boolean = true, Horizontal as boolean = true) as PictureMBS 17082

114.2.15 BoxBlurFractionalFilter(dest as PictureMBS, Radius as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The box blur filter for the radius fraction.
Notes: If you call BoxBlurFilter and BoxBlurFractionalFilter with a radius of 3.5 the BoxBlurFilter does the 3.0 and BoxBlurFractionalFilter does the 0.5.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.

114.2.16 CalculateMemory(width as Integer, height as Integer, theImageFormat as Integer) as Int64

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the memory needed for allocating the image.
Example:

```
Var n as int64 = PictureMBS.CalculateMemory(1000, 1000, PictureMBS.ImageFormatRGB)
MessageBox str(n)
```

Notes: Returns number of bytes needed.

114.2.17 CanAllocateImage(width as Integer, height as Integer, theImageFormat as Integer) as boolean

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Can the image with this size be allocated?
Example:

```
Var n as Boolean = PictureMBS.CanAllocateImage(1000, 1000, PictureMBS.ImageFormatRGB)
MessageBox str(n)
Var x as Boolean = PictureMBS.CanAllocateImage(100000, 100000, PictureMBS.ImageFormatRGB)
MessageBox str(x)
```

Notes: Retruns true if possible and false if the size is too big.
To figure out if allocation will work, we simply allocate and release memory and see if that worked.

114.2.18 Channel(index as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the channel with the given index as a new picture object.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
Var r as PictureMBS = p.Channel(0)
r.fillrect(100) // fill only red channel
```

Notes: Returns nil on any error. May raise an out of bounds exception on invalid index. Index is zero based.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.
See also:

- 114.2.146 Channel as String 17160

114.2.19 ChannelOffset(index as integer) as integer

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries channel offset within pixel.
Notes: For RGB the red channel has offset 0, the green channel has offset 1 and the blue channel has offset 2.

114.2.20 Channels as String()

MBS Images Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the channels of an image.
Example:

```
Var p as new Picture(100,100,32)
Var q as new PictureMBS(p)

Var channels() as string = q.Channels

Var cr as PictureMBS = q.RedChannel
Var cg as PictureMBS = q.GreenChannel
Var cb as PictureMBS = q.BlueChannel
Var c0 as pictureMBS = q.Channel(0)
Var c1 as pictureMBS = q.Channel(1)
Var c2 as pictureMBS = q.Channel(2)

Var crn as string = cg.Channel
Var cgn as string = cg.Channel
Var cbn as string = cg.Channel
Var c0n as string = c0.Channel
Var c1n as string = c1.Channel
Var c2n as string = c2.Channel

Break // check in debugger
```

114.2.21 ClearCache

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears picture cache.
Notes: If target of this PictureMBS is a Xojo picture, this method clears the Xojo cache for the picture to make sure it recognizes changes.
Does nothing if there is no target picture or there is no cache.

114.2.22 ClearRect

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all pixels.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
```

```
p.ClearRect
Window1.Backdrop = p.CopyPicture
```

Notes: Writes zeros over all pixels and all channels.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 114.2.23 ClearRect(x as Integer, y as Integer, width as Integer, height as Integer) 17086

114.2.23 ClearRect(x as Integer, y as Integer, width as Integer, height as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all pixels in the given area.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.ClearRect(0,0,100,100)
Window1.Backdrop = p.CopyPicture
```

Notes: Writes zeros over all pixels and all channels.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 114.2.22 ClearRect 17085

114.2.24 ClipImage as PictureMBS

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new PictureMBS object for the same picture content.
Notes: This may be useful if you need a second PictureMBS object. For example if two threads work on different rows.
See also:

- 114.2.25 ClipImage(x as Integer, y as Integer, width as Integer, height as Integer) as PictureMBS 17086

114.2.25 ClipImage(x as Integer, y as Integer, width as Integer, height as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new PictureMBS object which draws only into a portion of the existing image.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)

// clip it
Var c as PictureMBS = p.ClipImage(100, 100, 300, 300)

// clone it
Var q as PictureMBS = c.Clone

// and see result in debugger
Var pic as Picture = q.CopyPicture

Break
```

Notes: This may be useful to apply an effect only on a portion of an existing image.
See also:

- 114.2.24 ClipImage as PictureMBS 17086

114.2.26 Clone as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of a picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)

// clip it
Var c as PictureMBS = p.ClipImage(100, 100, 300, 300)

// clone it
Var q as PictureMBS = c.Clone

// and see result in debugger
Var pic as Picture = q.CopyPicture

Break
```

Notes: Does not work for pictures using virtual memory.
(Fails if IsMapping=True)
Copies the whole picture even if you clone just one channel.

Returns nil on low memory.

114.2.27 Close

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the picture by releasing all memory.
Notes: This calls the destructor internally.

114.2.28 CMYKChannels as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CMYK channels as a new PictureMBS object.
Notes: Returns nil if the image is not a CMYK picture.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the CMYK pixels directly without modifying an alpha channel
The resulting PictureMBS object is a CMYK picture.

114.2.29 Combine(Image As PictureMBS, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean) as boolean

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Example:

```
Var DestImage As PictureMBS
Var Image As PictureMBS
Var Mask As PictureMBS
Var DestX as Integer=100
Var DestY as Integer=100
Var SourceX as Integer=0
Var SourceY as Integer=0
Var Width as Integer=500
Var Height as Integer=500

image=new PictureMBS(LogoMBS(500))
Mask=nil
DestImage=new PictureMBS(700,700,PictureMBS.ImageFormatRGB)

// this will only copy the pixels
```

```
if DestImage.Combine(image,Mask,DestX,DestY,SourceX,SourceY,Width,Height,false) then
Window1.Backdrop=DestImage.CopyPicture
end if
```

Notes: Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The images you use can be Gray, RGB with or without alpha channels. But most variants here ignore alpha channels. To make sure the alpha channel is not touched, use the PictureMBS.RGBChannels function and pass that new PictureMBS.

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Example:

```
Var DestImage As PictureMBS
Var Image As PictureMBS
Var Mask As PictureMBS
Var DestX as Integer=100
Var DestY as Integer=100
Var SourceX as Integer=0
Var SourceY as Integer=0
Var Width as Integer=500
Var Height as Integer=500

image=new PictureMBS(LogoMBS(500))
Mask=nil
DestImage=new PictureMBS(700,700,PictureMBS.ImageFormatRGB)
```

```
if DestImage.Combine(image,Mask,DestX,DestY,SourceX,SourceY,Width,Height,true, &cFF0000, &cFF0000)
then
Window1.Backdrop=DestImage.CopyPicture
end if
```

Notes: Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The images you use can be Gray, RGB with or without alpha channels. But most variants here ignore alpha channels. To make sure the alpha channel is not touched, use the PictureMBS.RGBChannels function and pass that new PictureMBS.

Function: Copies pixels from one picture into another picture with some options.
Notes: Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The images you use can be Gray, RGB with or without alpha channels. But most variants here ignore alpha channels. To make sure the alpha channel is not touched, use the PictureMBS.RGBChannels function and pass that new PictureMBS.

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Example:

```
Var DestImage As PictureMBS
Var Image As PictureMBS
Var Mask As PictureMBS
Var DestX as Integer=100
Var DestY as Integer=100
Var SourceX as Integer=0
Var SourceY as Integer=0
Var Width as Integer=500
Var Height as Integer=500

// we create a little mask for a smooth fade
Var m as Picture = New Picture(500,500,32)
Var g as Graphics = m.Graphics

for y as Integer = 0 to 499
Var n as Integer = y*255/499
g.ForeColor = rgb(n, n, n)
g.DrawLine 0,y,499,y
next

// uncomment to see our mask:
'Backdrop = m
'return
```

```
image=new PictureMBS(LogoMBS(500))
Mask=new PictureMBS(m)
DestImage=new PictureMBS(700,700,PictureMBS.ImageFormatRGB)

// this will only copy the pixels
if DestImage.Combine(image,false,Mask,DestX,DestY,SourceX,SourceY,Width,Height,false) then
Window1.Backdrop=DestImage.CopyPicture
end if
```

Notes: Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The images you use can be Gray, RGB with or without alpha channels. But most variants here ignore alpha

channels. To make sure the alpha channel is not touched, use the PictureMBS.RGBChannels function and pass that new PictureMBS.

- 114.2.32 Combine(Image As PictureMBS, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer) as boolean 17094

- 114.2.33 Combine(Image As PictureMBS, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean 17096
- 114.2.34 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean) as boolean 17098
- 114.2.35 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color) as boolean 17100
- 114.2.36 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color, MaskColour As color) as boolean 17102
- 114.2.37 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer) as boolean 17104
- 114.2.38 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean 17106

114.2.40 CompareImages(other as PictureMBS) as Int64

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two pictures.
Example:

```
Var p as new PictureMBS(1000,1000, PictureMBS.imageFormatRGB)

// fill random
p.FillRectRandom

Var q as new PictureMBS(1000,1000, PictureMBS.imageFormatRGB)

// copy pixels
call q.CopyPixels(p, 0, 0, 1000, 1000, 0, 0)
q.FillRect(0,0,10,10,0) // fill 100 pixels

// show image
Backdrop = q.CopyPicture

// and compare
Title = str(p.CompareImages(q)) // shows 100
```

Notes: Returns -1 if both pictures are not from the same structure. (e.g. compare gray with RGB)
Else returns the number of different pixels.

114.2.41 Constructor(Buf as MemoryBlock, width as Integer, height as Integer, ImageFormat as Integer, RowSize as Integer)

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a PictureMBS object based on a memoryblock.
See also:

- 114.2.42 Constructor(pic as picture, UseAlpha as boolean=false) 17110
- 114.2.43 Constructor(width as Integer, height as Integer, ImageFormat as Integer) 17111
- 114.2.44 Constructor(width as Integer, height as Integer, ImageFormat as Integer, BlockSize as Int64, FilePath as folderitem) 17112

114.2.42 Constructor(pic as picture, UseAlpha as boolean=false)

MBS Images Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

Function: Creates a PictureMBS which shares memory with the given picture.
Example:

```
// Create a picture with mask:
Var p as Picture = LogoMBS(200)
Var g as Graphics = p.mask.Graphics

g.ForeColor = &cFFFFFF
g.FillRect 0,0,g.Width,g.Height

g.ForeColor = &c000000
g.Filloval 0,0,g.Width,g.Height

Canvas1.Backdrop = p

// create PictureMBS
Var pic as new PictureMBS(p, true)
Var mask as new PictureMBS(p.mask)

// draw mask into alpha channel
call pic.AlphaChannel.CopyPixels(mask,0,0,mask.Width,mask.Height,0,0)

// and copy back to Xojo picture
Canvas2.Backdrop = pic.CopyPictureWithMask
```

Notes: All drawings in the Picture and in the PictureMBS object will be visible in both objects.
This function works on Mac OS and Windows with both 24 bit and 32 bit pictures.
On Mac this function can fail if the picture is not a GWorld (Bitmap) picture.

The Valid property is set to true on success.

If you set UseAlpha=True, the 4th channel in a 32 bit picture is available for you as an alpha channel. Xojo does not use the 4th channel in the picture data and 24 bit pictures do not have one. So you can use 32 bit pictures, copy the pictures mask in the alpha channel (using PictureMBS.AlphaChannel. inverting may be needed), perform some operations and later make a copy of the image to a picture and extract the alpha channel back into the picture's mask.

Added support for Console/Web targets in 12.2 plugins. Please be aware that alpha channel of pictures with alpha channel has only a range from 0 to 127 for the values.
See also:

- 114.2.41 Constructor(Buf as MemoryBlock, width as Integer, height as Integer, ImageFormat as Integer, RowSize as Integer) 17110
- 114.2.43 Constructor(width as Integer, height as Integer, ImageFormat as Integer) 17111
- 114.2.44 Constructor(width as Integer, height as Integer, ImageFormat as Integer, BlockSize as Int64, FilePath as folderitem) 17112

114.2.43 Constructor(width as Integer, height as Integer, ImageFormat as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new PictureMBS object with the given size and Imageformat.
Notes: ImageFormat must be one of the ImageFormat constants.
The Valid property is set to true on success.

The constructor allocated address space for the image.
Physical memory is allocated based on write access to pixels.
See also:

- 114.2.41 Constructor(Buf as MemoryBlock, width as Integer, height as Integer, ImageFormat as Integer, RowSize as Integer) 17110
- 114.2.42 Constructor(pic as picture, UseAlpha as boolean=false) 17110
- 114.2.44 Constructor(width as Integer, height as Integer, ImageFormat as Integer, BlockSize as Int64, FilePath as folderitem) 17112

114.2.44 Constructor(width as Integer, height as Integer, ImageFormat as Integer, BlockSize as Int64, FilePath as folderitem)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a PictureMBS object using virtual memory.
Example:

```
Var mm as int64 = Picturembs.CalculateMemory(7000, 150000, PictureMBS.ImageFormatRGB)
// shows that this size needs 3 GB in memory

// create image
Var blocksize as Integer = 100*1024*1024
Var file as FolderItem = GetTemporaryFolderItem
Var pic as new PictureMBS(7000, 150000, PictureMBS.ImageFormatRGB, blocksize, file)

// draw dots on it
for x as Integer = 0 to pic.Width step 500
for y as Integer = 0 to pic.Height step 500
pic.FillRect(x, y, 100, 100, 175)
next
next

// write to tiff
Var f as FolderItem = SpecialFolder.Desktop.Child("test.tif")
Var t as TiffPictureMBS

if pic <>nil then
t = new TiffPictureMBS

if t.Create(F) then

const PLANARCONFIG_CONTIG = 1
const PHOTOMETRIC_RGB = 2
const FILLORDER_MSB2LSB = 1
const RESUNIT_INCH = 2
const ORIENTATION_TOPLEFT = 1
const COMPRESSION_LZW = 5

t.Height = pic.Height
t.Width = pic.Width

t.RowsPerStrip = 1
t.PlanarConfig = PLANARCONFIG_CONTIG
t.Photometric = PHOTOMETRIC_RGB
t.BitsPerSample = 8
t.SamplesPerPixel = 3
t.FillOrder = FILLORDER_MSB2LSB
```

```
t.Orientation = ORIENTATION_TOPLEFT
t.ResolutionUnit = RESUNIT_INCH
t.VerticalResolution = 72.0
t.HorizontalResolution = 72.0
t.Compression = COMPRESSION_LZW

for i as Integer = 0 to t.Height - 1
Var m as MemoryBlock = pic.RowInFormat(i, PictureMBS.ImageFormatRGB)
t.Scanline(i) = m

next

t.Close
end if
else

end if

// cleanup
pic = nil
file.delete
```

Notes: The size of this image is limited to available hard disc space.
The system will cache this data in memory to avoid writing it to disc. Using picture sizes bigger than physical memory can result into slow processing.

FilePath points to the location where the file is created.
On Windows the FilePath can be nil in which space in the system swapfile is used.
On Mac/Linux with nil FilePath, we use automatically a temp file path.

BlockSize specifies how many bytes of memory should be used in application memory space. A typical value may be 100 mega bytes.

The Valid property is set to true on success.
File is deleted in destructor and folderitem is than invalid.

- 114.2.43 Constructor(width as Integer, height as Integer, ImageFormat as Integer) 17111

114.2.45 CopyMask as picture

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the alpha channel into a mask picture.
Notes: Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work.
Returns nil on any error (e.g. out of memory).
Works for all pictures with alpha channel.
See also:

- 114.2.46 CopyMask(x as Integer, y as Integer, w as Integer, h as Integer) as picture 17114

114.2.46 CopyMask(x as Integer, y as Integer, w as Integer, h as Integer) as picture

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the given area of the alpha channel into a mask picture.
Notes: Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work.
Returns nil on any error (e.g. out of memory).
Works for all pictures with alpha channel.
See also:

- 114.2.45 CopyMask as picture 17114

114.2.47 CopyPicture as picture

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the RGB channels or the gray channel into a picture.
Example:

```
// get some picture
Var logo as Picture = LogoMBS(500)

// create PictureMBS
Var rgb as new PictureMBS(logo)

// Create a gray picture and copy RGB to gray
Var g as new PictureMBS(500, 500, PictureMBS.ImageFormatG)
call g.CopyPixels(rgb)

// Create CMYK and fill cyan channel with grayscale image
Var cmyk as new PictureMBS(500, 500, PictureMBS.ImageFormatCMYK)
call cmyk.MagentaChannel.CopyPixels(g)
```

```
// display it
Backdrop = cmyk.CopyPicture
```

Notes: Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work.
Returns nil on any error (e.g. out of memory).

Works with Gray, RGB and CMYK pictures and supports alpha channel. For CMYK we have some simply conversion to RGB to give you a preview. For a real world application, use Color Conversion like our LCMS plugin.
See also:

- 114.2.48 CopyPicture(x as Integer, y as Integer, w as Integer, h as Integer) as picture 17115

114.2.48 CopyPicture(x as Integer, y as Integer, w as Integer, h as Integer) as picture

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the RGB channels or the gray channel in the given area into a picture.
Notes: Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work.
Returns nil on any error (e.g. out of memory).

Works with Gray, RGB and CMYK pictures and supports alpha channel. For CMYK we have some simply conversion to RGB to give you a preview. For a real world application, use Color Conversion like our LCMS plugin.
See also:

- 114.2.47 CopyPicture as picture 17114

114.2.49 CopyPictureWithAlpha as picture

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies picture with alpha.
Notes: Returns a picture with HasAlphaChannel = true.
See also:

- 114.2.50 CopyPictureWithAlpha(x as integer, y as integer, w as integer, h as integer) as picture 17116

114.2.50 CopyPictureWithAlpha(x as integer, y as integer, w as integer, h as integer) as picture

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies picture in rectangle with alpha.
Notes: Returns a picture with HasAlphaChannel = true.
See also:

- 114.2.49 CopyPictureWithAlpha as picture 17115

114.2.51 CopyPictureWithMask as picture

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the picture with mask.
Notes: Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work.
Returns nil on any error (e.g. out of memory).

Works with Gray, RGB and CMYK pictures and supports alpha channel. For CMYK we have some simply conversion to RGB to give you a preview. For a real world application, use Color Conversion like our LCMS plugin.
See also:

- 114.2.52 CopyPictureWithMask(x as Integer, y as Integer, w as Integer, h as Integer) as picture 17116

114.2.52 CopyPictureWithMask(x as Integer, y as Integer, w as Integer, h as Integer) as picture

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the picture with mask in the given area.
Notes: Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work.
Returns nil on any error (e.g. out of memory).

Works with Gray, RGB and CMYK pictures and supports alpha channel. For CMYK we have some simply conversion to RGB to give you a preview. For a real world application, use Color Conversion like our LCMS plugin.
See also:

- 114.2.51 CopyPictureWithMask as picture 17116

114.2.53 CopyPixels(source as PictureMBS) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies all pixels from the source picture to the current picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
// create new picture:
// can be any image format: ImageFormatRGB, ImageFormatG, ImageFormatBGR, etc.
Var d as new PictureMBS(l.Width, l.Height, PictureMBS.ImageFormatRGB)

if d.CopyPixels(p) then
Backdrop = d.CopyPicture
else
MessageBox "Failed."
end if
```

Notes: This function is optimized for several image formats:
- Gray to Gray.
- RGB to Gray uses R*0.3+G*0.59+B*0.11.
- RGB to RGB.
- Gray to RGB fill red, green and blue with the same gray value.
- CMYK to CMYK
- CMYK to Gray, copies from black channel
- Gray to CMYK, copies to black channel

If an alpha channel exists in both images, it is copied.
See also:

- 114.2.54 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) as boolean 17117
- 114.2.55 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) as boolean 17118

114.2.54 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from the source picture to the current picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
Var d as new PictureMBS(700, 700, PictureMBS.ImageFormatRGB)
```

```
if d.CopyPixels(p,100,100,500,500) then
Backdrop = d.CopyPicture
else
MessageBox "Failed."
end if
```

Notes: DestWidth and DestHeight specify how many pixels are copied.
DestX/DestY specify the destination position in the current picture.

This function is optimized for several image formats:
- Gray to Gray.
- RGB to Gray uses R*0.3+G*0.59+B*0.11.
- RGB to RGB.
- Gray to RGB fill red, green and blue with the same gray value.
- CMYK to Gray, copies from black channel
- Gray to CMYK, copies to black channel

If an alpha channel exists in both images, it is copied.
See also:

- 114.2.53 CopyPixels(source as PictureMBS) as boolean 17117
- 114.2.55 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) as boolean 17118

114.2.55 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from the source picture to the current picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
Var d as new PictureMBS(700, 700, PictureMBS.ImageFormatRGB)

if d.CopyPixels(p,100,100,500,500,0,0) then
Backdrop = d.CopyPicture
else
MessageBox "Failed."
end if
```

Notes: SourceX/SourceY is the position in the source picture.
DestWidth/DestHeight specify how many pixels are copied.

DestX/DestY specify the destination position in the current picture.

This function is optimized for several image formats:
- Gray to Gray.
- RGB to Gray uses R*0.3+G*0.59+B*0.11.
- RGB to RGB.
- Gray to RGB fill red, green and blue with the same gray value.
- CMYK to Gray, copies from black channel
- Gray to CMYK, copies to black channel
If an alpha channel exists in both images, it is copied.
See also:

- 114.2.53 CopyPixels(source as PictureMBS) as boolean 17117
- 114.2.54 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) as boolean 17117

114.2.56 CreatePictureMBS(width as Integer, height as Integer, ImageFormat as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new PictureMBS object.
Notes: Returns nil if no factory can create a valid picture.

First the Factory on the current ImageMBS object (self) is asked to create the picture.
Second the global Factory object is asked.
Third the normal PictureMBS constructor is used.
See also:

- 114.2.57 CreatePictureMBS(width as Integer, height as Integer, theImageFormat as Integer) as PictureMBS 17119

114.2.57 CreatePictureMBS(width as Integer, height as Integer, theImageFormat as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new PictureMBS object.
Notes: Returns nil if no factory can create a valid picture.

First the global factory object is asked to create the picture.
Second the normal PictureMBS constructor is used.
See also:

- 114.2.56 CreatePictureMBS(width as Integer, height as Integer, ImageFormat as Integer) as PictureMBS 17119

114.2.58 CyanChannel as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The cyan channel of a CMYK picture as a new PictureMBS object.
Notes: Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

114.2.59 DiffuseFilter(dest as PictureMBS, level as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a diffuse filter to the image.
Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.
Level must be between 0 and min(width,height).

114.2.60 DitherFilter(dest as PictureMBS, matrix as Integer, levels as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies the dither filter to the picture.
Notes: Use for the matrix parameter one of the Dither* constants.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Levels is a number between 2 and 256 and specifies how many color levels are in the final picture.

Returns nil on any error.

114.2.61 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes: This method applys the pixel values from the Red, Green and Blue channel of the picture with calculating in the mask of the picture.

This is the calculation:
Pixel.Red = (Pixel.Red * (255-Pixel.Mask) + PicturePixel.Red * PicturePixel.Mask) / 255
Pixel.Green = (Pixel.Green * (255-Pixel.Mask) + PicturePixel.Green * PicturePixel.Mask) / 255
Pixel.Blue = (Pixel.Blue * (255-Pixel.Mask) + PicturePixel.Blue * PicturePixel.Mask) / 255

Works only if the PictureMBS has Red, Green and Blue channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 114.2.62 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer, InvertMask as boolean=False) 17121
- 114.2.63 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, InvertMask as boolean=False) 17122
- 114.2.64 DrawMaskedPictureApplyMaskRGB(pic as picture, InvertMask as boolean=False) 17122

114.2.62 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes: This method applys the pixel values from the Red, Green and Blue channel of the picture with calculating in the mask of the picture.

This is the calculation:
Pixel.Red = (Pixel.Red * (255-Pixel.Mask) + PicturePixel.Red * PicturePixel.Mask) / 255
Pixel.Green = (Pixel.Green * (255-Pixel.Mask) + PicturePixel.Green * PicturePixel.Mask) / 255
Pixel.Blue = (Pixel.Blue * (255-Pixel.Mask) + PicturePixel.Blue * PicturePixel.Mask) / 255

Works only if the PictureMBS has Red, Green, Blue and Alpha channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

114.2.65 DrawMaskedPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes: This method copies the pixel values from the Red, Green and Blue channel of the picture and the pixel value of the picture's mask to the PictureMBS replacing old values.

This is the calculation:
Pixel.Red = PicturePixel.Red
Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue
Pixel.Alpha = PicturePixel.Mask

Works only if the PictureMBS has Red, Green, Blue and Alpha channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

114.2.66 DrawMaskedPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes: This method copies the pixel values from the Red, Green and Blue channel of the picture and the pixel value of the picture's mask to the PictureMBS replacing old values.

This is the calculation:
Pixel.Red = PicturePixel.Red
Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue
Pixel.Alpha = PicturePixel.Mask

Works only if the PictureMBS has Red, Green and Blue channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

114.2.69 DrawPictureBlueToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the blue channel of a picture object into the gray channel of this picture.
Notes: If you want to copy the blue channel of the picture into the blue channel of the PictureMBS, then first get a PictureMBS object for the blue channel and use this method on this object.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

114.2.70 DrawPictureBlueToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the blue channel of a picture object into the gray channel of this picture.
Notes: If you want to copy the blue channel of the picture into the blue channel of the PictureMBS, then first get a PictureMBS object for the blue channel and use this method on this object.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 114.2.69 DrawPictureBlueToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) 17125

114.2.71 DrawPictureGreenToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the green channel of a picture object into the gray channel of this picture.
Notes: If you want to copy the green channel of the picture into the green channel of the PictureMBS, then first get a PictureMBS object for the green channel and use this method on this object.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 114.2.72 DrawPictureGreenToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) 17126

114.2.72 DrawPictureGreenToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the green channel of a picture object into the gray channel of this picture.
Notes: If you want to copy the green channel of the picture into the green channel of the PictureMBS, then first get a PictureMBS object for the green channel and use this method on this object.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 114.2.71 DrawPictureGreenToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) 17126

114.2.73 DrawPictureRedToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the red channel of a picture object into the gray channel of this picture.
Notes: If you want to copy the red channel of the picture into the red channel of the PictureMBS, then first get a PictureMBS object for the red channel and use this method on this object.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 114.2.74 DrawPictureRedToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) 17127

114.2.74 DrawPictureRedToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the red channel of a picture object into the gray channel of this picture.
Notes: If you want to copy the red channel of the picture into the red channel of the PictureMBS, then first get a PictureMBS object for the red channel and use this method on this object.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 114.2.73 DrawPictureRedToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) 17127

114.2.75 DrawPictureRGB(pic as picture)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes: Works only if the PictureMBS has Red, Green and Blue channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

This is the calculation:
Pixel.Red = PicturePixel.Red
Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue

This method does ignore a mask in the given picture and does not change set the alpha channel.
See also:

- 114.2.76 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer) 17128
- 114.2.77 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) 17128
- 114.2.78 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) 17129

114.2.76 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes: Works only if the PictureMBS has Red, Green and Blue channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

This is the calculation:
Pixel.Red = PicturePixel.Red
Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue

This method does ignore a mask in the given picture and does not change set the alpha channel.

- 114.2.78 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) 17129

114.2.77 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes: Works only if the PictureMBS has Red, Green and Blue channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

This is the calculation:
Pixel.Red = PicturePixel.Red

Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue

This method does ignore a mask in the given picture and does not change set the alpha channel.
See also:

114.2.79 EngraveFilter(dest as PictureMBS, level as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies an engrave filter to the image.
Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.

If dest is not nil, it must match the size of the original picture.

Level must be between 0 and min(width,height).

Returns nil on any error.

114.2.80 FillRect(value as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRect(200)
Window1.Backdrop = p.CopyPicture
```

Notes: All channels are filled with the given value.
The range of value is 0 to 255.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 114.2.81 FillRect(Value as integer, Alpha as Integer) 17130
- 114.2.82 FillRect(x as Integer, y as Integer, width as Integer, height as Integer, value as Integer) 17131
- 114.2.83 FillRect(x as integer, y as integer, width as integer, height as integer, Value as integer, Alpha as Integer) 17131

114.2.81 FillRect(Value as integer, Alpha as Integer)

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the given area of the picture with the given color.
Notes: All channels are filled with the given value and alpha channel (if exists) with the alpha value.
The range of value is 0 to 255.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 114.2.80 FillRect(value as Integer) 17130
- 114.2.82 FillRect(x as Integer, y as Integer, width as Integer, height as Integer, value as Integer) 17131
- 114.2.83 FillRect(x as integer, y as integer, width as integer, height as integer, Value as integer, Alpha as Integer) 17131

114.2.82 FillRect(x as Integer, y as Integer, width as Integer, height as Integer, value as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the given area of the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRect(10, 10, 20, 20, 200)
Window1.Backdrop = p.CopyPicture
```

Notes: All channels are filled with the given value.
The range of value is 0 to 255.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 114.2.80 FillRect(value as Integer) 17130
- 114.2.81 FillRect(Value as integer, Alpha as Integer) 17130
- 114.2.83 FillRect(x as integer, y as integer, width as integer, height as integer, Value as integer, Alpha as Integer) 17131

114.2.83 FillRect(x as integer, y as integer, width as integer, height as integer, Value as integer, Alpha as Integer)

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the given area of the picture with the given color.
Notes: All channels are filled with the given value and alpha channel (if exists) with the alpha value.
The range of value is 0 to 255.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 114.2.80 FillRect(value as Integer) 17130
- 114.2.81 FillRect(Value as integer, Alpha as Integer) 17130
- 114.2.82 FillRect(x as Integer, y as Integer, width as Integer, height as Integer, value as Integer) 17131

114.2.84 FillRectApply(FillColor as color, alpha as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color with using alpha.
Example:

```
Var p as new PictureMBS(300, 300, PictureMBS.ImageFormatRGB)

p.FillRectRGB &cFF0000

call p.FillRectApply 0, 0, 50, 100, &c00FF00, 0
call p.FillRectApply 50, 0, 50, 100, &c00FF00, 255*1/5
call p.FillRectApply 100, 0, 50, 100, &c00FF00, 255*2/5
call p.FillRectApply 150, 0, 50, 100, &c00FF00, 255*3/5
call p.FillRectApply 200, 0, 50, 100, &c00FF00, 255*4/5
call p.FillRectApply 250, 0, 50, 100, &c00FF00, 255*5/5

Backdrop = p.CopyPicture
```

Notes: Works with gray and RGB pictures.
The range of value is 0 to 255.
The alpha channel is ignored of the picture.
This function combines the RGB/Gray channels with the new fill color and the alpha value.
See also:

- 114.2.85 FillRectApply(red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean 17132
- 114.2.86 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) as boolean 17133
- 114.2.87 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean 17133

114.2.85 FillRectApply(red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color with using alpha.
Notes: Works with gray and RGB pictures.
The range of value is 0 to 255.
The alpha channel is ignored of the picture.
This function combines the RGB/Gray channels with the new fill color and the alpha value.
See also:

- 114.2.84 FillRectApply(FillColor as color, alpha as Integer) as boolean 17131
- 114.2.86 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) as boolean 17133
- 114.2.87 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean 17133

114.2.86 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color with using alpha.
Notes: Works with gray and RGB pictures.
The range of value is 0 to 255.
The alpha channel is ignored of the picture.
This function combines the RGB/Gray channels with the new fill color and the alpha value.
See also:

- 114.2.84 FillRectApply(FillColor as color, alpha as Integer) as boolean 17131
- 114.2.85 FillRectApply(red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean 17132
- 114.2.87 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean 17133

114.2.87 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color with using alpha.
Notes: Works with gray and RGB pictures.
The range of value is 0 to 255.
The alpha channel is ignored of the picture.
This function combines the RGB/Gray channels with the new fill color and the alpha value.
See also:

- 114.2.84 FillRectApply(FillColor as color, alpha as Integer) as boolean 17131
- 114.2.85 FillRectApply(red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean 17132
- 114.2.86 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) as boolean 17133

114.2.88 FillRectRandom

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the pixels with random values.
Example:

```
Var p as new PictureMBS(1000,1000, PictureMBS.imageFormatRGB)

p.FillRectRandom
```

Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 114.2.89 FillRectRandom(x as Integer, y as Integer, width as Integer, height as Integer) 17134

114.2.89 FillRectRandom(x as Integer, y as Integer, width as Integer, height as Integer)

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the pixels with random values.
Example:

```
Var p as new PictureMBS(1000,1000, PictureMBS.imageFormatRGB)
p.FillRectRandom(0,0,100,100)
Backdrop = p.CopyPicture
```

Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 114.2.88 FillRectRandom 17133

114.2.90 FillRectRGB(FillColor as color)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRectRGB(&cFF0000)
Window1.Backdrop = p.CopyPicture
```

Notes: Works only if the picture has RGB channels.
See also:

- 114.2.91 FillRectRGB(FillColor as color, alpha as Integer) 17135
- 114.2.92 FillRectRGB(red as Integer, green as Integer, blue as Integer) 17136
- 114.2.93 FillRectRGB(red as Integer, green as Integer, blue as Integer, alpha as Integer) 17136

- 114.2.94 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color) 17137
- 114.2.95 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) 17138
- 114.2.96 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer) 17138
- 114.2.97 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) 17139

114.2.91 FillRectRGB(FillColor as color, alpha as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRectRGB(&cFF0000, 0)
Window1.Backdrop = p.CopyPicture
```

Notes: Works only if the picture has RGB channels.
Alpha is ignored if the picture does not have an alpha channel.
The range of aloha is 0 to 255.
See also:

- 114.2.90 FillRectRGB(FillColor as color) 17134
- 114.2.92 FillRectRGB(red as Integer, green as Integer, blue as Integer) 17136
- 114.2.93 FillRectRGB(red as Integer, green as Integer, blue as Integer, alpha as Integer) 17136
- 114.2.94 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color) 17137
- 114.2.95 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) 17138
- 114.2.96 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer) 17138
- 114.2.97 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) 17139

114.2.92 FillRectRGB(red as Integer, green as Integer, blue as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRectRGB(255, 0, 0)
Window1.Backdrop = p.CopyPicture
```

Notes: Works only if the picture has RGB channels.
The ranges of red, green and blue are 0 to 255.
See also:

- 114.2.90 FillRectRGB(FillColor as color) 17134
- 114.2.91 FillRectRGB(FillColor as color, alpha as Integer) 17135

114.2.93 FillRectRGB(red as Integer, green as Integer, blue as Integer, alpha as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRectRGB(255, 0, 0, 0)
Window1.Backdrop = p.CopyPicture
```

Notes: Works only if the picture has RGB channels.
Alpha is ignored if the picture does not have an alpha channel.

The ranges of alpha, red, green and blue are 0 to 255.
See also:

- 114.2.90 FillRectRGB(FillColor as color) 17134
- 114.2.91 FillRectRGB(FillColor as color, alpha as Integer) 17135
- 114.2.92 FillRectRGB(red as Integer, green as Integer, blue as Integer) 17136
- 114.2.94 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color) 17137
- 114.2.95 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) 17138
- 114.2.96 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer) 17138
- 114.2.97 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) 17139

114.2.94 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the given area of the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRectRGB(10,10,20,20,&cFF0000)
Window1.Backdrop = p.CopyPicture
```

Notes: Works only if the picture has RGB channels.
See also:

- 114.2.90 FillRectRGB(FillColor as color) 17134
- 114.2.91 FillRectRGB(FillColor as color, alpha as Integer) 17135
- 114.2.92 FillRectRGB(red as Integer, green as Integer, blue as Integer) 17136
- 114.2.93 FillRectRGB(red as Integer, green as Integer, blue as Integer, alpha as Integer) 17136
- 114.2.95 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) 17138

- 114.2.97 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) 17139

114.2.95 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the given area of the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRectRGB(10,10,20,20,&cFF0000, 0)
Window1.Backdrop = p.CopyPicture
```

Notes: Works only if the picture has RGB channels.
Alpha is ignored if the picture does not have an alpha channel.
The range of aloha is 0 to 255.

114.2.96 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the given area of the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRectRGB(10,10,20,20, 255, 0, 0)
Window1.Backdrop = p.CopyPicture
```

Notes: Works only if the picture has RGB channels.
The ranges of red, green and blue are 0 to 255.

- 114.2.93 FillRectRGB(red as Integer, green as Integer, blue as Integer, alpha as Integer) 17136
- 114.2.94 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color) 17137
- 114.2.95 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) 17138
- 114.2.97 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) 17139

114.2.97 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the given area of the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRectRGB(10, 10, 20, 20, 255, 0, 0, 0)
Window1.Backdrop = p.CopyPicture
```

Notes: Works only if the picture has RGB channels.
Alpha is ignored if the picture does not have an alpha channel.
See also:

- 114.2.90 FillRectRGB(FillColor as color) 17134
- 114.2.91 FillRectRGB(FillColor as color, alpha as Integer) 17135

- 114.2.93 FillRectRGB(red as Integer, green as Integer, blue as Integer, alpha as Integer) 17136
- 114.2.94 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color) 17137

- 114.2.95 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) 17138
- 114.2.96 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer) 17138

114.2.98 GainFilter(dest as PictureMBS, gain as Double, bias as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies the gain filter to the picture.
Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.

114.2.99 GammaFilter(dest as PictureMBS, gamma as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the gamma value of the picture.
Notes: If dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.
See also:

- 114.2.100 GammaFilter(dest as PictureMBS, gamma as Double, alphaGamma as Double) as PictureMBS 17140
- 114.2.101 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double) as PictureMBS 17141
- 114.2.102 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double, alphaGamma as Double) as PictureMBS 17142

114.2.100 GammaFilter(dest as PictureMBS, gamma as Double, alphaGamma as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the gamma value of the picture.
Notes: If dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

If the picture has no alpha channel, the alpha parameter is ignored.

Returns nil on any error.
See also:

- 114.2.99 GammaFilter(dest as PictureMBS, gamma as Double) as PictureMBS 17140
- 114.2.101 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double) as PictureMBS 17141
- 114.2.102 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double, alphaGamma as Double) as PictureMBS 17142

114.2.101 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the gamma value of the picture.
Notes: If dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

For grayscale pictures the gray color is calculated from red, green and blue value.

Returns nil on any error.
See also:

- 114.2.99 GammaFilter(dest as PictureMBS, gamma as Double) as PictureMBS 17140
- 114.2.100 GammaFilter(dest as PictureMBS, gamma as Double, alphaGamma as Double) as PictureMBS 17140
- 114.2.102 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double, alphaGamma as Double) as PictureMBS 17142

114.2.102 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double, alphaGamma as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the gamma value of the picture.
Notes: If dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

For grayscale pictures the gray color is calculated from red, green and blue value.
If the picture has no alpha channel, the alpha parameter is ignored.

Returns nil on any error.
See also:

- 114.2.99 GammaFilter(dest as PictureMBS, gamma as Double) as PictureMBS 17140
- 114.2.100 GammaFilter(dest as PictureMBS, gamma as Double, alphaGamma as Double) as PictureMBS 17140
- 114.2.101 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double) as PictureMBS 17141

114.2.103 GrayChannel as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The gray channel as a new PictureMBS object.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
Var r as PictureMBS = p.GrayChannel
r.fillrect(100) // fill only gray channel
```

Notes: Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

114.2.104 GreenChannel as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green channel as a new PictureMBS object.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
Var r as PictureMBS = p.GreenChannel
r.fillrect(100) // fill only green channel
```

Notes: Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

114.2.105 HMirror

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mirrors the image content horizontally (flip).
Example:

```
// get some picture
Var l as Picture = LogoMBS(500)
// create new image
Var p as new PictureMBS(l)
// mirror
p.HMirror
```

```
// show in window
Window1.Backdrop = p.CopyPicture
```

Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.

114.2.106 Invert

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverts the image data.
Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 114.2.107 Invert(x as Integer, y as Integer, w as Integer, h as Integer) 17144

114.2.107 Invert(x as Integer, y as Integer, w as Integer, h as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverts the image data in the given area.
Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 114.2.106 Invert 17144

114.2.108 MagentaChannel as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The magenta channel of a CMYK picture as a new PictureMBS object.
Notes: Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

114.2.109 MapInRows(FirstRow as Integer, LastRow as Integer) as boolean

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maps in given row range.
Notes: This function does nothing if given rows are already mapped in.

Fails if range is invalid, image is invalid or mapping is not possible.
Returns true if not a mapped image.

Will resize memory buffer size to be big enough for those rows.

114.2.110 MirroredView as PictureMBS

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new PictureMBS object which draws into the existing on, but has all rows vertically mirrored.
Notes: So if the new picture draws into the first row, the change will be in the last row of the original picture.

114.2.111 Multiply

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies alpha channel of whole picture.
Notes: Pictures with alpha channel must be multiplied, while pictures with mask have the alpha unmultiplied and inverse in the mask.
See also:

- 114.2.112 Multiply(x as integer, y as integer, width as integer, height as integer) 17145

114.2.112 Multiply(x as integer, y as integer, width as integer, height as integer)

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies alpha channel of a rectangle of the picture.
Notes: Pictures with alpha channel must be multiplied, while pictures with mask have the alpha unmultiplied and inverse in the mask.
See also:

- 114.2.111 Multiply 17145

114.2.113 NeonFilter(dest as PictureMBS) as PictureMBS

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a neon filter to the image.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p = p.NeonFilter(nil)
Window1.Backdrop = p.CopyPicture
```

Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

114.2.114 OilFilter(dest as PictureMBS, levels as Integer, range as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a oil filter to the image.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p = p.OilFilter(nil,5,5)
Window1.Backdrop = p.CopyPicture
```

Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Levels must be between 0 and 256.
Range must be between 0 and min(width,height).

Returns nil on any error.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

114.2.115 RawRow(index as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a memoryblock with the data of this row.
Example:

```
// create new image
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
// copy row
Var m as MemoryBlock = p.RawRow(10)
// modify directly
m.FillBytesMBS(10,100,200)
// show in window
Window1.Backdrop = p.CopyPicture
```

Notes: This memoryblock is pointing to the original data, so any modification is applied to the picture.
Returns nil on any error.
May raise OutOfBoundsException for invalid index.

For pictures using virtual memory, this memoryblock can become invalid for the next call to any PictureMBS method!

114.2.116 RawRowPtr(index as Integer) as Ptr

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a Ptr pointing to the data of this row.
Notes: This ptr is pointing to the original data, so any modification is applied to the picture.
Returns nil on any error.
May raise OutOfBoundsException for invalid index.

For pictures using virtual memory, this ptr can become invalid for the next call to any PictureMBS method!

114.2.117 RedChannel as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red channel as a new PictureMBS object.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
Var r as PictureMBS = p.RedChannel
r.fillrect(100) // fill only red channel
```

Notes: Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

114.2.118 RGBChannels as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The RGB channels as a new PictureMBS object.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGBA)
Var r as PictureMBS = p.RGBChannels
r.fillrect(100) // fill only color channels
```

Notes: Returns nil if the image is not a RGB picture.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the RGB pixels directly without modifying an alpha channel
The resulting PictureMBS object is a RGB picture.

114.2.119 RGBToGray(mode as Integer = 0) as boolean

MBS Images Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Turns picture into grayscale.
Notes: Only for RGB pictures and picture stays RGB, but all channels have same color.
Returns true on success and false on failure.

Modes:

0	y = 0.33 * R + 0.5 * G + 0.16 * B	Faster version of 3
1	y = 0.375 * R + 0.5 * G + 0.125 * B	Faster version of 3
2	y = 0.2126 * R + 0.7152 * G + 0.0722 * B	Photometric/digital ITU-R
3	y = 0.299 * R + 0.587 * G + 0.114 * B	Digital CCIR601
4	y = 0.300 * R + 0.588 * G + 0.112 * B	Faster version of 3

Mode 2 and 3 uses doubles and mode 0, 4 and 1 use integers so they should be faster.
Still Mode 0 and 1 are just approximation formulas which trade accuracy for perfomance.

e.g. a red pixel (FF0000) will turn to 555555 in Mode 0, 5F5F5F in Mode 1, 363636 in Mode 2 and 4C4C4C in Mode 3 and 4.

114.2.120 Rotate(angle as Double, Red as Integer = 0, Green as Integer = 0, Blue as Integer = 0, Alpha as Integer = 0, Gray as Integer = 0, Cyan as Integer = 0, Magenta as Integer = 0, Yellow as Integer = 0, Black as Integer = 0) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by the given degree.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p = p.Rotate(30, 255, 255, 255, 255, 255)
Window1.Backdrop = p.CopyPicture
```

Notes: With Red, Blue, Green, Alpha and Gray specify the color of the fill color.

If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

114.2.121 Rotate180

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 180 degree.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.Rotate180
Window1.Backdrop = p.CopyPicture
```

Notes: Same as HMirror and VMirror together.

There are two Rotate180 methods. One makes a copy and one not. This one does not make a copy.

Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 114.2.122 Rotate180(dest as PictureMBS=nil) as PictureMBS 17150

114.2.122 Rotate180(dest as PictureMBS=nil) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 180 degree.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p = p.Rotate180
Window1.Backdrop = p.CopyPicture
```

Notes: If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture.

Same as HMirror and VMirror together.

There are two Rotate180 methods. One makes a copy and one not. This one does make a copy.

Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 114.2.121 Rotate180 17149

114.2.123 Rotate270(dest as PictureMBS=nil) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 270 degree.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p = p.Rotate270
Window1.Backdrop = p.CopyPicture
```

Notes: If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

114.2.124 Rotate270slow(dest as PictureMBS=nil) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 270 degree.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p = p.Rotate270slow
Window1.Backdrop = p.CopyPicture
```

Notes: If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture. Works with Gray, RGB and CMYK pictures and supports alpha channel.

114.2.125 Rotate90(dest as PictureMBS=nil) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 90 degree.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p = p.Rotate90
Window1.Backdrop = p.CopyPicture
```

Notes: If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture. Works with Gray, RGB and CMYK pictures and supports alpha channel.

114.2.126 Rotate90slow(dest as PictureMBS=nil) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 90 degree.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p = p.Rotate90slow
Window1.Backdrop = p.CopyPicture
```

Notes: If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture. Works with Gray, RGB and CMYK pictures and supports alpha channel.

The Rotate90slow function is the older implementation. Please use Rotate90 unless you need the old behavior.

114.2.127 Scale(source as PictureMBS, temp as PictureMBS, mode as Integer, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales the picture to the given size.
Notes: The final image is stored in the PictureMBS object you call this method on.
On low memory this function can fail or the image may look bad. (e.g. all black)

The size of the temporary picture must have the size of the destination width and the source height. Use ImageFormatScaling when you create the temp image to give it the correct size. Temp picture may not be mapped.

For scaling with the same size as the picture already has, the scaling is still performed.

Returns true on success and false on any error. (e.g. width=0)

Use the constants for the mod:

ScaleTriangle	triangle
ScaleBox	box, nereast neighbor
ScaleLanczos3	lanczos 3
ScaleLanczos8	lanczos 8
ScaleMitchell	mitchell
ScalePoly3	poly 3
ScaleCubic	cubic

This function is optimized for several image formats:
- Gray to Gray.
- RGB to Gray uses R*0.3+G*0.59+B*0.11.
- RGB to RGB.
- Gray to RGB fill red, green and blue with the same gray value.
If an alpha channel exists in both images, it is copied.

114.2.128 ScaleFast(source as PictureMBS, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales the picture to the new size fast.
Notes: The final image is stored in the PictureMBS object you call this method on.

Returns true on success and false on failure.

This is a low quality algorithm, but it is fast.

This function is optimized for several image formats:
- Gray to Gray.
- RGB to Gray uses R*0.3+G*0.59+B*0.11.
- RGB to RGB.
- Gray to RGB fill red, green and blue with the same gray value.
If an alpha channel exists in both images, it is copied.

114.2.129 ScaleMT(threads as Integer, source as PictureMBS, temp as PictureMBS, mode as Integer, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The multithreaded variant of Scale function.
Notes: Same as Scale, but with additional multithreading.

Threads parameter specifies how many threads you want to use:
A negative value disables threading, zero will use one thread for each CPU core and a positive number specifies the thread count.

If one of the pictures used has IsMapping = true, the plugin calls Scale() function.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

114.2.130 SolarizeFilter(dest as PictureMBS) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies the solarize filter to the picture.
Example:

```
// get some picture
Var l as Picture = LogoMBS(500)
// create new image
```

```
Var p as new PictureMBS(l)
// add filter
p = p.SolarizeFilter(nil)
// show in window
Window1.Backdrop = p.CopyPicture
```

Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

114.2.131 StampFilter(dest as PictureMBS, radius as Double, threshold as Double, softness as Double, Black as Color, White as Color) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies the stamp filter to the picture.
Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.
Works with Gray and RGB pictures and supports alpha channel.

114.2.132 TransferFilter(dest as PictureMBS, gray() as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfers a picture to another picture by looking up each pixel value in the given array.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)

Var gray(256) as Integer

for i as Integer = 0 to 255
gray(i)=255-i // invert
next
```

```
// inverts the picture
Var d as PictureMBS = p.TransferFilter(nil,gray)

Backdrop = d.CopyPicture
```

Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

The array for gray must have 256 entries starting with index 0.
For RGB pictures the gray array is used for all three channels.

Returns nil on any error.
See also:

- 114.2.133 TransferFilter(dest as PictureMBS, gray() as Integer, alpha() as Integer) as PictureMBS 17155
- 114.2.134 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer) as PictureMBS 17156
- 114.2.135 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer, alpha() as Integer) as PictureMBS 17157

114.2.133 TransferFilter(dest as PictureMBS, gray() as Integer, alpha() as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfers a picture to another picture by looking up each pixel value in the given arrays.
Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

The arrays for gray and alpha must have 256 entries starting with index 0.
For RGB pictures the gray array is used for all three channels.
If the picture has no alpha channel, the alpha parameter is ignored.

Returns nil on any error.
See also:

- 114.2.132 TransferFilter(dest as PictureMBS, gray() as Integer) as PictureMBS 17154
- 114.2.134 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer) as PictureMBS 17156

- 114.2.135 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer, alpha() as Integer) as PictureMBS 17157

114.2.134 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfers a picture to another picture by looking up each pixel value in the given arrays.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)

Var red(256) as Integer
Var green(256) as Integer
Var blue(256) as Integer

for i as Integer = 0 to 255
red(i)=i
green(i)=i
blue(i)=255-i // invert blue
next

Var d as PictureMBS = p.TransferFilter(nil,red,green,blue)

Backdrop = d.CopyPicture
```

Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

The arrays for red, green and blue must have 256 entries starting with index 0.
For grayscale pictures the green array is used for the gray channel.

Returns nil on any error.
See also:

- 114.2.132 TransferFilter(dest as PictureMBS, gray() as Integer) as PictureMBS 17154
- 114.2.133 TransferFilter(dest as PictureMBS, gray() as Integer, alpha() as Integer) as PictureMBS 17155
- 114.2.135 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer, alpha() as Integer) as PictureMBS 17157

114.2.135 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer, alpha() as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfers a picture to another picture by looking up each pixel value in the given arrays.
Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

The arrays for red, green, blue and alpha must have 256 entries starting with index 0.
For grayscale pictures the green array is used for the gray channel.
If the picture has no alpha channel, the alpha parameter is ignored.

Returns nil on any error.
See also:

- 114.2.132 TransferFilter(dest as PictureMBS, gray() as Integer) as PictureMBS 17154
- 114.2.133 TransferFilter(dest as PictureMBS, gray() as Integer, alpha() as Integer) as PictureMBS 17155
- 114.2.134 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer) as PictureMBS 17156

114.2.136 Unmultiply

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Un-multiplies alpha channel for whole picture.
Notes: Pictures with alpha channel must be multiplied, while pictures with mask have the alpha unmultiplied and inverse in the mask.
See also:

- 114.2.137 Unmultiply(x as integer, y as integer, width as integer, height as integer) 17157

114.2.137 Unmultiply(x as integer, y as integer, width as integer, height as integer)

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Un-multiplies alpha channel for given rectangle in picture.
Notes: Pictures with alpha channel must be multiplied, while pictures with mask have the alpha unmultiplied and inverse in the mask.
See also:

- 114.2.136 Unmultiply 17157

114.2.138 UnsharpFilter(origpixels as PictureMBS, Amount as Double, Threshold as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the unsharp filter.
Notes: You may want to run the BoxBlur filter first before using the unsharp filter.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.

Works with Gray, RGB and CMYK pictures and supports alpha channel.

114.2.139 VMirror

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mirrors the image content vertically.
Example:

```
// get some picture
Var l as Picture = LogoMBS(500)
// create new image
Var p as new PictureMBS(l)
// mirror
p.VMirror
// show in window
Window1.Backdrop = p.CopyPicture
```

Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.

114.2.140 YellowChannel as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The yellow channel of a CMYK picture as a new PictureMBS object.
Notes: Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.

The resulting PictureMBS object is a grayscale picture.

114.2.141 Properties

114.2.142 AlphaOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the alpha channel.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatGA)
MessageBox str(p.AlphaOffset)
```

Notes: (Read and Write property)

114.2.143 BitsPerComponent as Integer

MBS Images Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bits per component.
Notes: Value is 8 for most pictures except those with format ImageFormatGray16 which use 16.
(Read only property)

114.2.144 BlackOffset as Integer

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the black channel.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MessageBox str(p.BlackOffset)
```

Notes: (Read only property)

114.2.145 BlueOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the blue channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MessageBox str(p.BlueOffset)
```

Notes: (Read and Write property)

114.2.146 Channel as String

MBS Images Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the channel.
Example:

```
Var p as new Picture(100,100,32)
Var q as new PictureMBS(p)

Var channels() as string = q.Channels

Var cr as PictureMBS = q.RedChannel
Var cg as PictureMBS = q.GreenChannel
Var cb as PictureMBS = q.BlueChannel
Var c0 as pictureMBS = q.Channel(0)
Var c1 as pictureMBS = q.Channel(1)
Var c2 as pictureMBS = q.Channel(2)

Var crn as string = cg.Channel
Var cgn as string = cg.Channel
Var cbn as string = cg.Channel
Var c0n as string = c0.Channel
Var c1n as string = c1.Channel
Var c2n as string = c2.Channel

Break // check in debugger
```

Notes: For pictures which represent a channel of a bigger picture.
(Read only property)
See also:

- 114.2.18 Channel(index as Integer) as PictureMBS 17084

114.2.147 ChannelCount as Integer

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of channels in this picture.
Notes: 1 for gray, 2 for gray+alpha, 3 for RGB, 4 for RGB+alpha or CMYK and 5 for CMYK+alpha.
(Read only property)

114.2.148 CyanOffset as Integer

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the cyan channel.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MessageBox str(p.CyanOffset)
```

Notes: (Read only property)

114.2.149 DebugPicture as Picture

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The picture content to view in the debugger.
Notes: If DebugPictureEnabled is set to true iny our code you can use the DebugPicture property to watch the picture content in the debugger. For speed reasons the size of the debug picture is limited to 512 by 512 pixels. (that could be increased)
(Read only property)

114.2.150 DebugPictureEnabled as Boolean

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether you want to use the DebugPicture property.
Notes: If DebugPictureEnabled is set to true iny our code you can use the DebugPicture property to watch the picture content in the debugger. For speed reasons the size of the debug picture is limited to 512 by 512 pixels. (that could be increased)
(Read and Write property)

114.2.151 Factory as PictureFactoryMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The local factory to be used for pictures created in this picture.
Notes: If one of the functions in this PictureMBS instance needs a new PictureMBS object, this factory is asked first.
(Read and Write property)

114.2.152 FilePath as String

MBS Images Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file path to temporary file.
Notes: Only set when we have one, e.g. using mapped memory.
(Read only property)

114.2.153 GrayOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the gray channel.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatAG)
MessageBox str(p.GrayOffset)
```

Notes: (Read and Write property)

114.2.154 GreenOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the green channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MessageBox str(p.GreenOffset)
```

Notes: (Read and Write property)

114.2.155 HasAlpha as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has an alpha channel.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatGA)
MessageBox str(p.HasAlpha)
```

Notes: (Read only property)

114.2.156 HasBlack as Boolean

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a blue channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MessageBox str(p.HasBlack)
```

Notes: (Read only property)

114.2.157 HasBlue as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a blue channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MessageBox str(p.HasBlue)
```

Notes: (Read only property)

114.2.158 HasCyan as Boolean

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a blue channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MessageBox str(p.HasCyan)
```

Notes: (Read only property)

114.2.159 HasGray as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a gray channel.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatGA)
MessageBox str(p.HasGray)
```

Notes: (Read only property)

114.2.160 HasGreen as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a green channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MessageBox str(p.HasGreen)
```

Notes: (Read only property)

114.2.161 HasMagenta as Boolean

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a blue channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
```

MessageBox str(p.HasMagenta)

Notes: (Read only property)

114.2.162 HasRed as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MessageBox str(p.HasRed)
```

Notes: (Read only property)

114.2.163 HasYellow as Boolean

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a blue channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MessageBox str(p.HasYellow)
```

Notes: (Read only property)

114.2.164 Height as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture in pixels.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MessageBox str(p.Height)
```

Notes: (Read only property)

114.2.165 ImageFormat as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image format of this picture object.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MessageBox str(p.ImageFormat)
```

Notes: See the ImageFormat* constants.
(Read only property)

114.2.166 ImageFormatString as String

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The format of this picture as a string.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MessageBox p.ImageFormatString
```

Notes: Returns for example "RGB" for ImageFormatRGB.
(Read only property)

114.2.167 IsCMYK as Boolean

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture is a CMYK picture.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MessageBox str(p.IsCMYK)
```

Notes: HasCyan, HasMagenta, HasYellow and HasBlack are true if IsRGB is true.
(Read only property)

114.2.168 IsGray as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this picture is a grayscale picture.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatGA)
MessageBox str(p.IsGray)
```

Notes: HasGray is true if IsGray is true.
(Read only property)

114.2.169 IsMapping as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this picture uses virtual memory.
Notes: If IsMapping is true you should not use the Memory property or the Clone function.
(Read only property)

114.2.170 IsRGB as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture is a RGB picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MessageBox str(p.IsRGB)
```

Notes: HasRed, HasBlue and HasGreen are true if IsRGB is true.
(Read only property)

114.2.171 MagentaOffset as Integer

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the magenta channel.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MessageBox str(p.MagentaOffset)
```

Notes: (Read only property)

114.2.172 MappingBlockSize as Int64

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The block size for a picture using virtual memory.
Notes: (Read and Write property)

114.2.173 MappingFirstRow as Integer

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: First row mapped in memory.
Notes: Only for mapped images.
Value is -1 if no data is mapped in.
(Read only property)

114.2.174 MappingLastRow as Integer

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Last row mapped in memory.
Notes: Only for mapped images.
Value is -1 if no data is mapped in.
(Read only property)

114.2.175 MappingRows as Integer

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of rows for mapping.
Notes: For a mapped image how many rows fit in the mapping buffer.
(Read only property)

114.2.176 Memory as Memoryblock

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a memoryblock without size pointing to the current pixel buffer.
Notes: Use only if IsMapping is false.
If size is -1, it's a memoryblock referencing the pixel data.
If size is >0, you got the original memoryblock used to allocate the memory.
(Read only property)

114.2.177 MemoryTarget as Memoryblock

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If this picture stores its pixels in a memoryblock, you can access the memory block using this property.
Notes: (Read only property)

114.2.178 Parent as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parent PictureMBS object.
Notes: One PictureMBS can reference the pixels of another PictureMBS. The parent is referenced in this property so it is not released.
(Read only property)

114.2.179 PixelSize as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of a pixel in bytes.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MessageBox str(p.PixelSize)
```

Notes: For example:
1 for Gray
2 for Gray with Alpha
3 for RGB
4 for RGB with Alpha

(Read only property)

114.2.180 RedOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the red channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MessageBox str(p.RedOffset)
```

Notes: (Read and Write property)

114.2.181 RowOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal row offset.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
Var q as PictureMBS = p.ClipImage(10,10,80,80)

MessageBox str(q.width)+" x "+str(q.height)+" with row offset: "+str(q.RowOffset)
```

Notes: Only used with clipping images.
(Read only property)

114.2.182 RowSize as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of one row in bytes.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MessageBox str(p.RowSize)
```

Notes: Additional bytes may be needed per row for better alignment of the data.
Also using virtual memory functions requires alignment.
(Read only property)

114.2.183 Target as Picture

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The target picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)

Window1.Backdrop = p.Target
```

Notes: if this PictureMBS references the pixels of a Xojo picture, this property keeps a reference to this target picture.
(Read only property)

114.2.184 TotalSize as Int64

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total size of this picture in bytes.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)

MessageBox str(p.TotalSize)
```

Notes: The result is Height*RowSize.
(Read only property)

114.2.185 UnclippedHeight as Integer

MBS Images Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture in pixels.
Notes: Without clipping, the full height of the image.
(Read only property)

114.2.186 Valid as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this instance is a valid picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MessageBox str(p.Valid)
```

Notes: Valid is false if the constructor failed to create a picture.
(Read only property)

114.2.187 Width as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the picture in pixels.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MessageBox str(p.Width)
```

Notes: (Read only property)

114.2.188 YellowOffset as Integer

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the yellow channel.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MessageBox str(p.YellowOffset)
```

Notes: (Read only property)

114.2.189 YieldTicks as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: How much time is given back to Xojo for other ticks.
Example:

```
Var p as PictureMBS // your picture

p.YieldTicks=6 // only use 1/10th of a second
```

Notes: If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.
(Read and Write property)

114.2.190 DataStringInFormat(ImageFormat as Integer) as string

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data of this picture as a string.
Notes: Strings are limit to 2 GB, but the actual limit is certainly smaller.

You can get and set the image data with this method in the native format.
If you set the data, use a string with at least RowSize bytes.
If you query the data, you will get a copy of the data bytes in a string.
Returns "" on any error.
May raise OutOfBoundsException for invalid index.

Version 18.1 or later will raise an out of memory exception for 32-bit applications if the memory needed will exceed 2 GB in memory. Allocating that many memory will be impossible.
(Read and Write computed property)

114.2.191 Row(index as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A memoryblock with the data of this row.
Example:

```
// create new image
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
// copy row
Var m as MemoryBlock = p.Row(10)
// modify
m.FillBytesMBS(10,100,200)
```

```
// copy back
p.row(10)=m
// show in window
Window1.Backdrop = p.CopyPicture
```

Notes: You can get and set a row with this method in the native format.
If you set the row, use a memoryblock with at least RowSize bytes.
If you query the row, you will get a copy of the row bytes in a new memoryblock.
Returns "" on any error.
May raise OutOfBoundsException for invalid index.
(Read and Write computed property)

114.2.192 RowInFormat(index as Integer, ImageFormat as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A memoryblock with the data of this row in the format you request.
Example:

```
// create new image
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
// copy row
Var m as MemoryBlock = p.RowInFormat(10, p.ImageFormatRofRGB)
// modify
m.FillBytesMBS(10,80,200)
// copy back
p.RowInFormat(10, p.ImageFormatRofRGB)=m
// show in window
Window1.Backdrop = p.CopyPicture
```

Notes: You can get and set a row with this method in the given format.
If you set the row, use a memoryblock with at least Width*PixelSize bytes. PixelSize is the format dependent size in bytes for one pixel.
If you query the row, you will get a copy of the row bytes in a new memoryblock.
Returns nil on any error.
May raise OutOfBoundsException for invalid index.
(Read and Write computed property)
See also:

- 114.2.193 RowInFormat(index as Integer, ImageFormat as Integer, InvertAlpha as boolean) as memoryblock

114.2.193 RowInFormat(index as Integer, ImageFormat as Integer, InvertAlpha as boolean) as memoryblock

MBS Images Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A memoryblock with the data of this row in the format you request.
Example:

```
// create new image
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
// copy row
Var m as MemoryBlock = p.RowInFormat(10, p.ImageFormatRGB, true)
// modify
m.FillBytesMBS(10,80,200)
// copy back
p.RowInFormat(10, p.ImageFormatRGB, true)=m
// show in window
Window1.Backdrop = p.CopyPicture
```

Notes: You can get and set a row with this method in the given format.
If you set the row, use a memoryblock with at least Width*PixelSize bytes. PixelSize is the format dependent size in bytes for one pixel.
If you query the row, you will get a copy of the row bytes in a new memoryblock.
Returns nil on any error.
May raise OutOfBoundsException for invalid index.
If InvertAlpha is true, the alpha values are inverted by using A=255-A.
(Read and Write computed property)
See also:

- 114.2.192 RowInFormat(index as Integer, ImageFormat as Integer) as memoryblock 17174

114.2.194 RowStringInFormat(index as Integer, ImageFormat as Integer) as string

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The row as a string.
Notes: You can get and set a row with this method in the native format.
If you set the row, use a memoryblock with at least RowSize bytes.
If you query the row, you will get a copy of the row bytes in a string.
Returns nil on any error.
May raise OutOfBoundsException for invalid index.
(Read and Write computed property)

114.2.195 Constants

Constants

Constant	Value	Description
Dither90Halftone6x6Matrix	5	One of the dither modes for the DitherFilter method.
DitherCluster3Matrix	8	One of the dither modes for the DitherFilter method.
DitherCluster4Matrix	9	One of the dither modes for the DitherFilter method.
DitherCluster8Matrix	10	One of the dither modes for the DitherFilter method.
DitherLines4x4Matrix	4	One of the dither modes for the DitherFilter method.
DitherMagic2x2Matrix	1	One of the dither modes for the DitherFilter method.
DitherMagic4x4Matrix	2	One of the dither modes for the DitherFilter method.
DitherOrdered4x4Matrix	3	One of the dither modes for the DitherFilter method.
DitherOrdered6x6Matrix	6	One of the dither modes for the DitherFilter method.
DitherOrdered8x8Matrix	7	One of the dither modes for the DitherFilter method.
ScaleBox	2	One of the scale modes for the Scale function.
ScaleCubic	7	One of the scale modes for the Scale function.
ScaleLanczos3	3	One of the scale modes for the Scale function.
ScaleLanczos8	4	One of the scale modes for the Scale function.
ScaleMitchell	5	One of the scale modes for the Scale function.
ScalePoly3	6	One of the scale modes for the Scale function.
ScaleTriangle	1	One of the scale modes for the Scale function.

Image Formats

Constant	Value	Description
ImageFormat1of3	15	This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the first byte with pixelsize=3.
ImageFormat1of4	18	This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the first byte with pixelsize=4.
ImageFormat2of3	16	This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the second byte with pixelsize=3.
ImageFormat2of4	19	This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the second byte with pixelsize=4.
ImageFormat3of3	17	This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the third byte with pixelsize=3.
ImageFormat3of4	20	This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the third byte with pixelsize=4.
ImageFormat4of4	21	This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the fourth byte with pixelsize=4.
ImageFormatABGR	9	
ImageFormatACMYK	25	
ImageFormatAG	13	
ImageFormatAKYMC	30	
ImageFormatAofABGR	18	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatAofARGB	18	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatAofBGRA	21	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatAofRGBA	21	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatARGB	4	
ImageFormatBGR	6	
ImageFormatBGRA	7	
ImageFormatBGRX	8	
ImageFormatBofABGR	19	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatBofARGB	21	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatBofBGR	15	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatBofBGRA	18	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatBofRGB	17	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatBofRGBA	20	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatBuffer	22	This format is for PixelSize = 1 and no channels.
ImageFormatCMYK	23	
ImageFormatCMYKA	24	
ImageFormatCMYKX	26	
ImageFormatG	11	
ImageFormatG1	11	One gray channel.
ImageFormatG2	42	Two gray channels.
ImageFormatG3	43	Three gray channels.
ImageFormatG4	44	Four gray channels.

Chapter 115

Launch Services

115.1 class LaunchServicesApplicationListMBS

115.1.1 class LaunchServicesApplicationListMBS

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: A class for a list of folderitems.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr2

115.1.2 Methods

115.1.3 Constructor

MBS MacOSX Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: The private constructor.

115.1.4 Item(index as Integer) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns an item of this list.
Notes: Index goes from 0 to count-1.

115.1.5 Properties

115.1.6 Count as Integer

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The number of items inside this list.
Notes: (Read and Write property)

115.2 class LaunchServicesItemInfoMBS

115.2.1 class LaunchServicesItemInfoMBS

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: A class to represent several details about an application folderitem.
Example:

```
// ask Launch Services what kind of item a file is
Var f As FolderItem = SpecialFolder.Applications.Child("Safari.app")
Var info As LaunchServicesItemInfoMBS = f.LaunchServicesItemInfoMBS(-1) // -1 = all information

MessageBox "Application: " + info.IsApplication.ToString + EndOfLine + _
"Package: " + info.IsPackage.ToString + EndOfLine + _
"Extension: " + info.Extension + ", hidden: " + info.ExtensionIsHidden.ToString + EndOfLine + _
"Scriptable: " + info.AppIsScriptable.ToString
```

Blog Entries

- MBS Xojo Plugins, version 19.5pr1

115.2.2 Methods

115.2.3 close

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

115.2.4 Properties

115.2.5 AppIsScriptable as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Whether the application can be scripted.
Notes: (Read only property)

115.2.6 AppPrefersClassic as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Item is an application that can run either natively or in the Classic emulation environment, but prefers to be launched in the Classic environment.
Notes: This flag is valid only when kLSItemInfoIsNativeApp is set.
(Read only property)

115.2.7 AppPrefersNative as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Item is an application that can run either natively or in the Classic emulation environment, but prefers to be launched natively.
Notes: This flag is valid only when kLSItemInfoIsNativeApp is set.
(Read only property)

115.2.8 Extension as String

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The extension for the folderitem.
Notes: You need to specify the kLSRequestExtension flag to get this information.
(Read only property)

115.2.9 ExtensionIsHidden as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: whether the folderitem has a hidden extension.
Notes: (Read only property)

115.2.10 IconFilename as String

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The optional filename string for the icon of this application.
Notes: This property is not be used on 64bit Mac targets.
(Read only property)

115.2.11 IsAliasFile as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Whether the folderitem is an alias file (includes sym links)
Notes: (Read only property)

115.2.12 IsApplication as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The folderitem is a Single-file or packaged application.
Example:

```
Var l as LaunchServicesItemInfoMBS
Var f as FolderItem

f=ApplicationsFolderMBS(0).Child("Mail.app")
l=f.LaunchServicesItemInfoMBS(-1)

if l.IsApplication then
MessageBox "Is an application!"
end if
```

Notes: This property is filled when kLSRequestBasicFlagsOnly is requested.
(Read only property)

115.2.13 IsClassicApp as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The folderitem is a CFM Classic application.
Notes: (Read only property)

115.2.14 IsContainer as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The fodleritem is a directory (includes packages) or a volume.
Notes: (Read only property)

115.2.15 IsInvisible as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The folderitem is invisible.
Notes: Does not include '.' files or '.hidden' entries.
This property is filled when kLSRequestBasicFlagsOnly is requested.
(Read only property)

115.2.16 IsNativeApp as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The application is a Carbon or Cocoa native application.
Notes: (Read only property)

115.2.17 IsPackage as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: whether the folderitem is an Application, document, or bundle package.
Example:

```
Var l as LaunchServicesItemInfoMBS
Var f as FolderItem

f=SpecialFolder.Applications.Child("Mail.app")
l=f.LaunchServicesItemInfoMBS(-1)

if l.IsPackage then
MessageBox "Is a package!"
end if
```

Notes: The item is a packaged directory.
This property is filled when kLSRequestBasicFlagsOnly is requested.
(Read only property)

115.2.18 IsPlainFile as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: None of the other attributes is true.
Notes: The item is not a directory, volume, or symlink.

This property is filled when kLSRequestBasicFlagsOnly is requested.
(Read only property)

115.2.19 IsSymlink as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The folderitem is only an UNIX symbolic link.
Notes: (Read only property)

115.2.20 IsVolume as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The folderitem is a volume.
Notes: (Read only property)

115.2.21 KindID as Integer

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The kind ID of this folderitem.
Notes: This property is not be used on 64bit Mac targets.
(Read only property)

115.2.22 MacCreator as String

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The Mac OS creator code.
Example:

```
Var f as FolderItem = SpecialFolder.Applications.Child("Firefox.app")

Var l As LaunchServicesItemInfoMBS = f.LaunchServicesItemInfoMBS(&h02)

if l <>nil Then
MessageBox l.MacCreator // shows "MOZB"
end
```

Notes: You need to specify the kLSRequestTypeCreator flag to get this information.

(Read only property)

115.2.23 MacType as String

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The Mac OS type code.
Notes: You need to specify the kLSRequestTypeCreator flag to get this information.
(Read only property)

115.3 class LaunchServicesLaunchParameterMBS

115.3.1 class LaunchServicesLaunchParameterMBS

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: A class for parameters which can be used to launch an application.
Example:

```
Var f(0) as FolderItem
Var a as FolderItem
Var p as LaunchServicesLaunchParameterMBS

p=new LaunchServicesLaunchParameterMBS

p.Defaults=true
p.Hide=true
f.Add SpecialFolder.Desktop.Child("picture.tiff")

a=LaunchServicesOpenXMBS(f,p)

MessageBox a.Name
```

115.3.2 Methods

115.3.3 close

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

115.3.4 Properties

115.3.5 Application as FolderItem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The application to use to open documents.
Notes: (Read and Write property)

115.3.6 Defaults as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Default settings should be used.
Notes: default means: open, async, use Info.plist, start Classic.
(Read and Write property)

115.3.7 DontAddToRecents as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Do not add application or documents to recents menus.
Notes: (Read and Write property)

115.3.8 DontSwitch as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Don't bring new app to the foreground.
Example:

```
Var l as new LaunchServicesLaunchParameterMBS

l.DontSwitch=true

Var files(0) as FolderItem

files(0)=New FolderItem("/Applications/iTunes.app", FolderItem.PathModes.Shell)

call LaunchServicesOpenXMBS(files,l)
```

Notes: (Read and Write property)

115.3.9 Hide as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Send child a "hide" request as soon as it checks in.
Notes: (Read and Write property)

115.3.10 HideOthers as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Hide all other apps when child checks in.
Notes: (Read and Write property)

115.3.11 InClassic as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Force app to launch in Classic environment.
Notes: (Read and Write property)

115.3.12 InhibitBGOnly as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Causes launch to fail if target is background-only.
Notes: (Read and Write property)

115.3.13 LastError as Integer

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The last error value from the LaunchServicesOpenXMBS function.
Notes: Values for errors:

kLSUnknownErr	= -10810	
kLSNotAnApplicationErr	= -10811	
kLSNotInitializedErr	= -10812	
kLSDataUnavailableErr	= -10813	e.g. no kind string
kLSApplicationNotFoundErr	= -10814	e.g. no application claims the file
kLSUnknownTypeErr	= -10815	
kLSDataTooOldErr	= -10816	
kLSDataErr	= -10817	
kLSLaunchInProgressErr	= -10818	e.g. opening an alreay opening application
kLSNotRegisteredErr	= -10819	
kLSAppDoesNotClaimTypeErr	= -10820	
kLSAppDoesNotSupportSchemeWarning	= -10821	not an error, just a warning
kLSServerCommunicationErr	= -10822	cannot set recent items
kLSCannotSetInfoErr	= -10823	you may not set item info for this item

(Read and Write property)

115.3.14 NewInstance as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Instantiate app even if it is already running.
Notes: (Read and Write property)

115.3.15 NoParams as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Use Info.plist to determine launch parameters.
Notes: (Read and Write property)

115.3.16 Print as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Print items instead of opening them.
Notes: (Read and Write property)

115.3.17 StartClassic as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Start up Classic environment if required for this application.
Notes: (Read and Write property)

115.4 class LaunchServicesStringListMBS

115.4.1 class LaunchServicesStringListMBS

MBS MacOSX Plugin, Plugin Version: 6.1, Platform: macOS, Targets: All.

Function: A class for a list of strings.

115.4.2 Methods

115.4.3 Item(index as Integer) as string

MBS MacOSX Plugin, Plugin Version: 6.1, Platform: macOS, Targets: All.

Function: Returns an item of this list.
Notes: Index goes from 0 to count-1.

115.4.4 Properties

115.4.5 Count as Integer

MBS MacOSX Plugin, Plugin Version: 6.1, Platform: macOS, Targets: All.

Function: The number of items inside this list.
Notes: (Read and Write property)

115.5 Globals

115.5.1 LaunchServicesAllHandlersForURLSchemeMBS(URLScheme as string) as LaunchServicesStringListMBS

MBS MacOSX Plugin, Plugin Version: 6.1, Platform: macOS, Targets: All.

Function: Returns an array of application bundle identifiers for applications capable of handling the specified URL scheme.
Example:

```
Var l as LaunchServicesStringListMBS
Var s(-1) as string
Var i,c as Integer

l=LaunchServicesAllHandlersForURLSchemeMBS("http")
if l<>nil then
c=l.Count-1
for i=0 to c
s.Add l.Item(i)
next

MessageBox Join(s,", ")
end if
```

Notes: URL handling capability is determined according to the kCFBundleURLTypes listed in an application's Info.plist).
Returns nil if no handlers are available.

Example output from the code above:
org.videolan.vlc, com.RealNetworks.RealPlayer, org.mozilla.firefox, com.apple.safari, de.icab.iCab, com.microsoft.explorer

Requires Mac OS X 10.4 to work correct. Returns always nil on older systems.

115.5.2 LaunchServicesAllRoleHandlersForContentTypeMBS(ContentType as string, role as Integer) as LaunchServicesStringListMBS

MBS MacOSX Plugin, Plugin Version: 6.0, Platform: macOS, Targets: All.

Function: Returns an array of application bundle identifiers for applications capable of handling the specified content type (UTI) with the specified role(s).
Example:

```
Var l as LaunchServicesStringListMBS
```

```
Var s(-1) as string
Var i,c as Integer

const kLSRolesAll=-1

l=LaunchServicesAllRoleHandlersForContentTypeMBS("com.adobe.pdf",kLSRolesAll)
if l<>nil then
c=l.Count-1
for i=0 to c
s.Add l.Item(i)
next

MessageBox Join(s,", ")
end if
```

Notes: Application content handling capabilities are determined according to the kCFBundleDocumentTypes listed in an application's Info.plist). For any role, specify kLSRolesAll.
Returns nil if no handlers are available.
Requires Mac OS X 10.4.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

Example output for code above is:
com.adobe.Reader, com.apple.preview, com.adobe.acrobat.reader, com.apple.MDIimporter.PDF

115.5.3 LaunchServicesApplicationForInfoMBS(type as string, creator as string, extension as string, role as Integer) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the application used to open items with particular data.
Example:

```
MessageBox LaunchServicesApplicationForInfoMBS("","R*ch","txt",-1).name
MessageBox LaunchServicesApplicationForInfoMBS("TEXT","","",-1).name
MessageBox LaunchServicesApplicationForInfoMBS("","","txt",-1).name
```

Notes: Consults the binding tables to return the application that would be used to open items with type,

creator, and/or extension as provided if they were double-clicked in the Finder. This application will be the default for items like this if one has been set. If no application is known to LaunchServices suitable for opening such items, nil (kLSApplicationNotFoundErr) will be returned. Not all three input parameters can be "" at the same time nor can both output parameters be "" at the same time.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

Blog Entries

- MBS Plugins updated for Xojo 2019r2

115.5.4 LaunchServicesApplicationForItemMBS(file as folderitem, role as Integer) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the application used to open an item.
Example:

```
Var file As FolderItem = SpecialFolder.Desktop.Child("Test.xojo_binary_project")

Const kLSRolesNone = 1 // no claim Is made about support For this type/scheme
Const kLSRolesViewer = 2 // claim To be able To view this type/scheme
Const kLSRolesEditor = 4 // claim To be able To edit this type/scheme
Const kLSRolesAll = -1 // claim To Do it all

Var appfile As FolderItem = LaunchServicesApplicationForItemMBS(file, kLSRolesEditor)

// shows Xojo
MessageBox appfile.NativePath
```

Notes: Consults the binding tables to return the application that would be used to open the folderitem if it were double-clicked in the Finder. This application will be the user-specified override if appropriate or the default otherwise. If no application is known to LaunchServices suitable for opening this item, nil (kLSApplicationNotFoundErr) will be returned.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

Upgraded in version 19.5 to use CFURL instead of FSRef APIs.

115.5.5 LaunchServicesCanApplicationAcceptItemMBS(item as folderitem, targetapp as folderitem, role as Integer, flags as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Determine whether an item can accept another item.
Example:

```
Var file As FolderItem = SpecialFolder.Desktop.Child("Test.xojo_binary_project")
Var a As FolderItem = LaunchServicesOpenMBS(file)

Const kLSRolesNone = 1 // no claim Is made about support For this type/scheme
Const kLSRolesViewer = 2 // claim To be able To view this type/scheme
Const kLSRolesEditor = 4 // claim To be able To edit this type/scheme
Const kLSRolesAll = -1 // claim To Do it all

Var accept As Boolean = LaunchServicesCanApplicationAcceptItemMBS(file, a, kLSRolesEditor, 0)

MessageBox "accept by Xojo: "+Str(accept)
```

Notes: Returns whether TargetApp can accept this folderitem as in a drag and drop operation. If role is other than kLSRolesAll then make sure TargetApp claims to fulfill the requested role.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

Values for the flags:

```
kLSAcceptDefault          = 1
kLSAcceptAllowLoginUI     = 2   show UI to log in if necessary
```

Upgraded in version 19.5 to use CFURL instead of FSRef APIs.

- MBS Xojo Plugins, version 19.5pr1

115.5.6 LaunchServicesDefaultHandlerForURLSchemeMBS(URLScheme as string) as string

MBS MacOSX Plugin, Plugin Version: 6.1, Platform: macOS, Targets: All.

Function: Returns the bundle identifier of the default handler for the specified URL scheme.
Example:

```
MessageBox LaunchServicesDefaultHandlerForURLSchemeMBS("http") // shows here: com.apple.safari
```

Notes: Returns "" if no handler is available.
Requires Mac OS X 10.4 to work correct. Returns always "" on older systems.

115.5.7 LaunchServicesDefaultRoleHandlerForContentTypeMBS(ContentType as string, role as Integer) as string

MBS MacOSX Plugin, Plugin Version: 6.0, Platform: macOS, Targets: All.

Function: Returns the application bundle identifier of the default handler for the specified content type (UTI), in the specified role(s).
Example:

```
const type="com.adobe.pdf"
MessageBox LaunchServicesDefaultRoleHandlerForContentTypeMBS(type,-1)
```

Notes: For any role, specify kLSRolesAll. Returns "" if no handler is available.
Requires Mac OS X 10.4.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

115.5.8 LaunchServicesDisplayNameForCFURLMBS(cfurlhandle as Integer) as string

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Get the display name for an url handle.
Notes: Return a copy of the display name for an url handle. Takes into consideration whether this item has a hidden extension or not.

Cfurlhandle should be the non 0 value from a CFURL object handle property.

115.5.9 LaunchServicesFindApplicationForInfoMBS(creator as string, bundleID as string, name as string) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Locate a specific application.
Example:

```
MessageBox LaunchServicesFindApplicationForInfoMBS("prvw","","").Name
MessageBox LaunchServicesFindApplicationForInfoMBS("","com.apple.iTunes","").Name
MessageBox LaunchServicesFindApplicationForInfoMBS("","","Safari.app").Name
```

Notes: Returns the application with the corresponding input information. The registry of applications is consulted first in order of bundleID, then creator, then name. All comparisons are case insensitive and 'ties' are decided first by version, then by native vs. Classic.

Parameters can be "". The name of the application must be the name with the extension.

- Tip of the day: How to launch Disc Utility?

115.5.10 LaunchServicesItemInfoForCFURLMBS(cfurlhandle as Integer, WhichInfo as Integer) as LaunchServicesItemInfoMBS

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return information about an item.
Notes: Returns as much or as little information as requested about the url. Some information is available in a thread-safe manner, some is not.

Cfurlhandle should be the non 0 value from a CFURL object handle property.

Possible values you can combine for the WhichInfo parameter:

kLSRequestExtension	= &h01	Requests the item's filename extension.
kLSRequestTypeCreator	= &h02	Requests the item's file type and creator signature.
kLSRequestBasicFlagsOnly	= &h04	Requests all item-information flags that are not application-specific: that is, all except IsNativeApp, IsClassicApp, AppPrefersNative, AppPrefersClassic and AppIsScriptable.
kLSRequestAppTypeFlags	= &h08	Requests all application-specific item-information flags: that is, IsNativeApp, IsClassicApp, AppPrefersNative, AppPrefersClassic and AppIsScriptable.
kLSRequestAllFlags	= &h10	Requests all item-information flags.
kLSRequestIconAndKind	= &h20	Not used.
kLSRequestExtensionFlagsOnly	= &h40	Requests only the kLSItemInfoExtensionIsHidden item-information flag.
kLSRequestAllInfo	= -1	

115.5.11 LaunchServicesKindStringForCFURLMBS(cfurlhandle as Integer) as string

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Get the kind string for an item.
Notes: Returns the kind string as used in the Finder and elsewhere for the given folderitem.

Cfurlhandle should be the non 0 value from a CFURL object handle property.

115.5.12 LaunchServicesOpenMBS(item as folderitem) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Open an application, document, or folder.
Example:

```
Var file As FolderItem = SpecialFolder.Desktop.Child("Test.xojo_binary_project")
Var a As FolderItem = LaunchServicesOpenMBS(file)
```

MessageBox a.NativePath

Notes: Opens applications, documents, and folders. Applications are opened via an 'oapp' or 'rapp' event. Documents are opened in their user-overridden or default applications as appropriate. Folders are opened in the Finder. Use the more specific LaunchServicesOpenXMBS for more control over launching.

Returns a folderitem to the application which was launched.

Upgraded in version 19.5 to use CFURL instead of FSRef APIs.
Blog Entries

- MBS Xojo Plugins, version 19.5pr1

115.5.13 LaunchServicesOpenXMBS(documents() as folderitem, parameter as LaunchServicesLaunchParameterMBS) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Opens an application or one or more documents or folders.
Example:

```
// Open a file in Preview (Mac OS X).
Sub OpenWithPreview(f as folderitem)
Var p as FolderItem
Var d(0) as FolderItem
Var r as FolderItem
Var param as LaunchServicesLaunchParameterMBS

// Find preview
p=LaunchServicesFindApplicationForInfoMBS("prvw","com.apple.Preview","Preview.app")

if p<>Nil then
d(0)=f

param=new LaunchServicesLaunchParameterMBS
param.Application=p
param.Defaults=true // just default settings

r=LaunchServicesOpenXMBS(d, param)
if r<>nil then
Return //Success
end if
end if

// On failure, just launch normally:
```

```
f.Launch true
End Sub
```

Notes: Opens applications, documents, and folders. Applications are opened via an 'oapp' or 'rapp' event. Documents are opened in their user-overridden or default applications as appropriate. Folders are opened in the Finder.

Returns a folderitem to the application which was launched.
Currently this function is not available to RB versions before 3.5.
Note that the documents parameter is an array of folderitem and not just one.

Upgraded in version 19.5 to use CFURL instead of FSRef APIs.

- MBS Xojo Plugins, version 19.5pr1

115.5.14 LaunchServicesSetDefaultHandlerForURLSchemeMBS(URLScheme as string, BundleID as string) as Integer

MBS MacOSX Plugin, Plugin Version: 6.1, Platform: macOS, Targets: All.

Function: Sets the user's preferred handler for the specified URL scheme.
Example:

```
Var e as Integer
Var old as string

old=LaunchServicesDefaultHandlerForURLSchemeMBS("http")

MessageBox "Before: "+old

e=LaunchServicesSetDefaultHandlerForURLSchemeMBS("http","com.microsoft.explorer")

MessageBox "LaunchServicesSetDefaultHandlerForURLSchemeMBS: "+str(e)

MessageBox "Between: "+LaunchServicesDefaultHandlerForURLSchemeMBS("http")

e=LaunchServicesSetDefaultHandlerForURLSchemeMBS("http",old)

MessageBox "LaunchServicesSetDefaultHandlerForURLSchemeMBS: "+str(e)

MessageBox "After: "+LaunchServicesDefaultHandlerForURLSchemeMBS("http")
```

Notes: Returns Mac OS error code with 0 for success.
The handler is specified as an application bundle identifier.

Requires Mac OS X 10.4 to work correct. Returns always -1 on older systems.

115.5.15 LaunchServicesSetDefaultRoleHandlerForContentTypeMBS(ContentType as string, role as Integer, BundleID as string) as Integer

MBS MacOSX Plugin, Plugin Version: 6.0, Platform: macOS, Targets: All.

Function: Sets the user's preferred handler for the specified content type (UTI) in the specified role(s).
Example:

```
Var e as Integer

// makes Acrobat the default pdf reader
'e=LaunchServicesSetDefaultRoleHandlerForContentTypeMBS("com.adobe.pdf",-1,"com.adobe.Reader")

// makes preview the default pdf reader
e=LaunchServicesSetDefaultRoleHandlerForContentTypeMBS("com.adobe.pdf",-1,"com.apple.preview")

MessageBox str(e)
```

Notes: For all roles, specify kLSRolesAll. The handler is specified as an application bundle identifier.
Returns a Mac OS error code or -1 if the function is not available.
Requires Mac OS X 10.4.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

115.6 module UTTypeMBS

115.6.1 module UTTypeMBS

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: The module to wrap all the Apple UTI functions.
Example:

```
// find the type identifier for a file extension and check whether it is an image
Var uti As String = UTTypeMBS.CreatePreferredIdentifierForTag(UTTypeMBS.kUTTagClassFilenameEx-
```

tension, "heic", "")
MessageBox "heic is " + uti + EndOfLine + "Image: " + UTTypeMBS.ConformsTo(uti, UTTypeMBS.kUTTypeImage).ToString

Notes: See this webpage for a list of all the predefined types:

http://developer.apple.com/documentation/Carbon/Conceptual/understanding_utis/utilist/chapter_4_section_1.html

115.6.2 Methods

115.6.3 ConformsTo(UTI as string, ConformsToUTI as string) as boolean

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Checks whether a type is a subtype of the second type.
Example:

```
if UTTypeMBS.ConformsTo("public.jpeg","public.image") then
MessageBox "ConformsTo"
else
MessageBox "not ConformsTo"
end if
```

115.6.4 CreateAllIdentifiersForTag(inTagClass as string, inTag as string, inConformingToUTI as string) as string()

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Creates an array of all uniform type identifiers indicated by the specified tag.
Example:

```
MessageBox join(UTTypeMBS.CreateAllIdentifiersForTag(UTTypeMBS.kUTTagClassFilenameExtension, "txt", ""))
// shows "public.plain-text"

MessageBox join(UTTypeMBS.CreateAllIdentifiersForTag(UTTypeMBS.kUTTagClassFilenameExtension, "xml",
```

```
""))
// shows "public.xml com.apple.dashcode.xml"
```

Notes: An overloaded tag (e.g., an extension used by several applications for different file formats) may indicate multiple types. If no declared type identifiers have the specified tag, then a single dynamic type identifier will be created for the tag. Optionally, the returned type identifiers must conform to the identified "conforming-to" type argument. This is a hint to the implementation to constrain the search to a particular tree of types. For example, the client may want to know the type indicated by a particular extension tag. If the client knows that the extension is associated with a directory (rather than a file), the client may specify "public.directory" for the conforming-to argument. This will allow the implementation to ignore all types associated with byte data formats (public.data base type).

115.6.5 CreatePreferredIdentifierForTag(inTagClass as string, inTag as string, inConformingToUTI as string) as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Creates a uniform type identifier for the type indicated by the specified tag.
Example:

```
MessageBox UTTypeMBS.CreatePreferredIdentifierForTag(UTTypeMBS.kUTTagClassFilenameExtension,
"jpg", "")
// shows "public.jpeg"
MessageBox UTTypeMBS.CreatePreferredIdentifierForTag(UTTypeMBS.kUTTagClassOSType, "TIFF", "pub-
lic.image")
// shows "public.tiff"
```

Notes: This is the primary function to use for going from tag (extension/MIMEType/OSType) to uniform type identifier. Optionally, the returned type identifiers must conform to the identified "conforming-to" type argument. This is a hint to the implementation to constrain the search to a particular tree of types. For example, the client may want to know the type indicated by a particular extension tag. If the client knows that the extension is associated with a directory (rather than a file), the client may specify "public.directory" for the conforming-to argument. This will allow the implementation to ignore all types associated with byte data formats (public.data base type). If more than one type is indicated, preference is given to a public type over a non-public type on the theory that instances of public types are more common, and therefore more likely to be correct. When there a choice must be made between multiple public types or multiple non-public types, the selection rules are undefined. Clients needing finer control should use CreateAllIdentifiersWithTag. If no declared type is indicated, a dynamic type identifier is generated which satisfies the parameters.

115.6.6 DeclaringBundleURL(UTI as string) as folderitem

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Returns the folderitem of the bundle containing the type declaration of the identified type.
Example:

```
MessageBox UTTypeMBS.DeclaringBundleURL("public.jpeg").NativePath
```

115.6.7 Description(UTI as string) as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Returns the localized, user-readable type description string.
Example:

```
MessageBox UTTypeMBS.Description("public.jpeg") // "JPEG-Bild" in German
```

115.6.8 Equal(UTI as string, SecondUTI as string) as boolean

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Checks whether two types are equal.
Example:

```
if UTTypeMBS.Equal("public.jpeg","public.jpeg") then
MessageBox "equal"
else
MessageBox "not equal"
end if
```

Notes: Returns true if both UTIs are equal.

115.6.9 kUTExportedTypeDeclarationsKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MessageBox UTTypeMBS.kUTExportedTypeDeclarationsKey // "UTExportedTypeDeclarations"
```

115.6.10 kUTImportedTypeDeclarationsKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

MessageBox UTTypeMBS.kUTImportedTypeDeclarationsKey // "UTImportedTypeDeclarations"

115.6.11 kUTTagClassFilenameExtension as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constant strings identify tag classes for use when converting uniform type identifiers to and from equivalent tags.
Example:

MessageBox UTTypeMBS.kUTTagClassFilenameExtension // "public.filename-extension"

115.6.12 kUTTagClassMIMEType as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constant strings identify tag classes for use when converting uniform type identifiers to and from equivalent tags.
Example:

MessageBox UTTypeMBS.kUTTagClassMIMEType // "public.mime-type"

115.6.13 kUTTagClassNSPboardType as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constant strings identify tag classes for use when converting uniform type identifiers to and from equivalent tags.
Example:

MessageBox UTTypeMBS.kUTTagClassNSPboardType // "com.apple.nspboard-type"

115.6.14 kUTTagClassOSType as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constant strings identify tag classes for use when converting uniform type identifiers to and from equivalent tags.
Example:

MessageBox UTTypeMBS.kUTTagClassOSType // "com.apple.ostype"

115.6.15 kUTTypeAliasFile as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.16 kUTTypeAliasRecord as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.17 kUTTypeAppleICNS as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.18 kUTTypeAppleProtectedMPEG4Audio as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.19 kUTTypeApplication as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.20 kUTTypeApplicationBundle as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.21 kUTTypeApplicationFile as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.22 kUTTypeArchive as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.23 kUTTypeAudio as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.24 kUTTypeAudiovisualContent as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.25 kUTTypeBMP as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.26 kUTTypeBundle as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.27 kUTTypeCHeader as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.28 kUTTypeCompositeContent as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.29 kUTTypeConformsToKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MessageBox UTTypeMBS.kUTTypeConformsToKey // "UTTypeConformsTo"
```

115.6.30 kUTTypeContact as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.31 kUTTypeContent as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.32 kUTTypeCPlusPlusHeader as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.33 kUTTypeCPlusPlusSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.34 kUTTypeCSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.35 kUTTypeData as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.36 kUTTypeDescriptionKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

MessageBox UTTypeMBS.kUTTypeDescriptionKey // "UTTypeDescription"

115.6.37 kUTTypeDirectory as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.38 kUTTypeDiskImage as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.39 kUTTypeFileURL as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.40 kUTTypeFlatRTFD as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.41 kUTTypeFolder as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.42 kUTTypeFramework as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.43 kUTTypeGIF as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.44 kUTTypeHEIC as string

MBS MacOSX Plugin, Plugin Version: 25.0, Platform: macOS, Targets: All.

Function: One of the predefined type constants.
Notes: A type that represents High Efficiency Image Coding images.
The identifier for this type is public.heic.
This type conforms to a base type identified by public.heif-standard, which in turn conforms to UTTypeImage.

115.6.45 kUTTypeHEIF as string

MBS MacOSX Plugin, Plugin Version: 25.0, Platform: macOS, Targets: All.

Function: One of the predefined type constants.
Notes: A type that represents High Efficiency Image File Format images.
The identifier for this type is public.heif.
This type conforms to a base type identified by public.heif-standard, which in turn conforms to UTTypeImage.

115.6.46 kUTTypeHTML as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.47 kUTTypeICO as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.48 kUTTypeIconFileKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MessageBox UTTypeMBS.kUTTypeIconFileKey // "UTTypeIconFile"
```

115.6.49 kUTTypeIdentifierKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MessageBox UTTypeMBS.kUTTypeIdentifierKey // "UTTypeIdentifier"
```

115.6.50 kUTTypeImage as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.51 kUTTypeInkText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.52 kUTTypeItem as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.53 kUTTypeJavaSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.54 kUTTypeJPEG as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.55 kUTTypeJPEG2000 as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.56 kUTTypeJPEGXL as string

MBS MacOSX Plugin, Plugin Version: 25.0, Platform: macOS, Targets: All.

Function: One of the predefined type constants.
Notes: A JPEG-XL encoded image.
The UTI is public.jpeg-xl

115.6.57 kUTTypeMessage as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.58 kUTTypeMountPoint as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.59 kUTTypeMovie as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.avi")
Var u as string = UTTypeMBS.UTI(f)

if UTTypeMBS.ConformsTo(u, UTTypeMBS.kUTTypeMovie) then
MessageBox u+" is movie"
else
MessageBox u+" is not movie."
end if
```

115.6.60 kUTTypeMP3 as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.61 kUTTypeMPEG as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.62 kUTTypeMPEG4 as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.63 kUTTypeMPEG4Audio as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.64 kUTTypeObjectiveCPlusPlusSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.65 kUTTypeObjectiveCSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.66 kUTTypePackage as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.67 kUTTypePDF as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.68 kUTTypePICT as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.69 kUTTypePlainText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.70 kUTTypePNG as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.71 kUTTypeQuickTimeImage as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.72 kUTTypeQuickTimeMovie as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.73 kUTTypeReferenceURLKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

MessageBox UTTypeMBS.kUTTypeReferenceURLKey // "UTTypeReferenceURL"

115.6.74 kUTTypeResolvable as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.75 kUTTypeRTF as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.76 kUTTypeRTFD as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.77 kUTTypeSourceCode as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.78 kUTTypeSymLink as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.79 kUTTypeTagSpecificationKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

MessageBox UTTypeMBS.kUTTypeTagSpecificationKey // "UTTypeTagSpecification"

115.6.80 kUTTypeText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.81 kUTTypeTIFF as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.82 kUTTypeTXNTextAndMultimediaData as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.83 kUTTypeURL as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.84 kUTTypeUTF16ExternalPlainText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.85 kUTTypeUTF16PlainText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.86 kUTTypeUTF8PlainText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.87 kUTTypeVCard as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.88 kUTTypeVersionKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MessageBox UTTypeMBS.kUTTypeVersionKey // "UTTypeVersion"
```

115.6.89 kUTTypeVideo as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.90 kUTTypeVolume as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.91 kUTTypeWebArchive as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.92 kUTTypeXML as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

115.6.93 PreferredTagWithClass(inUTI as string, inTagClass as string) as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Returns the identified type's preferred tag with the specified tag class as a String.
Example:

```
MessageBox UTTypeMBS.PreferredTagWithClass("public.jpeg",UTTypeMBS.kUTTagClassMIMEType)
// shows "image/jpeg"
MessageBox UTTypeMBS.PreferredTagWithClass("public.jpeg",UTTypeMBS.kUTTagClassFilenameExtension)
// shows "jpeg"
```

Notes: This is the primary function to use for going from uniform type identifier to tag. If the type declaration included more than one tag with the specified class, the first tag in the declared tag array is the preferred tag.

115.6.94 UTI(file as folderitem) as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Queries the UTI for a given file.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.xojo_binary_project")
MessageBox UTTypeMBS.UTI(f) // shows com.xojo.project.binary
```

Notes: Returns "" if no UTI is available.

Chapter 116

LCMS2

116.1 class LCMS2BitmapMBS

116.1.1 class LCMS2BitmapMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a bitmap.
Example:

```
// convert a picture to grayscale with a color managed transform
Var pic As Picture = Picture.Open(SpecialFolder.Desktop.Child("test.jpg"))
Var source As New LCMS2BitmapMBS(pic) // 8 bit RGB
Var dest As New LCMS2BitmapMBS(pic.Width, pic.Height, LCMS2MBS.kTYPE_GRAY_8)

Var srgb As LCMS2ProfileMBS = LCMS2ProfileMBS.CreateSRGBProfile
Var gray As LCMS2ProfileMBS = LCMS2ProfileMBS.CreateGrayProfile(Nil, LCMS2MBS.D50_xyY, LCMS2ToneCurveMBS
2.2))
Var t As LCMS2TransformMBS = LCMS2TransformMBS.CreateTransform(srgb, LCMS2MBS.kTYPE_RGB_8,
gray, LCMS2MBS.kTYPE_GRAY_8, LCMS2MBS.kINTENT_PERCEPTUAL)

If t.Transform(source, dest) Then
Var result As Picture = dest.Picture
// show result in a Canvas or ImageViewer
MessageBox dest.Width.ToString + " x " + dest.Height.ToString + ", " + dest.Bits.ToString + " bits"
End If
```

Notes: You can pass bitmap data as raw memoryblock or fill it using a Xojo picture.
In our LCMS 1.x plugin, the bitmap was always 16 bit. This plugin also can also use 8 bit or 32 bit.

116.1.2 Methods

116.1.3 Constructor

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an empty bitmap object.
See also:

- 116.1.4 Constructor(p as picture, bits as Integer = 8) 17222
- 116.1.5 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8) 17223
- 116.1.6 Constructor(width as Integer, height as Integer, colorspace as Integer) 17223
- 116.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer) 17224
- 116.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) 17224

116.1.4 Constructor(p as picture, bits as Integer = 8)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new bitmap based on the pictures.
Example:

```
// convert picture to bitmap
Var b as new LCMS2BitmapMBS(pic)
// convert to picture
Backdrop = b.Picture
```

Notes: Bits can be 8, 16 or 32 bit integers.
See also:

- 116.1.3 Constructor 17222
- 116.1.5 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8) 17223
- 116.1.6 Constructor(width as Integer, height as Integer, colorspace as Integer) 17223

- 116.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer) 17224
- 116.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) 17224

116.1.5 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8)

MBS Images Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new bitmap based on the pictures.
Example:

```
// convert small part of picture to bitmap
Var b as new LCMS2BitmapMBS(pic, 50, 50, 100, 100)
// convert to picture
Backdrop = b.Picture
```

Notes: Picks only the provided area from the source picture.
Bits can be 8, 16 or 32 bit integers.
See also:

- 116.1.3 Constructor 17222
- 116.1.4 Constructor(p as picture, bits as Integer = 8) 17222
- 116.1.6 Constructor(width as Integer, height as Integer, colorspace as Integer) 17223
- 116.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer) 17224
- 116.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) 17224

116.1.6 Constructor(width as Integer, height as Integer, colorspace as Integer)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a bitmap object with given size and color space.
Notes: Colorspace Type should be one of the color space signatures like kcmsSigRgbData.
Raises exception if colorspace is invalid.
See also:

- 116.1.3 Constructor 17222
- 116.1.4 Constructor(p as picture, bits as Integer = 8) 17222

- 116.1.5 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8) 17223
- 116.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer) 17224
- 116.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) 17224

116.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a bitmap object with given size and color space.
Notes: Colorspace Type should be one of the colorspace signatures like kcmsSigRgbData.
Raises exception if colorspace is invalid.
See also:

- 116.1.3 Constructor 17222
- 116.1.4 Constructor(p as picture, bits as Integer = 8) 17222
- 116.1.5 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8) 17223
- 116.1.6 Constructor(width as Integer, height as Integer, colorspace as Integer) 17223
- 116.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) 17224

116.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a bitmap object with given size and color space.
Notes: In this variant, you pass the memoryblock with right size.
Passing memoryblock of wrong size can lead into crashs.
Raises exception if colorspace is invalid.
See also:

- 116.1.3 Constructor 17222
- 116.1.4 Constructor(p as picture, bits as Integer = 8) 17222
- 116.1.5 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8) 17223

- 116.1.6 Constructor(width as Integer, height as Integer, colorspace as Integer) 17223
- 116.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer) 17224

116.1.9 CopyToPicture(pic as picture, x as Integer = 0, y as Integer = 0) as boolean

MBS Images Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies image data into an existing picture.
Example:

```
// convert small part of picture to bitmap
Var b as new LCMS2BitmapMBS(pic)

// create destination picture
Var pic as new Picture(500, 500, 32)

// copy pixels and show
if b.CopyToPicture(pic, 50, 50) then

Backdrop = pic
end if
```

Notes: This may be more efficient for you if you process a lot of image data as you can avoid creating new picture objects with using Picture method in this class.
May not work for all pictures, especially may fail on Linux.
Returns true on success.

116.1.10 Invert

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverts the bitmap data.
Notes: Requires correct settings for rowbytes, height and data properties.

116.1.11 Picture(HasAlpha as Boolean = false) as picture

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the picture.
Example:

```
// get some picture
Var logo as Picture = LogoMBS(500)

// let us convert it to a 16 bit memory block
Var l as new LCMS2BitmapMBS(logo, 16)

// check bit depth
Title = str(l.Bits)

// convert back
Var p as Picture = l.Picture

// and display
Backdrop = p
```

Notes: This method works with 8, 16 and 32 bit integer pictures. Make sure bits property is set.

116.1.12 Properties

116.1.13 Bits as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of bits.
Notes: Can be 8, 16 or 32 and is used for conversion to and from Xojo picture objects.
(Read and Write property)

116.1.14 ColorSpaceType as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color space type.
Notes: Only used to let Picture function know what format the data is.
Typically kcmsSigRgbData.
(Read and Write property)

116.1.15 Data as MemoryBlock

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The memoryblock with the actual image data.
Notes: Data can be stored in 8, 16 or 32 bit Integers or 32bit Floats.

(Read and Write property)

116.1.16 Height as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the Bitmap in Pixels.
Notes: (Read and Write property)

116.1.17 RowBytes as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes per row.
Notes: Normally: rowbytes=pixelsize*width+padding
Where padding is some extra bytes.
(Read and Write property)

116.1.18 Width as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the Bitmap in Pixels.
Notes: (Read and Write property)

116.2 class LCMS2CIECAM02MBS

116.2.1 class LCMS2CIECAM02MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Class to evaluated viewing conditions.
Notes: Viewing conditions. Please note those are CAM model viewing conditions, and not the ICC tag viewing conditions, which I'm naming LCMS2ICCViewingConditionsMBS to make differences evident. Unfortunately, the tag cannot deal with surround La, Yb and D value so is basically useless to store CAM02 viewing conditions.
Blog Entries

- MBS Real Studio Plugins, version 12.0pr5

116.2.2 Methods

116.2.3 Constructor(context as LCMS2ContextMBS, VC as LCMS2ViewingConditionsMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a CAM02 object based on given viewing conditions.
Notes: Such object may be used as a color appearance model and evaluated in forward and reverse directions. Viewing conditions is defined by LCMS2ViewingConditionsMBS class. The surround member has to be one of this values: kAVG_SURROUND, kDIM_SURROUND, kDARK_SURROUND or kCUTSHEET_SURROUND. Degree of chromatic adaptation (d), can be specified in 0...1.0 range, or the model can be instructed to calculate it by using D_CALCULATE constant (-1).

Context: user-defined context cargo.
VC: A structure holding viewing conditions.

116.2.4 Forward(value as LCMS2CIEXYZMBS) as LCMS2JChMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates the CAM02 model in the forward direction: XYZ to JCh
Notes: value: the input XYZ value.
Returns the output JCh value.

116.2.5 Reverse(value as LCMS2JChMBS) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates the CAM02 model in the reverse direction: JCh to XYZ
Notes: Values: The input JCh value.
Returns the output XYZ value

116.2.6 Properties

116.2.7 Handle as Integer

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal handle to the conversion engine.
Notes: (Read and Write property)

116.3 class LCMS2CIELabMBS

116.3.1 class LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a Lab color.
Example:

```
// compare two Lab colors with different delta E formulas
Var sample As New LCMS2CIELabMBS(52.0, 42.5, 20.1)
Var reference As New LCMS2CIELabMBS(50.0, 40.0, 22.0)

MessageBox "Delta E 76: " + Format(sample.DeltaE(reference), "0.00") + EndOfLine + _
"Delta E 94: " + Format(sample.CIE94DeltaE(reference), "0.00") + EndOfLine + _
"Delta E 2000: " + Format(sample.CIE2000DeltaE(reference), "0.00") + EndOfLine + _
"Lightness, chroma, hue: " + Format(sample.LCh.L, "0.0") + ", " + Format(sample.LCh.C, "0.0") + ", "
+ Format(sample.LCh.h, "0.0")
```

116.3.2 Methods

116.3.3 BFDdeltaE(Other as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates BFD delta E metric.

116.3.4 CIE2000DeltaE(Other as LCMS2CIELabMBS, Kl as Double = 1.0, Kc as Double = 1.0, Kh as Double = 1.0) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Delta-E 2000.
Notes: Delta-E 2000 is the first major revision of the dE94 equation. Unlike dE94, which assumes that L* correctly reflects the perceived differences in lightness, dE2000 varies the weighting of L* depending on where in the lightness range the color falls. dE2000 is still under consideration and does not seem to be widely supported in graphics arts applications.

The weightings KL, KC and KH can be modified to reflect the relative importance of lightness, chroma and hue in different industrial applications

116.3.5 CIE94DeltaE(Other as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the CIE 94 delta e value.
Notes: A technical committee of the CIE (TC1-29) published an equation in 1995 called CIE94. The equation is similar to CMC but the weighting functions are largely based on RIT/DuPont tolerance data derived from automotive paint experiments where sample surfaces are smooth.
It also has ratios, labeled kL (lightness) and Kc (chroma) and the commercial factor (cf) but these tend to be preset in software and are not often exposed for the user (as it is the case in Little CMS).

116.3.6 Clone as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the color object.
Example:

```
Var l as new LCMS2CIELabMBS(0.1, 0.2, 0.3)
Var k as LCMS2CIELabMBS = l.Clone
MessageBox str(k.L)+" "+str(k.a)+" "+str(k.b)
```

116.3.7 CMCdeltaE(Other as LCMS2CIELabMBS, l as Double, c as Double) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the CMC delta E.
Notes: In 1984 the CMC (Colour Measurement Committee of the Society of Dyes and Colourists of Great Britain) developed and adopted an equation based on LCH numbers. Intended for the textiles industry, CMC l:c allows the setting of lightness (l) and chroma (c) factors. As the eye is more sensitive to chroma, the default ratio for l:c is 2:1 allowing for 2x the difference in lightness than chroma (numbers). There is also a 'commercial factor' (cf) which allows an overall varying of the size of the tolerance region according to accuracy requirements. A cf=1.0 means that a delta-E CMC value <1.0 is acceptable.
CMC l:c is designed to be used with D65 and the CIE Supplementary Observer. Commonly-used values for l:c are 2:1 for acceptability and 1:1 for the threshold of imperceptibility.

116.3.8 Constructor(L as Double=0.0, a as Double=0.0, b as Double=0.0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new Lab color with the given values.
See also:

- 116.3.9 Constructor(other as LCMS2CIELabMBS) 17232

116.3.9 Constructor(other as LCMS2CIELabMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the color value.
See also:

- 116.3.8 Constructor(L as Double=0.0, a as Double=0.0, b as Double=0.0) 17231

116.3.10 DeltaE(Other as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates delta E.
Notes: You don't have to spend too long in the color management world before you come across the term Delta-E. As with many things color, it seems simple to understand at first, yet the closer you look, the more elusive it gets. Delta-E (dE) is a single number that represents the 'distance' between two colors. The idea is that a dE of 1.0 is the smallest color difference the human eye can see. So any dE less than 1.0 is imperceptible and it stands to reason that any dE greater than 1.0 is noticeable. Unfortunately it's not that simple. Some color differences greater than 1 are perfectly acceptable, maybe even unnoticeable. Also, the same dE color difference between two yellows and two blues may not look like the same difference to the eye and there are other places where it can fall down. It's perfectly understandable that we would want to have a system to show errors. After all, we've spent the money on the instruments; shouldn't we get numbers from them? Delta-E numbers can be used for:

- how far off is a print or proof from the original
- how much has a device drifted
- how effective is a particular profile for printing or proofing
- removes subjectivity (as much as possible)

These functions does compute the difference between two Lab colors, using several difference spaces.

The L*a*b* color space was devised in 1976 and, at the same time delta-E 1976 (dE76) came into being. If you can imagine attaching a string to a color point in 3D Lab space, dE76 describes the sphere that is described by all the possible directions you could pull the string. If you hear people speak of just plain 'delta-E' they are probably referring to dE76. It is also known as dE-Lab and dE- ab. One problem with dE76 is that Lab itself is not 'perceptually uniform' as its creators had intended. So different amounts of visual color shift in different color areas of Lab might have the same dE76 number. Conversely, the same amount of color shift might result in different dE76 values. Another issue is that the eye is most sensitive to hue differences, then chroma and finally lightness and dE76 does not take this into account.

116.3.11 DesaturateLab(amax as Double, amin as Double, bmax as Double, bmin as Double) as Boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does poor man's gamut mapping.
Notes: See also cmsDesaturateLab in LCMS manual.

116.3.12 XYZ(whitePoint as LCMS2CIEXYZMBS=nil) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts color to XYZ value.
Notes: Setting WhitePoint to NULL forces D50 as white point.

116.3.13 Properties

116.3.14 A as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The a value.
Notes: (Read and Write property)

116.3.15 B as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The b value.
Notes: (Read and Write property)

116.3.16 L as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The L value.
Notes: (Read and Write property)

116.3.17 LCh as LCMS2CIELChMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts color to LCh value.
Notes: (Read only property)

116.4 class LCMS2CIELChMBS

116.4.1 class LCMS2CIELChMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The plugin class for CIE LCh values.
Example:

```
Var c as new LCMS2CIELChMBS(1,2,3)
MessageBox str(c.L)+" "+str(c.C)+" "+str(c.h)
```

116.4.2 Methods

116.4.3 Clone as LCMS2CIELChMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the color object.

116.4.4 Constructor(L as Double=0.0, C as Double=0.0, h as Double=0.0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object with the given values.
See also:

- 116.4.5 Constructor(other as LCMS2CIELChMBS) 17235

116.4.5 Constructor(other as LCMS2CIELChMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes object with values from other object.
See also:

- 116.4.4 Constructor(L as Double=0.0, C as Double=0.0, h as Double=0.0) 17235

116.4.6 Properties

116.4.7 C as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The C value.
Notes: (Read and Write property)

116.4.8 h as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The h value.
Notes: (Read and Write property)

116.4.9 L as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The L value.
Notes: (Read and Write property)

116.4.10 Lab as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the LCh value to a Lab value.
Example:

```
Var c as new LCMS2CIELChMBS(0.1, 0.2, 0.3)
Var lab as LCMS2CIELabMBS = c.Lab
MessageBox str(lab.L)+" "+str(lab.a)+" "+str(lab.b)
```

Notes: (Read only property)

116.5 class LCMS2CIExyYMBS

116.5.1 class LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a CIE xyY value.
Example:

```
Var c as new LCMS2CIExyYMBS(1,2,3)
MessageBox str(c.x)+" "+str(c.y)+" "+str(c.yy)
```

Notes: As Xojo is case insensitive, we have to name the big Y as YY.

116.5.2 Methods

116.5.3 Clone as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the color.

116.5.4 Constructor(other as LCMS2CIExyYMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the object with values from other object.
See also:

- 116.5.5 Constructor(X as Double=0.0, Y as Double=0.0, YY as Double=0.0) 17237

116.5.5 Constructor(X as Double=0.0, Y as Double=0.0, YY as Double=0.0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new xyY object with the given values.
See also:

- 116.5.4 Constructor(other as LCMS2CIExyYMBS) 17237

116.5.6 TempFromWhitePoint as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the temperature from using this xyY point as the white point.
Example:

```
Var c as new LCMS2CIExyYMBS(1,2,3)
MessageBox str(c.TempFromWhitePoint)
```

116.5.7 Properties

116.5.8 x as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x value.
Notes: (Read and Write property)

116.5.9 XYZ as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the xyY value to XYZ.
Example:

```
Var c as new LCMS2CIExyYMBS(1,2,3)
Var n as LCMS2CIEXYZMBS = c.XYZ
MessageBox str(n.x)+" "+str(n.y)+" "+str(n.z)
Var x as LCMS2CIExyYMBS = n.xyY
MessageBox str(x.x)+" "+str(x.y)+" "+str(x.yy)
```

Notes: (Read only property)

116.5.10 y as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y value.
Notes: (Read and Write property)

116.5.11 YY as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Y value.
Notes: As Xojo is case insensitive, we have to name the big Y as YY.
(Read and Write property)

116.6 class LCMS2CIExyYTripleMBS

116.6.1 class LCMS2CIExyYTripleMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a xyY color triple.
Example:

```
// create an RGB profile from white point and primaries, here similar to sRGB
Var white As New LCMS2CIExyYMBS(0.3127, 0.3290, 1.0) // D65
Var primaries As New LCMS2CIExyYTripleMBS(New LCMS2CIExyYMBS(0.64, 0.33, 1.0), _
New LCMS2CIExyYMBS(0.30, 0.60, 1.0), New LCMS2CIExyYMBS(0.15, 0.06, 1.0))

Var gamma As LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(Nil, 2.2)
Var curves() As LCMS2ToneCurveMBS = Array(gamma, gamma, gamma)
Var profile As LCMS2ProfileMBS = LCMS2ProfileMBS.CreateRGBProfile(Nil, white, primaries, curves)
MessageBox "Profile created: " + Str(profile <>Nil)
```

116.6.2 Methods

116.6.3 Clone as LCMS2CIExyYTripleMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the xyY triple.

116.6.4 Constructor

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a xyY triple with zero values.
See also:

- 116.6.5 Constructor(other as LCMS2CIExyYTripleMBS) 17240
- 116.6.6 Constructor(Red as LCMS2CIExyYMBS, Green as LCMS2CIExyYMBS, Blue as LCMS2CIExyYMBS) 17241

116.6.5 Constructor(other as LCMS2CIExyYTripleMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a xyY triple with values from other object.
See also:

- 116.6.4 Constructor 17240
- 116.6.6 Constructor(Red as LCMS2CIExyYMBS, Green as LCMS2CIExyYMBS, Blue as LCMS2CIExyYMBS) 17241

116.6.6 Constructor(Red as LCMS2CIExyYMBS, Green as LCMS2CIExyYMBS, Blue as LCMS2CIExyYMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a xyY triple with given values.
See also:

- 116.6.4 Constructor 17240
- 116.6.5 Constructor(other as LCMS2CIExyYTripleMBS) 17240

116.6.7 Properties

116.6.8 Blue as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue color.
Notes: (Read and Write property)

116.6.9 Green as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green color.
Notes: (Read and Write property)

116.6.10 Red as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red color.
Notes: (Read and Write property)

116.7 class LCMS2CIEXYZMBS

116.7.1 class LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a CIE XYZ values.
Example:

```
Var n as new LCMS2CIEXYZMBS(0.1, 0.2, 0.3)
MessageBox str(n.x)+" "+str(n.y)+" "+str(n.z)
```

116.7.2 Methods

116.7.3 Constructor(x as Double=0.0, y as Double=0.0, z as Double=0.0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object with the given values.

116.7.4 Lab(whitePoint as LCMS2CIEXYZMBS=nil) as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the XYZ value to a lab value using the given whitepoint.
Notes: Setting WhitePoint to nil forces D50 as white point.

116.7.5 Properties

116.7.6 x as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x value.
Notes: (Read and Write property)

116.7.7 xyY as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the XYZ value to a xyY value.
Example:

```
Var n as new LCMS2CIEXYZMBS(0.1, 0.2, 0.3)
Var l as LCMS2CIExyYMBS = n.xyY
MessageBox str(l.x)+" "+str(l.y)+" "+str(l.yy)
```

Notes: (Read only property)

116.7.8 y as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y value.
Notes: (Read and Write property)

116.7.9 z as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The z value.
Notes: (Read and Write property)

116.8 class LCMS2CIEXYZTripleMBS

116.8.1 class LCMS2CIEXYZTripleMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a XYZ color triple.

116.8.2 Methods

116.8.3 Clone as LCMS2CIEXYZTripleMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the XYZ triple.

116.8.4 Constructor

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a XYZ triple with zero values.
See also:

- 116.8.5 Constructor(other as LCMS2CIEXYZTripleMBS) 17244
- 116.8.6 Constructor(Red as LCMS2CIEXYZMBS, Green as LCMS2CIEXYZMBS, Blue as LCMS2CIEXYZMBS) 17245

116.8.5 Constructor(other as LCMS2CIEXYZTripleMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a XYZ triple with values from other object.
See also:

- 116.8.4 Constructor 17244
- 116.8.6 Constructor(Red as LCMS2CIEXYZMBS, Green as LCMS2CIEXYZMBS, Blue as LCMS2CIEXYZMBS) 17245

116.8.6 Constructor(Red as LCMS2CIEXYZMBS, Green as LCMS2CIEXYZMBS, Blue as LCMS2CIEXYZMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a XYZ triple with given values.
See also:

- 116.8.4 Constructor 17244
- 116.8.5 Constructor(other as LCMS2CIEXYZTripleMBS) 17244

116.8.7 Properties

116.8.8 Blue as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue color.
Notes: (Read and Write property)

116.8.9 Green as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green color.
Notes: (Read and Write property)

116.8.10 Red as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red color.
Notes: (Read and Write property)

116.9 class LCMS2ContextMBS

116.9.1 class LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a LCMS2 context.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.1pr1

116.9.2 Methods

116.9.3 Clone as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the context object.
Notes: You can assign a new tag to the copy.

116.9.4 Constructor(other as LCMS2ContextMBS)

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new context object with a copy of the existing one.
See also:

- 116.9.5 Constructor(tag as Variant = nil) 17246

116.9.5 Constructor(tag as Variant = nil)

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new context object with given tag.
See also:

- 116.9.4 Constructor(other as LCMS2ContextMBS) 17246

116.9.6 Properties

116.9.7 Handle as Integer

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal handle value.
Notes: (Read and Write property)

116.9.8 Tag as Variant

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag value.
Notes: (Read and Write property)

116.10 class LCMS2CurveSegmentMBS

116.10.1 class LCMS2CurveSegmentMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a curve segment.
Notes: Segmented curves are formed by several segments.
Blog Entries

- MBS Real Studio Plugins, version 12.0pr4

116.10.2 Methods

116.10.3 Constructor(nGridPoints as Integer = 0)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object and allocates sample points.
Notes: Pass number of sample points you want to fill.

116.10.4 Properties

116.10.5 nGridPoints as UInt32

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of grid points if Type = 0.
Notes: (Read only property)

116.10.6 Type as Integer

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of curve segment.
Notes: Parametric type, Type = 0 means sampled segment.
Negative values are reserved.
(Read and Write property)

116.10.7 x0 as Single

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x0 value of the domain.
Notes: Domain; for x0 <x <= x1
(Read and Write property)

116.10.8 x1 as Single

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x1 value of the domain.
Notes: Domain; for x0 <x <= x1
(Read and Write property)

116.10.9 Params(index as Integer) as Double

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parameters if Type != 0.
Notes: Index from 0 to 9.
(Read and Write computed property)

116.10.10 SampledPoints(index as Integer) as Single

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Array of floats if Type = 0.
Notes: Index from 0 to nGridPoints-1.
(Read and Write computed property)

116.11 class LCMS2DateMBS

116.11.1 class LCMS2DateMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a date.

116.11.2 Properties

116.11.3 Date as Date

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The date as a Xojo date object.
Notes: (Read only property)

116.11.4 DateTime as DateTime

MBS Images Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The date as a Xojo dateTime object.
Notes: (Read only property)

116.11.5 Day as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The day value.
Notes: (Read only property)

116.11.6 Daylight as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether it is daylight saving time.
Notes: (Read only property)

116.11.7 DayOfWeek as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The day of the week.
Notes: (Read only property)

116.11.8 DayOfYear as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The day of the year.
Notes: (Read only property)

116.11.9 Hour as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The hour value.
Notes: (Read only property)

116.11.10 Minute as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minute value.
Notes: (Read only property)

116.11.11 Month as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The month value.
Notes: (Read only property)

116.11.12 Second as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The second value.
Notes: (Read only property)

116.11.13 Year as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The year value.
Notes: (Read only property)

116.12 class LCMS2DictionaryEntryMBS

116.12.1 class LCMS2DictionaryEntryMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an entry of the dictionary.
Example:

```
// create new dictionary
Var d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
Var e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MessageBox e.Name+" "+e.Value
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- LCMS 2.4

116.12.2 Methods

116.12.3 Constructor

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

116.12.4 NextEntry as LCMS2DictionaryEntryMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the next element in linked list.

116.12.5 Properties

116.12.6 DisplayName as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The display name multi language unicode string.
Notes: (Read only property)

116.12.7 DisplayValue as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The display value multi language unicode string.
Notes: (Read only property)

116.12.8 Handle as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

116.12.9 Name as String

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name string.
Example:

```
// create new dictionary
Var d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
Var e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MessageBox e.Name+" "+e.Value
```

Notes: (Read only property)

116.12.10 Parent as LCMS2DictionaryMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reference to the parent dictionary.
Notes: (Read only property)

116.12.11 Value as String

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value string.
Example:

```
// create new dictionary
Var d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
Var e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MessageBox e.Name+" "+e.Value
```

Notes: (Read only property)

116.13 class LCMS2DictionaryMBS

116.13.1 class LCMS2DictionaryMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The LCMS 2 class for a dictionary of values.
Example:

```
// create new dictionary
Var d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
Var e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MessageBox e.Name+" "+e.Value
```

Notes: This is a simple linked list used to store pairs Name,ÄêValue for the dictionary metatag, as described in http://www.color.org/ICCSpecRevision_25,Äê02,Äê10_dictType.pdf

116.13.2 Methods

116.13.3 AddEntry(Name as String, Value as String, DisplayName as LCMS2MLUMBS, DisplayValue as LCMS2MLUMBS) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds data to a dictionary linked list object.
Notes: No check for duplicity is made. Dictionary and Name parameters a required, rest is optional and nil may be used.

Name, Value: Strings. Value may be empty.
DisplayName, Display Value: Multilocalized Unicode objects. May be nil.
Returns true on success.

116.13.4 Constructor(context as LCMS2ContextMBS = nil)

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allocates an empty dictionary linked list object.

116.13.5 EntryList as LCMS2DictionaryEntryMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns first element in linked list.
Example:

```
// create new dictionary
Var d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
Var e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MessageBox e.Name+" "+e.Value
```

116.13.6 Properties

116.13.7 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The context for this profile.
Notes: Error handling uses it, so you can see which part of your application failed.
(Read and Write property)

116.13.8 Handle as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

116.14 class LCMS2GamutBoundaryDescriptionMBS

116.14.1 class LCMS2GamutBoundaryDescriptionMBS

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This class allows you to create gamut boundary, add points, compute and check points.
Example:

```
Var n1,n2 as Integer
Var h as new LCMS2GamutBoundaryDescriptionMBS

// Fill all Lab gamut as valid

for L as Integer = 0 to 100 step 10
for a as Integer = -128 to 128 step 5
for b as Integer = -128 to 128 step 5

Var lab as new LCMS2CIELabMBS(l, a, b)

if h.AddPoint(lab) then
n1 = n1 + 1
else
break
MessageBox "Point not in boundary!"
end if
next
next
next

// Complete boundaries
call h.Compute

// All points should be inside gamut

for L as Integer = 10 to 90 step 25
for a as Integer = -120 to 120 step 25
for b as Integer = -120 to 120 step 25

Var lab as new LCMS2CIELabMBS(l, a, b)

if h.CheckPoint(lab) then
n2 = n2 + 1
else
break
MessageBox "Point not in boundary!"
end if
next
```

- MBS Real Studio Plugins, version 12.1pr6

116.14.2 Methods

116.14.3 AddPoint(Lab as LCMS2CIELabMBS) as Boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a new sample point for computing the gamut boundary descriptor.
Notes: This function can be called as many times as known points. No memory or other resurces are wasted by adding new points. The gamut boundary descriptor cannot be checked until Compute() is called.

Lab: Lab value.
Returns true on success, false on error.

116.14.4 CheckPoint(Lab as LCMS2CIELabMBS) as Boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whatever a Lab value is inside a given gamut boundary descriptor.
Notes: Lab: Lab value.
Returns: True if point is inside gamut, false otherwise.

116.14.5 Compute(options as UInt32 = 0) as Boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Computes the gamut boundary descriptor using all know points and interpolating any missing sector(s).
Notes: Call this function after adding all know points with AddPoint() and before using CheckPoint().
Flags: reserved (unused). Set it to 0.
Returns true on success, false on error

116.14.6 Constructor(context as LCMS2ContextMBS = nil)

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object.

116.14.7 Properties

116.14.8 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The context for this profile.
Notes: Error handling uses it, so you can see which part of your application failed.
(Read and Write property)

116.14.9 Handle as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

116.15 class LCMS2ICCDataMBS

116.15.1 class LCMS2ICCDataMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for ICC data.
Notes: This is used for some tags where no dedicated class is available. This way you can modify the data directly in the memoryblock.

116.15.2 Properties

116.15.3 Data as Memoryblock

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The memoryblock with the data.
Notes: (Read only property)

116.15.4 Flags as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags.
Notes: (Read and Write property)

116.15.5 Size as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of the data.
Notes: (Read and Write property)

116.16 class LCMS2ICCMeasurementConditionsMBS

116.16.1 class LCMS2ICCMeasurementConditionsMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for ICC measurement conditions.

116.16.2 Methods

116.16.3 Constructor(Observer as UInt32 = 0, Backing as LCMS2CIEXYZMBS = nil, Geometry as UInt32 = 0, Flare as Double = 0.0, IlluminantType as UInt32 = 0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object with given values.

116.16.4 Properties

116.16.5 Backing as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Backing value.
Notes: (Read and Write property)

116.16.6 Flare as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flare value.
Notes: Range 0..1.0.
(Read and Write property)

116.16.7 Geometry as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The geometry value.
Notes: 0=unknown, 1=45/0, 0/45 2=0d, d/0.
(Read and Write property)

116.16.8 IlluminantType as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The illuminant type.
Notes: (Read and Write property)

116.16.9 Observer as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The observer value.
Notes: 0 = unknown, 1=CIE 1931, 2=CIE 1964
(Read and Write property)

116.17 class LCMS2ICCViewingConditionsMBS

116.17.1 class LCMS2ICCViewingConditionsMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a ICC viewing conditions tag stored in the profile.

116.17.2 Methods

116.17.3 Constructor(IlluminantXYZ as LCMS2CIEXYZMBS = nil, Backing as LCMS2CIEXYZMBS = nil, IlluminantType as UInt32 = 0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new ICC viewing conditions object.

116.17.4 Properties

116.17.5 IlluminantType as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The illuminant.
Notes: (Read and Write property)

116.17.6 IlluminantXYZ as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The illuminant.
Notes: (Read and Write property)

116.17.7 SurroundXYZ as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The surround.
Notes: (Read and Write property)

116.18 class LCMS2IT8MBS

116.18.1 class LCMS2IT8MBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for IT8 handling.
Example:

```
// read measurement values from a CGATS / IT8 file
Var it8 As LCMS2IT8MBS = LCMS2IT8MBS.LoadFromFile(Nil, SpecialFolder.Desktop.Child("measurement.txt"))
If it8 = Nil Then
MessageBox "Can't read file."
Return
End If

Var fields() As String = it8.EnumDataFormat
MessageBox "Sheet type: " + it8.GetSheetType + EndOfLine + _
"Fields: " + String.FromArray(fields, ", ") + EndOfLine + _
"A1 L*: " + it8.GetDataAsDouble("A1", "LAB_L").ToString
```

Notes: ANSI CGATS.17 is THE standard text file format for exchanging color measurement data. This standard text format (the ASCII version is by far the most common) is the format accepted by most color measurement and profiling applications.
It consists of a Preamble section containing originator information, keyword definitions, etc and then one or more data sections, each consisting of header and data subsections. The header subsection is where the BEGIN_DATA_FORMAT and END_DATA_FORMAT delimiters define the actual data types / units contained in the following tables. The data subsection contains the BEGIN_DATA and END_DATA delimiters which contain the actual color information in tabular form.
CGATS.17 text files can contain device (RGB, CMYK, etc), colorimetric (Lab, XYZ, etc), densitometric, spectral, naming and other information so it is a fairly comprehensive storage and exchange format.

116.18.2 Methods

116.18.3 Constructor(context as LCMS2ContextMBS = nil)

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allocates an empty CGATS.17 object.

116.18.4 DefineDblFormat(Formatter as string)

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the format string for float numbers.
Notes: It uses the "C" sprintf convention. The default format string is "%.10g".

116.18.5 EnumDataFormat as string()

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an array with pointers to the column names in current table.
Notes: Return the column names in table.

116.18.6 EnumProperties as string()

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enumerates all properties in current table.
Notes: Returns array of property name string.

116.18.7 EnumPropertyMulti(Prop as string) as string()

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enumerates all the identifiers found in a multi,Äêvalue property in current table.
Notes: Prop: A string holding property name
Returns an array with property names.

116.18.8 FindDataFormat(Sample as string) as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the position (column) of a given data sample name in current table.
Notes: First column is 0 (SAMPLE_ID).
Returns column number if found, ,Äê1 if not found

116.18.9 GetData(Patch as string, Sample as string) as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a cell [Patch, Sample] as a literal string (uncooked string) in current table.
Notes: Patch: The intended patch name (row)
Sample: The intended sample name (column)

Returns the data for the intended cell on success, "" on error.

116.18.10 GetDataAsDouble(Patch as string, Sample as string) as Double

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a cell [Patch, Sample] as a double in current table.
Notes: Patch: The intended patch name (row)
Sample: The intended sample name (column)

Returns the data for the intended cell interpreted as Double on success, 0 on error.

116.18.11 GetDataRowCol(Row as Integer, Col as Integer) as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a cell [row, col] as a literal string in current table.
Notes: This function is fast since it has not to search columns or rows by name.

row, col: The position of the cell.

Returns the data for the intended cell on success, "" on error.

116.18.12 GetDataRowColAsDouble(Row as Integer, Col as Integer) as Double

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a cell [row, col] as a double in current table.
Notes: This function is fast since it has not to search columns or rows by name.
row, col: The position of the cell.

Returns the data for the intended cell interpreted as Double on success, 0 on error.

116.18.13 GetPatchByName(Patch as string) as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Lookups patch index by name.

116.18.14 GetPatchName(nPatch as Integer) as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills buffer with the contents of SAMPLE_ID column for the set given in nPatch.
Notes: That usually corresponds to patch name. Buffer may be NULL to get the internal memory block used by the CGATS.17 object. If specified, buffer gets a copy of such block. In this case it should have space for at least 1024 characters.

nPatch: set number to retrieve name

Returns the patch name. "" if error.

116.18.15 GetProperty(Prop as string) as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a property as a literal string in current table.
Notes: Prop: A string holding property name.

Returns the data for the intended property on success, "" on error.

116.18.16 GetPropertyAsDouble(Prop as string) as Double

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a property as a double in current table.
Notes: Prop: A string holding property name.

Returns the data for the intended property interpreted as Double on success, 0 on error.

116.18.17 GetPropertyMulti(Key as string, SubKey as string) as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries property.

116.18.18 GetSheetType as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns the type of the IT8 object.

116.18.19 HeaderIsDictionary(HeaderName as string) as boolean

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if a header entry has subkeys, so it has a dictionary with keys and values.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.

116.18.20 HeaderList as string()

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns list of header properties.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.

116.18.21 HeadersAsDictionary as dictionary

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the header keys and values as dictionary.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.
Returns nil on any error.

116.18.22 HeaderSubDictionary(HeaderName as string) as dictionary

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the dictionary with subkeys for a given header entry.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.
Returns nil on any error.

116.18.23 HeaderValue(HeaderName as string) as string

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the header value for the given header.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.

116.18.24 LoadFromFile(context as LCMS2ContextMBS, file as folderitem) as LCMS2IT8MBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function allocates a CGATS.17 object and fills it with the contents of file.
Notes: Used for reading existing CGATS files.

Context: The context value.
File: The CGATS.17 file name to read/parse

Returns a CGATS.17 object on success, nil on error.

116.18.25 LoadFromMemory(context as LCMS2ContextMBS, data as Memoryblock) as LCMS2IT8MBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Same as LoadFromFile, but the IT8/CGATS.13 stream is read from a memory block.
Notes: Returns nil on failure.

116.18.26 LoadFromString(context as LCMS2ContextMBS, data as string) as LCMS2IT8MBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Same as LoadFromFile, but the IT8/CGATS.13 stream is read from a string.
Notes: Returns nil on failure.

116.18.27 SaveToFile(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function saves a CGATS.17 object to a file.
Notes: File: Destination file. Existing file will be overwritten if possible.

Returns true on success, false on error

116.18.28 SaveToMemory as Memoryblock

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function saves a CGATS.17 object to a contiguous memory block.

116.18.29 SaveToString as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function saves a CGATS.17 object to a contiguous memory block.

116.18.30 SetComment(comment as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function is intended to provide a way automated IT8 creators can embed comments into the file.
Notes: Comments have no effect, and its only purpose is to document any of the file meaning. On this function the calling order is important; as successive calls to SetComment do embed comments in the same order the function is being called.

Comment: The comment to inserted

Returns true on success, false on error.

116.18.31 SetData(Patch as string, Sample as string, Val as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a cell [Patch, Sample] as a literal string (uncooked string) in current table.
Notes: Patch: The intended patch name (row)
Sample: The intended sample name (column)
Val: The value to be set, as a literal

Returns true on success, false on error.

116.18.32 SetDataAsDouble(Patch as string, Sample as string, Val as Double) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a cell [Patch, Sample] as a double in current table.
Notes: Patch: The intended patch name (row)
Sample: The intended sample name (column)
Val: The value to be set, as a cmsFloat64Number

Returns true on success, false on error

116.18.33 SetDataFormat(n as Integer, Sample as String) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets column names in current table.
Notes: First column is 0 (SAMPLE_ID). Special property NUMBER_OF_FIELDS must be set before calling this function.

n: Column to set name
Sample: Name of data

Returns true on success, false on error.

116.18.34 SetDataRowCol(Row as Integer, Col as Integer, Val as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a cell [row, col] as a literal string in current table.
Notes: This function is fast since it has not to search columns or rows by name.

row, col: The position of the cell.
Val: The value to be set, as a literal string.

Returns true on success, false on error.

116.18.35 SetDataRowColAsDouble(Row as Integer, Col as Integer, Val as Double) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a cell [Patch, Sample] as a double in current table.
Notes: This function is fast since it has not to search columns or rows by name.

row, col: The position of the cell.
Val: The value to be set, as a cmsFloat64Number

Returns true on success, false on error

116.18.36 SetIndexColumn(Sample as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the index column.

116.18.37 SetPropertyDouble(Prop as string, Value as Double) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a property as a double in current table.
Notes: Prop: A string holding property name.
Value: The data for the intended property as Double.

Returns true on success, false on error.

116.18.38 SetPropertyHex(Prop as string, Value as UInt32) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a property as an hexadecimal constant (appends 0x) in current table.
Notes: Prop: A string holding property name.
Value: The value to be set (32 bits max)

Returns true on success, false on error.

116.18.39 SetPropertyMulti(Key as string, SubKey as string, Value as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a new sub,Äêproperty to the property Key.
Notes: Value of buffer is interpreted literally.

Key: A string holding property name.
SubKey: A string holding the sub,Äêproperty name.
Buffer: A string holding the uncooked value of sub,Äêproperty.

Returns true on success, false on error.

116.18.40 SetPropertyString(Prop as string, Value as String) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a property as a literal string in current table.
Notes: The string is enclosed in quotes "".
Returns true on success, false on error.

116.18.41 SetPropertyUncooked(Prop as string, Value as Memoryblock) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a property with no interpretation in current table.
Notes: No quotes "" are added. No checking is performed, and it is up to the programmer to make sure the string is valid.
Special prefixes:
0b: Binary

0x : Hexadecimal

Parameters:
cProp: A string holding property name.
Buffer: A string holding the uncooked value to place in the CGATS file.

Returns true on success, false on error.

116.18.42 SetSheetType(type as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function sets the type of a CGATS.17 object to the new type.
Notes: Returns true on success, false on error.

116.18.43 SetTable(nTable as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function positions the IT8 object in a given table, identified by its position.
Notes: Setting nTable to Table Count + 1 does allocate a new empty table.
Returns the current table number on success, ,Äê1 on error.

116.18.44 SetTableByLabel(Set as string, Field as string, ExpectedType as string) as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets table by label.

116.18.45 TableCount as UInt32

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns the number of tables found in the current CGATS object.
Notes: Returns the number of tables on success, 0 on error.

116.18.46 ValidKeywords as string()

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns list of valid keywords.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.

116.18.47 ValidSampleIDs as string()

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns list of valid sample IDs.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.

116.18.48 Properties

116.18.49 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The context for this profile.
Notes: Error handling uses it, so you can see which part of your application failed.
(Read and Write property)

116.18.50 Handle as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

116.19 class LCMS2JChMBS

116.19.1 class LCMS2JChMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a JCh value.
Example:

```
// see how a color appears under bright and dim viewing conditions
Var xyz As New LCMS2CIEXYZMBS(0.4, 0.3, 0.2)

Var bright As New LCMS2CIECAM02MBS(Nil, New LCMS2ViewingConditionsMBS(LCMS2MBS.D50_XYZ,
20, 1000, LCMS2MBS.kAVG_SURROUND, LCMS2MBS.kD_CALCULATE))
Var dimmed As New LCMS2CIECAM02MBS(Nil, New LCMS2ViewingConditionsMBS(LCMS2MBS.D50_XYZ,
20, 10, LCMS2MBS.kDIM_SURROUND, LCMS2MBS.kD_CALCULATE))

Var a As LCMS2JChMBS = bright.Forward(xyz)
Var b As LCMS2JChMBS = dimmed.Forward(xyz)
MessageBox "Bright: J " + Format(a.J, "0.0") + ", C " + Format(a.C, "0.0") + EndOfLine + _
"Dim: J " + Format(b.J, "0.0") + ", C " + Format(b.C, "0.0")

// convert back to XYZ with Reverse
Var back As LCMS2CIEXYZMBS = bright.Reverse(a)
```

116.19.2 Methods

116.19.3 Clone as LCMS2JChMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of this object.

116.19.4 Constructor(J as Double=0.0, C as Double=0.0, h as Double=0.0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new JCh value.
See also:

- 116.19.5 Constructor(other as LCMS2JChMBS) 17278

116.19.5 Constructor(other as LCMS2JChMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes new JCh color object with values from existing object.
See also:

- 116.19.4 Constructor(J as Double=0.0, C as Double=0.0, h as Double=0.0) 17277

116.19.6 Properties

116.19.7 C as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The C value.
Notes: (Read and Write property)

116.19.8 h as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The h value.
Notes: (Read and Write property)

116.19.9 J as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The J value.
Notes: (Read and Write property)

116.20 class LCMS2Mat3MBS

116.20.1 class LCMS2Mat3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a 3 by 3 matrix.
Example:

```
// build a 3 x 3 matrix, e.g. to convert between color spaces
Var m As New LCMS2Mat3MBS(New LCMS2Vec3MBS(0.4124, 0.3576, 0.1805), _
New LCMS2Vec3MBS(0.2126, 0.7152, 0.0722), _
New LCMS2Vec3MBS(0.0193, 0.1192, 0.9505)) // linear sRGB to XYZ

Var row As LCMS2Vec3MBS = m.V1
MessageBox "Second row: " + row.X.ToString + ", " + row.Y.ToString + ", " + row.Z.ToString
```

Blog Entries

- MBS Real Studio Plugins, version 12.0pr4

116.20.2 Methods

116.20.3 Clone as LCMS2Mat3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the matrix.

116.20.4 Constructor

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new matrix.
See also:

- 116.20.5 Constructor(other as LCMS2Mat3MBS) 17279
- 116.20.6 Constructor(v0 as LCMS2Vec3MBS, v1 as LCMS2Vec3MBS, v2 as LCMS2Vec3MBS) 17280

116.20.5 Constructor(other as LCMS2Mat3MBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the given matrix.
See also:

- 116.20.4 Constructor 17279
- 116.20.6 Constructor(v0 as LCMS2Vec3MBS, v1 as LCMS2Vec3MBS, v2 as LCMS2Vec3MBS) 17280

116.20.6 Constructor(v0 as LCMS2Vec3MBS, v1 as LCMS2Vec3MBS, v2 as LCMS2Vec3MBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new matrix with the given three vectors.
See also:

- 116.20.4 Constructor 17279
- 116.20.5 Constructor(other as LCMS2Mat3MBS) 17279

116.20.7 Properties

116.20.8 V0 as LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Property for first vector.
Notes: (Read and Write property)

116.20.9 V1 as LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Property for second vector.
Notes: (Read and Write property)

116.20.10 V2 as LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Property for third vector.
Notes: (Read and Write property)

116.20.11 value(index as UInt32) as LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the vector by index.
Notes: Index from 0 to 2.
(Read and Write computed property)

116.21 module LCMS2MBS

116.21.1 module LCMS2MBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The central LCMS module with all the global methods and constants.
Example:

```
// show the LittleCMS version and the supported rendering intents
Var lines() As String = LCMS2MBS.GetSupportedIntentDescriptions
MessageBox "LittleCMS " + LCMS2MBS.Version + EndOfLine + String.FromArray(lines, EndOfLine)
```

116.21.2 Methods

116.21.3 AdaptationMatrix(ConeMatrix as LCMS2Mat3MBS, FromIll as LCMS2CIEXYZM ToIll as LCMS2CIEXYZMBS) as LCMS2Mat3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates adaptation matrix.
Notes: Returns the final chromatic adaptation from illuminant FromIll to Illuminant ToIll.
The cone matrix can be specified in ConeMatrix. If nil, Bradford is assumed.

ConeMatrix: the cone matrix.
FromIll: Source illuminant.
ToIll: Destination illuminant.

Returns matrix on success or nil on failure.

116.21.4 AdaptToIlluminant(SourceWhitePt as LCMS2CIEXYZMBS, Illuminant as LCMS2CIEXYZMBS, Value as LCMS2CIEXYZMBS) as LCMS2CIEXYZM

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chromatic adaptation.
Notes: Adapts a color to a given illuminant. Original color is expected to have a SourceWhitePt white point.

116.21.5 BFDdeltaE(Lab1 as LCMS2CIELabMBS, Lab2 as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Computes the dE between two Lab values.

116.21.6 BIT15_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Bit15 flag

116.21.7 BuildRGB2XYZtransferMatrix(WhitePoint as LCMS2CIExyYMBS, Primaries as LCMS2CIExyYTripleMBS) as LCMS2Mat3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds RGB to XYZ transfer matrix.
Notes: Build a White point, primary chromas transfer matrix from RGB to CIE XYZ.
This is just an approximation, I am not handling all the non-linear aspects of the RGB to XYZ process, and assumming that the gamma correction has transitive property in the tranformation chain.

The algorithm:

- First I build the absolute conversion matrix using primaries in XYZ. This matrix is next inverted
- Then I eval the source white point across this matrix obtaining the coeficients of the transformation
- Then, I apply these coeficients to the original matrix

WhitePoint: The white point.
Primaries: The primaries.

Returns matrix on success or nil on failure.

116.21.8 BYTES_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: bytes per sample

116.21.9 ChannelsOf(ColorSpaceSignature as Integer) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of channels in a color space signature.
Example:

```
MessageBox "RGB has "+str(LCMS2MBS.ChannelsOf(LCMS2MBS.kcmsSigRgbData))+" channels"
```

116.21.10 CHANNELS_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Channels (Samples per pixel)

116.21.11 CIE2000DeltaE(Lab1 as LCMS2CIELabMBS, Lab2 as LCMS2CIELabMBS, Kl as Double = 1.0, Kc as Double = 1.0, Kh as Double = 1.0) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Delta-E 2000.
Notes: Delta-E 2000 is the first major revision of the dE94 equation. Unlike dE94, which assumes that L* correctly reflects the perceived differences in lightness, dE2000 varies the weighting of L* depending on where in the lightness range the color falls. dE2000 is still under consideration and does not seem to be widely supported in graphics arts applications.

The weightings KL, KC and KH can be modified to reflect the relative importance of lightness, chroma and hue in different industrial applications

116.21.12 CIE94DeltaE(Lab1 as LCMS2CIELabMBS, Lab2 as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the CIE 94 delta e value.
Notes: A technical committee of the CIE (TC1-29) published an equation in 1995 called CIE94. The equation is similar to CMC but the weighting functions are largely based on RIT/DuPont tolerance data derived from automotive paint experiments where sample surfaces are smooth.
It also has ratios, labeled kL (lightness) and Kc (chroma) and the commercial factor (cf) but these tend to be preset in software and are not often exposed for the user (as it is the case in Little CMS).

116.21.13 CMCdeltaE(Lab1 as LCMS2CIELabMBS, Lab2 as LCMS2CIELabMBS, l as Double, c as Double) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the CMC delta E.
Notes: In 1984 the CMC (Colour Measurement Committee of the Society of Dyes and Colourists of Great Britain) developed and adopted an equation based on LCH numbers. Intended for the textiles industry, CMC l:c allows the setting of lightness (l) and chroma (c) factors. As the eye is more sensitive to chroma, the default ratio for l:c is 2:1 allowing for 2x the difference in lightness than chroma (numbers). There is also a 'commercial factor' (cf) which allows an overall varying of the size of the tolerance region according to accuracy requirements. A cf=1.0 means that a delta-E CMC value <1.0 is acceptable.
CMC l:c is designed to be used with D65 and the CIE Supplementary Observer. Commonly-used values for l:c are 2:1 for acceptability and 1:1 for the threshold of imperceptibility.

116.21.14 ColorSpaceICCtoLCMS(ICCColorSpace as Integer) as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts from ICC color space notation to Little CMS color space notation.

116.21.15 ColorSpaceLCMStoICC(LCMSColorSpace as Integer) as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts from Little CMS color space notation to ICC color space notation.

116.21.16 COLORSPACE_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Pixeltype.

116.21.17 CreateBitmapFromPicture(p as picture, bits as Integer = 8) as LCMS2BitmapMB

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new bitmap based on the pictures.
Notes: Bits can be 8, 16 or 32 bit integers.

116.21.18 D50_xyY as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns D50 white point as xyY color.

116.21.19 D50_XYZ as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns D50 white point as XYZ color.

116.21.20 DeltaE(Lab1 as LCMS2CIELabMBS, Lab2 as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates delta E.
Notes: You don't have to spend too long in the color management world before you come across the term Delta-E. As with many things color, it seems simple to understand at first, yet the closer you look, the more elusive it gets. Delta-E (dE) is a single number that represents the 'distance' between two colors. The idea is that a dE of 1.0 is the smallest color difference the human eye can see. So any dE less than 1.0 is imperceptible and it stands to reason that any dE greater than 1.0 is noticeable. Unfortunately it's not that simple. Some color differences greater than 1 are perfectly acceptable, maybe even unnoticeable. Also, the same dE color difference between two yellows and two blues may not look like the same difference to the eye and there are other places where it can fall down. It's perfectly understandable that we would want to have a system to show errors. After all, we've spent the money on the instruments; shouldn't we get numbers

from them? Delta-E numbers can be used for:

- how far off is a print or proof from the original
- how much has a device drifted
- how effective is a particular profile for printing or proofing
- removes subjectivity (as much as possible)

These functions does compute the difference between two Lab colors, using several difference spaces.

The L*a*b* color space was devised in 1976 and, at the same time delta-E 1976 (dE76) came into being. If you can imagine attaching a string to a color point in 3D Lab space, dE76 describes the sphere that is described by all the possible directions you could pull the string. If you hear people speak of just plain 'delta-E' they are probably referring to dE76. It is also known as dE-Lab and dE- ab. One problem with dE76 is that Lab itself is not 'perceptually uniform' as its creators had intended. So different amounts of visual color shift in different color areas of Lab might have the same dE76 number. Conversely, the same amount of color shift might result in different dE76 values. Another issue is that the eye is most sensitive to hue differences, then chroma and finally lightness and dE76 does not take this into account.

116.21.21 DITHER_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: dither flag

116.21.22 DOSWAP_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Do swap? ie, BGR, KYMC

116.21.23 EnableFastFloatExtensions

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enables fast float extension for Little CMS 2.10.
Notes: Originally this is GPLv3 licensed, but MBS bought a commercial license for all our plugins, so you

don't need to worry about the license.

116.21.24 EncodedCMMversion as Integer

MBS Images Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries version of LCMS library.
Example:

```
Var e as Integer = LCMS2MBS.EncodedCMMversion
MessageBox str(e \1000)+"."+str((e\10) mod 100)+"."+str(e mod 10)
```

Notes: Returns 2070 for version 2.7.

116.21.25 ENDIAN16_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: swap 16 bps endianess?

116.21.26 EXTRA_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Extra samples

116.21.27 FLAVOR_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Flavor 0=MinIsBlack(Chocolate) 1=MinIsWhite(Vanilla).

116.21.28 Float2LabEncoded(c as LCMS2CIELabMBS) as Integer()

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encodes a Lab value.
Notes: Returns array of 3 encoded UInt16 values.

116.21.29 Float2LabEncodedV2(c as LCMS2CIELabMBS) as Integer()

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encodes a Lab value to ICC v2 convention.
Notes: Returns array of 3 encoded UInt16 values.

116.21.30 Float2XYZEncoded(c as LCMS2CIEXYZMBS) as Integer()

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encodes a XYZ value to ICC convention.
Notes: Returns three UInt16 values as Integer array.

116.21.31 FLOAT_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Floating point – With this flag we can differentiate 16 bits as float and as int.

116.21.32 GetAlarmCodes as Integer()

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the current global codes used to mark out-out-gamut on Proofing transforms.
Notes: Values are meant to be encoded in 16 bits.
Returns array with 16 integer values.
See also:

- 116.21.33 GetAlarmCodes(context as LCMS2ContextMBS) as Integer() 17289

116.21.33 GetAlarmCodes(context as LCMS2ContextMBS) as Integer()

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the current global codes used to mark out-out-gamut on Proofing transforms.
Notes: Values are meant to be encoded in 16 bits.

Returns array with 16 integer values.
See also:

- 116.21.32 GetAlarmCodes as Integer() 17289

116.21.34 GetSupportedIntentCodes as UInt32()

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills an array with id,Äênumbers for all supported intents.
Example:

```
Var names() as string = LCMS2MBS.GetSupportedIntentDescriptions
Var codes() as UInt32 = LCMS2MBS.GetSupportedIntentCodes

Var u as Integer = names.LastIndex
for i as Integer = 0 to u
MessageBox str(codes(i))+": "+names(i)
next
```

Notes: Little CMS plug,Äêin architecture allows to implement user,Äêdefined intents; use this function to get info about such extended functionality.
See also:

- 116.21.35 GetSupportedIntentCodes(context as LCMS2ContextMBS) as UInt32() 17290

116.21.35 GetSupportedIntentCodes(context as LCMS2ContextMBS) as UInt32()

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills an array with id,Äênumbers for all supported intents.
Example:

```
Var names() as string = LCMS2MBS.GetSupportedIntentDescriptions
Var codes() as UInt32 = LCMS2MBS.GetSupportedIntentCodes

Var u as Integer = names.LastIndex
for i as Integer = 0 to u
MessageBox str(codes(i))+": "+names(i)
next
```

Notes: Little CMS plug,Äêin architecture allows to implement user,Äêdefined intents; use this function to get info about such extended functionality.
See also:

- 116.21.34 GetSupportedIntentCodes as UInt32() 17290

116.21.36 GetSupportedIntentDescriptions as string()

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills an array with descriptions for all supported intents.
Example:

MessageBox Join(LCMS2MBS.GetSupportedIntentDescriptions, EndOfLine)

Notes: Little CMS plug,Äêin architecture allows to implement user,Äêdefined intents; use this function to get info about such extended functionality.

116.21.37 GridPoints(n as Integer) as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates grid points.
Example:

MessageBox str(LCMS2MBS.GridPoints(2))

116.21.38 kcmsD50X as Double

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: X value of D50 XYZ normalized to Y=1.0.

116.21.39 kcmsD50Y as Double

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Y value of D50 XYZ normalized to Y=1.0.

116.21.40 kcmsD50Z as Double

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Z value of D50 XYZ normalized to Y=1.0.

116.21.41 kcmsPERCEPTUAL_BLACK_X as Double

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: X of V4 perceptual black.

116.21.42 kcmsPERCEPTUAL_BLACK_Y as Double

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Y of V4 perceptual black.

116.21.43 kcmsPERCEPTUAL_BLACK_Z as Double

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Z of V4 perceptual black.

116.21.44 Lab2LCh(p as LCMS2CIELabMBS) as LCMS2CIELChMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts lab color to LCh value.

116.21.45 Lab2XYZ(p as LCMS2CIELabMBS, whitepoint as LCMS2CIEXYZMBS = nil) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts color to XYZ value.
Notes: Setting WhitePoint to NULL forces D50 as white point.

116.21.46 LabEncoded2Float(w0 as UInt16, w1 as UInt16, w2 as UInt16) as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a Lab value, encoded on ICC v4 convention to a lab value.
Notes: w0, w1 and w2: Array of 3 UInt16 holding the encoded values.

Returns lab color.

116.21.47 LabEncoded2FloatV2(w0 as UInt16, w1 as UInt16, w2 as UInt16) as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a Lab value, encoded on ICC v2 convention to a Lab value.
Notes: w0, w1 and w2: 3 UInt16 numbers holding the encoded values.

116.21.48 LCh2Lab(p as LCMS2CIELChMBS) as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colorimetric space conversion from LCh to Lab.

116.21.49 NewBitmap(width as Integer,height as Integer, colorspace as Integer) as LCMS2BitmapMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a bitmap object with given size and color space.
See also:

- 116.21.50 NewBitmap(width as Integer,height as Integer, colorspace as Integer, RowBytes as Integer) as LCMS2BitmapMBS 17293
- 116.21.51 NewBitmap(width as Integer,height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) as LCMS2BitmapMBS 17294

116.21.50 NewBitmap(width as Integer,height as Integer, colorspace as Integer, RowBytes as Integer) as LCMS2BitmapMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a bitmap object with given size and color space.
See also:

- 116.21.49 NewBitmap(width as Integer,height as Integer, colorspace as Integer) as LCMS2BitmapMBS 17293
- 116.21.51 NewBitmap(width as Integer,height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) as LCMS2BitmapMBS 17294

116.21.51 NewBitmap(width as Integer,height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) as LCMS2BitmapMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a bitmap object with given size and color space.
Notes: In this variant, you pass the memoryblock with right size.
Passing memoryblock of wrong size can lead into crashs.
See also:

- 116.21.49 NewBitmap(width as Integer,height as Integer, colorspace as Integer) as LCMS2BitmapMBS 17293
- 116.21.50 NewBitmap(width as Integer,height as Integer, colorspace as Integer, RowBytes as Integer) as LCMS2BitmapMBS 17293

116.21.52 OPTIMIZED_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Optimized – previous optimization already returns the final 8-bit value.

116.21.53 PixelFormat(FloatingPoint as boolean, Optimized as boolean, ColorSpace as UInt32, MinIsWhite as boolean, Planar as boolean, EndianSwap as boolean, DoSwap as boolean, ExtraSamples as UInt32, Channels as UInt32, BytesPerSample as UInt32, SwapFirst as boolean) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Utility function to create a pixel format.
Notes: Format of pixel is defined by one UInt32, using bit fields as follows

A O TTTTT U Y F P X S EEE CCCC BBB

FloatingPoint: With this flag we can differentiate 16 bits as float and as int
Optimized: Previous optimization already returns the final 8-bit value
ColorSpace: Pixeltype
MinIsWhite: Flavor 0=MinIsBlack(Chocolate) 1=MinIsWhite(Vanilla)
Planar: Planar? 0=Chunky, 1=Planar
EndianSwap: swap 16 bps endianess?
DoSwap: Do swap? ie, BGR, KYMC
ExtraSamples: Extra samples

Channels: Channels (Samples per pixel)
BytesPerSample: bytes per sample
SwapFirst: Swap first - changes ABGR to BGRA and KCMY to CMYK

116.21.54 PLANAR_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Planar? 0=Chunky, 1=Planar

116.21.55 PREMUL_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Premultiplied? 0=No, 1=Yes

116.21.56 SetAdaptationState(context as LCMS2ContextMBS, d as Double) as Double

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets adaptation state for absolute colorimetric intent, on all but CreateExtendedTransform.
Notes: Little CMS can handle incomplete adaptation states.

d: Degree on adaptation 0=Not adapted, 1=Complete adaptation, in-between=Partial adaptation. Use negative values to return the global state without changing it.

Returns previous global adaptation state.
See also:

- 116.21.57 SetAdaptationState(d as Double) as Double 17295

116.21.57 SetAdaptationState(d as Double) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets adaptation state for absolute colorimetric intent, on all but CreateExtendedTransform.
Notes: Little CMS can handle incomplete adaptation states.

d: Degree on adaptation 0=Not adapted, 1=Complete adaptation, in-between=Partial adaptation. Use negative values to return the global state without changing it.

Returns previous global adaptation state.
See also:

- 116.21.56 SetAdaptationState(context as LCMS2ContextMBS, d as Double) as Double 17295

116.21.58 SetAlarmCodes(context as LCMS2ContextMBS, values() as Integer)

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the global codes used to mark out-out-gamut on Proofing transforms.
Notes: Values are meant to be encoded in 16 bits.
AlarmCodes: Array of 16 codes. All 16 values must be specified, set to zero for unused channels.
See also:

- 116.21.59 SetAlarmCodes(values() as Integer) 17296

116.21.59 SetAlarmCodes(values() as Integer)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the global codes used to mark out-out-gamut on Proofing transforms.
Notes: Values are meant to be encoded in 16 bits.
AlarmCodes: Array of 16 codes. All 16 values must be specified, set to zero for unused channels.
See also:

- 116.21.58 SetAlarmCodes(context as LCMS2ContextMBS, values() as Integer) 17296

116.21.60 SetLogErrorHandler(Context as LCMS2ContextMBS, handler as LCMS2ErrorHandlerMBS)

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allows user to set any specific logger.
Notes: Each time this function is called, the previous logger is replaced. Calling this functin with NULL as parameter, does reset the logger to the default Little CMS logger. The default Little CMS logger does nothing.

LCMS2ErrorHandlerMBS is an Interface. You add it to the interface of your window/thread/class. Than you get a method "Error(context as LCMS2ContextMBS, ErrorCode as UInt32, Text as string)" which is called to log error messages. The context parameter is the object you pass for reference in the various context parameters to LCMS2 functions.
See also:

- 116.21.61 SetLogErrorHandler(handler as LCMS2ErrorHandlerMBS) 17297

116.21.61 SetLogErrorHandler(handler as LCMS2ErrorHandlerMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allows user to set any specific logger.
Notes: Each time this function is called, the previous logger is replaced. Calling this functin with NULL as parameter, does reset the logger to the default Little CMS logger. The default Little CMS logger does nothing.

LCMS2ErrorHandlerMBS is an Interface. You add it to the interface of your window/thread/class. Than you get a method "Error(context as LCMS2ContextMBS, ErrorCode as UInt32, Text as string)" which is called to log error messages. The context parameter is the object you pass for reference in the various context parameters to LCMS2 functions.
See also:

- 116.21.60 SetLogErrorHandler(Context as LCMS2ContextMBS, handler as LCMS2ErrorHandlerMBS) 17296

116.21.62 SWAPFIRST_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Swap first - changes ABGR to BGRA and KCMY to CMYK

116.21.63 TagInteger(tag as string) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts tag integer to string.
Example:

```
MessageBox hex(LCMS2MBS.TagInteger("devs"))+" "+LCMS2MBS.TagString(&h64657673)
```

116.21.64 TagString(tag as UInt32) as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts tag string to integer.
Example:

MessageBox hex(LCMS2MBS.TagInteger("devs"))+" "+LCMS2MBS.TagString(&h64657673)

116.21.65 TempFromWhitePoint(TempK as LCMS2CIExyYMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Correlates a black body temperature in K from given chromaticity.
Example:

Var c as new LCMS2CIExyYMBS

c.x = 0.32
c.y = 0.32
c.YY = 1.0

MessageBox str(LCMS2MBS.TempFromWhitePoint(c))

Notes: Returns temperature. Or zero on any error.

116.21.66 T_BIT15(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Bit15 flag

116.21.67 T_BYTES(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: bytes per sample

116.21.68 T_CHANNELS(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Channels (Samples per pixel)

116.21.69 T_COLORSPACE(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Pixeltype

116.21.70 T_DITHER(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: dither flag

116.21.71 T_DOSWAP(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Do swap? ie, BGR, KYMC

116.21.72 T_ENDIAN16(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: swap 16 bps endianess?

116.21.73 T_EXTRA(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Extra samples

116.21.74 T_FLAVOR(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Flavor 0=MinIsBlack(Chocolate) 1=MinIsWhite(Vanilla)

116.21.75 T_FLOAT(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Floating point – With this flag we can differentiate 16 bits as float and as int

116.21.76 T_OPTIMIZED(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Optimized – previous optimization already returns the final 8-bit value

116.21.77 T_PLANAR(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Planar? 0=Chunky, 1=Planar

116.21.78 T_PREMUL(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Premultiplied? 0=Yes, 1=No

116.21.79 T_SWAPFIRST(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Swap first - changes ABGR to BGRA and KCMY to CMYK.

116.21.80 Version as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns version number of LCMS2.
Example:

```
MessageBox LCMS2MBS.Version
```

116.21.81 WhitePointFromTemp(TempK as Double) as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Correlates a black body chromaticity from given temperature in K.
Example:

```
Var c as LCMS2CIExyYMBS = LCMS2MBS.WhitePointFromTemp(6500)

MessageBox str(c.x)+" "+str(c.y)+" "+str(c.yy)
```

Notes: Valid range is 4000K-25000K.
TempK: Temperature in oK
Returns white point or nil in case of error.

116.21.82 xyY2XYZ(p as LCMS2CIExyYMBS) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colorimetric space conversion from xyY to XYZ.

116.21.83 XYZ2Lab(p as LCMS2CIEXYZMBS, whitepoint as LCMS2CIEXYZMBS = nil) as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts XYZ color to Lab.
Notes: Setting WhitePoint to nil forces D50 as white point.

116.21.84 XYZ2xyY(p as LCMS2CIEXYZMBS) as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colorimetric space conversion from XYZ to xyY.

116.21.85 XYZEncoded2Float(w0 as UInt16, w1 as UInt16, w2 as UInt16) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a XYZ value, encoded on ICC convention to a LCMS2CIEXYZMBS value.
Notes: w0,w1 and w2: Array of 3 UInt16 values holding the encoded valkues.
Returns XYZ color on success or nil on failure.

116.21.86 Constants

Constants

Constant	Value	Description
kcmsMagicNumber	&h61637370	Magic number to identify an ICC profile.
kcmsMAXCHANNELS	16	Maximum number of channels in ICC profiles.
kD_CALCULATE	-1	Special value for D Value of ViewingConditions.
klcmsSignature	&h6C636D73	Little CMS signature.

Surround Constants

Constant	Value	Description
kAVG_SURROUND	1	
kCUTSHEET_SURROUND	4	
kDARK_SURROUND	3	
kDIM_SURROUND	2	

Header Flag Constants

Constant	Value	Description
kcmsEmbeddedProfileFalse	0	
kcmsEmbeddedProfileTrue	1	
kcmsUseAnywhere	0	
kcmsUseWithEmbeddedDataOnly	2	

Error Constants

Constant	Value	Description
kcmsERROR_ALREADY_DEFINED	10	Already defined
kcmsERROR_BAD_SIGNATURE	11	Bad signature
kcmsERROR_COLORSPACE_CHECK	9	Colorspace Check
kcmsERROR_CORRUPTION_DETECTED	12	Corruption detected
kcmsERROR_FILE	1	File error
kcmsERROR_INTERNAL	3	Internal error
kcmsERROR_NOT_SUITABLE	13	Not suitable
kcmsERROR_NULL	4	NULL passed
kcmsERROR_RANGE	2	Range error
kcmsERROR_READ	5	Read error
kcmsERROR_SEEK	6	Seek error
kcmsERROR_UNDEFINED	0	Undefined error
kcmsERROR_UNKNOWN_EXTENSION	8	Unknown extension
kcmsERROR_WRITE	7	Write error

Flag Constants

Constant	Value	Description
kcmsFLAGS_8BITS_DEVICELINK	8	Create 8 bits devicelinks
kcmsFLAGS_BLACKPOINTCOMPENSATION	&h00002000	Black point compensation.
kcmsFLAGS_CLUT_POST_LINEARIZATION	1	Create postlinearization tables if possible
kcmsFLAGS_CLUT_PRE_LINEARIZATION	16	Create prelinearization tables if possible
kcmsFLAGS_COPY_ALPHA	&h04000000	Whether to copy alpha.
kcmsFLAGS_FORCE_CLUT	2	Force CLUT optimization
kcmsFLAGS_GAMUTCHECK	&h00001000	Out of Gamut alarm
kcmsFLAGS_GUESSDEVICECLASS	32	Guess device class (for transform2devicelink)
kcmsFLAGS_HIGHRESPRECALC	&h00000400	Use more memory to give better accuracy.
kcmsFLAGS_KEEP_SEQUENCE	&h00000080	Keep profile sequence for devicelink creation
kcmsFLAGS_LOWRESPRECALC	&h00000800	Use less memory to minimize resouces
kcmsFLAGS_NOCACHE	64	Inhibit 1-pixel cache
kcmsFLAGS_NODEFAULTRESOURCEDEF	&h01000000	
kcmsFLAGS_NONEGATIVES	&h00008000	Prevent negative numbers in floating point transforms
kcmsFLAGS_NOOPTIMIZE	&h00000100	Inhibit optimizations
kcmsFLAGS_NOWHITEONWHITEFIXUP	4	Don't fix scum dot
kcmsFLAGS_NULLTRANSFORM	&h00000200	Don't transform anyway
kcmsFLAGS_SOFTPROOFING	&h00004000	Do softproofing

Screening Flag Constants

Constant	Value	Description
kcmsFREQUENCE_UNITS_LINES_CM	0	
kcmsFREQUENCE_UNITS_LINES_INCH	2	
kcmsPRINTER_DEFAULT_SCREENS	1	

Device Attribute Constants

Constant	Value	Description
kcmsGlossy	0	
kcmsMatte	2	
kcmsReflective	0	
kcmsTransparency	1	

Illuminant Constants

Constant	Value	Description
kcmsILLUMINANT_TYPE_A	6	A
kcmsILLUMINANT_TYPE_D50	1	D50
kcmsILLUMINANT_TYPE_D55	5	D55
kcmsILLUMINANT_TYPE_D65	2	D65
kcmsILLUMINANT_TYPE_D93	3	D93
kcmsILLUMINANT_TYPE_E	7	E
kcmsILLUMINANT_TYPE_F2	4	F2
kcmsILLUMINANT_TYPE_F8	8	F8
kcmsILLUMINANT_TYPE_UNKNOWN	0	Unknown

Colorspace Signature Constants

Constant	Value	Description
kcmsSig10colorData	&h41434C52

Response Curve Type Signature Constants

Constant	Value	Description
kcmsSigDN	&h444E2020	DIN E: DIN 16536-2 densitometer response, with no polarising filter.
kcmsSigDNN	&h444E4E20	DIN I: DIN 16536-2 narrow band densitometer response, with no polarising filter.
kcmsSigDNNP	&h444E4E50	DIN I: DIN 16536-2 narrow band densitometer response, with polarising filter.
kcmsSigDNP	&h444E2050	DIN E: DIN 16536-2 densitometer response, with polarising filter.
kcmsSigStatusA	&h53746141	Status A: ISO 5-3 densitometer response. This is the accepted standard for reflection densitometers for measuring photographic colour prints.
kcmsSigStatusE	&h53746145	Status E: ISO 5-3 densitometer response which is the accepted standard in Europe for colour reflection densitometers.
kcmsSigStatusI	&h53746149	Status I: ISO 5-3 densitometer response commonly referred to as narrow band or interference-type response.
kcmsSigStatusM	&h5374614D	Status M: ISO 5-3 densitometer response for measuring colour negatives.
kcmsSigStatusT	&h53746154	Status T: ISO 5-3 wide band colour reflection densitometer response which is the accepted standard in the United States for colour reflection densitometers.

kINTENT_RELATIVE_COLORIMETRIC	1	Relative Colorimetric ICC Intent.
kINTENT_SATURATION	2	Saturation ICC Intent.

Used Direction Constants

Constant	Value	Description
kLCMS_USED_AS_INPUT	0	
kLCMS_USED_AS_OUTPUT	1	
kLCMS_USED_AS_PROOF	2	

Pixel Type Constants

Constant	Value	Description
kPT_ANY	0	Don't check colorspace
kPT_CMY	5	CMY
kPT_CMYK	6	CMYK
kPT_GRAY	3	Gray
kPT_HLS	13	HLS
kPT_HSV	12	HSV
kPT_Lab	10	Lab
kPT_LabV2	30	Identical to kPT_Lab, but using the V2 old encoding
kPT_MCH1	15	Multichannel with 1 channels.
kPT_MCH10	24	Multichannel with 10 channels.
kPT_MCH11	25	Multichannel with 11 channels.
kPT_MCH12	26	Multichannel with 12 channels.
kPT_MCH13	27	Multichannel with 13 channels.
kPT_MCH14	28	Multichannel with 14 channels.
kPT_MCH15	29	Multichannel with 15 channels.
kPT_MCH2	16	Multichannel with 2 channels.
kPT_MCH3	17	Multichannel with 3 channels.
kPT_MCH4	18	Multichannel with 4 channels.
kPT_MCH5	19	Multichannel with 5 channels.
kPT_MCH6	20	Multichannel with 6 channels.
kPT_MCH7	21	Multichannel with 7 channels.
kPT_MCH8	22	Multichannel with 8 channels.
kPT_MCH9	23	noMultichannel with 9 channels.ne
kPT_RGB	4	RGB
kPT_XYZ	9	XYZ
kPT_YCbCr	7	YCbCr
kPT_YUV	8	Lu'v'
kPT_YUVK	11	Lu'v'K
kPT_Yxy	14	Yxy

Color Space Type Constants

Constant	Value	Description
kTYPE_ABGR_15	&h0404049A	RGB, 3 channels, 2 bytes, 1 extra samples, integer, chunky, swap 15, 8 bytes in total.
kTYPE_ABGR_15_PLANAR	&h0404149A	RGB, 3 channels, 2 bytes, 1 extra samples, integer, planar, swap 15, 8 bytes in total.
kTYPE_ABGR_15_SE	&h04040C9A	RGB, 3 channels, 2 bytes, 1 extra samples, integer, chunky, swap endian, bit 15, 8 bytes in total.
kTYPE_ABGR_16	&h0004049A	RGB, 3 channels, 2 bytes, 1 extra samples, integer, chunky, sw bytes in total.
kTYPE_ABGR_16_PLANAR	&h0004149A	RGB, 3 channels, 2 bytes, 1 extra samples, integer, planar, sw bytes in total.
kTYPE_ABGR_16_PREMUL	&h0084049A	RGB, 3 channels, 2 bytes, 1 extra samples, integer, premultiplied, output, 8 bytes in total.
kTYPE_ABGR_16_SE	&h00040C9A	RGB, 3 channels, 2 bytes, 1 extra samples, integer, chunky, swap endian, 8 bytes in total.
kTYPE_ABGR_8	&h00040499	RGB, 3 channels, 1 bytes, 1 extra samples, integer, chunky, sw bytes in total.
kTYPE_ABGR_8_DITHER	&h08040499	RGB, 3 channels, 1 bytes, 1 extra samples, integer, dither, chunky, 4 bytes in total.
kTYPE_ABGR_8_PLANAR	&h00041499	RGB, 3 channels, 1 bytes, 1 extra samples, integer, planar, sw bytes in total.
kTYPE_ABGR_8_PREMUL	&h00840499	RGB, 3 channels, 1 bytes, 1 extra samples, integer, premultiplied, output, 4 bytes in total.
kTYPE_ABGR_FLT	&h0044049C	RGB, 3 channels, 4 bytes, 1 extra samples, single, chunky, swa bytes in total.
kTYPE_ABGR_FLT_PREMUL	&h00C4049C	RGB, 3 channels, 4 bytes, 1 extra samples, single, premultiplied, output, 16 bytes in total.
kTYPE_ABGR_HALF_FLT	&h0044041A	RGB, 3 channels, 2 bytes, single, chunky, swap output, 6 bytes in
kTYPE_ACMYK_16	&h000640A2	CMYK, 4 channels, 2 bytes, 1 extra samples, integer, chunky, sw bytes in total.
kTYPE_ACMYK_8	&h000640A1	CMYK, 4 channels, 1 bytes, 1 extra samples, integer, chunky, s bytes in total.
kTYPE_AGRAY_16	&h0003048A	GRAY, 1 channels, 2 bytes, 1 extra samples, integer, chunky, sw bytes in total.
kTYPE_AGRAY_16_PLANAR	&h0003508A	GRAY, 1 channels, 2 bytes, 1 extra samples, integer, planar, s bytes in total.
kTYPE_AGRAY_8	&h00030489	GRAY, 1 channels, 1 bytes, 1 extra samples, integer, chunky, sw bytes in total.
kTYPE_AGRAY_8_PLANAR	&h00035089	GRAY, 1 channels, 1 bytes, 1 extra samples, integer, planar, s bytes in total.
kTYPE_AGRAY_DBL	&h00430488	GRAY, 1 channels, 8 bytes, 1 extra samples, double, chunky, swa bytes in total.
kTYPE_AGRAY_DBL_PLANAR	&h00435088	GRAY, 1 channels, 8 bytes, 1 extra samples, double, planar, sw bytes in total.
kTYPE_AGRAY_FLT	&h0043048C	GRAY, 1 channels, 4 bytes, 1 extra samples, single, chunky, sw bytes in total.
kTYPE_AGRAY_FLT_PLANAR	&h0043508C	GRAY, 1 channels, 4 bytes, 1 extra samples, single, planar, swap i in total.
kTYPE_AKYMC_16	&h000604A2	CMYK, 4 channels, 2 bytes, 1 extra samples, integer, chunky, swa bytes in total.
kTYPE_AKYMC_8	&h000604A1	CMYK, 4 channels, 1 bytes, 1 extra samples, integer, chunky, sw bytes in total.
kTYPE_ALabV2_8	&h001E4099	LabV2, 3 channels, 1 bytes, 1 extra samples, integer, chunky, s bytes in total.
kTYPE_ALab_8	&h000A4099	Lab, 3 channels, 1 bytes, 1 extra samples, integer, chunky, swap i in total.
kTYPE_ARGB_15	&h0404409A	RGB, 3 channels, 2 bytes, 1 extra samples, integer, chunky, swap i 8 bytes in total.
kTYPE_ARGB_16	&h0004409A	RGB, 3 channels, 2 bytes, 1 extra samples, integer, chunky, swap i

116.22 class LCMS2MLUMBS

116.22.1 class LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a multi localized unicode string.
Example:

```
// store a text in several languages, e.g. for a profile description
Var mlu As New LCMS2MLUMBS(Nil, 2)
Call mlu.setASCII("en", "US", "Printer profile")
Call mlu.setASCII("de", "DE", "Druckerprofil")

MessageBox "English: " + mlu.getASCII("en", "US") + EndOfLine + _
"German: " + mlu.getASCII("de", "DE") + EndOfLine + _
"Translations: " + mlu.TranslationsCount.ToString
```

Notes: MLU functions are the low-level interface to access the localization features of V4 ICC profiles. Little CMS does offer a high-level interface for easy operation. You may want, however, handle those objects by yourself.

Obtaining localized info from profiles
In versions prior to 4.0, the ICC format defined a required tag 'desc' which stored ASCII, Unicode, and Script Code versions of the profile description for display purposes. However, this structure allowed the profile to be localized for one language only through Unicode or Script Code. Profile vendors had to ship many localized versions to different countries. It also created problems when a document with localized profiles embedded in it was shipped to a system using a different language. With the adoption of V4 spec as basis, Little CMS solves all those issues honoring a new tag type: ‚Äòmluc' and multi localized Unicode. There is a full part of the API to deal with this stuff, but if you don't care about the details and all you want is to display the right string, Little CMS provides a simplified interface for that purpose.
Note that ASCII is strictly 7 bits, so you need to use wide chars if you want to preserve the information in the profile. The localization trick is done by using the lenguage and country codes, which you are supposed to supply. Those are two or three ASCII letters. A list of codes may be found here:

Language Code:
http://lcweb.loc.gov/standards/iso639-2/iso639jac.html

Country Codes:
http://www.iso.ch/iso/en/prods-services/iso3166ma/index.html

In practice, "en" for "english" and "US" for "united states" are implemented in most profiles. It is Ok to set a language and a country even if the profile does not implement such specific language and country. Little CMS will search for a proper match.
If you don't care and want just to take the first string in the profile, you can use:

For the language:
kcmsNoLanguage

For the country:
kcmsNoCountry

This will force to get the very first string, without any searching. A note of warning on that: you will get an string, but the language would be any, and probably that is not what you want. It is better to specify a default for language, and let LittleCMS to choose any other country (or language!) if what you ask for is not available.
Blog Entries

- MBS Xojo Plugins, version 23.5pr7

116.22.2 Methods

116.22.3 Constructor(context as LCMS2ContextMBS, items as UInt32)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allocates an empty multilocalized unicode object.
Example:

```
Var c as new LCMS2MLUMBS(nil, 3)

call c.setASCII("en", "US", "Hello" )
call c.setASCII("de", "DE", "Hallo" )
```

116.22.4 getASCII(LanguageCode as string, CountryCode as string) as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets an ASCII (7 bit) entry for the given Language and country.
Example:

```
Var c as new LCMS2MLUMBS(nil, 3)

call c.setASCII("en", "US", "Hello" )
call c.setASCII("de", "DE", "Hallo" )

MessageBox "en: "+c.getASCII("en", "US") + EndOfLine + "de: "+c.getASCII("de", "DE") + EndOfLine
+ "any: "+c.getASCII("", "")
```

Notes: Language Code: 3 chars describing the language.
CountryCode: 3 chars describing the country.

Returns the string.

116.22.5 getTranslation(LanguageCode as string, CountryCode as string, byref ObtainedLanguageCode as string, byref ObtainedCountryCode as string) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Obtains the translation rule for given multilocalized unicode object.
Notes: Language Code: 3 chars describing the language.
CountryCode: 3 chars describing the country
ObtainedLanguage: 3 chars to get the language translation.
ObtainedCode: 3 chars to get the country translation.

Returns true on success, false on error

116.22.6 getUnicode(LanguageCode as string, CountryCode as string) as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets an unicode (16 bit) entry for the given Language and country.
Notes: Language Code: 3 chars describing the language
CountryCode: 3 chars describing the country

Returns the string value.

116.22.7 setASCII(LanguageCode as string, CountryCode as string, ASCIIString as string) as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills an ASCII (7 bit) entry for the given Language and country.
Example:

```
Var c as new LCMS2MLUMBS(nil, 3)

call c.setASCII("en", "US", "Hello" )
call c.setASCII("de", "DE", "Hallo" )
```

```
MessageBox "en: "+c.getASCII("en", "US") + EndOfLine + "de: "+c.getASCII("de", "DE") + EndOfLine
+ "any: "+c.getASCII("", "")
```

Notes: Language Code: 3 chars describing the language
CountryCode: 3 chars describing the country
ASCIIString: String to add.

Returns true on success, false on error.

116.22.8 setUnicode(LanguageCode as string, CountryCode as string, UnicodeString as string) as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills a UNICODE wide char (16 bit) entry for the given Language and country.
Example:

```
Var c as new LCMS2MLUMBS(nil, 3)
call c.setUnicode("de", "DE", "K√§tzchen" )
Var u as string = c.getUnicode("de", "DE")
MessageBox u
```

Notes: Language Code: 3 chars describing the language
CountryCode: 3 chars describing the country
WideString: String to add.

Returns true on success, false on error.

116.22.9 translationsCodes(index as Integer, byref LanguageCode as string, byref CountryCode as string) as boolean

MBS Images Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries language and country code for the given index.
Example:

```
Var c as new LCMS2MLUMBS(nil, 3)

call c.setASCII("en", "US", "Hello" )
call c.setASCII("de", "DE", "Hallo" )

Var u as Integer = c.TranslationsCount-1
```

```
for i as Integer = 0 to u
Var LanguageCode as string
Var CountryCode as string

if c.translationsCodes(i, LanguageCode, CountryCode) then
MessageBox LanguageCode+" "+CountryCode
end if
next
```

Notes: Index is from 0 to TranslationsCount-1.

116.22.10 UnicodeStrings as String()

MBS Images Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries all available strings.

116.22.11 Properties

116.22.12 Handle as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

116.22.13 TranslationsCount as Integer

MBS Images Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of stored translations.
Example:

```
Var c as new LCMS2MLUMBS(nil, 3)

call c.setASCII("en", "US", "Hello" )
call c.setASCII("de", "DE", "Hallo" )

MessageBox str(c.TranslationsCount)+" translations"
```

Notes: (Read only property)

116.22.14 Constants

Constants

Constant	Value	Description
kNoCountry	""	One of the possible country constants. Any country.
kNoLanguage	""	One of the possible language constants. Any language.

116.23 class LCMS2NamedColorListMBS

116.23.1 class LCMS2NamedColorListMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specialized dictionaries for dealing with named color profiles.
Example:

```
// build a list of named colors and look one up
Var list As New LCMS2NamedColorListMBS(Nil, 3, 4, "Brand ", "")
Call list.Append("Red")
Call list.Append("Blue")
Call list.Append("Green")

Var index As Integer = list.ColorIndex("Blue")
MessageBox list.Count.ToString + " colors, Blue at index " + index.ToString + ": " + list.Prefix(index) +
list.Name(index)
```

116.23.2 Methods

116.23.3 Append(name as string) as Boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a new spot color to the list.
Notes: If the number of elements in the list exceeds the initial storage, the list is realloc'ed to accommodate things.

Name: The spot color name without any prefix or suffix specified in Constructor.
PCS: Optionally, Encoded PCS coordinates as three integers.
Colorant: Optionally, Encoded values for device colorant. (up to 16 entries)

Returns true on success and false on failure.
See also:

- 116.23.4 Append(name as string, PCS() as Integer) as Boolean 17320
- 116.23.5 Append(name as string, PCS() as Integer, Colorant() as Integer) as Boolean 17321

116.23.4 Append(name as string, PCS() as Integer) as Boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a new spot color to the list.
Notes: If the number of elements in the list exceeds the initial storage, the list is realloc'ed to accommodate things.

Name: The spot color name without any prefix or suffix specified in Constructor.
PCS: Optionally, Encoded PCS coordinates as three integers.
Colorant: Optionally, Encoded values for device colorant. (up to 16 entries)

Returns true on success and false on failure.
See also:

- 116.23.3 Append(name as string) as Boolean 17320
- 116.23.5 Append(name as string, PCS() as Integer, Colorant() as Integer) as Boolean 17321

116.23.5 Append(name as string, PCS() as Integer, Colorant() as Integer) as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a new spot color to the list.
Notes: If the number of elements in the list exceeds the initial storage, the list is realloc'ed to accommodate things.

Name: The spot color name without any prefix or suffix specified in Constructor.
PCS: Optionally, Encoded PCS coordinates as three integers.
Colorant: Optionally, Encoded values for device colorant. (up to 16 entries)

Returns true on success and false on failure.
See also:

- 116.23.3 Append(name as string) as Boolean 17320
- 116.23.4 Append(name as string, PCS() as Integer) as Boolean 17320

116.23.6 Colorant(nColor as UInt32) as Integer()

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns encoded colorants of nth color.
Notes: Array has 16 entries, but not all may be in use.

116.23.7 ColorIndex(name as string) as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a look-up in the dictionary and returns an index on the given color name.
Notes: Returns index on name, or -1 if the spot color is not found.

116.23.8 Constructor(context as LCMS2ContextMBS, n as UInt32, ColorantCount as UInt32, Prefix as string = ””, Suffix as string = ””)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new named color list.
Notes: Allocates an empty named color dictionary.

Context: The user-defined context cargo.
N: Initial number of spot colors in the list
Colorant count: Number of channels of device space (i.e, 3 for RGB, 4 for CMYK, etc,)
Prefix, Suffix: fixed strings for all spot color names, e.g., ”coated”, ”system”, ...

On success handle is not zero.

116.23.9 Name(nColor as UInt32) as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns name of nth color.

116.23.10 PCS(nColor as UInt32) as Integer()

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns encoded PCS of nth color.
Notes: Array has 3 entries.

116.23.11 Prefix(nColor as UInt32) as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns prefix of nth color.

116.23.12 Suffix(nColor as UInt32) as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns suffix of nth color.

116.23.13 Properties

116.23.14 Count as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of spot colors in a named color list.
Notes: Returns the number of spot colors on success, 0 on error.
(Read only property)

116.23.15 Handle as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

116.24 class LCMS2PipelineMBS

116.24.1 class LCMS2PipelineMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a pipeline.
Example:

```
// look at the stages of the pipeline of a color transform
Var srgb As LCMS2ProfileMBS = LCMS2ProfileMBS.CreateSRGBProfile
Var lab As LCMS2ProfileMBS = LCMS2ProfileMBS.CreateLab4Profile
Var t As LCMS2TransformMBS = LCMS2TransformMBS.CreateTransform(srgb, LCMS2MBS.kTYPE_RGB_8,
lab, LCMS2MBS.kTYPE_Lab_DBL, LCMS2MBS.kINTENT_PERCEPTUAL)

Var pipeline As LCMS2PipelineMBS = t.Lut
If pipeline <>Nil Then
MessageBox pipeline.StageCount.ToString + " stages, " + pipeline.InputChannels.ToString + " in, " +
pipeline.OutputChannels.ToString + " out"
End If
```

Notes: Pipelines are a convenient way to model complex operations on image data. Each pipeline may contain an arbitrary number of stages. Each stage performs a single operation. Pipelines may be optimized to be executed on a certain format (8 bits, for example) and can be saved as LUTs in ICC profiles.

- MBS Releases the MBS Real Studio plug-ins in version 12.0

116.24.2 Methods

116.24.3 Append(p as LCMS2PipelineMBS) as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Appends pipeline l2 at the end of pipeline l1.
Notes: Channel count must match.
Returns true on success and false on failure.

116.24.4 CheckAndRetreiveStages(type1 as Integer, byref stage1 as LCMS2StageMBS) as Boolean

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks for some specific stages and returns them via byref parameters.
Notes: This function is quite useful to analyze the structure of a Pipeline and retrieve the Stage elements that conform the Pipeline. It should be called with the Pipeline, the number of expected elements and then a list of expected types followed with a list of double pointers to Stage elements. If the function founds a match with current pipeline, it fills the parameters and returns true if not, returns false without touching anything.
See also:

- 116.24.5 CheckAndRetreiveStages(type1 as Integer, type2 as Integer, byref stage1 as LCMS2StageMBS, byref stage2 as LCMS2StageMBS) as Boolean 17325
- 116.24.6 CheckAndRetreiveStages(type1 as Integer, type2 as Integer, type3 as Integer, byref stage1 as LCMS2StageMBS, byref stage2 as LCMS2StageMBS, byref stage3 as LCMS2StageMBS) as Boolean 17325

116.24.5 CheckAndRetreiveStages(type1 as Integer, type2 as Integer, byref stage1 as LCMS2StageMBS, byref stage2 as LCMS2StageMBS) as Boolean

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks for some specific stages and returns them via byref parameters.
Notes: This function is quite useful to analyze the structure of a Pipeline and retrieve the Stage elements that conform the Pipeline. It should be called with the Pipeline, the number of expected elements and then a list of expected types followed with a list of double pointers to Stage elements. If the function founds a match with current pipeline, it fills the parameters and returns true if not, returns false without touching anything.
See also:

- 116.24.4 CheckAndRetreiveStages(type1 as Integer, byref stage1 as LCMS2StageMBS) as Boolean 17324
- 116.24.6 CheckAndRetreiveStages(type1 as Integer, type2 as Integer, type3 as Integer, byref stage1 as LCMS2StageMBS, byref stage2 as LCMS2StageMBS, byref stage3 as LCMS2StageMBS) as Boolean 17325

116.24.6 CheckAndRetreiveStages(type1 as Integer, type2 as Integer, type3 as Integer, byref stage1 as LCMS2StageMBS, byref stage2 as LCMS2StageMBS, byref stage3 as LCMS2StageMBS) as Boolean

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks for some specific stages and returns them via byref parameters.
Example:

```
// load a profile
Var file As FolderItem = SpecialFolder.Desktop.child("test.icc")
```

```
Var profile As LCMS2ProfileMBS = LCMS2ProfileMBS.OpenProfileFromFile( file, False )

// get the pipeline
Var pipeline As LCMS2PipelineMBS = profile.ReadPipeline( LCMS2MBS.kcmsSigBToA1Tag )

// get curves
Var CurveIn As LCMS2StageMBS
Var CLUT As LCMS2StageMBS
Var CurveOut As LCMS2StageMBS

Var ok As Boolean = pipeline.CheckAndRetreiveStages(_
LCMS2MBS.kcmsSigCurveSetElemType, _
LCMS2MBS.kcmsSigCLutElemType, _
LCMS2MBS.kcmsSigCurveSetElemType, _
CurveIn, CLUT, CurveOut)

Break // check the three entries
```

Notes: This function is quite useful to analyze the structure of a Pipeline and retrieve the Stage elements that conform the Pipeline. It should be called with the Pipeline, the number of expected elements and then a list of expected types followed with a list of double pointers to Stage elements. If the function founds a match with current pipeline, it fills the parameters and returns true if not, returns false without touching anything.

116.24.7 Constructor(context as LCMS2ContextMBS, InputChannels as UInt32, OutputChannels as UInt32)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allocates an empty pipeline.
Notes: Final Input and output channels must be specified at creation time.

context: A user-defined context cargo.
InputChannels, OutputChannels: Number of channels on input and output.

116.24.8 Eval16(In as Ptr, Out as Ptr)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates a pipeline usin 16-bit numbers, optionally using the optimized path.
Notes: In: Input values.
Out: Output values.

For in and out you can use memoryblocks with UInt16 values.
We use Ptr for maximum performance. Please make sure the memoryblocks have right size. An UInt16 value has 2 bytes.

116.24.9 EvalFloat(In as Ptr, Out as Ptr)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates a pipeline using floating point numbers.
Notes: In: Input values.
Out: Output values.

For in and out you can use memoryblocks with single values.
We use Ptr for maximum performance. Please make sure the memoryblocks have right size. A single value has 4 bytes.

116.24.10 EvalReverseFloat(Target as Ptr, Result as Ptr, Hint as Ptr)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates a pipeline in the reverse direction, using Newton's method.
Notes: Target: Input values.
Result: Output values.
Hint: Where begin the search.

For target, result and hint you can use memoryblocks with single values.
We use Ptr for maximum performance. Please make sure the memoryblocks have right size. A single value has 4 bytes.

Returns true on success, false on error.

116.24.11 InsertStage(where as Integer, stage as LCMS2StageMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inserts a stage on either the head or the tail of a given pipeline.
Notes: where: enumerated constant, either kAtBegin or kAtEnd.
stage: Pointer to a stage object

116.24.12 SetSaveAs8bitsFlag(save8bit as boolean) as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an internal flag that marks the pipeline to be saved in 8 bit precision.
Notes: By default all pipelines are saved on 16 bits precision on AtoB/BToA tags and in floating point precision on DToB/BToD tags.

save8bit: State of the flag, true=Save as 8 bits, false=Save as 16 bits

Returns true on success, false on error

116.24.13 Stages as LCMS2StageMBS()

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an array with all stage objects.

116.24.14 UnlinkStage(where as Integer) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the stage from the pipeline.
Notes: Returns the removed stage object.
where can be kAtBegin or kAtEnd values.

116.24.15 Properties

116.24.16 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The context object.
Notes: (Read and Write property)

116.24.17 FirstStage as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get a the first stage in the pipeline, or nil if pipeline is empty.
Notes: Intended for iterators.
(Read only property)

116.24.18 Handle as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

116.24.19 InputChannels as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of input channels of a given pipeline.
Notes: Number of channels on success, 0 on error.
(Read only property)

116.24.20 LastStage as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get a the last stage in the pipeline, or nil if pipeline is empty.
Notes: Intended for iterators.
(Read only property)

116.24.21 OutputChannels as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns number of output channels of a given pipeline.
Notes: Number of channels on success, 0 on error.

(Read only property)

116.24.22 StageCount as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns number of stages of a given pipeline.
Notes: (Read only property)

116.24.23 Constants

Location Constants for UnlinkStage

Constant	Value	Description
kAtBegin	0	At the beginning.
kAtEnd	1	At the end.

116.25 class LCMS2ProfileMBS

116.25.1 class LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a LCMS2 profile.
Example:

```
// open an ICC profile and show its description
Var file As FolderItem = SpecialFolder.Desktop.Child("test.icc")
Var profile As LCMS2ProfileMBS = LCMS2ProfileMBS.OpenProfileFromFile(file)

If profile = Nil Then
MessageBox "Failed to open profile."
Return
End If

MessageBox profile.GetProfileInfo(LCMS2ProfileMBS.kInfoDescription, "en", "US") + EndOfLine + _
"Version: " + profile.ProfileVersion.ToString

// create a standard sRGB profile and save it to a file
Var srgb As LCMS2ProfileMBS = LCMS2ProfileMBS.CreateSRGBProfile
Call srgb.SaveProfileToFile(SpecialFolder.Desktop.Child("sRGB.icc"))
```

116.25.2 Methods

116.25.3 cmsV2Unicode as String

MBS Images Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns special constant to access unicode string for V2 profiles.
Example:

```
// special v2 unicode string
Var ProfileVersion As Integer = MyProfile.ProfileVersion

If ProfileVersion = 2 Then
Var cmsV2Unicode As String = LCMS2ProfileMBS.cmsV2Unicode
Var s2 As String = MyMLU.getUnicode(cmsV2Unicode, cmsV2Unicode)

If s2<>"" Then
List.AddRow "V2 Unicode Text", s2
End If
End If
```

116.25.4 Constructor(context as LCMS2ContextMBS = nil)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new empty profile.
Notes: On success the handle property is not zero.
See also:

- 116.25.5 Constructor(file as folderitem, write as boolean = false) 17332

116.25.5 Constructor(file as folderitem, write as boolean = false)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates profile by reading in an existing profile or creating a new profile at the given location.
Notes: file: file location.
write: Whether to create new profile.

On success the handle property is not zero.
See also:

- 116.25.4 Constructor(context as LCMS2ContextMBS = nil) 17332

116.25.6 CreateBCHSWabstractProfile(context as LCMS2ContextMBS, nLUTPoints as UInt32, Bright as double, Contrast as double, Hue as double, Saturation as double, TempSrc as UInt32, TempDest as UInt32) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an abstract devicelink operating in Lab for Bright/Contrast/Hue/Saturation and white point translation.
Notes: White points are specified as temperatures degree of Kelvin.

context: optional context object.
nLUTPoints: Resulting colormap resolution
Bright: Bright increment. May be negative
Contrast: Contrast increment. May be negative.
Hue: Hue displacement in degree.
Saturation: Saturation increment. May be negative
TempSrc: Source white point temperature
TempDest: Destination white point temperature.

Returns an ICC profile object on success, nil on error.

116.25.7 CreateGrayProfile(context as LCMS2ContextMBS, WhitePoint as LCMS2CIExyY TransferFunction as LCMS2ToneCurveMBS) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a gray profile based on White point and transfer function.
Notes: It populates followingtags; this conform a standard gray display profile:

1. cmsSigProfileDescriptionTag
2. cmsSigMediaWhitePointTag
3. cmsSigGrayTRCTag

Context: Optional context object.
WhitePoint: The white point of the gray device or space.
TransferFunction: tone curve describing the device or space gamma.

Returns an ICC profile object on success, NULL on error.

116.25.8 CreateInkLimitingDeviceLink(context as LCMS2ContextMBS, ColorSpaceSignature as UInt32, Limit as Double) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is a devicelink operating in CMYK for ink-limiting.
Notes: Space: any color space signature. Currently only kcmsSigCmykData is supported.
Limit: Amount of ink limiting in % (0..400%)

Returns new profile or nil on error.

116.25.9 CreateLab2Profile(context as LCMS2ContextMBS = nil, point as LCMS2CIExyYM = nil) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a Lab to Lab identity, marking it as v2 ICC profile.
Notes: Adjustments for accomodating PCS endoing shall be done by Little CMS when using this profile.

Context: The optional context object.
WhitePoint: Lab reference white. nil for D50.

Returns a handle to an ICC profile object on success, nil on error.

116.25.10 CreateLab4Profile(context as LCMS2ContextMBS = nil, point as LCMS2CIExyYMBS = nil) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a Lab to Lab identity, marking it as v4 ICC profile.
Notes: Context: The optional context object.
WhitePoint: Lab reference white. nil for D50.

Returns a handle to an ICC profile object on success, nil on error.

116.25.11 CreateLinearizationDeviceLink(context as LCMS2ContextMBS, ColorSpaceSignature as UInt32, TransferFunction() as LCMS2ToneCurveMBS) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is a devicelink operating in the target colorspace with as many transfer functions asÔøº-components.
Notes: Space: The desired color space signature. Like &h52474220 for RGB.
TransferFunction: tone curves describing the device or space linearization.

Please make sure you pass right number of transfer functions matching number of channels of color space.

A handle to an ICC profile object on success, NULL on error.

116.25.12 CreateNULLProfile(context as LCMS2ContextMBS = nil) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a fake NULL profile.
Notes: This profile return 1 channel as always 0. Is useful only for gamut checking tricks.
Returns an ICC profile object on success, nil on error.

116.25.13 CreateProfilePlaceholder(context as LCMS2ContextMBS = nil) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an empty profile object, to be populated by the programmer.
Notes: WARNING: The profile without adding any information is not directly useable.

Context: The context object.
Returns an ICC profile object on success, nil on error.

116.25.14 CreateRGBProfile(context as LCMS2ContextMBS, WhitePoint as LCMS2CIExyYMBS, Primaries as LCMS2CIExyYTripleMBS, TransferFunction() as LCMS2ToneCurveMBS) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a RGB profile based on White point, primaries and transfer functions.
Notes: It populates following tags; this conform a standard RGB Display Profile, and then I add (As per addendum II) chromaticity tag.

Context: Optional context object.

1	cmsSigProfileDescriptionTag
2	cmsSigMediaWhitePointTag
3	cmsSigRedColorantTag
4	cmsSigGreenColorantTag
5	cmsSigBlueColorantTag
6	cmsSigRedTRCTag
7	cmsSigGreenTRCTag
8	cmsSigBlueTRCTag
9	Chromatic adaptation Tag
10	cmsSigChromaticityTag

WhitePoint: The white point of the RGB device or space.
Primaries: The primaries in xyY of the device or space.
TransferFunction: 3 tone curves describing the device or space gamma. (if you pass just one, the plugin uses it for all three channels)

Returns the new ICC profile object or nil on any error.

116.25.15 CreateSRGBProfile(context as LCMS2ContextMBS = nil) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create an ICC virtual profile for sRGB space.
Notes: sRGB is a standard RGB color space created cooperatively by HP and Microsoft in 1996 for use on monitors, printers, and the Internet.

sRGB white point is D65.
xyY 0.3127, 0.3291, 1.0
Ôøº
Primaries are ITU-R BT.709-5 (xYY)

R	0.6400, 0.3300, 1.0
G	0.3000, 0.6000, 1.0
B	0.1500, 0.0600, 1.0

Ôøº
31

Predefined virtual profiles sRGB transfer functions are defined by:
Ôøº
If R'sRGB, G'sRGB, B'sRGB <0.04045
R = R'sRGB / 12.92
G = G'sRGB / 12.92
B = B'sRGB / 12.92
elseif R'sRGB, G'sRGB, B'sRGB >= 0.04045
R = ((R'sRGB + 0.055) / 1.055)^2.4
G = ((G'sRGB + 0.055) / 1.055)^2.4
B = ((B'sRGB + 0.055) / 1.055)^2.4
end if

Context: Optional context object.
Returns an ICC profile object on success, nil on error.

116.25.16 CreateXYZProfile(context as LCMS2ContextMBS = nil) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a XYZ to XYZ identity, marking it as v4 ICC profile.
Notes: WhitePoint used in Absolute colorimetric intent is D50.
Returns the new profile on success or nil on failure.

116.25.17 DetectBlackPoint(Intent as Integer, Flags as Integer) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Estimate the black point.

116.25.18 DetectDestinationBlackPoint(Intent as Integer, Flags as Integer) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the black point of a destination profile.
Notes: This algorithm comes from the Adobe paper disclosing its black point compensation method.

116.25.19 DetectRGBProfileGamma(threshold as double) as double

MBS Images Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Estimate gamma space, always positive.
Notes: Returns -1 on error.
threshold e.g. 0.01.

116.25.20 DetectTAC as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Detects total area coverage.
Notes: When several colors are printed on top of each other, there is a limit to the amount of ink that can be put on paper. This maximum total dot percentage is referred to as either TIC (Total Ink Coverage) or TAC (Total Area Coverage). This function does estimate total area coverage for a given profile in %. Only works on output profiles. On RGB profiles, 400% is returned. TAC is detected by subsampling Lab color space on 6x74x74 points.

Returns estimated area coverage in % on success, 0 on error.

116.25.21 FormatterForBitmap(BitCount as Integer = 8) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Build a suitable formatter for the colorspace of this profile.
Notes: This is a convenience function which prepares you a pixel format for use with LCMS2BitmapMBS class.
Formatters are used to describe how bitmap buffers are organized.

116.25.22 FormatterForColorspace(nBytes as UInt32, IsFloat as boolean = false) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Build a suitable formatter for the colorspace of this profile.
Notes: nBytes is number of bytes per color value. For 3 byte RGB, you pass 1 here.
Formatters are used to describe how bitmap buffers are organized.

e.g.
nBytes = 1 and isfloat = false gives UInt8.
nBytes = 2 and isfloat = false gives UInt16.

nBytes = 4 and isfloat = true gives 32-bit float, which is Single in Xojo.
nBytes = 8 and isfloat = true gives 64-bit float, which is Double in Xojo.

116.25.23 FormatterForPCS(nBytes as UInt32, IsFloat as boolean = false) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Build a suitable formatter for the colorspace of this profile.
Notes: Formatters are used to describe how bitmap buffers are organized.

116.25.24 GetProfileInfo(Info as Integer, LanguageCode as string, CountryCode as string) as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets several information strings from the profile, dealing with localization.
Notes: Info: A selector of which info to return. (kInfoCopyright, kInfoDescription, kInfoManufacturer or kInfoModel)
Language Code: first name language code from ISO-639/2.
Country Code: first name region code from ISO-3166.

Returns the string. (empty string on error)

116.25.25 IsCLUT(Intent as UInt32, UsedDirection as UInt32) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns whatever a CLUT is present in the profile for the given intent and direction.
Notes: Intent: The intent code.
UsedDirection: UsedAsInput = 0, UsedAsOutput = 1, UsedAsProof = 2.
Returns true CLUT is present for given intent and direction, false otherwise.

116.25.26 IsIntentSupported(Intent as UInt32, UsedDirection as UInt32) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the requested intent is implemented in the given direction.
Notes: Little CMS has a fallback strategy that allows to specify any rendering intent when creating the

transform, but the intent really being used may be another if the requested intent is not implemented.

UsedDirection: UsedAsInput = 0, UsedAsOutput = 1, UsedAsProof = 2.
Returns true if the intent is implemented, false otherwise.

116.25.27 IsTag(TagSignature as Integer) as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if a tag with signature sig is found on the profile.
Notes: Useful to check if a profile contains a given tag.
Returns true if the tag is found or false otherwise.

116.25.28 LinkTag(sig as Integer, dest as Integer) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a directory entry on tag sig that points to same location as tag dest.
Notes: Using this function you can collapse several tag entries to the same block in the profile.

sig: Signature of linking tag.
dest: Signature of linked tag.

Returns ture on success, false on error

116.25.29 MD5computeID as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Computes a MD5 checksum and stores it as Profile ID in the profile header.
Notes: Returns true on success or false on failure.

116.25.30 OpenProfileFromFile(context as LCMS2ContextMBS, file as folderitem, write as boolean = false) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a profile from a file or creates a new profile file there.
Notes: context: Optional context object.

file: The folderitem for the file location.
write: If true, a new profile is created. If false an existing profile is opened.

Returns a new ICC Profile object on success or nil on failure.
See also:

- 116.25.31 OpenProfileFromFile(file as folderitem, write as boolean = false) as LCMS2ProfileMBS 17341

116.25.31 OpenProfileFromFile(file as folderitem, write as boolean = false) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a profile from a file or creates a new profile file there.
Example:

```
Var path As String = "/Library/ColorSync/Profiles/Blue Tone.icc"
Var file as new FolderItem(path, FolderItem.PathModes.Native)
Var p As LCMS2ProfileMBS = LCMS2ProfileMBS.OpenProfileFromFile(file)

MessageBox p.TagCount.ToString+" tags"
```

Notes: context: Optional context object.
file: The folderitem for the file location.
write: If true, a new profile is created. If false an existing profile is opened.

Returns a new ICC Profile object on success or nil on failure.
See also:

- 116.25.30 OpenProfileFromFile(context as LCMS2ContextMBS, file as folderitem, write as boolean = false) as LCMS2ProfileMBS 17340

116.25.32 OpenProfileFromMemory(context as LCMS2ContextMBS, data as Memoryblock) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens an ICC profile which is entirely contained in a memory block.
Notes: Context: Optional, the context object.
Data: The profile data.

Useful for accessing embedded profiles. This buffer must hold a full profile image. Memory must be contiguous.

Returns an ICC profile object on success, nil on error.
See also:

- 116.25.33 OpenProfileFromMemory(data as Memoryblock) as LCMS2ProfileMBS 17342

116.25.33 OpenProfileFromMemory(data as Memoryblock) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens an ICC profile which is entirely contained in a memory block.
Notes: Context: Optional, the context object.
Data: The profile data.

Useful for accessing embedded profiles. This buffer must hold a full profile image. Memory must be contiguous.
Returns an ICC profile object on success, nil on error.
See also:

- 116.25.32 OpenProfileFromMemory(context as LCMS2ContextMBS, data as Memoryblock) as LCMS2ProfileMBS 17341

116.25.34 OpenProfileFromString(context as LCMS2ContextMBS, data as string) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens an ICC profile which is entirely contained in a string.
Notes: Context: Optional, the context object.
Data: The profile data.

Useful for accessing embedded profiles. This buffer must hold a full profile image. Memory must be contiguous.
Returns an ICC profile object on success, nil on error.
See also:

- 116.25.35 OpenProfileFromString(data as string) as LCMS2ProfileMBS 17342

116.25.35 OpenProfileFromString(data as string) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens an ICC profile which is entirely contained in a string.
Notes: Context: Optional, the context object.

Data: The profile data.

Useful for accessing embedded profiles. This buffer must hold a full profile image. Memory must be contiguous.
Returns an ICC profile object on success, nil on error.
See also:

- 116.25.34 OpenProfileFromString(context as LCMS2ContextMBS, data as string) as LCMS2ProfileMBS 17342

116.25.36 PostScriptCRD(context as LCMS2ContextMBS, intent as UInt32, flags as UInt32 = 0) as string

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A wrapper on cmsGetPostScriptColorResource to simplify CRD generation.
Notes: context: Optional a user-defined context cargo.
Intent: The intent code, as described in Intents constants.
Flags: A combination of bit-field kcmsFLAGS* constants.

Returns: The resource as string or an empty string on error.

116.25.37 PostScriptCSA(context as LCMS2ContextMBS, intent as UInt32, flags as UInt32 = 0) as string

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A wrapper on cmsGetPostScriptColorResource to simplify CSA generation.
Notes: context: Optional a user-defined context cargo.
Intent: The intent code, as described in Intents constants.
Flags: A combination of bit-field kcmsFLAGS* constants.

Returns: The resource as string or an empty string on error.

116.25.38 ReadChromaticAdaptation as LCMS2CIEXYZMBS()

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a chromatic adaptation.
Notes: On success returns an array of 3 XYZ values.

116.25.39 ReadChromaticity as LCMS2CIExyYTripleMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads chromaticity tag.
Notes: For kcmsSigChromaticityTag.
Returns nil on error.

116.25.40 ReadCIEXYZ(tag as Integer) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as CIE XYZ value.
Notes: Works with kcmsSigBlueColorantTag, kcmsSigBlueMatrixColumnTag, kcmsSigGreenColorantTag, kcmsSigGreenMatrixColumnTag, kcmsSigLuminanceTag, kcmsSigMediaBlackPointTag, kcmsSigMediaWhite-PointTag, kcmsSigRedColorantTag and kcmsSigRedMatrixColumnTag.
Returns nil on any error.

116.25.41 ReadColorantOrder as Memoryblock

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads colorant order.
Notes: For kcmsSigColorantOrderTag.
Returns nil on any error.

116.25.42 ReadDate(tag as Integer) as LCMS2DateMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as date.
Notes: Works with kcmsSigCalibrationDateTimeTag and kcmsSigDateTimeTag.
Returns nil on any error.

116.25.43 ReadDict(tag as Integer) as LCMS2DictionaryMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as Dictionary value.
Notes: Works with kcmsSigMetaTag.
Returns nil on any error.

116.25.44 ReadICCData(tag as Integer) as LCMS2ICCDataMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as ICC Data.
Notes: Works with kcmsSigDataTag, kcmsSigPs2CRD0Tag, kcmsSigPs2CRD1Tag, kcmsSigPs2CRD2Tag, kcmsSigPs2CRD3Tag, kcmsSigPs2CSATag and kcmsSigPs2RenderingIntentTag.
Returns nil on any error.

116.25.45 ReadICCMeasurementConditions as LCMS2ICCMeasurementConditionsMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads IIC measurement conditions.
Notes: for kcmsSigMeasurementTag.
Returns nil on any error.

116.25.46 ReadICCViewingConditions as LCMS2ICCViewingConditionsMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as ICCViewingConditions value.
Notes: Works with kcmsSigViewingConditionsTag.

116.25.47 ReadMLU(tag as Integer) as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as MLU.
Notes: Works with kcmsSigCharTargetTag, kcmsSigCopyrightTag, kcmsSigDeviceMfgDescTag, kcmsSigDeviceModelDescTag, kcmsSigProfileDescriptionTag, kcmsSigScreeningDescTag and kcmsSigViewingCondDescTag.
Returns nil on any error.

116.25.48 ReadNamedColorList(tag as Integer) as LCMS2NamedColorListMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as named color list.
Notes: Works with kcmsSigColorantTableTag, kcmsSigColorantTableOutTag, kcmsSigCrdInfoTag and kcmsSigNamedColor2Tag.

Returns nil on any error.

116.25.49 ReadPipeline(tag as Integer) as LCMS2PipelineMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as pipeline.
Notes: Works with kcmsSigAToB0Tag, kcmsSigAToB1Tag, kcmsSigAToB2Tag, kcmsSigBToA0Tag, kcmsSigBToA1Tag, kcmsSigBToA2Tag, kcmsSigDToB0Tag, kcmsSigDToB1Tag, kcmsSigDToB2Tag, kcmsSigDToB3Tag, kcmsSigBToD0Tag, kcmsSigBToD1Tag, kcmsSigBToD2Tag, kcmsSigBToD3Tag, kcmsSigGamutTag, kcmsSigPreview0Tag, kcmsSigPreview1Tag and kcmsSigPreview2Tag.
Returns nil on any error.

116.25.50 ReadRawTag(sig as Integer) as Memoryblock

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads raw tag.
Notes: Similar to ReadTag*, but different in two important aspects. The important point is, this is raw data. No processing is performed, so you can effectively read wrong or broken profiles with this function. Obviously, then you have to interpret all those bytes!

sig: Signature of tag to be read

Returns memoryblock with data or nil on any error.

Those functions allows to read/write directly to the ICC profile any data, without checking anything. As a rule, mixing Raw with cooked doesn't work, so writting a tag as raw and then reading it as cooked without serializing does result into an error. If that is wha you want, you will need to dump the profile to memory or disk and then reopen it.

Returns nil on any error.

116.25.51 ReadScreening as LCMS2ScreeningMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as screening.
Notes: Works with kcmsSigScreeningTag.
Returns nil on any error.

116.25.52 ReadSequence(tag as Integer) as LCMS2SequenceMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as sequence.
Notes: Only for kcmsSigProfileSequenceDescTag and kcmsSigProfileSequenceIdTag.
Returns nil on any error.

116.25.53 ReadSignature(tag as Integer) as UInt32

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a signature tag.
Notes: Works with kcmsSigColorimetricIntentImageStateTag, kcmsSigPerceptualRenderingIntentGamutTag, kcmsSigSaturationRenderingIntentGamutTag or kcmsSigTechnologyTag.

116.25.54 ReadTag(tag as Integer) as Variant

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a tag.
Notes: This is a convenience function which gives you the tag in whatever class the plugin thing is suitable. Check with isa what class you get.
Returns nil on any error.

116.25.55 ReadToneCurve(tag as Integer) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as ToneCurve.
Notes: Works with kcmsSigBlueTRCTag, kcmsSigGrayTRCTag, kcmsSigGreenTRCTag and kcmsSigRedTRCTag.

116.25.56 ReadUcrBg as LCMS2UcrBgMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads UcrBg tag.

116.25.57 SaveProfileToFile(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves the contents of a profile to a given file.
Notes: Returns true on success and false on failure.

116.25.58 SaveProfileToMemory as Memoryblock

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves the contents of a profile to a memoryblock.
Notes: Returns memoryblock on success and nil on failure.

116.25.59 SaveProfileToString as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves the contents of a profile to a string.
Notes: Returns string with profile data on success and "" on failure.

116.25.60 TagLinkedTo(sig as Integer) as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the tag linked to sig, in the case two tags are sharing same resource, or nil if the tag is not linked to any other tag.
Notes: sig: Signature of linking tag.

Returns signature of linked tag, or 0 if no tag is linked.

116.25.61 TagSignature(index as Integer) as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the signature of a tag located in n position being n a 0-based index: i.e., first tag is indexed with n=0.
Notes: index: index to a tag position (0-based)

Returns the tag signature on success, 0 on error.

Changed in v23.5 to raise exception for invalid index.

116.25.62 TagSignatures as Integer()

MBS Images Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the array of tag signatures.
Example:

```
Var path As String = "/Library/ColorSync/Profiles/Blue Tone.icc"
Var file as new FolderItem(path, FolderItem.PathModes.Native)
Var p As LCMS2ProfileMBS = LCMS2ProfileMBS.OpenProfileFromFile(file)

Var tags() As Integer = p.TagSignatures
Break // inspect array in debugger
```

Notes: The array contains all tags and you can loop over the array and use ReadTag()

116.25.63 WriteChromaticAdaptation(value as LCMS2Mat3MBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes chromatic adaptation.
Notes: Variant of the function which takes matrix of values.
See also:

- 116.25.64 WriteChromaticAdaptation(values() as LCMS2CIEXYZMBS) as boolean 17349

116.25.64 WriteChromaticAdaptation(values() as LCMS2CIEXYZMBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes chromatic adaptation.
Notes: Pass array with 3 XYZ colors.
Returns true on success.
See also:

- 116.25.63 WriteChromaticAdaptation(value as LCMS2Mat3MBS) as boolean 17349

116.25.65 WriteChromaticity(o as LCMS2CIExyYTripleMBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes chromaticity tag.
Notes: For kcmsSigChromaticityTag.
Returns true on success and false on error.

116.25.66 WriteCIEXYZ(tag as Integer, o as LCMS2CIEXYZMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes CIE XYZ tag.
Notes: Works with kcmsSigBlueColorantTag, kcmsSigBlueMatrixColumnTag, kcmsSigGreenColorantTag, kcmsSigGreenMatrixColumnTag, kcmsSigLuminanceTag, kcmsSigMediaBlackPointTag, kcmsSigMediaWhite-PointTag, kcmsSigRedColorantTag and kcmsSigRedMatrixColumnTag.

116.25.67 WriteColorantOrder(data as Memoryblock) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes colorant order.
Notes: For kcmsSigColorantOrderTag.
Data should be 16 byte long.
Returns true on success or false on failure.

116.25.68 WriteDate(tag as Integer, o as LCMS2DateMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes date tag.
Notes: Works with kcmsSigCalibrationDateTimeTag and kcmsSigDateTimeTag.

116.25.69 WriteDict(tag as Integer, o as LCMS2DictionaryMBS) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes Dictionary tag.
Notes: Works with kcmsSigMetaTag.

116.25.70 WriteICCData(tag as Integer, o as LCMS2ICCDataMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes ICC Data tag.
Notes: Works with kcmsSigDataTag, kcmsSigPs2CRD0Tag, kcmsSigPs2CRD1Tag, kcmsSigPs2CRD2Tag, kcmsSigPs2CRD3Tag, kcmsSigPs2CSATag and kcmsSigPs2RenderingIntentTag.

116.25.71 WriteICCMeasurementConditions(value as LCMS2ICCMeasurementConditionsMBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes IIC measurement conditions.
Notes: for kcmsSigMeasurementTag.
Writes data and returns true on success or false on failure.

116.25.72 WriteICCViewingConditions(o as LCMS2ICCViewingConditionsMBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes ICC Viewing conditions tag.
Notes: Works with kcmsSigViewingConditionsTag.

116.25.73 WriteMLU(tag as Integer, o as LCMS2MLUMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes MLU tag.
Notes: Works with kcmsSigCharTargetTag, kcmsSigCopyrightTag, kcmsSigDeviceMfgDescTag, kcmsSigDeviceModelDescTag, kcmsSigProfileDescriptionTag, kcmsSigScreeningDescTag and kcmsSigViewingCondDescTag.

116.25.74 WriteNamedColorList(tag as Integer, o as LCMS2NamedColorListMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes named color list tag.
Notes: Works with kcmsSigColorantTableTag, kcmsSigColorantTableOutTag, kcmsSigCrdInfoTag and kcmsSigNamedColor2Tag.

116.25.75 WritePipeline(tag as Integer, o as LCMS2PipelineMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes pipeline tag.
Notes: Works with kcmsSigAToB0Tag, kcmsSigAToB1Tag, kcmsSigAToB2Tag, kcmsSigBToA0Tag, kcmsSigBToA1Tag, kcmsSigBToA2Tag, kcmsSigDToB0Tag, kcmsSigDToB1Tag, kcmsSigDToB2Tag, kcmsSigDToB3Tag, kcmsSigBToD0Tag, kcmsSigBToD1Tag, kcmsSigBToD2Tag, kcmsSigBToD3Tag, kcmsSigGamutTag, kcmsSigPreview0Tag, kcmsSigPreview1Tag and kcmsSigPreview2Tag.

116.25.76 WriteRawTag(sig as Integer, data as Memoryblock) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes raw tag.
Notes: The RAW version does the same as WriteTag* but without any interpretation of the data. Please note it is fair easy to deal with "cooked" structures, since there are primitives for allocating, deleting and modifying data. For RAW data you are responsible of everything. If you want to deal with a private tag, you may want to write a plug-in instead of messing up with raw data.

sig: Signature of tag to be written
data: memory block holding the data.

Returns true on success, false on error

Those functions allows to read/write directly to the ICC profile any data, without checking anything. As a rule, mixing Raw with cooked doesn't work, so writting a tag as raw and then reading it as cooked without serializing does result into an error. If that is wha you want, you will need to dump the profile to memory or disk and then reopen it.

116.25.77 WriteScreening(o as LCMS2ScreeningMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes screening tag.
Notes: Works with kcmsSigScreeningTag.

116.25.78 WriteSequence(tag as Integer, o as LCMS2SequenceMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes sequence tag.
Notes: Only for kcmsSigProfileSequenceDescTag and kcmsSigProfileSequenceIdTag.

116.25.79 WriteSignature(tag as Integer, o as UInt32) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes a signature tag with the given values.
Notes: Works with kcmsSigColorimetricIntentImageStateTag, kcmsSigPerceptualRenderingIntentGamutTag, kcmsSigSaturationRenderingIntentGamutTag or kcmsSigTechnologyTag.

116.25.80 WriteToneCurve(tag as Integer, o as LCMS2ToneCurveMBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes tone curve tag.
Example:

```
// read a profile
Var f as FolderItem = SpecialFolder.Desktop.Child("myprofile.icc")
Var p as LCMS2ProfileMBS = LCMS2ProfileMBS.OpenProfileFromFile(f)

// find gray level tone curve
Var t as LCMS2ToneCurveMBS = p.ReadToneCurve(LCMS2MBS.kcmsSigGrayTRCTag)
if t<>nil then

// let's make a new one with half of old values
Var values(1000) as single

for i as Integer = 0 to 1000
values(i) = t.EvalToneCurveFloat(i/1000.0) * 0.5
next

// build new curve with that values
Var n as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildTabulatedToneCurve(nil, values)

// write back
if not p.WriteToneCurve(LCMS2MBS.kcmsSigGrayTRCTag, n) then
MessageBox "failed to write tone curve"
end if
end if

// write profile
f = SpecialFolder.Desktop.Child("test.icc")
call p.SaveProfileToFile(f)
```

Notes: Works with kcmsSigBlueTRCTag, kcmsSigGrayTRCTag, kcmsSigGreenTRCTag and kcmsSigRedTRC-Tag.

116.25.81 WriteUcrBg(o as LCMS2UcrBgMBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes UcrBg tag.

116.25.82 Properties

116.25.83 ChannelCount as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of channels used for the colorspace of this profile.
Example:

```
Var p as LCMS2ProfileMBS = LCMS2ProfileMBS.CreateSRGBProfile
MessageBox str(p.ChannelCount)
```

Notes: (Read only property)

116.25.84 ColorSpaceType as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets/Sets the color space used by the given profile, using the ICC convention.
Notes: (Read and Write property)

116.25.85 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The context for this profile.
Notes: Error handling uses it, so you can see which part of your application failed.
(Read only property)

116.25.86 DeviceClass as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets/sets the device class signature from profile header.
Notes: Device Classes:
ÔøººÔøººÔøºº

116.25.90 HeaderCMM as Integer

MBS Images Plugin, Plugin Version: 26.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the CMM field in the header for the Color Management System.
Notes: Value may be e.g. &h6c636d73 for 'lcms'.
(Read only property)

116.25.91 HeaderCreationDateTime as LCMS2DateMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the date and time when profile was created.
Notes: This is a field stored in profile header.
Returns nil on any error.
(Read only property)

116.25.92 HeaderCreator as UInt32

MBS Images Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/set the creator signature as described in the header.
Notes: (Read only property)

116.25.93 HeaderFlags as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set header flags of given ICC profile object.
Notes: The profile flags field does contain flags to indicate various hints for the CMM such as distributed processing and caching options. The least-significant 16 bits are reserved for the ICC. Flags in bit positions 0 and 1 shall be used as indicated below.

Position	Field Length (bits)	Field Contents
0	1	Embedded Profile (kcmsEmbeddedProfileFalse if not embedded, kcmsEmbeddedProfileTrue if embedded in file)
1	1	Profile cannot be used independently from the embedded color data (set to kcmsUseWithEmbeddedDataOnly if true, kcmsUseAnywhere if false)

(Read and Write property)

116.25.94 HeaderManufacturer as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/set the manufacturer signature as described in the header.
Notes: This funcionality is widely superseded by the manufaturer tag. Of use only in elder profiles.
(Read and Write property)

116.25.95 HeaderModel as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/set the model signature as described in the header.
Notes: This funcionality is widely superseded by
the model tag. Of use only in elder profiles.
(Read and Write property)

116.25.96 HeaderProfileID as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/set header profile ID.
Notes: Profile ID must be a 16 byte long string.
(Read and Write property)

116.25.97 IsMatrixShaper as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns whatever a matrix-shaper is present in the profile.
Notes: Note that a profile may hold matrix-shaper and CLUT as well.
Returns true if the profile holds a matrix-shaper, false otherwise.
(Read only property)

116.25.98 Name as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the profile name.
Notes: This is a convenience function. The plugin builds this name from manufacturer, model and description strings.

(Read only property)

116.25.99 PCS as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets/Sets the profile connection space used by the given profile, using the ICC convention.
Notes: (Read and Write property)

116.25.100 ProfileICCversion as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/set the profile ICC version in the same format as it is stored in the header.
Notes: (Read and Write property)

116.25.101 ProfileVersion as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets/Sets the ICC version in profile header.
Notes: The version given as to this function as a float n.m is properly encoded.
(Read and Write property)

116.25.102 RenderingIntent as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets/Sets the profile header rendering intent.
Notes: From the ICC spec: "The rendering intent field shall specify the rendering intent which should be used (or, in the case of a Devicelink profile, was used) when this profile is (was) combined with another profile. In a sequence of more than two profiles, it applies to the combination of this profile and the next profile in the sequence and not to the entire sequence. Typically, the user or application will set the rendering intent dynamically at runtime or embedding time. Therefore, this flag may not have any meaning until the profile is used in some context, e.g. in a Devicelink or an embedded source profile."
(Read and Write property)

116.25.103 TagCount as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns number of tags of a given profile.
Notes: Returns number of tags on success, -1 on error.
(Read only property)

116.25.104 Constants

Info selector.

Constant	Value	Description
kInfoCopyright	3	The copyright string.
kInfoDescription	0	The description string.
kInfoManufacturer	1	The manufacturer string.
kInfoModel	2	The model string.

116.26 class LCMS2ScreeningChannelMBS

116.26.1 class LCMS2ScreeningChannelMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The screening information for one channel.

116.26.2 Methods

116.26.3 Clone as LCMS2ScreeningChannelMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the screening channel object.

116.26.4 Constructor(Frequency as Double = 0.0, ScreenAngle as Double = 0.0, SpotShape as UInt32 = 0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
See also:

- 116.26.5 Constructor(other as LCMS2ScreeningChannelMBS) 17361

116.26.5 Constructor(other as LCMS2ScreeningChannelMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes object with values from other object.
See also:

- 116.26.4 Constructor(Frequency as Double = 0.0, ScreenAngle as Double = 0.0, SpotShape as UInt32 = 0) 17361

116.26.6 Properties

116.26.7 Frequency as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The frequency.
Notes: (Read and Write property)

116.26.8 ScreenAngle as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The screen angle.
Notes: (Read and Write property)

116.26.9 SpotShape as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The spot shape.
Notes: See kcmsSpot* constants.
(Read and Write property)

116.27 class LCMS2ScreeningMBS

116.27.1 class LCMS2ScreeningMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for screening parameters.

116.27.2 Properties

116.27.3 Channels as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of channels.
Notes: (Read and Write property)

116.27.4 Flag as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags for screening.
Notes: See flags kcmsPRINTER_DEFAULT_SCREENS, kcmsFREQUENCE_UNITS_LINES_CM and kcmsFREQUENCE_UNITS_LINES_INCH.
(Read and Write property)

116.27.5 Channel(index as Integer) as LCMS2ScreeningChannelMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The screening information for each channel.
Notes: Index from 0 to 15.
(Read and Write computed property)

116.28 class LCMS2SequenceDescriptionMBS

116.28.1 class LCMS2SequenceDescriptionMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a sequence description.

116.28.2 Properties

116.28.3 AttributeFlags as UInt64

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The attribute flags.
Notes: (Read and Write property)

116.28.4 Description as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The description.
Notes: (Read only property)

116.28.5 DeviceMfg as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The device Mfg.
Notes: (Read and Write property)

116.28.6 DeviceModel as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The device model.
Notes: (Read and Write property)

116.28.7 Manufacturer as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The manufacturer name.
Notes: (Read only property)

116.28.8 Model as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The model string.
Notes: (Read only property)

116.28.9 ProfileID as Memoryblock

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The profile ID.
Notes: 16 bytes and typically the result of a MD5.
(Read only property)

116.28.10 Technology as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The technology value.
Notes: Use one of the following constants: kcmsSigDigitalCamera, kcmsSigFilmScanner, kcmsSigReflectiveScanner, kcmsSigInkJetPrinter, kcmsSigThermalWaxPrinter, kcmsSigElectrophotographicPrinter, kcmsSigElectrostaticPrinter, kcmsSigDyeSublimationPrinter, kcmsSigPhotographicPaperPrinter, kcmsSigFilmWriter, kcmsSigVideoMonitor, kcmsSigVideoCamera, kcmsSigProjectionTelevision, kcmsSigCRTDisplay, kcmsSigPMDisplay, kcmsSigAMDisplay, kcmsSigPhotoCD, kcmsSigPhotoImageSetter, kcmsSigGravure, kcmsSigOffsetLithography, kcmsSigSilkscreen, kcmsSigFlexography, kcmsSigMotionPictureFilmScanner, kcmsSigMotionPictureFilmRecorder, kcmsSigDigitalMotionPictureCamera or kcmsSigDigitalCinemaProjector.
(Read and Write property)

116.29 class LCMS2SequenceMBS

116.29.1 class LCMS2SequenceMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Profile sequence descriptors.
Notes: Profile sequence can be read/written by using cmsReadTag and cmsWriteTag functions.

116.29.2 Methods

116.29.3 Constructor(context as LCMS2ContextMBS, Count as UInt32)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new sequence with the given number of entries.
Example:

```
Var d as new LCMS2SequenceMBS(nil, 5)
MessageBox str(d.Count)
```

Notes: On success the handle property is not zero.

116.29.4 Properties

116.29.5 Count as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of sequence descriptions used in this class.
Notes: (Read only property)

116.29.6 Handle as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

116.29.7 Description(index as Integer) as LCMS2SequenceDescriptionMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sequence descriptions.
Notes: Index from 0 to count-1.
(Read and Write computed property)

116.30 class LCMS2StageMBS

116.30.1 class LCMS2StageMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A pipeline stage.
Example:

```
// list the stage types of a transform pipeline
Var t As LCMS2TransformMBS = LCMS2TransformMBS.CreateTransform(LCMS2ProfileMBS.CreateS-
RGBProfile, LCMS2MBS.kTYPE_RGB_8, LCMS2ProfileMBS.CreateLab4Profile, LCMS2MBS.kTYPE_Lab_DBL,
LCMS2MBS.kINTENT_PERCEPTUAL)
If t = Nil Or t.Lut = Nil Then Return

Var lines() As String
For Each stage As LCMS2StageMBS In t.Lut.Stages
lines.Add "Type " + Hex(stage.Type) + ": " + stage.InputChannels.ToString + " ->" + stage.OutputChan-
nels.ToString + " channels"
Next
MessageBox String.FromArray(lines, EndOfLine)
```

Notes: Stages are single-step operations that can be chained to create pipelines. Actual stage types does include matrices, tone curves, Look-up interpolation and user-defined. There are functions to create new stage types and a plug-in type to allow stages to be saved in multi profile elements tag types. See the plug-in API for further details.

116.30.2 Methods

116.30.3 CLutFloatValues as Double()

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns CLut floating point values.
Notes: Only if stage is from type kcmsSigCLutElemType and CLutHasFloatValues = true.

116.30.4 CLutParamsSamples as UInt32()

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sample counts in the CLut parameters.
Notes: Valid on all kinds of tables.

116.30.5 CLutUInt16Values as UInt16()

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns CLut integer values.
Notes: Only if stage is from type kcmsSigCLutElemType and CLutHasFloatValues = false.

116.30.6 CreateStageWithCLut16bit(Context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains a 16 bits multidimensional lookup table (CLUT).
Notes: Each dimension has same resolution.

Context: Pointer to a user-defined context cargo.
GridPoints: the number of nodes (same for each component).
inputChan: Number of input channels.
outputChan: Number of output channels.

Returns a pipeline stage on success, nil on error.
See also:

- 116.30.7 CreateStageWithCLut16bit(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16 as Memoryblock) as LCMS2StageMBS 17369
- 116.30.8 CreateStageWithCLut16bit(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as UInt16) as LCMS2StageMBS 17370

116.30.7 CreateStageWithCLut16bit(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16 as Memoryblock) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains a 16 bits multidimensional lookup table (CLUT).
Notes: Each dimension has same resolution. The CLUT can be initialized by specifying values in Table parameter. The recommended way is to set Table to nil and use StageSampleCLut16bit with a event, because this way the implementation is independent of the selected number of grid points.

Context: Pointer to a user-defined context cargo.
GridPoints: the number of nodes (same for each component).
inputChan: Number of input channels.
outputChan: Number of output channels.
Table: Memoryblock with a table of UInt16, holding initial values for nodes. If nil the CLUT is initialized to zero.

Returns a pipeline stage on success, nil on error.
Raises exception if table memoryblock is not empty/nil, but has wrong size.
See also:

- 116.30.6 CreateStageWithCLut16bit(Context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS 17369
- 116.30.8 CreateStageWithCLut16bit(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as UInt16) as LCMS2StageMBS 17370

116.30.8 CreateStageWithCLut16bit(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as UInt16) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains a 16 bits multidimensional lookup table (CLUT).
Example:

```
// creates CLUT with 17 grid points, 3 input channels RGB and 4 output channels CMYK

Var data() as UInt16

// fill all the data into the table upfront, RGB to CMYK

Var c,m,y,k as Double

for Grid0 as Integer = 0 to 16 // 17 grid, 1st input
Var r as Double = Grid0 / 16
for Grid1 as Integer = 0 to 16 // 17 grid, 2nd input
Var g as Double = Grid0 / 16
for Grid2 as Integer = 0 to 16 // 17 grid, 3rd input
Var b as Double = Grid0 / 16
```

```
// some bad conversion

c = r
m = g
y = b
k = 0

// fill array with values
data.Add 65535 * c
data.Add 65535 * m
data.Add 65535 * y
data.Add 65535 * k

next
next
next

Var CLUT as LCMS2StageMBS = LCMS2StageMBS.CreateStageWithCLut16bit(nil, 17, 3, 4, data)
break
```

Notes: Each dimension has same resolution. The CLUT can be initialized by specifying values in Table parameter.

Context: Pointer to a user-defined context cargo.
GridPoints: the number of nodes (same for each component).
inputChan: Number of input channels.
outputChan: Number of output channels.
values: array of UInt16, holding initial values for nodes.

Returns a pipeline stage on success, nil on error.
Raises exception if values array is not empty/nil, but has wrong size.

116.30.9 CreateStageWithCLut16bitGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to CreateStageWithCLut16bit, but it allows different granularity on each CLUT dimension.
Notes: Context: user-defined context cargo.
clutPoints: Memoryblock with array [inputChan] of UInt32 holding the number of nodes for each component.
inputChan: Number of input channels.
outputChan: Number of output channels.

Returns a pipeline stage on success, nil on error.
See also:

- 116.30.9 CreateStageWithCLut16bitGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS 17371

- 116.30.11 CreateStageWithCLut16bitGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16() as UInt16) as LCMS2StageMBS 17373

116.30.11 CreateStageWithCLut16bitGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16() as UInt16) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to CreateStageWithCLut16bit, but it allows different granularity on each CLUT dimension.
Example:

```
// create CLUT with 15 grid points for 1st channel, 16 for 2nd channel and 17 for 3rd channel
Var ChannelGridPoints(2) as UInt32
ChannelGridPoints(0) = 15
ChannelGridPoints(1) = 16
ChannelGridPoints(2) = 17

Var noData() as UInt16 = nil
Var CLUT as LCMS2StageMBS = LCMS2StageMBS.CreateStageWithCLut16bitGranular(nil, ChannelGridPoints, 3, 4, noData)

break
```

Notes: Context: user-defined context cargo.
clutPoints: Array [inputChan] of UInt32 holding the number of nodes for each component.
inputChan: Number of input channels.
outputChan: Number of output channels.
Table: Table of UInt16, holding initial values for nodes. If nil/empty the CLUT is initialized to zero.

Returns a pipeline stage on success, nil on error.
Raises exception if values array is not empty/nil, but has wrong size.

- 116.30.15 CreateStageWithCLutFloat(Context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as single) as LCMS2StageMBS 17375

116.30.14 CreateStageWithCLutFloat(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as Double) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains a float multidimensional lookup table (CLUT).
Example:

```
// creates CLUT with 17 grid points, 3 input channels and 4 output channels
Var noData() as Double = nil
Var CLUT as LCMS2StageMBS = LCMS2StageMBS.CreateStageWithCLutFloat(nil, 17, 3, 4, noData)

break
```

Notes: Each dimension has same resolution. The CLUT can be initialized by specifying values in Table parameter.

Context: user-defined context cargo.
GridPoints: the number of nodes (same for each component).
inputChan: Number of input channels.
outputChan: Number of output channels.
values: Array of double values, holding initial values for nodes.

Returns a pipeline stage on success, nil on error.
Raises exception if values array is not empty/nil, but has wrong size.

- 116.30.15 CreateStageWithCLutFloat(Context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as single) as LCMS2StageMBS 17375

116.30.15 CreateStageWithCLutFloat(Context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as single) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains a float multidimensional lookup table (CLUT).
Example:

```
// creates CLUT with 17 grid points, 3 input channels RGB and 4 output channels CMYK

Var data() as Single

// fill all the data into the table upfront, RGB to CMYK

Var c,m,y,k as Double

for Grid0 as Integer = 0 to 16 // 17 grid, 1st input
Var r as Double = Grid0 / 16
for Grid1 as Integer = 0 to 16 // 17 grid, 2nd input
Var g as Double = Grid0 / 16
for Grid2 as Integer = 0 to 16 // 17 grid, 3rd input
Var b as Double = Grid0 / 16

// some bad conversion

c = r
m = g
y = b
k = 0

// fill array with values
data.Add c
data.Add m
data.Add y
data.Add k

next
next
next

Var CLUT as LCMS2StageMBS = LCMS2StageMBS.CreateStageWithCLutFloat(nil, 17, 3, 4, data)

break
```

Notes: Each dimension has same resolution. The CLUT can be initialized by specifying values in Table parameter.

Context: user-defined context cargo.
GridPoints: the number of nodes (same for each component).
inputChan: Number of input channels.
outputChan: Number of output channels.
values: Array of single (Float32) values, holding initial values for nodes.

Returns a pipeline stage on success, nil on error.
Raises exception if values array is not empty/nil, but has wrong size.

- 116.30.14 CreateStageWithCLutFloat(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as Double) as LCMS2StageMBS 17375

116.30.16 CreateStageWithCLutFloatGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to CreateStageWithCLutFloat, but it allows different granularity on each CLUT dimension.
Notes: Context: user-defined context cargo.
clutPoints: Memoryblock with Array of UInt32 [inputChan] holding the number of nodes for each component.
inputChan: Number of input channels.
outputChan: Number of output channels.

Returns a pipeline stage on success, nil on error.
See also:

- 116.30.17 CreateStageWithCLutFloatGranular(context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableSingle as Memoryblock) as LCMS2StageMBS 17377
- 116.30.18 CreateStageWithCLutFloatGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableSingle() as Single) as LCMS2StageMBS 17378

116.30.17 CreateStageWithCLutFloatGranular(context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableSingle as Memoryblock) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to CreateStageWithCLutFloat, but it allows different granularity on each CLUT dimension.

Notes: Context: user-defined context cargo.
clutPoints: Memoryblock with Array of UInt32 [inputChan] holding the number of nodes for each component.
inputChan: Number of input channels.
outputChan: Number of output channels.
Table: a pointer to a table of Singles (Float32), holding initial values for nodes.

Returns a pipeline stage on success, nil on error.
Raises exception if table memoryblock is not empty/nil, but has wrong size.
See also:

- 116.30.16 CreateStageWithCLutFloatGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS 17377
- 116.30.18 CreateStageWithCLutFloatGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableSingle() as Single) as LCMS2StageMBS 17378

116.30.18 CreateStageWithCLutFloatGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableSingle() as Single) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to CreateStageWithCLutFloat, but it allows different granularity on each CLUT dimension.
Example:

```
// create CLUT with 15 grid points for 1st channel, 16 for 2nd channel and 17 for 3rd channel
Var ChannelGridPoints(2) as UInt32
ChannelGridPoints(0) = 15
ChannelGridPoints(1) = 16
ChannelGridPoints(2) = 17

Var noData() as Single = nil
Var CLUT as LCMS2StageMBS = LCMS2StageMBS.CreateStageWithCLutFloatGranular(nil, ChannelGridPoints, 3, 4, noData)
Break
```

Notes: Context: user-defined context cargo.
clutPoints: Array of UInt32 [inputChan] holding the number of nodes for each component.
inputChan: Number of input channels.
outputChan: Number of output channels.
Table: a table of Singles (Float32), holding initial values for nodes.

Returns a pipeline stage on success, nil on error.
Raises exception if values array is not empty/nil, but has wrong size.

See also:

- 116.30.16 CreateStageWithCLutFloatGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS 17377

- 116.30.17 CreateStageWithCLutFloatGranular(context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableSingle as Memoryblock) as LCMS2StageMBS 17377

116.30.19 CreateStageWithIdentity(context as LCMS2ContextMBS, Channels as UInt32) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an empty (identity) stage that does no operation.
Notes: May be needed in order to save the pipeline as AToB/BToA tags in ICC profiles.

Context: user-defined context cargo.
Channels: Number of channels

Returns a pipeline stage on success, nil on error.

116.30.20 CreateStageWithMatrix(context as LCMS2ContextMBS, Rows as UInt32, Cols as UInt32, Matrix as Memoryblock, Offset as Memoryblock = nil) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains a matrix plus an optional offset.
Notes: Note that Matrix is specified in double precision, whilst CLUT has only float precision. That is because an ICC profile can encode matrices with far more precision that CLUTS.

Context: user-defined context cargo.
Rows, Cols: Dimensions of matrix
Matrix: Memoryblock with a matrix of [Rows, Cols] (double values, 8 byte per value)
Offset: Memoryblock with a vector of [Cols] , nil if no offset is to be applied.

Returns a pipeline stage on success, nil on error.

116.30.21 CreateStageWithToneCurves(context as LCMS2ContextMBS, ChannelCount as Integer) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains n channels tone curves, one per channel.
Notes: Setting Curves to nil forces identity (1:1) curves to be used. The stage keeps and owns a private copy of the tone curve objects.

Context: user-defined context cargo.
Curvess: Optionally, an array of tone curves objects, one per channel.

Returns a pipeline stage on success, nil on error.
See also:

- 116.30.22 CreateStageWithToneCurves(context as LCMS2ContextMBS, Channels() as LCMS2ToneCurveMBS) as LCMS2StageMBS 17380

116.30.22 CreateStageWithToneCurves(context as LCMS2ContextMBS, Channels() as LCMS2ToneCurveMBS) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains n channels tone curves, one per channel.
Notes: Setting Curves to nil forces identity (1:1) curves to be used. The stage keeps and owns a private copy of the tone curve objects.

Context: user-defined context cargo.
Curvess: Optionally, an array of tone curves objects, one per channel.

Returns a pipeline stage on success, nil on error.
See also:

- 116.30.21 CreateStageWithToneCurves(context as LCMS2ContextMBS, ChannelCount as Integer) as LCMS2StageMBS 17380

116.30.23 CubeSize(clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32 = 1) as UInt32

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the number of values needed for a CLUT with given dimensions.
Notes: This is a helper function, so you can know how big the table for CreateStageWithCLut16bitGranular

or CreateStageWithCLutFloatGranular must be.
See also:

- 116.30.24 CubeSize(GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32 = 1) as UInt32 17381

116.30.24 CubeSize(GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32 = 1) as UInt32

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the number of values needed for a CLUT with given dimensions.
Notes: This is a helper function, so you can know how big the table for CreateStageWithCLut16bit or CreateStageWithCLutFloat must be.
See also:

- 116.30.23 CubeSize(clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32 = 1) as UInt32 17380

116.30.25 MatrixOffsets as Double()

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns array with matrix offsets.
Notes: Only if stage is from type kcmsSigMatrixElemType and.

116.30.26 MatrixValues as Double()

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns array with matrix values.
Notes: Only if stage is from type kcmsSigMatrixElemType and.

116.30.27 SampleCLut16bit(sampler as LCMS2StageSamplerMBS, Flags as Integer = 0) as boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Iterate on all nodes of a given CLUT stage, calling a 16-bit sampler on each node.
Notes: Those functions (SampleCLut16bit and SampleCLutFloat) are provided to populate CLUT stages in a way that is independent of the number of nodes. The programmer has to provide an object with event that will be invoked on each CLUT node. LittleCMS does fill the In parameter with the coordinates that addresses the node. It also fills the Out parameter with CLUT contents on the node, so this can be used

also to get CLUT contents after reading it from an ICC profile. In this case, a special flag can be specified to make sure the CLUT is being accessed as read-only and not modified (kSamplerInspect).

Works only with CLut stage objects and returns false if the object is not a Clut.

Sampler: The object to receive events.
Flags: Bit-field flags for different options. Only kSamplerInspect is currently supported.

Returns true on success, false on error.

116.30.28 SampleCLutFloat(sampler as LCMS2StageSamplerMBS, Flags as Integer = 0) as boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Iterate on all nodes of a given CLUT stage, calling a float sampler on each node.
Notes: Those functions (SampleCLut16bit and SampleCLutFloat) are provided to populate CLUT stages in a way that is independent of the number of nodes. The programmer has to provide an object with event that will be invoked on each CLUT node. LittleCMS does fill the In parameter with the coordinates that addresses the node. It also fills the Out parameter with CLUT contents on the node, so this can be used also to get CLUT contents after reading it from an ICC profile. In this case, a special flag can be specified to make sure the CLUT is being accessed as read-only and not modified (kSamplerInspect).

Works only with CLut stage objects and returns false if the object is not a Clut.

Sampler: The object to receive events.
Flags: Bit-field flags for different options. Only kSamplerInspect is currently supported.

Returns true on success, false on error.

116.30.29 ToneCurves as LCMS2ToneCurveMBS()

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns array with tone curves.
Notes: Only if stage is from type kcmsSigCurveSetElemType and.

116.30.30 Properties

116.30.31 CLutEntries as Integer

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of entries in the CLut.
Notes: Only if stage is from type kcmsSigCLutElemType.
(Read only property)

116.30.32 CLutHasFloatValues as Boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this CLut has floating point values.
Notes: Only if stage is from type kcmsSigCLutElemType.
(Read only property)

116.30.33 CLutParamsInputs as Integer

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of input parameters for in the CLut parameters.
Notes: Value is <>1 only in 3D interpolation.
(Read only property)

116.30.34 CLutParamsOutputs as Integer

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of output parameters for in the CLut parameters.
Notes: Value is <>1 only in 3D interpolation.
(Read only property)

116.30.35 Data as Ptr

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The raw stage data.
Notes: (Read only property)

116.30.36 Handle as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

116.30.37 InputChannels as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of input channels of a given stage object.
Notes: (Read only property)

116.30.38 NextItem as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns next stage in pipeline list, or nil if end of list.
Notes: Intended for iterators.
(Read only property)

116.30.39 OutputChannels as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of output channels of a this stage object.
Notes: (Read only property)

116.30.40 Type as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the type of a given stage object.
Notes: Use this type constants: kcmsSigCurveSetElemType, kcmsSigMatrixElemType, kcmsSigCLutElemType, kcmsSigBAcsElemType, kcmsSigEAcsElemType, kcmsSigXYZ2LabElemType, kcmsSigLab2XYZElemType, kcmsSigNamedColorElemType, kcmsSigLabV2toV4, kcmsSigLabV4toV2, kcmsSigIdentityElemType.
(Read only property)

116.30.41 Constants

Constants

Constant	Value	Description
kSamplerInspect	&h01000000	One of the flags for Sampling. Use this flag to prevent changes being written to destination when using SampleCLutFloat or SampleCLut16bit.

116.31 class LCMS2StageSamplerMBS

116.31.1 class LCMS2StageSamplerMBS

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for getting sampler callback.
Blog Entries

- MBS Real Studio Plugins, version 12.1pr1

116.31.2 Methods

116.31.3 SliceSpaceFloat(Inputs as UInt32, values() as UInt32) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Slices target space executing a floating point callback of type cmsSAMPLERFLOAT.
Notes: Parameters:
Inputs: Number of components in target space.
clutPoints: Array [nInputs] holding the division slices for each component.
Calls Floating point sample event to execute on each slice.

Returns true on success, false on error.

116.31.4 SliceSpaceInteger(Inputs as UInt32, values() as UInt32) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Slices target space executing a 16 bits callback of type cmsSAMPLER16.
Notes: Parameters:
Inputs: Number of components in target space.
values: Array [nInputs] holding the division slices for each component.

Calls 16 bit Sample event to execute on each slice.

Returns true on success, false on error.

116.31.5 Events

116.31.6 SamplerFloat(InValues as Ptr, OutValues as Ptr, InputChannels as Integer, OutputChannels as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sampler event called by SampleCLutFloat.
Notes: In and Out point to 32 bit float values, so please use Single property to access.
InputChannels and OutputChannels are the number of channels.

116.31.7 SamplerInteger(InValues as Ptr, OutValues as Ptr, InputChannels as Integer, OutputChannels as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sampler event called by SampleCLut16bit.
Notes: In and Out point to 16 bit unsigned integer values, so please use UInt16 property to access.
InputChannels and OutputChannels are the number of channels.

116.32 class LCMS2ToneCurveMBS

116.32.1 class LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a tone curve or gamma.
Example:

```
// build a gamma 2.2 curve, evaluate it and invert it
Var curve As LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(Nil, 2.2)

Var lines() As String
For i As Integer = 0 To 4
Var v As Single = i / 4
lines.Add Format(v, "0.00") + " ->" + Format(curve.EvalToneCurveFloat(v), "0.000")
Next

Var inverse As LCMS2ToneCurveMBS = curve.Reverse
MessageBox String.FromArray(lines, EndOfLine) + EndOfLine + _
"Estimated gamma: " + Format(curve.EstimateGamma, "0.00") + EndOfLine + _
"Inverse of 0.5: " + Format(inverse.EvalToneCurveFloat(0.5), "0.000")
```

116.32.2 Methods

116.32.3 BuildGamma(context as LCMS2ContextMBS, gamma as Double) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Simplified wrapper to BuildParametricToneCurve.
Example:

```
Var t as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(nil, 2.2)
MessageBox str(t.EstimateGamma)
```

Notes: Builds a parametric curve of type 1.

Context: user-defined context object.
Gamma: Value of gamma exponent

Returns a newly created tone curve object on success, nil on error.

116.32.4 BuildParametricToneCurve(context as LCMS2ContextMBS, Type as Integer, params() as Double) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds a parametric tone curve.
Notes: Parameters:
context: user-defined context object.
Type: Number of parametric tone curve. (see LCMS2 manual)
Params: Array of tone curve parameters.

Returns a newly created tone curve object on success, nil on error.

116.32.5 BuildSegmentedToneCurve(context as LCMS2ContextMBS, Segments() as LCMS2CurveSegmentMBS) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds a tone curve from given segment information.
Notes: context: Puser-defined context object
Segments: Array of segments

Returns a newly created tone curve object on success, nil on error.

116.32.6 BuildTabulatedToneCurve(context as LCMS2ContextMBS, values() as Single) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds a tone curve based on a table of floating point values.
Example:

```
Var values(-1) as Single

for i as Integer = 0 to 9
values.Add 0.5 + i*0.02
next
```

```
Var t as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildTabulatedToneCurve(nil, values)

Var items(-1) as string
for i as Integer = 0 to 10
Var v as Single = t.EvalToneCurveFloat(i/10.0)
items.Add str(i/10.0)+" ->"+str(v)
next

MessageBox Join(items,EndOfLine)
```

Notes: Tone curves built with this function are not restricted to 0...1.0 domain.

context: user-defined context object.
values: Array of samples. Domain of samples is 0...1.0

Returns a newly created tone curve object on success, nil on error.
See also:

- 116.32.7 BuildTabulatedToneCurve(context as LCMS2ContextMBS, values() as UInt16) as LCMS2ToneCurveMBS 17390

116.32.7 BuildTabulatedToneCurve(context as LCMS2ContextMBS, values() as UInt16) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds a tone curve based on a table of 16-bit values. Tone curves built with this function are restricted to 0...1.0 domain.
Notes: context: user-defined context object.
values: Array of samples. Domain is 0...65535 (UInt32).

Returns a newly created tone curve object on success, nil on error.
See also:

- 116.32.6 BuildTabulatedToneCurve(context as LCMS2ContextMBS, values() as Single) as LCMS2ToneCurveMBS 17389

116.32.8 EstimatedTable as UInt16()

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tone curves do maintain a shadow low,Äêresolution tabulated representation of the curve. This function returns an array with this table.

116.32.9 EstimatedTableEntries as UInt32

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tone curves do maintain a shadow low,Äêresolution tabulated representation of the curve. This function returns the number of entries such table has.

116.32.10 EstimateGamma(Precision as Double = 0.01) as Double

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Estimates the apparent gamma of the tone curve by using least squares fitting to a pure exponential expression in the f(ùë •) = ùë • .
Example:

```
Var t as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(nil, 2.2)
MessageBox str(t.EstimateGamma)
```

Notes: Precision: The maximum standard deviation allowed on the residuals, 0.01 is a fair value, set it to a big number to fit any curve, mo matter how good is the fit.

Returns the estimated gamma at given precision, or -1.0 if the fitting has less precision.

116.32.11 EvalToneCurve16(value as UInt16) as UInt16

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates the given 16-bit number across the given tone curve.
Notes: This function is significantly faster than EvalToneCurveFloat, since it uses a pre-computed 16-bit lookup table.
Value: 16 bit Number to evaluate
Returns operation result

116.32.12 EvalToneCurveFloat(value as Single) as Single

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates the given floating-point number across the given tone curve.
Example:

```
Var t1 as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(nil, 1.0)
Var t2 as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(nil, 2.0)
Var t3 as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(nil, 3.0)
```

```
Var v1 as Double = t1.EvalToneCurveFloat(0.5)
Var v2 as Double = t2.EvalToneCurveFloat(0.5)
Var v3 as Double = t3.EvalToneCurveFloat(0.5)

MessageBox str(v1)+" "+str(v2)+" "+str(v3)
```

Notes: Value: floating point number to evaluate
Returns the result.

116.32.13 IsDescending as Boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if f(0) >f(1) , false otherwise.
Notes: Does not take unbounded parts into account.

116.32.14 IsLinear as Boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an estimation of cube being an identity (1:1) in the [0..1] domain.
Notes: Does not take unbounded parts into account. This is just a coarse approximation, with no mathematical validity.

116.32.15 IsMonotonic as Boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an estimation of monotonicity of curve in the [0..1] domain.
Example:

```
Var t as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(nil, 2.2)
MessageBox "IsMonotonic: "+str(t.IsMonotonic)
```

Notes: Does not take unbounded parts into account. This is just a coarse approximation, with no mathematical validity.

116.32.16 IsMultisegment as Boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the tone curve contains more than one segment, false if it has only one segment.

116.32.17 JoinToneCurve(context as LCMS2ContextMBS, X as LCMS2ToneCurveMBS, Y as LCMS2ToneCurveMBS, nPoints as UInt32) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Composites two tone curves in the form ùëå,àí1(ùëã(ùë°)).
Notes: context: user-defined context object.
X, Y : Tone curve objects.
nPoints: Sample rate for resulting tone curve.

Returns a newly created tone curve object on success, nil on error.

116.32.18 ParametricType as Integer

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the parametric type.

116.32.19 Reverse as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a tone curve that is the inverse f-1 of given tone curve.
Notes: Returns a newly created tone curve object on success, nil on error.
See also:

- 116.32.20 Reverse(nResultSamples as Integer) as LCMS2ToneCurveMBS 17393

116.32.20 Reverse(nResultSamples as Integer) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a tone curve that is the inverse f-1 of given tone curve.
Notes: In the case it couldn't be analytically reversed, a tablulated curve of nResultSamples is created.
nResultSamples: Number of samples to use in the case origin tone curve couldn't be analytically reversed

Returns a newly created tone curve object on success, nil on error.
See also:

- 116.32.19 Reverse as LCMS2ToneCurveMBS 17393

116.32.21 Smooth(lambda as Double) as Boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Smoothes tone curve according to the lambda parameter.
Notes: Lambda: degree of smoothing.
Returns true on success, false on error.

116.32.22 Properties

116.32.23 Handle as Integer

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

116.33 class LCMS2TransformMBS

116.33.1 class LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a LCMS 2.x transformation.
Example:

```
// convert a picture from sRGB to a CMYK profile and back to see the result on screen
Var pic As Picture = Picture.Open(SpecialFolder.Desktop.Child("test.jpg"))
Var srgb As LCMS2ProfileMBS = LCMS2ProfileMBS.CreateSRGBProfile
Var cmyk As LCMS2ProfileMBS = LCMS2ProfileMBS.OpenProfileFromFile(SpecialFolder.Desktop.Child("ISO-coated_v2_eci.icc"))
If cmyk = Nil Then Return

Var toCMYK As LCMS2TransformMBS = LCMS2TransformMBS.CreateTransform(srgb, LCMS2MBS.kTYPE_RGB_8, cmyk, LCMS2MBS.kTYPE_CMYK_8, LCMS2MBS.kINTENT_PERCEPTUAL)
Var toRGB As LCMS2TransformMBS = LCMS2TransformMBS.CreateTransform(cmyk, LCMS2MBS.kTYPE_CMYK_8, srgb, LCMS2MBS.kTYPE_RGB_8, LCMS2MBS.kINTENT_PERCEPTUAL)

Var rgbBitmap As New LCMS2BitmapMBS(pic)
Var cmykBitmap As New LCMS2BitmapMBS(pic.Width, pic.Height, LCMS2MBS.kTYPE_CMYK_8)
Var resultBitmap As New LCMS2BitmapMBS(pic.Width, pic.Height, LCMS2MBS.kTYPE_RGB_8)

If toCMYK.Transform(rgbBitmap, cmykBitmap) And toRGB.Transform(cmykBitmap, resultBitmap) Then
Var proof As Picture = resultBitmap.Picture
// show proof in a Canvas or ImageViewer
End If
```

116.33.2 Methods

116.33.3 ChangeBuffersFormat(InputFormat as UInt32, OutputFormat as UInt32) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function does change the encoding of buffers in a yet-existing transform.
Notes: Not all transforms can be changed, cmsChangeBuffersFormat only works on transforms created originally with at least 16 bits of precision. This function is provided for backwards compatibility and should be avoided whenever possible, as it prevents transform optimization.

InputFormat: A bit-field format specifier as described in Formatters section.
OutputFormat: A bit-field format specifier as described in Formatters section.

Returns true on success and false on failure.

116.33.4 CreateExtendedTransform(context as LCMS2ContextMBS, Profiles() as LCMS2ProfileMBS, BPC() as boolean, Intents() as UInt32, AdaptationStates() as Double, GamutProfile as LCMS2ProfileMBS, GamutPCSposition as UInt32, InputFormat as UInt32, OutputFormat as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extended form of multiprofile color transform creation, exposing all parameters for each profile in the chain.
Notes: All other transform cration functions are wrappers to this call.

Parameters:
context: Pointer to a user-defined context cargo.
Profiles: Array of handles to open profile objects.
BPC: Array of black point compensation states
GamutProfile: A profile holding gamut information for gamut check. Only used if cmsFLAGS_GAMUTCHECK specified. Set to nil for no gamut check.
GamutPCSPosition: Position in the chain of Lab/XYZ PCS to check against gamut profile Only used if cmsFLAGS_GAMUTCHECK specified.
InputFormat: Input format.
OutputFormat: Output format.
Intents: An array holding the intent codes.
Flags: Some flags to control it.

Returns a transform object on success, NULL on error.

See also cmsCreateExtendedTransform in the LCMS2 manual.

116.33.5 CreateMultiprofileTransform(context as LCMS2ContextMBS, Profiles() as LCMS2ProfileMBS, InputFormat as UInt32, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a multi profile transformation.
Notes: User passes in an array of handles to open profiles. The returned color transform do "smelt" all profiles in a single devicelink. Color spaces must be paired with the exception of Lab/XYZ, which can be interchanged.

context: Optional context object.
Profiles: Array of open profile objects.
InputFormat: A bit-field format specifier as described in Formatters section.
OutputFormat: A bit-field format specifier as described in Formatters section.
Intent: The intent code, as described in Intents section.
Flags: A combination of bit-field of kcmsFLAGS_* constants.

Returns a transform object on success, nil on error.
See also:

- 116.33.6 CreateMultiprofileTransform(Profiles() as LCMS2ProfileMBS, InputFormat as UInt32, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS 17397

116.33.6 CreateMultiprofileTransform(Profiles() as LCMS2ProfileMBS, InputFormat as UInt32, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a multi profile transformation.
Notes: User passes in an array of handles to open profiles. The returned color transform do "smelt" all profiles in a single devicelink. Color spaces must be paired with the exception of Lab/XYZ, which can be interchanged.

context: Optional context object.
Profiles: Array of open profile objects.
InputFormat: A bit-field format specifier as described in Formatters section.
OutputFormat: A bit-field format specifier as described in Formatters section.
Intent: The intent code, as described in Intents section.
Flags: A combination of bit-field of kcmsFLAGS_* constants.

Returns a transform object on success, nil on error.
See also:

- 116.33.5 CreateMultiprofileTransform(context as LCMS2ContextMBS, Profiles() as LCMS2ProfileMBS, InputFormat as UInt32, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS 17397

116.33.7 CreateProofingTransform(context as LCMS2ContextMBS, InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Proofing as LCMS2ProfileMBS, Intent as UInt32, ProofingIntent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Same as CreateTransform(), but including soft-proofing.
Notes: A proofing transform does emulate the colors that would appear as the image were rendered on a specific device. That is, for example, with a proofing transform I can see how will look a photo of my little daughter if rendered on my HP printer. Since most printer profiles does include some sort of gamut-remapping, it is likely colors will not look as the original. Using a proofing transform, it can be done by using the appropriate function. Note that this is an important feature for final users, it is worth of all color-management stuff if the final media is not cheap.

The obtained transform emulates the device described by the "Proofing" profile. Useful to preview final result without rendering to the physical medium. To enable proofing and gamut check you need to include following flags:

cmsFLAGS_GAMUTCHECK: Color out of gamut are flagged to a fixed color defined by the function kcmsSetAlarmCodes
cmsFLAGS_SOFTPROOFING: does emulate the Proofing device.

context: Optional context object.
InputProfile: A profile object capable to work in input direction
InputFormat: A bit-field format specifier as described in Formatters section.
OutputProfile: A profile object capable to work in output direction
OutputFormat: A bit-field format specifier as described in Formatters section.
Intent: The intent code.
ProofingIntent: The intent code.
Flags: A combination of bit-field constants described in Table 42.

Returns transform object on success, nil on error.

- 116.33.7 CreateProofingTransform(context as LCMS2ContextMBS, InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Proofing as LCMS2ProfileMBS, Intent as UInt32, ProofingIntent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS 17398

116.33.9 CreateTransform(context as LCMS2ContextMBS, InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a color transform for translating bitmaps.
Notes: context: Optional, the context object.
InputProfile: A profile object capable to work in input direction
InputFormat: A bit-field format specifier as described in Formatters section.
OutputProfile: A profile object capable to work in output direction
OutputFormat: A bit-field format specifier as described in Formatters section.
Intent: The intent code, as described in Intents section.
Flags: A combination of bit-field kcmsFLAGS_* constants.

Returns a transform object on success, NULL on error.
See also:

- 116.33.10 CreateTransform(InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS 17400

116.33.10 CreateTransform(InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a color transform for translating bitmaps.
Notes: context: Optional, the context object.
InputProfile: A profile object capable to work in input direction
InputFormat: A bit-field format specifier as described in Formatters section.
OutputProfile: A profile object capable to work in output direction
OutputFormat: A bit-field format specifier as described in Formatters section.
Intent: The intent code, as described in Intents section.
Flags: A combination of bit-field kcmsFLAGS_* constants.

Returns a transform object on success, NULL on error.
See also:

- 116.33.9 CreateTransform(context as LCMS2ContextMBS, InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS 17400

116.33.11 ToDeviceLink(Version as Double, Flags as UInt32) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates a device-link profile from a given color transform.
Notes: This profile can then be used by any other function accepting profile handle. Depending on the specified version number, the implementation of the devicelink may vary. Accepted versions are in range 1.0...4.3

Version: The target devicelink version number.
Flags: A combination of bit-field constants kcmsFLAGS_*.

Returns an ICC profile object on success, nil on error.

116.33.12 Transform(bitmap as LCMS2BitmapMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates bitmaps according of parameters setup when creating the color transform.
Notes: bitmap: the input and output bitmap.

Returns true on success.
Size of input and output bitmaps must match.
Please make sure RowBytes is either zero for both (block mode) or is correct (row by row mode).
Please make sure input and output color space types of transform match the one in the bitmap.
See also:

- 116.33.13 Transform(inBitmap as LCMS2BitmapMBS, outBitmap as LCMS2BitmapMBS) as boolean 17401
- 116.33.14 Transform(InputBuffer as Ptr, OutputBuffer as Ptr, Size as UInt32) as boolean 17402

116.33.13 Transform(inBitmap as LCMS2BitmapMBS, outBitmap as LCMS2BitmapMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function translates bitmaps according of parameters setup when creating the color transform.
Notes: inBitmap: the input bitmap.
outBitmap: the output bitmap.

Returns true on success.
Size of input and output bitmaps must match.
Please make sure RowBytes is either zero for both (block mode) or is correct (row by row mode).
Please make sure input and output color space types of transform match the those in the bitmaps.
See also:

- 116.33.12 Transform(bitmap as LCMS2BitmapMBS) as boolean 17401
- 116.33.14 Transform(InputBuffer as Ptr, OutputBuffer as Ptr, Size as UInt32) as boolean 17402

116.33.14 Transform(InputBuffer as Ptr, OutputBuffer as Ptr, Size as UInt32) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function translates bitmaps according of parameters setup when creating the color transform.
Notes: InputBuffer: A pointer to the input bitmap.
OutputBuffer: A pointer to the output bitmap.
Size: the number of PIXELS to be transformed.

Returns true on success.
See also:

- 116.33.12 Transform(bitmap as LCMS2BitmapMBS) as boolean 17401
- 116.33.13 Transform(inBitmap as LCMS2BitmapMBS, outBitmap as LCMS2BitmapMBS) as boolean 17401

116.33.15 TransformLineStride(inBitmap as Ptr, outBitmap as Ptr, PixelsPerLine as UInt32, LineCount as UInt32, BytesPerLineIn as UInt32, BytesPerLineOut as UInt32, BytesPerPlaneIn as UInt32, BytesPerPlaneOut as UInt32) as boolean

MBS Images Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates bitmaps with complex organization.
Notes: Each bitmap may contain several lines, and every may have padding. The distance from one line to the next one is BytesPerLine { In/Out } . In planar formats, each line may hold several planes, each plane may have padding. Padding of lines and planes should be same across all bitmap. I.e. all lines in same bitmap have to be padded in same way. This function may be more efficient that repeated calls to Transform(), especially when customized plug-ins are being used.

Parameters:
InputBuffer: A pointer to the input bitmap

OutputBuffer: A pointer to the output bitmap.
PixelsPerLine: The number of pixels for line, which is same on input and in output.
LineCount: The number of lines, which is same on input and output
BytesPerLine { In,Out } : The distance in bytes from one line to the next one.
BytesPerPlaneIn { In,Out } : The distance in bytes from one plane to the next one inside a line. Only applies in planar formats.

Returns true on success.

116.33.16 TransformLineStrideMT(inBitmap as Ptr, outBitmap as Ptr, PixelsPerLine as UInt32, LineCount as UInt32, BytesPerLineIn as UInt32, BytesPerLineOut as UInt32, BytesPerPlaneIn as UInt32, BytesPerPlaneOut as UInt32, ThreadCount as Integer = 1) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates bitmaps with complex organization.
Notes: Same as TransformLineStride, but with thread support.

ThreadCount: New in MBS Plugin 20.0. If value is zero, we do work on the calling thread. If value is 1, we start a new preemptive thread to do the work and yield on the Xojo thread. If value is >1, we create that many threads and do the split the work to those threads.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

116.33.17 TransformMT(bitmap as LCMS2BitmapMBS, ThreadCount as Integer = 1) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates bitmaps according of parameters setup when creating the color transform.
Notes: Same as Transform, but with thread support.

ThreadCount: New in MBS Plugin 20.0. If value is zero, we do work on the calling thread. If value is 1, we start a new preemptive thread to do the work and yield on the Xojo thread. If value is >1, we create that many threads and do the split the work to those threads.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

116.33.20 TransformRGB(c as color) as color

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to convert one RGB color.
Notes: Works for input/output data with Float (4 or 8 byte) or Integer (1, 2 or 4 bytes).

116.33.21 TransformStride(inBitmap as Ptr, outBitmap as Ptr, size as UInt32, Stride as UInt32) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function translates bitmaps according of parameters setup when creating the color transform.
Notes: On planar-organized buffers, the parameter stride specifies the separation between planes, which may be different of the number of pixels to transform. The main application of this function is when several threads are transforming pixels from different zones of same planar buffer. Otherwise it is identical to other Transform functions.

InputBuffer: A pointer to the input bitmap.
OutputBuffer: A pointer to the output bitmap.
Size: the number of PIXELS to be transformed.
Stride: Plane separation on planar formats

Returns true on success.

116.33.22 TransformStrideMT(inBitmap as Ptr, outBitmap as Ptr, size as UInt32, Stride as UInt32) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates bitmaps with complex organization.
Notes: Same as TransformLineStride, but with thread support.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

116.33.23 Properties

116.33.24 AdaptationState as Double

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The adaptation state.
Notes: (Read only property)

116.33.25 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The context object.
Notes: (Read and Write property)

116.33.26 EntryColorSpace as Integer

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The entry colorspace.
Notes: (Read only property)

116.33.27 EntryWhitePoint as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The entry white points.
Notes: Only for information, so plugin may return a copy of the data.
(Read only property)

116.33.28 ExitColorSpace as Integer

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exit colorspace.
Notes: (Read only property)

116.33.29 ExitWhitePoint as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exit white points.
Notes: Only for information, so plugin may return a copy of the data.
(Read only property)

116.33.30 GamutCheck as LCMS2PipelineMBS

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A Pipeline holding the gamut check. It goes from the input space to bilevel.
Notes: Only for information, so plugin may return a copy of the data.
(Read only property)

116.33.31 Handle as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

116.33.32 InputColorant as LCMS2NamedColorListMBS

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Input Colorant table.
Notes: Only for information, so plugin may return a copy of the data.
(Read only property)

116.33.33 InputFormat as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the input format associated with a given transform.
Notes: (Read only property)

116.33.34 Lut as LCMS2PipelineMBS

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A Pipeline holding the full (optimized) transform.
Notes: Only for information, so plugin may return a copy of the data.
(Read only property)

116.33.35 NamedColorList as LCMS2NamedColorListMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieve a named color list from a given color transform.
Notes: Returns named color list dictionary on success, nil on error.
Only for information, so plugin may return a copy of the data.
(Read only property)

116.33.36 OriginalFlags as UInt32

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The original flags used to create transform.
Notes: (Read only property)

116.33.37 OutputColorant as LCMS2NamedColorListMBS

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Output Colorant table (for n chans >CMYK)
Notes: Only for information, so plugin may return a copy of the data.
(Read only property)

116.33.38 OutputFormat as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the output format associated with a given transform.
Notes: (Read only property)

116.33.39 RenderingIntent as UInt32

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The intent of this transform. That is usually the last intent in the profilechain, but may differ.
Notes: (Read only property)

116.33.40 Sequence as LCMS2SequenceMBS

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The profiles used to create the transform.
Notes: Only for information, so plugin may return a copy of the data.
(Read only property)

116.33.41 TransformGamutCheckPipeline as LCMS2PipelineMBS

MBS Images Plugin, Plugin Version: 26.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the gamut check pipeline.
Notes: Access the gamut-check pipeline inside a transform.
(Read only property)

116.33.42 TransformPipeline as LCMS2PipelineMBS

MBS Images Plugin, Plugin Version: 26.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the pipeline.
Notes: Access the optimized pipeline inside a transform.
(Read only property)

116.33.43 YieldToRB as Boolean

MBS Images Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the MT methods should yield.
Notes: If true (default), we yield to keep other threads running.
Can be set to false to disable yielding.
(Read and Write property)

116.34 class LCMS2UcrBgMBS

116.34.1 class LCMS2UcrBgMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for the cmsSigUcrBgType tag.
Notes: This is for Undercolorremoval and black generation.
Blog Entries

- MBS Real Studio Plugins, version 12.0pr4

116.34.2 Methods

116.34.3 Constructor(Ucr as LCMS2ToneCurveMBS = nil, Bg as LCMS2ToneCurveMBS = nil, Desc as LCMS2MLUMBS = nil)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object with given values.

116.34.4 Properties

116.34.5 Bg as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The black generation value.
Notes: (Read and Write property)

116.34.6 Desc as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The description.
Notes: (Read and Write property)

116.34.7 Ucr as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The undercolor removal setting.
Notes: (Read and Write property)

116.35 class LCMS2Vec3MBS

116.35.1 class LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a three dimension vector.
Example:

```
Var v as new LCMS2Vec3MBS(1,2,3)
MessageBox str(v.X)+" "+str(v.y)+" "+str(v.z)
```

Blog Entries

116.35.2 Methods

116.35.3 Clone as LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the vector.

116.35.4 Constructor(other as LCMS2Vec3MBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The copy constructor.
Example:

```
// make a vector
Var v as new LCMS2Vec3MBS(1,2,3)

// create a copy
Var w as new LCMS2Vec3MBS(v)

// show values
MessageBox str(w.X)+" "+str(w.y)+" "+str(w.z)
```

See also:

- 116.35.5 Constructor(v1 as Double = 0.0, v2 as Double = 0.0, v3 as Double = 0.0) 17414

116.35.5 Constructor(v1 as Double = 0.0, v2 as Double = 0.0, v3 as Double = 0.0)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor to initialize the object with the given values.
Example:

```
Var v as new LCMS2Vec3MBS(1,2,3)
MessageBox str(v.X)+" "+str(v.y)+" "+str(v.z)
```

See also:

- 116.35.4 Constructor(other as LCMS2Vec3MBS) 17413

116.35.6 Properties

116.35.7 X as Double

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first value.
Notes: (Read and Write property)

116.35.8 Y as Double

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The second value.
Notes: (Read and Write property)

116.35.9 Z as Double

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The third value.
Notes: (Read and Write property)

116.35.10 value(index as UInt32) as Double

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The values by index.
Notes: Index from 0 to 2.
(Read and Write computed property)

116.36 class LCMS2ViewingConditionsMBS

116.36.1 class LCMS2ViewingConditionsMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Viewing conditions.
Example:

```
// describe the viewing conditions for a CIECAM02 color appearance model
Var vc As New LCMS2ViewingConditionsMBS(LCMS2MBS.D50_XYZ, 20, 200, LCMS2MBS.kAVG_SUR-
ROUND, LCMS2MBS.kD_CALCULATE)
// white point, background luminance Yb (%), adapting luminance La (cd/m2), surround, degree of adap-
tation

Var model As New LCMS2CIECAM02MBS(Nil, vc)
Var xyz As New LCMS2CIEXYZMBS(0.4, 0.3, 0.2)
Var appearance As LCMS2JChMBS = model.Forward(xyz)
MessageBox "Lightness J: " + Format(appearance.J, "0.0") + EndOfLine + _
"Chroma C: " + Format(appearance.C, "0.0") + EndOfLine + _
"Hue h: " + Format(appearance.h, "0.0")
```

Notes: From LCMS documenation: Please note those are CAM model viewing conditions, and not the ICC tag viewing conditions, which I'm naming cmsICCViewingConditions to make differences evident. Unfortunately, the tag cannot deal with surround La, Yb and D value so is basically useless to store CAM02 viewing conditions.

116.36.2 Methods

116.36.3 Clone as LCMS2ViewingConditionsMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the object.

116.36.4 Constructor(other as LCMS2ViewingConditionsMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes object with values from other object.
See also:

- 116.36.5 Constructor(whitePoint as LCMS2CIEXYZMBS = nil, Yb as Double = 0.0, La as Double = 0.0, surround as Integer = 0, D_value as Double = 0.0)

116.36.5 Constructor(whitePoint as LCMS2CIEXYZMBS = nil, Yb as Double = 0.0, La as Double = 0.0, surround as Integer = 0, D_value as Double = 0.0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new viewing conditions object.
See also:

- 116.36.4 Constructor(other as LCMS2ViewingConditionsMBS) 17416

116.36.6 Properties

116.36.7 D_value as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The D value value.
Notes: (Read and Write property)

116.36.8 La as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The La value.
Notes: (Read and Write property)

116.36.9 Surround as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The surround value.
Notes: Use this constants:
kAVG_SURROUND = 1
kDIM_SURROUND = 2
kDARK_SURROUND = Ôøº3
kCUTSHEET_SURROUND = 4
(Read and Write property)

116.36.10 whitePoint as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The white point.
Notes: (Read and Write property)

116.36.11 Yb as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Yb value.
Notes: (Read and Write property)

Chapter 117

LDAP

117.1 class LDAPMBS

117.1.1 class LDAPMBS

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for LDAP connection.
Example:

```
// Get a handle to an LDAP connection and set any session preferences.
Var l as new LDAPMBS("localhost", 389)

// Use the ProtocolVersion session preference to specify that the client is an LDAPv3 client.
l.ProtocolVersion = 3
if l.Lasterror <>0 then
Var error as string = l.ErrorString(l.Lasterror)
Break
end if

// Bind to the server.
// In this example, the client binds anonymously to the server
// (no DN or credentials are specified).

l.SimpleBind("", "")
if l.Lasterror <>0 then
Var error as string = l.ErrorString(l.Lasterror)
Break
end if

const BASEDN = "dc=example,dc=com"
const SCOPE = l.kScopeSubtree
```

```
const FILTER = "(sn=Jensen)"

Var results() as Dictionary = l.Search(BASEDN, SCOPE, FILTER)

for each dic as Dictionary in results
Break // look in debugger
next
```

Notes: On Windows we use Microsoft's WinLDAP Library.
For Mac OS X and Linux we link to OpenLDAP, so be sure to have the right package installed on Linux.

117.1.2 Methods

117.1.3 Add(distinguishedName as string, attrs() as LDAPModMBS)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds attributes.
Example:

```
// add like this
```

```
Var m1 as new LDAPModMBS
Var m2 as new LDAPModMBS

m1.Operation = m1.kOperationAdd
m1.Type = "sn"
m1.addValue "yyy"

m2.Operation = m1.kOperationAdd
m2.Type = "cn"
m2.addValue "xxx"

Var attr() as LDAPModMBS
attr.Add m1
attr.Add m2

l.Add("test", attr)
```

Notes: The Add function initiates a synchronous add operation that adds an entry to a tree. The parent of the entry being added must already exist or the parent must be empty (equal to the root distinguished name) for an add operation to succeed.

Before calling Add, you must create an entry by specifying its attributes in LDAPModMBS objects. Set the Operator member of each structure to kOperationAdd, and set the Type and Value members as appropriate for your entry.

117.1.4 Bind(Who as String, Cred as String, AuthMethod as Integer, Domain as String = "")

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Binds to a server with given credentials and authorization method.
Notes: Synchronously authenticates a client to the LDAP server.

Added domain parameter in plugin version 17.1, Windows only.

117.1.5 Connect(TimeOutSeconds as Double = 1.0)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Connects to server.
Notes: On Mac does nothing.

117.1.6 Constructor

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Targets: All.

Function: Default constructor.
Notes: Creates a new connection without connecting.
See also:

- 117.1.7 Constructor(IP as string, Port as Integer, Open as Boolean = false, Secure as Boolean = false) 17422
- 117.1.8 Constructor(URL as string) 17423

117.1.7 Constructor(IP as string, Port as Integer, Open as Boolean = false, Secure as Boolean = false)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a connection to a LDAP server.
Example:

```
// connect with SSL
Var ldap as LDAPMBS

#if TargetWin32 then
ldap = new LDAPMBS("192.168.1.123", 636, false, true)
#else
ldap = new LDAPMBS("ldaps://192.168.1.123")
#endif
```

Notes: If open is true, we connect directly to server.
Secure: For Windows Vista and newer. Set to true for a secure connection with SSL. (only for open=false)

For connecting via SSL, please use on Mac OS X the Constructor taking the URL and specify ldaps protocol. For Windows use this constructor with secure parameter set to true.

Changed with 16.0 to work on Mac with secure = true. For Windows we switch to Open = false if secure is true.
See also:

- 117.1.6 Constructor 17422
- 117.1.8 Constructor(URL as string) 17423

117.1.8 Constructor(URL as string)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a connection to a LDAP server.
Example:

```
// connect with SSL
Var ldap as LDAPMBS

#if TargetWin32 then
ldap = new LDAPMBS("192.168.1.123", 636, false, true)
#else
ldap = new LDAPMBS("ldaps://192.168.1.123")
#endif
```

Notes: Added Windows support in 16.0 plugins.
See also:

- 117.1.6 Constructor 17422
- 117.1.7 Constructor(IP as string, Port as Integer, Open as Boolean = false, Secure as Boolean = false) 17422

117.1.9 Delete(distinguishedName as string)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes an entry.

117.1.10 ErrorString(error as Integer) as string

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries an error message for an error code.

117.1.11 Modify(distinguishedName as string, attrs() as LDAPModMBS)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modifies an entry.
Notes: Please pass one LDAPModMBS for each attribute to change.

The Modify function initiates a synchronous operation to modify an existing entry. If values are being added to or replaced in the entry, the function creates the attribute, if necessary. If values are being deleted, the function removes the attribute if no values remain. All modifications are performed in the order in which they are listed.

When connecting to an LDAP 2 server, the application must perform a bind operation (by calling one of the Bind or SimpleBind routines) before attempting any other operations.

117.1.12 Rename(distinguishedName as string, NewDistinguishedName as String, DeleteOldRdn as Boolean)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renames an item.
See also:

- 117.1.13 Rename(distinguishedName as string, NewRDN as String, NewParent as String, DeleteOldRdn as Boolean) 17424

117.1.13 Rename(distinguishedName as string, NewRDN as String, NewParent as String, DeleteOldRdn as Boolean)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renames an item and can move it to other parent.
See also:

- 117.1.12 Rename(distinguishedName as string, NewDistinguishedName as String, DeleteOldRdn as Boolean) 17424

117.1.14 Search(distinguishedName as string, Scope as Integer, Filter as String, Attrs() as String = nil, AttributesOnly as boolean = false, timeout as Double = 1.0, SizeLimit as Integer = 0) as Dictionary()

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Search for something.
Example:

```
// Get a handle to an LDAP connection and set any session preferences.
Var l as new LDAPMBS("localhost", 389)

// Use the ProtocolVersion session preference to specify that the client is an LDAPv3 client.
l.ProtocolVersion = 3
```

```
if l.Lasterror <>0 then
Var error as string = l.ErrorString(l.Lasterror)
Break
end if

// Bind to the server.
// In this example, the client binds anonymously to the server
// (no DN or credentials are specified).

l.SimpleBind("", "")
if l.Lasterror <>0 then
Var error as string = l.ErrorString(l.Lasterror)
Break
end if

const BASEDN = "dc=example,dc=com"
const SCOPE = l.kScopeSubtree
const FILTER = "(sn=Jensen)"

Var results() as Dictionary = l.Search(BASEDN, SCOPE, FILTER)

for each dic as Dictionary in results
Break // look in debugger
next
```

Notes: The plugin will return result as array of Dictionaries, one for each item. Dictionary contains attributes with their values. A special entry has key = nil and as value the distinguish name of the item.

117.1.15 SimpleBind(Who as String, Cred as String)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Simple bind call.
Example:

```
// Get a handle to an LDAP connection and set any session preferences.
Var l as new LDAPMBS("localhost", 389)

// Use the ProtocolVersion session preference to specify that the client is an LDAPv3 client.
l.ProtocolVersion = 3
if l.Lasterror <>0 then
Var error as string = l.ErrorString(l.Lasterror)
Break
end if

// Bind to the server.
```

```
// In this example, the client binds anonymously to the server
// (no DN or credentials are specified).

l.SimpleBind("", "")
if l.Lasterror <>0 then
Var error as string = l.ErrorString(l.Lasterror)
Break
end if

const BASEDN = "dc=example,dc=com"
const SCOPE = l.kScopeSubtree
const FILTER = "(sn=Jensen)"

Var results() as Dictionary = l.Search(BASEDN, SCOPE, FILTER)

for each dic as Dictionary in results
Break // look in debugger
next
```

117.1.16 StartTLS

MBS Network Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a StartTLS request to a server, waits for the reply, and then installs TLS handlers on the session if the request succeeded.
Notes: Lasterror is set.

117.1.17 Properties

117.1.18 CACertFile as FolderItem

MBS Network Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Targets: All.

Function: The path for CACert file.
Notes: Should be PEM format.
Lasterror is set.
(Read and Write property)

117.1.19 Handle as Integer

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.

Notes: (Read and Write property)

117.1.20 Lasterror as Integer

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

117.1.21 NetworkTimeOut as Double

MBS Network Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Targets: All.

Function: The network timeout.
Example:

```
Var l as LDAPMBS
l.NetworkTimeOut = 2.5 // 2.5 seconds
```

Notes: This is the timeout for the underlaying sockets.
Value is in seconds with resolution to microseconds.
(Read and Write property)

117.1.22 ProtocolVersion as Integer

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set the protocol version to use.
Notes: (Read and Write property)

117.1.23 Referrals as Integer

MBS Network Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies whether to automatically follow referrals returned by the LDAP server.
Notes: (Read and Write property)

117.1.24 TimeOut as Double

MBS Network Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Targets: All.

Function: The default timeout.
Example:

```
Var l as LDAPMBS
l.TimeOut = 2.5 // 2.5 seconds
```

Notes: Value is in seconds with resolution to microseconds.
(Read and Write property)

117.1.25 Events

117.1.26 Error(ErrorCode as Integer, ErrorMessage as String, FunctionName as String)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error event.
Notes: Called for any function which got an error. Provides for your convenience the error code, message and function name.

117.1.27 Constants

Auth Modes

Constant	Value	Description
kAuthDigest	&h4086	Only for Windows.
kAuthDPA	&h2086	Only for Windows.
kAuthExternal	&hA6	
kAuthKRBV4	&hFF	Only for Mac OS X and Linux.
kAuthKRBV41	&h81	Only for Mac OS X and Linux.
kAuthKRBV42	&h82	Only for Mac OS X and Linux.
kAuthMSN	&h0886	Only for Windows.
kAuthNegotiate	&h4FF	Only for Windows.
kAuthNegotiateWin	&h0486	Only for Windows.
kAuthNone	0	No auth.
kAuthNTLM	&h1086	Only for Windows.
kAuthSASL	&hA3	Only for Mac OS X and Linux.
kAuthSASLWin	&h83	Only for Windows.
kAuthSicily	&h0286	Only for Windows.
kAuthSimple	&h80	Simple authentication.
kAuthSSPI	&h4FF	Only for Windows.

Scopes

Constant	Value	Description
kScopeBase	0	
kScopeDefault	-1	
kScopeOneLevel	1	
kScopeSubordinate	3	
kScopeSubtree	2	

Versions

Constant	Value	Description
kVersion1	1	
kVersion2	2	
kVersion3	3	

117.2 class LDAPModMBS

117.2.1 class LDAPModMBS

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class to hold values being added/modified.
Example:

```
Var m1 as new LDAPModMBS

m1.Operation = m1.kOperationAdd
m1.Type = "sn"
m1.addValue "yyy"
```

117.2.2 Methods

117.2.3 addValue(value as String)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value.
Notes: An item may have one value or several, so the plugin manages an array for you.

117.2.4 clearValues

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all values.

117.2.5 Constructor

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

117.2.6 setValues(values() as String)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the values array to be the one passed.
Notes: Does not make a copy of the array, but references it.

117.2.7 Values as String()

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the array with values.
Notes: Returns not a copy, but the array used to store values.

117.2.8 Properties

117.2.9 Operation as Integer

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The operation to perform.
Notes: Can be kOperationAdd, kOperationDelete or kOperationReplace.
(Read and Write property)

117.2.10 Type as String

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: String that specifies the name of the attribute to modify.
Notes: (Read and Write property)

117.2.11 Value as String

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns first value.
Notes: Some items only have one value, so this is the value.
(Read only property)

117.2.12 Constants

Operations

Constant	Value	Description
kOperationAdd	0	Adds a value to the entry. The supplied values are appended to the existing values in the attribute.
kOperationDelete	1	Deletes a value in the entry. The supplied values are deleted from the current attribute values.
kOperationReplace	2	Replaces a value in the entry. The supplied values replace the existing attribute values.

Chapter 118

Licenses

118.1 Licenses

118.1.1 bzip2

Platforms: macOS, Linux, Windows, Targets: .

Function: The bzip2 1.0.5 license
Notes: This program, "bzip2", the associated library "libbzip2", and all documentation, are copyright (C) 1996-2007 Julian R Seward. All rights reserved.

Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met:

1. Redistributions of source code must retain the above copyright
notice, this list of conditions and the following disclaimer.

2. The origin of this software must not be misrepresented; you must not claim that you wrote the original software. If you use this software in a product, an acknowledgment in the product documentation would be appreciated but is not required.

3. Altered source versions must be plainly marked as such, and must not be misrepresented as being the original software.

4. The name of the author may not be used to endorse or promote products derived from this software without specific prior written permission.

THIS SOFTWARE IS PROVIDED BY THE AUTHOR "AS IS" AND ANY EXPRESS OR IMPLIED

WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. IN false EVENT SHALL THE AUTHOR BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY,
WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

Julian Seward, jseward@bzip.org bzip2/libbzip2 version 1.0.5 of 10 December 2007

118.1.2 ChartDirector

Platforms: macOS, Linux, Windows, Targets: .

Function: The ChartDirector 5.0 license
Notes: Please note: The license for the ChartDirector is included when you purchase the plugin as we pay royalties. So you do not need to buy an additional license from Advanced Software Engineering Limited.

The original license for the C library:

ChartDirector Version 5.0
Copyright (C) 2008 Advanced Software Engineering Limited
All Rights Reserved

********** LICENSE AGREEMENT **********

You should carefully read the following terms and conditions before using the ChartDirector software. Your use of the ChartDirector software indicates your acceptance of this license agreement. Do not use the ChartDirector software if you do not agree with the license agreement.

Disclaimer of Warranty

The ChartDirector software and the accompanying files are distributed and licensed "as is". Advanced Software Engineering Limited disclaims all warranties, either express or implied, including, but not limited to implied warranties of merchantability and fitness for a particular purpose. Should the ChartDirector software prove defective, the licensee assumes the risk of paying the entire cost of all necessary servicing, repair, or correction and any incidental or consequential damages. In no event will Advanced Software Engineering Limited be liable for any damages whatsoever (including without limitation damages for loss of business profits, business interruption, loss of business information and the like) arising out of the use or the inability to use the ChartDirector software even if Advanced Software Engineering Limited has been advised of the

possibility of such damages.

Intellectual Property

The ChartDirector software is protected by copyright laws and international copyright treaties, as well as other intellectual property laws and treaties. The ChartDirector software is licensed, not sold. Title to the ChartDirector software shall at all times remain with Advanced Software Engineering Limited.

You agree not to modify, decompile, reverse engineer, disassemble or otherwise attempt to derive source code from the ChartDirector software.

Trial Version

The trial version of the ChartDirector software will produce yellow banner messages at the bottom of the chart images generated by it. You agree to not remove, obscure, or alter this message.

Subjected to the conditions in this license agreement:

- You may use the unmodified trial version of the ChartDirector software without charge.

- You may redistribute the unmodified trial version of the ChartDirector software, provided you do not charge for it.

- You may embed the unmodified trial version of the ChartDirector software (or part of it), in a product and distribute the product, provided you do not charge for the product.

If you do not want the yellow banner messages appearing in the charts, or you want to embed the ChartDirector software (or part of it) in a product that is not free, you must purchase a commercial license to use the ChartDirector software from Advanced Software Engineering Limited. Please refer to Advanced Software Engineering's web site at www.advsofteng.com for details.

Credits

The ASP/COM/VB, PHP, Perl, Python, Ruby and C++ editions of ChartDirector contains code from the Independent JPEG Group and the FreeType team. Any software that is derived from these editions of ChartDirector must include the following text in its documentation. This applies to both the trial version as well as to the commercial licensed version of ChartDirector.

- This software is based in part on the work of the Independent JPEG Group

- This software is based in part of the work of the FreeType Team

118.1.3 CUPS

Platforms: macOS, Linux, Windows, Targets: .

Function: The CUPS 1.4.4 license
Notes: CUPS License Agreement

Copyright 2007-2009 by Apple Inc.
1 Infinite Loop
Cupertino, CA 95014 USA

WWW: http://www.cups.org/

INTRODUCTION

CUPS(tm) is provided under the GNU General Public License ("GPL")
and GNU Library General Public License ("LGPL"), Version 2, with
exceptions for Apple operating systems and the OpenSSL toolkit. A
copy of the exceptions and licenses follow this introduction.

The GNU LGPL applies to the CUPS and CUPS Imaging libraries
located in the "cups" and "filter" subdirectories of the CUPS
source distribution and in the "cups" include directory and
library files in the binary distributions. The GNU GPL applies to
the remainder of the CUPS distribution, including the "pdftops"
filter which is based upon Xpdf.

For those not familiar with the GNU GPL, the license basically
allows you to:

- Use the CUPS software at no charge.
- Distribute verbatim copies of the software in source or
binary form.
- Sell verbatim copies of the software for a media fee, or
sell support for the software.

What this license *does not* allow you to do is make changes or
add features to CUPS and then sell a binary distribution without
source code. You must provide source for any changes or additions

to the software, and all code must be provided under the GPL or LGPL as appropriate. The only exceptions to this are the portions of the CUPS software covered by the Apple operating system license exceptions outlined later in this license agreement.

The GNU LGPL relaxes the "link-to" restriction, allowing you to develop applications that use the CUPS and CUPS Imaging libraries under other licenses and/or conditions as appropriate for your application, driver, or filter.

LICENSE EXCEPTIONS

In addition, as the copyright holder of CUPS, Apple Inc. grants the following special exceptions:

1. Apple Operating System Development License Exception;

a. Software that is developed by any person or entity for an Apple Operating System ("Apple OS-Developed Software"), including but not limited to Apple and third party printer drivers, filters, and backends for an Apple Operating System, that is linked to the CUPS imaging library or based on any sample filters or backends provided with CUPS shall not be considered to be a derivative work or collective work based on the CUPS program and is exempt from the mandatory source code release clauses of the GNU GPL. You may therefore distribute linked combinations of the CUPS imaging library with Apple OS-Developed Software without releasing the source code of the Apple OS-Developed Software. You may also use sample filters and backends provided with CUPS to develop Apple OS-Developed Software without releasing the source code of the Apple OS-Developed Software.

b. An Apple Operating System means any operating system software developed and/or marketed by Apple Computer, Inc., including but not limited to all existing releases and versions of Apple's Darwin, Mac OS X, and Mac OS X Server products and all follow-on releases and future versions thereof.

c. This exception is only available for Apple OS-Developed Software and does not apply to software

that is distributed for use on other operating systems.

d. All CUPS software that falls under this license exception have the following text at the top of each source file:

This file is subject to the Apple OS-Developed Software exception.

2. OpenSSL Toolkit License Exception;

a. Apple Inc. explicitly allows the compilation and distribution of the CUPS software with the OpenSSL Toolkit.

No developer is required to provide these exceptions in a derived work.

KERBEROS SUPPORT CODE

The Kerberos support code ("KSC") is copyright 2006 by Jelmer Vernooij and is provided 'as-is', without any express or implied warranty. In no event will the author or Apple Inc. be held liable for any damages arising from the use of the KSC.

Sources files containing KSC have the following text at the top of each source file:

This file contains Kerberos support code, copyright 2006 by Jelmer Vernooij.

The KSC copyright and license apply only to Kerberos-related feature code in CUPS. Such code is typically conditionally compiled based on the present of the HAVE_GSSAPI preprocessor definition.

Permission is granted to anyone to use the KSC for any purpose, including commercial applications, and to alter it and redistribute it freely, subject to the following restrictions:

1. The origin of the KSC must not be misrepresented; you must not claim that you wrote the original software. If you use the KSC in a product, an acknowledgment in the product documentation would be appreciated but is not required.

2. Altered source versions must be plainly marked as such, and must not be misrepresented as being the original software.

3. This notice may not be removed or altered from any source distribution.

TRADEMARKS

CUPS and the CUPS logo (the "CUPS Marks") are trademarks of Apple Inc. Apple grants you a non-exclusive and non-transferable right to use the CUPS Marks in any direct port or binary distribution incorporating CUPS software and in any promotional material therefor. You agree that your products will meet the highest levels of quality and integrity for similar goods, not be unlawful, and be developed, manufactured, and distributed in compliance with this license. You will not interfere with Apple's rights in the CUPS Marks, and all use of the CUPS Marks shall inure to the benefit of Apple. This license does not apply to use of the CUPS Marks in a derivative products, which requires prior written permission from Apple Inc.

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software–to make sure the software is free for all its users. This General Public License applies to most of the Free Software

Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium

customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the

original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

false WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS false WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN false EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

Appendix: How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest
possible use to the public, the best way to achieve this is to make it
free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest
to attach them to the start of each source file to most effectively
convey the exclusion of warranty; and each file should have at least
the "copyright" line and a pointer to where the full notice is found.

<one line to give the program's name and a brief idea of what it does.>
Copyright (C) 19yy <name of author>

This program is free software; you can redistribute it and/or modify
it under the terms of the GNU General Public License as published by
the Free Software Foundation; either version 2 of the License, or
(at your option) any later version.

This program is distributed in the hope that it will be useful,
but WITHOUT ANY WARRANTY; without even the implied warranty of
MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the
GNU General Public License for more details.

You should have received a copy of the GNU General Public License
along with this program; if not, write to the Free Software
Foundation, Inc., 675 Mass Ave, Cambridge, MA 02139, USA.

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this
when it starts in an interactive mode:

Gnomovision version 69, Copyright (C) 19yy name of author
Gnomovision comes with ABSOLUTELY false WARRANTY; for details type 'show w'.
This is free software, and you are welcome to redistribute it
under certain conditions; type 'show c' for details.

The hypothetical commands 'show w' and 'show c' should show the appropriate

parts of the General Public License. Of course, the commands you use may be called something other than 'show w' and 'show c'; they could even be mouse-clicks or menu items–whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the program 'Gnomovision' (which makes passes at compilers) written by James Hacker.

<signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Library General Public License instead of this License.

GNU LIBRARY GENERAL PUBLIC LICENSE
Version 2, June 1991

Copyright (C) 1991 Free Software Foundation, Inc.
59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

[This is the first released version of the library GPL. It is numbered 2 because it goes with version 2 of the ordinary GPL.]

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public Licenses are intended to guarantee your freedom to share and change free software–to make sure the software is free for all its users.

This license, the Library General Public License, applies to some specially designated Free Software Foundation software, and to any

other libraries whose authors decide to use it. You can use it for your libraries, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the library, or if you modify it.

For example, if you distribute copies of the library, whether gratis or for a fee, you must give the recipients all the rights that we gave you. You must make sure that they, too, receive or can get the source code. If you link a program with the library, you must provide complete object files to the recipients so that they can relink them with the library, after making changes to the library and recompiling it. And you must show them these terms so they know their rights.

Our method of protecting your rights has two steps: (1) copyright the library, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the library.

Also, for each distributor's protection, we want to make certain that everyone understands that there is no warranty for this free library. If the library is modified by someone else and passed on, we want its recipients to know that what they have is not the original version, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that companies distributing free software will individually obtain patent licenses, thus in effect transforming the program into proprietary software. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

Most GNU software, including some libraries, is covered by the ordinary GNU General Public License, which was designed for utility programs. This license, the GNU Library General Public License, applies to certain

designated libraries. This license is quite different from the ordinary one; be sure to read it in full, and don't assume that anything in it is the same as in the ordinary license.

The reason we have a separate public license for some libraries is that they blur the distinction we usually make between modifying or adding to a program and simply using it. Linking a program with a library, without changing the library, is in some sense simply using the library, and is analogous to running a utility program or application program. However, in a textual and legal sense, the linked executable is a combined work, a derivative of the original library, and the ordinary General Public License treats it as such.

Because of this blurred distinction, using the ordinary General Public License for libraries did not effectively promote software sharing, because most developers did not use the libraries. We concluded that weaker conditions might promote sharing better.

However, unrestricted linking of non-free programs would deprive the users of those programs of all benefit from the free status of the libraries themselves. This Library General Public License is intended to permit developers of non-free programs to use free libraries, while preserving your freedom as a user of such programs to change the free libraries that are incorporated in them. (We have not seen how to achieve this as regards changes in header files, but we have achieved it as regards changes in the actual functions of the Library.) The hope is that this will lead to faster development of free libraries.

The precise terms and conditions for copying, distribution and modification follow. Pay close attention to the difference between a "work based on the library" and a "work that uses the library". The former contains code derived from the library, while the latter only works together with the library.

Note that it is possible for a library to be covered by the ordinary General Public License rather than by this special one.

GNU LIBRARY GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License Agreement applies to any software library which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Library General Public License (also called "this License"). Each licensee is

addressed as ”you”.

A ”library” means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

The ”Library”, below, refers to any such software library or work which has been distributed under these terms. A ”work based on the Library” means either the Library or any derivative work under copyright law: that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or translated straightforwardly into another language. (Hereinafter, translation is included without limitation in the term ”modification”.)

”Source code” for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from such a program is covered only if its contents constitute a work based on the Library (independent of the use of the Library in a tool for writing it). Whether that is true depends on what the Library does and what the program that uses the Library does.

1. You may copy and distribute verbatim copies of the Library’s complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and distribute a copy of this License along with the Library.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) The modified work must itself be a software library.

b) You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.

c) You must cause the whole of the work to be licensed at no charge to all third parties under the terms of this License.

d) If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility, other than as an argument passed when the facility is invoked, then you must make a good faith effort to ensure that, in the event an application does not supply such function or table, the facility still operates, and performs whatever part of its purpose remains meaningful.

(For example, a function in a library to compute square roots has a purpose that is entirely well-defined independent of the application. Therefore, Subsection 2d requires that any application-supplied function or table used by this function must be optional: if the application does not supply it, the square root function must still compute square roots.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Library, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Library.

In addition, mere aggregation of another work not based on the Library with the Library (or with a work based on the Library) on a volume of a storage or distribution medium does not bring the other work under

the scope of this License.

3. You may opt to apply the terms of the ordinary GNU General Public License instead of this License to a given copy of the Library. To do this, you must alter all the notices that refer to this License, so that they refer to the ordinary GNU General Public License, version 2, instead of to this License. (If a newer version than version 2 of the ordinary GNU General Public License has appeared, then you can specify that version instead if you wish.) Do not make any other change in these notices.

Once this change is made in a given copy, it is irreversible for that copy, so the ordinary GNU General Public License applies to all subsequent copies and derivative works made from that copy.

This option is useful when you wish to copy part of the code of the Library into a program that is not a library.

4. You may copy and distribute the Library (or a portion or derivative of it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange.

If distribution of object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place satisfies the requirement to distribute the source code, even though third parties are not compelled to copy the source along with the object code.

5. A program that contains no derivative of any portion of the Library, but is designed to work with the Library by being compiled or linked with it, is called a "work that uses the Library". Such a work, in isolation, is not a derivative work of the Library, and therefore falls outside the scope of this License.

However, linking a "work that uses the Library" with the Library creates an executable that is a derivative of the Library (because it contains portions of the Library), rather than a "work that uses the library". The executable is therefore covered by this License. Section 6 states terms for distribution of such executables.

When a "work that uses the Library" uses material from a header file that is part of the Library, the object code for the work may be a derivative work of the Library even though the source code is not. Whether this is true is especially significant if the work can be linked without the Library, or if the work is itself a library. The threshold for this to be true is not precisely defined by law.

If such an object file uses only numerical parameters, data structure layouts and accessors, and small macros and small inline functions (ten lines or less in length), then the use of the object file is unrestricted, regardless of whether it is legally a derivative work. (Executables containing this object code plus portions of the Library will still fall under Section 6.)

Otherwise, if the work is a derivative of the Library, you may distribute the object code for the work under the terms of Section 6. Any executables containing that work also fall under Section 6, whether or not they are linked directly with the Library itself.

6. As an exception to the Sections above, you may also compile or link a "work that uses the Library" with the Library to produce a work containing portions of the Library, and distribute that work under terms of your choice, provided that the terms permit modification of the work for the customer's own use and reverse engineering for debugging such modifications.

You must give prominent notice with each copy of the work that the Library is used in it and that the Library and its use are covered by this License. You must supply a copy of this License. If the work during execution displays copyright notices, you must include the copyright notice for the Library among them, as well as a reference directing the user to the copy of this License. Also, you must do one of these things:

a) Accompany the work with the complete corresponding machine-readable source code for the Library including whatever changes were used in the work (which must be distributed under Sections 1 and 2 above); and, if the work is an executable linked with the Library, with the complete machine-readable "work that uses the Library", as object code and/or source code, so that the user can modify the Library and then relink to produce a modified executable containing the modified Library. (It is understood that the user who changes the contents of definitions files in the Library will not necessarily be able to recompile the application to use the modified definitions.)

b) Accompany the work with a written offer, valid for at
least three years, to give the same user the materials
specified in Subsection 6a, above, for a charge no more
than the cost of performing this distribution.

c) If distribution of the work is made by offering access to copy
from a designated place, offer equivalent access to copy the above
specified materials from the same place.

d) Verify that the user has already received a copy of these
materials or that you have already sent this user a copy.

For an executable, the required form of the "work that uses the
Library" must include any data and utility programs needed for
reproducing the executable from it. However, as a special exception,
the source code distributed need not include anything that is normally
distributed (in either source or binary form) with the major
components (compiler, kernel, and so on) of the operating system on
which the executable runs, unless that component itself accompanies
the executable.

It may happen that this requirement contradicts the license
restrictions of other proprietary libraries that do not normally
accompany the operating system. Such a contradiction means you cannot
use both them and the Library together in an executable that you
distribute.

7. You may place library facilities that are a work based on the
Library side-by-side in a single library together with other library
facilities not covered by this License, and distribute such a combined
library, provided that the separate distribution of the work based on
the Library and of the other library facilities is otherwise
permitted, and provided that you do these two things:

a) Accompany the combined library with a copy of the same work
based on the Library, uncombined with any other library
facilities. This must be distributed under the terms of the
Sections above.

b) Give prominent notice with the combined library of the fact
that part of it is a work based on the Library, and explaining
where to find the accompanying uncombined form of the same work.

8. You may not copy, modify, sublicense, link with, or distribute the Library except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, link with, or distribute the Library is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

9. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Library or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Library (or any work based on the Library), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Library or works based on it.

10. Each time you redistribute the Library (or any work based on the Library), the recipient automatically receives a license from the original licensor to copy, distribute, link with or modify the Library subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

11. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Library at all. For example, if a patent license would not permit royalty-free redistribution of the Library by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Library.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply, and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any

patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

12. If the distribution and/or use of the Library is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Library under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

13. The Free Software Foundation may publish revised and/or new versions of the Library General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library specifies a version number of this License which applies to it and ”any later version”, you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Library does not specify a license version number, you may choose any version ever published by the Free Software Foundation.

14. If you wish to incorporate parts of the Library into other free programs whose distribution conditions are incompatible with these, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

false WARRANTY

15. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS false WARRANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE LIBRARY "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. IN false EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE LIBRARY (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE LIBRARY TO OPERATE WITH ANY OTHER SOFTWARE), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

Appendix: How to Apply These Terms to Your New Libraries

If you develop a new library, and you want it to be of the greatest possible use to the public, we recommend making it free software that everyone can redistribute and change. You can do so by permitting redistribution under these terms (or, alternatively, under the terms of the ordinary General Public License).

To apply these terms, attach the following notices to the library. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the library's name and a brief idea of what it does.>
Copyright (C) <year><name of author>

This library is free software; you can redistribute it and/or modify it under the terms of the GNU Library General Public License as published by the Free Software Foundation; either

version 2 of the License, or (at your option) any later version.

This library is distributed in the hope that it will be useful,
but WITHOUT ANY WARRANTY; without even the implied warranty of
MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU
Library General Public License for more details.

You should have received a copy of the GNU Library General Public
License along with this library; if not, write to the Free
Software Foundation, Inc., 675 Mass Ave, Cambridge, MA 02139, USA.

Also add information on how to contact you by electronic and paper mail.

You should also get your employer (if you work as a programmer) or your
school, if any, to sign a "copyright disclaimer" for the library, if
necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the
library 'Frob' (a library for tweaking knobs) written by James Random Hacker.

<signature of Ty Coon>, 1 April 1990
Ty Coon, President of Vice

That's all there is to it!

118.1.4 CURL

Platforms: macOS, Linux, Windows, Targets: .

Function: The CURL 7.20.0 license
Notes: CURL links to libssl, libcrypto, libssh2 and other libraries.

COPYRIGHT AND PERMISSION NOTICE

Copyright (c) 1996 - 2009, Daniel Stenberg, <daniel@haxx.se>.

All rights reserved.

Permission to use, copy, modify, and distribute this software for any purpose with or without fee is hereby granted, provided that the above copyright notice and this permission notice appear in all copies.

THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT OF THIRD PARTY RIGHTS. IN false EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

Except as contained in this notice, the name of a copyright holder shall not be used in advertising or otherwise to promote the sale, use or other dealings in this Software without prior written authorization of the copyright holder.

118.1.5 expat

Platforms: macOS, Linux, Windows, Targets: .

Function: The expat 2.0.1 license
Notes: Copyright (c) 1998, 1999, 2000 Thai Open Source Software Center Ltd and Clark Cooper Copyright (c) 2001, 2002, 2003, 2004, 2005, 2006 Expat maintainers.

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the "Software"), to deal in the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in all copies or substantial portions of the Software.

THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT. IN false EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

118.1.6 FreeType

Platforms: macOS, Linux, Windows, Targets: .

Function: The FreeType 2.3.9 license

Notes: The FreeType 2 font engine is copyrighted work and cannot be used legally without a software license. In order to make this project usable to a vast majority of developers, we distribute it under two mutually exclusive open-source licenses.

This means that *you* must choose *one* of the two licenses described below, then obey all its terms and conditions when using FreeType 2 in any of your projects or products.

- The FreeType License, found in the file 'FTL.TXT', which is similar to the original BSD license *with* an advertising clause that forces you to explicitly cite the FreeType project in your product's documentation. All details are in the license file. This license is suited to products which don't use the GNU General Public License.

- The GNU General Public License version 2, found in 'GPL.TXT' (any later version can be used also), for programs which already use the GPL. Note that the FTL is incompatible with the GPL due to its advertisement clause.

The contributed PCF driver comes with a license similar to that of the X Window System. It is compatible to the above two licenses (see file src/pcf/readme).

— end of LICENSE.TXT —

The FreeType Project LICENSE
————————————————-

2006-Jan-27

Copyright 1996-2002, 2006 by
David Turner, Robert Wilhelm, and Werner Lemberg

Introduction
==========

The FreeType Project is distributed in several archive packages; some of them may contain, in addition to the FreeType font engine, various tools and contributions which rely on, or relate to, the FreeType Project.

This license applies to all files found in such packages, and which do not fall under their own explicit license. The license affects thus the FreeType font engine, the test programs, documentation and makefiles, at the very least.

This license was inspired by the BSD, Artistic, and IJG (Independent JPEG Group) licenses, which all encourage inclusion and use of free software in commercial and freeware products alike. As a consequence, its main points are that:

o We don't promise that this software works. However, we will be interested in any kind of bug reports. ('as is' distribution)

o You can use this software for whatever you want, in parts or full form, without having to pay us. ('royalty-free' usage)

o You may not pretend that you wrote this software. If you use it, or only parts of it, in a program, you must acknowledge somewhere in your documentation that you have used the FreeType code. ('credits')

We specifically permit and encourage the inclusion of this software, with or without modifications, in commercial products. We disclaim all warranties covering The FreeType Project and assume no liability related to The FreeType Project.

Finally, many people asked us for a preferred form for a credit/disclaimer to use in compliance with this license. We thus encourage you to use the following text:

"""
Portions of this software are copyright ©<year>The FreeType Project (www.freetype.org). All rights reserved.
"""

Please replace <year>with the value from the FreeType version you actually use.

Legal Terms
==========

0. Definitions

Throughout this license, the terms 'package', 'FreeType Project', and 'FreeType archive' refer to the set of files originally distributed by the authors (David Turner, Robert Wilhelm, and Werner Lemberg) as the 'FreeType Project', be they named as alpha, beta or final release.

'You' refers to the licensee, or person using the project, where 'using' is a generic term including compiling the project's source code as well as linking it to form a 'program' or 'executable'. This program is referred to as 'a program using the FreeType engine'.

This license applies to all files distributed in the original FreeType Project, including all source code, binaries and documentation, unless otherwise stated in the file in its original, unmodified form as distributed in the original archive. If you are unsure whether or not a particular file is covered by this license, you must contact us to verify this.

The FreeType Project is copyright (C) 1996-2000 by David Turner, Robert Wilhelm, and Werner Lemberg. All rights reserved except as specified below.

1. No Warranty

THE FREETYPE PROJECT IS PROVIDED 'AS IS' WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. IN false EVENT WILL ANY OF THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY DAMAGES CAUSED BY THE USE OR THE INABILITY TO USE, OF THE FREETYPE PROJECT.

2. Redistribution

This license grants a worldwide, royalty-free, perpetual and irrevocable right and license to use, execute, perform, compile, display, copy, create derivative works of, distribute and sublicense the FreeType Project (in both source and object code

forms) and derivative works thereof for any purpose; and to
authorize others to exercise some or all of the rights granted
herein, subject to the following conditions:

o Redistribution of source code must retain this license file
('FTL.TXT') unaltered; any additions, deletions or changes to
the original files must be clearly indicated in accompanying
documentation. The copyright notices of the unaltered,
original files must be preserved in all copies of source
files.

o Redistribution in binary form must provide a disclaimer that
states that the software is based in part of the work of the
FreeType Team, in the distribution documentation. We also
encourage you to put an URL to the FreeType web page in your
documentation, though this isn't mandatory.

These conditions apply to any software derived from or based on
the FreeType Project, not just the unmodified files. If you use
our work, you must acknowledge us. However, no fee need be paid
to us.

3. Advertising

Neither the FreeType authors and contributors nor you shall use
the name of the other for commercial, advertising, or promotional
purposes without specific prior written permission.

We suggest, but do not require, that you use one or more of the
following phrases to refer to this software in your documentation
or advertising materials: 'FreeType Project', 'FreeType Engine',
'FreeType library', or 'FreeType Distribution'.

As you have not signed this license, you are not required to
accept it. However, as the FreeType Project is copyrighted
material, only this license, or another one contracted with the
authors, grants you the right to use, distribute, and modify it.
Therefore, by using, distributing, or modifying the FreeType
Project, you indicate that you understand and accept all the terms
of this license.

4. Contacts

There are two mailing lists related to FreeType:

o freetype@nongnu.org

Discusses general use and applications of FreeType, as well as
future and wanted additions to the library and distribution.
If you are looking for support, start in this list if you
haven't found anything to help you in the documentation.

o freetype-devel@nongnu.org

Discusses bugs, as well as engine internals, design issues,
specific licenses, porting, etc.

Our home page can be found at

http://www.freetype.org

GNU GENERAL PUBLIC LICENSE
Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.
51 Franklin St, Fifth Floor, Boston, MA 02110-1301 USA
Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your
freedom to share and change it. By contrast, the GNU General Public
License is intended to guarantee your freedom to share and change free
software–to make sure the software is free for all its users. This
General Public License applies to most of the Free Software
Foundation's software and to any other program whose authors commit to
using it. (Some other Free Software Foundation software is covered by
the GNU Library General Public License instead.) You can apply it to
your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The ”Program”, below, refers to any such program or work, and a ”work based on the Program” means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term ”modification”.) Each licensee is addressed as ”you”.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an

announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer

to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to

this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will

be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

false WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS false WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN false EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest
possible use to the public, the best way to achieve this is to make it
free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest
to attach them to the start of each source file to most effectively
convey the exclusion of warranty; and each file should have at least
the "copyright" line and a pointer to where the full notice is found.

<one line to give the program's name and a brief idea of what it does.>
Copyright (C) <year><name of author>

This program is free software; you can redistribute it and/or modify
it under the terms of the GNU General Public License as published by
the Free Software Foundation; either version 2 of the License, or
(at your option) any later version.

This program is distributed in the hope that it will be useful,
but WITHOUT ANY WARRANTY; without even the implied warranty of
MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the
GNU General Public License for more details.

You should have received a copy of the GNU General Public License
along with this program; if not, write to the Free Software
Foundation, Inc., 51 Franklin St, Fifth Floor, Boston, MA 02110-1301 USA

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this
when it starts in an interactive mode:

Gnomovision version 69, Copyright (C) year name of author
Gnomovision comes with ABSOLUTELY false WARRANTY; for details type 'show w'.
This is free software, and you are welcome to redistribute it
under certain conditions; type 'show c' for details.

The hypothetical commands 'show w' and 'show c' should show the appropriate
parts of the General Public License. Of course, the commands you use may
be called something other than 'show w' and 'show c'; they could even be
mouse-clicks or menu items–whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the program 'Gnomovision' (which makes passes at compilers) written by James Hacker.

<signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Library General Public License instead of this License.

118.1.7 GraphicsMagick

Platforms: macOS, Linux, Windows, Targets: .

Function: The GraphicsMagick license
Notes: GraphicsMagick links to Tiff, zlib, LCMS, JPEG, FreeType, XML, iconv and PNG.

.. This text is in reStucturedText format, so it may look a bit odd.
.. See http://docutils.sourceforge.net/rst.html for details.

==========
GraphicsMagick Copyrights and Licenses
==========

This file is part of the GraphicsMagick software distributed by the GraphicsMagick Group.

[*Please note that the legal community considers 15 or more total lines of code or text (not necessarily contiguous) to be significant for the purposes of copyright. Repeated changes such as renaming a symbol has similar significance to changing one line of code.*]

The licenses which components of this software fall under are as follows.

1)
In November 2002, the GraphicsMagick Group created GraphicsMagick from ImageMagick Studio's ImageMagick and applied the "MIT" style license:

Copyright (C) 2002 - 2010 GraphicsMagick Group

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the "Software"), to deal in the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in all copies or substantial portions of the Software.

THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT. IN false EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

2)
In October 1999, ImageMagick Studio assumed the responsibility for the development of ImageMagick (forking from the distribution by E. I. du Pont de Nemours and Company) and applied a new license:

Copyright (C) 2002 ImageMagick Studio, a non-profit organization dedicated to making software imaging solutions freely available.

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files ("ImageMagick"), to deal in ImageMagick without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of ImageMagick, and to permit persons to whom the ImageMagick is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in

all copies or substantial portions of ImageMagick.

The software is provided ”as is”, without warranty of any kind, express or implied, including but not limited to the warranties of merchantability, fitness for a particular purpose and noninfringement. In no event shall ImageMagick Studio be liable for any claim, damages or other liability, whether in an action of contract, tort or otherwise, arising from, out of or in connection with ImageMagick or the use or other dealings in ImageMagick.

Except as contained in this notice, the name of the ImageMagick Studio shall not be used in advertising or otherwise to promote the sale, use or other dealings in ImageMagick without prior written authorization from the ImageMagick Studio.

3)
From 1991 to October 1999 (through ImageMagick 4.2.9), ImageMagick was developed and distributed by E. I. du Pont de Nemours and Company:

Copyright 1999 E. I. du Pont de Nemours and Company

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (”ImageMagick”), to deal in ImageMagick without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of ImageMagick, and to permit persons to whom the ImageMagick is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in all copies or substantial portions of ImageMagick.

The software is provided ”as is”, without warranty of any kind, express or implied, including but not limited to the warranties of merchantability, fitness for a particular purpose and noninfringement. In no event shall E. I. du Pont de Nemours and Company be liable for any claim, damages or other liability, whether in an action of contract, tort or otherwise, arising from, out of or in connection with ImageMagick or the use or other dealings in ImageMagick.

Except as contained in this notice, the name of the E. I. du Pont de Nemours and Company shall not be used in advertising or otherwise to

promote the sale, use or other dealings in ImageMagick without prior
written authorization from the E. I. du Pont de Nemours and Company.

4)
The GraphicsMagick Base64Decode() and Base64Encode() functions are
based on source code obtained from OpenSSH. This source code is
distributed under the following license:

Copyright (c) 2000 Markus Friedl. All rights reserved.

THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

5)
Many of the pattern images in coders/logo.c are derived from XFig,
which is distributed under the following license:

| FIG : Facility for Interactive Generation of figures
| Copyright (c) 1985-1988 by Supoj Sutanthavibul
| Parts Copyright (c) 1989-2000 by Brian V. Smith
| Parts Copyright (c) 1991 by Paul King

Any party obtaining a copy of these files is granted, free of charge, a

full and unrestricted irrevocable, world-wide, paid up, royalty-free, nonexclusive right and license to deal in this software and documentation files (the "Software"), including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons who receive copies from any such party to do so, with the only requirement being that this copyright notice remain intact.

6)
The documentation for the composition operators is copied from the rlecomp manual page, which is authored by Rod Bogart and John W. Peterson. Rlecomp is part of the Utah Raster Toolkit distributed by the University of Michigan and the University of Utah. The copyright for this manual page is as follows:

Copyright (c) 1986, University of Utah

This software is copyrighted as noted below. It may be freely copied, modified, and redistributed, provided that the copyright notice is preserved on all copies.

There is no warranty or other guarantee of fitness for this software, it is provided solely "as is". Bug reports or fixes may be sent to the author, who may or may not act on them as he desires.

You may not include this software in a program or other software product without supplying the source, or without informing the end-user that the source is available for no extra charge.

If you modify this software, you should include a notice giving the name of the person performing the modification, the date of modification, and the reason for such modification.

7)
The source code comprising swab.c is originally derived from libtiff which has the following license:

| Copyright (c) 1988-1997 Sam Leffler
| Copyright (c) 1991-1997 Silicon Graphics, Inc.

Permission to use, copy, modify, distribute, and sell this software and its documentation for any purpose is hereby granted without fee, provided that (i) the above copyright notices and this permission notice appear in all copies of the software and related documentation, and (ii) the names of Sam Leffler and Silicon Graphics may not be used in any advertising or

publicity relating to the software without the specific, prior written
permission of Sam Leffler and Silicon Graphics.

THE SOFTWARE IS PROVIDED "AS-IS" AND WITHOUT WARRANTY OF ANY KIND,
EXPRESS, IMPLIED OR OTHERWISE, INCLUDING WITHOUT LIMITATION, ANY
WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

IN false EVENT SHALL SAM LEFFLER OR SILICON GRAPHICS BE LIABLE FOR
ANY SPECIAL, INCIDENTAL, INDIRECT OR CONSEQUENTIAL DAMAGES OF ANY KIND,
OR ANY DAMAGES WHATSOEVER RESULTING FROM LOSS OF USE, DATA OR PROFITS,
WHETHER OR NOT ADVISED OF THE POSSIBILITY OF DAMAGE, AND ON ANY THEORY OF
LIABILITY, ARISING OUT OF OR IN CONNECTION WITH THE USE OR PERFORMANCE
OF THIS SOFTWARE.

8)
The C++ API known as "Magick++", and which resides in the Magick++
directory, is distributed under the following license:

Copyright 1999 - 2003 Bob Friesenhahn <bfriesen@simple.dallas.tx.us>

Permission is hereby granted, free of charge, to any person
obtaining a copy of the source files and associated documentation
files ("Magick++"), to deal in Magick++ without restriction,
including without limitation of the rights to use, copy, modify,
merge, publish, distribute, sublicense, and/or sell copies of
Magick++, and to permit persons to whom the Magick++ is furnished
to do so, subject to the following conditions:

This copyright notice shall be included in all copies or
substantial portions of Magick++. The copyright to Magick++ is
retained by its author and shall not be subsumed or replaced by any
other copyright.

The software is provided "as is", without warranty of any kind,
express or implied, including but not limited to the warranties of
merchantability, fitness for a particular purpose and
noninfringement. In no event shall Bob Friesenhahn be liable for
any claim, damages or other liability, whether in an action of
contract, tort or otherwise, arising from, out of or in connection
with Magick++ or the use or other dealings in Magick++.

9)
The GraphicsMagick HaldClutImagePixels() function in magick/hclut.c
is based on source code from the HaldCLUT package by Eskil Steenberg

(http://www.quelsolaar.com/technology/clut.html) which is
distributed under the following license:

Copyright (c) 2005 Eskil Steenberg. All rights reserved.

Redistribution and use in source and binary forms, with or without
modification, are permitted provided that the following conditions
are met:

1. Redistributions of source code must retain the above copyright
notice, this list of conditions and the following disclaimer.

2. Redistributions in binary form must reproduce the above copyright
notice, this list of conditions and the following disclaimer in the
documentation and/or other materials provided with the distribution.

THIS SOFTWARE IS PROVIDED BY THE AUTHOR \'\'AS IS\'\' AND ANY EXPRESS OR

THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT
(INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF
THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

10)
GraphicsMagick makes use of third-party ”delegate” libraries to
support certain optional features. These libraries bear their own
copyrights and licenses, which may be more or less restrictive than the
GraphicsMagick license. For convenience, when GraphicsMagick is
bundled with (or compiled with) ”delegate” libraries, a copy of the
licenses for these libraries is provided in a ”licenses” directory.

| Copyright (C) 2002 - 2010 GraphicsMagick Group

118.1.8 HASP

Platforms: macOS, Linux, Windows, Targets: .

Function: The HASP license
Notes: Aladdin Knowledge Systems Ltd. (c) 1985 - 2005. All rights reserved.

Exact license details are available with the HASP SDKs.

118.1.9 ImageMagick

Platforms: macOS, Linux, Windows, Targets: .

Function: The ImageMagick license
Notes: The authoratitive ImageMagick license can be found at
http://www.imagemagick.org/script/license.php and ImageMagick notices at
http://www.imagemagick.org/script/notice.php.

Before we get to the text of the license lets just review what the license says in simple terms:

It allows you to:

* freely download and use ImageMagick software, in whole or in part, for personal, company internal, or commercial purposes;
* use ImageMagick software in packages or distributions that you create.

It forbids you to:

* redistribute any piece of ImageMagick-originated software without proper attribution;
* use any marks owned by ImageMagick Studio LLC in any way that might state or imply that ImageMagick Studio LLC endorses your distribution;
* use any marks owned by ImageMagick Studio LLC in any way that might state or imply that you created the ImageMagick software in question.

It requires you to:

* include a copy of the license in any redistribution you may make that includes ImageMagick software;
* provide clear attribution to ImageMagick Studio LLC for any distributions that include ImageMagick software.

It does not require you to:

* include the source of the ImageMagick software itself, or of any modifications you may have made to it, in any redistribution you may assemble that includes it;
* submit changes that you make to the software back to the ImageMagick Studio LLC (though such feedback is encouraged).

A few other clarifications include:
* ImageMagick is freely available without charge;
* you may include ImageMagick on a CD-ROM as long as you comply with the terms of the license;
* you can give modified code away for free or sell it under the terms of the ImageMagick license or distribute the result under a different license, but you need to acknowledge the use of the ImageMagick software;
* the license is compatible with the GPL.

The legally binding and authoritative terms and conditions for use, reproduction, and distribution of ImageMagick follow:

Copyright 1999-2007 ImageMagick Studio LLC, a non-profit organization dedicated to making software imaging solutions freely available.

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.
"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.
"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.
"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.
"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.
"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.
"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).
"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

”Contribution” shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, ”submitted” means any form of electronic, verbal, or written communication intentionally sent to the Licensor by its copyright holder or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as ”Not a Contribution.”

”Contributor” shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

a. You must give any other recipients of the Work or Derivative Works a copy of this License; and

b. You must cause any modified files to carry prominent notices stating that You changed the files; and

c. You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

d. If the Work includes a ”NOTICE” text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks,

or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.
7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.
8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.
9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License.

118.1.10 iMedia Browser

Platforms: macOS, Linux, Windows, Targets: .

Function: The iMedia Browser license
Notes: iMedia Browser <http://karelia.com/imedia/>
Copyright (c) 2005-2007 by Karelia Software et al.
iMedia Browser is based on code originally developed by Jason Terhorst, further developed for Sandvox by Greg Hulands, Dan Wood, and Terrence Talbot. Contributions have also been made by Matt Gough, Martin Wennerberg and others as indicated in source files.
iMedia Browser is licensed under the following terms:
Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the "Software"), to deal in all or substantial portions of the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions:
Redistributions of source code must retain the original terms stated here, including this list of conditions, the disclaimer noted below, and the following copyright notice: Copyright (c) 2005-2007 by Karelia Software et al.
Redistributions in binary form must include, in an end-user-visible manner, e.g., About window, Acknowledgments window, or similar, either a) the original terms stated here, including this list of conditions, the disclaimer noted below, and the aforementioned copyright notice, or b) the aforementioned copyright notice and a link to karelia.com/imedia.
Neither the name of Karelia Software, nor Sandvox, nor the names of contributors to iMedia Browser may be used to endorse or promote products derived from the Software without prior and express written permission from Karelia Software or individual contributors, as appropriate.
Disclaimer: THE SOFTWARE IS PROVIDED BY THE COPYRIGHT OWNER AND CONTRIBUTORS

”AS IS”, WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NONINFRINGEMENT. IN false EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES, OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT, OR OTHERWISE, ARISING FROM, OUT OF, OR IN CONNECTION WITH, THE SOFTWARE OR THE USE OF, OR OTHER DEALINGS IN, THE SOFTWARE.

118.1.11 lcms

Platforms: macOS, Linux, Windows, Targets: .

Function: The lcms 1.19 license
Notes: Little CMS
Copyright (c) 1998-2007 Marti Maria Saguer

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the ”Software”), to deal in the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in all copies or substantial portions of the Software.

THE SOFTWARE IS PROVIDED ”AS IS”, WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT. IN false EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

118.1.12 libjpeg

Platforms: macOS, Linux, Windows, Targets: .

Function: The libjpeg license
Notes: In plain English:

1. We don’t promise that this software works. (But if you find any bugs,
please let us know!)
2. You can use this software for whatever you want. You don’t have to pay us.
3. You may not pretend that you wrote this software. If you use it in a

program, you must acknowledge somewhere in your documentation that
you've used the IJG code.

In legalese:

The authors make false WARRANTY or representation, either express or implied,
with respect to this software, its quality, accuracy, merchantability, or
fitness for a particular purpose. This software is provided "AS IS", and you,
its user, assume the entire risk as to its quality and accuracy.

This software is copyright (C) 1991-2010, Thomas G. Lane, Guido Vollbeding.
All Rights Reserved except as specified below.

Permission is hereby granted to use, copy, modify, and distribute this
software (or portions thereof) for any purpose, without fee, subject to these
conditions:
(1) If any part of the source code for this software is distributed, then this
README file must be included, with this copyright and no-warranty notice
unaltered; and any additions, deletions, or changes to the original files
must be clearly indicated in accompanying documentation.
(2) If only executable code is distributed, then the accompanying
documentation must state that "this software is based in part on the work of
the Independent JPEG Group".
(3) Permission for use of this software is granted only if the user accepts
full responsibility for any undesirable consequences; the authors accept
false LIABILITY for damages of any kind.

These conditions apply to any software derived from or based on the IJG code,
not just to the unmodified library. If you use our work, you ought to
acknowledge us.

Permission is NOT granted for the use of any IJG author's name or company name
in advertising or publicity relating to this software or products derived from
it. This software may be referred to only as "the Independent JPEG Group's
software".

We specifically permit and encourage the use of this software as the basis of
commercial products, provided that all warranty or liability claims are
assumed by the product vendor.

ansi2knr.c is included in this distribution by permission of L. Peter Deutsch,
sole proprietor of its copyright holder, Aladdin Enterprises of Menlo Park, CA.
ansi2knr.c is NOT covered by the above copyright and conditions, but instead

by the usual distribution terms of the Free Software Foundation; principally, that you must include source code if you redistribute it. (See the file ansi2knr.c for full details.) However, since ansi2knr.c is not needed as part of any program generated from the IJG code, this does not limit you more than the foregoing paragraphs do.

The Unix configuration script "configure" was produced with GNU Autoconf. It is copyright by the Free Software Foundation but is freely distributable. The same holds for its supporting scripts (config.guess, config.sub, ltmain.sh). Another support script, install-sh, is copyright by X Consortium but is also freely distributable.

The IJG distribution formerly included code to read and write GIF files. To avoid entanglement with the Unisys LZW patent, GIF reading support has been removed altogether, and the GIF writer has been simplified to produce "uncompressed GIFs". This technique does not use the LZW algorithm; the resulting GIF files are larger than usual, but are readable by all standard GIF decoders.

We are required to state that
"The Graphics Interchange Format(c) is the Copyright property of CompuServe Incorporated. GIF(sm) is a Service Mark property of CompuServe Incorporated."

118.1.13 libpng

Platforms: macOS, Linux, Windows, Targets: .

Function: The libpng 1.4.3 license.
Notes: This copy of the libpng notices is provided for your convenience. In case of any discrepancy between this copy and the notices in the file png.h that is included in the libpng distribution, the latter shall prevail.

COPYRIGHT NOTICE, DISCLAIMER, and LICENSE:

If you modify libpng you may insert additional notices immediately following this sentence.

This code is released under the libpng license.

libpng versions 1.2.6, August 15, 2004, through 1.4.3, June 26, 2010, are Copyright (c) 2004, 2006-2007 Glenn Randers-Pehrson, and are distributed according to the same disclaimer and license as libpng-1.2.5 with the following individual added to the list of Contributing Authors

Cosmin Truta

libpng versions 1.0.7, July 1, 2000, through 1.2.5 - October 3, 2002, are Copyright (c) 2000-2002 Glenn Randers-Pehrson, and are distributed according to the same disclaimer and license as libpng-1.0.6 with the following individuals added to the list of Contributing Authors

Simon-Pierre Cadieux
Eric S. Raymond
Gilles Vollant

and with the following additions to the disclaimer:

There is no warranty against interference with your enjoyment of the
library or against infringement. There is no warranty that our
efforts or the library will fulfill any of your particular purposes
or needs. This library is provided with all faults, and the entire
risk of satisfactory quality, performance, accuracy, and effort is with
the user.

libpng versions 0.97, January 1998, through 1.0.6, March 20, 2000, are Copyright (c) 1998, 1999 Glenn Randers-Pehrson, and are distributed according to the same disclaimer and license as libpng-0.96,
with the following individuals added to the list of Contributing Authors:

Tom Lane
Glenn Randers-Pehrson
Willem van Schaik

libpng versions 0.89, June 1996, through 0.96, May 1997, are Copyright (c) 1996, 1997 Andreas Dilger Distributed according to the same disclaimer and license as libpng-0.88,
with the following individuals added to the list of Contributing Authors:

John Bowler
Kevin Bracey
Sam Bushell
Magnus Holmgren
Greg Roelofs
Tom Tanner

libpng versions 0.5, May 1995, through 0.88, January 1996, are Copyright (c) 1995, 1996 Guy Eric Schalnat, Group 42, Inc.

For the purposes of this copyright and license, "Contributing Authors"

is defined as the following set of individuals:

Andreas Dilger
Dave Martindale
Guy Eric Schalnat
Paul Schmidt
Tim Wegner

The PNG Reference Library is supplied "AS IS". The Contributing Authors and Group 42, Inc. disclaim all warranties, expressed or implied,
including, without limitation, the warranties of merchantability and of fitness for any purpose. The Contributing Authors and Group 42, Inc.
assume no liability for direct, indirect, incidental, special, exemplary,
or consequential damages, which may result from the use of the PNG Reference Library, even if advised of the possibility of such damage.

Permission is hereby granted to use, copy, modify, and distribute this source code, or portions hereof, for any purpose, without fee, subject to the following restrictions:

1. The origin of this source code must not be misrepresented.
2. Altered versions must be plainly marked as such and must not be misrepresented as being the original source.
3. This Copyright notice may not be removed or altered from any source or altered source distribution.

The Contributing Authors and Group 42, Inc. specifically permit, without fee, and encourage the use of this source code as a component to supporting the PNG file format in commercial products. If you use this source code in a product, acknowledgment is not required but would be appreciated.

A "png_get_copyright" function is available, for convenient use in "about"
boxes and the like:

printf("%s",png_get_copyright(NULL));

Also, the PNG logo (in PNG format, of course) is supplied in the files "pngbar.png" and "pngbar.jpg (88x31) and "pngnow.png" (98x31).

Libpng is OSI Certified Open Source Software. OSI Certified Open Source is a certification mark of the Open Source Initiative.

Glenn Randers-Pehrson glennrp at users.sourceforge.net June 26, 2010

118.1.14 libssh2

Platforms: macOS, Linux, Windows, Targets: .

Function: The ssh2 1.2.4 license
Notes: Copyright (c) 2004-2007 Sara Golemon <sarag@libssh2.org>
Copyright (c) 2006-2007 The Written Word, Inc.
Copyright (c) 2009 Daniel Stenberg Copyright (C) 2008, 2009 Simon Josefsson All rights reserved.

Redistribution and use in source and binary forms,
with or without modification, are permitted provided that the following conditions are met:

- Redistributions of source code must retain the above copyright notice, this list of conditions and the following disclaimer.
- Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.
- Neither the name of the copyright holder nor the names of any other contributors may be used to endorse or promote products derived from this software without specific prior written permission.

THIS SOFTWARE IS PROVIDED BY THE COPYRIGHT HOLDERS AND CONTRIBUTORS "AS IS" AND ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. IN false EVENT SHALL THE COPYRIGHT OWNER OR CONTRIBUTORS BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

118.1.15 LibTesseract

Platforms: macOS, Linux, Windows, Targets: .

Function: The LibTesseract 2.04 license
Notes: This package contains the Tesseract Open Source OCR Engine.
Orignally developed at Hewlett Packard Laboratories Bristol and
at Hewlett Packard Co, Greeley Colorado, all the code
in this distribution is now licensed under the Apache License:

- Licensed under the Apache License, Version 2.0 (the "License");

- you may not use this file except in compliance with the License.
- You may obtain a copy of the License at
- http://www.apache.org/licenses/LICENSE-2.0
- Unless required by applicable law or agreed to in writing, software
- distributed under the License is distributed on an "AS IS" BASIS,
- WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied.
- See the License for the specific language governing permissions and
- limitations under the License.

Other Dependencies and Licenses:
==========
The Aspirin/MIGRAINES system is no longer used.

Tesseract can also make use of the libtiff library. (www.libtiff.org)
Without libtiff, Tesseract can only read uncompressed and G3 compressed
TIFF files.

118.1.16 libtiff

Platforms: macOS, Linux, Windows, Targets: .

Function: The libtiff 3.9.4 license
Notes: Use and Copyright

Silicon Graphics has seen fit to allow us to give this work away. It is free. There is no support or guarantee of any sort as to its operations, correctness, or whatever. If you do anything useful with all or parts of it you need to honor the copyright notices. I would also be interested in knowing about it and, hopefully, be acknowledged.

The legal way of saying that is:

Copyright (c) 1988-1997 Sam Leffler
Copyright (c) 1991-1997 Silicon Graphics, Inc.

Permission to use, copy, modify, distribute, and sell this software and its documentation for any purpose is hereby granted without fee, provided that (i) the above copyright notices and this permission notice appear in all copies of the software and related documentation, and (ii) the names of Sam Leffler and Silicon Graphics may not be used in any advertising or publicity relating to the software without the specific, prior

written permission of Sam Leffler and Silicon Graphics.

THE SOFTWARE IS PROVIDED "AS-IS" AND WITHOUT WARRANTY OF ANY KIND, EXPRESS, IMPLIED OR OTHERWISE, INCLUDING WITHOUT LIMITATION, ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

IN false EVENT SHALL SAM LEFFLER OR SILICON GRAPHICS BE LIABLE FOR ANY SPECIAL, INCIDENTAL, INDIRECT OR CONSEQUENTIAL DAMAGES OF ANY KIND, OR ANY DAMAGES WHATSOEVER RESULTING FROM LOSS OF USE, DATA OR PROFITS, WHETHER OR NOT ADVISED OF THE POSSIBILITY OF DAMAGE, AND ON ANY THEORY OF LIABILITY, ARISING OUT OF OR IN CONNECTION WITH THE USE OR PERFORMANCE OF THIS SOFTWARE.

118.1.17 libunimotion

Platforms: macOS, Linux, Windows, Targets: .

Function: The libunimotion 0.4.1 license
Notes: The plugin loads the unimotion library. So the library is LGPL and your commercial app can load it.

GNU LESSER GENERAL PUBLIC LICENSE
Version 2.1, February 1999

Copyright (C) 1991, 1999 Free Software Foundation, Inc.
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA
Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

[This is the first released version of the Lesser GPL. It also counts
as the successor of the GNU Library Public License, version 2, hence
the version number 2.1.]

Preamble

The licenses for most software are designed to take away your
freedom to share and change it. By contrast, the GNU General Public
Licenses are intended to guarantee your freedom to share and change
free software–to make sure the software is free for all its users.

This license, the Lesser General Public License, applies to some
specially designated software packages–typically libraries–of the
Free Software Foundation and other authors who decide to use it. You

can use it too, but we suggest you first think carefully about whether this license or the ordinary General Public License is the better strategy to use in any particular case, based on the explanations below.

When we speak of free software, we are referring to freedom of use, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish); that you receive source code or can get it if you want it; that you can change the software and use pieces of it in new free programs; and that you are informed that you can do these things.

To protect your rights, we need to make restrictions that forbid distributors to deny you these rights or to ask you to surrender these rights. These restrictions translate to certain responsibilities for you if you distribute copies of the library or if you modify it.

For example, if you distribute copies of the library, whether gratis or for a fee, you must give the recipients all the rights that we gave you. You must make sure that they, too, receive or can get the source code. If you link other code with the library, you must provide complete object files to the recipients, so that they can relink them with the library after making changes to the library and recompiling it. And you must show them these terms so they know their rights.

We protect your rights with a two-step method: (1) we copyright the library, and (2) we offer you this license, which gives you legal permission to copy, distribute and/or modify the library.

To protect each distributor, we want to make it very clear that there is no warranty for the free library. Also, if the library is modified by someone else and passed on, the recipients should know that what they have is not the original version, so that the original author's reputation will not be affected by problems that might be introduced by others.

Finally, software patents pose a constant threat to the existence of any free program. We wish to make sure that a company cannot effectively restrict the users of a free program by obtaining a restrictive license from a patent holder. Therefore, we insist that any patent license obtained for a version of the library must be consistent with the full freedom of use specified in this license.

Most GNU software, including some libraries, is covered by the

ordinary GNU General Public License. This license, the GNU Lesser General Public License, applies to certain designated libraries, and is quite different from the ordinary General Public License. We use this license for certain libraries in order to permit linking those libraries into non-free programs.

When a program is linked with a library, whether statically or using a shared library, the combination of the two is legally speaking a combined work, a derivative of the original library. The ordinary General Public License therefore permits such linking only if the entire combination fits its criteria of freedom. The Lesser General Public License permits more lax criteria for linking other code with the library.

We call this license the "Lesser" General Public License because it does Less to protect the user's freedom than the ordinary General Public License. It also provides other free software developers Less of an advantage over competing non-free programs. These disadvantages are the reason we use the ordinary General Public License for many libraries. However, the Lesser license provides advantages in certain special circumstances.

For example, on rare occasions, there may be a special need to encourage the widest possible use of a certain library, so that it becomes a de-facto standard. To achieve this, non-free programs must be allowed to use the library. A more frequent case is that a free library does the same job as widely used non-free libraries. In this case, there is little to gain by limiting the free library to free software only, so we use the Lesser General Public License.

In other cases, permission to use a particular library in non-free programs enables a greater number of people to use a large body of free software. For example, permission to use the GNU C Library in non-free programs enables many more people to use the whole GNU operating system, as well as its variant, the GNU/Linux operating system.

Although the Lesser General Public License is Less protective of the users' freedom, it does ensure that the user of a program that is linked with the Library has the freedom and the wherewithal to run that program using a modified version of the Library.

The precise terms and conditions for copying, distribution and modification follow. Pay close attention to the difference between a

”work based on the library” and a ”work that uses the library”. The former contains code derived from the library, whereas the latter must be combined with the library in order to run.

GNU LESSER GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License Agreement applies to any software library or other program which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Lesser General Public License (also called ”this License”). Each licensee is addressed as ”you”.

A ”library” means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

The ”Library”, below, refers to any such software library or work which has been distributed under these terms. A ”work based on the Library” means either the Library or any derivative work under copyright law: that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or translated straightforwardly into another language. (Hereinafter, translation is included without limitation in the term ”modification”.)

”Source code” for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from such a program is covered only if its contents constitute a work based on the Library (independent of the use of the Library in a tool for writing it). Whether that is true depends on what the Library does and what the program that uses the Library does.

1. You may copy and distribute verbatim copies of the Library’s complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any

warranty; and distribute a copy of this License along with the Library.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) The modified work must itself be a software library.

b) You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.

c) You must cause the whole of the work to be licensed at no charge to all third parties under the terms of this License.

d) If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility, other than as an argument passed when the facility is invoked, then you must make a good faith effort to ensure that, in the event an application does not supply such function or table, the facility still operates, and performs whatever part of its purpose remains meaningful.

(For example, a function in a library to compute square roots has a purpose that is entirely well-defined independent of the application. Therefore, Subsection 2d requires that any application-supplied function or table used by this function must be optional: if the application does not supply it, the square root function must still compute square roots.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Library, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the

entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Library.

In addition, mere aggregation of another work not based on the Library with the Library (or with a work based on the Library) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may opt to apply the terms of the ordinary GNU General Public License instead of this License to a given copy of the Library. To do this, you must alter all the notices that refer to this License, so that they refer to the ordinary GNU General Public License, version 2, instead of to this License. (If a newer version than version 2 of the ordinary GNU General Public License has appeared, then you can specify that version instead if you wish.) Do not make any other change in these notices.

Once this change is made in a given copy, it is irreversible for that copy, so the ordinary GNU General Public License applies to all subsequent copies and derivative works made from that copy.

This option is useful when you wish to copy part of the code of the Library into a program that is not a library.

4. You may copy and distribute the Library (or a portion or derivative of it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange.

If distribution of object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place satisfies the requirement to distribute the source code, even though third parties are not compelled to copy the source along with the object code.

5. A program that contains no derivative of any portion of the

Library, but is designed to work with the Library by being compiled or linked with it, is called a "work that uses the Library". Such a work, in isolation, is not a derivative work of the Library, and therefore falls outside the scope of this License.

However, linking a "work that uses the Library" with the Library creates an executable that is a derivative of the Library (because it contains portions of the Library), rather than a "work that uses the library". The executable is therefore covered by this License. Section 6 states terms for distribution of such executables.

When a "work that uses the Library" uses material from a header file that is part of the Library, the object code for the work may be a derivative work of the Library even though the source code is not. Whether this is true is especially significant if the work can be linked without the Library, or if the work is itself a library. The threshold for this to be true is not precisely defined by law.

If such an object file uses only numerical parameters, data structure layouts and accessors, and small macros and small inline functions (ten lines or less in length), then the use of the object file is unrestricted, regardless of whether it is legally a derivative work. (Executables containing this object code plus portions of the Library will still fall under Section 6.)

Otherwise, if the work is a derivative of the Library, you may distribute the object code for the work under the terms of Section 6. Any executables containing that work also fall under Section 6, whether or not they are linked directly with the Library itself.

6. As an exception to the Sections above, you may also combine or link a "work that uses the Library" with the Library to produce a work containing portions of the Library, and distribute that work under terms of your choice, provided that the terms permit modification of the work for the customer's own use and reverse engineering for debugging such modifications.

You must give prominent notice with each copy of the work that the Library is used in it and that the Library and its use are covered by this License. You must supply a copy of this License. If the work during execution displays copyright notices, you must include the copyright notice for the Library among them, as well as a reference directing the user to the copy of this License. Also, you must do one of these things:

a) Accompany the work with the complete corresponding machine-readable source code for the Library including whatever changes were used in the work (which must be distributed under Sections 1 and 2 above); and, if the work is an executable linked with the Library, with the complete machine-readable "work that uses the Library", as object code and/or source code, so that the user can modify the Library and then relink to produce a modified executable containing the modified Library. (It is understood that the user who changes the contents of definitions files in the Library will not necessarily be able to recompile the application to use the modified definitions.)

b) Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (1) uses at run time a copy of the library already present on the user's computer system, rather than copying library functions into the executable, and (2) will operate properly with a modified version of the library, if the user installs one, as long as the modified version is interface-compatible with the version that the work was made with.

c) Accompany the work with a written offer, valid for at least three years, to give the same user the materials specified in Subsection 6a, above, for a charge no more than the cost of performing this distribution.

d) If distribution of the work is made by offering access to copy from a designated place, offer equivalent access to copy the above specified materials from the same place.

e) Verify that the user has already received a copy of these materials or that you have already sent this user a copy.

For an executable, the required form of the "work that uses the Library" must include any data and utility programs needed for reproducing the executable from it. However, as a special exception, the materials to be distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

It may happen that this requirement contradicts the license restrictions of other proprietary libraries that do not normally

accompany the operating system. Such a contradiction means you cannot use both them and the Library together in an executable that you distribute.

7. You may place library facilities that are a work based on the Library side-by-side in a single library together with other library facilities not covered by this License, and distribute such a combined library, provided that the separate distribution of the work based on the Library and of the other library facilities is otherwise permitted, and provided that you do these two things:

a) Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities. This must be distributed under the terms of the Sections above.

b) Give prominent notice with the combined library of the fact that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.

8. You may not copy, modify, sublicense, link with, or distribute the Library except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, link with, or distribute the Library is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

9. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Library or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Library (or any work based on the Library), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Library or works based on it.

10. Each time you redistribute the Library (or any work based on the Library), the recipient automatically receives a license from the original licensor to copy, distribute, link with or modify the Library subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties with this License.

11. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Library at all. For example, if a patent license would not permit royalty-free redistribution of the Library by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Library.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply, and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

12. If the distribution and/or use of the Library is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Library under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

13. The Free Software Foundation may publish revised and/or new versions of the Lesser General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library specifies a version number of this License which applies to it and ”any later version”, you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Library does not specify a license version number, you may choose any version ever published by the Free Software Foundation.

14. If you wish to incorporate parts of the Library into other free programs whose distribution conditions are incompatible with these, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

false WARRANTY

15. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS false WARRANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE LIBRARY ”AS IS” WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. IN false EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE LIBRARY (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE LIBRARY TO OPERATE WITH ANY OTHER SOFTWARE), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Libraries

If you develop a new library, and you want it to be of the greatest possible use to the public, we recommend making it free software that everyone can redistribute and change. You can do so by permitting redistribution under these terms (or, alternatively, under the terms of the ordinary General Public License).

To apply these terms, attach the following notices to the library. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the library's name and a brief idea of what it does.>
Copyright (C) <year><name of author>

This library is free software; you can redistribute it and/or modify it under the terms of the GNU Lesser General Public License as published by the Free Software Foundation; either version 2.1 of the License, or (at your option) any later version.

This library is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU Lesser General Public License for more details.

You should have received a copy of the GNU Lesser General Public License along with this library; if not, write to the Free Software Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA

Also add information on how to contact you by electronic and paper mail.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the library, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the library 'Frob' (a library for tweaking knobs) written by James Random Hacker.

<signature of Ty Coon>, 1 April 1990
Ty Coon, President of Vice

That's all there is to it!

118.1.18 libunzip

Platforms: macOS, Linux, Windows, Targets: .

Function: The libunzip 1.01e license
Notes: unzip.h – IO for uncompress .zip files using zlib
Version 1.01e, February 12th, 2005

Copyright (C) 1998-2005 Gilles Vollant

This unzip package allow extract file from .ZIP file, compatible with PKZip 2.04g
WinZip, InfoZip tools and compatible.

Multi volume ZipFile (span) are not supported.
Encryption compatible with pkzip 2.04g only supported
Old compressions used by old PKZip 1.x are not supported

I WAIT FEEDBACK at mail info@winimage.com
Visit also http://www.winimage.com/zLibDll/unzip.htm for evolution

Condition of use and distribution are the same than zlib :

This software is provided 'as-is', without any express or implied
warranty. In no event will the authors be held liable for any damages
arising from the use of this software.

Permission is granted to anyone to use this software for any purpose,
including commercial applications, and to alter it and redistribute it
freely, subject to the following restrictions:

1. The origin of this software must not be misrepresented; you must not
claim that you wrote the original software. If you use this software
in a product, an acknowledgment in the product documentation would be
appreciated but is not required.
2. Altered source versions must be plainly marked as such, and must not be
misrepresented as being the original software.
3. This notice may not be removed or altered from any source distribution.

118.1.23 optipng

Platforms: macOS, Linux, Windows, Targets: .

Function: The optipng 0.6.2 license
Notes: Copyright (C) 2001-2010 Cosmin Truta.

This software is provided 'as-is', without any express or implied warranty. In no event will the author(s) be held liable for any damages arising from the use of this software.

Permission is granted to anyone to use this software for any purpose, including commercial applications, and to alter it and redistribute it freely, subject to the following restrictions:

1. The origin of this software must not be misrepresented; you must not claim that you wrote the original software. If you use this software in a product, an acknowledgment in the product documentation would be appreciated but is not required.
2. Altered source versions must be plainly marked as such, and must not be misrepresented as being the original software.
3. This notice may not be removed or altered from any source distribution.

118.1.24 PCRE

Platforms: macOS, Linux, Windows, Targets: .

Function: The PCRE 8.0.1 license (RegEx)
Notes: PCRE LICENCE

PCRE is a library of functions to support regular expressions whose syntax
and semantics are as close as possible to those of the Perl 5 language.

Release 8 of PCRE is distributed under the terms of the "BSD" licence, as specified below. The documentation for PCRE, supplied in the "doc" directory, is distributed under the same terms as the software itself.

The basic library functions are written in C and are freestanding. Also included in the distribution is a set of C++ wrapper functions.

THE BASIC LIBRARY FUNCTIONS

Written by: Philip Hazel
Email local part: ph10

118.1.28 SecureDongle X

Platforms: macOS, Linux, Windows, Targets: .

Function: The SecureDongle X license
Notes: Software Developer's Agreement

All Products of SecureMetric Technology Sdn. Bhd. (SecureMetric) including, but not limited to, evaluation copies, diskettes, CD-ROMs, hardware and documentation, and all future orders, are subject to the terms of this Agreement. If developers do not agree with the terms herein, please return the evaluation package to us, postage and insurance prepaid, within seven days of their receipt, and we will reimburse developers the cost of the Product, less freight and reasonable handling charges.

1. Allowable Use - Developers may merge and link the Software with other programs for the sole purpose of protecting those programs in accordance with the usage described in the Developer's Guide. Developers may make archival copies of the Software.

2. Prohibited Use - The Software or hardware or any other part of the Product may not be copied, reengineered, disassembled, decompiled, revised, enhanced or otherwise modified, except as specifically allowed in item 1. Developers may not reverse engineer the Software or any part of the product or attempt to discover

the Software's source code. Developers may not use the magnetic or optical media included with the Product for the purposes of transferring or storing data that was not either an original part of the Product, or a SecureMetric provided enhancement or upgrade to the Product.

3. Warranty - SecureMetric warrants that the hardware and Software storage media are substantially free from significant defects of workmanship or materials for a time period of twelve (12) months from the date of delivery of the Product to developers.

4. Breach of Warranty - In the event of breach of this warranty, SecureMetric's sole obligation is to replace or repair, at the discretion of SecureMetric, any Product free of charge. Any replaced Product becomes the property of SecureMetric. Warranty claims must be made in writing to SecureMetric during the warranty period and within fourteen (14) days after the observation of the defect. All warranty claims must be accompanied by evidence of the defect that is deemed satisfactory by SecureMetric. Any Products that developers return to SecureMetric, or a SecureMetric authorized distributor, must be sent with freight and insurance prepaid.
EXCEPT AS STATED ABOVE, THERE IS false OTHER WARRANTY OR REPRESENTATION OF THE PRODUCT, EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

5. Limitation of SecureMetric's Liability - SecureMetric's entire liability to developers or any other party for any cause whatsoever, whether in contract or in tort, including negligence, shall not exceed the price developers paid for the unit of the Product that caused the damages or are the subject of, or indirectly related to the cause of action. In no event shall SecureMetric be liable for any damages caused by developers failure to meet developer's obligations, nor for any loss of data, profit or savings, or any other consequential and incidental damages, even if SecureMetric has been advised of the possibility of damages, or for any claim by developers based on any third-party claim.

6. Termination - This Agreement shall terminate if developers fail to comply with the terms herein. Items 2, 3, 4 and 5 shall survive any termination of this Agreement.

118.1.29 SQLAPI

Platforms: macOS, Linux, Windows, Targets: .

Function: The SQLAPI 3.7.33 license
Notes: Note: Once you buy a SQL Plugin license, you get automatically a SQLAPI license from use with our plugin. No extra license fee required.

****
SQLAPI++ Library - LICENSE AGREEMENT and WARRANTY
****

You should carefully read the following terms and conditions

before using this software. Your use of this software
indicates your acceptance of this license agreement
and warranty.

LICENSE AGREEMENT:
==========
You have the non-exclusive right to use the Library.
The Company retains all title and ownership of the Library.

EVALUATION:
==========
The SQLAPI++ Library is distributed as shareware. You can use the Library
for evaluation purposes without charge for unlimited period. The evaluation
version has no limits or functional differences from registered version,
but it will display registration messages occasionally.
While in evaluation you MAY NOT distribute your applications written with
trial version of SQLAPI++ library.

REGISTERED VERSIONS:
==========
You have to purchase SQLAPI++ Personal license for every developer,
or one Site license for up to 10 developers in your company
or one Site+ license for unlimited number of developers in your company.
You MAY distribute applications written with SQLAPI++ (including SQLAPI++
run-time) without any additional charge.
You MAY NOT distribute SQLAPI++ source codes (original or modified).

REGISTERED VERSION (Personal license):
One registered copy of SQLAPI++ Library may be used by a single person
who uses it personally on one or more computers.
You may access the registered version of SQLAPI++ Library through a network,
provided that you have obtained individual licenses for the software covering
all developers that will access the software through the network.

REGISTERED VERSION (Site license):
One registered copy of SQLAPI++ may be used by up to 10 developers
WORKING IN ONE COMPANY on one or more computers.

REGISTERED VERSION (Site+ license):
One registered copy of SQLAPI++ may be used by any number of developers
WORKING IN ONE COMPANY on one or more computers.

WARRANTY AND LIMITATION OF LIABILITY
==========

We warrant that you will receive life-time FREE e-mail support, FREE bugs fixing and FREE new version updates.

118.1.30 TCMPortMapper

Platforms: macOS, Linux, Windows, Targets: .

Function: The TCMPortMapper 1.3.1 license
Notes: TCMPortMapper
Establishes port mapping via upnp or natpmp

118.1.34 zlib

Platforms: macOS, Linux, Windows, Targets: .

Function: The zlib 1.2.3 license
Notes: (C) 1995-2004 Jean-loup Gailly and Mark Adler

This software is provided 'as-is', without any express or implied warranty. In no event will the authors be held liable for any damages arising from the use of this software.

Permission is granted to anyone to use this software for any purpose, including commercial applications, and to alter it and redistribute it freely, subject to the following restrictions:

1. The origin of this software must not be misrepresented; you must not claim that you wrote the original software. If you use this software in a product, an acknowledgment in the product documentation would be appreciated but is not required.
2. Altered source versions must be plainly marked as such, and must not be misrepresented as being the original software.

3. This notice may not be removed or altered from any source distribution.

Jean-loup Gailly Mark Adler
jloup@gzip.org madler@alumni.caltech.edu

If you use the zlib library in a product, we would appreciate *not* receiving lengthy legal documents to sign. The sources are provided for free but without warranty of any kind. The library has been entirely written by Jean-loup Gailly and Mark Adler; it does not include third-party code.

If you redistribute modified sources, we would appreciate that you include in the file ChangeLog history information documenting your changes. Please read the FAQ for more information on the distribution of modified source versions.

Chapter 119

Linguistic

119.1 class NSLinguisticTaggerMBS

119.1.1 class NSLinguisticTaggerMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Analyze natural language to tag part of speech and lexical class, identify proper names, perform lemmatization, and determine the language and script (orthography) of text.
Example:

```
Var TagScheme as string = NSLinguisticTaggerMBS.NSLinguisticTagSchemeLanguage
Var TagSchemes() as string = array(TagScheme)
Var t as new NSLinguisticTaggerMBS(TagSchemes)

t.Text = "Hallo Leute"

Var tokenRange as NSRangeMBS
Var sentenceRange as NSRangeMBS
Var tag as string = t.tagAtIndex(0, TagScheme, tokenRange, sentenceRange)

MessageBox "Language: "+tag // should be "de" for German
```

Notes: The NSLinguisticTaggerMBS class provides a uniform interface to a variety of natural language processing functionality with support for many different languages and scripts. You can use NSLinguistic-TaggerMBS to segment natural language text into paragraphs, sentences, or words, and tag information about those tokens, such as part of speech, lexical class, lemma, script, and language.
When you create a linguistic tagger, you specify what kind of information you're interested in by passing one or more
NSLinguisticTagScheme values. Set the string property to the natural language text you want to analyze, and the linguistic tagger processes it according to the specified tag schemes. You can then enumerate over

the tags in a specified range, using the methods described in Enumerating Linguistic Tags, to get the information requested for a given scheme and unit.
Blog Entries

- MBS Xojo Plugins, version 21.1pr6
- MBS Xojo Plugins, version 17.3pr3

119.1.2 Methods

119.1.3 availableTagSchemesForLanguage(Language as String) as String()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns the tag schemes available for a particular language on the current device.
Notes: language: A BCP-47 tag identifying the language. For example, "en" for English or "zh-Hans" for Chinese written using the Simplified Chinese script.

Returns the available tag schemes. For possible values, see NSLinguisticTagScheme.

This is a convenience method for calling the availableTagSchemesForUnit, passing NSLinguisticTaggerUnitWord as the linguistic unit.

119.1.4 availableTagSchemesForUnit(unit as Integer, Language as String) as String()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns the tag schemes available for a particular unit and language on the current device.
Notes: unit: The linguistic unit. For possible values, see NSLinguisticTaggerUnit.
language: A BCP-47 tag identifying the language. For example, "en" for English or "zh-Hans" for Chinese written using the Simplified Chinese script.

Returns the supported tag schemes. For possible values, see NSLinguisticTagScheme.

Available in macOS 10.13 and newer.

119.1.5 Constructor(tagSchemes() as String, options as integer = 0)

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Creates a linguistic tagger instance using the specified tag schemes and options.
Notes: tagSchemes: An array of tag schemes. See NSLinguisticTagScheme for the possible values.
options: Reserved for future use. Specify 0 for this parameter.

119.1.6 dominantLanguageForString(text as String) as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns the dominant language for the specified string.
Notes: string: The string for which the dominant language is determined.

Returns the BCP-47 tag identifying the dominant language of the string, or the tag "und" if a specific language cannot be determined.

This is a convenience method for creating a new linguistic tagger, setting the string property, and getting the dominantLanguage property. If you analyze the same string more than once, you should create a linguistic tagger object instead of calling this method.

Available in macOS 10.13 and newer.

119.1.7 NSLinguisticTagAdjective as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is an adjective.

119.1.8 NSLinguisticTagAdverb as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is an adverb.

119.1.9 NSLinguisticTagClassifier as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.

Notes: This token is a classifier.

119.1.10 NSLinguisticTagCloseParenthesis as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a close parenthesis.

119.1.11 NSLinguisticTagCloseQuote as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a close quote.

119.1.12 NSLinguisticTagConjunction as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a conjunction.

119.1.13 NSLinguisticTagDash as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a dash.

119.1.14 NSLinguisticTagDeterminer as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a determiner.

119.1.15 NSLinguisticTagIdiom as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is an idiom.

119.1.16 NSLinguisticTagInterjection as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is an interjection.

119.1.17 NSLinguisticTagNoun as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: The token is a noun.

119.1.18 NSLinguisticTagNumber as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a number.

119.1.19 NSLinguisticTagOpenParenthesis as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is an open parenthesis.

119.1.20 NSLinguisticTagOpenQuote as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is an open quote.

119.1.21 NSLinguisticTagOrganizationName as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the Name Types.
Notes: This token is an organization name.

119.1.22 NSLinguisticTagOther as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the token types.
Notes: The token indicates a non-linguistic item, such as a symbol.

119.1.23 NSLinguisticTagOtherPunctuation as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is punctuation other than a kind described by other lexical classes (sentence terminator, open or close quote, open or close parenthesis, word joiner, and dash).

119.1.24 NSLinguisticTagOtherWhitespace as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is whitespace other than a kind described by other lexical classes (paragraph break).

119.1.25 NSLinguisticTagOtherWord as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a word other than a kind described by other lexical classes (noun, verb, adjective, adverb, pronoun, determiner, particle, preposition, number, conjunction, interjection, classifier, and idiom).

119.1.26 NSLinguisticTagParagraphBreak as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a paragraph break.

119.1.27 NSLinguisticTagParticle as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a particle.

119.1.28 NSLinguisticTagPersonalName as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the Name Types.
Notes: This token is a personal name.

119.1.29 NSLinguisticTagPlaceName as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the Name Types.
Notes: This token is a place name.

119.1.30 NSLinguisticTagPreposition as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a preposition.

119.1.31 NSLinguisticTagPronoun as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a pronoun.

119.1.32 NSLinguisticTagPunctuation as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the token types.
Notes: The token indicates punctuation.

119.1.33 NSLinguisticTagSchemeLanguage as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Supplies a BCP-47 language identifier for a token.
Notes: For example, the language identifier for English is "en" and the identifier for Chinese written using the Simplified Chinese script is "zh-Hans". The identifier "und" is used if a specific language cannot be determined.
The tagger generally attempts to determine the language of text at the level of an entire sentence, paragraph, or document, rather than word by word.

119.1.34 NSLinguisticTagSchemeLemma as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Supplies a stem form of a word token, if known.

119.1.35 NSLinguisticTagSchemeLexicalClass as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Classifies tokens according to class: part of speech for words, type of punctuation, or whitespace.

119.1.36 NSLinguisticTagSchemeNameType as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Classifies tokens according to whether they are part of a named entity.

119.1.37 NSLinguisticTagSchemeNameTypeOrLexicalClass as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Classifies tokens corresponding to names according to NSLinguisticTagSchemeNameType and tokens all other tokens according to NSLinguisticTagSchemeLexicalClass.

119.1.38 NSLinguisticTagSchemeScript as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Supplies an ISO 15924 script identifier for a token.
Notes: For example, the identifier for Latin script is "Latn" and the identifier for Simplified Chinese script is "Hans". The identifier "Zyyy" is used if a specific script cannot be determined.

119.1.39 NSLinguisticTagSchemeTokenType as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Classifies tokens according to their broad type: word, punctuation, or whitespace.
Notes: To classify tokens by a more specific type, for example, distinguishing words between nouns and verbs, use the
NSLinguisticTagSchemeLexicalClass scheme.

119.1.40 NSLinguisticTagSentenceTerminator as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a sentence terminator.

119.1.41 NSLinguisticTagVerb as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a verb.

119.1.42 NSLinguisticTagWhitespace as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the token types.
Notes: The token indicates white space of any sort.

119.1.43 NSLinguisticTagWord as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the token types.
Notes: The token indicates a word.

119.1.44 NSLinguisticTagWordJoiner as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a word joiner.

119.1.45 orthographyAtIndex(charIndex as integer, byref effectiveRange as NSRangeMBS) as NSOrthographyMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns the orthography at the index and also returns the effective range.
Example:

```
Var TagScheme as string = NSLinguisticTaggerMBS.NSLinguisticTagSchemeLanguage
Var TagSchemes() as string = array(TagScheme)
Var t as new NSLinguisticTaggerMBS(TagSchemes)

t.Text = "Hallo Leute"

Var tokenRange as NSRangeMBS
Var sentenceRange as NSRangeMBS
Var tag as string = t.tagAtIndex(0, TagScheme, tokenRange, sentenceRange)

Var effectiveRange as NSRangeMBS
Var o as NSOrthographyMBS = t.orthographyAtIndex(0, effectiveRange)

MessageBox o.dominantLanguage+" "+o.dominantScript
```

Notes: charIndex: The character index to begin examination.
effectiveRange: An NSRangeMBS that, upon completion, contains the range of the orthography containing charIndex.

Returns the orthography for the location.

119.1.46 sentenceRangeForRange(range as NSRangeMBS) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns the range of a sentence containing the specified range.
Notes: charRange: The character range.

Returns the range of the sentence.

This is a convenience method for calling tokenRangeAtIndex, passing the NSLinguisticTaggerUnitSentence unit and the first position of the provided range.

119.1.47 setOrthography(orthography as NSOrthographyMBS, range as NSRangeMBS)

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Sets the orthography for the specified range.
Notes: orthography: The orthography.
charRange: The range.

If the orthography of the linguistic tagger is not set, it will determine it automatically from the contents of the text. You should call this method only if you know the orthography of the text by some other means.

119.1.48 tagAtIndex(charIndex as Integer, Scheme as String, byref tokenRange as NSRangeMBS, byref sentenceRange as NSRangeMBS) as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns a tag for a single scheme at the specified character position.
Notes: charIndex: The position of the initial character.
tagScheme: The tag scheme. See NSLinguisticTagScheme for the possible values.
tokenRange: The token range for output.
sentenceRange: The range of the sentence for output.

Returns the tag for the requested tag scheme, or nil. If a tag is returned, this function returns by reference the range of the token to tokenRange, and the range of the enclosing sentence to sentenceRange, if applicable.

This is a convenience method for calling tagAtIndex and passing NSLinguisticTaggerUnitWord as the linguistic unit.

Available in macOS 10.7 and newer.
See also:

- 119.1.49 tagAtIndex(charIndex as Integer, unit as Integer, Scheme as String, byref tokenRange as NSRangeMBS) as String 17534

119.1.49 tagAtIndex(charIndex as Integer, unit as Integer, Scheme as String, byref tokenRange as NSRangeMBS) as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns a tag for a single scheme for a given linguistic unit at the specified character position.
Notes: charIndex: The position of the initial character.
unit: The linguistic unit. See NSLinguisticTaggerUnit for possible values.
tagScheme: The tag scheme. See NSLinguisticTagScheme for possible values.
tokenRange: The token range for output.

Returns the tag for the requested tag scheme and linguistic unit, or nil. If a tag is returned, this function returns by reference the range of the token to tokenRange.

Available in macOS 10.13 and newer.
See also:

- 119.1.48 tagAtIndex(charIndex as Integer, Scheme as String, byref tokenRange as NSRangeMBS, byref sentenceRange as NSRangeMBS) as String 17533

119.1.50 tagForString(text as string, charIndex as Integer, unit as Integer, Scheme as String, orthography as NSOrthographyMBS, byref tokenRange as NSRangeMBS) as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns a tag for a single scheme for a given linguistic unit at the specified character position in a string.
Notes: charIndex: The position of the initial character.
unit: The linguistic unit. See NSLinguisticTaggerUnit for possible values.
tagScheme: The tag scheme. See NSLinguisticTagScheme for possible values.

tokenRange: The token range for output.

Returns the tag for the requested tag scheme and linguistic unit, or nil. If a tag is returned, this function returns by reference the range of the token to tokenRange.

This is a convenience method for initializing a linguistic tagger, setting the string property, and calling the tagForString method. If you analyze the same string more than once, you should create a linguistic tagger object instead of calling this method.

119.1.51 tagSchemes as String()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns the tag schemes configured for this linguistic tagger.
Notes: For possible values, see NSLinguisticTagScheme.

119.1.52 TagsForString(text as string, range as NSRangeMBS, unit as Integer, Scheme as String, options as Integer, orthography as NSOrthographyMBS) as NSLinguisticValueMBS()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns an array of linguistic tags and token ranges.
Notes: range: The range from which to return tags.
unit: The linguistic unit. See NSLinguisticTaggerUnit for possible values.
tagScheme: The tag scheme. See NSLinguisticTagScheme for possible values.
options: The linguistic tagger options to use. See NSLinguisticTaggerOptions for possible values.

An array of the values in the requested range (tag and tokenRange set).

When the returned array contains an entry that doesn't have a corresponding tag scheme, that entry is an empty string ("").
This is a convenience method for initializing a linguistic tagger, setting the
string property, and calling the tagsInRange method. If you analyze the same string more than once, you should create a linguistic tagger object instead of calling this method.

Available in macOS 10.13 and newer.

119.1.53 tagsInRange(range as NSRangeMBS, Scheme as String, options as Integer) as NSLinguisticValueMBS()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns an array of linguistic tags and token ranges.
Notes: range: The range to analyze.
tagScheme: The tag scheme. For possible values, see NSLinguisticTagScheme.
options: The linguistic tagger options to use. See NSLinguisticTaggerOptions for possible values.

Available in macOS 10.7 and newer.
See also:

- 119.1.54 tagsInRange(range as NSRangeMBS, unit as Integer, Scheme as String, options as Integer) as NSLinguisticValueMBS() 17536

119.1.54 tagsInRange(range as NSRangeMBS, unit as Integer, Scheme as String, options as Integer) as NSLinguisticValueMBS()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns an array of linguistic tags and token ranges.
Notes: range: The range to analyze.
unit: The linguistic unit. For possible values, see NSLinguisticTaggerUnit.
tagScheme: The tag scheme. For possible values, see NSLinguisticTagScheme.
options: The linguistic tagger options to use. See NSLinguisticTaggerOptions for possible values.

Available in macOS 10.13 and newer.

Returns all tokens intersecting a given range, supplying tags and ranges. The tagger segments the string into sentences and tokens as necessary, and return those ranges along with a tag for any scheme in its array of tag schemes. For example, if the tag scheme is NSLinguisticTagSchemeLexicalClass, the tags specify the part of speech (for word tokens) or the type of whitespace or punctuation (for whitespace or punctuation tokens). If the tag scheme is NSLinguisticTagSchemeLemma, the tags specify the stem form of the word (if known) for each word token.
See also:

- 119.1.53 tagsInRange(range as NSRangeMBS, Scheme as String, options as Integer) as NSLinguistic-ValueMBS() 17536

119.1.55 tokenRangeAtIndex(charIndex as Integer, Unit as Integer) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns the range of the linguistic unit containing the specified character index.
Notes: charIndex: The character index to begin examination.
unit: The linguistic unit. For possible values, see NSLinguisticTaggerUnit.

Returns the range of the substring for the linguistic unit.
Available in macOS 10.13 and newer.

119.1.56 Properties

119.1.57 dominantLanguage as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns the dominant language of the string set for the linguistic tagger.
Notes: The BCP-47 tag identifying the dominant language of the string, or the tag "und" if a specific language cannot be determined.
Available in macOS 10.13 and newer.
(Read only property)

119.1.58 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

119.1.59 Text as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: The string being analyzed by the linguistic tagger.
Notes: (Read and Write property)

119.1.60 Constants

Options

Constant	Value	Description
NSLinguisticTaggerJoinNames	16	Typically, multiple-word names will be returned as multiple tokens, follo the standard tokenization practice of the tagger. If this option is set, multiple-word names will be joined together and returned as a single toke
NSLinguisticTaggerOmitOther	8	Omit tokens of type NSLinguisticTagOther (non-linguistic items, such as s bols).
NSLinguisticTaggerOmitPunctuation	2	Omit tokens of type NSLinguisticTagPunctuation (all punctuation).
NSLinguisticTaggerOmitWhitespace	4	Omit tokens of type NSLinguisticTagWhitespace (whitespace of all sorts)
NSLinguisticTaggerOmitWords	1	Omit tokens of type NSLinguisticTagWord (items considered to be words

Units

Constant	Value	Description
NSLinguisticTaggerUnitDocument	3	The document in its entirety.
NSLinguisticTaggerUnitParagraph	2	An individual paragraph.
NSLinguisticTaggerUnitSentence	1	An individual sentence.
NSLinguisticTaggerUnitWord	0	An individual word.

119.2 class NSLinguisticValueMBS

119.2.1 class NSLinguisticValueMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: The class for linguistic tokens.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 21.1pr6
- MBS Xojo Plugins, version 17.3pr3

119.2.2 Methods

119.2.3 Constructor

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: The private constructor.

119.2.4 Properties

119.2.5 sentenceRange as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: The sentence range.
Notes: Only filled by tagAtIndex when used without unit.
(Read and Write property)

119.2.6 Tag as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: The linguistic tag.
Notes: (Read and Write property)

119.2.7 Text as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: The text for the token.
Notes: (Read and Write property)

119.2.8 tokenRange as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: The token range.
Notes: (Read and Write property)

119.3 class NSOrthographyMBS

119.3.1 class NSOrthographyMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: A description of the linguistic content of a piece of text typically used for spelling and grammar checking.
Example:

```
// show the script and languages of the default orthography for German
Var ortho As NSOrthographyMBS = NSOrthographyMBS.defaultOrthographyForLanguage("de")

MessageBox "Dominant script: " + ortho.dominantScript + EndOfLine + _
"Dominant language: " + ortho.dominantLanguage + EndOfLine + _
"Languages: " + String.FromArray(ortho.allLanguages, ", ")
```

Notes: An NSOrthography instance describes:

- Which scripts the text contains.
- A dominant language and possibly other languages for each of these scripts.
- A dominant script and language for the text as a whole.

Scripts are uniformly described by standard four-letter tags (Latn, Grek, Cyrl, etc.) with the supertags Jpan and Kore typically used for Japanese and Korean text, Hans and Hant for Chinese text; the tag Zyyy is used if a specific script cannot be identified. See Internationalization and Localization Guide for more information on internationalization.

Languages are uniformly described by BCP-47 tags , preferably in canonical form; the tag und is used if a specific language cannot be determined.

119.3.2 Methods

119.3.3 allLanguages as String()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns an array containing all the languages appearing in the values of the language map.
Notes: Available in macOS 10.6 and newer.

119.3.4 allScripts as String()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns an array containing all the scripts appearing as keys in the language map.
Notes: Available in macOS 10.6 and newer.

119.3.5 Constructor(script as string, map as dictionary)

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Creates and returns an orthography instance with the specified dominant script and language map.
Notes: script: The dominant script.
map: A dictionary containing the language map.

Returns an initialized orthography object for the specified script and language map.

119.3.6 copy as NSOrthographyMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Create a copy of the object.

119.3.7 defaultOrthographyForLanguage(language as string) as NSOrthographyMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Queries default orthography for a language.
Notes: Available in macOS 10.13 and newer.

119.3.8 dominantLanguageForScript(script as string) as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns the dominant language for the specified script.
Notes: Available in macOS 10.6 and newer.

119.3.9 languagesForScript(script as string) as String()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns the list of languages for the specified script.
Notes: Available in macOS 10.6 and newer.

119.3.10 orthographyWithDominantScript(script as string, map as dictionary) as NSOrthographyMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Creates and returns an orthography instance with the specified dominant script and language map.
Notes: script: The dominant script.
map: A dictionary containing the language map.

Returns an initialized orthography object for the specified script and language map.

119.3.11 Properties

119.3.12 dominantLanguage as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns the first language in the list of languages for the dominant script.
Notes: Available in macOS 10.6 and newer.
(Read only property)

119.3.13 dominantScript as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: The dominant script for the text.
Notes: The dominant script should be a script tag, such as Latn, Cyrl, etc.
Available in macOS 10.6 and newer.

(Read only property)

119.3.14 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

119.3.15 languageMap as Dictionary

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: A dictionary that map script tags to arrays of language tags.
Notes: The dictionary,Äôs keys are script tags (such as Latn, Cyrl, and so forth) and whose values are arrays of language tags (such as en, fr, de, etc.)
(Read only property)

Chapter 120

Linux

120.1 module LinuxIconMBS

120.1.1 module LinuxIconMBS

MBS Linux Plugin, Plugin Version: 19.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The module for Linux icons.
Example:

```
// This example needs a window with ImageViewer1.
// show the icon of a file as shown in the Linux file manager
ImageViewer1.Image = LinuxIconMBS.FileIcon(SpecialFolder.Documents, 64)
```

120.1.2 Methods

120.1.3 FileIcon(file as FolderItem, size as integer = 48) as Picture

MBS Linux Plugin, Plugin Version: 19.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries file icon for file.
Example:

```
// This example needs a window with Canvas2.
Var f2 as FolderItem = SpecialFolder.Desktop
Canvas2.Backdrop = LinuxIconMBS.FileIcon(f2, Canvas2.Width)
```

Notes: Returns nil in case of error.

120.1.4 FilePreview(file as FolderItem, size as integer = 48) as Picture

MBS Linux Plugin, Plugin Version: 19.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries preview icon for file.
Notes: Returns nil in case of error.

120.1.5 FileThumbnail(file as FolderItem) as FolderItem

MBS Linux Plugin, Plugin Version: 19.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries thumbnail path for a given file.
Example:

```
// This example needs a window with Canvas6.
// make an image file
Var p as picture = logoMBS(500) // from Main plugin
Var f as FolderItem = SpecialFolder.Desktop.Child("MBS.jpg")
p.Save(f, p.SaveAsJPEG, 90)

// show thumbnail
Var ThumbnailFile as FolderItem = LinuxIconMBS.FileThumbnail(f)
if ThumbnailFile <>nil then
Canvas6.Backdrop = Picture.Open(ThumbnailFile)
end if
```

Notes: Returns nil in case of error.
Otherwise this may be URL for png file with thumbnail.

120.1.6 GenericIconName(MimeType as String) as String

MBS Linux Plugin, Plugin Version: 19.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries generic icon name for mime type.

120.1.7 Icon(MimeType as String, size as integer = 48) as Picture

MBS Linux Plugin, Plugin Version: 19.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries icon for mime type.
Example:

```
// This example needs a window with Canvas1.
Canvas1.Backdrop = LinuxIconMBS.Icon("image/jpeg", Canvas1.Width)
```

Notes: Returns nil in case of error.

120.1.8 SymbolicIcon(MimeType as String, size as integer = 48) as Picture

MBS Linux Plugin, Plugin Version: 19.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries symbolic icon for given mime type.
Example:

```
// This example needs a window with Canvas3.
Canvas3.Backdrop = LinuxIconMBS.SymbolicIcon("image/jpeg", Canvas3.Width)
```

Notes: Returns nil in case of error.

120.2 class LinuxProcessMBS

120.2.1 class LinuxProcessMBS

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The class for querying Linux process details.
Example:

```
// show the path of current process
Var myPID as Integer = LinuxProcessMBS.PID
Var myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)

MessageBox myProcess.path
```

Notes: If your app has not enough permission to read info about other app, values may be missing.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- 12.3, page 10: News

120.2.2 Methods

120.2.3 Constructor

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The private constructor.

120.2.4 PID as Integer

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The Process ID of the current process (your app).
Example:

```
Var myPID as Integer = LinuxProcessMBS.PID
MessageBox "my process ID is: "+str(myPID)
```

120.2.5 ProcessByPID(ProcessID as Integer) as LinuxProcessMBS

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries the information for a process with given ID.
Example:

```
// show the name of current process
Var myPID as Integer = LinuxProcessMBS.PID
Var myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)

MessageBox myProcess.name
```

Notes: Returns nil on error.

120.2.6 Processes as LinuxProcessMBS()

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Returns array with all processes.
Example:

```
// shows all process names in listbox
Var Processes() as LinuxProcessMBS = LinuxProcessMBS.Processes

for each p as LinuxProcessMBS in Processes
ListBox1.addrow p.name
next
```

120.2.7 Properties

120.2.8 CommandLine as String

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The command line used to create this process.
Example:

```
// show the command line of current process
Var myPID as Integer = LinuxProcessMBS.PID
```

```
Var myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)
MessageBox myProcess.CommandLine
```

Notes: (Read only property)

120.2.9 CurrentWorkingDirectory as String

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The current working directory.
Example:

```
// show the current working directory of current process
Var myPID as Integer = LinuxProcessMBS.PID
Var myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)

MessageBox myProcess.CurrentWorkingDirectory
```

Notes: (Read only property)

120.2.10 Environment as Dictionary

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The environment variables.
Notes: (Read only property)

120.2.11 Name as String

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The name of the process.
Example:

```
// shows all process names in listbox
Var Processes() as LinuxProcessMBS = LinuxProcessMBS.Processes

for each p as LinuxProcessMBS in Processes
ListBox1.addrow p.name
next
```

Notes: (Read only property)

120.2.12 NumberOfThreads as Integer

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The number of threads used by this process.
Notes: (Read only property)

120.2.13 OpenFiles as Dictionary

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries details about open files.
Example:

```
// show the paths of open files of current process in listbox
Var myPID as Integer = LinuxProcessMBS.PID
Var myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)
Var OpenFiles as Dictionary = myProcess.OpenFiles

for each key as Variant in OpenFiles.keys
ListBox1.addrow OpenFiles.Value(key).StringValue
next
```

Notes: This dictionary contains the file descriptor number as key and the path to the file as text.
(Read only property)

120.2.14 ParentProcessID as Integer

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The parent process ID.
Notes: (Read only property)

120.2.15 Path as String

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The path for this process.
Example:

```
// show the path of current process
Var myPID as Integer = LinuxProcessMBS.PID
Var myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)
MessageBox myProcess.Path
```

Notes: (Read only property)

120.2.16 ProcessID as Integer

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The process ID.
Notes: (Read only property)

120.2.17 StartTime as Date

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The start time of the process.
Example:

```
// show the start time of current process
Var myPID as Integer = LinuxProcessMBS.PID
Var myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)
Var d as date = myProcess.StartTime
MessageBox d.LongDate+" "+d.LongTime
```

Notes: (Read only property)

120.2.18 State as String

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The state of the process.
Notes: Can be Running, Sleeping, Disk Sleep, Zombie, Trace or Writing pages.
(Read only property)

120.3 class LinuxSuMBS

120.3.1 class LinuxSuMBS

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The class to run stuff with sudo.
Example:

```
Var s as new LinuxSuMBS

s.Command = "/usr/bin/whoami"
s.User = "root"
s.Alert = "Please Root?"
s.Message "Can I install something for you?"

if s.ExecuteSudo then
MessageBox "OK"
else
MessageBox s.LastErrorMessage
end if
```

Notes: Uses the gksu library.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.1pr1
- Sudo on Linux

120.3.2 Methods

120.3.3 AskPassword(prompt as String) as String

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Asks for the password.
Notes: Returns password.
Stores error in LastError and LastErrorMessage properties.
See also:

- 120.3.24 AskPassword(prompt as String, byref ErrorCode as Integer, byref ErrorMessage as String) as string 17557

120.3.4 Available as boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether the gksu library was found and loaded.
Notes: Should return true on Linux.
If missing, install the libgksu2-0 library.

120.3.5 ExecuteRun as boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Runs the command.
Notes: Returns true on success.
Stores error in LastError and LastErrorMessage properties.

120.3.6 ExecuteSu as boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Runs the command with su.
Notes: Returns true on success.
Stores error in LastError and LastErrorMessage properties.

120.3.7 ExecuteSudo as boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Runs the command with sudo.
Example:

```
Var s as new LinuxSuMBS

s.Command = "/usr/bin/whoami"
s.User = "root"
s.Alert = "Please Root?"
s.Message "Can I install something for you?"

if s.ExecuteSudo then
MessageBox "OK"
else
MessageBox s.LastErrorMessage
end if
```

Notes: Returns true on success.
Stores error in LastError and LastErrorMessage properties.

120.3.8 Properties

120.3.9 Alert as String

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The alert message.
Notes: (Read and Write property)

120.3.10 AlwaysAskPassword as Boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether to always ask for a password.
Notes: (Read and Write property)

120.3.11 Command as String

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The command will run with the target user.
Notes: (Read and Write property)

120.3.12 Debug as Boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether debuging information should be printed.
Notes: (Read and Write property)

120.3.13 Description as String

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The description text.
Notes: (Read and Write property)

120.3.14 ExitCode as Integer

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The exit code of the last command run.
Notes: (Read and Write property)

120.3.15 Grab as Boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Grab?
Notes: (Read and Write property)

120.3.16 Handle as Integer

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

120.3.17 KeepEnvironment as Boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Should the environment be kept as it is?
Notes: Defaults to true. Notice that setting this to false may cause the X authorization stuff to fail. (Read and Write property)

120.3.18 LastError as Integer

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

120.3.19 LastErrorMessage as String

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The last error message.
Notes: (Read and Write property)

120.3.20 LoginShell as Boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The shell in which the command will be run be a login shell?
Notes: Finds out if the shell created by the underlying su process will be a login shell.
(Read and Write property)

120.3.21 Message as String

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The message text.
Notes: (Read and Write property)

120.3.22 User as String

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: What user the command will be run as.
Notes: The default is root, but you can run the command as any user.
(Read and Write property)

120.3.23 Events

120.3.24 AskPassword(prompt as String, byref ErrorCode as Integer, byref ErrorMessage as String) as string

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The event to ask for password.
Notes: If you prefer your own dialog.
Return password or set error parameters.
See also:

- 120.3.3 AskPassword(prompt as String) as String 17553

120.3.25 PasswordNoNeeded

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: No password is needed.

120.3.26 Constants

Error Codes

Constant	Value	Description
ErrorCanceled	11	The user cancelled.
ErrorChildFailed	9	Child failed.
ErrorExec	5	Execution failed.
ErrorFork	4	Forking failed.
ErrorHelper	1	The helper tool failed.
ErrorNoCommand	2	Missing command.
ErrorNoPassword	3	Missing password.
ErrorNotAllowed	10	Not allowed.
ErrorPipe	6	Pipe failed.
ErrorPiperead	7	Pipe read error.
ErrorWrongAutoPass	12	Wrong auto Password.
ErrorWrongPass	8	Wrong Password
ErrorXauth	0	XAuth failed.

Chapter 121

Llama

121.1 class LlamaBackendMBS

121.1.1 class LlamaBackendMBS

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a backend.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

121.1.2 Methods

121.1.3 Constructor

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

121.1.4 Devices as LlamaDeviceMBS()

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the array with devices.

121.1.5 Properties

121.1.6 Features as Dictionary

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Some additional feature flags.
Notes: Not always available.
(Read only property)

121.1.7 Name as String

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The name of the backend.
Notes: (Read only property)

121.2 class LlamaBatchMBS

121.2.1 class LlamaBatchMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: A batch of tokens.
Blog Entries

- MBS Xojo Plugins, version 25.5pr4

121.2.2 Methods

121.2.3 Constructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.
Notes: Creates an empty batch.
See also:

- 121.2.4 Constructor(tokens as Int32, embd as Int32, n_seq_max as Int32) 17561
- 121.2.5 Constructor(tokens() as Int32) 17561

121.2.4 Constructor(tokens as Int32, embd as Int32, n_seq_max as Int32)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new batch with one token.
See also:

- 121.2.3 Constructor 17561
- 121.2.5 Constructor(tokens() as Int32) 17561

121.2.5 Constructor(tokens() as Int32)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new batch based on the tokens.
Notes: We avoid copying the tokens array and reference it.
Please don't modify the array later.
See also:

- 121.2.3 Constructor 17561

- 121.2.4 Constructor(tokens as Int32, embd as Int32, n_seq_max as Int32) 17561

121.2.6 Destructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

121.2.7 Tokens as Int32()

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the tokens array.
Notes: This may return the same array passed to the constructor.

121.2.8 Properties

121.2.9 embd as Ptr

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Token embeddings.
Notes: i.e. float vector of size n_embd.

Used when token is nil.
(Read only property)

121.2.10 Handle as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

121.2.11 logits as Ptr

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The pointer to the logits.
Notes: if zero, the logits (and/or the embeddings) for the respective token will not be output

(if set to nil:
- if embeddings: all tokens are output
- if not: only the last token is output
(Read only property)

121.2.12 n_tokens as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The number of tokens.
Notes: (Read only property)

121.3 class LlamaChatMessageMBS

121.3.1 class LlamaChatMessageMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a chat message.
Blog Entries

- Use Llama.cpp in Xojo

121.3.2 Methods

121.3.3 Constructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.
See also:

- 121.3.4 Constructor(Role as String, Content as String) 17564

121.3.4 Constructor(Role as String, Content as String)

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The convenience constructor to set the properties.
See also:

- 121.3.3 Constructor 17564

121.3.5 Destructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

121.3.6 Properties

121.3.7 Content as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The content of the message.
Notes: (Read and Write property)

121.3.8 Role as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The role of the message.
Notes: e.g. "user" or "assistant".
(Read and Write property)

121.4 class LlamaContextMBS

121.4.1 class LlamaContextMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The context for llama.
Example:

```
// ask a local language model a question
// The llama library must be loaded before, see LlamaMBS.LoadLibrary and LlamaMBS.BackendLoadAll.
Var model As New LlamaModelMBS(SpecialFolder.Desktop.Child("model.gguf"))

Var params As New LlamaContextParametersMBS
params.n_ctx = 4096 // context size in tokens
Var context As New LlamaContextMBS(model, params)

// sampler chain: keep the 40 best tokens, then pick one randomly with a temperature
Var sampler As New LlamaSamplerMBS(New LlamaSamplerChainParametersMBS)
sampler.AddToChain LlamaSamplerMBS.InitTopK(40)
sampler.AddToChain LlamaSamplerMBS.InitTemp(0.7)
sampler.AddToChain LlamaSamplerMBS.InitDist(1234)

MessageBox context.Ask(sampler, "Write a haiku about Xojo.", 200)
```

Xojo Developer Magazine

- 24.1, page 9: News

121.4.2 Methods

121.4.3 Ask(Sampler as LlamaSamplerMBS, prompt as String, MaxTokens as Integer = 100) as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the LLM with a prompt.
Notes: This is a convenience function to:

- tokenize the prompt.
- run the loop to decode and ask sampler for next token
- collect tokens and convert to text
- return the collected answer

Exists when token limit is reached.

May raise OutOfMemoryException or UnsupportedOperationException if something goes terrible wrong.

121.4.4 ClearMemory

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Clears the memory in the current context.

121.4.5 Constructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.
See also:

- 121.4.6 Constructor(Model as LlamaModelMBS, Parameters as LlamaContextParametersMBS = nil) 17567

121.4.6 Constructor(Model as LlamaModelMBS, Parameters as LlamaContextParametersMBS = nil)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new context based on the given model.
Notes: Raises UnsupportedOperationException if the context can't be created.
See also:

- 121.4.5 Constructor 17567

121.4.7 Decode(batch as LlamaBatchMBS) as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Process a batch of tokens.
Notes: Requires the context to have a memory.

For encode-decoder contexts, processes the batch using the decoder.
Positive return values does not mean a fatal error, but rather a warning.
Upon fatal-error or abort, the ubatches that managed to be been processed will remain in the memory state of the context

To handle this correctly, query the memory state using llama_memory_seq_pos_min() and llama_memory_seq_pos_max()

Upon other return values, the memory state is restored to the state before this call

0 - success
1 - could not find a KV slot for the batch (try reducing the size of the batch or increase the context)
2 - aborted (processed ubatches will remain in the context's memory)
-1 - invalid input batch
<-1 - fatal error (processed ubatches will remain in the context's memory)

121.4.8 Destructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

121.4.9 Embeddings as Ptr

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get all output token embeddings.
Notes: when pooling_type = PoolingTypeNone or when using a generative model, the embeddings for which llama_batch.logits [i] != 0 are stored contiguouslyin the order they have appeared in the batch.

shape: [n_outputs*n_embd]
Otherwise, returns nil.
See also:

- 121.4.10 Embeddings(index as Integer) as Ptr

121.4.10 Embeddings(index as Integer) as Ptr

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the embeddings for the ith token.
Notes: For positive indices, Equivalent to:
Embeddings + ctx->output_ids [i] *n_embd

Negative indicies can be used to access embeddings in reverse order, -1 is the last embedding.

shape: [n_embd] (1-dimensional)

returns nil for invalid ids.
See also:

- 121.4.9 Embeddings as Ptr 17568

121.4.11 EmbeddingsSeq(index as Integer) as Ptr

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the embeddings for a sequence index.
Notes: Returns nil if pooling_type is PoolingTypeRank.

When pooling_type = PoolingTypeRank, returns float [n_cls_out] with the rank(s) of the sequence otherwise: float [n_embd] (1-dimensional)

121.4.12 Encode(batch as LlamaBatchMBS) as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Process a batch of tokens.
Notes: In contrast to Decode() - this call does not use KV cache.

For encode-decoder contexts, processes the batch using the encoder.
Can store the encoder output internally for later use by the decoder's cross-attention layers.

Returns 0 - success
Returns <0 - error. the memory state is restored to the state before this call.

121.4.13 Logits as Ptr

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Token logits obtained from the last call to Decode.
Notes: The logits for which llama_batch.logits [i] != 0 are stored contiguously in the order they have appeared in the batch.

Rows: number of tokens for which llama_batch.logits [i] != 0
Cols: n_vocab
See also:

- 121.4.14 Logits(index as Integer) as Ptr 17570

121.4.14 Logits(index as Integer) as Ptr

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Logits for the ith token.
Notes: For positive indices, Equivalent to:
logits + ctx->output_ids [i] *n_vocab

Negative indicies can be used to access logits in reverse order, -1 is the last logit.

Returns nil for invalid ids.
See also:

- 121.4.13 Logits as Ptr 17570

121.4.15 Performance as LlamaPerformanceContextDataMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries performance data.

121.4.16 PerformancePrint

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Prints performance statistics.

121.4.17 PerformanceReset

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Resets performance data.

121.4.18 SetCausalAttention(causalAttn as boolean)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Set whether to use causal attention or not.
Notes: If set to true, the model will only attend to the past tokens.

121.4.19 SetEmbeddings(embeddings as Boolean)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Set whether the context outputs embeddings or not.

121.4.20 SetThreads(Threads as Integer, ThreadsBatch as Integer)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Set the number of threads used for decoding.
Notes: n_threads is the number of threads used for generation (single token)
n_threads_batch is the number of threads used for prompt and batch processing (multiple tokens)

121.4.21 SetWarmup(warmup as boolean)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Set whether the model is in warmup mode or not.
Notes: If true, all model tensors are activated during llama_decode() to load and cache their weights.

121.4.22 Synchronize

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Wait until all computations are finished.
Notes: This is automatically done when using one of the functions below to obtain the computation results and is not necessary to call it explicitly in most cases.

121.4.23 Properties

121.4.24 Handle as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

121.4.25 Model as LlamaModelMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The model used for this context.
Notes: (Read only property)

121.4.26 n_batch as UInt32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the batch size.
Notes: logical maximum batch size that can be submitted to Decode.
(Read only property)

121.4.27 n_ctx as UInt32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the context size.
Notes: (Read only property)

121.4.28 n_ctx_seq as UInt32

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The context for a single sequence.
Notes: (Read only property)

121.4.29 n_ctx_used as UInt32

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries context memory used.
Notes: (Read only property)

121.4.30 n_seq_max as UInt32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the maximum sequence size.
Notes: max number of sequences (i.e. distinct states for recurrent models)
(Read only property)

121.4.31 n_threads as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: number of threads to use for generation
Notes: (Read only property)

121.4.32 n_threads_batch as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: number of threads to use for batch processing
Notes: (Read only property)

121.4.33 n_ubatch as UInt32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: physical maximum batch size
Notes: (Read only property)

121.4.34 pooling_type as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The pooling type.
Notes: (Read only property)

121.5 class LlamaContextParametersMBS

121.5.1 class LlamaContextParametersMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The context parameters.
Example:

```
// create a context with a bigger context window and more threads
// model is a LlamaModelMBS, see there
Var model As New LlamaModelMBS(SpecialFolder.Desktop.Child("model.gguf"))

Var params As New LlamaContextParametersMBS
params.n_ctx = 8192 // tokens the model can see at once
params.n_batch = 512
params.n_threads = 8
params.n_threads_batch = 8

Var context As New LlamaContextMBS(model, params)
```

121.5.2 Methods

121.5.3 Constructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.

121.5.4 Destructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

121.5.5 FlashAttnTypeName(FlashAttnType as Integer) as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the text for the flash attention type value.
Example:

Var nn As String = LlamaContextParametersMBS.FlashAttnTypeName(LlamaContextParametersMBS.FlashAttnTypeEnabled)
Break // nn is "enabled"

121.5.6 Properties

121.5.7 attention_type as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: attention type to use for embeddings
Notes: (Read and Write property)

121.5.8 defrag_thold as Single

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: defragment the KV cache if holes/size >thold, <= 0 disabled (default)
Notes: Deprecated in llama.
(Read and Write property)

121.5.9 embeddings as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: if true, extract embeddings (together with logits)
Notes: (Read and Write property)

121.5.10 flash_attn_type as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: when to enable Flash Attention
Notes: (Read and Write property)

121.5.11 kv_unified as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Use a unified buffer across the input sequences when computing the attention.
Notes: (Read and Write property)

121.5.12 no_perf as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Measure performance timings.
Notes: (Read and Write property)

121.5.13 n_batch as UInt32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: logical maximum batch size that can be submitted to llama_decode
Notes: (Read and Write property)

121.5.14 n_ctx as UInt32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Context size.
Notes: text context, 0 = from model
(Read and Write property)

121.5.15 n_seq_max as UInt32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: max number of sequences (i.e. distinct states for recurrent models)
Notes: (Read and Write property)

121.5.16 n_threads as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: number of threads to use for generation
Notes: (Read and Write property)

121.5.17 n_threads_batch as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of threads to use for batch processing
Notes: (Read and Write property)

121.5.18 n_ubatch as UInt32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: physical maximum batch size
Notes: (Read and Write property)

121.5.19 offload_kqv as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: offload the KQV ops (including the KV cache) to GPU
Notes: (Read and Write property)

121.5.20 op_offload as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: offload host tensor operations to device
Notes: (Read and Write property)

121.5.21 pooling_type as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: whether to pool (sum) embedding results by sequence id
Notes: (Read and Write property)

121.5.22 rope_freq_base as Single

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: RoPE base frequency
Notes: 0 = from model
(Read and Write property)

121.5.23 rope_freq_scale as Single

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: RoPE frequency scaling factor
Notes: 0 = from model
(Read and Write property)

121.5.24 rope_scaling_type as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: RoPE scaling type, from ‘enum llama_rope_scaling_type‘
Notes: (Read and Write property)

121.5.25 swa_full as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: use full-size SWA cache.
Notes: (Read and Write property)

121.5.26 type_k as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Data type for K cache.
Notes: See GgmlType constants in LlamaModelQuantizeParametersMBS class.
(Read and Write property)

121.5.27 type_v as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: data type for V cache.
Notes: See GgmlType constants in LlamaModelQuantizeParametersMBS class.
(Read and Write property)

121.5.28 yarn_attn_factor as Single

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: YaRN magnitude scaling factor
Notes: (Read and Write property)

121.5.29 yarn_beta_fast as Single

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: YaRN low correction dim
Notes: (Read and Write property)

121.5.30 yarn_beta_slow as Single

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: YaRN high correction dim
Notes: (Read and Write property)

121.5.31 yarn_ext_factor as Single

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: YaRN extrapolation mix factor, negative = from model
Notes: (Read and Write property)

121.5.32 yarn_orig_ctx as UInt32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: YaRN original context size
Notes: (Read and Write property)

121.5.33 Constants

Attention Types

Constant	Value	Description
AttentionTypeCausal	0	Standard autoregressive (left-to-right) attention, where each position attends only to itself and previous positions
AttentionTypeNonCausal	1	Allow full (bidirectional) attention across tokens
AttentionTypeUnspecified	-1	No selection made; use default (probably causal)

Flash Attention Types

Constant	Value	Description
FlashAttnTypeAuto	-1	Let the implementation pick whether to use FlashAttention or fallback, depending on hardware, sequence length, etc.
FlashAttnTypeDisabled	0	Do not use FlashAttention; always use standard attention
FlashAttnTypeEnabled	1	Force use of FlashAttention when supported

Pooling Types

Constant	Value	Description
PoolingTypeCls	2	Use a special ,Äú [CLS] ,Äù token embedding (or a reserved first token) as the representation
PoolingTypeLast	3	Use the embedding of the last token in the sequence as representation
PoolingTypeMean	1	Take the average (mean) over token embeddings to form a pooled vector
PoolingTypeNone	0	No pooling: e.g. raw token-level output, no reduction over sequence
PoolingTypeRank	4	For reranking or classification tasks: attach classification head directly on top of the graph (rather than pooling)
PoolingTypeUnspecified	-1	No explicit pooling type chosen

Rope Scaling Types

Constant	Value	Description
RopeScalingTypeLinear	1	Scale positional embeddings (RoPE) linearly to handle longer context
RopeScalingTypeLongrope	3	A scaling method designed for very long contexts, possibly combining multiple scaling techniques (e.g. adjusting frequency)
RopeScalingTypeMaxValue	3	Utility sentinel to bound loops, check ranges etc.
RopeScalingTypeNone	0	Use standard (original) RoPE without any scaling or extension
RopeScalingTypeUnspecified	-1	Means ,Äúnot set,Äù or ,Äúuse default behavior,Äù
RopeScalingTypeYarn	2	Another scaling strategy (less common / experimental)

121.6 class LlamaDeviceMBS

121.6.1 class LlamaDeviceMBS

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a backend device.
Example:

```
// list the backends and devices llama can use, e.g. Metal, CUDA or CPU
// The llama library must be loaded before, see LlamaMBS.LoadLibrary and LlamaMBS.BackendLoadAll.
Var lines() As String
For Each backend As LlamaBackendMBS In LlamaMBS.Backends
lines.Add backend.Name
For Each d As LlamaDeviceMBS In backend.Devices
lines.Add " " + d.Name + " (" + d.TypeString + "): " + d.Description + ", " + Format(d.MemoryFree /
1024 / 1024 / 1024, "0.0") + " of " + Format(d.MemoryTotal / 1024 / 1024 / 1024, "0.0") + " GB free"
Next
Next
MessageBox String.FromArray(lines, EndOfLine)
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

121.6.2 Methods

121.6.3 Constructor

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

121.6.4 Properties

121.6.5 Description as String

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The description for the device.
Notes: (Read only property)

121.6.6 DeviceID as String

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The id for the device.
Notes: For PCI devices, this should be the PCI bus id formatted as "domain:bus:device.function" (e.g. "0000:01:00.0") if the id is unknown, this should be "".
(Read only property)

121.6.7 MemoryFree as Integer

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The free memory.
Notes: Value is zero if unknown.
(Read only property)

121.6.8 MemoryTotal as Integer

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The total memory available.
Notes: Value is zero if unknown.
(Read only property)

121.6.9 Name as String

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The name for the device.
Notes: (Read only property)

121.6.10 Type as Integer

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the type of the device.
Notes: See Type constants.
May be a CPU, GPU, integrated GPU or Accelerator.
(Read only property)

121.6.11 TypeString as String

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The type as string for debugging.
Notes: (Read only property)

121.6.12 Constants

Types

Constant	Value	Description
TypeACCEL	3	Accelerator devices intended to be used together with the CPU backend (e.g. BLAS or AMX).
TypeCPU	0	CPU device using system memory
TypeGPU	1	GPU device using dedicated memory
TypeIGPU	2	Integrated GPU device using host memory

121.7 class LlamaExceptionMBS

121.7.1 class LlamaExceptionMBS

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for an exception.
Notes: Subclass of the RuntimeException class.
Blog Entries

- MBS Xojo Plugins, version 26.1pr3

121.8 module LlamaMBS

121.8.1 module LlamaMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The module for globals functions for llama.
Example:

```
// load the llama library with all backends and show what it supports
Var libFile As FolderItem = SpecialFolder.Resources.Child("libllama.dylib")
If Not LlamaMBS.LoadLibrary(libFile) Then
MessageBox LlamaMBS.LoadErrorMessage
Return
End If
LlamaMBS.BackendLoadAll
LlamaMBS.BackendInit

MessageBox "llama " + LlamaMBS.Version + ", mmap: " + LlamaMBS.SupportsMMap.ToString + EndOfLine + _
"Chat templates: " + String.FromArray(LlamaMBS.ChatBuiltInTemplates, ", ")
```

Notes: This is a thin layer around llama.cpp package.
We load the llama library (and ggml library) and call the functions.

121.8.2 Methods

121.8.3 ApplyChatTemplate(Template as String, ChatMessages() as LlamaChatMessageMBS, AddAssistentTokens as boolean) as String

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Apply chat template.
Notes: Template: The Jinja template to use for this chat.
ChatMessages: a list of multiple llama_chat_message

AddAssistentTokens: Whether to end the prompt with the token(s) that indicate the start of an assistant message.

Returns the answer. May raise LlamaExceptionMBS class if the apply process fails.

121.8.4 BackendInit

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Initialize the llama + ggml backend.
Notes: If numa is true, use NUMA optimizations
Call once at the start of the program

121.8.5 BackendLoad(Path as String) as Boolean

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads a specific backend library.
Notes: Please pass DLL, dylib or so path.

121.8.6 BackendLoadAll

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads all backends.
Example:

```
// load dynamic backends

LlamaMBS.BackendLoadAll
```

Notes: Needs ggml library loaded.

121.8.7 Backends as LlamaBackendMBS()

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the backends available.
Example:

```
// load dynamic backends
LlamaMBS.BackendLoadAll

// now inspect them
var backends() as LlamaBackendMBS = LlamaMBS.Backends
for each backend as LlamaBackendMBS in backends
var devices() as LlamaDeviceMBS = backend.Devices
var name as string = backend.Name
var features as Dictionary = backend.Features

Break
next
```

Notes: Each backend has a list of devices with properties.

121.8.8 ChatBuiltInTemplates as String()

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get list of built-in chat templates.

121.8.9 Loaded as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether the llama library is loaded.

121.8.10 LoadErrorMessage as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The error message from the last LoadLibrary call.

121.8.11 LoadLibrary(File as FolderItem) as boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads the llama library.
Notes: For Windows you need llama.dll, for macOS you need llama.dylib and for Linux you need llama.so.

On Windows you need to load ggml.dll, ggml-base.dll and llama.dll to have all functions.

Returns true on success and false on failure.
See also:

- 121.8.12 LoadLibrary(Path as String) as boolean 17589

121.8.12 LoadLibrary(Path as String) as boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads the llama library.
Example:

```
If Not LlamaMBS.LoadLibrary("/opt/homebrew/Cellar/llama.cpp/6710/lib/libllama.dylib") Then
System.DebugLog LlamaMBS.LoadErrorMessage
End If
```

Notes: For Windows you need llama.dll, for macOS you need llama.dylib and for Linux you need llama.so.

On Windows you need to load ggml.dll, ggml-base.dll and llama.dll to have all functions.

Returns true on success and false on failure.
See also:

- 121.8.11 LoadLibrary(File as FolderItem) as boolean 17588

121.8.13 PrintSystemInfo

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Print system information

121.8.14 SetDebugLogger

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets the debug logger, which prints all log messages to stderr.
Notes: Helps to debug console applications.

121.8.15 SetLogger(Logger as LlamaLogMBS)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets the delegate for logging.
Notes: If no logger is set, log messages go to stderr.

121.8.16 Properties

121.8.17 MaxDevices as UInt64

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the maximum number of hardware devices (e.g. GPUs or accelerators) that the runtime can utilize.
Notes: May return 1 for CPU-only configurations or higher if multi-GPU support is available.
(Read only property)

121.8.18 MaxParallelSequences as UInt64

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the maximum number of sequences that can be processed in parallel during inference.
Notes: Useful for determining batching or parallel decoding strategies in server or multi-user environments.
(Read only property)

121.8.19 MaxTensorBufTOverrides as UInt64

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Maximum tensor buft overrides.
Notes: Should be 4096.
(Read only property)

121.8.20 SupportsGPUOffload as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns whether the current build supports GPU acceleration/offloading.
Notes: Returns true if GPU offloading is available, false otherwise.

Enabled if compiled with CUDA, Metal, or similar GPU backends.
(Read only property)

121.8.21 SupportsMLock as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Checks if the runtime supports mlock, which allows locking memory pages to avoid swapping them to disk.
Notes: Returns true if mlock is supported and enabled, false otherwise.

Locking model weights in RAM can improve performance consistency and prevent paging.
(Read only property)

121.8.22 SupportsMMap as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Checks if the current build/runtime supports memory-mapped model loading.
Notes: Returns: true if mmap is supported, false otherwise.

mmap allows efficient loading of large models without reading them entirely into memory.
(Read only property)

121.8.23 SupportsRPC as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Indicates whether the runtime supports RPC (Remote Procedure Call) functionality.
Notes: Returns true if RPC support is compiled in, false otherwise.

Useful for distributed inference setups where parts of the model or computation may be hosted remotely.
(Read only property)

121.8.24 TimeUS as Int64

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the current time in microseconds since an unspecified starting point (usually process start or epoch, depending on implementation).

Notes: Useful for benchmarking or profiling model performance.
(Read only property)

121.8.25 Version as String

MBS Tools Plugin, Plugin Version: 26.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the version string.
Example:

```
If LlamaMBS.LoadLibrary("/opt/homebrew/lib/libllama.dylib") Then
MessageBox LlamaMBS.Version
else
MessageBox LlamaMBS.LoadErrorMessage
end if
```

Notes: e.g. "0.3.0".
(Read only property)

121.8.26 Constants

Log Levels

Constant	Value	Description
LogLevelCont	5	Continue previous log
LogLevelDebug	1	Debug Message
LogLevelError	4	Error
LogLevelInfo	2	Information
LogLevelNone	0	No level set.
LogLevelWarn	3	Warning

121.8.27 Delegates

121.8.28 LlamaLogMBS(Level as Integer, Message as String)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The delegate for log messages.
Example:

```
Sub Init
LlamaMBS.SetLogger AddressOf Log
End Sub
```

```
Public Sub Log(level as integer, message as string)
System.DebugLog message
End Sub
```

121.9 class LlamaModelMBS

121.9.1 class LlamaModelMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a llama model.
Example:

```
// load a GGUF model file and show some information about it
// The llama library must be loaded before, see LlamaMBS.LoadLibrary and LlamaMBS.BackendLoadAll.
Var file As FolderItem = SpecialFolder.Desktop.Child("model.gguf")
Var model As New LlamaModelMBS(file)

MessageBox model.Description + EndOfLine + Format(model.Size / 1024 / 1024, "0") + " MB"

// create a context to run the model
Var context As New LlamaContextMBS(model)
```

121.9.2 Methods

121.9.3 ChatTemplate(Name as String) as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the default chat template. Returns nullptr if not available.
Notes: If name is "", returns the default chat template.

121.9.4 ClassifierOutputLabel(index as integer) as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns label of classifier output by index (<n_cls_out).
Notes: Returns "" if no label provided.

121.9.5 Constructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.
See also:

- 121.9.6 Constructor(File as FolderItem, Parameters as LlamaModelParametersMBS = nil) 17595
- 121.9.7 Constructor(Path as String, Parameters as LlamaModelParametersMBS = nil) 17595

121.9.6 Constructor(File as FolderItem, Parameters as LlamaModelParametersMBS = nil)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads a model.
Notes: Raises UnsupportedOperationException if the model can't be loaded.

e.g. load e.g. gemma-3-1b-it.Q8_0.gguf or gpt-oss-20b-Q4_K_M.gguf
See also:

- 121.9.5 Constructor 17595
- 121.9.6 Constructor(File as FolderItem, Parameters as LlamaModelParametersMBS = nil) 17595

121.9.8 DecoderStartToken as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: For encoder-decoder models, this function returns id of the token that must be provided to the decoder to start generating output sequence. For other models, it returns -1.

121.9.9 Destructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

121.9.10 MetaKey(Index as Integer) as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the metadata key with the given index.
Example:

```
var model as LlamaModelMBS // your model
Var firstKey As String = model.MetaKey(0)
Var firstValue As String = model.MetaValue(0)
```

Notes: Index is zero based.

121.9.11 MetaKeyName(Key as Integer) as String

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get sampling metadata key name.
Notes: Returns "" if the key is invalid.
Pass one of MetaKeySampling* constants.

121.9.12 MetaValue(Index as Integer) as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the metadata value with the given index.
Example:

```
var model as LlamaModelMBS // your model
Var firstKey As String = model.MetaKey(0)
Var firstValue As String = model.MetaValue(0)
```

Notes: Index is zero based.
See also:

- 121.9.13 MetaValue(Key as String) as String 17597

121.9.13 MetaValue(Key as String) as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the metadata value with the given key.
See also:

- 121.9.12 MetaValue(Index as Integer) as String 17596

121.9.14 SaveToFile(File as FolderItem)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Saves the model to a new file.
See also:

- 121.9.15 SaveToFile(Path as String) 17597

121.9.15 SaveToFile(Path as String)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Saves the model to a new file.
See also:

- 121.9.14 SaveToFile(File as FolderItem) 17597

121.9.16 Properties

121.9.17 ClassifierOutputs as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the number of classifier outputs (only valid for classifier models)
Notes: Undefined behavior for non-classifier models

(Read only property)

121.9.18 ctx_train as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the context length (i.e., the maximum number of tokens) the model was trained with.
Notes: This may differ from the context size used during inference, especially if the model is fine-tuned or configured with a different context window.
(Read only property)

121.9.19 Description as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get a string describing the model type.
Notes: (Read only property)

121.9.20 embd as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the size of the embedding vector for each token (also known as the hidden size or dimensionality of the model).
Notes: For LLaMA-7B, this is typically 4096.
(Read only property)

121.9.21 embd_inp as Integer

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the input embedding size.
Notes: (Read only property)

121.9.22 embd_out as Integer

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the output embedding size.
Notes: (Read only property)

121.9.23 FType as Integer

MBS Tools Plugin, Plugin Version: 26.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries FType of model.
Notes: (Read only property)

121.9.24 Handle as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

121.9.25 HasDecoder as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if the model contains a decoder that requires Decode call.
Notes: (Read only property)

121.9.26 HasEncoder as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if the model contains an encoder that requires Encode call.
Notes: (Read only property)

121.9.27 head as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the number of attention heads used in each transformer layer.
Notes: LLaMA-7B typically uses 32 attention heads.
(Read only property)

121.9.28 head_kv as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the number of key-value (KV) attention heads.
Notes: In models with multi-query attention (e.g., grouped-query attention), this may be less than the total number of attention heads. In standard attention, this equals head function.
(Read only property)

121.9.29 IsDiffusion as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if the model is diffusion-based (like LLaDA, Dream, etc.)
Notes: (Read only property)

121.9.30 IsHybrid as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if the model is hybrid (like Jamba, Granite, etc.)
Notes: (Read only property)

121.9.31 IsRecurrent as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if the model is recurrent (like Mamba, RWKV, etc.)
Notes: (Read only property)

121.9.32 layer as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the number of transformer layers (also known as "blocks") in the model.
Notes: LLaMA-7B has 32 layers.
(Read only property)

121.9.33 Meta as Dictionary

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the metadata for the model.
Notes: This provides all keys and values in the metadata at once.
(Read only property)

121.9.34 MetaCount as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries meta data count.
Notes: (Read only property)

121.9.35 ParameterCount as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the total number of parameters in the model.
Notes: (Read only property)

121.9.36 RopeType as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Retrieves the Rotary Positional Embedding (RoPE) type used by the given llama model.
Notes: See RopeType* constants.
(Read only property)

121.9.37 Size as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the total size of all the tensors in the model in bytes
Notes: (Read only property)

121.9.38 swa as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the number of sliding window attention (SWA) blocks, if used.
Notes: This field may be 0 if the model does not use sliding window attention. This is a feature used in some efficient transformer variants.
(Read only property)

121.9.39 Vocab as LlamaVocabMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the vocabulary.
Notes: (Read only property)

121.9.40 Constants

Metadata Key Names

Constant	Value	Description
MetaKeySamplingMinP	3	Sets a minimum probability threshold relative to the most likely token. Tokens with probability lower than min_p * max_probability are excluded filtering out extremely unlikely choices.
MetaKeySamplingMirostat	9	Enables Mirostat adaptive sampling, which dynamically adjusts randomness to maintain a target entropy level. Useful for keeping generation coherent while avoiding collapse or runaway randomness.
MetaKeySamplingMirostatEta	11	Controls the learning rate (Œ) for Mirostat,Äôs entropy adjustment. Higher values react faster to entropy changes but may cause instability.
MetaKeySamplingMirostatTau	10	Sets the target entropy (œÑ) for Mirostat sampling. Lower values aim for more focused text; higher values allow more creative variation.
MetaKeySamplingPenaltyLastN	7	Specifies the number of recent tokens to consider when applying repetition penalties. Only tokens within this sliding window are penalized.
MetaKeySamplingPenaltyRepeat	8	Defines the strength of the repetition penalty applied to previously generated tokens. Higher values more aggressively discourage repeated words or phrases.
MetaKeySamplingSequence	0	Defines the order in which sampling strategies are applied when generating tokens (e.g., top-k ,Üí top-p ,Üí temperature). This allows fine-grained control over how multiple sampling filters are composed.
MetaKeySamplingTemp	6	Applies temperature scaling to logits before sampling. Values <1.0 make outputs more deterministic; values >1.0 increase randomness.
MetaKeySamplingTopK	1	Limits token selection to the K most probable tokens at each step. Lower values reduce randomness and increase determinism; higher values allow more diverse outputs.
MetaKeySamplingTopP	2	Enables nucleus sampling, where tokens are selected from the smallest set whose cumulative probability is ,â• P. This dynamically adapts the candidate set size based on confidence.
MetaKeySamplingXtcProbability	4	Controls the probability of applying XTC (eXtended Token Control) sampling during generation. Used to intermittently introduce stronger randomness or exploration behavior
MetaKeySamplingXtcThreshold	5	Defines the entropy or confidence threshold at which XTC sampling activates XTC is only applied when the token distribution meets this threshold condition

Rope Type

Constant	Value	Description
RopeTypeMrope	8	Modified RoPE used for supporting longer context lengths (like in LLaMA 2 64k or LLaMA 3).
RopeTypeNeox	2	GPT-NeoX style RoPE, which can differ in frequency base or application.
RopeTypeNone	-1	Indicates that no RoPE is applied or is unsupported. Often used as a default or error state.
RopeTypeNorm	0	The standard Rotary Positional Embedding (used in original LLaMA models).
RopeTypeVision	24	RoPE adapted for vision models (e.g., LLaVA or CLIP-like models).

121.10 class LlamaModelParametersMBS

121.10.1 class LlamaModelParametersMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The model parameters.
Example:

```
// load a model and put all layers on the GPU
// The llama library must be loaded before, see LlamaMBS.LoadLibrary and LlamaMBS.BackendLoadAll.
Var params As New LlamaModelParametersMBS
params.n_gpu_layers = 999 // as many as possible, use 0 for CPU only

Var model As New LlamaModelMBS(SpecialFolder.Desktop.Child("model.gguf"), params)
MessageBox model.Description
```

121.10.2 Methods

121.10.3 Constructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.

121.10.4 Destructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

121.10.5 Properties

121.10.6 check_tensors as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: validate model tensor data.
Notes: (Read and Write property)

121.10.7 main_gpu as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: the GPU that is used for the entire model when split_mode is SplitModeNone.
Notes: (Read and Write property)

121.10.8 no_alloc as Boolean

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Only load metadata and simulate memory allocations.
Notes: (Read and Write property)

121.10.9 no_host as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: bypass host buffer allowing extra buffers to be used.
Notes: (Read and Write property)

121.10.10 n_gpu_layers as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of layers to store in VRAM.
Notes: (Read and Write property)

121.10.11 split_mode as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: How to split the model across multiple GPUs.
Notes: (Read and Write property)

121.10.12 use_extra_bufts as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: use extra buffer types (used for weight repacking)
Notes: (Read and Write property)

121.10.13 vocab_only as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: only load the vocabulary, no weights
Notes: (Read and Write property)

121.10.14 Yield as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to yield time to other threads while loading a model.
Notes: Set to true to give away CPU time to other cooperative threads while loading a model.
(Read and Write property)

121.10.15 Events

121.10.16 Progress(progress as Single) as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The progress callback for loading a model.
Notes: Progress parameter gives you the percentage from 0.0 to 1.0.
If implemented, return true to continue loading.

121.10.17 Constants

Split Modes

Constant	Value	Description
SplitModeLayer	1	split layers and KV across GPUs
SplitModeNone	0	single GPU
SplitModeRow	2	split layers and KV across GPUs, use tensor parallelism if supported
SplitModeTensor	3	Tensor

121.11 class LlamaModelQuantizeParametersMBS

121.11.1 class LlamaModelQuantizeParametersMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Model quantization parameters.
Blog Entries

- News from the MBS Xojo Plugin version 26.4

121.11.2 Methods

121.11.3 Constructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.

121.11.4 Destructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

121.11.5 FTypeName(value as Integer) as String

MBS Tools Plugin, Plugin Version: 26.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the name for a FType.
Example:

```
Var f As Integer = LlamaModelQuantizeParametersMBS.FTypeMostlyQ2K
Var fn As String = LlamaModelQuantizeParametersMBS.FTypeName(f)
var s as string = f.ToString+" = "+fn
MessageBox s // shows: 10 = Q2_K - Medium
```

121.11.6 Properties

121.11.7 allow_requantize as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: allow quantizing non-f32/f16 tensors.
Notes: (Read and Write property)

121.11.8 ftype as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The file type / quantization format used to store a LLaMA model,Äôs weights.
Notes: This is primarily relevant when loading models from GGUF or GGML format files in projects like llama.cpp.

These formats balance model size, speed, and accuracy by using various quantization methods—reducing precision to save memory and increase inference speed.

See FType constants.
(Read and Write property)

121.11.9 keep_split as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: quantize to the same number of shards.
Notes: (Read and Write property)

121.11.10 nthread as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: number of threads to use for quantizing.
Notes: if <=0 will use default for platform.
(Read and Write property)

121.11.11 only_copy as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: only copy tensors - ftype, allow_requantize and quantize_output_tensor are ignored.
Notes: (Read and Write property)

121.11.12 output_tensor_type as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Output tensor type.
Notes: (Read and Write property)

121.11.13 pure as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: quantize all tensors to the default type.
Notes: (Read and Write property)

121.11.14 quantize_output_tensor as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: quantize output.weight.
Notes: (Read and Write property)

121.11.15 token_embedding_type as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Token embeddings tensor type.
Notes: (Read and Write property)

121.11.16 Constants

FTypes

Constant	Value	Description
FTypeAllF32	0	All weights are stored as 32-bit floats (most accurate, largest).
FTypeGuessed	1024	The format wasn't specified in the file and was inferred by the loader.
FTypeMostlyBf16	32	Brain float16 —used in hardware like Google TPUs, similar to FP16.
FTypeMostlyF16	1	Mostly float16 weights; 1D tensors remain float32.
FTypeMostlyIq1M	31	IQ1_M: 1-bit int quant (medium).
FTypeMostlyIq1S	24	IQ1_S: 1-bit quantized weights (very small, experimental).
FTypeMostlyIq2M	29	IQ2_M: 2-bit int quant (medium).
FTypeMostlyIq2S	28	IQ2_S: 2-bit int quant (small).
FTypeMostlyIq2Xs	20	IQ2 XS: slightly larger, better accuracy.
FTypeMostlyIq2Xxs	19	IntQuant 2-bit extra-extra-small; ultra-compressed.
FTypeMostlyIq3M	27	IQ3_M: 3-bit int quant (medium).
FTypeMostlyIq3S	26	IQ3_S: 3-bit int quant (standard/small).
FTypeMostlyIq3Xs	22	IQ3 XS: 3-bit int quantization (small).
FTypeMostlyIq3Xxs	23	IQ3 XXS: highly compact 3-bit quantization.
FTypeMostlyIq4Nl	25	IQ4_NL: 4-bit int quant with nonlinear quantization.
FTypeMostlyIq4Xs	30	IQ4_XS: 4-bit int quant (extra small).
FTypeMostlyMxfp4Moe	38	Mixed FP4 quantization for Mixture of Experts models.
FTypeMostlyNVFP4	39	NVFP4
FTypeMostlyQ1_0	40	Q1_0
FTypeMostlyQ2K	10	Q2_K: grouped 2-bit quantization.
FTypeMostlyQ2KS	21	Q2_K_S: 2-bit grouped quant (small variant).
FTypeMostlyQ2_0	41	Q2_0
FTypeMostlyQ3KL	13	Q3_K_L: "large" 3-bit grouped quantization.
FTypeMostlyQ3KM	12	Q3_K_M: "medium" 3-bit grouped quantization.
FTypeMostlyQ3KS	11	Q3_K_S: "small" variant of grouped 3-bit quant.
FTypeMostlyQ40	2	Quantized to 4-bit Q4_0 (original quantization).
FTypeMostlyQ41	3	Q4_1 format; improved accuracy over Q4_0.
FTypeMostlyQ4KM	15	Q4_K_M: 4-bit grouped quant (medium variant). Popular in GGUF models.
FTypeMostlyQ4KS	14	Q4_K_S: 4-bit grouped quant (small variant).
FTypeMostlyQ50	8	5-bit quantization (Q5_0); good balance.
FTypeMostlyQ51	9	5-bit quantization (Q5_1); slightly improved.
FTypeMostlyQ5KM	17	Q5_K_M: 5-bit grouped quant (medium).
FTypeMostlyQ5KS	16	Q5_K_S: 5-bit grouped quant (small variant).
FTypeMostlyQ6K	18	Q6_K: 6-bit grouped quantization.
FTypeMostlyQ80	7	Quantized to 8-bit Q8_0; high accuracy.
FTypeMostlyTq10	36	TQ1_0: true quantized 1-bit (experimental).
FTypeMostlyTq20	37	TQ2_0: 2-bit true quantized (experimental).

Tensor element storage formats

Constant	Value	Description
GgmlTypeBf16	30	Brain Float 16. Compatible with hardware like TPUs.
GgmlTypeCount	40	Total number of defined types. Sentinel constant, not a real type.
GgmlTypeF16	1	16-bit float (IEEE FP16). Half precision.
GgmlTypeF32	0	32-bit float (standard float). Full precision.
GgmlTypeF64	28	64-bit float (double precision).
GgmlTypeI16	25	16-bit signed integer.
GgmlTypeI32	26	32-bit signed integer.
GgmlTypeI64	27	64-bit signed integer.
GgmlTypeI8	24	8-bit signed integer. Raw, unquantized int tensor.
GgmlTypeIq1M	29	IntQuant 1-bit, medium variant.
GgmlTypeIq1S	19	IntQuant 1-bit, small. Very high compression.
GgmlTypeIq2S	22	IntQuant 2-bit, small.
GgmlTypeIq2Xs	17	IntQuant 2-bit, extra-small variant.
GgmlTypeIq2Xxs	16	IntQuant 2-bit, extra-extra-small variant. Extremely compressed.
GgmlTypeIq3S	21	IntQuant 3-bit, small.
GgmlTypeIq3Xxs	18	IntQuant 3-bit, extra-extra-small.
GgmlTypeIq4Nl	20	IntQuant 4-bit with nonlinear quantization.
GgmlTypeIq4Xs	23	IntQuant 4-bit, extra-small.
GgmlTypeMxfp4	39	Mixed-precision FP4 format. Used in Mixture-of-Experts and memory-constrained models.
GgmlTypeQ2K	10	2-bit grouped quantization (K-quant). High compression.
GgmlTypeQ3K	11	3-bit grouped quantization (K-quant).
GgmlTypeQ40	2	4-bit quantization (Q4_0). First 4-bit format in GGML.
GgmlTypeQ41	3	4-bit quantization (Q4_1). Better accuracy vs Q4_0.
GgmlTypeQ4K	12	4-bit grouped quantization (K-quant). Most widely used today.
GgmlTypeQ50	6	5-bit quantization (Q5_0). Balanced compression.
GgmlTypeQ51	7	5-bit quantization (Q5_1). Slight variant.
GgmlTypeQ5K	13	5-bit grouped quantization (K-quant).
GgmlTypeQ6K	14	6-bit grouped quantization (K-quant).
GgmlTypeQ80	8	8-bit quantization (Q8_0). High accuracy, low compression.
GgmlTypeQ81	9	Improved variant of Q8_0, more accurate scaling.
GgmlTypeQ8K	15	8-bit grouped quantization.
GgmlTypeTq10	34	TrueQuant 1-bit format (experimental).
GgmlTypeTq20	35	TrueQuant 2-bit format (experimental).

121.12 class LlamaPerformanceContextDataMBS

121.12.1 class LlamaPerformanceContextDataMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for performance metrics for a context.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

121.12.2 Methods

121.12.3 Constructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

121.12.4 Destructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

121.12.5 Properties

121.12.6 n_eval as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: number of generated tokens.
Notes: (Read only property)

121.12.7 n_p_eval as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: number of prompt tokens.
Notes: (Read only property)

121.12.8 n_reused as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: number of times a ggml compute graph had been reused.
Notes: (Read only property)

121.12.9 t_eval_ms as Double

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: time needed for generating tokens.
Notes: In milliseconds.
(Read only property)

121.12.10 t_load_ms as Double

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: time needed for loading the model.
Notes: In milliseconds.
(Read only property)

121.12.11 t_p_eval_ms as Double

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: time needed for processing the prompt.
Notes: In milliseconds.
(Read only property)

121.12.12 t_start_ms as Double

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: absolute start time.
Notes: In milliseconds.
(Read only property)

121.13 class LlamaPerformanceSamplerDataMBS

121.13.1 class LlamaPerformanceSamplerDataMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for performance metrics for a sampler.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

121.13.2 Methods

121.13.3 Constructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

121.13.4 Destructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

121.13.5 Properties

121.13.6 n_sample as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of sampled tokens.
Notes: (Read only property)

121.13.7 t_sample_ms as Double

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: time needed for sampling in ms.
Notes: (Read only property)

121.14 class LlamaSamplerChainParametersMBS

121.14.1 class LlamaSamplerChainParametersMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The parameters for building a sampler chain.
Blog Entries

- Use Llama.cpp in Xojo

121.14.2 Methods

121.14.3 Constructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.

121.14.4 Destructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

121.14.5 Properties

121.14.6 no_perf as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to measure performance timings.
Notes: (Read and Write property)

121.15 class LlamaSamplerMBS

121.15.1 class LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The sampler class.
Example:

```
// build a sampler chain that always picks the most likely token (deterministic answers)
// context is a LlamaContextMBS, see there
Var sampler As New LlamaSamplerMBS(New LlamaSamplerChainParametersMBS)
sampler.AddToChain LlamaSamplerMBS.InitMinP(0.05, 1) // drop very unlikely tokens
sampler.AddToChain LlamaSamplerMBS.InitGreedy

MessageBox sampler.ChainLength.ToString + " samplers in chain: " + sampler.Name
// Var answer As String = context.Ask(sampler, "What is 2+2?")
```

Notes: This class is key to controlling how tokens are selected during model inference (sampling strategies like greedy, top-k, nucleus, etc.).
Blog Entries

- Use Llama.cpp in Xojo
- Using llama.cpp in Xojo

121.15.2 Methods

121.15.3 Accept(token as Int32)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Notifies the sampler that a token has been selected.
Notes: This allows stateful samplers to update their internal state.

121.15.4 AddToChain(sampler as LlamaSamplerMBS)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Adds a sampler to the chain.

121.15.5 Chain(Index as Integer) as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Retrieves the i-th sampler from the chain.

121.15.6 Clone as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a deep copy of the sampler, including its current internal state.
Notes: Returns a new sampler with the same configuration and state.

121.15.7 Constructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.
See also:

- 121.15.8 Constructor(parameters as LlamaSamplerChainParametersMBS) 17619

121.15.8 Constructor(parameters as LlamaSamplerChainParametersMBS)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Initializes an empty sampler chain with the given configuration.
Notes: Raises UnsupportedOperationException if the sampler can't be created.
See also:

- 121.15.7 Constructor 17619

121.15.9 Destructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

121.15.10 InitDist(seed as UInt32) as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Initializes a random distribution sampler, selecting tokens proportionally to their probabilities.
Notes: seed: RNG seed for reproducibility.

121.15.11 InitGreedy as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Initializes a greedy sampler that always picks the highest-probability token.

121.15.12 InitInfill(vocab as LlamaVocabMBS) as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates an in-fill sampler.
Notes: this sampler is meant to be used for fill-in-the-middle infilling
it's supposed to be used after top_k + top_p sampling

1. if the sum of the EOG probs times the number of candidates is higher than the sum of the other probs ->pick EOG
2. combine probs of tokens that have the same prefix

example:

- before:
"hel": 0.5
"hell": 0.2
"hello": 0.1
"dummy": 0.1

- after:
"hel": 0.8
"dummy": 0.1

3. discard non-EOG tokens with low prob
4. if no tokens are left ->pick EOT

121.15.13 InitMinP(p as Single, minKeep as UInt64) as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Minimum P sampling keeps all tokens with individual probability ,â • p.

121.15.14 InitTemp(p as Single) as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Applies temperature scaling to logits.
Notes: Each logit l_i is divided by t.

If t <= 0, the max logit is preserved; others set to -inf (argmax).

121.15.15 InitTempExt(t as Single, delta as Single, exponent as Single) as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Dynamic temperature implementation (a.k.a. entropy)

121.15.16 InitTopK(k as Int32) as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Top-K sampling limits selection to the top k most probable tokens.
Notes: Setting k <= 0 disables this sampler (noop).

121.15.17 InitTopNSigma(n as Single) as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Top n sigma sampling.

121.15.18 InitTopP(p as Single, minKeep as UInt64) as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Nucleus (Top-P) sampling limits selection to the smallest set of tokens with cumulative probability ,â • p.
Notes: p: Probability threshold (0.0–1.0).

min_keep: Minimum number of tokens to retain regardless of p.

121.15.19 InitTypical(p as Single, minKeep as UInt64) as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Locally Typical Sampling selects tokens whose conditional probability is close to the entropy of the distribution.

121.15.20 InitXTC(p as Single, t as Single, minKeep as UInt64, seed as UInt32) as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: XTC sampler.

121.15.21 Performance as LlamaPerformanceSamplerDataMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries sampler performance data.

121.15.22 PerformancePrint

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Prints performance statistics.

121.15.23 PerformanceReset

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Resets performance data.

121.15.24 RemoveFromChain(Index as Integer)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Removes the i-th sampler from the chain.

121.15.25 Reset

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Resets the internal state of the sampler (if applicable).

121.15.26 Sample(context as LlamaContextMBS, Index as Integer) as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sample and accept a token from the idx-th output of the last evaluation.
Notes: Returns the sampled token.

121.15.27 Properties

121.15.28 ChainLength as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the number of samplers currently in the chain.
Notes: (Read only property)

121.15.29 Handle as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

121.15.30 Name as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Retrieves the name of the sampler (e.g., ”top_k”, ”greedy”).
Notes: (Read only property)

121.15.31 Seed as UInt32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the seed.
Notes: (Read only property)

121.15.32 Constants

Constants

Constant	Value	Description
DefaultSeed	&hFFFFFFFF	The default seed value.

121.16 class LlamaVocabMBS

121.16.1 class LlamaVocabMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a vocabulary.
Example:

```
// split a text into tokens and show them, e.g. to count tokens before sending a prompt
// The llama library must be loaded before, see LlamaMBS.LoadLibrary and LlamaMBS.BackendLoadAll.
Var model As New LlamaModelMBS(SpecialFolder.Desktop.Child("model.gguf"))
Var vocab As LlamaVocabMBS = model.Vocab

Var tokens() As Int32 = vocab.Tokenize("Hello world, how are you?", False)
Var pieces() As String
For Each token As Int32 In tokens
pieces.Add " [ " + vocab.TokenToPiece(token) + " ] "
Next
MessageBox tokens.Count.ToString + " tokens of " + vocab.n_tokens.ToString + ": " + String.FromArray(pieces, "")
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- News from the MBS Xojo Plugin version 26.4
- MBS Xojo Plugins, version 26.1pr3

121.16.2 Methods

121.16.3 Constructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

121.16.4 Destructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

121.16.5 Detokenize(tokens() as Int32, removeSpecial as boolean, unparseSpecial as Boolean) as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Convert the provided tokens into text (inverse of Tokenize()).
Notes: Returns the text.

remove_special: Allow to remove BOS and EOS tokens if model is configured to do so.
unparse_special: If true, special tokens are rendered in the output.

121.16.6 isControl(Token as Int32) as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Identify if Token Id is a control token or a render-able token.

121.16.7 isEOG(Token as Int32) as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Check if the token is supposed to end generation (end-of-generation, eg. EOS, EOT, etc.)

121.16.8 SuppressTokens as Int32()

MBS Tools Plugin, Plugin Version: 26.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: model-specific suppress tokens.

121.16.9 Text(Token as Int32) as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the text for a token.
Example:

```
// let's list text for 100 tokens

Var vocab As LlamaVocabMBS = model.Vocab

var words() as string
```

```
For i As Integer = 30000 To 30100
words.Add vocab.Text(i)
Next
Var List As String = Join(words, ", ")
break
```

121.16.10 TokenAttributes(Token as Int32) as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries attribute flags for the given token.

121.16.11 Tokenize(text as String, AddSpecial as Boolean = true, ParseSpecial as Boolean = true) as Int32()

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Convert the provided text into tokens.
Notes: add_special: Allow to add BOS and EOS tokens if model is configured to do so.
parse_special: Allow tokenizing special and/or control tokens which otherwise are not exposed and treated as plaintext. Does not insert a leading space.

121.16.12 TokenScore(Token as Int32) as Single

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the score for a token.

121.16.13 TokenToPiece(Token as Int32, special as boolean = true) as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Token Id ->Piece.
Notes: Uses the vocabulary in the provided context.

User can skip up to 'lstrip' leading spaces before copying (useful when encoding/decoding multiple tokens with 'add_space_prefix')

special: If true, special tokens are rendered in the output.

121.16.14 Properties

121.16.15 bos as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The token for beginning-of-sentence
Notes: (Read only property)

121.16.16 eot as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The token for end-of-turn.
Notes: (Read only property)

121.16.17 Handle as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

121.16.18 nl as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The token for next-line.
Notes: (Read only property)

121.16.19 n_tokens as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The number of tokens.
Notes: (Read only property)

121.16.20 pad as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The token for padding.
Notes: (Read only property)

121.16.21 sep as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The token for sentence separator.
Notes: (Read only property)

121.16.22 type as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the type of vocab.
Notes: See Type* constants.
(Read only property)

121.16.23 Constants

Constants

Constant	Value	Description
TokenNull	-1	The value used for a null token.

Token Attributes

Constant	Value	Description
TokenAttrByte	32	Byte fallback token (e.g. used for bytes not covered by BPE merges)
TokenAttrControl	8	Control token (e.g. special tokens, separators, directives) —tokens that don,Äôt map directly to output text.
TokenAttrLstrip	128	Token is to be left,Äëstripped (i.e. leading whitespace removal)
TokenAttrNormal	4	A ,Äúnormal,Äù token (non,Äëspecial, non,Äëcontrol) —a basic lexical token.
TokenAttrNormalized	64	Token has been normalized (e.g. transformed / canonicalized)
TokenAttrRstrip	256	Token is to be right,Äëstripped (i.e. trailing whitespace removal)
TokenAttrSingleWord	512	Token represents a single word (i.e. atomic word, not subword)
TokenAttrUndefined	0	No attribute set / default / ,Äúno classification,Äù
TokenAttrUnknown	1	Token whose status is unknown (e.g. not in vocabulary or fallback)
TokenAttrUnused	2	Token that is present but not used / deprecated / reserved.
TokenAttrUserDefined	16	A user,Äëdefined token (e.g. custom token inserted by user / application)

Vocab Types

Constant	Value	Description
TypeBPE	2	GPT-2 tokenizer based on byte-level BPE
TypeNone	0	For models without vocab
TypePLAMO2	6	PLaMo-2 tokenizer based on Aho-Corasick with dynamic programming
TypeRWKV	5	RWKV tokenizer based on greedy tokenization
TypeSPM	1	LLaMA tokenizer based on byte-level BPE with byte fallback
TypeUGM	4	T5 tokenizer based on Unigram
TypeWPM	3	BERT tokenizer based on WordPiece

Chapter 122

LMFit

122.1 class LMFitControlMBS

122.1.1 class LMFitControlMBS

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Collection of input parameters for fit control.
Blog Entries

- MBS Xojo Plugins, version 19.6pr1

122.1.2 Methods

122.1.3 MsgFileStderr

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set msgfile to stderr.

122.1.4 MsgFileStdout

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set msgfile to stdout.

122.1.5 Properties

122.1.6 epsilon as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Step used to calculate the Jacobian, should be slightly larger than the relative error in the user-supplied functions.
Notes: (Read and Write property)

122.1.7 ftol as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Relative error desired in the sum of squares.
Notes: Termination occurs when both the actual and predicted relative reductions in the sum of squares are at most ftol.
(Read and Write property)

122.1.8 gtol as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Orthogonality desired between fvec and its derivs.
Notes: Termination occurs when the cosine of the angle between fvec and any column of the Jacobian is at most gtol in absolute value.
(Read and Write property)

122.1.9 msgfile as FolderItem

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Progress messages will be written to this file.
Notes: (Read and Write property)

122.1.10 m_maxpri as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: -1, or max number of residuals to print.
Notes: (Read and Write property)

122.1.11 n_maxpri as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: -1, or max number of parameters to print.
Notes: (Read and Write property)

122.1.12 patience as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Used to set the maximum number of function evaluations to patience*(number_of_parameters+1).
Notes: (Read and Write property)

122.1.13 scale_diag as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If 1, the variables will be rescaled internally.
Notes: Recommended value is 1.
(Read and Write property)

122.1.14 stepbound as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Used in determining the initial step bound.
Notes: This bound is set to the product of stepbound and the Euclidean norm of diag*x if nonzero, or else to stepbound itself. In most cases stepbound should lie in the interval (0.1,100.0). Generally, the value 100.0 is recommended.
(Read and Write property)

122.1.15 verbosity as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The verbosity flags.
Notes: OR'ed: 1: print some messages; 2: print Jacobian.

(Read and Write property)

122.1.16 xtol as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Relative error between last two approximations.
Notes: Termination occurs when the relative error between two consecutive iterates is at most xtol.
(Read and Write property)

122.2 class LMFitMBS

122.2.1 class LMFitMBS

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to run Levenberg-Marquardt least squares fitting algorithm.
Notes: Based on lmfit library from Joachim Wuttke, Forschungszentrum Juelich GmbH (2004-2013).

122.2.2 Methods

122.2.3 LMCurve(NPar as Integer, Par as Ptr, mDat as Integer, t as Ptr, y as Ptr, control as LMFitControlMBS, status as LMFitStatusMBS, tag as variant = nil)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs curve algorithm.
Notes: NPar is the number of variables (INPUT, positive integer).
Par is the solution vector (INPUT/OUTPUT, array of length n). On input it must be set to an estimated solution. On output it yields the final estimate of the solution.
mDat is the number of functions to be minimized (INPUT, positive integer). It must fulfill m>=n.

Calls evaluateCurve event to query values.

control contains INPUT variables that control the fit algorithm, as declared and explained in lmstruct.h
status contains OUTPUT variables that inform about the fit result, as declared and explained in lmstruct.h
See also:

- 122.2.4 LMCurve(NPar as Integer, Par() as double, mDat as Integer, t() as double, y() as double, control as LMFitControlMBS, status as LMFitStatusMBS, tag as variant = nil) 17636

122.2.4 LMCurve(NPar as Integer, Par() as double, mDat as Integer, t() as double, y() as double, control as LMFitControlMBS, status as LMFitStatusMBS, tag as variant = nil)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs curve algorithm.
Notes: NPar is the number of variables (INPUT, positive integer).
Par is the solution vector (INPUT/OUTPUT, array of length n). On input it must be set to an estimated solution. On output it yields the final estimate of the solution.
mDat is the number of functions to be minimized (INPUT, positive integer). It must fulfill m>=n.

Calls evaluateCurve event to query values.

control contains INPUT variables that control the fit algorithm, as declared and explained in lmstruct.h
status contains OUTPUT variables that inform about the fit result, as declared and explained in lmstruct.h
See also:

- 122.2.3 LMCurve(NPar as Integer, Par as Ptr, mDat as Integer, t as Ptr, y as Ptr, control as LMFitControlMBS, status as LMFitStatusMBS, tag as variant = nil) 17635

122.2.5 LMMin(NPar as Integer, Par as Ptr, mDat as Integer, control as LMFitControlMBS, status as LMFitStatusMBS, tag as variant = nil)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs Levenberg-Marquardt minimization.
Notes: This routine contains the core algorithm of our library.

It minimizes the sum of the squares of m nonlinear functions in n variables by a modified Levenberg-Marquardt algorithm. The function evaluation is done by the user-provided routine 'evaluate'. The Jacobian is then calculated by a forward-difference approximation.

Parameters:

NPar is the number of variables (INPUT, positive integer).
Par is the solution vector (INPUT/OUTPUT, array of length n). On input it must be set to an estimated solution. On output it yields the final estimate of the solution. This should be memoryblock with double values.
mDat is the number of functions to be minimized (INPUT, positive integer). It must fulfill m>=n.

Calls evaluateMin event to query values.

control contains INPUT variables that control the fit algorithm, as declared and explained in lmstruct.h
status contains OUTPUT variables that inform about the fit result, as declared and explained in lmstruct.h
See also:

- 122.2.6 LMMin(NPar as Integer, Par() as double, mDat as Integer, control as LMFitControlMBS, status as LMFitStatusMBS, tag as variant = nil) 17637

122.2.6 LMMin(NPar as Integer, Par() as double, mDat as Integer, control as LMFitControlMBS, status as LMFitStatusMBS, tag as variant = nil)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs Levenberg-Marquardt minimization.
Notes: This routine contains the core algorithm of our library.

It minimizes the sum of the squares of m nonlinear functions in n variables by a modified Levenberg-Marquardt algorithm. The function evaluation is done by the user-provided routine 'evaluate'. The Jacobian is then calculated by a forward-difference approximation.

Parameters:

NPar is the number of variables (INPUT, positive integer).
Par is the solution vector (INPUT/OUTPUT, array of length n). On input it must be set to an estimated solution. On output it yields the final estimate of the solution.
mDat is the number of functions to be minimized (INPUT, positive integer). It must fulfill m>=n.

Calls evaluateMin event to query values.

control contains INPUT variables that control the fit algorithm, as declared and explained in lmstruct.h
status contains OUTPUT variables that inform about the fit result, as declared and explained in lmstruct.h
See also:

- 122.2.5 LMMin(NPar as Integer, Par as Ptr, mDat as Integer, control as LMFitControlMBS, status as LMFitStatusMBS, tag as variant = nil) 17636

122.2.7 Properties

122.2.8 provideArrays as Boolean

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to fill parameter array for evaluateMin event.
Notes: If provideArrays property is true, we provide values via parameters array, which may be slower than

using par pointer.
(Read and Write property)

122.2.9 Events

122.2.10 evaluateCurve(t as double, par as Ptr, nPar as Integer, parameters() as double, tag as variant) as double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluate is a event that calculates the m functions.
Notes: The parameter par, nPar, parameters and mDat are passed through from the call to LMCurve.

fvec is an array of length m; on OUTPUT, it must contain the m function values for the parameter vector x.

If you return a nonzero value, lmmin will terminate.
Return zero to continue.

If provideArrays property is true, we provide values via parameters array, which may be slower than using par pointer.

122.2.11 evaluateMin(par as Ptr, nPar as Integer, parameters() as double, mDat as Integer, fvec as Ptr, tag as variant) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluate is a event that calculates the m functions.
Notes: The parameter par, nPar, parameters and mDat are passed through from the call to LMMin.

fvec is an array of length m; on OUTPUT, it must contain the m function values for the parameter vector x.

If you return a nonzero value, lmmin will terminate.
Return zero to continue.

If provideArrays property is true, we provide values via parameters array, which may be slower than using par pointer.

122.3 class LMFitStatusMBS

122.3.1 class LMFitStatusMBS

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Collection of output parameters for status info.
Blog Entries

- MBS Xojo Plugins, version 19.6pr1

122.3.2 Properties

122.3.3 fnorm as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Norm of the residue vector fvec.
Notes: (Read and Write property)

122.3.4 nfev as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Actual number of iterations.
Notes: (Read and Write property)

122.3.5 outcome as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Status indicator.
Notes: Nonnegative values are used as index for the message text.
(Read and Write property)

122.3.6 outcomeInfoMessage as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The info message text.
Notes: The plugin looks up text based on outcome value.

(Read only property)

122.3.7 outcomeShortMessage as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The short message text.
Notes: The plugin looks up text based on outcome value.
(Read only property)

122.3.8 userbreak as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set when function evaluation requests termination.
Notes: (Read and Write property)

Chapter 123

Login Items

123.1 class LoginItemsMBS

123.1.1 class LoginItemsMBS

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use LSSharedFileListMBS instead. **Function:** A class to handle login items on Mac OS X.
Notes: After creating a new object, the constructor may fail sometimes while updateing the list. lasterror is -609 in that case. His happens most likely just after login when the system events process is not yet ready. In that case, let your app wait a few seconds and try again.

For newer Mac OS X versions, please use LSSharedFileListMBS class instead.
Blog Entries

- MBS Xojo Plugins, version 22.5pr1
- Adding Login Items on Mac OS X

123.1.2 Methods

123.1.3 AddFile(file as FolderItem, hidden as boolean=false) as boolean

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Adds a file to the login items.
Notes: Returns true on success.

For newer Mac OS X versions, please use LSSharedFileListMBS class instead.

123.1.4 AddURL(url as string, hidden as boolean=false) as boolean

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Adds an url to the item list.
Notes: Returns true on success.

For newer Mac OS X versions, please use LSSharedFileListMBS class instead.

123.1.5 DisplayName(index as Integer) as String

MBS MacOSX Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The display name of the item with the given index.
Example:

```
Var l as LoginItemsMBS

l=new LoginItemsMBS
MessageBox l.displayName(0) // shows name of first item
```

Notes: The display name may be localized.

123.1.6 File(index as Integer) as FolderItem

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The file reference of the item with the given index.
Notes: Index is from 0 to count-1.

123.1.7 IsHidden(index as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Whether the item with the given index should be hidden after launch.
Notes: Index is from 0 to count-1.

This value does not work in Mac OS X 10.4, but works in 10.5.

123.1.8 Name(index as Integer) as String

MBS MacOSX Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The name of the item with the given index.
Example:

```
Var l as LoginItemsMBS

l=new LoginItemsMBS
MessageBox l.Name(0) // shows name of first item
```

Notes: This is the file name. To get the name for display, use displayname.

123.1.9 OldAddLoginItem(file as folderitem,hide as boolean,allusers as boolean) as boolean

MBS MacOSX Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Adds a file to the loginitems list.
Example:

```
Var f as folderItem
Var r as new LoginItemsMBS

f=app.applicationFileMBS
if r.OldAddLoginItem(f,false,false) then
MessageBox f.displayName+" has been added to the login items!"
else
MessageBox "Something went wrong."
end if
```

Notes: This is the old method which edits the preferences file directly.
Do not use it unless you really need to. The new functions in this class handle login items using a system service and will be safer for future releases of Mac OS X.

hide matches the checkbox in the loginitems list.
allusers decides whether to set it for all user or the current one.

This function will add a LoginItem to the list of LoginItems when called. The properties given to the new LoginItem are passed when calling the function. Note that *no* check is made when adding the LoginItem

to ensure that the path points to a valid application. Note that the LoginItem Is always added to the *end* of the list of LoginItems.

First Parameter (appfile):
The absolute path of the application to be launched expressed as a Xojo folderitem.

Second Parameter (hide):
A value representing if you want your application to be hidden at login time. True if you want the application to be hidden after it is launched. If you want the application to show up normally use be hidden use false.

Third Parameter (allusers):
A constant which represents which users preferences we want to change. In this case there are two alternatives: False which changes the preferences of the current user. The second alternative is True.
The kAllUsers LoginItems are launched for all users on the system. You must be root or admin to use the kAllUsers option.

Function Returns:
This function returns a boolean value representing if the function was successful.
The function returns true if the LoginItem was successfully added. False if otherwise. No additional error codes are returned.

Other Notes:
This code doesn't work properly if more than one application is attempting to write to the LoginItems preference at once.
Also no check is made to ensure that what you are adding to the LoginItem list isn't a duplicate. If there is a duplicate however only one instance of the application is launched.

123.1.10 OldCountOfLoginItems(allusers as boolean) as Integer

MBS MacOSX Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: This function will return the number of LoginItems for the user requested.
Example:

```
// Add this code for synchronization:

Var cf as CFPreferencesMBS
Var b as Boolean

cf=new CFPreferencesMBS
b=cf.AppSynchronize(cf.kCFPreferencesCurrentApplication)

// Count items
```

```
Var r as new LoginItemsMBS
MessageBox str(r.OldCountOfLoginItems(false))
```

Notes: This is the old method which edits the preferences file directly.
Do not use it unless you really need to. The new functions in this class handle login items using a system service and will be safer for future releases of Mac OS X.

This function returns the number of LoginItems for the user requested as a signed integer.

123.1.11 OldLoginItemPropertyAtIndex(what as Integer, index as Integer, allusers as boolean) as string

MBS MacOSX Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Returns a property from the loginitems list.
Example:

```
Var i as Integer
Var c as Integer
Var l as Integer
Var path,name,hide as string
Var r as new LoginItemsMBS

c=r.OldCountOfLoginItems(false)

MessageBox str(c)+" Login items found for this user."

c=c-1
for i=0 to c
name=r.OldLoginItemPropertyAtIndex(2,i,false)
hide=r.OldLoginItemPropertyAtIndex(3,i,false)
path=r.OldLoginItemPropertyAtIndex(1,i,false)

list.addrow name
l=list.lastIndex
list.CellTextAt(l,1)=hide
list.CellTextAt(l,2)=path
list.CellTextAt(l,3)=str(i)
next
```

Notes: This is the old method which edits the preferences file directly.
Do not use it unless you really need to. The new functions in this class handle login items using a system service and will be safer for future releases of Mac OS X.

Index is from 0 to count-1.
What can be 1 for the absolute path of the LoginItem, 2 for the LoginItem name or 3 for a string with "false" or "true" for the hiding option.

Returns "" on any error.

123.1.12 OldRemoveLoginItem(file as folderitem,allusers as boolean) as boolean

MBS MacOSX Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Removes a file to the loginitems list.
Example:

```
Var f as folderItem
Var r as new LoginItemsMBS

f=app.applicationFileMBS
if r.OldRemoveLoginItem(f,false) then
MessageBox f.displayName+" has been added to the login items!"
else
MessageBox "Something went wrong."
end if
```

Notes: This is the old method which edits the preferences file directly.
Do not use it unless you really need to. The new functions in this class handle login items using a system service and will be safer for future releases of Mac OS X.

The items are compared by path.
Returns true if item was found and the new list is written correctly to disk.
allusers decides whether to set it for all user or the current one.

123.1.13 OldRemoveLoginItemAtIndex(index as Integer, allusers as boolean) as boolean

MBS MacOSX Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Removes an entry from the loginitem list.
Notes: This is the old method which edits the preferences file directly.
Do not use it unless you really need to. The new functions in this class handle login items using a system service and will be safer for future releases of Mac OS X.

Index is from 0 to count-1.

123.1.14 Remove(index as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Removes the item from the login items list.
Notes: Index is from 0 to count-1.
The count property is updated.

123.1.15 RemoveFile(file as FolderItem) as boolean

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Removes the items matching this file reference from the list.
Notes: Returns true on success.
Count is updated.

123.1.16 RemoveURL(url as string) as boolean

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Removes the item matching the given URL.
Notes: Returns true on success.

123.1.17 Update

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Reloads the list of items.
Notes: Update is done after each modification method and in the constructor.
You should never need to call this method.

123.1.18 URL(index as Integer) as String

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The URL of the item with the given index.
Notes: Index is from 0 to count-1.

123.1.19 Properties

123.1.20 Count as Integer

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Number of items in the list currently.
Notes: (Read and Write property)

123.1.21 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The handle to the NSArray Reference used internally for the item list.
Notes: (Read and Write property)

123.1.22 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The last error code.
Notes: Value can be 0 for success or -1 for a parameter error in the plugins or some other Mac OS X error code.
(Read and Write property)

123.2 class LSSharedFileListItemMBS

123.2.1 class LSSharedFileListItemMBS

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a list item.
Notes: Requires Mac OS X 10.5.

123.2.2 Methods

123.2.3 DisplayName as string

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Obtain item's display name.
Example:

```
Var l as new LSSharedFileListMBS(LSSharedFileListMBS.kRecentDocumentItems)

if l.Handle=0 then
MessageBox "Failed to get list."
else
Var a(-1) as LSSharedFileListItemMBS = l.Snapshot
Var lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.Add x.DisplayName
next

MessageBox Join(lines, EndOfLine)
end if
```

123.2.4 Icon as Variant

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Obtain item's icon.
Notes: Value is a IconMBS. We use variant to reduce dependency to other plugins.

123.2.5 ID as UInt32

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Obtain unique item id.
Example:

```
Var l as new LSSharedFileListMBS(LSSharedFileListMBS.kSessionLoginItems)

if l.Handle=0 then
MessageBox "Failed to get list."
else
Var a(-1) as LSSharedFileListItemMBS = l.Snapshot
Var lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.Add x.DisplayName+": "+str(x.ID)
next

MessageBox Join(lines, EndOfLine)
end if
```

123.2.6 Resolve(flags as UInt32) as folderitem

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Resolve item and return its folderitem.
Example:

```
Var l as new LSSharedFileListMBS(LSSharedFileListMBS.kRecentDocumentItems)

if l.Handle=0 then
MessageBox "Failed to get list."
else
Var a(-1) as LSSharedFileListItemMBS = l.Snapshot
Var lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.Add x.Resolve(0).NativePath
next

MessageBox Join(lines, EndOfLine)
end if
```

Notes: Pass values like 0, kNoUserInteraction, kDoNotMountVolumes or kDoNotMountVolumes+kNoUserInteraction.

123.2.7 ResolveURL(flags as UInt32) as string

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Resolve item and return its URL.
Example:

```
Var l as new LSSharedFileListMBS(LSSharedFileListMBS.kRecentDocumentItems)

if l.Handle=0 then
MessageBox "Failed to get list."
else
Var a(-1) as LSSharedFileListItemMBS = l.Snapshot
Var lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.Add x.ResolveURL(x.kNoUserInteraction)
next

MessageBox Join(lines, EndOfLine)
end if
```

Notes: Pass values like 0, kNoUserInteraction, kDoNotMountVolumes or kDoNotMountVolumes+kNoUserInteraction.

123.2.8 Properties

123.2.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal reference to the item.
Notes: (Read and Write property)

123.2.10 Lasterror as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

123.2.11 ItemHidden as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Is item hidden in UI?
Example:

```
Var l as new LSSharedFileListMBS(LSSharedFileListMBS.kSessionLoginItems)

if l.Handle=0 then
MessageBox "Failed to get list."
else
Var a(-1) as LSSharedFileListItemMBS = l.Snapshot
Var lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.Add x.DisplayName+": "+str(x.ItemHidden)
next

MessageBox Join(lines, EndOfLine)
end if
```

Notes: (Read and Write computed property)

123.2.12 LoginItemHidden as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Should UI hide login item's window?
Example:

```
Var l as new LSSharedFileListMBS(LSSharedFileListMBS.kSessionLoginItems)

if l.Handle=0 then
MessageBox "Failed to get list."
else
Var a(-1) as LSSharedFileListItemMBS = l.Snapshot
Var lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.Add x.DisplayName+": "+str(x.LoginItemHidden)
next

MessageBox Join(lines, EndOfLine)
end if
```

Notes: Requires Mac OS X 10.6.
(Read and Write computed property)

123.2.13 Constants

Constants

Constant	Value	Description
kDoNotMountVolumes	2	One of the flags for resolve. do not mount volumes during resolution
kNoUserInteraction	1	One of the flags for resolve. no user interaction during resolution

123.3 class LSSharedFileListMBS

123.3.1 class LSSharedFileListMBS

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The shared list class.
Notes: The shared file list API is for sharing and storing list of references to file system objects. The shared file list is a persistent list of objects, where each item has assigned display name, icon, and url as well as other optional properties.
Each list can also have various properties attached.

Requires Mac OS X 10.5.
Blog Entries

- MBS Plugins updated for Xojo 2019r2
- MBS Real Studio Plugins, version 12.4pr8
- Adding Login Items on Mac OS X

123.3.2 Methods

123.3.3 Constructor(type as Integer)

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates shared file list reference to be used for changing list and reading its various properties.
Notes: type: A constant indicating list type to create. See the constants in this class.

123.3.4 GetSeedValue as UInt32

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns seed value of the shared list.

123.3.5 InsertFile(AfterItem as LSSharedFileListItemMBS, DisplayName as string, Icon as object, file as folderitem) as LSSharedFileListItemMBS

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Insert item into shared list.
Example:

```
// Add iPhoto to launch items

// pick app
Var app as FolderItem = SpecialFolder.Applications.Child("iPhoto.app")

// get list object
Var l as new LSSharedFileListMBS(LSSharedFileListMBS.kSessionLoginItems)

// insert file
Var item as LSSharedFileListItemMBS = l.InsertFile(l.kLSSharedFileListItemBeforeFirst, "Launch iPhoto",
nil, app)

// check error
if l.Lasterror = 0 then
MessageBox "OK"
else
MessageBox "Failed: "+str(l.Lasterror)
end if
```

Notes: Inserts item into shared list at specified location. If the item already exists in the list it will be moved and its icon, display name and properties will be updated.

AfterItem: Item after which new item has to be inserted. To insert at the beginning of the list use kLSSharedFileListItemBeforeFirst or to insert at the end of the list use kLSSharedFileListItemLast.

DisplayName: Display name of the new item. Can be NULL.
Icon: IconMBS of the new item. Can be nil.
File: FolderItem of the new item.

123.3.6 InsertURL(AfterItem as LSSharedFileListItemMBS, DisplayName as string, Icon as object, URL as string) as LSSharedFileListItemMBS

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Insert item into shared list.
Notes: Inserts item into shared list at specified location. If the item already exists in the list it will be moved and its icon, display name and properties will be updated.

AfterItem: Item after which new item has to be inserted. To insert at the beginning of the list use kLSSharedFileListItemBeforeFirst or to insert at the end of the list use kLSSharedFileListItemLast.

DisplayName: Display name of the new item. Can be "".
Icon: IconMBS object for the icon. Can be nil.

URL: URL of the new item.

123.3.7 kLSSharedFileListItemBeforeFirst as LSSharedFileListItemMBS

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: A virtual item reference for inserting new item at beginning of the list.
Example:

```
Var n as LSSharedFileListItemMBS = LSSharedFileListMBS.kLSSharedFileListItemBeforeFirst
MessageBox str(n.Handle) // a special handle value for this virtual item: 1
```

123.3.8 kLSSharedFileListItemLast as LSSharedFileListItemMBS

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: A virtual item reference for inserting new item at end of the list.
Example:

```
Var n as LSSharedFileListItemMBS = LSSharedFileListMBS.kLSSharedFileListItemLast
MessageBox str(n.Handle) // a special handle value for this virtual item: 2
```

123.3.9 Move(item as LSSharedFileListItemMBS, MoveAfterItem as LSSharedFileListItemMBS)

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Moves item at specified location.
Notes: item: Item to move.
MoveAfterItem: New icon of the new item. Use kLSSharedFileListItemBeforeFirst and kLSSharedFileListItemLast to move at the beginning or the end of the shared list.

123.3.10 Remove(item as LSSharedFileListItemMBS)

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Remove item from shared list.
Example:

```
// Remove iPhoto from launch items

// get list object
```

```
Var l as new LSSharedFileListMBS(LSSharedFileListMBS.kSessionLoginItems)

// get items
Var items(-1) as LSSharedFileListItemMBS = l.Snapshot

// check all items
for each item as LSSharedFileListItemMBS in items
Var file as FolderItem = item.Resolve(LSSharedFileListItemMBS.kNoUserInteraction)

if file<>nil then
if file.Name = "iPhoto.app" then
l.Remove item

if l.Lasterror = 0 then
MessageBox "OK"
else
MessageBox "Error: "+str(l.Lasterror)
end if
Return
end if
end if

next
```

123.3.11 RemoveAllItems

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Remove all items from shared list.

123.3.12 SetAuthorization(handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Set authorization reference for the shared list.
Notes: Before attempting to perform a privileged operation on the shared list caller must authorize appropriate rights. For example, modifying kGlobalLoginItems list requires "system.global-login-items." right authorized.

123.3.13 Snapshot as LSSharedFileListItemMBS()

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates snapshot array, which is list of all items at the moment this method was called.
See also:

- 123.3.14 Snapshot(byref seed as UInt32) as LSSharedFileListItemMBS() 17658

123.3.14 Snapshot(byref seed as UInt32) as LSSharedFileListItemMBS()

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates snapshot array, which is list of all items at the moment this method was called.
Notes: seed: Returned seed value at which snapshot was taken.
See also:

- 123.3.13 Snapshot as LSSharedFileListItemMBS() 17657

123.3.15 Properties

123.3.16 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal reference to the list.
Notes: (Read and Write property)

123.3.17 Lasterror as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

123.3.18 RecentItemsMaxAmount as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Maximum amount of items in the list.
Notes: (Read and Write computed property)

123.3.19 VolumesComputerVisible as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Is Computer item visible in favorite volumes list?
Notes: (Read and Write computed property)

123.3.20 VolumesIDiskVisible as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Is iDisk item visible in favorite volumes list.
Notes: (Read and Write computed property)

123.3.21 VolumesNetworkVisible as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Is Network item visible in favorite volumes list?
Notes: (Read and Write computed property)

123.3.22 Events

123.3.23 Changed

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The event called whenever the list is changed by an application.

123.3.24 Constants

Constants

Constant	Value	Description
kFavoriteItems	2	One of the list type constants.
kFavoriteVolumes	1	One of the list type constants.
kGlobalLoginItems	7	One of the list type constants.
kRecentApplicationItems	3	One of the list type constants.
kRecentDocumentItems	4	One of the list type constants.
kRecentServerItems	5	One of the list type constants.
kSessionLoginItems	6	One of the list type constants.

123.4 module ServiceManagementModuleMBS

123.4.1 module ServiceManagementModuleMBS

MBS MacCF Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The module with function to add helper to login items.
Example:

```
// start a helper app (inside Contents/Library/LoginItems) when the user logs in
If Not ServiceManagementModuleMBS.LoginItemSetEnabled("com.example.myapp.helper", True) Then
MessageBox "Can't enable the login item."
End If
```

Notes: This API seems to be sandbox safe and working with Mac App Store.

- Adding Login Items on Mac OS X

123.4.2 Methods

123.4.3 AllJobDictionaries(domain as string) as Dictionary()

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Returns the job description dictionaries for all jobs in the given domain.
Notes: domain: The desired domain (e.g. kSMDomainSystemLaunchd).

Returns a new array containing all job dictionaries, or empty array if an error occurred. Must be released by the caller.
Available in OS X v10.6 and later.

123.4.4 CreateAuthorization as AuthorizationMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Creates an authorization for Job operations.
Notes: Creates an authorization with kSMRightBlessPrivilegedHelper and flags InteractionAllowed, PreAuthorize and ExtendRights.

123.4.5 JobBless(domain as string, executableLabel as string, auth as AuthorizationMBS, byref error as Variant) as boolean

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Submits the executable for the given label as a launchd job.
Notes: domain: The job's domain. Only kSMDomainSystemLaunchd is supported.
executableLabel: The label of the privileged executable to install. This label must be one of the keys found in the SMPrivilegedExecutables dictionary in the application's Info.plist.
auth: An authorization reference containing the kSMRightBlessPrivilegedHelper right.
Error: An output reference to a CFErrorMBS describing the specific error encountered while submitting the executable tool, or nil if successful. It is the responsibility of the application to release the error reference.

Returns true if the job was successfully submitted, otherwise false.

JobBless submits the executable for the given label as a launchd job. This function obviates the need for a setuid helper invoked via AuthorizationExecuteWithPrivileges in order to install a launchd plist.

If the job is already installed, success is returned.

In order to use this function the following requirements must be met:

- The calling application and target executable tool must both be signed.
- The calling application's Info.plist must include a "SMPrivilegedExecutables" dictionary of strings. Each string is a textual representation of a code signing requirement used to determine whether the application owns the privileged tool once installed (i.e. in order for subsequent versions to update the installed version).

Each key of SMPrivilegedExecutables is a reverse-DNS label for the helper tool (must be globally unique).

- The helper tool must have an embedded Info.plist containing an "SMAuthorizedClients" array of strings. Each string is a textual representation of a code signing requirement describing a client which is allowed to add and remove the tool.
- The helper tool must have an embedded launchd plist. The only required key in this plist is the Label key. When the launchd plist is extracted and written to disk, the key for ProgramArguments will be set to an array of 1 element pointing to a standard location. You cannot specify your own program arguments, so do not rely on custom command line arguments being passed to your tool. Pass any parameters via IPC.
- The helper tool must reside in the Contents/Library/LaunchServices directory inside the application bundle, and its name must be its launchd job label. So if your launchd job label is "com.apple.Mail.helper", this must be the name of the tool in your application bundle.

Available in OS X v10.6 and later.

123.4.6 JobDictionary(domain as string, jobLabel as string) as Dictionary

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Returns the job description dictionary for the given job label.
Notes: domain: The job's domain (e.g. kSMDomainSystemLaunchd).
jobLabel: The label identifier for the job to copy.

Return a new dictionary describing the job, or nil if the job could not be found.
Available in OS X v10.6 and later.

123.4.7 JobRemove(domain as string, jobLabel as string, auth as AuthorizationMBS, wait as boolean, byref error as CFErrorMBS) as boolean

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Removes the job with the given label from the specified domain.
Notes: domain: The job's domain (e.g. kSMDomainSystemLaunchd).
jobLabel: The label for the job to remove.
auth: An AuthorizationRef containing the kSMRightModifySystemDaemons right if the given domain is kSMDomainSystemLaunchd.
wait: Pass true to block until the process for the given job has exited.
Error: An output reference to a CFErrorMBS describing the specific error encountered while submitting the job dictionary, or nil if no error occurred. It is the responsibility of the application to release the error reference.

Returns true if the job was removed successfully, otherwise false.

JobSubmit removes the job specified by label from the domain. If the job is currently running, it will conditionally block until the running process has exited.
Available in OS X v10.6 and later.

123.4.8 JobSubmit(domain as string, job as Dictionary, auth as AuthorizationMBS, byref error as CFErrorMBS) as boolean

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Submits the given job to the specified domain.
Notes: domain: The job's domain (e.g. kSMDomainSystemLaunchd).

job: A dictionary describing a job.
auth: An AuthorizationRef containing the kSMRightModifySystemDaemons right if the given domain is kSMDomainSystemLaunchd.
Error: An output reference to a CFErrorMBS describing the specific error encountered while submitting the job dictionary, or NULL if no error occurred. It is the responsibility of the application to release the error reference.

Returns true if the job was submitted successfully, otherwise false.

JobSubmit submits the given job to the specified domain.
Available in OS X v10.6 and later.

123.4.9 kSMDomainSystemLaunchd as string

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: System-level launchd domain.

123.4.10 kSMDomainUserLaunchd as string

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: User-level launchd domain.

123.4.11 kSMInfoKeyAuthorizedClients as string

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Authorized clients property list key.

123.4.12 kSMInfoKeyPrivilegedExecutables as string

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Privileged executables property list key.

123.4.13 LoginItemRunning(identifier as string) as boolean

MBS MacCF Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Checks whether a login item is running.
Notes: Actually checks if there is a record for your helper, so if it crashed, this returns still true.

123.4.14 LoginItemSetEnabled(identifier as string, enabled as boolean) as boolean

MBS MacCF Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Enable a helper application located in the main application bundle's Contents/Library/LoginItems directory.
Notes: identifier: The bundle identifier of the helper application bundle.
enabled: The Boolean enabled state of the helper application. This value is effective only for the currently logged in user. If true, the helper application will be started immediately (and upon subsequent logins) and kept running. If false, the helper application will no longer be kept running.

Returns true if the requested change has taken effect.

123.4.15 RegisterHelperApp(name as string, Update as boolean = false) as boolean

MBS MacCF Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Registers a helper application in the Launch Services database.
Notes: The app must exist with given name inside the bundle in Library/LoginItems folder.

Update: A Boolean value specifying whether Launch Services should update existing information registered for the application, if any. If this parameter is false, the application will not be registered if it has already been registered previously and its current modification date has not changed from when it was last registered; if the parameter is true, the application's registered information will be updated even if its modification date has not changed.

Returns true on success and false on failure.

123.5 class SMAppServiceMBS

123.5.1 class SMAppServiceMBS

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: An object the framework uses to control helper executables that live inside an app,Äôs main bundle.
Example:

```
// let the application start automatically at login (macOS 13 and newer)
Var service As SMAppServiceMBS = SMAppServiceMBS.mainAppService

Select Case service.Status
Case SMAppServiceMBS.SMAppServiceStatusEnabled
MessageBox "Already starting at login."
Case SMAppServiceMBS.SMAppServiceStatusRequiresApproval
// the user needs to approve in System Settings
SMAppServiceMBS.openSystemSettingsLoginItems
Else
Var error As NSErrorMBS
If Not service.register(error) Then
MessageBox "Failed: " + error.localizedDescription
End If
End Select
```

Notes: In macOS 13 and later, use SMAppService to register and control LoginItems, LaunchAgents, and LaunchDaemons as helper executables for your app. When converting code from earlier versions of macOS, use an SMAppService object and select one of the following methods depending on the type of service your helper executable provides:

- For SMAppServices initialized as LoginItems, the register and unregister APIs provide a replacement for SMLoginItemSetEnabled.
- For SMAppServices initialized as LaunchAgents, the register and unregister methods provide a replacement for installing property lists in
textasciitilde /Library/LaunchAgents or /Library/LaunchAgents.
- For SMAppServices initialized as LaunchDaemons, the register and unregister methods provide a replacement for installing property lists in /Library/LaunchDaemons.

Requires macOS 13.0.

- News from the MBS Xojo Plugins in Version 23.0

123.5.2 Methods

123.5.3 agentService(plistName as String) as SMAppServiceMBS

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Initializes an app service object with a launch agent with the property list name you provide.
Notes: plistName: The name of the property list corresponding to the SMAppService.

The property list name must correspond to a property list in the calling app,Äôs Contents/Library/LaunchAgents directory.

123.5.4 Constructor

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The constructor.
Notes: An app service object that corresponds to the main application as a login item.
Use this SMAppServiceMBS to configure the main app to launch at login.

123.5.5 daemonService(plistName as String) as SMAppServiceMBS

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Initializes an app service object with a launch daemon with the property list name you provide.
Notes: plistName: The name of the property list corresponding to the SMAppService.

Returns an SMService object

The property list name must correspond to a property list in the calling app,Äôs Contents/Library/LaunchDaemons directory

123.5.6 loginItemService(identifier as String) as SMAppServiceMBS

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Initializes an app service object for a login item corresponding to the bundle with the identifier you provide.
Notes: identifier: The bundle identifier of the helper application.

Returns an SMService object.

The property list name must correspond to a property list in the calling app,Äôs Contents/Library/LoginItems directory.

123.5.7 mainAppService as SMAppServiceMBS

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: An app service object that corresponds to the main application as a login item.
Notes: Use this SMAppServiceMBS to configure the main app to launch at login.

123.5.8 openSystemSettingsLoginItems

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Opens System Settings to the Login Items control panel.

123.5.9 register(byref error as NSErrorMBS) as Boolean

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Registers the service so it can begin launching subject to user approval.
Notes: The registration process applies to the following rules, depending upon the type of service:

- If the service corresponds to a LoginItem bundle, the helper starts immediately and on subsequent logins. If the helper crashes or exits with a non-zero status, the system relaunches it.
- If the service corresponds to the main application, the application launches on subsequent logins.
- If the service corresponds to a LaunchAgent, the LaunchAgent is immediately bootstrapped and may begin running. In addition LaunchAgents registered with this method bootstrap on each subsequent login.
- If an app needs to register a LaunchAgent for multiple users, you must call the API once per user while that user is running the app.
- If the service corresponds to a LaunchDaemon, the system won,Äôt bootstrap the LaunchDaemon until an admin approves the LaunchDaemon in System Preferences. The system bootstraps LaunchDaemons registered with this method and approved by an admin on each subsequent boot.

If the service is already registered, this method returns kSMErrorAlreadyRegistered.
If the service isn,Äôt approved by the user, this method returns kSMErrorLaunchDeniedByUser.

123.5.10 statusForLegacyFile(File as FolderItem) as Integer

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Check the authorization status of an earlier OS version login item.
Notes: File: The folderitem of the helper executable,Äôs property list.

Returns one of the SMAppServiceStatus constants that indicate the current authorization status.

123.5.11 statusForLegacyURL(URL as String) as Integer

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Check the authorization status of an earlier OS version login item.
Notes: url: The URL of the helper executable,Äôs property list.

Returns one of the SMAppServiceStatus constants that indicate the current authorization status.

123.5.12 unregister(byref error as NSErrorMBS) as Boolean

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Unregisters the service so the system no longer launches it.
Notes: error: Upon an unsuccessful return, a new NSError object describing the error. Upon successful return, this argument is nil. This argument may be NULL.

Returns true if the service was successfully unregistered; otherwise, false.

This is the opposite operation of register().
If the service corresponds to a LoginItem, LaunchAgent, or LaunchDaemon and the service is currently running it, the system terminates it. If the service corresponds to the main application, it continues running, but becomes unregistered to prevent future launches at login.
If the service is already unregistered, this method returns kSMErrorJobNotFound.
See also:

- 123.5.13 unregister(CompleteHandler as SMAppServiceUnregisterCompletedMBS, tag as variant = nil) 17669

123.5.13 unregister(CompleteHandler as SMAppServiceUnregisterCompletedMBS, tag as variant = nil)

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Unregisters the service so the system no longer launches it and calls a completion handler you provide with the resulting error value.
Notes: CompleteHandler: A completion handler to call with the result of the unregistration operation. Upon an unsuccessful return, the handler contains a new NSErrorMBS object describing the error. Upon successful return, this argument is nil.
See also:

- 123.5.12 unregister(byref error as NSErrorMBS) as Boolean 17668

123.5.14 Properties

123.5.15 Handle as Integer

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

123.5.16 Status as Integer

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: A property that describes registration or authorization state of the service.
Notes: (Read only property)

123.5.17 Constants

Service Status

Constant	Value	Description
SMAppServiceStatusEnabled	1	The service has been successfully registered and is eligible to run.
SMAppServiceStatusNotFound	3	An error occurred and the framework couldn,Äôt find this service.
SMAppServiceStatusNotRegistered	0	The service hasn,Äôt registered with the Service Management framewo the service attempted to reregister after it was already registered.
SMAppServiceStatusRequiresApproval	2	The service has been successfully registered, but the user needs to take in System Preferences. The Service Management framework successfully registered this servic the user needs to take action in System Settings before the service is e to run. The framework also returns this status if the user revokes conse the service to run in System Settings.

123.5.18 Delegates

123.5.19 SMAppServiceUnregisterCompletedMBS(Error as NSErrorMBS, Tag as Variant)

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The delegate used with unregister method.
Notes: A handler to call with the result of the unregistration operation. Upon an unsuccessful return, the handler contains a new NSErrorMBS object describing the error. Upon successful return, this argument is nil.

Chapter 124

Mac

124.1 Globals

124.1.1 CurrentAppearanceThemeMBS as string

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns which theme is used on your computer.
Example:

MessageBox "You are using this theme: "+CurrentAppearanceThemeMBS

Notes: Possible values:
com.apple.theme.appearance.platinum
com.apple.theme.appearance.aqua
com.apple.theme.appearance.aqua.blue
com.apple.theme.appearance.aqua.graphite
Returns "" on any error.
Available in CarbonLib 1.4 and later. Available in Mac OS X 10.1 and later.

On Windows or Linux an empty string is returned.

124.1.2 SetDesktopPictureMBS(file as folderitem) as Integer

MBS Picture Plugin, Plugin Version: 3.3, Platforms: macOS, Windows, Targets: All.

Function: Asks the Finder/Explorer to change the desktop picture.
Example:

```
// set a picture as desktop background
Var result As Integer = SetDesktopPictureMBS(SpecialFolder.Pictures.Child("beach.jpg"))
If result <>0 Then MessageBox "Error " + result.ToString
```

Notes: File must be a valid folderitem for an existing file to define a new desktop picture.
Returns a Mac OS or Windows error code or -1 if the function is not available.

You can use file=nil to remove the desktop wallpaper on Windows.

- MBS Plugins updated for Xojo 2019r2

124.2 class SummaryMBS

124.2.1 class SummaryMBS

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A class using SearchKit on Mac OS X 10.4 and newer to summarize texts.
Example:

```
Var s as new SummaryMBS("Hello World. This is just a test.")

MessageBox s.SentenceSummaryString(1)
```

Blog Entries

- MBS Plugins 10.3 Release Notes
- MBS REALbasic Plugins, version 10.3pr4

124.2.2 Methods

124.2.3 Constructor(text as string)

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Creates a summary object based on a text string.
Example:

```
Var s as new SummaryMBS("Hello World. This is just a test.")

MessageBox s.SentenceSummaryString(1)
```

Notes: text: The text string that you want to summarize.
On success the handle property is not zero.

The constructor creates a summarization object that pre-analyzes a text string to support fast summarization.
Available in Mac OS X v10.4 and later.

124.2.4 ParagraphAtIndex(index as Integer) as string

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Gets a specified paragraph from the text in a summarization object.
Example:

```
Var s as new SummaryMBS("Hello World. This is just a test.")
MessageBox s.ParagraphAtIndex(0)
```

Notes: index: The ordinal number of the paragraph in the original text, with the first paragraph designated by zero (this function uses zero-based indexing).

Return a string containing the specified paragraph, or "" on failure.

Available in Mac OS X v10.4 and later.

124.2.5 ParagraphIndexOfParagraphs as Integer()

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Returns the array containing the ordinal number for each paragraph in the original text.

124.2.6 ParagraphIndexOfSentences as Integer()

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Returns an array of indexes to map a sentence index to it's paragraph index.

124.2.7 ParagraphSummaryString(numParagraphs as Integer) as string

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Gets a text string consisting of a summary with, at most, the requested number of paragraphs.
Notes: numParagraphs: The maximum number of paragraphs you want in the summary.
Returns a string containing the requested summary.
Available in Mac OS X v10.4 and later.

124.2.8 RankOrderOfParagraphs as Integer()

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Returns an array with the summarization relevance rank of each paragraph in the original text.

124.2.9 RankOrderOfSentences as Integer()

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Returns an array with the summarization relevance rank of each sentence in the original text.

124.2.10 SentenceAtIndex(index as Integer) as string

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Gets a specified sentence from the text in a summarization object.
Example:

```
Var s as new SummaryMBS("Hello World. This is just a test.")
MessageBox s.SentenceAtIndex(0)
```

Notes: index: The ordinal number of the sentence in the original text, with the first sentence designated by zero (this function uses zero-based indexing).
Returns a string containing the specified sentence, or NULL on failure.
Available in Mac OS X v10.4 and later.

124.2.11 SentenceIndexOfSentences as Integer()

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Returns an array of the ordinal number for each sentence in the original text.

124.2.12 SentenceSummaryString(numSentences as Integer) as string

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Gets a text string consisting of a summary with, at most, the requested number of sentences.
Example:

```
Var s as new SummaryMBS("Hello World. This is just a test.")

MessageBox s.SentenceSummaryString(1)
```

Notes: numSentences: The maximum number of sentences you want in the summary.
Returns a string containing the requested summary.
Available in Mac OS X v10.4 and later.

124.2.13 Properties

124.2.14 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: The internal reference to the SKSummary object.
Example:

```
Var s as new SummaryMBS("Hello World. This is just a test.")
MessageBox str(s.handle)
```

Notes: (Read and Write property)

124.2.15 ParagraphCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Gets the number of paragraphs in a summarization object.
Example:

```
Var s as new SummaryMBS("Hello World. This is just a test.")
MessageBox str(s.ParagraphCount)
```

Notes: (Read only property)

124.2.16 SentenceCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Gets the number of sentences in a summarization object.
Example:

```
Var s as new SummaryMBS("Hello World. This is just a test.")
MessageBox str(s.SentenceCount)
```

Notes: (Read only property)

124.3 class TextInputSourceMBS

124.3.1 class TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The class for text input source on Mac OS X.
Example:

```
// show the current keyboard layout and list all selectable ones
Var current As TextInputSourceMBS = TextInputSourceMBS.CurrentKeyboardLayoutInputSource
Var lines() As String

For Each source As TextInputSourceMBS In TextInputSourceMBS.CreateASCIICapableInputSourceList
If source.IsSelectCapable Then lines.Add source.LocalizedName
Next

MessageBox "Current: " + current.LocalizedName + EndOfLine + EndOfLine + String.FromArray(lines,
EndOfLine)
```

Notes: Text input sources fall into three general categories:

- Keyboard input sources, including keyboard layouts, keyboard input methods and input modes
- Palette input sources, including the character palette, keyboard viewer, and private dictionary panels
- Ink input sources

Palette input sources and ink input source are categorized as non-keyboard input sources. However, palette input sources might still involve some keyboard interaction. Keyboard input methods can be mode-enabled (for instance, Kotoeri). Hence, they are potentially the parent of several input modes directly selectable in the user interface (for instance, hiragana, katakana, and romaji). With mode-enabled input methods, the parent input method is not directly selectable. Non-mode-enabled input methods are directly selectable.

Some input sources are provided and installed with OS X. Other input sources can be installed as third party products themselves or as part of the installation of certain applications. International Preferences displays a list of all visible installed input sources. You can use International Preferences to enable or disable most input sources that are intended to be visible in the user interface. Setup Assistant also enables some input sources. A separate user interface provides a way to enable ink input sources.

You can use some of the functions in Text Input Source Services to enable or disable input sources programmatically in your application. One keyboard input source must be enabled. Only one ink input source may be enabled. Multiple instances of other input source types may be enabled.

Some enabled input sources are invisible but programmatically selectable, such as ink. Some are visible but not programmatically selectable, such as mode-savvy parent input methods (these must be visible so that International Preferences can display the parent input method for a group of input modes).

Input modes can only be changed from disabled to enabled if their parent input method is enabled. Input modes can only be selected if they and their parent input method are enabled.

Exactly one keyboard input source is selected at any time: the current keyboard input source. Selecting a new keyboard input source deselects the previous keyboard input source. Multiple palette input sources may be selected. For instance, there may be one or more character palettes and one or more keyboard viewers selected in addition to the selected keyboard input source. Selecting or deselecting a palette (or ink) input source does not affect any other input source. Input methods that provide associated input palettes may programmatically deselect the palette when the input method is deselected, for example.

Text Input Source Source Services specifies modern, non-Script-Manager-based programming interfaces for operating on text input sources and performs the following functions:

- Finds information about text input sources
- Selects, enables, and disables text input sources
- Receives notifications about relevant changes in text input sources.

Available in OS X v10.5 and later.

Blog Entries

- MBS Real Studio Plugins, version 12.5pr8

124.3.2 Methods

124.3.3 BundleID as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The reverse DNS BundleID associated with the input source.
Example:

MessageBox TextInputSourceMBS.CurrentKeyboardInputSource.BundleID

124.3.4 Category as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The category of this input source.
Example:

```
MessageBox TextInputSourceMBS.CurrentKeyboardInputSource.Category
```

Notes: Can be kTISCategoryKeyboardInputSource, kTISCategoryPaletteInputSource, and kTISCategoryInkInputSource.

124.3.5 CreateASCIICapableInputSourceList as TextInputSourceMBS()

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Creates a list of ASCII-capable keyboard input sources.
Notes: This list represents a snapshot of ASCII-capable keyboard input sources enabled when the call was made. Successive calls to CreateASCIICapableInputSourceList may return different results because, for example, in between the calls the user may enable or disable an input source in the International Preferences pane. When a keyboard input source is enabled or disabled, by the user or programmatically, the distributed CF notification kTISNotifyEnabledKeyboardInputSourcesChanged is posted.

124.3.6 CreateInputSourceList(properties as dictionary, includeAllInstalled as boolean) as TextInputSourceMBS()

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Creates a list of input sources that match specified properties.
Example:

```
// show keyboard viewer
Var d As New Dictionary
d.Value(TextInputSourceMBS.kTISPropertyInputSourceID) = "com.apple.KeyboardViewer"

Var sources() As TextInputSourceMBS = TextInputSourceMBS.CreateInputSourceList(d, False)
If Sources.LastIndex >= 0 Then
sources(0).SelectIt
End If
```

Notes: properties: A dictionary of property keys and corresponding values to filter the input source list. May be nil, in which case no filtering is performed.
includeAllInstalled: Typically, set to false so that only enabled input sources are included; set to true to include all installed input sources that match the filter .

Returns an array for a list of text input source references that match the specified properties.

This list represents a snapshot of input sources that matched the properties specified when you made the call. If you want to include input sources that are installed but not currently enabled, set the includeAllInstalled parameter to true. Typically, you do this to obtain a text input source reference for a newly installed input source. In this case, the properties parameter would include very specific criteria limiting the matching input sources.

Important: Calling this function with the includeAllInstalled parameter set to true can have significant memory impact on the calling application if the properties parameter is nil (match all) or if it specifies criteria that might match many installed input sources. This setting might force caching of data for all matching input sources and result in an allocation of up to 120K.
If you are calling CreateInputSourceList to find a specific input source or sources from among the sources included in the list, first call CreateInputSourceList with includeAllInstalled set to false and check whether the returned array includes the desired input source(s). If this is not the case, call CreateInputSourceList again with the includeAllInstalled parameter set to true.

124.3.7 CurrentASCIICapableKeyboardInputSource as TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Returns a text input source reference for the most recently used ASCII-capable keyboard input source.
Example:

```
Var t as TextInputSourceMBS
t = TextInputSourceMBS.CurrentASCIICapableKeyboardInputSource

MessageBox t.LocalizedName
```

Notes: Returns text input source reference for the most recently used ASCII-capable keyboard input source.

If no ASCII-capable keyboard input source has been used yet, the function returns the default ASCII-capable keyboard layout chosen by Setup Assistant.

124.3.8 CurrentASCIICapableKeyboardLayoutInputSource as TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Returns a text input source reference for the most recently used ASCII-capable keyboard layout.
Example:

```
Var t as TextInputSourceMBS
t = TextInputSourceMBS.CurrentASCIICapableKeyboardLayoutInputSource

MessageBox t.LocalizedName
```

Notes: Returns A text input source reference for the most recently used ASCII-capable keyboard layout.

If no ASCII-capable keyboard input source has been used, the function returns the default ASCII-capable keyboard layout chosen by Setup Assistant.

This function is used by input methods to get the keyboard layout used for key translation if no specific keyboard layout override exists. The CurrentASCIICapableKeyboardInputSource can return input sources that are not keyboard layouts.

124.3.9 CurrentKeyboardInputSource as TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Returns a text input source reference for the currently selected keyboard input source.
Example:

```
Var t as TextInputSourceMBS
t = TextInputSourceMBS.CurrentKeyboardInputSource
MessageBox t.LocalizedName
```

124.3.10 CurrentKeyboardLayoutInputSource as TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Returns a text input source reference for the keyboard layout currently in use.
Example:

```
Var t as TextInputSourceMBS
t = TextInputSourceMBS.CurrentKeyboardLayoutInputSource
MessageBox t.LocalizedName
```

Notes: If the currently selected keyboard input source is a keyboard layout, the text input source reference refers to that layout. If the currently selected keyboard input source is an input method or mode, the text input source reference refers to the keyboard layout used by that input method or mode.

124.3.11 Deselect

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Deselects the specified input source.
Notes: inputSource: The input source you want to deselect.

Lasterror is set.

Deselect is for use with palette or ink input sources only. It has no effect on other input sources. When palette input sources are disabled, the palette disappears. Ink input sources are usually deselected and disabled at the same time.

124.3.12 Disable

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Disables the specified input source.
Notes: Sets lasterror. Lasterror is paramErr (-50) if the input source cannot be disabled. Otherwise, lasterror is noErr (0).

Disable is primarily intended for input methods, or for applications that supply their own input sources (for example, applications that provide keyboard layouts or palette input methods, and keyboard input methods that provide their own keyboard layouts and input modes). It makes the specified input source unavailable for selection and removes it from the user interface.

124.3.13 Enable

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Enables the specified input source.
Notes: Lasterror is set. Lasterror is paramErr (-50) if the input source cannot be enabled. Otherwise, it is noErr (0).

Enable is primarily for input methods or for applications that supply their own input sources (for example, applications that provide keyboard layouts or palette input methods, and keyboard input methods that provide their own keyboard layouts and input modes). It makes the specified input source available in the user interface for selection.

For Enable to succeed, the input source must be capable of being enabled (that is, kTISPropertyInputSourceIsEnableCapable is set to true). Furthermore, if the input source is an input mode, its parent must already be enabled for the mode to become enabled.

124.3.14 Icon as Variant

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Queries IconMBS object for this input source.
Notes: Value is a IconMBS. We use variant to reduce dependency to other plugins.

Icon references are the typical icon format for keyboard layouts and input methods. If an icon reference is not available for the specified input source, the value is nil.

124.3.15 IconImageFile as folderitem

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The file containing the image (typically TIFF) to be used as the input source icon.
Notes: If an image file URL is not available for the specified input source, the value is nil. Note that other image formats (for example, JPEG, PNG) may also be used in the future.

124.3.16 IconImageURL as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The URL to the file containing the image (typically TIFF) to be used as the input source icon.
Notes: If an image file URL is not available for the specified input source, the value is nil. Note that other image formats (for example, JPEG, PNG) may also be used in the future.

124.3.17 InputMethodKeyboardLayoutOverride as TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Returns a text input source reference for the currently selected input method's keyboard layout override.
Example:

```
Var t as TextInputSourceMBS
t = TextInputSourceMBS.InputMethodKeyboardLayoutOverride
if t = nil then
MessageBox "Nil"
else
MessageBox t.LocalizedName
```

```
end if
```

Notes: If the current keyboard input source is an input method or mode that has a keyboard layout override, a text input source reference for that keyboard layout is returned. Otherwise, the function returns nil.

124.3.18 InputModeID as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: A reverse DNS string that identifies a particular usage class for input modes.
Example:

```
MessageBox TextInputSourceMBS.CurrentKeyboardInputSource.InputModeID
```

Notes: For example, com.apple.inputmethod.Japanese.Katakana identifies a standard Katakana-input usage class that may be associated with input modes from several different input methods.
You can attach this input mode to a TSMDocument using the TSMSetDocumentProperty function with the tag kTSMDocumentInputModePropertyTag, to control the input mode usage class that should be used with that TSM document.

124.3.19 InputSourceForLanguage(language as string) as TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Returns a text input source reference for the input source that should be used to input the specified language.
Notes: language: A BCP 47 language code (in the same form returned by the Core Foundation function CFLocaleCreateCanonicalLanguageIdentifierFromString function) that represents the language an input source should be returned for.

Returns an enabled input source that can input the specified language. If more than one such input source exists and at least one has been used, the most recently used input source is chosen. If none has been used, one is chosen based on the intended languages of the input sources. If no enabled input source exists that can input the specified language, the function returns nil.

If a text field is expected to have input in a particular language, an application can call InputSourceForLanguage and then SelectIt to select an input source appropriate for that language. This function is a replacement for the deprecated KeyScript programming interface's capability to select the default input source associated with a particular script code.

124.3.20 IsASCIICapable as boolean

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Whether the input source is intended to be capable of ASCII input.

124.3.21 IsEnableCapable as boolean

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Whether the input source can ever be programmatically enabled using Enable.
Notes: You can enable most input sources programmatically at any time. IsEnableCapable is set to true for these input sources.
Some input sources can never be programmatically enabled. These are mainly input method private keyboard layouts used by the input method via the function SetInputMethodKeyboardLayoutOverride. You cannot directly enable these layouts, nor use them as keyboard layout input sources. IsEnableCapable is set to false for these.
Some input sources can be programmatically enabled only under the correct conditions. These are mainly input modes, which can be changed from disabled to enabled only if their parent input method is enabled. However, they can already be in the enabled state, but not currently selectable if their parent input method is disabled. IsEnableCapable is true for these.

124.3.22 IsEnabled as boolean

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Whether the input source is currently enabled.
Example:

```
MessageBox str(TextInputSourceMBS.CurrentKeyboardInputSource.IsEnabled)
```

124.3.23 IsSelectCapable as boolean

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Whether the input source can ever be programmatically selected using Select.
Notes: This static property of an input source does not depend on any current state. For input sources that can be programmatically selected if they are enabled, IsSelectCapable is set to true.
For input sources that can never be programmatically selected even if they are enabled, IsSelectCapable is set to false. Such sources are mainly input methods that have modes (parent input methods); only their modes can be selected.
For input sources that are enabled and can only be programmatically selected under the correct conditions, IsSelectCapable is set to true. Such input sources are mainly input modes, which can only be selected if both they and their parent input method are enabled.

For input sources that can never be enabled or selected, IsSelectCapable is set to false.

124.3.24 IsSelected as boolean

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Whether the input source is currently selected.
Example:

MessageBox str(TextInputSourceMBS.CurrentKeyboardInputSource.IsSelected)

124.3.25 kTISCategoryInkInputSource as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the category identifiers.
Notes: You can install or select 0 or 1 ink input source.

124.3.26 kTISCategoryKeyboardInputSource as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the category identifiers.
Notes: This category includes keyboard layouts, keyboard input methods (both with modes and without), and keyboard input modes. At least one input source in this category is installed. Of all input sources in this category, exactly one is selected; selecting a new one deselects the previous one.

124.3.27 kTISCategoryPaletteInputSource as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the category identifiers.
Notes: This category includes character palettes and keyboard viewers. You can select 0 or more categories.

124.3.28 kTISNotifyEnabledKeyboardInputSourcesChanged as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The name of the CF distributed notification for a change to the set of enabled keyboard input sources.

Notes: Available in OS X v10.5 and later.

124.3.29 kTISNotifySelectedKeyboardInputSourceChanged as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The name of the CF distributed notification for a change to the selected keyboard input source.
Notes: Available in OS X v10.5 and later.

124.3.30 kTISPropertyBundleID as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a string for the reverse DNS BundleID associated with the input source.

124.3.31 kTISPropertyIconImageURL as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a CFURLRef indicating the file containing the image (typically TIFF) to be used as the input source icon.
If an image file URL is not available for the specified input source, the value is nil. Note that other image formats (for example, JPEG, PNG) may also be used in the future.
Note: You may not use this key (and its corresponding value) used in the filter dictionary passed to the CreateInputSourceList function.

124.3.32 kTISPropertyIconRef as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is an IconRef value for the input source icon. Icon references are the typical icon format for keyboard layouts and input methods. If an icon reference is not available for the specified input source, the value is nil.
Note: You may not use this key (and its corresponding value) used in the filter dictionary passed to the CreateInputSourceList function.

124.3.33 kTISPropertyInputModeID as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a CFStringRef for a reverse DNS string that identifies a particular usage class for input modes.
For example, com.apple.inputmethod.Japanese.Katakana identifies a standard Katakana-input usage class that may be associated with input modes from several different input methods.
You can attach this input mode to a TSMDocument using the TSMSetDocumentProperty function with the tag kTSMDocumentInputModePropertyTag, to control the input mode usage class that should be used with that TSM document.

124.3.34 kTISPropertyInputSourceCategory as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a string indicating the category of an input source.
Possible values are specified by the following property value constants: kTISCategoryKeyboardInputSource, kTISCategoryPaletteInputSource, and kTISCategoryInkInputSource.

124.3.35 kTISPropertyInputSourceID as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Example:

```
// show keyboard viewer
Var d As New Dictionary
d.Value(TextInputSourceMBS.kTISPropertyInputSourceID) = "com.apple.KeyboardViewer"

Var sources() As TextInputSourceMBS = TextInputSourceMBS.CreateInputSourceList(d, False)
If Sources.LastIndex >= 0 Then
sources(0).SelectIt
End If
```

Notes: This property key designates a property value, which is a CFStringRef for the unique reverse DNS name associated with the input source.

- For keyboard input methods and for palette or ink input sources, typically, the bundle ID, for instance, com.apple.Kotoeri.

- For keyboard input modes, typically, the bundle ID of the parent input method plus a suffix that uniquely identifies the input mode, for instance, com.apple.Kotoeri.Katakana. It is not the generic input mode name used across input methods, for instance, com.apple.inputmethod.Japanese.Katakana.

- For keyboard layouts, a new identification mechanism typically structured as com.company.keyboardlayout.name,for instance, com.apple.keyboardlayout.US.

124.3.36 kTISPropertyInputSourceIsASCIICapable as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a boolean indicating whether the input source is intended to be capable of ASCII input.

124.3.37 kTISPropertyInputSourceIsEnableCapable as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value which is a boolean indicating whether the input source can ever be programmatically enabled using TISEnableInputSource.
You can enable most input sources programmatically at any time. kTISPropertyInputSourceIsEnableCapable is set to true for these input sources.
Some input sources can never be programmatically enabled. These are mainly input method private keyboard layouts used by the input method via the functionTISSetInputMethodKeyboardLayoutOverride. You cannot directly enable these layouts, nor use them as keyboard layout input sources. kTISPropertyInputSourceIsEnableCapable is set to false for these.
Some input sources can be programmatically enabled only under the correct conditions. These are mainly input modes, which can be changed from disabled to enabled only if their parent input method is enabled. However, they can already be in the enabled state, but not currently selectable if their parent input method is disabled. kTISPropertyInputSourceIsEnableCapable is true for these.

124.3.38 kTISPropertyInputSourceIsEnabled as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a boolean indicating whether the input source is currently enabled.

124.3.39 kTISPropertyInputSourceIsSelectCapable as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a boolean indicating whether the input source can ever be programmatically selected using TISSelectInputSource.
This static property of an input source does not depend on any current state. For input sources that can be programmatically selected if they are enabled, kTISPropertyInputSourceIsSelectCapable is set to true.
For input sources that can never be programmatically selected even if they are enabled, kTISPropertyInputSourceIsSelectCapable is set to false. Such sources are mainly input methods that have modes (parent input methods); only their modes can be selected.
For input sources that are enabled and can only be programmatically selected under the correct conditions, kTISPropertyInputSourceIsSelectCapable is set to true. Such input sources are mainly input modes, which can only be selected if both they and their parent input method are enabled.
For input sources that can never be enabled or selected, kTISPropertyInputSourceIsSelectCapable is set to false.

124.3.40 kTISPropertyInputSourceIsSelected as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a Boolean indicating whether the input source is currently selected.

124.3.41 kTISPropertyInputSourceLanguages as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a CFArrayRef for an array of CFStringRefs, where each string is the language code for a language that can be input using the input source. You can use this constant with the PropertyValue function, but you may not use it in the filter dictionary passed to the CreateInputSourceList function.
Languages codes are in the same BCP 47 form returned by the CFLocaleCreateCanonicalLanguageIdentifierFromString function. The first language code in the array is the language the input source is intended for. If no such language exists (for example, for the Unicode Hex Input keyboard layout), the first language code is an empty string.

124.3.42 kTISPropertyInputSourceType as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a string indicating the specific type of an input source.
Possible values are specified by the following property value constants: kTISTypeKeyboardLayout, kTISTypeKeyboardInputMethodWithoutModes, kTISTypeKeyboardInputMethodModeEnabled, kTISTypeKeyboardInputMode, kTISTypeCharacterPalette, kTISTypeKeyboardViewer, and kTISTypeInk.

124.3.43 kTISPropertyLocalizedName as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Example:

```
Var t as TextInputSourceMBS
t = TextInputSourceMBS.CurrentKeyboardInputSource
MessageBox t.PropertyValue(t.kTISPropertyLocalizedName)
```

Notes: This property key designates a property value, which is a string for the input source's localized name as intended for user interface use.
Uses the best match (determined by CFBundle) between the localization used by the caller and the available localizations of the input source name. In some cases, this might be an unlocalized name.

124.3.44 kTISPropertyUnicodeKeyLayoutData as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a Memoryblock that refers to the 'uchr' keyboard layout data for a keyboard layout input source.
The 'uchr' data is in native-endian order. If the input source is not a keyboard layout, or is a keyboard layout for which only 'KCHR data' is available, the value is nil.
Note: You may not use this key (and its corresponding value) used in the filter dictionary passed to the CreateInputSourceList function.

124.3.45 kTISTypeCharacterPalette as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the possible type values.
Notes: This type belongs to the category kTISCategoryPaletteInputSource.

124.3.46 kTISTypeInk as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the possible type values.
Notes: This type belongs to the category kTISCategoryInkInputSource. Even though it is the only type in that category, a type is provided so that clients who don't need category information can just check input source type.

124.3.47 kTISTypeKeyboardInputMethodModeEnabled as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the possible type values.
Notes: This type belongs to the category kTISCategoryKeyboardInputSource.

124.3.48 kTISTypeKeyboardInputMethodWithoutModes as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the possible type values.
Notes: This type belongs to the category kTISCategoryKeyboardInputSource.

124.3.49 kTISTypeKeyboardInputMode as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the possible type values.
Notes: This type belongs to the category kTISCategoryKeyboardInputSource.

124.3.50 kTISTypeKeyboardLayout as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the possible type values.
Notes: This type belongs to the category kTISCategoryKeyboardInputSource.

124.3.51 kTISTypeKeyboardViewer as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the possible type values.
Notes: This type belongs to the category kTISCategoryPaletteInputSource.

124.3.52 LocalizedName as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The input source's localized name as intended for user interface use.
Example:

```
MessageBox TextInputSourceMBS.CurrentKeyboardInputSource.LocalizedName
```

Notes: Uses the best match (determined by CFBundle) between the localization used by the caller and the available localizations of the input source name. In some cases, this might be an unlocalized name.

124.3.53 PropertyValue(key as string) as Variant

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Gets the value of a specified property for a specified input source.
Example:

```
Var t as TextInputSourceMBS
t = TextInputSourceMBS.CurrentKeyboardInputSource
MessageBox t.PropertyValue(t.kTISPropertyLocalizedName)
```

Notes: Key: The property key constant specifying the desired property value.

Returns a variant associated with the property key. The value type is specified for each key. Can be a string a boolean, a number, an array or an IconMBS. The function might return nil if the specified property is missing or invalid for the specified input source.

124.3.54 RegisterInputSource(file as folderitem) as Integer

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Registers any new input sources in a file or bundle so a text input source reference can be obtained immediately for each new input source.
Notes: location: The location of the input sources in a file or bundle.

Returns a result code. The function returns paramErr (-50) if location is invalid or the input sources in the

specified location cannot be registered. Otherwise, it returns noErr (0).

This function enables an installer for an input method bundle or a keyboard layout file or bundle to notify the system to register these new input sources. The system can then locate the specified file or bundle and perform any necessary cache rebuilds so that the installer can immediately call TISCreateInputSourceList with appropriate properties (for example, a bundle ID or input source ID) to get text input source references for one or more of the newly registered input sources.

You can only use this function to register the following:

Keyboard layout files or bundles in the /Library/Keyboard Layouts/ or
textasciitilde /Library/Keyboard Layouts/ directory (available to all users or to the current user, respectively). Such keyboard layouts, once enabled, are selectable.
Input method bundles in the new Library/Input Methods/ or
textasciitilde /Library/Input Methods/ directories (available to all users or to the current user, respectively).
Note: Input method bundles can include private non-selectable keyboard layouts for use with SetInputMethodKeyboardLayoutOverride. These are registered automatically when the input method is registered, and do not need to be separately registered. They are not registered using TISRegisterInputSource.
Security: Any code that calls RegisterInputSource is part of an application or service that has already been validated in some way (for instance, by the user).
See also:

- 124.3.55 RegisterInputSource(URL as string) as Integer 17694

124.3.55 RegisterInputSource(URL as string) as Integer

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Registers any new input sources in a file or bundle so a text input source reference can be obtained immediately for each new input source.
Notes: location: The location of the input sources in a file or bundle.

Returns a result code. The function returns paramErr (-50) if location is invalid or the input sources in the specified location cannot be registered. Otherwise, it returns noErr (0).

This function enables an installer for an input method bundle or a keyboard layout file or bundle to notify the system to register these new input sources. The system can then locate the specified file or bundle and perform any necessary cache rebuilds so that the installer can immediately call TISCreateInputSourceList with appropriate properties (for example, a bundle ID or input source ID) to get text input source references for one or more of the newly registered input sources.

You can only use this function to register the following:

Keyboard layout files or bundles in the /Library/Keyboard Layouts/ or
textasciitilde /Library/Keyboard Layouts/ directory (available to all users or to the current user, respectively). Such keyboard layouts, once enabled, are selectable.
Input method bundles in the new Library/Input Methods/ or
textasciitilde /Library/Input Methods/ directories (available to all users or to the current user, respectively).
Note: Input method bundles can include private non-selectable keyboard layouts for use with SetInputMethodKeyboardLayoutOverride. These are registered automatically when the input method is registered, and do not need to be separately registered. They are not registered using TISRegisterInputSource.
Security: Any code that calls RegisterInputSource is part of an application or service that has already been validated in some way (for instance, by the user).
See also:

- 124.3.54 RegisterInputSource(file as folderitem) as Integer 17693

124.3.56 SelectIt

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Selects the specified input source.
Example:

```
// show keyboard viewer
Var d As New Dictionary
d.Value(TextInputSourceMBS.kTISPropertyInputSourceID) = "com.apple.KeyboardViewer"

Var sources() As TextInputSourceMBS = TextInputSourceMBS.CreateInputSourceList(d, False)
If Sources.LastIndex >= 0 Then
sources(0).SelectIt
End If
```

Notes: Lasterror is set. Lasterror is paramErr (-50) if the input source is not selectable. Otherwise, it is noErr (0).

When the input source is a selectable keyboard, the specified input source becomes the new current keyboard input source, and the previous input source is deselected. When the input source is a palette, that palette is displayed and made available for input. Ink input sources are typically enabled and selected at the same time. When you call SelectInputSource for a palette or ink input source, there is no effect on other input sources. When you call SelectInputSource for an already selected input source, there is, similarly, no effect.

For SelectInputSource to succeed, the input source must be selectable (that is, kTISPropertyInputSourceIsSelectCapable is set to true) and the input source must be enabled (that is, kTISPropertyInputSourceIsEnabled is set to true). Furthermore, if the input source is an input mode, its parent must be enabled for it to be selected.

We named the function SelectIt as Select is a reserved word in Xojo.

124.3.57 SetInputMethodKeyboardLayoutOverride

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Sets the keyboard layout override for an input method or mode.
Notes: self: The input source for the keyboard layout that should be used until the current input method is deactivated (if it should be something other than the most recently used ASCII-capable keyboard layout).

Lasterror is set. Value is paramErr (-50) if the current keyboard input source is not an input method or mode or if keyboardLayout does not designate a keyboard layout. Otherwise, it is noErr (0).

When an input method or mode is the selected input source, the most recently used ASCII-capable keyboard layout to translate key events is used. This keyboard layout is also the one that appears in Keyboard Viewer. An input source for this keyboard layout is returned by the function CurrentASCIICapableKeyboardLayoutInputSource. If a different keyboard layout should be used for a particular input method or mode, the activated input method or mode should call SetInputMethodKeyboardLayoutOverride to specify the desired keyboard layout.

For example, when a Kotoeri user selects kana layout for kana input, Kotoeri should call SetInputMethodKeyboardLayoutOverride to set the kana keyboard as the override for the appropriate input modes.

The keyboard layout set in this way is used for the final stage of key translation in the Window Server, the connection, or application-specific key translation.

The override setting is lost when the input method that set it is deactivated.

The keyboard layout used for overriding need not be enabled or explicitly selectable. It can be a non-selectable layout included in an input method bundle and automatically registered.

The default behavior is new with OS X v10.5, and eliminates the necessity that input methods have a user interface for setting the ASCII- capable keyboard for phonetic input based on Latin characters.

124.3.58 SourceID as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The unique reverse DNS name associated with the input source.
Notes:

- For keyboard input methods and for palette or ink input sources, typically, the bundle ID, for instance, com.apple.Kotoeri.
- For keyboard input modes, typically, the bundle ID of the parent input method plus a suffix that uniquely identifies the input mode, for instance, com.apple.Kotoeri.Katakana. It is not the generic input mode name used across input methods, for instance, com.apple.inputmethod.Japanese.Katakana.
- For keyboard layouts, a new identification mechanism typically structured as com.company.keyboardlayout.name,for instance, com.apple.keyboardlayout.US.

124.3.59 SourceLanguages as string()

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The array of string, where each string is the language code for a language that can be input using the input source.
Notes: Languages codes are in the same BCP 47 form returned by the CFLocaleCreateCanonicalLanguageIdentifierFromString function. The first language code in the array is the language the input source is intended for. If no such language exists (for example, for the Unicode Hex Input keyboard layout), the first language code is an empty string.

124.3.60 Type as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Returns the type of an input source.
Example:

MessageBox TextInputSourceMBS.CurrentKeyboardInputSource.Type

Notes: Value can be kTISTypeKeyboardLayout, kTISTypeKeyboardInputMethodWithoutModes, kTISTypeKeyboardInputMethodModeEnabled, kTISTypeKeyboardInputMode, kTISTypeCharacterPalette, kTISTypeKeyboardViewer, and kTISTypeInk.

124.3.61 Properties

124.3.62 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

124.3.63 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

124.4 module ValidationMBS

124.4.1 module ValidationMBS

MBS Encryption Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: This module has helper functions for App Store Validation.
Example:

```
// check the App Store receipt when the app starts, e.g. in App.Opening
Var receipt As FolderItem = ValidationMBS.locateAppStoreReceipt
If receipt = Nil Or Not receipt.Exists Or Not ValidationMBS.Validate(receipt) Then
ValidationMBS.ExitApp // quits with code 173, so macOS fetches a new receipt
End If

Var info As Dictionary = ValidationMBS.AppStoreReceipt(receipt)
System.DebugLog "Bundle version: " + info.Lookup("BundleVersion", "").StringValue
```

Notes: Please use AppReceiptMBS and AppReceiptVerificatorMBS classes instead.
Blog Entries

- MBS Xojo Plugins, version 25.3pr1
- MBS Xojo Plugins, version 19.6pr1

124.4.2 Methods

124.4.3 AppStoreReceipt(file as folderitem) as dictionary

MBS Encryption Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Reads the app store receipt.
Example:

```
// read a receipt file
Var file as FolderItem = SpecialFolder.Desktop.Child("receipt")

// query values
Var dic as Dictionary = ValidationMBS.AppStoreReceipt(file)

// show identifier
MessageBox dic.Value(ValidationMBS.kReceiptBundleIdentifer)
```

Notes: You can use this to get details from your receipt.
Returns nil on any error.
Please pass folderitem to receipt file.

124.4.4 ExitApp(code as Integer = 173)

MBS Encryption Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Quits the application directly.
Example:

ValidationMBS.ExitApp 173

Notes: This does not call the destructors and CancelClose events. The app is quit right away.
If you use code 173 the Finder will show error message that app needs to be downloaded again from Mac App Store.

124.4.5 GUID as string

MBS Encryption Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Reads the GUID of the Mac.
Example:

Var g as String = ValidationMBS.GUID
MessageBox EncodeHex(g)

Notes: This is normally build from the MAC ID of the ethernet card.

124.4.6 locateAppStoreReceipt as folderitem

MBS Encryption Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Locates the App Store Receipt in the application bundle.
Example:

Var f as FolderItem = ValidationMBS.locateAppStoreReceipt
MessageBox f.NativePath

Notes: Please check result if folderitem is not nil and exists before processing.

124.4.7 Validate(file as folderitem) as boolean

MBS Encryption Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Validates the receipt.
Example:

```
Var file as FolderItem = ValidationMBS.locateAppStoreReceipt

if ValidationMBS.Validate(file) = false then
ValidationMBS.ExitApp 173
else
// ok
end if
```

Notes: Returns true if valid and false if not.

124.4.8 Constants

Dictionary Keys

Constant	Value	Description
kReceiptBundleIdentifer	"BundleIdentifier"	The bundle identifier.
kReceiptBundleIdentiferData	"BundleIdentifierData"	The bundle identifier data.
kReceiptHash	"Hash"	The hash for the receipt.
kReceiptOpaqueValue	"OpaqueValue"	The opaque value used for hashing.
kReceiptVersion	"Version"	The version string.

Chapter 125

MapKit

125.1 control DesktopMapKitViewControlMBS

125.1.1 control DesktopMapKitViewControlMBS

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The control for showing a map in Xojo.
Notes: This control is designed for Xojo (it may or may not work in REAL Studio if the Cocoa target is chosen)

As Xojo provides some events for us automatically like for context menu or mouse wheel, it does not mean that those events do work. The webview used in the map view seems to consume them before the plugin gets them.

- 18.6, page 69: MapKit Part 7, Implementing Maps in Xojo desktop apps with the MapKitMBS plugin by Markus Winter

125.1.2 Properties

125.1.3 View as MKMapViewMBS

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The map view used for this control.
Notes: The plugin creates it automatically when the constructor runs.
(Read only property)

125.1.4 Events

125.1.5 annotationViewDidChangeDragState(mapView as MKMapViewMBS, annotationView as MKAnnotationViewMBS, newState as Integer, oldState as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the drag state of one of its annotation views changed.
Notes: mapView: The map view containing the annotation view.
annotationView: The annotation view whose drag state changed.
newState: The new drag state of the annotation view.
oldState: The previous drag state of the annotation view.

The drag state typically changes in response to user interactions with the annotation view. However, the annotation view itself is responsible for changing that state as well.

125.1.6 beginGestureWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has begun a touch gesture.
Notes: e: An event object representing the gesture beginning.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

125.1.7 BoundsChanged

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The event called when the bounds, but not the frame, changed.

125.1.8 Closing

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

125.1.9 ClusterAnnotationForMemberAnnotations(mapView as MKMapViewMBS, memberAnnotations() as MKAnnotationMBS) as MKClusterAnnotationMBS

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Asks you to provide a cluster annotation object for the specified annotations.
Notes: mapView: The map view containing the specified annotations.
memberAnnotations: The annotations to be clustered together. The returned MKClusterAnnotation object must include the specific annotations in this parameter.

Return the cluster annotation object.

Use this method to customize the cluster annotations displayed on your map. Normally, MapKit creates cluster annotation objects automatically when one or more annotations with the same cluster identifier are too close together. However, you can implement this method and return a custom cluster annotation object for the specified set of annotations.

125.1.10 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 22.1, Platform: macOS, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

125.1.11 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Called when a menuitem is chosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

125.1.12 didAddAnnotationViews(mapView as MKMapViewMBS, AnnotationViews() as MKAnnotationViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that one or more annotation views were added to the map.
Notes: mapView: The map view that added the annotation views.
views: An array of MKAnnotationView objects representing the views that were added.

By the time this method is called, the specified views are already added to the map.

125.1.13 DidAddOverlayRenderers(mapView as MKMapViewMBS, renderers() as MKOverlayRendererMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells you that one or more renderer objects were added to the map.
Notes: mapView: The map view that added the renderer objects.
renderers: The renderer objects that were added.

The map view adds renderer objects when it needs them to draw their contents, which might be prior to those contents appearing onscreen. It calls this method to let you know that the renderer is active and in use. By the time this method is called, the specified renderers have already been added to the map.

125.1.14 didAddOverlayViews(mapView as MKMapViewMBS, overlayViews() as NSViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The event to inform you about added overlay views.

125.1.15 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Did close contextual menu.
Notes: Allows you to restart any animation you may have stopped in the willShowContextualMenu event.

125.1.16 didDeselectAnnotationView(mapView as MKMapViewMBS, view as MKAnnotationViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that one of its annotation views was deselected.
Notes: mapView: The map view containing the annotation view.
view: The annotation view that was deselected.

You can use this method to track changes in the selection state of annotation views.

125.1.17 didFailLoadingMap(mapView as MKMapViewMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the specified view was unable to load the map data.
Notes: mapView: The map view that started the load operation.
error: The reason that the map data could not be loaded.

This method might be called in situations where the device does not have access to the network or is unable to load the map data for some reason. It may also be called if a request for additional map tiles comes in while a previous request for tiles is still pending. You can use this message to notify the user that the map data is unavailable.

125.1.18 didFailToLocateUserWithError(mapView as MKMapViewMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that an attempt to locate the user's position failed.
Notes: mapView: The map view that is tracking the user's location.
error: An error object containing the reason why location tracking failed.

125.1.19 didFinishLoadingMap(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the specified map view successfully loaded the needed map data.
Notes: mapView: The map view that started the load operation.

This method is called when the map tiles associated with the current request have been loaded. Map tiles are requested when a new visible area is scrolled into view and tiles are not already available. Map tiles may also be requested for portions of the map that are not currently visible. For example, the map view may load tiles immediately surrounding the currently visible area as needed to handle small pans by the user.

125.1.20 DidFinishRenderingMap(mapView as MKMapViewMBS, fullyRendered as boolean)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells you that the map view has finished rendering all visible tiles.
Notes: fullyRendered: This parameter is set to true if the map view was able to render all tiles completely or false if errors prevented all tiles from being rendered.

This method lets you know when the map view finishes rendering all of the currently visible tiles to the best of its ability. This method is called regardless of whether all tiles were rendered successfully. If there were errors loading one or more tiles that prevented map view from rendering them, the fullyRendered parameter is set to false.

125.1.21 didSelectAnnotationView(mapView as MKMapViewMBS, view as MKAnnotationViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that one of its annotation views was selected.
Notes: mapView: The map view containing the annotation view.

view: The annotation view that was selected.

You can use this method to track changes in the selection state of annotation views.

125.1.22 didStopLocatingUser(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the map view stopped tracking the user's location.
Notes: mapView: The map view that stopped tracking the user's location.

This method is called when the value of the showsUserLocation property changes to false.

125.1.23 didUpdateUserLocation(mapView as MKMapViewMBS, userLocation as MKUserLocationMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the location of the user was updated.
Notes: mapView: The map view that is tracking the user's location.
userLocation: The location object representing the user's latest location. This property may be nil.

While the showsUserLocation property is set to true, this method is called whenever a new location update is received by the map view. This method is also called if the map view's user tracking mode is set to MKUserTrackingModeFollowWithHeading and the heading changes.

This method is not called if the application is currently running in the background. If you want to receive location updates while running in the background, you must use the Core Location framework.

125.1.24 endGestureWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has ended a touch gesture.
Notes: e: An event object representing the gesture end.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

125.1.25 FocusLost

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

This only fires if the control itself lost focus and not a sub control.

125.1.26 FocusReceived

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes:

This only fires if the control itself got focus and not a sub control.

125.1.27 FrameChanged

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

125.1.28 magnifyWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has begun a pinch gesture.
Notes: e: An event object representing the magnify gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

125.1.29 MenuBarSelected

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

125.1.30 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

125.1.31 MouseDrag(x as Integer, y as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

125.1.32 MouseUp(x as Integer, y as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

125.1.33 Opening

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

125.1.34 pressureChange(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Informs the current object that a pressure change occurred on a system that supports pressure sensitivity.
Notes: This method is invoked automatically in response to user actions. event is the event that initiated the change in pressure.
Available in OS X v10.10.3 and later.

125.1.35 regionDidChangeAnimated(mapView as MKMapViewMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the region displayed by the map view just changed.
Notes: mapView: The map view whose visible region changed.
animated: If true, the change to the new region was animated.

This method is called whenever the currently displayed map region changes. During scrolling, this method may be called many times to report updates to the map position. Therefore, your implementation of this method should be as lightweight as possible to avoid affecting scrolling performance.

125.1.36 regionWillChangeAnimated(mapView as MKMapViewMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the region displayed by the map view is about to change.
Notes: mapView: The map view whose visible region is about to change.
animated: If true, the change to the new region will be animated. If NO, the change will be made immediately.

This method is called whenever the currently displayed map region changes. During scrolling, this method

may be called many times to report updates to the map position. Therefore, your implementation of this method should be as lightweight as possible to avoid affecting scrolling performance.

125.1.37 rendererForOverlay(mapView as MKMapViewMBS, overlay as MKOverlayMBS) as MKOverlayRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Asks the control for a renderer object to use when drawing the specified overlay.
Notes: mapView: The map view that requested the renderer object.
overlay: The overlay object that is about to be displayed.

Return the renderer to use when presenting the specified overlay on the map.

You must implement this method and use it to provide an appropriate renderer object for your overlays. The renderer object is responsible for drawing the contents of your overlay when asked to do so by the map view. Map Kit supports many different types of standard renderer objects and you may also define your own custom renderers.

If you don't implement this event, the MBS Plugin returns a default renderer.

125.1.38 rotateWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has begun a rotation gesture.
Notes: e: An event object representing the rotate gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

125.1.39 ScaleFactorChanged(NewFactor as Double)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

125.1.40 swipeWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has begun a swipe gesture.
Notes: e: An event object representing the swipe gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

125.1.41 viewForAnnotation(mapView as MKMapViewMBS, annotation as MKAnnotationMBS) as MKAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The event to query an annotation view for the given annotation.

125.1.42 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

125.1.43 willStartLoadingMap(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the specified map view is about to retrieve some map data.
Notes: mapView: The map view that began loading the data.

This method is called whenever a new group of map tiles need to be downloaded from the server. This typically occurs whenever you expose portions of the map by panning or zooming the content. You can use this method to mark the time that it takes for the map view to load the data.

125.1.44 willStartLocatingUser(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the map view will start tracking the user's position.
Notes: mapView: The map view that is tracking the user's location.

This method is called when the value of the showsUserLocation property changes to true.

125.1.45 WillStartRenderingMap(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells you that the map view is about to start rendering some of its tiles.
Notes: The map view calls this method when one or more tiles are revealed and require rendering.

125.2 control MapKitIOSControlMBS

125.2.1 control MapKitIOSControlMBS

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The control for showing a map in Xojo.
Notes: This control is designed for Xojo 2020r2 or newer.

- 19.2, page 9: News

125.2.2 Properties

125.2.3 View as MKMapViewMBS

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The map view used for this control.
Notes: The plugin creates it automatically when the constructor runs.
(Read only property)

125.2.4 Events

125.2.5 annotationViewDidChangeDragState(mapView as MKMapViewMBS, annotationView as MKAnnotationViewMBS, newState as integer, oldState as integer)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that the drag state of one of its annotation views changed.
Notes: mapView: The map view containing the annotation view.
annotationView: The annotation view whose drag state changed.
newState: The new drag state of the annotation view.
oldState: The previous drag state of the annotation view.

The drag state typically changes in response to user interactions with the annotation view. However, the annotation view itself is responsible for changing that state as well.

125.2.6 Close

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: The control is about to close.

125.2.7 ClusterAnnotationForMemberAnnotations(mapView as MKMapViewMBS, memberAnnotations() as MKAnnotationMBS) as MKClusterAnnotationMBS

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Asks you to provide a cluster annotation object for the specified annotations.
Notes: mapView: The map view containing the specified annotations.
memberAnnotations: The annotations to be clustered together. The returned MKClusterAnnotation object must include the specific annotations in this parameter.

Return the cluster annotation object.

Use this method to customize the cluster annotations displayed on your map. Normally, MapKit creates cluster annotation objects automatically when one or more annotations with the same cluster identifier are too close together. However, you can implement this method and return a custom cluster annotation object for the specified set of annotations.

125.2.8 didAddAnnotationViews(mapView as MKMapViewMBS, AnnotationViews() as MKAnnotationViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that one or more annotation views were added to the map.
Notes: mapView: The map view that added the annotation views.
views: An array of MKAnnotationView objects representing the views that were added.

By the time this method is called, the specified views are already added to the map.

125.2.9 DidAddOverlayRenderers(mapView as MKMapViewMBS, renderers() as MKOverlayRendererMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells you that one or more renderer objects were added to the map.
Notes: mapView: The map view that added the renderer objects.
renderers: The renderer objects that were added.

The map view adds renderer objects when it needs them to draw their contents, which might be prior to those contents appearing onscreen. It calls this method to let you know that the renderer is active and in use. By the time this method is called, the specified renderers have already been added to the map.

125.2.10 didAddOverlayViews(mapView as MKMapViewMBS, overlayViews() as NSViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: The event to inform you about added overlay views.

125.2.11 didDeselectAnnotationView(mapView as MKMapViewMBS, view as MKAnnotationViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that one of its annotation views was deselected.
Notes: mapView: The map view containing the annotation view.
view: The annotation view that was deselected.

You can use this method to track changes in the selection state of annotation views.

125.2.12 didFailLoadingMap(mapView as MKMapViewMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that the specified view was unable to load the map data.
Notes: mapView: The map view that started the load operation.
error: The reason that the map data could not be loaded.

This method might be called in situations where the device does not have access to the network or is unable to load the map data for some reason. It may also be called if a request for additional map tiles comes in while a previous request for tiles is still pending. You can use this message to notify the user that the map data is unavailable.

125.2.13 didFailToLocateUserWithError(mapView as MKMapViewMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that an attempt to locate the user's position failed.
Notes: mapView: The map view that is tracking the user's location.
error: An error object containing the reason why location tracking failed.

125.2.14 didFinishLoadingMap(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that the specified map view successfully loaded the needed map data.
Notes: mapView: The map view that started the load operation.

This method is called when the map tiles associated with the current request have been loaded. Map tiles are requested when a new visible area is scrolled into view and tiles are not already available. Map tiles may also be requested for portions of the map that are not currently visible. For example, the map view may load tiles immediately surrounding the currently visible area as needed to handle small pans by the user.

125.2.15 DidFinishRenderingMap(mapView as MKMapViewMBS, fullyRendered as boolean)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells you that the map view has finished rendering all visible tiles.
Notes: fullyRendered: This parameter is set to true if the map view was able to render all tiles completely or false if errors prevented all tiles from being rendered.

This method lets you know when the map view finishes rendering all of the currently visible tiles to the best of its ability. This method is called regardless of whether all tiles were rendered successfully. If there were errors loading one or more tiles that prevented map view from rendering them, the fullyRendered parameter is set to false.

125.2.16 didSelectAnnotationView(mapView as MKMapViewMBS, view as MKAnnotationViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that one of its annotation views was selected.
Notes: mapView: The map view containing the annotation view.
view: The annotation view that was selected.

You can use this method to track changes in the selection state of annotation views.

125.2.17 didStopLocatingUser(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that the map view stopped tracking the user's location.
Notes: mapView: The map view that stopped tracking the user's location.

This method is called when the value of the showsUserLocation property changes to false.

125.2.18 didUpdateUserLocation(mapView as MKMapViewMBS, userLocation as MKUserLocationMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that the location of the user was updated.
Notes: mapView: The map view that is tracking the user's location.

userLocation: The location object representing the user's latest location. This property may be nil.

While the showsUserLocation property is set to true, this method is called whenever a new location update is received by the map view. This method is also called if the map view's user tracking mode is set to MKUserTrackingModeFollowWithHeading and the heading changes.

This method is not called if the application is currently running in the background. If you want to receive location updates while running in the background, you must use the Core Location framework.

125.2.19 GotFocus

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

125.2.20 LostFocus

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

125.2.21 Open

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: The control is about to was created and you can initialize it.

125.2.22 regionDidChangeAnimated(mapView as MKMapViewMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that the region displayed by the map view just changed.
Notes: mapView: The map view whose visible region changed.
animated: If true, the change to the new region was animated.

This method is called whenever the currently displayed map region changes. During scrolling, this method

may be called many times to report updates to the map position. Therefore, your implementation of this method should be as lightweight as possible to avoid affecting scrolling performance.

125.2.23 regionWillChangeAnimated(mapView as MKMapViewMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that the region displayed by the map view is about to change.
Notes: mapView: The map view whose visible region is about to change.
animated: If true, the change to the new region will be animated. If NO, the change will be made immediately.

This method is called whenever the currently displayed map region changes. During scrolling, this method may be called many times to report updates to the map position. Therefore, your implementation of this method should be as lightweight as possible to avoid affecting scrolling performance.

125.2.24 rendererForOverlay(mapView as MKMapViewMBS, overlay as MKOverlayMBS) as MKOverlayRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Asks the control for a renderer object to use when drawing the specified overlay.
Notes: mapView: The map view that requested the renderer object.
overlay: The overlay object that is about to be displayed.

Return the renderer to use when presenting the specified overlay on the map.

You must implement this method and use it to provide an appropriate renderer object for your overlays. The renderer object is responsible for drawing the contents of your overlay when asked to do so by the map view. Map Kit supports many different types of standard renderer objects and you may also define your own custom renderers.

If you don't implement this event, the MBS Plugin returns a default renderer.

125.2.25 touchesBegan(e as NSEventMBS, touches() as NSTouchMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 23.5, Platform: iOS, Targets: Desktop & iOS.

Function: Tells this object that one or more new touches occurred in a view or window.
Notes: e: The event to which the touches belong.

UIKit calls this method when a new touch is detected in a view or window. Many UIKit classes override this method and use it to handle the corresponding touch events. The default implementation of this method forwards the message up the responder chain.

Return true if you handled it as otherwise we pass it on.

125.2.26 touchesCancelled(e as NSEventMBS, touches() as NSTouchMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 23.5, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the responder when a system event (such as a system alert) cancels a touch sequence.
Notes: e: The event to which the touches belong.

UIKit calls this method when it receives a system interruption requiring cancellation of the touch sequence. An interruption is anything that causes the application to become inactive or causes the view handling the touch events to be removed from its window. Your implementation of this method should clean up any state associated with handling the touch sequence.

Return true if you handled it as otherwise we pass it on.

125.2.27 touchesEnded(e as NSEventMBS, touches() as NSTouchMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 23.5, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the responder when one or more fingers are raised from a view or window.
Notes: e: The event to which the touches belong.

UIKit calls this method when a finger or Apple Pencil is no longer touching the screen. Many UIKit classes override this method and use it to clean up state involved in the handling of the corresponding touch events. The default implementation of this method forwards the message up the responder chain.

Return true if you handled it as otherwise we pass it on.

125.2.28 touchesMoved(e as NSEventMBS, touches() as NSTouchMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 23.5, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the responder when one or more touches associated with an event changed.
Notes: e: The event to which the touches belong.

UIKit calls this method when the location or force of a touch changes. Many UIKit classes override this method and use it to handle the corresponding touch events. The default implementation of this method forwards the message up the responder chain.

Return true if you handled it as otherwise we pass it on.

125.2.29 viewForAnnotation(mapView as MKMapViewMBS, annotation as MKAnnotationMBS) as MKAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: The event to query an annotation view for the given annotation.

125.2.30 willStartLoadingMap(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that the specified map view is about to retrieve some map data.
Notes: mapView: The map view that began loading the data.

This method is called whenever a new group of map tiles need to be downloaded from the server. This typically occurs whenever you expose portions of the map by panning or zooming the content. You can use this method to mark the time that it takes for the map view to load the data.

125.2.31 willStartLocatingUser(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that the map view will start tracking the user's position.
Notes: mapView: The map view that is tracking the user's location.

This method is called when the value of the showsUserLocation property changes to true.

125.2.32 WillStartRenderingMap(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells you that the map view is about to start rendering some of its tiles.
Notes: The map view calls this method when one or more tiles are revealed and require rendering.

125.3 control MapKitViewControlMBS

125.3.1 control MapKitViewControlMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: The control for showing a map in Xojo.
Notes: This control is designed for Xojo (it may or may not work in REAL Studio if the Cocoa target is chosen)

As Xojo provides some events for us automatically like for context menu or mouse wheel, it does not mean that those events do work. The webview used in the map view seems to consume them before the plugin gets them.

125.3.2 Properties

125.3.3 View as MKMapViewMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: The map view used for this control.
Notes: The plugin creates it automatically when the constructor runs.
(Read only property)

125.3.4 Events

125.3.5 annotationViewDidChangeDragState(mapView as MKMapViewMBS, annotationView as MKAnnotationViewMBS, newState as Integer, oldState as Integer)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the drag state of one of its annotation views changed.
Notes: mapView: The map view containing the annotation view.
annotationView: The annotation view whose drag state changed.
newState: The new drag state of the annotation view.
oldState: The previous drag state of the annotation view.

The drag state typically changes in response to user interactions with the annotation view. However, the annotation view itself is responsible for changing that state as well.

125.3.6 beginGestureWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has begun a touch gesture.
Notes: e: An event object representing the gesture beginning.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

125.3.7 BoundsChanged

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the bounds, but not the frame, changed.

125.3.8 Close

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function:

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

125.3.9 Closing

Plugin Version: 14.1, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

125.3.10 ClusterAnnotationForMemberAnnotations(mapView as MKMapViewMBS, memberAnnotations() as MKAnnotationMBS) as MKClusterAnnotationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: Asks you to provide a cluster annotation object for the specified annotations.
Notes: mapView: The map view containing the specified annotations.
memberAnnotations: The annotations to be clustered together. The returned MKClusterAnnotation object must include the specific annotations in this parameter.

Return the cluster annotation object.

Use this method to customize the cluster annotations displayed on your map. Normally, MapKit creates cluster annotation objects automatically when one or more annotations with the same cluster identifier are too close together. However, you can implement this method and return a custom cluster annotation object for the specified set of annotations.

125.3.11 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: This event is called when it is appropriate to display a contextual menu for the control.

125.3.12 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: Called when a menuitem is chosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

125.3.13 didAddAnnotationViews(mapView as MKMapViewMBS, AnnotationViews() as MKAnnotationViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that one or more annotation views were added to the map.
Notes: mapView: The map view that added the annotation views.
views: An array of MKAnnotationView objects representing the views that were added.

By the time this method is called, the specified views are already added to the map.

125.3.14 DidAddOverlayRenderers(mapView as MKMapViewMBS, renderers() as MKOverlayRendererMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: Tells you that one or more renderer objects were added to the map.
Notes: mapView: The map view that added the renderer objects.
renderers: The renderer objects that were added.

The map view adds renderer objects when it needs them to draw their contents, which might be prior to those contents appearing onscreen. It calls this method to let you know that the renderer is active and in use. By the time this method is called, the specified renderers have already been added to the map.

125.3.15 didAddOverlayViews(mapView as MKMapViewMBS, overlayViews() as NSViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The event to inform you about added overlay views.

125.3.16 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Did close contextual menu.
Notes: Allows you to restart any animation you may have stopped in the willShowContextualMenu event.

125.3.17 didDeselectAnnotationView(mapView as MKMapViewMBS, view as MKAnnotationViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that one of its annotation views was deselected.
Notes: mapView: The map view containing the annotation view.
view: The annotation view that was deselected.

You can use this method to track changes in the selection state of annotation views.

125.3.18 didFailLoadingMap(mapView as MKMapViewMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the specified view was unable to load the map data.
Notes: mapView: The map view that started the load operation.
error: The reason that the map data could not be loaded.

This method might be called in situations where the device does not have access to the network or is unable to load the map data for some reason. It may also be called if a request for additional map tiles comes in while a previous request for tiles is still pending. You can use this message to notify the user that the map data is unavailable.

125.3.19 didFailToLocateUserWithError(mapView as MKMapViewMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that an attempt to locate the user's position failed.
Notes: mapView: The map view that is tracking the user's location.
error: An error object containing the reason why location tracking failed.

125.3.20 didFinishLoadingMap(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the specified map view successfully loaded the needed map data.
Notes: mapView: The map view that started the load operation.

This method is called when the map tiles associated with the current request have been loaded. Map tiles are requested when a new visible area is scrolled into view and tiles are not already available. Map tiles may also be requested for portions of the map that are not currently visible. For example, the map view may load tiles immediately surrounding the currently visible area as needed to handle small pans by the user.

125.3.21 DidFinishRenderingMap(mapView as MKMapViewMBS, fullyRendered as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: Tells you that the map view has finished rendering all visible tiles.
Notes: fullyRendered: This parameter is set to true if the map view was able to render all tiles completely or false if errors prevented all tiles from being rendered.

This method lets you know when the map view finishes rendering all of the currently visible tiles to the best of its ability. This method is called regardless of whether all tiles were rendered successfully. If there were errors loading one or more tiles that prevented map view from rendering them, the fullyRendered parameter is set to false.

125.3.22 didSelectAnnotationView(mapView as MKMapViewMBS, view as MKAnnotationViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that one of its annotation views was selected.
Notes: mapView: The map view containing the annotation view.

view: The annotation view that was selected.

You can use this method to track changes in the selection state of annotation views.

125.3.23 didStopLocatingUser(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the map view stopped tracking the user's location.
Notes: mapView: The map view that stopped tracking the user's location.

This method is called when the value of the showsUserLocation property changes to false.

125.3.24 didUpdateUserLocation(mapView as MKMapViewMBS, userLocation as MKUserLocationMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the location of the user was updated.
Notes: mapView: The map view that is tracking the user's location.
userLocation: The location object representing the user's latest location. This property may be nil.

While the showsUserLocation property is set to true, this method is called whenever a new location update is received by the map view. This method is also called if the map view's user tracking mode is set to MKUserTrackingModeFollowWithHeading and the heading changes.

This method is not called if the application is currently running in the background. If you want to receive location updates while running in the background, you must use the Core Location framework.

125.3.25 EnableMenuItems

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function:

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

125.3.26 endGestureWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has ended a touch gesture.
Notes: e: An event object representing the gesture end.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

125.3.27 FocusLost

Plugin Version: 16.5, Platform: macOS, Targets: .

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

This only fires if the control itself lost focus and not a sub control.

125.3.28 FocusReceived

Plugin Version: 16.5, Platform: macOS, Targets: .

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes:

This only fires if the control itself got focus and not a sub control.

125.3.29 FrameChanged

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

125.3.30 GotFocus

MBS MacFrameworks Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function:

The control itself got focus.
In Xojo version 2021r3 and newer this event is named FocusReceived.
Notes:

This only fires if the control itself got focus and not a sub control.

125.3.31 LostFocus

MBS MacFrameworks Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function:

The control lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.
Notes:

This only fires if the control itself lost focus and not a sub control.

125.3.32 magnifyWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has begun a pinch gesture.
Notes: e: An event object representing the magnify gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

125.3.33 MenuBarSelected

Plugin Version: 17.1, Platform: macOS, Targets: .

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

125.3.34 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

125.3.35 MouseDrag(x as Integer, y as Integer)

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

125.3.36 MouseUp(x as Integer, y as Integer)

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

125.3.37 Open

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function:

The control is about to was created and you can initialize it.
In Xojo version 2021r3 and newer this event is named Opening.

125.3.38 Opening

Plugin Version: 14.1, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

125.3.39 pressureChange(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Informs the current object that a pressure change occurred on a system that supports pressure sensitivity.
Notes: This method is invoked automatically in response to user actions. event is the event that initiated the change in pressure.
Available in OS X v10.10.3 and later.

125.3.40 regionDidChangeAnimated(mapView as MKMapViewMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the region displayed by the map view just changed.
Notes: mapView: The map view whose visible region changed.
animated: If true, the change to the new region was animated.

This method is called whenever the currently displayed map region changes. During scrolling, this method may be called many times to report updates to the map position. Therefore, your implementation of this method should be as lightweight as possible to avoid affecting scrolling performance.

125.3.41 regionWillChangeAnimated(mapView as MKMapViewMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the region displayed by the map view is about to change.
Notes: mapView: The map view whose visible region is about to change.
animated: If true, the change to the new region will be animated. If NO, the change will be made immediately.

This method is called whenever the currently displayed map region changes. During scrolling, this method may be called many times to report updates to the map position. Therefore, your implementation of this method should be as lightweight as possible to avoid affecting scrolling performance.

125.3.42 rendererForOverlay(mapView as MKMapViewMBS, overlay as MKOverlayMBS) as MKOverlayRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: Asks the control for a renderer object to use when drawing the specified overlay.
Notes: mapView: The map view that requested the renderer object.
overlay: The overlay object that is about to be displayed.

Return the renderer to use when presenting the specified overlay on the map.

You must implement this method and use it to provide an appropriate renderer object for your overlays. The renderer object is responsible for drawing the contents of your overlay when asked to do so by the map view. Map Kit supports many different types of standard renderer objects and you may also define your own custom renderers.

If you don't implement this event, the MBS Plugin returns a default renderer.

125.3.43 rotateWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has begun a rotation gesture.
Notes: e: An event object representing the rotate gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

125.3.44 ScaleFactorChanged(NewFactor as Double)

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

125.3.45 swipeWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has begun a swipe gesture.
Notes: e: An event object representing the swipe gesture.

The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

125.3.46 viewForAnnotation(mapView as MKMapViewMBS, annotation as MKAnnotationMBS) as MKAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The event to query an annotation view for the given annotation.

125.3.47 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

125.3.48 willStartLoadingMap(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the specified map view is about to retrieve some map data.
Notes: mapView: The map view that began loading the data.

This method is called whenever a new group of map tiles need to be downloaded from the server. This typically occurs whenever you expose portions of the map by panning or zooming the content. You can use this method to mark the time that it takes for the map view to load the data.

125.3.49 willStartLocatingUser(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the map view will start tracking the user's position.
Notes: mapView: The map view that is tracking the user's location.

This method is called when the value of the showsUserLocation property changes to true.

125.3.50 WillStartRenderingMap(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: Tells you that the map view is about to start rendering some of its tiles.
Notes: The map view calls this method when one or more tiles are revealed and require rendering.

125.4 class MKAnnotationViewMBS

125.4.1 class MKAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The visual representation of one of your annotation objects.
Example:

```
// show annotations with your own picture and a callout bubble
// MyMapView is a subclass of DesktopMapKitViewControlMBS with the viewForAnnotation event implemented, placed on the window as MyMapView1.
Var pin As New MKCustomAnnotationMBS
pin.SetCoordinate New CLLocationCoordinate2DMBS(50.3569, 7.5890)
pin.title = "Office"
MyMapView1.View.addAnnotation pin

// in MyMapView:
Function viewForAnnotation(mapView As MKMapViewMBS, annotation As MKAnnotationMBS) As MKAnnotationViewMBS Handles viewForAnnotation
Var v As New MKAnnotationViewMBS(annotation, "custom")
v.image = NSImageMBS.imageWithSystemSymbolName("building.2.fill", "Office")
v.canShowCallout = True // show the title when clicked
Return v
End Function
```

Notes: See
https://developer.apple.com/documentation/mapkit/mkannotationview
Subclass of the NSViewMBS class.

125.4.2 Methods

125.4.3 Constructor(annotation as MKAnnotationMBS, reuseIdentifier as string = """, EnableEvents as Boolean = false)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a new annotation view.
Notes: annotation: The annotation object to associate with the new view.
reuseIdentifier: If you plan to reuse the annotation view for similar types of annotations, pass a string to identify it. Although you can pass nil if you do not intend to reuse the view, reusing annotation views is generally recommended.

Returns the initialized annotation view or nil if there was a problem initializing the object.

The reuse identifier provides a way for you to improve performance by recycling annotation views as they are scrolled on and off of the map. As views are no longer needed, they are moved to a reuse queue by the map view. When a new annotation becomes visible, your application can request a view for that annotation by passing the appropriate reuse identifier string to the dequeueReusableAnnotationViewWithIdentifier: method of MKMapView.

Added EnableEvents parameter to enable new prepareForDisplay and prepareForReuse events. But please keep reference in some global array to those objects to keep the events working.

- 125.4.4 Constructor(Handle as Integer) 17741

125.4.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKAnnotationView reference from a declare.
The object is retained.
See also:

- 125.4.3 Constructor(annotation as MKAnnotationMBS, reuseIdentifier as string = """, EnableEvents as Boolean = false) 17741

125.4.5 Destructor

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

125.4.6 MKAnnotationCalloutInfoDidChangeNotification as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The notification name for the case callout info changed.

125.4.7 setDragState(State as Integer, animated as Boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the current drag state for the annotation view.
Notes: newDragState: The new drag state for the annotation view.
animated: If true, the change to the new drag state should be animated; otherwise, it should be made without animations.

Applications targeting iOS 4.2 and later can override this method and use it to implement drag support for custom annotation views. As the system detects user actions that would indicate a drag, it calls this method to update the drag state. In response to these changes, your custom implementation of this method should do the following:
When the drag state changes to MKAnnotationViewDragStateStarting, set the state to MKAnnotationViewDragStateDragging. If you perform an animation to indicate the beginning of a drag, and the animated parameter is true, perform that animation before changing the state.

When the state changes to either MKAnnotationViewDragStateCanceling or MKAnnotationViewDragStateEnding, set the state to MKAnnotationViewDragStateNone. If you perform an animation at the end of a drag, and the animated parameter is true, you should perform that animation before changing the state.

The default implementation of this method sets the value of the dragState property to the value in the newDragState parameter only. Therefore, direct subclasses can simply call the inherited version of this method to change the drag state; otherwise, just change the value in the draggable property directly.

Changing the state to MKAnnotationViewDragStateDragging or MKAnnotationViewDragStateNone is the way to signal to the map view that you are done with any animations you wanted to perform. For example,

when a drag operation begins for a pin annotation, the MKPinAnnotationView class executes an animation to lift the pin off the map. Similarly, when the pin is dropped, the class performs a drop animation. Even if you do not perform any animations, you should call the inherited version of this method to update the dragState property.

You must not try to abort a new drag operation by changing the state from MKAnnotationViewDragStateStarting to MKAnnotationViewDragStateNone. If you do not want your annotation view to be draggable, set the draggable property to NO.

125.4.8 setSelected(selected as boolean, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the selection state of the annotation view.
Notes: selected: Contains the value true if the view should display itself as selected.
animated: Set to true if the change in selection state is animated.

You should not call this method directly. An MKMapView object calls this method in response to user interactions with the annotation.

125.4.9 Properties

125.4.10 annotation as MKAnnotationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The annotation object currently associated with the view.
Notes: You should not change the value of this property directly. This property contains a non-nil value only while the annotation view is visible on the map. If the view is queued and waiting to be reused, the value is nil
(Read and Write property)

125.4.11 CalloutOffset as NSPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The offset (in points) at which to place the callout bubble.
Notes: This property determines the additional distance by which to move the callout bubble. When this property is set to (0, 0), the anchor point of the callout bubble is placed on the top-center point of the annotation view,Äôs frame. Specifying positive offset values moves the callout bubble down and to the right, while specifying negative values moves it up and to the left.

The calloutOffset property is not used in macOS apps. Instead, macOS apps use leftCalloutOffset and rightCalloutOffset.
(Read and Write property)

125.4.12 canShowCallout as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the annotation view is able to display extra information in a callout bubble.
Notes: If the value of this property is YES, a standard callout bubble is shown when the user taps a selected annotation view. The callout uses the title and subtitle text from the associated annotation object. If there is no title text, though, the annotation view is treated as if its enabled property is set to NO. The callout also displays any custom callout views stored in the leftCalloutAccessoryView and rightCalloutAccessoryView properties.
If the value of this property is NO, the value of the title and subtitle strings are ignored and the annotation view remains enabled by default. You can still disable the view explicitly using the enabled property.
(Read and Write property)

125.4.13 CenterOffset as NSPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The offset (in points) at which to display the view.
Notes: By default, the center point of an annotation view is placed at the coordinate point of the associated annotation. You can use this property to reposition the annotation view as needed. This x and y offset values are measured in points. Positive offset values move the annotation view down and to the right, while negative values move it up and to the left.
(Read and Write property)

125.4.14 clusterAnnotationView as MKAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The clustering annotation view currently standing in for this annotation view.
Notes: When the annotation view is being displayed on the map, the value of this property is nil.
(Read only property)

125.4.15 clusteringIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: An identifier that determines whether the annotation view participates in clustering.
Notes: The default value of this property is empty, which prevents the annotation view from being clustered with other annotation views. Setting the property to a non empty value it to participate in clustering.
Clustering occurs when there is a collision between multiple annotation views with the same identifier on the map surface. The annotation views involved in the collision are removed from the map view and replaced by a clustering annotation view, which displays the title from one of the annotations and provides access to the other annotations.
(Read and Write property)

125.4.16 collisionMode as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The collision mode to use when interpreting the collision frame rectangle.
Notes: (Read and Write property)

125.4.17 detailCalloutAccessoryView as NSViewMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The detail accessory view to be used in the standard callout.
Notes: (Read and Write property)

125.4.18 displayPriority as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The display priority of this annotation view.
Notes: An annotation view whose priority is set to DisplayPriorityRequired is always visible on the map, whereas other priorities may result in the annotation view being hidden.
The default value of this property is DisplayPriorityRequired.
(Read and Write property)

125.4.19 draggable as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean indicating whether the annotation view is draggable.
Notes: Setting this property to true makes an annotation draggable by the user. If true, the associated annotation object must also implement the setCoordinate: method. The default value of this property is false.

Setting this property to true, lets the map view know that the annotation is always draggable. In other words, you cannot conditionalize drag operations by attempting to stop an operation that has already been initiated; doing so can lead to undefined behavior. Once begun, the drag operation should always continue to completion.
(Read and Write property)

125.4.20 dragState as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The current drag state of the annotation view.
Notes: To support drag operations, you must override the implementation of this property and update the drag state at the following times:
When the drag state changes to MKAnnotationViewDragStateStarting, you should set the state to MKAnnotationViewDragStateDragging. If you perform an animation to indicate the beginning of a drag, you should perform that animation before changing the state. Changing the state to the new value lets the map know that your animations are done.
When the state changes to either MKAnnotationViewDragStateCanceling or MKAnnotationViewDragStateEnding, set the state to MKAnnotationViewDragStateNone. If you perform an animation at the end of a drag, you should perform that animation before changing the state.

Changing the state to the MKAnnotationViewDragStateDragging or MKAnnotationViewDragStateNone value is the way to signal to the map view that you are done with any animations you wanted to perform. For example, when a drag operation begins for a pin annotation, the MKPinAnnotationView class executes an animation to lift the pin off the map. Similarly, when the pin is dropped, the class performs a drop animation. Even if you do not perform any animations, you should still change the value of this property to reflect the correct state.

You must not try to abort a new drag operation by changing the state from MKAnnotationViewDragStateStarting to MKAnnotationViewDragStateNone. If you do not want your annotation view to be draggable, set the draggable property to NO.
(Read and Write property)

125.4.21 enabled as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the annotation is enabled.
Notes: The default value of this property is YES. If the value of this property is NO, the annotation view ignores touch events and cannot be selected. Subclasses may also display the annotation contents differently depending on the value of this property.
(Read and Write property)

125.4.22 highlighted as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the annotation view is highlighted.
Notes: You should not set the value of this property directly. The map view sets it in response to touch events entering or exiting the annotation view,Äôs bounds.
(Read and Write property)

125.4.23 image as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The image to be displayed by the annotation view.
Notes: Looks like MKPinAnnotationViewMBS likes to ignore it, so you may prefer to use MKAnnotationViewMBS directly.
(Read and Write property)

125.4.24 leftCalloutAccessoryView as NSViewMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The view to display on the left side of the standard callout bubble.
Notes: The default value of this property is nil. The left callout view is typically used to display information about the annotation or to link to custom information provided by your application.
In an iOS app, if the view you specify is also a descendant of the UIControl class, you can use the map view,Äôs delegate to receive notifications when your control is tapped. If it does not descend from UIControl, your view is responsible for handling any touch events within its bounds.
In a macOS app, the callout view,Äôs view controller can implement an action method that responds when a user clicks the control in a callout view.
(Read and Write property)

125.4.25 leftCalloutOffset as NSPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The offset in points from the middle-left of the annotation view.
Notes: This property specifies where the anchor of the callout should be shown when it,Äôs oriented off the left side of the annotation view.
(Read and Write property)

125.4.26 reuseIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The string that identifies that this annotation view is reusable.
Notes: You specify the reuse identifier when you create the view. You use this type later to retrieve an annotation view that was created previously but which is currently unused because its annotation is not on screen.
If you define distinctly different types of annotations (with distinctly different annotation views to go with them), you can differentiate between the annotation types by specifying different reuse identifiers for each one.
(Read only property)

125.4.27 rightCalloutAccessoryView as NSViewMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The view to display on the right side of the standard callout bubble.
Notes: This property is set to nil by default. The right callout view is typically used to link to more detailed information about the annotation. In an iOS app, a common view to specify for this property is a button object whose type is set to UIButtonTypeDetailDisclosure.
In an iOS app, if the view you specify is also a descendant of the UIControl class, you can use the map view,Äôs delegate to receive notifications when your control is tapped. If it does not descend from UIControl, your view is responsible for handling any touch events within its bounds.
In a macOS app, the callout view,Äôs view controller can implement an action method that responds when a user clicks the control in a callout view.
(Read and Write property)

125.4.28 rightCalloutOffset as NSPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The offset in points from the middle-right of the annotation view.
Notes: This property specifies where the anchor of the callout should be shown when it,Äôs oriented off the right side of the annotation view.
(Read and Write property)

125.4.29 selected as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the annotation view is currently selected.
Notes: You should not set the value of this property directly. If the property contains true, the annotation

view is displaying a callout bubble.
(Read and Write property)

125.4.30 Events

125.4.31 prepareForDisplay

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: Notifies the annotation view that it is about to be displayed on the map.
Notes: Use this event to prepare the content of your annotation view.

125.4.32 prepareForReuse

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: Called when the view is removed from the reuse queue.
Notes: You can implement this event in your custom annotation views and use it to put the view in a known state before it is returned to your map view delegate.

125.4.33 Constants

Collision Modes

Constant	Value	Description
CollisionModeCircle	1	
CollisionModeRectangle	0	

Display Priorities

Constant	Value	Description
DisplayPriorityDefaultHigh	750	A constant indicating that the item's display priority is high.
DisplayPriorityDefaultLow	250	A constant indicating that the item's display priority is low.
DisplayPriorityRequired	1000	A constant indicating that the item is required.

Drag States

Constant	Value	Description
DragStateCanceling	3	Drag was cancelled.
DragStateDragging	2	Drag is happening.
DragStateEnding	4	Drag is ending.
DragStateNone	0	No dragging.
DragStateStarting	1	Drag is starting.

125.5 class MKCircleMBS

125.5.1 class MKCircleMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The MKCircle class is a concrete overlay object representing a circular area on a map.
Example:

```
// show a circle with 1 km radius around a location on a map
// Map is a property of the window: Map As MKMapViewMBS
Map = New MKMapViewMBS(0, 0, Self.Width, Self.Height)
Self.NSWindowMBS.contentView.addSubview Map

Var circle As New MKCircleMBS(50.3569, 7.5890, 1000) // Koblenz, radius in meters
Map.addOverlay circle

// the overlay needs a renderer, e.g. MKCircleRendererMBS returned in the rendererForOverlay event of a MKMapViewMBS subclass
```

Notes: This class manages the data that defines the area and is typically used in conjunction with an MKCircleView object, which handles the drawing of the circular area on a map.
Subclass of the MKShapeMBS class.

Interfaces: MKOverlayMBS

125.5.2 Methods

125.5.3 boundingMapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The projected rectangle that encompasses the overlay.
Notes: This property contains the smallest rectangle that completely encompasses the overlay. Implementers of this interface must set this area when implementing their overlay class, and after setting it, you must not change it. The rectangle should be specified using projected coordinates—that is, coordinates obtained by projecting the globe onto a two-dimensional surface.

Part of the MKOverlayMBS interface.
See also:

- 125.5.15 boundingMapRect as MKMapRectMBS 17755

125.5.4 canReplaceMapContent as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean indicating whether the overlay content replaces the underlying map content.
Notes: true if the map view can skip the loading and drawing of the underlying map tiles or false if the map tiles should still be drawn.

The map view uses the return value of this method as a hint to determine whether it should load and render its tiles. If your overlay covers its designated region entirely with opaque content, and effectively replaces the content of underlying map tiles, implement this method and return true. Doing so alleviates the need for the map to render its tiles.
If you do not implement this method, or if you return false from it, the map view continues to load and render its tiles.

Part of MKOverlayMBS interface.

125.5.5 circleWithCenterCoordinate(coord as CLLocationCoordinate2DMBS, radius as Double) as MKCircleMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKCircle object using the specified coordinate and radius.
Example:

```
Var mapview as MKMapViewMBS // your map view
Var centerCoordinate as CLLocationCoordinate2DMBS = mapview.centerCoordinate
Var radius as Integer = 300 // 300 meter

Var circle as MKCircleMBS = MKCircleMBS.circleWithCenterCoordinate(centerCoordinate, radius)
mapview.addOverlay circle
```

Notes: coord: The center point of the circle, specified as a latitude and longitude value.
radius: The radius of the circle, measured in meters from the center point.
See also:

- 125.5.6 circleWithCenterCoordinate(Latitude as Double, Longitude as Double, radius as Double) as MKCircleMBS 17753

125.5.6 circleWithCenterCoordinate(Latitude as Double, Longitude as Double, radius as Double) as MKCircleMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKCircle object using the specified coordinate and radius.
Notes: Latitude and Longitude: The center point of the circle, specified as a latitude and longitude value.
radius: The radius of the circle, measured in meters from the center point.
See also:

- 125.5.5 circleWithCenterCoordinate(coord as CLLocationCoordinate2DMBS, radius as Double) as MKCircleMBS 17752

125.5.7 circleWithMapRect(mapRect as MKMapRectMBS) as MKCircleMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates new circle object with given rectangle.

125.5.8 Constructor(coord as CLLocationCoordinate2DMBS, radius as Double)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKCircle object using the specified coordinate and radius.
Notes: coord: The center point of the circle, specified as a latitude and longitude value.
radius: The radius of the circle, measured in meters from the center point.
See also:

- 125.5.9 Constructor(Handle as Integer) 17753
- 125.5.10 Constructor(Latitude as Double, Longitude as Double, radius as Double) 17754
- 125.5.11 Constructor(mapRect as MKMapRectMBS) 17754

125.5.9 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKCircle reference from a declare.
The object is retained.
See also:

- 125.5.8 Constructor(coord as CLLocationCoordinate2DMBS, radius as Double) 17753

- 125.5.10 Constructor(Latitude as Double, Longitude as Double, radius as Double) 17754
- 125.5.11 Constructor(mapRect as MKMapRectMBS) 17754

125.5.10 Constructor(Latitude as Double, Longitude as Double, radius as Double)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKCircle object using the specified coordinate and radius.
Notes: Latitude and Longitude: The center point of the circle, specified as a latitude and longitude value.
radius: The radius of the circle, measured in meters from the center point.
See also:

- 125.5.8 Constructor(coord as CLLocationCoordinate2DMBS, radius as Double) 17753
- 125.5.9 Constructor(Handle as Integer) 17753
- 125.5.11 Constructor(mapRect as MKMapRectMBS) 17754

125.5.11 Constructor(mapRect as MKMapRectMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates new circle object with given rectangle.
See also:

- 125.5.8 Constructor(coord as CLLocationCoordinate2DMBS, radius as Double) 17753
- 125.5.9 Constructor(Handle as Integer) 17753
- 125.5.10 Constructor(Latitude as Double, Longitude as Double, radius as Double) 17754

125.5.12 coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.
See also:

- 125.5.16 coordinate as CLLocationCoordinate2DMBS 17755

125.5.13 intersectsMapRect(mapRect as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this overlay intersects with the given map rectangle.
Notes: Part of the MKOverlayMBS interface.

125.5.14 Properties

125.5.15 boundingMapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The projected rectangle that encompasses the overlay.
Notes: This property contains the smallest rectangle that completely encompasses the overlay. Implementers of this interface must set this area when implementing their overlay class, and after setting it, you must not change it. The rectangle should be specified using projected coordinates—that is, coordinates obtained by projecting the globe onto a two-dimensional surface.

Part of the MKOverlayMBS interface.
(Read only property)
See also:

- 125.5.3 boundingMapRect as MKMapRectMBS 17751

125.5.16 coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The center point of the circular area, specified as a latitude and longitude.
Notes: (Read only property)
See also:

- 125.5.12 coordinate as CLLocationCoordinate2DMBS 17754

125.5.17 radius as Double

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The radius of the circular area, measured in meters.
Notes: (Read only property)

125.6 class MKCircleRendererMBS

125.6.1 class MKCircleRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The visual representation for a circular overlay.
Notes: This renderer fills and strokes the circular region represented by the overlay object. You can change the color and other drawing attributes of the circle by modifying the properties inherited from the parent class. You typically use this class as is and do not subclass it.

You create an instance of this class in your map view rendererForOverlay event.
Subclass of the MKOverlayPathRendererMBS class.

125.6.2 Methods

125.6.3 Constructor(Circle as MKCircleMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a new overlay view using the specified circle overlay object.
Notes: circle: The circle overlay containing the information about the circular area to be drawn. The renderer maintains a strong reference to the object you provide. This parameter must not be nil.
See also:

- 125.6.4 Constructor(Handle as Integer) 17756

125.6.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKCircleRenderer reference from a declare.
The object is retained.
See also:

- 125.6.3 Constructor(Circle as MKCircleMBS) 17756

125.6.5 Properties

125.6.6 circle as MKCircleMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The circle overlay object that contains the information used to draw the overlay.
Notes: (Read only property)

125.7 class MKClusterAnnotationMBS

125.7.1 class MKClusterAnnotationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: An annotation that groups two or more distinct annotations into a single entity.
Example:

```
// group nearby markers into one cluster marker with the count
// MyMapView is a subclass of DesktopMapKitViewControlMBS with the events implemented, placed on the window as MyMapView1.
Var places() As MKAnnotationMBS
For i As Integer = 1 To 20
Var p As New MKCustomAnnotationMBS
p.SetCoordinate New CLLocationCoordinate2DMBS(50.35 + Rnd * 0.02, 7.58 + Rnd * 0.02)
places.Add p
Next
MyMapView1.View.addAnnotations places

// in MyMapView:
Function viewForAnnotation(mapView As MKMapViewMBS, annotation As MKAnnotationMBS) As MKAnnotationViewMBS Handles viewForAnnotation
Var marker As New MKMarkerAnnotationViewMBS(annotation, "place")
marker.clusteringIdentifier = "places" // markers with the same identifier are grouped
Return marker
End Function

Function ClusterAnnotationForMemberAnnotations(mapView As MKMapViewMBS, memberAnnotations() As MKAnnotationMBS) As MKClusterAnnotationMBS Handles ClusterAnnotationForMemberAnnotations
Var cluster As New MKClusterAnnotationMBS(memberAnnotations)
cluster.Title = memberAnnotations.Count.ToString + " places"
Return cluster
End Function
```

Notes: A cluster annotation object stands in for the group of annotations. Cluster views promote legibility of the underlying annotations by displaying a single annotation whose title is taken from one annotation and whose subtitle indicates how many additional annotations belong to the group.

MapKit automatically creates cluster annotations when two or more annotation views become grouped too closely together on the map surface. To customize the cluster annotations displayed on your map, implement the clusterAnnotationForMemberAnnotations event in your map's control.

Interfaces: MKAnnotationMBS

125.7.2 Methods

125.7.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

- 125.7.4 Constructor(Handle as Integer) 17759
- 125.7.5 Constructor(memberAnnotations() as MKAnnotationMBS) 17759

125.7.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKClusterAnnotation reference from a declare.
The object is retained.
See also:

- 125.7.3 Constructor 17759
- 125.7.5 Constructor(memberAnnotations() as MKAnnotationMBS) 17759

125.7.5 Constructor(memberAnnotations() as MKAnnotationMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes the cluster annotations with the specified individual annotations.
Notes: memberAnnotations: The annotations to group together as a single entity.

Returns an initialized MKClusterAnnotationMBS object or nil if the object could not be created.
See also:

- 125.7.3 Constructor 17759
- 125.7.4 Constructor(Handle as Integer) 17759

125.7.6 Coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

125.7.7 memberAnnotations as MKAnnotationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The annotations that are grouped together by the cluster.

125.7.8 SetCoordinate(newCoordinate as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Set the coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

125.7.9 SubTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKOverlayMBS interface.
See also:

- 125.7.13 SubTitle as String 17761

125.7.10 Title as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes: Part of the MKAnnotationMBS interface.
See also:

- 125.7.14 Title as String 17761

125.7.11 Properties

125.7.12 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

125.7.13 SubTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKOverlayMBS interface.
(Read and Write property)
See also:

- 125.7.9 SubTitle as String 17760

125.7.14 Title as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes: Part of the MKAnnotationMBS interface.
(Read and Write property)
See also:

- 125.7.10 Title as String 17761

125.8 class MKCoordinateRegionMBS

125.8.1 class MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: A structure that defines which portion of the map to display.
Blog Entries

- MapKit Framework for Xojo

Xojo Developer Magazine

- 18.6, page 74: MapKit Part 7, Implementing Maps in Xojo desktop apps with the MapKitMBS plugin by Markus Winter
- 18.3, page 79: Xojo Maps, Part 4, Finding and Displaying Addresses with the MapKitMBS plugin by Markus Winter

125.8.2 Methods

125.8.3 Constructor(center as CLLocationCoordinate2DMBS, span as MKCoordinateSpanMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor to initialize an object of this class.

125.8.4 MakeWithDistance(center as CLLocationCoordinate2DMBS, latitudinalMeters as double, longitudinalMeters as double) as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a region with given center and size.

125.8.5 Properties

125.8.6 center as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The center point of the region.
Notes: (Read and Write property)

125.8.7 span as MKCoordinateSpanMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The horizontal and vertical span representing the amount of map to display.
Notes: The span also defines the current zoom level used by the map view object.
(Read and Write property)

125.9 class MKCoordinateSpanMBS

125.9.1 class MKCoordinateSpanMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: A structure that defines the area spanned by a map region.
Notes: You use the delta values in this structure to indicate the desired zoom level of the map, with smaller delta values corresponding to a higher zoom level.
Blog Entries

- MapKit Framework for Xojo

Xojo Developer Magazine

- 18.6, page 74: MapKit Part 7, Implementing Maps in Xojo desktop apps with the MapKitMBS plugin by Markus Winter

125.9.2 Methods

125.9.3 Constructor(latitudeDelta as Double, longitudeDelta as Double)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor to initialize this class.

125.9.4 Properties

125.9.5 latitudeDelta as Double

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The amount of north-to-south distance (measured in degrees) to display on the map.
Notes: Unlike longitudinal distances, which vary based on the latitude, one degree of latitude is always approximately 111 kilometers (69 miles).
(Read and Write property)

125.9.6 longitudeDelta as Double

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The amount of east-to-west distance (measured in degrees) to display for the map region.
Notes: The number of kilometers spanned by a longitude range varies based on the current latitude. For

example, one degree of longitude spans a distance of approximately 111 kilometers (69 miles) at the equator but shrinks to 0 kilometers at the poles.
(Read and Write property)

125.10 class MKCustomAnnotationMBS

125.10.1 class MKCustomAnnotationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The class for a custom MKAnnotationMBS.
Example:

```
// This example needs a window with MapKitViewControlMBS1.
// put a pin with title and subtitle on the map
Var pin As New MKCustomAnnotationMBS
pin.SetCoordinate New CLLocationCoordinate2DMBS(50.3569, 7.5890)
pin.title = "Monkeybread Software"
pin.subtitle = "Nickenich, Germany"

MapKitViewControlMBS1.View.addAnnotation pin
MapKitViewControlMBS1.View.setCenterCoordinate(pin.Coordinate, True)
```

Notes: As MKAnnotationMBS is an interface, you need a Cocoa class to implement coordinate, title and subtitle properties.
So you can subclass this class if you like.

- MBS Xojo Plugins, version 19.2pr1

Interfaces: MKAnnotationMBS

125.10.2 Methods

125.10.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 125.10.4 Constructor(Handle as Integer) 17766

125.10.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKCustomAnnotation reference from a declare.

The object is retained.
See also:

- 125.10.3 Constructor 17766

125.10.5 Coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

125.10.6 SetCoordinate(newCoordinate as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: Set the coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

125.10.7 SubTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKAnnotationMBS interface.
See also:

- 125.10.11 subtitle as String 17768

125.10.8 Title as String

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes: Part of the MKAnnotationMBS interface.
See also:

- 125.10.12 title as String 17768

125.10.9 Properties

125.10.10 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

125.10.11 subtitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKAnnotationMBS interface.
(Read and Write property)
See also:

- 125.10.7 SubTitle as String 17767

125.10.12 title as String

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes: Part of the MKAnnotationMBS interface.
(Read and Write property)
See also:

- 125.10.8 Title as String 17767

125.11 class MKCustomOverlayMBS

125.11.1 class MKCustomOverlayMBS

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The class for a custom overlay.
Example:

```
// define an overlay covering an area and draw it with your own renderer
// MyMapView is a subclass of DesktopMapKitViewControlMBS with the rendererForOverlay event implemented, placed on the window as MyMapView1.
Var overlay As New MKCustomOverlayMBS
overlay.SetCoordinate New CLLocationCoordinate2DMBS(50.3569, 7.5890)
Var center As MKMapPointMBS = MKMapPointMBS.Point(overlay.Coordinate)
overlay.setBoundingMapRect New MKMapRectMBS(center.X - 5000, center.Y - 5000, 10000, 10000)
overlay.title = "Area"
MyMapView1.View.addOverlay overlay

// in MyMapView:
Function rendererForOverlay(mapView As MKMapViewMBS, overlay As MKOverlayMBS) As MKOverlayRendererMBS Handles rendererForOverlay
If overlay IsA MKCustomOverlayMBS Then
Var r As New MKOverlayRendererMBS(overlay)
r.alpha = 0.5
Return r // use a subclass with drawMapRect to draw something
End If
End Function
```

Blog Entries

- MBS Xojo Plugins, version 19.2pr1

Xojo Developer Magazine

- 17.5, page 54: Maps (Part 1), Implementing Maps in Xojo desktop apps with the MapKitMBS plug-in by Markus Winter

Interfaces: MKOverlayMBS, MKAnnotationMBS

125.11.2 Methods

125.11.3 boundingMapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The projected rectangle that encompasses the overlay.
Notes: This property contains the smallest rectangle that completely encompasses the overlay. Implementers of this interface must set this area when implementing their overlay class, and after setting it, you must not change it. The rectangle should be specified using projected coordinates—that is, coordinates obtained by projecting the globe onto a two-dimensional surface.

Part of the MKOverlayMBS interface.

125.11.4 canReplaceMapContent as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean indicating whether the overlay content replaces the underlying map content.
Notes: true if the map view can skip the loading and drawing of the underlying map tiles or false if the map tiles should still be drawn.

The map view uses the return value of this method as a hint to determine whether it should load and render its tiles. If your overlay covers its designated region entirely with opaque content, and effectively replaces the content of underlying map tiles, implement this method and return true. Doing so alleviates the need for the map to render its tiles.
If you do not implement this method, or if you return false from it, the map view continues to load and render its tiles.

Part of MKOverlayMBS interface.

- 125.11.14 canReplaceMapContent as Boolean 17772

125.11.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 125.11.6 Constructor(Handle as Integer) 17770

125.11.6 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKCustomOverlay reference from a declare.

The object is retained.
See also:

- 125.11.5 Constructor 17770

125.11.7 Coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The center point of the circular area, specified as a latitude and longitude.

125.11.8 intersectsMapRect(mapRect as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this overlay intersects with the given map rectangle.
Notes: Part of the MKOverlayMBS interface.

125.11.9 setBoundingMapRect(m as MKMapRectMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets boundingMapRect property.

125.11.10 SetCoordinate(newCoordinate as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: Set the coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

125.11.11 SubTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKOverlayMBS interface.
See also:

- 125.11.16 subtitle as String 17772

125.11.12 Title as String

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes: Part of the MKAnnotationMBS interface.
See also:

- 125.11.17 title as String 17773

125.11.13 Properties

125.11.14 canReplaceMapContent as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: a Boolean indicating whether the overlay content replaces the underlying map content.
Notes: true if the map view can skip the loading and drawing of the underlying map tiles or false if the map tiles should still be drawn.

The map view uses the return value of this method as a hint to determine whether it should load and render its tiles. If your overlay covers its designated region entirely with opaque content, and effectively replaces the content of underlying map tiles, implement this method and return true. Doing so alleviates the need for the map to render its tiles.
If you do not implement this method, or if you return false from it, the map view continues to load and render its tiles.
(Read and Write property)

125.12 class MKCustomOverlayRendererMBS

125.12.1 class MKCustomOverlayRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The renderer for custom overlays.
Notes: A special renderer with events for Xojo.
Subclass of the MKOverlayRendererMBS class.
Blog Entries

- MBS Xojo Plugins, version 19.2pr1

Xojo Developer Magazine

- 17.5, page 54: Maps (Part 1), Implementing Maps in Xojo desktop apps with the MapKitMBS plug-in by Markus Winter

125.12.2 Methods

125.12.3 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKCustomOverlayRenderer reference from a declare.
The object is retained.
See also:

- 125.12.4 Constructor(overlay as MKOverlayMBS) 17774

125.12.4 Constructor(overlay as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
Notes: The overlay can be any overlay, not just a MKCustomOverlayMBS one.
See also:

- 125.12.3 Constructor(Handle as Integer) 17774

125.12.5 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

125.12.6 Events

125.12.7 canDrawMapRect(mapRect as MKMapRectMBS, zoomScale as Double) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: Event to return a Boolean value indicating whether the overlay view is ready to draw its content.
Example:

```
Function canDrawMapRect(mapRect as MKMapRectMBS, zoomScale as Double) Handles canDrawMapRect
as Boolean
Return True
End Function
```

Notes: mapRect: The map rectangle that needs to be updated.
zoomScale: The current scale factor applied to the map.

Return yes if this overlay renderer is ready to draw its contents on the map or false if it is not.

Overlay renderers can override this method in situations where they may depend on the availability of other information to draw their contents. For example, a renderer showing traffic information might want to delay drawing until it has all of the traffic data it needs. In such a case, it can return NO from this method to indicate that it is not ready. An overlay renderer might also return false if it does not draw content in the specified rectangle.

If you return false from this method, your application is responsible for calling the setNeedsDisplayInMapRect method when the overlay renderer subsequently becomes ready to draw its contents.

The default implementation of this method returns YES.

As callback may come on a thread, MBS Xojo Plugin invokes event on the main thread. For best performance, please make sure your code does not take long time to execute.

125.12.8 DrawMapRect(mapRect as MKMapRectMBS, zoomScale as Double, context as CGContextMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The event to draw the overlay,Äôs contents at the specified location on the map.
Example:

```
Sub DrawMapRect(mapRect as MKMapRectMBS, zoomScale as Double, context as CGContextMBS) Handles DrawMapRect
// change coordinate system to show just our area
Var rect As CGRectMBS = Self.RectForMapRect(overlay.boundingMapRect)
context.ScaleCTM(1.0, -1.0)
context.TranslateCTM(0.0, -rect.size.height)

// and fill it all in red
context.SetRGBFillColor 1,0,0,0.3
context.FillRect rect

context.Flush
End Sub
```

Notes: mapRect: The map rectangle that needs to be updated. Your drawing code should avoid drawing outside of this rectangle.
zoomScale: The current zoom factor applied to the map content. You can use this value for configuring the stroke width of lines or other attributes that might be affected by the scale of the map,Äôs contents.
context: The graphics context to use for drawing the overlay,Äôs contents.

The default implementation of this method does nothing. Subclasses are expected to implement this event and use it to draw the overlay,Äôs contents.

When determining where to draw content, make your initial calculations relative to the map itself. In other words, compute the position and size of any overlay content using map points and map rectangles, convert those values to regular CGPoint and CGRect types using the methods of this class, and then pass the converted points to any drawing primitives.
It is recommended that you use Core Graphics to draw any content for your overlays.

To improve drawing performance, the map view may divide your overlay into multiple tiles and render each one on a separate thread.

As callback may come on a thread, MBS Xojo Plugin invokes event on the main thread. For best performance, please make sure your code does not take long time to execute.

125.13 class MKDirectionsMBS

125.13.1 class MKDirectionsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A utility object that computes directions and travel-time information based on the route information you provide.
Example:

```
// calculate a walking route between two places
// MyDirections is a subclass of MKDirectionsMBS with the calculateDirectionsCompleted event implemented.
// Directions is a property of the window: Directions As MyDirections
Var request As New MKDirectionsRequestMBS
request.source = New MKMapItemMBS(New MKPlacemarkMBS(New CLLocationCoordinate2DMBS(50.9413, 6.9583)))
request.destination = New MKMapItemMBS(New MKPlacemarkMBS(New CLLocationCoordinate2DMBS(50.9375, 6.9603)))
request.transportType = MKDirectionsRequestMBS.TransportTypeWalking

Directions = New MyDirections(request)
Directions.calculateDirections

// in MyDirections:
Sub calculateDirectionsCompleted(response As MKDirectionsResponseMBS, error As NSErrorMBS, tag As Variant) Handles calculateDirectionsCompleted
If error <>Nil Then Return
For Each route As MKRouteMBS In response.routes
System.DebugLog route.name + ": " + Format(route.distance, "0") + " m, " + Format(route.expectedTravelTime / 60, "0") + " minutes"
Next
End Sub
```

Notes: You use an MKDirections object to ask the Apple servers to provide walking or driving directions for a route, which you specify using an MKDirectionsRequestMBS object. After making a request, MapKit delivers the results asynchronously to the completion handler that you provide. You can also get the estimated travel time for the route.

Each MKDirectionsMBS object handles a single request for directions, although you can cancel and restart that request as needed. You can create multiple instances of this class and process different route requests at the same time, but you should make requests only when you plan to present the corresponding route information to the user. Apps may receive a MKErrorLoadingThrottled error if too many requests have been made from the current device in too short a time period.

125.13.2 Methods

125.13.3 calculateDirections(tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Begins calculating the requested route information asynchronously.
Notes: Calls calculateDirectionsCompleted event later.

This method initiates the request for directions and calls your calculateDirectionsCompleted event with the results. The implementation of your event handler should check for errors and then incorporate the response data as appropriate.

If you call this method while a previous request is in process, this method calls your event with an error. You can determine if a request is in process by checking the value of the calculating property. You can also cancel a request as needed.

125.13.4 calculateETA(tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Begins calculating the requested travel-time information asynchronously.
Notes: This method initiates a request for a travel-time estimate and calls your calculateETAWithCompleted event handler block with the results. Travel-time estimates take much less time to generate than directions, so use this method in situations where you want a time estimate only. The implementation of your handler should check for errors and then incorporate the response data as appropriate.

If you call this method while a previous request is in process, this method calls your event handler with an error. You can determine if a request is in process by checking the value of the calculating property. You can also cancel a request as needed.

125.13.5 cancel

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels a pending request.
Notes: After canceling a request, you can call the calculateDirections method again (if you want) to restart

the request process.

125.13.6 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKDirections reference from a declare.
The object is retained.
See also:

- 125.13.7 Constructor(request as MKDirectionsRequestMBS) 17779

125.13.7 Constructor(request as MKDirectionsRequestMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a directions object using the specified request.
Notes: request: The request object containing the start and end points of the route. This parameter must not be nil.

After initializing your directions object, you must call the calculateDirections or calculateETA method to perform the request.
See also:

- 125.13.6 Constructor(Handle as Integer) 17779

125.13.8 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

125.13.9 Properties

125.13.10 Calculating as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether a request is currently in process.
Notes: (Read only property)

125.13.11 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

125.13.12 Request as MKDirectionsRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The request used to create this object.
Notes: (Read only property)

125.13.13 Events

125.13.14 calculateDirectionsCompleted(response as MKDirectionsResponseMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The event called when calculateDirections method finished.
Notes: This event takes three parameters:

- The response parameter contains the route information for the request. If an error occurred or no route could be determined, this parameter is nil.
- The error parameter contains information about any errors that occurred. If no errors occurred, this parameter is nil.
- The tag passed to the method.

The implementation of your block should check for a value in the error parameter and, if that parameter is nil, incorporate the route information provided in the response parameter.

125.13.15 calculateETAWithCompleted(response as MKETAResponseMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Event called by calculateETA when method is done.

125.14 class MKDirectionsRequestMBS

125.14.1 class MKDirectionsRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The start and end points of a route, along with the planned mode of transportation.
Example:

```
// prepare a request for driving directions from the current location
Var request As New MKDirectionsRequestMBS
request.source = MKMapItemMBS.mapItemForCurrentLocation
request.destination = New MKMapItemMBS(New MKPlacemarkMBS(New CLLocationCoordinate2DMBS(50.9375,
6.9603)))
request.transportType = MKDirectionsRequestMBS.TransportTypeAutomobile

// pass the request to MKDirectionsMBS and call calculateDirections
```

Notes: You use an MKDirectionsRequestMBS object when requesting or providing directions. If your app provides directions, use this class to decode the URL sent to you by Maps. If you need to request directions from Apple, pass an instance of this class to an MKDirections object. For example, an app that provides subway directions might request walking directions to and from relevant subway stations.

For apps that provide directions, you receive direction-related URLs in your app delegate,Äôs application:openURL:sourceApplication:annotation: method. Upon receiving a URL, call the isDirectionsRequestURL method of this class to determine if the URL is related to routing directions. If it is, create an instance of this class using the provided URL and extract the map items associated with the start and end points.

To provide routing directions, your app must include special keys in its Info.plist file and be able to handle URLs sent to it by the Maps app. These keys indicate a special URL type that your app must be prepared to handle. For information about how to implement this support, see Location and Maps Programming Guide.

125.14.2 Methods

125.14.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The construtor.
See also:

- 125.14.4 Constructor(Handle as Integer) 17782
- 125.14.5 Constructor(URL as string) 17782

125.14.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKDirectionsRequest reference from a declare.
The object is retained.
See also:

- 125.14.3 Constructor 17781
- 125.14.5 Constructor(URL as string) 17782

125.14.5 Constructor(URL as string)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a directions request object using the specified URL.
Notes: You should use the isDirectionsRequestURL method to verify that the specified URL is of the correct format before calling this method to initialize the object.
See also:

- 125.14.3 Constructor 17781
- 125.14.4 Constructor(Handle as Integer) 17782

125.14.6 isDirectionsRequestURL(URL as string) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean indicating whether the specified URL contains a directions request.
Notes: True if the URL contains a directions request that your app should display to the user or false if it does not.

125.14.7 Properties

125.14.8 arrivalDate as Date

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The arrival date for the trip.
Notes: Specifying an arrival date provides the server with extra information that it can use to optimize the returned routes. For example, for a trip that takes place during commute hours, the server might consider alternatives to routes that are typically congested at that time.
The use of this property is optional.
(Read and Write property)

125.14.9 arrivalDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The arrival date for the trip.
Notes: Specifying an arrival date provides the server with extra information that it can use to optimize the returned routes. For example, for a trip that takes place during commute hours, the server might consider alternatives to routes that are typically congested at that time.
The use of this property is optional.
(Read and Write property)

125.14.10 departureDate as Date

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The departure date for the trip.
Notes: Specifying a departure date provides the server with extra information that it can use to optimize the returned routes. For example, for a trip that takes place during commute hours, the server might consider alternatives to routes that are typically congested at that time.
The use of this property is optional.
(Read and Write property)

125.14.11 departureDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The departure date for the trip.
Notes: Specifying a departure date provides the server with extra information that it can use to optimize the returned routes. For example, for a trip that takes place during commute hours, the server might consider alternatives to routes that are typically congested at that time.

The use of this property is optional.
(Read and Write property)

125.14.12 destination as MKMapItemMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The end point for routing directions.
Notes: (Read and Write property)

125.14.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

125.14.14 requestsAlternateRoutes as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean indicating whether your app wants multiple routes when they are available.
Notes: When this property is set to false, the server returns a single route between the start and end points. When this property is YES, the server may return additional routes for the user to follow. The server returns additional routes only if they are available and represent a reasonable path that the user might take.
The default value of this property is false.
(Read and Write property)

125.14.15 source as MKMapItemMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The starting point for routing directions.
Notes: (Read and Write property)

125.14.16 transportType as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The type of conveyance to which the directions should apply.
Notes: You can use this property to specify whether you want directions suited to a particular type of transportation. For example, you can use this to specify that you want walking directions or driving directions.
The default value of this property is TransportTypeAny.
(Read and Write property)

125.14.17 Constants

Transport Types

Constant	Value	Description
TransportTypeAny	&h0FFFFFFF	Directions suitable for any transportation option.
TransportTypeAutomobile	1	Directions suitable for use while driving.
TransportTypeTransit	3	Directions suitable for public transportation.
TransportTypeWalking	2	Directions suitable for a pedestrian.

125.15 class MKDirectionsResponseMBS

125.15.1 class MKDirectionsResponseMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The route information returned by Apple servers in response to one of your requests for directions.
Example:

```
// compare the alternative routes Apple Maps returned
// MyDirections is a subclass of MKDirectionsMBS with the calculateDirectionsCompleted event implemented.
// in MyDirections:
Sub calculateDirectionsCompleted(response As MKDirectionsResponseMBS, error As NSErrorMBS, tag As Variant) Handles calculateDirectionsCompleted
If error <>Nil Then Return

System.DebugLog response.routeCount.ToString + " routes from " + response.source.name + " to " + response.destination.name
For Each route As MKRouteMBS In response.routes
System.DebugLog route.name + ": " + Format(route.expectedTravelTime / 60, "0") + " minutes"
Next
End Sub
```

Notes: You do not create instances of this class directly. Instead, you initiate a request for directions by calling the calculateDirection method of an MKDirectionsMBS object. The calculateDirectionCompleted event handler receives an MKDirectionsResponseMBS object with the results.

- MapKit Framework for Xojo

125.15.2 Methods

125.15.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

- 125.15.4 Constructor(Handle as Integer) 17786

125.15.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKDirectionsResponse reference from a declare.
The object is retained.
See also:

- 125.15.3 Constructor 17786

125.15.5 routes as MKRouteMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: An array of route objects representing the directions between the start and end points.
Notes: The array contains one or more MKRouteMBS objects, each of which represents a possible set of directions for the user to follow. If you did not request alternate routes in the original directions request, this array contains at most one object.
Each route object contains geometry information that you can use to display that route on your app,Äôs map view. Routes may also contain additional information that is relevant to that particular route, such as the expected travel time and any trip advisory notices.

125.15.6 Properties

125.15.7 destination as MKMapItemMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The end point of the route.
Notes: The item in this property may contain additional details that were not included in the original item used to create the MKDirectionsRequestMBS object.
(Read only property)

125.15.8 firstRoute as MKRouteMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The first route.
Notes: Mainly for debugging, so you can see the routes in debugger.
(Read only property)

125.15.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

125.15.10 routeCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Number of routes.
Notes: (Read only property)

125.15.11 source as MKMapItemMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The start point of the route.
Notes: The item in this property may contain additional details that were not included in the original item used to create the MKDirectionsRequestMBS object.
(Read only property)

125.15.12 Constants

Transport Types

Constant	Value	Description
TransportTypeAny	&h0FFFFFFF	Directions suitable for any transportation option.
TransportTypeAutomobile	1	Directions suitable for use while driving.
TransportTypeTransit	3	Directions suitable for public transportation.
TransportTypeWalking	2	Directions suitable for a pedestrian.

125.16 class MKDistanceFormatterMBS

125.16.1 class MKDistanceFormatterMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A utility object that converts between a geographic distance and a string-based expression of that distance.
Example:

```
Var f as new MKDistanceFormatterMBS

f.Units = f.UnitsMetric
f.UnitStyle = f.UnitStyleFull

MessageBox f.stringFromDistance(1234.56)
```

Notes: You use a distance formatter when you need to display distances to the user or when you want to parse user-specified text to obtain a numerical value for a distance. When formatting strings containing distances, a distance formatter object takes into account the user,Äôs locale and language settings. You can also specify a custom locale or custom units for any distances that you format.
Blog Entries

- MapKit Framework for Xojo

125.16.2 Methods

125.16.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 125.16.4 Constructor(Handle as Integer) 17789

125.16.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKDistanceFormatter reference from a declare.
The object is retained.
See also:

- 125.16.3 Constructor 17789

125.16.5 distanceFromString(distance as String) as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the distance value parsed from the specified string.
Notes: distance: A formatted string that specifies a distance.

Returns the distance value represented by the string or -1.0 if the string does not contain a recognized distance value.

This method searches the provided string for a number that could represent a distance. Distances must be specified as purely numerical values. Do not specify distances as fractions such as "1/4 mile".

125.16.6 formatter as MKDistanceFormatterMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The singelton instance for easy use.
Example:

```
// shows e.g. 1,2km
// depending on the locale
MessageBox MKDistanceFormatterMBS.formatter.stringFromDistance(1234)
```

Notes: The plugin keeps an object, so you get the same one everytime and you can reuse it often.

125.16.7 stringFromDistance(distance as Double) as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a string representation of the specified distance.
Notes: distance: The distance value that you want to convert to a string.

Returns a user-readable string that describes the distance based on the formatter settings.

125.16.8 Properties

125.16.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

125.16.10 Locale as NSLocaleMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The locale to use when formatting strings.
Notes: If you do not specify an explicit locale, the formatter uses the user,Äôs current locale information.
(Read and Write property)

125.16.11 Units as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The measuring system (imperial or metric) to use for units.
Notes: You can use this property to explicitly set the measuring system for units. The default value of this property is UnitsDefault, which bases the measuring system on the user,Äôs locale.
(Read and Write property)

125.16.12 UnitStyle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The preferred style for units.
Notes: Units can be abbreviated or fully spelled out. The default value of this property is UnitStyleDefault, which bases the style on the user,Äôs locale and language settings.
(Read and Write property)

125.16.13 Constants

Units

Constant	Value	Description
UnitsDefault	0	The format uses the locale information to determine which units to use. Some locales mix metric and imperial units so do not assume this means one or the other.
UnitsImperial	2	The format uses imperial units.
UnitsImperialWithYards	3	The format uses imperial units that include measurements in yards.
UnitsMetric	1	The format uses metric units.

Util Styles

Constant	Value	Description
UnitStyleAbbreviated	1	Use abbreviated units. For example, use the abbreviation km instead of kilometer.
UnitStyleDefault	0	The decision to abbreviate is based on the current locale and user language settings.
UnitStyleFull	2	Spell out units in full. For example, use kilometer instead of the abbreviation km.

125.17 class MKETAResponseMBS

125.17.1 class MKETAResponseMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The travel-time information returned by Apple servers.
Example:

```
// ask how long the walk between two places takes
// MyDirections is a subclass of MKDirectionsMBS with the calculateETAWithCompleted event implemented.
// Directions is a property of the window: Directions As MyDirections
Var request As New MKDirectionsRequestMBS
request.source = New MKMapItemMBS(New MKPlacemarkMBS(New CLLocationCoordinate2DMBS(50.3594, 7.6005))) // Deutsches Eck
request.destination = New MKMapItemMBS(New MKPlacemarkMBS(New CLLocationCoordinate2DMBS(50.3500, 7.6070))) // Fortress
request.transportType = MKDirectionsRequestMBS.TransportTypeWalking

Directions = New MyDirections(request)
Directions.calculateETA

// in MyDirections:
Sub calculateETAWithCompleted(response As MKETAResponseMBS, error As NSErrorMBS, tag As Variant) Handles calculateETAWithCompleted
If error <>Nil Then
System.DebugLog error.localizedDescription
Else
System.DebugLog Format(response.expectedTravelTime / 60, "0") + " minutes for " + Format(response.distance, "0") + " m, arrival at " + response.expectedArrivalDateTime.ToString
End If
End Sub
```

Notes: You do not create instances of this class directly. Instead, you initiate a request for the travel time by calling the calculateETA method of an MKDirectionsMBS object. The completion event handler receives an MKETAResponseMBS object with the results.

125.17.2 Methods

125.17.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

- 125.17.4 Constructor(Handle as Integer) 17794

125.17.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKETAResponse reference from a declare.
The object is retained.
See also:

- 125.17.3 Constructor 17793

125.17.5 Properties

125.17.6 destination as MKMapItemMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The end point of the route.
Notes: The item in this property may contain additional details that were not included in the original item used to create the MKDirectionsRequestMBS object.
(Read only property)

125.17.7 distance as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The expected travel distance, in meters.
Notes: This property contains the overall distance traversed by the route.
(Read only property)

125.17.8 expectedArrivalDate as Date

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The expected arrival time.
Notes: The value of this property is dependent on whether you specified a departure date or arrival date in your MKDirectionsRequestMBS object. If you specified a departure date, the date in this property is computed by starting at your departure date and adding the expected travel time. If you specified an arrival

time but not a departure date, this property is set to your arrival time. If you did not specify an arrival date or departure date, this property is set to the date computed by adding the travel time to the current time.
(Read only property)

125.17.9 expectedArrivalDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The expected arrival time.
Notes: The value of this property is dependent on whether you specified a departure date or arrival date in your MKDirectionsRequestMBS object. If you specified a departure date, the date in this property is computed by starting at your departure date and adding the expected travel time. If you specified an arrival time but not a departure date, this property is set to your arrival time. If you did not specify an arrival date or departure date, this property is set to the date computed by adding the travel time to the current time.
(Read only property)

125.17.10 expectedDepartureDate as Date

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The expected departure time.
Notes: The value of this property is dependent on whether you specified a departure date or arrival date in your MKDirectionsRequestMBS object. If you specified a departure date, that date is copied to this property. If you specified an arrival date but not a departure date, the departure date is computed by subtracting the expected travel time from your arrival date. If you did not specify an arrival date or departure date, this property is set to the current time.
(Read only property)

125.17.11 expectedDepartureDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The expected departure time.
Notes: The value of this property is dependent on whether you specified a departure date or arrival date in your MKDirectionsRequestMBS object. If you specified a departure date, that date is copied to this property. If you specified an arrival date but not a departure date, the departure date is computed by subtracting the expected travel time from your arrival date. If you did not specify an arrival date or departure date, this property is set to the current time.
(Read only property)

125.17.12 expectedTravelTime as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The expected travel time in seconds.
Notes: The expected travel time reflects the time it takes to traverse the route, taking expected traffic into account. The actual amount of time may vary based on changes in traffic and other travel conditions.
(Read only property)

125.17.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

125.17.14 source as MKMapItemMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The start point of the route.
Notes: This item in this property may contain additional details that were not included in the original item used to create the MKDirectionsRequestMBS object.
(Read only property)

125.17.15 transportType as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The type of conveyance used to determine the travel time.
Notes: You specify the desired transportation type in your MKDirectionsRequestMBS object. If you specified TransportTypeAny, this property contains the transportation type used to generate the estimated information.
(Read only property)

125.17.16 Constants

Transport Types

Constant	Value	Description
TransportTypeAny	&h0FFFFFFF	Directions suitable for any transportation option.
TransportTypeAutomobile	1	Directions suitable for use while driving.
TransportTypeTransit	3	Directions suitable for public transportation.
TransportTypeWalking	2	Directions suitable for a pedestrian.

125.18 class MKGeodesicPolylineMBS

125.18.1 class MKGeodesicPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A line-based shape that follows the contours of the Earth to create the shortest path between the specified points.
Example:

```
// draw the shortest flight path from Frankfurt to New York on a map
// MyMapView is a subclass of DesktopMapKitViewControlMBS with the rendererForOverlay event implemented, placed on the window as MyMapView1.
Var coords() As CLLocationCoordinate2DMBS
coords.Add New CLLocationCoordinate2DMBS(50.0379, 8.5622) // FRA
coords.Add New CLLocationCoordinate2DMBS(40.6413, -73.7781) // JFK

Var flight As MKGeodesicPolylineMBS = MKGeodesicPolylineMBS.polylineWithCoordinates(coords)
MyMapView1.View.addOverlay flight

// in MyMapView:
Function rendererForOverlay(mapView As MKMapViewMBS, overlay As MKOverlayMBS) As MKOverlayRendererMBS Handles rendererForOverlay
If overlay IsA MKPolylineMBS Then
Var renderer As New MKPolylineRendererMBS(MKPolylineMBS(overlay))
renderer.strokeColor = NSColorMBS.systemRedColor
renderer.lineWidth = 3
Return renderer
End If
End Function
```

Notes: A geodesic polyline contains a set of points that are connected end-to-end in the order that you provide them. The first and last points are not automatically connected to each other. When displayed on a two-dimensional map view, the line segment between any two points may appear curved.
Subclass of the MKPolylineMBS class.

125.18.2 Methods

125.18.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

See also:

- 125.18.4 Constructor(coords() as CLLocationCoordinate2DMBS) 17799
- 125.18.5 Constructor(Handle as Integer) 17799
- 125.18.6 Constructor(points() as MKMapPointMBS) 17799

125.18.4 Constructor(coords() as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a geodesic polyline using the specified coordinates.
Notes: coords: The array of coordinates that define the path.

Returns a new geodesic polyline object.
See also:

- 125.18.3 Constructor 17798
- 125.18.5 Constructor(Handle as Integer) 17799
- 125.18.6 Constructor(points() as MKMapPointMBS) 17799

125.18.5 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKGeodesicPolyline reference from a declare.
The object is retained.
See also:

- 125.18.3 Constructor 17798
- 125.18.4 Constructor(coords() as CLLocationCoordinate2DMBS) 17799
- 125.18.6 Constructor(points() as MKMapPointMBS) 17799

125.18.6 Constructor(points() as MKMapPointMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a geodesic polyline using the specified map points.
Notes: points: The array of map points that define the path.

Returns a new geodesic polyline object.
See also:

- 125.18.3 Constructor 17798
- 125.18.4 Constructor(coords() as CLLocationCoordinate2DMBS) 17799
- 125.18.5 Constructor(Handle as Integer) 17799

125.18.7 polylineWithCoordinates(coords() as CLLocationCoordinate2DMBS) as MKGeodesicPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a geodesic polyline using the specified coordinates.
Notes: coords: The array of coordinates that define the path.

Returns a new geodesic polyline object.

125.18.8 polylineWithPoints(points() as MKMapPointMBS) as MKGeodesicPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a geodesic polyline using the specified map points.
Notes: points: The array of map points that define the path.

Returns a new geodesic polyline object.

125.19 class MKLocalSearchCompleterMBS

125.19.1 class MKLocalSearchCompleterMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A utility object for generating a list of completion strings based on a partial search string that you provide.
Example:

```
// This example needs a window with TextField1.
// suggest places while the user types into a search field
// MySearchCompleter is a subclass of MKLocalSearchCompleterMBS with the events implemented.
// Completer is a property of the window: Completer As MySearchCompleter
If Completer = Nil Then Completer = New MySearchCompleter
Completer.QueryFragment = TextField1.Text // e.g. call this in the TextChanged event

// in MySearchCompleter:
Sub DidUpdateResults() Handles DidUpdateResults
For Each result As MKLocalSearchCompletionMBS In Me.results
System.DebugLog result.title + " - " + result.subtitle
Next
End Sub

Sub DidFailWithError(error As NSErrorMBS) Handles DidFailWithError
System.DebugLog error.localizedDescription
End Sub
```

Notes: You use an MKLocalSearchCompleter object to retrieve auto-complete suggestions for your own map-based search controls. As the user types text, you feed the current text string into the search completer object, which delivers possible string completions that match locations or points of interest.

You create and configure MKLocalSearchCompleterMBS objects yourself. You should subclass this class to fill the event handler. You should also specify a search region to restrict results to a designated area.

Update the value of the completer,Äôs queryFragment property to begin a search query. You can update this property in real time as the user types new characters into a text field because the completer object waits a short amount of time for the query string to stabilize. When modifications to the query strong stop, the completer initiates a new search and returns the results to your delegate as an array of MKLocalSearch-CompletionMBS objects.

Xojo Developer Magazine

- 17.6, page 36: Maps Part 2, Implementing Maps in Xojo desktop apps with the MapKitMBS plugin by Markus Winter

125.19.2 Methods

125.19.3 cancel

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels an in-progress search operation.
Notes: If a search operation is currently in progress, this method attempts to cancels it. If cancellation is successful, the search completer does not notify its delegate. If no search operation is in progress, this method does nothing.

125.19.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

125.19.5 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

125.19.6 results as MKLocalSearchCompletionMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The most recently received search completions.
Notes: This property is nil initially. After a successful query, the property is set to the array of MKLocalSearchCompletionMBS objects returned by that query. Each new successful query replaces the previous value of this property.

125.19.7 Properties

125.19.8 filterType as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The filter options for the search results.
Notes: Use this property to determine whether you want completions that represent points-of-interest or whether completions might yield additional relevant query strings.
(Read and Write property)

125.19.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

125.19.10 QueryFragment as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The search string for which you want completions.
Notes: Assigning a string to this property initiates a search based on that string. The completer object waits a short amount of time before initiating new searches. This delay gives you enough time to update the search string based on typed input from the user. For example, if you are using a text field to manage the input from the user, you could use the TextChange event to update the value of this property.
(Read and Write property)

125.19.11 region as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The region that defines the geographic scope of the search.
Notes: Use this property to limit search results to the specified geographic area. The default value of this property is a region that spans the entire world.
(Read and Write property)

125.19.12 Searching as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether a search operation is in progress.
Notes: (Read only property)

125.19.13 Events

125.19.14 DidFailWithError(error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Called when the specified search completer is unable to generate a list of search results.
Notes: completer: The search completer object reporting the error.
error: The error object containing the reason for the failure.

Use this object to process any errors that occurred while generating search results. Even when an error occurs, the search completer starts a new search if it already has a new search string. Depending on the error, you might do nothing or let the user know that you were unable to obtain a list of search completions.

125.19.15 DidUpdateResults

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Called when the specified search completer updates its array of search completions.
Notes: After receiving results from a query, the search completer updates its results property with the new MKLocalSearchCompletionMBS objects and calls this method. Use this method to update your app,Äôs interface based on the new search results. For example, you might update a table that you use to display search results to the user.

125.19.16 Constants

Filter Types

Constant	Value	Description
FilterTypeLocationsAndQueries	0	Points of interest and query suggestions. Specify this value when you want both map-based points of interest and common query terms used to find locations. For example, the search string ,Äúcof,Äù yields a completion for ,Äúcoffee,Äù.
FilterTypeLocationsOnly	1	Points of interest only. Specify this value when you want the search string to yield completions that correspond to a specific point-of-interest on the map.

125.20 class MKLocalSearchCompletionMBS

125.20.1 class MKLocalSearchCompletionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A fully formed string that completes a partial string.
Notes: You do not create instances of this class directly. Instead, you use an MKLocalSearchCompleterMBS to initiate a search based on a set of partial search strings. That object stores any matches in its results property. Retrieve any MKLocalSearchCompletionMBS objects from that property and display the search terms in your interface or use one to initiate a search for content based on that search term.

When displaying text completions for a partial search term in your user interface, you might want to use a bold version of a font or add some other highlighting to the portion of the completion string that caused it to match the partial search term. To help you add this styling, the completion object includes highlight ranges for the title and subtitle strings.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

125.20.2 Methods

125.20.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructors.

125.20.4 subtitleHighlightRanges as NSRangeMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The ranges of characters to highlight in the subtitle string.
Notes: This property contains an array of NSRangeMBS objects, each defining a range of characters in the subtitle string. Use this property to identify the ranges of characters in the subtitle string that you should highlight. Highlighting the matching text of a search completion is optional, but does provide helpful information to the user and is recommended.

Zerobased ranges.

125.20.5 titleHighlightRanges as NSRangeMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The ranges of characters to highlight in the title string.
Notes: This property contains an array of NSRangeNBS objects, each defining a range of characters in the title string. Use this property to identify the ranges of characters in the title string that you should highlight. Highlighting the matching text of a search completion is optional, but does provide helpful information to the user and is recommended.

Range is zero based.

125.20.6 Properties

125.20.7 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

125.20.8 subtitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle (if any) associated with the point-of-interest.
Notes: The string in this property may be empty.
(Read only property)

125.20.9 title as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title string associated with the point-of-interest.
Notes: This string is guaranteed not to be empty.
(Read only property)

125.21 class MKLocalSearchMBS

125.21.1 class MKLocalSearchMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A utility object for initiating map-based searches and processing the results.
Example:

```
// search for coffee shops near a location
// MyLocalSearch is a subclass of MKLocalSearchMBS with the SearchFinished event implemented.
// Search is a property of the window: Search As MyLocalSearch
Var request As New MKLocalSearchRequestMBS
request.naturalLanguageQuery = "coffee"
request.region = MKCoordinateRegionMBS.MakeWithDistance(New CLLocationCoordinate2DMBS(50.9375,
6.9603), 2000, 2000)

Search = New MyLocalSearch(request)
Search.Start

// in MyLocalSearch:
Sub SearchFinished(response As MKLocalSearchResponseMBS, error As NSErrorMBS, tag As Variant) Han-
dles SearchFinished
If error <>Nil Then
System.DebugLog error.localizedDescription
Return
End If
For Each item As MKMapItemMBS In response.mapItems
System.DebugLog item.Name + " " + item.phoneNumber
Next
End Sub
```

Notes: Use an MKLocalSearchMBS object to execute a single search request. You might use this class to search for addresses or points of interest on the map. Upon completion of the request, the object delivers the results to the SearchFinished event handler that you provide.

- MapKit Framework for Xojo

Xojo Developer Magazine

- 17.6, page 34: Maps Part 2, Implementing Maps in Xojo desktop apps with the MapKitMBS plugin by Markus Winter

125.21.2 Methods

125.21.3 cancel

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels an in-progress search operation.
Notes: If no search operation is in progress, this method does nothing.

125.21.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKLocalSearch reference from a declare.
The object is retained.
See also:

- 125.21.5 Constructor(request as MKLocalSearchRequestMBS) 17809

125.21.5 Constructor(request as MKLocalSearchRequestMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a search object configured with the specified parameters.
Notes: request: The search request information. This parameter must not be nil.

This method stores a copy of the object in the request parameter. So any changes you make to your request object after calling this method are ignored.
See also:

- 125.21.4 Constructor(Handle as Integer) 17809

125.21.6 Start(tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Starts the search and delivers the results to the specified completion handler.
Notes: Triggers SearchFinished event later.

You use this method to initiate a map-based search operation. The search runs until the results are delivered, at which point the specified completion handler is called.
You should call this method only once to start the search operation. Calling this method while the search

is running does not stop the original search operation from finishing. However, for each subsequent call, the search object executes your completion handler and passes an error object to it.
The provided completion handler is always executed on your app,Äôs main thread. The local search object keeps a reference to the completion handler block until the results (or an error) are delivered, at which point it relinquishes that reference.

125.21.7 Properties

125.21.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

125.21.9 Searching as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean indicating whether the search is currently in progress.
Notes: The value of this property is set to true when a search is initiated and remains in that state until the search results (or an appropriate error) are delivered, at which time the property is set to false.
(Read only property)

125.21.10 Events

125.21.11 SearchFinished(response as MKLocalSearchResponseMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The event handler that processes the results. This parameter must not be nil.
Notes: Called by Start asynchronously.

125.22 class MKLocalSearchRequestMBS

125.22.1 class MKLocalSearchRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The parameters to use when searching for points of interest on the map.
Example:

```
// prepare a search request for restaurants around a location
Var request As New MKLocalSearchRequestMBS
request.naturalLanguageQuery = "restaurant"
request.region = MKCoordinateRegionMBS.MakeWithDistance(New CLLocationCoordinate2DMBS(50.9375,
6.9603), 1000, 1000)

// pass the request to MKLocalSearchMBS and call Start
```

Notes: You create an MKLocalSearchRequest object when you want to search for map locations based on a natural language string. For example, if your interface allows the user to type in addresses, you would place the typed text in this object and pass it to an MKLocalSearch object to begin the search process. When specifying your search strings, include a map region to narrow the search results to the specified geographical area.

125.22.2 Methods

125.22.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 125.22.4 Constructor(completion as MKLocalSearchCompletionMBS) 17812
- 125.22.5 Constructor(Handle as Integer) 17812

125.22.4 Constructor(completion as MKLocalSearchCompletionMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a search request based on the specified search completion data.
Notes: completion: A search completion object obtained from an MKLocalSearchCompleterMBS object. The search request uses the provided object to set the value of the naturalLanguageQuery property.

Use this method when initializing your object from MKLocalSearchCompleterMBS objects. You do not need to use this method if you intend to provide the search string and region information yourself.
See also:

- 125.22.3 Constructor 17811
- 125.22.5 Constructor(Handle as Integer) 17812

125.22.5 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKLocalSearchRequest reference from a declare.
The object is retained.
See also:

- 125.22.3 Constructor 17811
- 125.22.4 Constructor(completion as MKLocalSearchCompletionMBS) 17812

125.22.6 Copy as MKLocalSearchRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the request.

125.22.7 Properties

125.22.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

125.22.9 naturalLanguageQuery as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A string containing the desired search item.
Notes: You specify this parameter as a string describing the map-based item you want to look for. The text is equivalent to what the user would type in a search field in the Maps app. For example, the text might contain all or part of an address or it might contain the name of a point of interest.
(Read and Write property)

125.22.10 region as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A map region that provides a hint as to where to search.
Notes: You can use this parameter to narrow the list of search results to those inside or close to the specified region. Specifying a region does not guarantee that the results will all be inside the region. It is merely a hint to the search engine.
(Read and Write property)

125.23 class MKLocalSearchResponseMBS

125.23.1 class MKLocalSearchResponseMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The results from a map-based search.
Notes: You do not create instances of this class directly. After initiating a map search using an MKLocalSearchMBS object, MapKit passes an instance of this class to your event handler.

125.23.2 Methods

125.23.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

- 125.23.4 Constructor(Handle as Integer) 17814

125.23.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKLocalSearchResponse reference from a declare.
The object is retained.
See also:

- 125.23.3 Constructor 17814

125.23.5 mapItems as MKMapItemMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: An array of map items representing the search results.
Notes: This property contains an array of MKMapItemMBS objects, each of which represents a returned search result. You can use these objects to retrieve information about the search result, such as the name of the point of interest, the address, the geographic location, and so on.

125.23.6 Properties

125.23.7 boundingRegion as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The map region that encloses the returned search results.
Notes: The returned region is the smallest bounding box that encloses all of the map items. If there is only one search result, the size of the region may be (0, 0).
(Read only property)

125.23.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

125.24 class MKMapCameraMBS

125.24.1 class MKMapCameraMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A virtual camera for defining the appearance of the map.
Example:

```
// show a 3D view looking at a location from 500 meters, tilted by 60 degrees
// Map is a property of the window: Map As MKMapViewMBS
Map = New MKMapViewMBS(0, 0, Self.Width, Self.Height)
Self.NSWindowMBS.contentView.addSubview Map

Var center As New CLLocationCoordinate2DMBS(48.8584, 2.2945) // Eiffel Tower
Var camera As MKMapCameraMBS = MKMapCameraMBS.cameraLookingAtCenterCoordinate(center, 500,
60, 0)
Map.setCamera camera, True
```

Notes: A camera object defines a virtual viewpoint above the map surface and affects how the map is presented to the user. You use a camera object to specify the location of the camera on the map, the compass heading indicating the camera,Äôs viewing direction, the pitch of the camera relative to the map perpendicular, and the camera,Äôs altitude above the map. These factors create a map view with a three dimensional perspective.
After creating an instance of this class, configure it with the desired attributes and assign it to your map view. When you assign a camera to your map view, the map centers the map using the value in your camera object,Äôs centerCoordinate property, updating the map,Äôs own region information in the process. The map also takes the camera,Äôs the pitch and altitude into account when calculating the visible region, ensuring that the region always encompasses the visible content on the map.

- MapKit Framework for Xojo

125.24.2 Methods

125.24.3 camera as MKMapCameraMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new camera object for you to configure.
Notes: You must change the values of the returned camera object before using it.

125.24.4 cameraLookingAtCenterCoordinate(centerCoordinate as CLLocationCoordinate2DMBS, distance as double, pitch as double, heading as double) as MKMapCameraMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new camera object using the specified distance, pitch, and heading information.
Notes: centerCoordinate: The coordinate point on which the map should be centered.
distance: The line-of-sight distance from the camera to the center coordinate of the map.
pitch: The viewing angle of the camera, measured in degrees. A value of 0 results in a camera pointed straight down at the map. Angles greater than 0 result in a camera that is pitched toward the horizon by the specified number of degrees.
heading: The heading of the camera (measured in degrees) relative to true north. The value 0 means that the top edge of the map view corresponds to true north. The value 90 means the top of the map is pointing due east. The value 180 means the top of the map points due south, and so on.

Returns a new camera object initialized with the specified information.
The altitude of the camera is obtained by multiplying distance by the cosine of the pitch value.
See also:

- 125.24.5 cameraLookingAtCenterCoordinate(centerCoordinate as CLLocationCoordinate2DMBS, eyeCoordinate as CLLocationCoordinate2DMBS, eyeAltitude as double) as MKMapCameraMBS 17817

125.24.5 cameraLookingAtCenterCoordinate(centerCoordinate as CLLocationCoordinate2DMBS, eyeCoordinate as CLLocationCoordinate2DMBS, eyeAltitude as double) as MKMapCameraMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new camera object using the specified viewing angle information.
Notes: centerCoordinate: The coordinate point on which the map should be centered.
eyeCoordinate: The coordinate point at which to place the camera. If the value for this parameter is equal to the value in the centerCoordinate parameter, the map is displayed as if the camera is looking straight down. If this point is offset from the centerCoordinate value, the map is displayed with an appropriate heading and pitch angle.
eyeAltitude: The altitude (in meters) above the ground at which to place the camera.

Returns a new camera object initialized with the specified information.

This method calculates the required pitch and heading angles to accommodate the specified eye position and altitude.
See also:

- 125.24.4 cameraLookingAtCenterCoordinate(centerCoordinate as CLLocationCoordinate2DMBS, distance as double, pitch as double, heading as double) as MKMapCameraMBS 17817

125.24.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new camera object for you to configure.
Notes: You must change the values of the returned camera object before using it.
See also:

- 125.24.7 Constructor(centerCoordinate as CLLocationCoordinate2DMBS, distance as double, pitch as double, heading as double) 17818
- 125.24.8 Constructor(centerCoordinate as CLLocationCoordinate2DMBS, eyeCoordinate as CLLocationCoordinate2DMBS, eyeAltitude as double) 17818
- 125.24.9 Constructor(Handle as Integer) 17819

125.24.7 Constructor(centerCoordinate as CLLocationCoordinate2DMBS, distance as double, pitch as double, heading as double)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new camera object using the specified distance, pitch, and heading information.
Notes: centerCoordinate: The coordinate point on which the map should be centered.
distance: The line-of-sight distance from the camera to the center coordinate of the map.
pitch: The viewing angle of the camera, measured in degrees. A value of 0 results in a camera pointed straight down at the map. Angles greater than 0 result in a camera that is pitched toward the horizon by the specified number of degrees.
heading: The heading of the camera (measured in degrees) relative to true north. The value 0 means that the top edge of the map view corresponds to true north. The value 90 means the top of the map is pointing due east. The value 180 means the top of the map points due south, and so on.

Returns a new camera object initialized with the specified information.
The altitude of the camera is obtained by multiplying distance by the cosine of the pitch value.
See also:

- 125.24.6 Constructor 17818
- 125.24.8 Constructor(centerCoordinate as CLLocationCoordinate2DMBS, eyeCoordinate as CLLocationCoordinate2DMBS, eyeAltitude as double) 17818
- 125.24.9 Constructor(Handle as Integer) 17819

125.24.8 Constructor(centerCoordinate as CLLocationCoordinate2DMBS, eyeCoordinate as CLLocationCoordinate2DMBS, eyeAltitude as double)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new camera object using the specified viewing angle information.
Notes: centerCoordinate: The coordinate point on which the map should be centered.
eyeCoordinate: The coordinate point at which to place the camera. If the value for this parameter is equal to the value in the centerCoordinate parameter, the map is displayed as if the camera is looking straight down. If this point is offset from the centerCoordinate value, the map is displayed with an appropriate heading and pitch angle.
eyeAltitude: The altitude (in meters) above the ground at which to place the camera.

Returns a new camera object initialized with the specified information.

This method calculates the required pitch and heading angles to accommodate the specified eye position and altitude.

- 125.24.6 Constructor 17818
- 125.24.7 Constructor(centerCoordinate as CLLocationCoordinate2DMBS, distance as double, pitch as double, heading as double) 17818
- 125.24.9 Constructor(Handle as Integer) 17819

125.24.9 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKMapCamera reference from a declare.
The object is retained.
See also:

- 125.24.6 Constructor 17818
- 125.24.7 Constructor(centerCoordinate as CLLocationCoordinate2DMBS, distance as double, pitch as double, heading as double) 17818
- 125.24.8 Constructor(centerCoordinate as CLLocationCoordinate2DMBS, eyeCoordinate as CLLocationCoordinate2DMBS, eyeAltitude as double) 17818

125.24.10 copy as MKMapCameraMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the camera object.

125.24.11 Properties

125.24.12 altitude as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The altitude above the ground, measured in meters.
Notes: The value you specify for this property must not be less than 0.
Changing this property may also change the maximum pitch that is allowed for the map. If the current pitch value exceeds the new maximum, the pitch property is clamped to the new maximum.
(Read and Write property)

125.24.13 centerCoordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The map coordinate at the center of the map view.
Notes: This point represents the coordinate on which the map should be centered. When the camera pitch is 0, this property also corresponds to the geographic position of the camera. Changing the pitch to a nonzero value moves the camera but does not affect this property.
(Read and Write property)

125.24.14 heading as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The heading of the camera (measured in degrees) relative to true north.
Notes: The value 0 means that the top edge of the map view corresponds to true north. The value 90 means the top of the map is pointing due east. The value 180 means the top of the map points due south, and so on.
(Read and Write property)

125.24.15 pitch as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The viewing angle of the camera, measured in degrees.
Notes: A value of 0 results in a camera pointed straight down at the map. Angles greater than 0 result in a camera that is pitched toward the horizon by the specified number of degrees. If the map type is MapTypeSatellite or MapTypeHybrid, the pitch value is clamped to 0.
The value in this property may be clamped to a maximum value to maintain map readability. There is no fixed maximum value, though, because the actual maximum value is dependent on the current altitude of the camera.

(Read and Write property)

125.25 class MKMapItemMBS

125.25.1 class MKMapItemMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A point of interest on the map.
Example:

```
// open a location in the Maps app
Var place As New MKPlacemarkMBS(New CLLocationCoordinate2DMBS(50.9375, 6.9603))
Var item As New MKMapItemMBS(place)
item.Name = "Cologne Cathedral"

Call item.openInMaps(Nil)
```

Notes: A map item includes a geographic location and any interesting data that might apply to that location, such as the address at that location and the name of a business at that address. You can also create a special MKMapItem object representing the user's current location.

Use this class to do the following:

- Share map-related data with the Maps app.
- Handle requests for directions that originate from the Maps app.

To display information in Maps, create an MKMapItem object with the information you want to display and call the openMapsWithItems method. Maps displays that location on the map and shows the information you provide.
If you implement a routing app, Maps provides you with two MKMapItem objects representing the start and end points. Use the information in those two objects to plot the route and generate directions.

125.25.2 Methods

125.25.3 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKMapItem reference from a declare.
The object is retained.
See also:

- 125.25.4 Constructor(PlaceMark as MKPlacemarkMBS) 17823

125.25.4 Constructor(PlaceMark as MKPlacemarkMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a map item object using the specified placemark object.
Notes: placemark: The placemark object corresponding to the desired map location. This parameter must not be nil.

Use this method to create a map item for an existing placemark. Do not use it to create a map item representing the user,Äôs current location. To do that, use the mapItemForCurrentLocation method instead.
See also:

- 125.25.3 Constructor(Handle as Integer) 17823

125.25.5 mapItemForCurrentLocation as MKMapItemMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a singleton map item object representing the device,Äôs current location.
Notes: For privacy reasons, and because the user,Äôs location can change, the map item returned by this method does not contain any coordinate data. When you need the actual location of the user, you must use the Core Location framework to retrieve it.

125.25.6 MKLaunchOptionsCameraKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The virtual camera to use for viewing the map.
Notes: The value of this key is an MKMapCameraMBS object that describes a virtual camera that can specify a 3D perspective for the map. If you do not specify this key, Maps uses its current settings to define the appearance of the map.

125.25.7 MKLaunchOptionsDirectionsModeDefault as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Directions that match the user,Äôs preferred transportation type.

125.25.8 MKLaunchOptionsDirectionsModeDriving as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Driving directions between the specified start and end points.

125.25.9 MKLaunchOptionsDirectionsModeKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The mode of transportation.
Notes: The value of this key is an NSString corresponding to one of the values described in Directions Mode Values. You specify this key to tell the Maps app which mode of transport to use when generating directions.

125.25.10 MKLaunchOptionsDirectionsModeTransit as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Public transit directions between the specified start and end points.

125.25.11 MKLaunchOptionsDirectionsModeWalking as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Walking directions between the specified start and end points.

125.25.12 MKLaunchOptionsMapCenterKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate value on which to center the map.
Notes: The value of this key is an NSValue object that contains an encoded CLLocationCoordinate2D structure.

125.25.13 MKLaunchOptionsMapSpanKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The amount of the map to display.
Notes: The value of this key is an NSValue object that contains an encoded MKCoordinateSpan structure.

125.25.14 MKLaunchOptionsMapTypeKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The type of map (standard, satellite, or hybrid) to display.
Notes: The value of this key is an NSNumber object whose value is an integer corresponding to an MKMapType value.

125.25.15 MKLaunchOptionsShowsTrafficKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether to display traffic information.
Notes: The value of this key is a Boolean value. If you do not specify this key, Maps uses its current settings to determine whether or not to display traffic.

125.25.16 openInMaps(LaunchOptions as Dictionary) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Open the Maps app and display this map item.
Notes: launchOptions: Additional information that the Maps app can use to configure the map display. For example, you can use the launch options to specify the visible map region and the map type. For a list of keys you can put into this dictionary, see Launch Options Dictionary Keys.

This parameter may be nil.

Returns true if this map item was successfully opened by the Maps app, or false if there was an error.

You use this method to pass the current map item to the Maps app. If your map item contains descriptive information about the location (such as a name or URL), the Maps app displays that information at the specified coordinate.
If you specify the MKLaunchOptionsDirectionsModeKey option in the launchOptions dictionary, the Maps app interprets that as an attempt to map from the user,Äôs current location to the location specified by this map item.
If you do not include the MKLaunchOptionsMapCenterKey and MKLaunchOptionsMapSpanKey keys in your launchOptions dictionary, Maps constructs a region around the current item. It uses that region to set the visible portion of the map.

125.25.17 openMapsWithItems(items() as MKMapItemMBS, launchOptions as Dictionary) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Open the Maps app and display the specified map items.
Notes: mapItems: An array containing one or more MKMapItemMBS objects representing the items you want to display on the map.
launchOptions: Additional information that the Maps app can use to configure the map display. For example, you can use the launch options to specify the visible map region, a 3D perspective, and the map type. For a list of keys you can put into this dictionary, see Launch Options Dictionary Keys.

You may specify nil for this parameter.

Returns true if the map items were successfully opened by the Maps app, or false if there was an error.

You use this method to pass one or more map items to the Maps app. For example, you might use this method to ask the Maps app to display location-based search results generated by your app. Maps displays pins at each location you specify and uses the contents of each map item object to display additional information.
If you specify the MKLaunchOptionsDirectionsModeKey option in the launchOptions dictionary, the mapItems array must have no more than two items in it. If the array contains one item, the Maps app generates directions from the user,Äôs current location to the location specified by the map item. If the array contains two items, the Maps app generates directions from the location of the first item to the location of the second item in the array.
If you do not include the MKLaunchOptionsMapCenterKey and MKLaunchOptionsMapSpanKey keys in your launchOptions dictionary, Maps constructs a region that encompasses the provided items. It uses this region to set the visible portion of the map.

125.25.18 Properties

125.25.19 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

125.25.20 isCurrentLocation as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the map item represents the user,Äôs current location.
Notes: If the value of this property is true, the map item represents the user,Äôs current location. If true, the value in the placemark property is set to nil.
(Read only property)

125.25.21 Name as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The descriptive name associated with the map item.
Notes: Use this property to specify the name associated with the location. For example, if there is a business at the specified location, you would use this property to specify the name of the business.
If this map item represents the user,Äôs current location, the value in property is set to a localized version of ,ÄúCurrent Location,Äù.
(Read and Write property)

125.25.22 phoneNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The phone number associated with a business at the specified location.
Notes: If there is a relevant phone number associated with the location, such as a phone number for a business at the location, use this property to specify that value.
(Read and Write property)

125.25.23 placemark as MKPlacemarkMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The placemark object containing the location information.
Notes: If you created the map item using the mapItemForCurrentLocation method, the value of this property is nil and the isCurrentLocation property is set to true.
(Read only property)

125.25.24 timeZone as NSTimeZoneMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The time zone of the specified location.
Notes: When you search for map items, MapKit populates this field with the time zone information as a convenience. You may also set the time zone for any map items you create.
(Read and Write property)

125.25.25 URL as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The URL associated with the specified location.
Notes: If there is a relevant URL associated with the location, such as a URL for a business at the location, use this property to specify that value.
(Read and Write property)

125.26 class MKMapPointMBS

125.26.1 class MKMapPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The class for a point on the map.
Example:

```
// take some coordinates
Var c1 as new CLLocationCoordinate2DMBS(52.518611, 13.408333) // Berlin
Var c2 as new CLLocationCoordinate2DMBS(48.137222, 11.575556) // Munich

// convert to points on map
Var p1 as MKMapPointMBS = MKMapPointMBS.Point(c1)
Var p2 as MKMapPointMBS = MKMapPointMBS.Point(c2)

// show
MessageBox p1.StringValue+EndOfLine+p2.StringValue

// create locations
Var l1 as new CLLocationMBS(c1.latitude, c1.longitude)
Var l2 as new CLLocationMBS(c2.latitude, c2.longitude)

// show
MessageBox l1.Description+EndOfLine+l2.Description

// now get distance on two ways
Var d1 as Double = MKMapPointMBS.MetersBetweenMapPoints(p1,p2)
Var d2 as Double = l1.distanceFromLocation(l2)

// and format to show
Var s1 as string = MKDistanceFormatterMBS.formatter.stringFromDistance(d1)
Var s2 as string = MKDistanceFormatterMBS.formatter.stringFromDistance(d2)

MessageBox "Distance: "+s1+" vs. "+s2
// not the same due to rounding!
```

125.26.2 Methods

125.26.3 Constructor(other as MKMapPointMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The copy constructor.
See also:

- 125.26.4 Constructor(x as double = 0, y as double = 0) 17830

125.26.4 Constructor(x as double = 0, y as double = 0)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The map constructor.
See also:

- 125.26.3 Constructor(other as MKMapPointMBS) 17830

125.26.5 Coordinate(point as MKMapPointMBS) as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Converts point in map to coordinate.

125.26.6 Equal(other as MKMapPointMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Compares two point objects.
Notes: Returns true if both are equal.

125.26.7 MapPointsPerMeterAtLatitude(Latitude as Double) as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the number of map points that represent one meter at the given latitude.
Notes: The number of map points per meter increases as the latitude approaches the poles.

125.26.8 MetersBetweenMapPoints(point1 as MKMapPointMBS, point2 as MKMapPointMBS) as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the number of meters between two map points.
Notes: This distance reflects the actual distance between the two points on the surface of the globe, taking into account the curvature of the Earth.

125.26.9 MetersPerMapPointAtLatitude(Latitude as Double) as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the distance spanned by one map point at the specified latitude.
Example:

```
MessageBox str(MKMapPointMBS.MetersPerMapPointAtLatitude(50.0))
```

Notes: latitude: The latitude for which to return the value.

Returns the distance (in meters) spanned by a single map point.

The distance between map points decreases as the latitude approaches the poles. This relationship parallels the relationship between longitudinal coordinates at different latitudes.

125.26.10 Point(coordinate as CLLocationCoordinate2DMBS) as MKMapPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Converts coordinate in point in map.
See also:

- 125.26.11 Point(x as double = 0, y as double = 0) as MKMapPointMBS 17831

125.26.11 Point(x as double = 0, y as double = 0) as MKMapPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new point with given values.
See also:

- 125.26.10 Point(coordinate as CLLocationCoordinate2DMBS) as MKMapPointMBS 17831

125.26.12 Properties

125.26.13 StringValue as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Formats point as text for display in debugger.
Example:

```
Var p as new MKMapPointMBS(12, 34)

MessageBox p.StringValue
```

Notes: (Read only property)

125.26.14 X as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The X coordinate.
Notes: (Read and Write property)

125.26.15 Y as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The Y coordinate.
Notes: (Read and Write property)

125.27 class MKMapRectMBS

125.27.1 class MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The class for a map rectangle.
Example:

```
// calculate a map rectangle containing two places
Var berlin As MKMapPointMBS = MKMapPointMBS.Point(New CLLocationCoordinate2DMBS(52.52, 13.405))
Var munich As MKMapPointMBS = MKMapPointMBS.Point(New CLLocationCoordinate2DMBS(48.137, 11.575))

Var r1 As New MKMapRectMBS(berlin.X, berlin.Y, 0, 0)
Var r2 As New MKMapRectMBS(munich.X, munich.Y, 0, 0)
Var both As MKMapRectMBS = r1.Union(r2).Inset(-50000, -50000) // add some margin

Var region As MKCoordinateRegionMBS = both.Region
MessageBox "Center: " + region.center.latitude.ToString + ", " + region.center.longitude.ToString + EndOfLine + _
"Distance: " + Format(MKMapPointMBS.MetersBetweenMapPoints(berlin, munich) / 1000, "0") + " km"

// pass both to MKMapViewMBS.setVisibleMapRect to show both places on a map
```

Blog Entries

- MapKit Framework for Xojo

125.27.2 Methods

125.27.3 Constructor(origin as MKMapPointMBS, size as MKMapSizeMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
Notes: Copies values from point and size to build new rectangle.
See also:

- 125.27.4 Constructor(other as MKMapRectMBS) 17834
- 125.27.5 Constructor(x as double = 0, y as double = 0, w as double = 0, h as double = 0) 17834

125.27.4 Constructor(other as MKMapRectMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The copy constructor.
See also:

- 125.27.3 Constructor(origin as MKMapPointMBS, size as MKMapSizeMBS) 17833
- 125.27.5 Constructor(x as double = 0, y as double = 0, w as double = 0, h as double = 0) 17834

125.27.5 Constructor(x as double = 0, y as double = 0, w as double = 0, h as double = 0)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 125.27.3 Constructor(origin as MKMapPointMBS, size as MKMapSizeMBS) 17833
- 125.27.4 Constructor(other as MKMapRectMBS) 17834

125.27.6 Contains(other as MKMapPointMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns true if point is included in rectangle area.
See also:

- 125.27.7 Contains(other as MKMapRectMBS) as Boolean 17834

125.27.7 Contains(other as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns true if given rectangle is included in rectangle area.
See also:

- 125.27.6 Contains(other as MKMapPointMBS) as Boolean 17834

125.27.8 Divide(byref slice as MKMapRectMBS, byref remainder as MKMapRectMBS, amount as double, edge as Integer)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Divides rectangle in slice and remainder.

125.27.9 Equal(other as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Compares two rectangle objects.
Notes: Returns true if both are equal.

125.27.10 Inset(dx as Double, dy as Double) as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Insets rectangle by given delta and returns new rectangle.

125.27.11 Intersection(other as MKMapRectMBS) as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns intersection of two map rectangles.

125.27.12 Intersects(other as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether the given rectangle intersects with the current one.

125.27.13 Null as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Queries a null rectangle.

125.27.14 Offset(dx as Double, dy as Double) as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Offsets map rectangle by given offset.

125.27.15 Rect(x as double = 0, y as double = 0, width as double = 0, heigth as double = 0) as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates new rectangle with given values.

125.27.16 Region as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creation region covering the map rectangle.

125.27.17 Remainder as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: For map rects that span the 180th meridian, this returns the portion of the rect that lies outside of the world rect wrapped around to the other side of the world.
Notes: The portion of the rect that lies inside the world rect can be determined with rect.Intersection(MKMapRectMBS.World).

125.27.18 Union(other as MKMapRectMBS) as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns union of both rectangles.

125.27.19 World as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The world rectangle.
Notes: The rect that contains every map point in the world.

125.27.20 Properties

125.27.21 Height as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The height of the rectangle.
Notes: (Read and Write property)

125.27.22 isEmpty as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns true if rectangle is empty.
Notes: (Read only property)

125.27.23 isNull as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns true if rectangle is null rectangle.
Notes: (Read only property)

125.27.24 MaxX as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Maximum X value of rectangle.
Notes: (Read only property)

125.27.25 MaxY as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The maximum X value of the rectangle.
Notes: (Read only property)

125.27.26 MidX as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The middle x value of this rectangle.
Notes: (Read only property)

125.27.27 MidY as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Middle Y value of rectangle.
Notes: (Read only property)

125.27.28 MinX as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Minimum X value of rectangle.
Notes: (Read only property)

125.27.29 MinY as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Minimum Y value of rectangle.
Notes: (Read only property)

125.27.30 Origin as MKMapPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The origin point of the rectangle.
Notes: Returns new point object with given values.
(Read and Write property)

125.27.31 Size as MKMapSizeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The size of the rectangle.
Notes: Returns new size object with given values.
(Read and Write property)

125.27.32 Spans180thMeridian as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this map rectangle spans the 180th meridian.
Notes: (Read only property)

125.27.33 StringValue as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Formats rect as text for display in debugger.
Example:

```
Var r as new MKMapRectMBS(1,2,3,4)

MessageBox r.StringValue
```

Notes: (Read only property)

125.27.34 Width as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The width of the rectangle.
Notes: (Read and Write property)

125.27.35 X as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The X origin coordinate.
Notes: (Read and Write property)

125.27.36 Y as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The Y origin coordinate.
Notes: (Read and Write property)

125.28 class MKMapSizeMBS

125.28.1 class MKMapSizeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The class for a size in maps.
Example:

```
// calculate how many map points a 10 km wide area is at a latitude
Var pointsPerMeter As Double = MKMapPointMBS.MapPointsPerMeterAtLatitude(50.0)
Var size As MKMapSizeMBS = MKMapSizeMBS.Size(10000 * pointsPerMeter, 5000 * pointsPerMeter)

Var center As MKMapPointMBS = MKMapPointMBS.Point(New CLLocationCoordinate2DMBS(50.3569, 7.5890))
Var area As New MKMapRectMBS(center.X - size.Width / 2, center.Y - size.Height / 2, size.Width, size.Height)
MessageBox "Size: " + size.StringValue + EndOfLine + "Part of world: " + Format(size.Width / MKMapSizeMBS.World.Width * 100, "0.000") + "%"
// show area with MKMapViewMBS.setVisibleMapRect
```

125.28.2 Methods

125.28.3 Constructor(other as MKMapSizeMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The copy constructor.
See also:

- 125.28.4 Constructor(width as double = 0, height as double = 0) 17841

125.28.4 Constructor(width as double = 0, height as double = 0)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 125.28.3 Constructor(other as MKMapSizeMBS) 17841

125.28.5 Equal(other as MKMapSizeMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Compares two size objects.
Notes: Returns true if both are equal.

125.28.6 Size(Width as double = 0, Height as double = 0) as MKMapSizeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates new size object with given values.

125.28.7 World as MKMapSizeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The size that contains every map point in the world.

125.28.8 Properties

125.28.9 Height as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The height of the size.
Notes: (Read and Write property)

125.28.10 StringValue as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Formats size as text for display in debugger.
Notes: (Read only property)

125.28.11 Width as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The width of the size.
Notes: (Read and Write property)

125.29 class MKMapSnapshotMBS

125.29.1 class MKMapSnapshotMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The class to take map snapshots.
Example:

```
// create a map picture without showing a map view
// MySnapshotter is a subclass of MKMapSnapshotterMBS with the SnapshotCompleted event implemented.
// Snapshotter is a property of the window: Snapshotter As MySnapshotter
Var options As New MKMapSnapshotOptionsMBS
options.region = MKCoordinateRegionMBS.MakeWithDistance(New CLLocationCoordinate2DMBS(50.3569,
7.5890), 2000, 2000)
options.size = NSMakeSizeMBS(600, 400)

Snapshotter = New MySnapshotter(options)
Snapshotter.Start

// in MySnapshotter:
Sub SnapshotCompleted(snapshot As MKMapSnapshotMBS, error As NSErrorMBS, tag As Variant) Han-
dles SnapshotCompleted
If error <>Nil Then
System.DebugLog error.localizedDescription
Return
End If
Var pic As Picture = snapshot.Image.CopyPicture
// pointForCoordinate tells where to draw a marker
Var p As NSPointMBS = snapshot.pointForCoordinate(New CLLocationCoordinate2DMBS(50.3569, 7.5890))
pic.Graphics.DrawingColor = &cFF0000
pic.Graphics.FillOval(p.X - 5, p.Y - 5, 10, 10)
// show pic in a Canvas or save it
End Sub
```

125.29.2 Methods

125.29.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

- 125.29.4 Constructor(Handle as Integer) 17845

125.29.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKMapSnapshot reference from a declare.
The object is retained.
See also:

- 125.29.3 Constructor 17845

125.29.5 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

125.29.6 pointForCoordinate(coordinate as CLLocationCoordinate2DMBS) as NSPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Translates a point in the coordinate to the point in the image.

125.29.7 Properties

125.29.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

125.29.9 Image as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The image created.
Notes: Please use methods in NSImageMBS class to get PNG or JPEG data.
Or use methods to copy a xojo picture.
(Read only property)

125.29.10 Options as MKMapSnapshotOptionsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The options used to create object.
Notes: (Read and Write property)

125.29.11 Tag as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The tag passed to creating the snapshot.
Notes: e.g. a ID for a database record.
(Read and Write property)

125.30 class MKMapSnapshotOptionsMBS

125.30.1 class MKMapSnapshotOptionsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The class for snapshot options.
Example:

```
// options for a 600 x 400 hybrid map image of Cologne
Var options As New MKMapSnapshotOptionsMBS
options.region = MKCoordinateRegionMBS.MakeWithDistance(New CLLocationCoordinate2DMBS(50.9375, 6.9603), 3000, 3000)
options.size = NSMakeSizeMBS(600, 400)
options.mapType = MKMapViewMBS.MapTypeHybrid

// pass the options to MKMapSnapshotterMBS
```

125.30.2 Methods

125.30.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 125.30.4 Constructor(Handle as Integer) 17847

125.30.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKMapSnapshotOptions reference from a declare.
The object is retained.
See also:

• 125.30.3 Constructor 17847

125.30.5 Copy as MKMapSnapshotOptionsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the options.

125.30.6 Properties

125.30.7 appearance as NSAppearanceMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The appearance to use for rendering.
Notes: For MacOS 10.14 or newer.
(Read and Write property)

125.30.8 camera as MKMapCameraMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The camera to use.
Notes: (Read and Write property)

125.30.9 mapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The rectangle in the map to query.
Notes: (Read and Write property)

125.30.10 mapType as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The map type to use.
Notes: (Read and Write property)

125.30.11 region as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The region to use.
Notes: (Read and Write property)

125.30.12 showsBuildings as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to show buildings.
Notes: Affects MKMapTypeStandard.
(Read and Write property)

125.30.13 showsPointsOfInterest as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to show points of interest.
Notes: Affects MKMapTypeStandard and MKMapTypeHybrid.
(Read and Write property)

125.30.14 size as NSSizeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The size of the image to create.
Notes: Defaults to 256x256 if nil.
(Read and Write property)

125.31 class MKMapSnapshotterMBS

125.31.1 class MKMapSnapshotterMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The class to take snapshots for maps.
Example:

```
// render a map image without showing a map view
// MySnapshotter is a subclass of MKMapSnapshotterMBS with the SnapshotCompleted event implemented.
// Snapshotter is a property of the window: Snapshotter As MySnapshotter
Var options As New MKMapSnapshotOptionsMBS
options.region = MKCoordinateRegionMBS.MakeWithDistance(New CLLocationCoordinate2DMBS(50.9375,
6.9603), 3000, 3000)
options.size = NSMakeSizeMBS(600, 400)
options.mapType = MKMapViewMBS.MapTypeSatellite

Snapshotter = New MySnapshotter(options)
Snapshotter.Start

// in MySnapshotter:
Sub SnapshotCompleted(snapshot As MKMapSnapshotMBS, error As NSErrorMBS, tag As Variant) Han-
dles SnapshotCompleted
If snapshot <>Nil Then
Var pic As Picture = snapshot.Image.CopyPictureWithAlpha
// show pic in a Canvas or save it
End If
End Sub
```

125.31.2 Methods

125.31.3 Cancel

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels the snapshot.

125.31.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKMapSnapshotter reference from a declare.
The object is retained.
See also:

- 125.31.5 Constructor(options as MKMapSnapshotOptionsMBS) 17851

125.31.5 Constructor(options as MKMapSnapshotOptionsMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
Notes: We keep reference to options in options property.
See also:

- 125.31.4 Constructor(Handle as Integer) 17851

125.31.6 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

125.31.7 Start(tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Starts the asynchronous snapshot process.
Notes: The tag value is passed to the snapshot for later reference.
Triggers SnapshotCompleted event later.
Sets Error and Snapshot properties on this object.

125.31.8 Properties

125.31.9 Error as NSErrorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The last error.
Notes: (Read and Write property)

125.31.10 Loading as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this is still loading.
Notes: (Read only property)

125.31.11 Options as MKMapSnapshotOptionsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The options used to create object.
Notes: (Read and Write property)

125.31.12 Snapshot as MKMapSnapshotMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The last snapshot.
Notes: (Read and Write property)

125.31.13 Events

125.31.14 SnapshotCompleted(snapshot as MKMapSnapshotMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The event to be called when snapshot is done.

125.32 class MKMapViewMBS

125.32.1 class MKMapViewMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: An MKMapView object provides an embeddable map interface, similar to the one provided by the Maps application.
Example:

```
// add a map to the window, centered on Cologne with a pin
Var map As New MKMapViewMBS(0, 0, Self.Width, Self.Height)
map.mapType = MKMapViewMBS.MapTypeStandard
Self.NSWindowMBS.contentView.addSubview map

Var center As New CLLocationCoordinate2DMBS(50.9375, 6.9603)
map.setRegion(MKCoordinateRegionMBS.MakeWithDistance(center, 5000, 5000), True)

Var pin As New MKPointAnnotationMBS
pin.coordinate = center
pin.title = "Cologne"
map.addAnnotation pin
```

Notes: You use this class as-is to display map information and to manipulate the map contents from your application. You can center the map on a given coordinate, specify the size of the area you want to display, and annotate the map with custom information.

In the IDE we show a generic map image as preview as the control itself doesn't perform well inside the Xojo IDE.
Subclass of the NSViewMBS class.

125.32.2 Methods

125.32.3 addAnnotation(annotation as MKAnnotationMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Adds the specified annotation to the map view.
Example:

```
Var mapview as MKMapViewMBS // your map view

// new pin
Var pin as new MKPointAnnotationMBS

pin.coordinate = mapView.centerCoordinate
pin.title = "Hello"
```

```
// show on map
mapView.addAnnotation pin
```

125.32.4 addAnnotations(annotations() as MKAnnotationMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Adds an array of annotation objects to the map view.

125.32.5 addOverlay(overlay as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Adds a single overlay object to the map.
Example:

```
Var mapview as MKMapViewMBS // your map view
Var centerCoordinate as CLLocationCoordinate2DMBS = mapview.centerCoordinate
Var radius as Integer = 300 // 300 meter

Var circle as MKCircleMBS = MKCircleMBS.circleWithCenterCoordinate(centerCoordinate, radius)
mapview.addOverlay circle
```

Notes: overlay: The overlay object to add. This object must conform to the MKOverlayMBS interface.

The specified object is added to the group of overlay objects in the MKOverlayLevelAboveLabels level. Adding an overlay causes the map view to begin monitoring the area represented by that overlay. As soon as the bounding rectangle of an overlay intersects the visible portion of the map, the map view adds a corresponding overlay view to the map. The overlay view is provided by the mapViewViewForOverlay event.

To remove an overlay from a map, use the removeOverlay method.
See also:

- 125.32.6 addOverlay(overlay as MKOverlayMBS, level as integer) 17855

125.32.6 addOverlay(overlay as MKOverlayMBS, level as integer)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Adds the overlay object to the map at the specified level.
Notes: overlay: The overlay object to add. This object must conform to the MKOverlayMBS interface.
level: The map level at which to place the overlay. For a list of possible values for this parameter, see level

constants.

Positioning an overlay at a specific level places that overlay,Äôs visual representation in front of or behind other map content such as map labels and point-of-interest icons.
This method adds the specified overlay to the end of the list of overlay objects at the given level. Adding an overlay also causes the map view to begin monitoring the area they represent. As soon as the bounding rectangle of the overlay intersects the visible portion of the map, the map view calls your rendererForOverlay event to get the renderer object to use when drawing the overlay.
To remove an overlay from a map, use the removeOverlay: method.
See also:

- 125.32.5 addOverlay(overlay as MKOverlayMBS) 17855

125.32.7 addOverlays(overlays() as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Adds an array of overlay objects to the map.
Notes: overlays: An array of objects, each of which must conform to the MKOverlayMBS interface.

The specified objects are added to the group of overlay objects in the MKOverlayLevelAboveLabels level. Adding an overlay causes the map view to begin monitoring the area represented by that overlay. As soon as the bounding rectangle of the overlay intersects the visible portion of the map, the map view tries to draw the overlay. As soon as the bounding rectangle of an overlay intersects the visible portion of the map, the map view adds a corresponding overlay view to the map. The overlay view is provided by the mapViewViewForOverlay method of the map view's delegate object.

To remove multiple overlays from a map, use the removeOverlays method.
See also:

- 125.32.8 addOverlays(overlays() as MKOverlayMBS, level as integer) 17856

125.32.8 addOverlays(overlays() as MKOverlayMBS, level as integer)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Adds an array of overlay objects to the map at the specified level.
Notes: overlays: The array of overlay objects to add. Each object in the array must conform to the MKOverlayMBS interface.
level: The map level at which to place the overlays. For a list of possible values for this parameter, see MKOverlayLevel.

Positioning an overlay at a specific level places that overlay,Äôs visual representation in front of or behind other map content such as map labels and point-of-interest icons.

This method adds the specified overlays to the end of the list of overlay objects at the given level. Adding the overlays also causes the map view to begin monitoring the area they represent. As soon as the bounding rectangle of an overlay intersects the visible portion of the map, the map view calls your rendererForOverlay event to get the renderer object to use when drawing that overlay.

To remove multiple overlays from a map, use the removeOverlays method.
See also:

- 125.32.7 addOverlays(overlays() as MKOverlayMBS) 17856

125.32.9 annotations as MKAnnotationMBS()

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The complete list of annotations associated with the receiver.
Notes: If no annotations are associated with the map view, the value of this property is empty.

125.32.10 annotationsInMapRect(mapRect as MKMapRectMBS) as MKAnnotationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the annotation objects located in the specified map rectangle.
Notes: mapRect: The portion of the map that you want to search for annotations.

Returns the array of annotation objects located in mapRect.

This method offers a fast way to retrieve the annotation objects in a particular portion of the map. This method is much faster than doing a linear search of the objects in the annotations property yourself.

125.32.11 annotationViews as MKAnnotationViewMBS()

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: Queries internal list of MapView to get list of all annotation views.

125.32.12 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Returns true for Mac 64-bit targets.

125.32.13 Constructor

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new box view with size 100/100 and position 0/0
Example:

```
Var x as new MKMapViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 125.32.14 Constructor(Handle as Integer) 17858
- 125.32.15 Constructor(left as Double, top as Double, width as Double, height as Double) 17858

125.32.14 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an object based on the given NSView handle.
Example:

```
Var t as new MKMapViewMBS(0, 0, 100, 100)
Var v as new MKMapViewMBS(t.handle)

MessageBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a MKMapView and the plugin retains this handle.
See also:

- 125.32.13 Constructor 17858
- 125.32.15 Constructor(left as Double, top as Double, width as Double, height as Double) 17858

125.32.15 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new control with the given size and position.
Example:

```
Var left,top,width,height as Integer
// define rectangle
Var x as new MKMapViewMBS(left, top, width, height)
```

Notes: On success the handle property is not zero.
See also:

- 125.32.13 Constructor 17858
- 125.32.14 Constructor(Handle as Integer) 17858

125.32.16 convertCoordinateToPointToView(coordinate as CLLocationCoordinate2DMBS, view as NSViewMBS) as NSPointMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Converts a map coordinate to a point in the specified view.
Notes: coordinate: The map coordinate for which you want to find the corresponding point.
view: The view in whose coordinate system you want to locate the specified map coordinate. If this parameter is nil, the returned point is specified in the window's coordinate system. If view is not nil, it must belong to the same window as the map view.

Returns the point (in the appropriate view or window coordinate system) corresponding to the specified latitude and longitude value.

125.32.17 convertPointToCoordinateFromView(point as NSPointMBS, view as NSViewMBS) as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Converts a point in the specified view's coordinate system to a map coordinate.
Notes: point: The point you want to convert.
view: The view that serves as the reference coordinate system for the point parameter.

Returns the map coordinate at the specified point.

125.32.18 convertRectToRegionFromView(rect as NSRectMBS, view as NSViewMBS) as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Converts a rectangle in the specified view's coordinate system to a map region.
Example:

```
// convert mouse position in x/y to select annotation on the given mouse point
Var xView As MKMapViewMBS = MapViewControl.View
Var rect As New NSRectMBS(x,y,1,1)
Var region As MKCoordinateRegionMBS = xView.convertRectToRegionFromView(rect,xView)
Var center As CLLocationCoordinate2DMBS = region.center
Var circle As New MKCircleMBS(center,32)
Var mapRect As MKMapRectMBS = circle.boundingMapRect()
Var xAnnos() As MKAnnotationMBS = xView.annotationsInMapRect(mapRect)

If xAnnos.LastRowIndex <>-1 Then
Var xThisAnno As MKAnnotationMBS = xAnnos(0)
If xThisAnno IsA MKPointAnnotationMBS Then
me.View.selectAnnotation(xThisAnno,False)
Return True
End If
End If
```

Notes: rect: The rectangle you want to convert.
view: The view that serves as the reference coordinate system for the rect parameter.

Returns the map region corresponding to the specified view rectangle.

125.32.19 convertRegionToRectToView(region as MKCoordinateRegionMBS, view as NSViewMBS) as NSRectMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Converts a map region to a rectangle in the specified view.
Notes: region: The map region for which you want to find the corresponding view rectangle.
view: The view in whose coordinate system you want to locate the specified map region. If this parameter is nil, the returned rectangle is specified in the window's coordinate system. If view is not nil, it must belong to the same window as the map view.

Returns the rectangle corresponding to the specified map region.

125.32.20 dequeueReusableAnnotationViewWithIdentifier(identifier as string) as MKAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a reusable annotation view located by its identifier.
Notes: identifier: A string identifying the annotation view to be reused. This string is the same one you specify when initializing the annotation view using the Constructor method.

Returns an annotation view with the specified identifier, or nil if no such object exists in the reuse queue.

For performance reasons, you should generally reuse MKAnnotationView objects in your map views. As annotation views move offscreen, the map view moves them to an internally managed reuse queue. As new annotations move onscreen, and your code is prompted to provide a corresponding annotation view, you should always attempt to dequeue an existing view before creating a new one. Dequeueing saves time and memory during performance-critical operations such as scrolling.

125.32.21 deselectAnnotation(annotation as MKAnnotationMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Deselects the specified annotation and hides its callout view.
Notes: annotation: The annotation object to deselect.
animated: If true, the callout view is animated offscreen.

125.32.22 Destructor

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

125.32.23 exchangeOverlay(index1 as Integer, index2 as Integer)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Exchanges the positions of the two overlay objects.
Notes: index1: The index of an overlay in the MKOverlayLevelAboveLabels map level.
index2: The index of another overlay in the MKOverlayLevelAboveLabels map level.

If you need to exchange overlays in other map levels, use the exchangeOverlay method.
See also:

- 125.32.24 exchangeOverlay(Overlay1 as MKOverlayMBS, Overlay2 as MKOverlayMBS) 17862

125.32.24 exchangeOverlay(Overlay1 as MKOverlayMBS, Overlay2 as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Exchanges the positions of the two overlay objects.
Notes: If the overlays are in the same map level, they exchange positions within that level,Äôs array of overlay objects. If they are in different map levels, the two objects also swap levels. Swapping the position of the overlays affects their visibility in the map view.
See also:

- 125.32.23 exchangeOverlay(index1 as Integer, index2 as Integer) 17861

125.32.25 insertOverlayAboveOverlay(overlay as MKOverlayMBS, aboveOverlay as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Inserts one overlay object on top of another.
Notes: overlay: The overlay object to insert.
sibling: An existing object in the overlays array. This object must exist in the array and must not be nil.

This method inserts the overlay into the MKOverlayLevelAboveLabels level and positions it relative to the specified sibling. When displayed, this leads to the overlay's contents being displayed above that of its sibling. If sibling is not in the same map level, this method appends the overlay to the end of the list of overlays at the indicated level.

125.32.26 insertOverlayAtIndex(overlay as MKOverlayMBS, index as Integer)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Inserts an overlay object into the list associated with the map.
Notes: overlay: The overlay object to insert.
index: The index at which to insert the overlay object. If this value is greater than the number of objects in the overlays property, this method appends the object to the end of the array.

This method inserts the overlay into the MKOverlayLevelAboveLabels level.
See also:

- 125.32.27 insertOverlayAtIndex(overlay as MKOverlayMBS, index as integer, level as integer) 17863

125.32.27 insertOverlayAtIndex(overlay as MKOverlayMBS, index as integer, level as integer)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Inserts an overlay object into the level at the specified index.
Notes: overlay: The overlay object to insert.
index: The index at which to insert the overlay object. If this value is greater than the number of objects in the overlays property, this method appends the object to the end of the array.
level: The map level at which to place the overlay. For a list of possible values for this parameter, see level constants.

Inserting an overlay at a specific level places that overlay,Äôs visual representation in front of or behind other map content such as map labels and point-of-interest icons.
See also:

- 125.32.26 insertOverlayAtIndex(overlay as MKOverlayMBS, index as Integer) 17862

125.32.28 insertOverlayBelowOverlay(overlay as MKOverlayMBS, belowOverlay as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Inserts one overlay object below another.
Notes: overlay: The overlay object to insert.
sibling: An existing object in the overlays array. This object must exist in the array and must not be nil.

This method inserts the overlay into the MKOverlayLevelAboveLabels level and positions it relative to the specified sibling. When displayed, this leads to the overlay's contents being displayed beneath that of its sibling. If sibling is not in the same map level, this method appends the overlay to the end of the list of overlays at the indicated level.

125.32.29 mapRectThatFits(mapRect as MKMapRectMBS) as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Adjusts the aspect ratio of the specified map rectangle to ensure that it fits in the map view,Äôs frame.
Notes: mapRect: The initial map rectangle whose width and height you want to adjust.

Returns a map rectangle that is still centered on the same point of the map but whose width and height are adjusted to fit in the map view,Äôs frame.

You can use this method to normalize map rectangle values before displaying the corresponding area. This method returns a new map rectangle that both contains the specified rectangle and fits neatly inside the map view,Äôs frame.
See also:

- 125.32.30 mapRectThatFits(mapRect as MKMapRectMBS, edgePaddingLeft as Double, edgePaddingTop as Double, edgePaddingRight as Double, edgePaddingBottom as Double) as MKMapRectMBS 17864

125.32.30 mapRectThatFits(mapRect as MKMapRectMBS, edgePaddingLeft as Double, edgePaddingTop as Double, edgePaddingRight as Double, edgePaddingBottom as Double) as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Adjusts the aspect ratio of the specified map rectangle, incorporating the specified inset values.
Notes: A map rectangle that is still centered on the same point of the map but whose width and height are adjusted to fit in the map view,Äôs frame minus the inset values.
See also:

- 125.32.29 mapRectThatFits(mapRect as MKMapRectMBS) as MKMapRectMBS 17863

125.32.31 MKErrorDomain as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The error domain for Map Kit.

125.32.32 MKMapViewDefaultAnnotationViewReuseIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The default reuse identifier for your map's annotation views.
Notes: Use this constant to register a default annotation view. This default annotation view is used when your map view's delegate does not implement the viewForAnnotation event or when that method returns nil.

125.32.33 MKMapViewDefaultClusterAnnotationViewReuseIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The default reuse identifier for the annotation view representing a cluster of annotations.
Notes: Use this constant to register a default annotation view to use for clusters of annotations. This cluster annotation view is used when your map view's delegate does not implement the viewForAnnotation

event or when that method returns nil.

125.32.34 overlays as MKOverlayMBS()

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The overlay objects currently associated with the map view.
Notes: This property contains the union of all overlays at the different levels of the map. The objects in this array must adopt the MKOverlayMBS interface. If no overlays are associated with the map view, the value of this property is an empty array.

The order of the objects in this array does not necessary reflect their visual order on the map.

125.32.35 overlaysInLevel(level as Integer) as MKOverlayMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The overlay objects in the specified level of the map.
Notes: level: The map level whose overlays you want. For a list of possible values for this parameter.

Returns an array of objects conforming to the MKOverlayMBS interfaces that display in the specified map level. If there are no overlays at the specified level, this method returns an empty array.

You can use this method to get all of the overlays assigned to a specific map level, which might be a subset of the complete set of overlay objects. For overlapping overlay objects, the order of objects in the array represents their visual order when displayed on the map, with objects in the beginning of the array located behind those at later indexes.

125.32.36 regionThatFits(region as MKCoordinateRegionMBS) as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Adjusts the aspect ratio of the specified region to ensure that it fits in the map view,Äôs frame.
Notes: region: The initial region whose span you want to adjust.

Returns a region that is still centered on the same point of the map but whose span values are adjusted to fit in the map view,Äôs frame.

You can use this method to normalize the region values before displaying them in the map. This method

returns a new region that both contains the specified region and fits neatly inside the map view,Äôs frame.

125.32.37 removeAnnotation(annotation as MKAnnotationMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Removes the specified annotation object from the map view.
Notes: annotation: The annotation object to remove. This object must conform to the MKAnnotationMBS interface.

If the annotation is currently associated with an annotation view, and that view has a reuse identifier, this method removes the annotation view and queues it internally for later reuse. You can retrieve queued annotation views (and associate them with new annotations) using the dequeueReusableAnnotationViewWithIdentifier method.

Removing an annotation object disassociates it from the map view entirely, preventing it from being displayed on the map. Thus, you would typically call this method only when you want to hide or delete a given annotation.

125.32.38 removeAnnotations(annotations() as MKAnnotationMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Removes an array of annotation objects from the map view.
Notes: annotations: The array of annotations to remove. Objects in the array must conform to the MKAnnotationMBS interface.

If any annotation object in the array has an associated annotation view, and if that view has a reuse identifier, this method removes the annotation view and queues it internally for later reuse. You can retrieve queued annotation views (and associate them with new annotations) using the dequeueReusableAnnotationViewWithIdentifier method.

Removing annotation objects disassociates them from the map view entirely, preventing them from being displayed on the map. Thus, you would typically call this method only when you want to hide or delete the specified annotations.

125.32.39 removeOverlay(overlay as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Removes a single overlay object from the map.
Notes: overlay: The overlay object to remove.

This method removes the overlay regardless of the level that it is in. Removing an overlay also removes its corresponding renderer, if one is in use. If the specified overlay is not currently associated with the map view, this method does nothing.

125.32.40 removeOverlays(overlays() as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Removes one or more overlay objects from the map.
Notes: overlays: An array of objects, each of which conforms to the MKOverlayMBS interface.

This method removes the specified overlays regardless of which level each one is in. Removing an overlay also removes its corresponding renderer, if one is in use. If a given overlay object is not associated with the map view, it is ignored.

125.32.41 rendererForOverlay(overlay as MKOverlayMBS) as MKOverlayRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the renderer object used to draw the contents of the specified overlay object.
Notes: overlay: The overlay object whose renderer you want.

Returns the renderer object in use for the specified overlay or nil if the overlay is not onscreen.

This method returns the renderer object that your control provided in its xrendererForOverlay event.

125.32.42 selectAnnotation(annotation as MKAnnotationMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Selects the specified annotation and displays a callout view for it.
Notes: annotation: The annotation object to select.
animated: If true, the callout view is animated into position.

If the specified annotation is not onscreen, and therefore does not have an associated annotation view, this method has no effect.

125.32.43 selectedAnnotations as MKAnnotationMBS()

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The annotations that are currently selected.
Notes: Assigning a new array to this property selects only the first annotation in the array.

125.32.44 setCamera(camera as MKMapCameraMBS, Animated as boolean = true)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Changes the camera used for determining the map,Äôs viewing parameters and optionally animates the change.
Notes: camera: The camera object containing the viewing angle information. This parameter must not be nil.
animated: Specify true if you want the change in viewing angle to be animated or false if you want the map to reflect the changes without animations.

125.32.45 setCenterCoordinate(centerCoordinate as CLLocationCoordinate2DMBS, zoomLevel as double, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop & iOS.

Function: hanges the center coordinate of the map with zoom and optionally animates the change.
Notes: Zoomlevel is in range 1 to 20.

Latitude and Longitude in coordinate: The new center coordinate for the map.
animated: Specify true if you want the map view to scroll to the new location or false if you want the map to display the new location immediately.

Changing the center coordinate centers the map on the new coordinate without changing the current zoom level. It also updates the value in the region property to reflect the new center coordinate and the new span values needed to maintain the current zoom level.
See also:

- 125.32.46 setCenterCoordinate(coordinate as CLLocationCoordinate2DMBS, Animated as boolean = true)

125.32.46 setCenterCoordinate(coordinate as CLLocationCoordinate2DMBS, Animated as boolean = true)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Changes the center coordinate of the map and optionally animates the change.
Notes: Latitude and Longitude in coordinate: The new center coordinate for the map.
animated: Specify true if you want the map view to scroll to the new location or false if you want the map to display the new location immediately.

Changing the center coordinate centers the map on the new coordinate without changing the current zoom level. It also updates the value in the region property to reflect the new center coordinate and the new span values needed to maintain the current zoom level.
See also:

- 125.32.45 setCenterCoordinate(centerCoordinate as CLLocationCoordinate2DMBS, zoomLevel as double, animated as boolean) 17868

125.32.47 setRegion(c as CLLocationCoordinate2DMBS, animated as boolean = false)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop & iOS.

Function: Changes the currently visible region and optionally animates the change.
Notes: Same as SetRegion with MKCoordinateRegionMBS but reuses current coordinate span.
See also:

- 125.32.48 setRegion(region as MKCoordinateRegionMBS, animated as boolean = false) 17869

125.32.48 setRegion(region as MKCoordinateRegionMBS, animated as boolean = false)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Changes the currently visible region and optionally animates the change.
Example:

```
Var mapview as MKMapViewMBS // your mapview

// get current region
Var r as MKCoordinateRegionMBS = mapview.region

// make new span with double deltas
Var s as new MKCoordinateSpanMBS(r.span.latitudeDelta*2, r.span.longitudeDelta*2)

// make new region
```

```
Var n as new MKCoordinateRegionMBS(r.center, s)

// and zoom there
mapview.setRegion n, true
```

Notes: region: The new region to display in the map view.
animated: Specify true if you want the map view to animate the transition to the new region or false if you want the map to center on the specified region immediately.

Changing just the center coordinate of the region can still cause the span values to change implicitly. The span values might change because that the distances represented by a span change at different latitudes and longitudes and the map view may need to adjust the span to account for the new location. If you want to change the center coordinate without changing the zoom level, use the setCenterCoordinate instead.

When setting a new region, the map may adjust the value in the region parameter so that it fits the visible area of the map precisely. This adjustment is normal and is done to ensure that the value in the region property always reflects the visible portion of the map. However, it does mean that if you get the value of that property right after calling this method, the returned value may not match the value you set. (You can use the regionThatFits method to determine the region that will actually be set by the map.)
See also:

- 125.32.47 setRegion(c as CLLocationCoordinate2DMBS, animated as boolean = false) 17869

125.32.49 setVisibleMapRect(coordinate as MKMapRectMBS, Animated as boolean = true)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Changes the currently visible portion of the map and optionally animates the change.
Notes: mapRect: The map rectangle to make visible in the map view.
animate: Specify true if you want the map view to animate the transition to the new map rectangle or false if you want the map to center on the specified rectangle immediately.
See also:

- 125.32.50 setVisibleMapRect(mapRect as MKMapRectMBS, edgePaddingLeft as Double, edgePaddingTop as Double, edgePaddingRight as Double, edgePaddingBottom as Double, animated as boolean) 17870

125.32.50 setVisibleMapRect(mapRect as MKMapRectMBS, edgePaddingLeft as Double, edgePaddingTop as Double, edgePaddingRight as Double, edgePaddingBottom as Double, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Changes the currently visible portion of the map, allowing you to specify additional space around the edges.
Notes: MapRect: The map rectangle to make visible in the map view.
edgePaddingLeft, edgePaddingTop, edgePaddingRight and edgePaddingBottom: The amount of additional space (measured in screen points) to make visible around the specified rectangle.
animate: Specify true if you want the map view to animate the transition to the new map rectangle or false if you want the map to center on the specified rectangle immediately.
See also:

- 125.32.49 setVisibleMapRect(coordinate as MKMapRectMBS, Animated as boolean = true) 17870

125.32.51 setZoomLevel(zoomLevel as double, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop & iOS.

Function: Sets zoom level.
Notes: Zoomlevel is in range 1 to 20.

125.32.52 showAddress(address as string)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Convenience method to run an address geocoding and shows position on map.
Example:

```
Var mapview as MKMapViewMBS // your map view
mapView.showAddress "Markt 15, Andernach, Deutschland"
```

Notes: Uses CLGeocoderMBS geocodeAddressString method to asynchronously find the place and show it on the map.

125.32.53 ShowAllAnnotations(withOverlays as boolean = false)

MBS MacFrameworks Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop & iOS.

Function: Zooms map to show all annotations.
Notes: The plugin loops over the annotations to calculate a bounding rectangle for all annotations and zoom the map to make them all visible with some border space around.

Added withOverlays parameter in v22.4 to include overlays in the calculation of the rectangle.

125.32.54 showAnnotations(annotations() as MKAnnotationMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the visible region so that the map displays the specified annotations.
Notes: annotations: The annotations that you want to be visible in the map.
animated: true if you want the map region change to be animated, or NO if you want the map to display the new region immediately without animations.

Calling this method updates the value in the region property and potentially other properties to reflect the new map region.

125.32.55 viewForAnnotation(annotation as MKAnnotationMBS) as MKAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the annotation view associated with the specified annotation object, if any.
Example:

```
Function viewForAnnotation(mapView as MKMapViewMBS, annotation as MKAnnotationMBS) Handles
viewForAnnotation as MKAnnotationViewMBS
// return nil for default annotation view

// new annotation view
Var v As New MKAnnotationViewMBS(annotation)

// get a picture and use it as decoration
Var pic As Picture = LogoMBS(100)
Var img As New NSImageMBS(pic)
img.setSize(pic.Width/2, pic.Height/2) // half size gives 2x resolution, if the picture isn't retina aware

// set image and return
v.image = img

Return v
End Function
```

Notes: annotation: The annotation object whose view you want.

Returns the annotation view or nil if the view has not yet been created. This method may also return nil if the annotation is not in the visible map region and therefore does not have an associated annotation view.

125.32.56 Properties

125.32.57 annotationVisibleRect as NSRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The visible rectangle where annotation views are currently being displayed.
Notes: (Read only property)

125.32.58 camera as MKMapCameraMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The camera used for determining the appearance of the map.
Notes: A camera object defines a point above the map,Äôs surface from which to view the map. Applying a camera to a map can have the effect of giving the map a 3D-like appearance. You can use a camera to rotate the map so that it is oriented to match the user,Äôs heading or to apply a pitch angle to tilt the plane of the map. (You can check the map,Äôs pitchEnabled property to determine whether the map can be pitched.)

Assigning a new camera to this property updates the map immediately and without animating the change. If you want to animate changes in camera position, use the setCamera method instead.

You must not set this property to nil. To restore the map to a flat appearance, apply a camera with a pitch angle of 0, which yields a camera looking straight down onto the map surface.
(Read and Write property)

125.32.59 centerCoordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The map coordinate at the center of the map view.
Example:

```
Var mapview as MKMapViewMBS // your map view
Var centerCoordinate as CLLocationCoordinate2DMBS = mapview.centerCoordinate

// show center
MessageBox str(centerCoordinate.latitude)+" "+str(centerCoordinate.longitude)
```

Notes: Changing the value in this property centers the map on the new coordinate without changing the current zoom level. It also updates the values in the region property to reflect the new center coordinate and the new span values needed to maintain the current zoom level.

Changing the value of this property updates the map view immediately. If you want to animate the change, use the setCenterCoordinate method instead.
(Read and Write property)

125.32.60 mapType as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The type of data displayed by the map view.
Example:

```
Var mapview as MKMapViewMBS // your map view
mapView.mapType = mapView.MKMapTypeHybrid
```

Notes: Changing the value in this property may cause the receiver to begin loading new map content. For example, changing from MKMapTypeStandard to MKMapTypeSatellite might cause it to begin loading the satellite imagery needed for the map. If new data is needed, however, it is loaded asynchronously and appropriate messages are sent to the receiver's delegate indicating the status of the operation.
(Read and Write property)

125.32.61 PitchEnabled as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the map camera,Äôs pitch information is used.
Notes: When this property is set to true and a valid camera is associated with the map, the camera,Äôs pitch angle is used to tilt the plane of the map. When this property is set to NO, the camera,Äôs pitch angle is ignored and the map is always displayed as if the user is looking straight down onto it.
In an app, always check the value of this property to determine whether a map can support 3D.
(Read and Write property)

125.32.62 region as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The area currently displayed by the map view.
Notes: The region encompasses both the latitude and longitude point on which the map is centered and the span of coordinates to display. The span values provide an implicit zoom value for the map. The larger the displayed area, the lower the amount of zoom. Similarly, the smaller the displayed area, the greater the amount of zoom.

Changing only the center coordinate of the region can still cause the span to change implicitly. The span

might change because the distances represented by a span change at different latitudes and longitudes and the map view may need to adjust the span to account for the new location. If you want to change the center coordinate without changing the zoom level, use the centerCoordinate instead.

Changing the value of this property updates the map view immediately. When setting this property, the map may adjust the new region value so that it fits the visible area of the map precisely. This is normal and is done to ensure that the value in this property always reflects the visible portion of the map. However, it does mean that if you get the value of this property right after setting it, the returned value may not match the value you set. (You can use the regionThatFits method to determine the region that will actually be set by the map.)

If you want to animate the change in region, use the setRegion method instead.
(Read and Write property)

125.32.63 RotateEnabled as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the map camera,Äôs heading information is used.
Notes: When this property is set to true and a valid camera is associated with the map, the camera,Äôs heading angle is used to rotate the plane of the map around its center point. When this property is set to false, the camera,Äôs heading angle is ignored and the map is always oriented so that true north is situated at the top of the map view.
(Read and Write property)

125.32.64 scrollEnabled as Boolean

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the user may scroll around the map.
Notes: This property controls only user interactions with the map. If you set the value of this property to NO, you may still change the map location programmatically by changing the value in the region property.

The default value of this property is true.
(Read and Write property)

125.32.65 showsBuildings as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean indicating whether the map displays extruded building information.

Notes: When this property is set to YES and the camera has a pitch angle greater than zero, the map extrudes buildings so that they extend above the map plane, creating a 3D effect. The mapType property must be set to MapTypeStandard for extruded buildings to be displayed. The default value of this property is true.
(Read and Write property)

125.32.66 ShowsCompass as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean indicating whether the map displays a compass control.
Notes: Use this property to show or hide a control that lets users change the heading orientation of the map.
(Read and Write property)

125.32.67 showsPointsOfInterest as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean indicating whether the map displays point-of-interest information.
Notes: When this property is set to true, the map displays icons and labels for restaurants, schools, and other relevant points of interest. The mapType property must be set to MapTypeStandard or MapTypeHybrid for points of interest to be displayed. The default value of this property is true.
(Read and Write property)

125.32.68 showsScale as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean indicating whether the map shows scale information.
Notes: The default value of this property is false.
(Read and Write property)

125.32.69 showsTraffic as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the map displays traffic information.
Notes: The mapType property must be set to MapTypeStandard or MapTypeHybrid for traffic information to be shown. The default value of this property is false.

(Read and Write property)

125.32.70 showsUserLocation as Boolean

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the map should try to display the user's location.
Notes: This property does not indicate whether the user's position is actually visible on the map, only whether the map view should try to display it. Setting this property to true causes the map view to use the Core Location framework to find the current location and try to display it on the map. As long as this property is true, the map view continues to track the user's location and update it periodically. The default value of this property is false.

Showing the user's location does not guarantee that the location is visible on the map. The user might have scrolled the map to a different point, causing the current location to be offscreen. To determine whether the user's current location is currently displayed on the map, use the userLocationVisible property.
(Read and Write property)

125.32.71 showsZoomControls as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: A Boolean indicating whether the map displays zoom controls.
Notes: In macOS, use this property to show or hide the controls that let users change the zoom level of the map.
(Read and Write property)

125.32.72 userLocation as MKUserLocationMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The annotation object representing the user's current location.
Notes: (Read only property)

125.32.73 userLocationVisible as Boolean

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the device's current location is visible in the map view.
Notes: This property tells you whether the icon used to represent the user's current location is visible in the map view. When determining whether the current location is visible, this property factors in the horizontal

accuracy of the location data. Specifically, if the rectangle represented by the user's current location plus or minus minus the horizontal accuracy of that location intersects the map's visible rectangle, this property contains the value true. If that location rectangle does not intersect the map's visible rectangle, this property contains the value false.

If the user's location cannot be determined, this property contains the value false.
(Read only property)

125.32.74 visibleMapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The area currently displayed by the map view.
Notes: This property represents the same basic information as the region property but specified as a map rectangle instead of a region.
Changing the value of this property updates the map view immediately. If you want to animate the change, use the setVisibleMapRect method instead.
(Read and Write property)

125.32.75 zoomEnabled as Boolean

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the user may use pinch gestures to zoom in and out of the map.
Notes: This property controls only user interactions with the map. If you set the value of this property to NO, you may still change the zoom level programmatically by changing the value in the region property.

The default value of this property is true.
(Read and Write property)

125.32.76 zoomLevel as Double

MBS MacFrameworks Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop & iOS.

Function: Queries current zoom level.
Example:

```
Var m as MKMapViewMBS // your map view

// zoom in one level
```

m.zoomLevel = m.zoomLevel + 1

Notes: A value between 1 and 20.
(Read and Write property)

125.32.77 Constants

Errors

Constant	Value	Description
ErrorDirectionsNotFound	4	The specified directions could not be found.
ErrorLoadingThrottled	2	The data was not loaded because data throttling is in effect. This error can occur if an app makes frequent requests for data over a short period of time.
ErrorPlacemarkNotFound	3	The specified placemark could not be found.
ErrorServerFailure	1	The map server was unable to return the desired information.
ErrorUnknown	0	An unknown error occurred.

Feature visibility

Constant	Value	Description
FeatureVisibilityAdaptive	0	For features in the normal state, title text is displayed and subtitle text is hidden. When a feature is selected, the title and subtitle text are hidden when the feature requires a callout.
FeatureVisibilityHidden	1	Always hidden.
FeatureVisibilityVisible	2	Always visible.

Map Types

Constant	Value	Description
MapTypeHybrid	2	Displays a satellite image of the area with road and road name information layered on top.
MapTypeHybridFlyover	4	A hybrid satellite image with flyover data where available.
MapTypeMutedStandard	5	A street map where your data is emphasized over the underlying map details.
MapTypeSatellite	1	Displays satellite imagery of the area.
MapTypeSatelliteFlyover	3	A satellite image of the area with flyover data where available.
MapTypeStandard	0	Displays a street map that shows the position of all roads and some road names.

Overlay Levels

Constant	Value	Description
OverlayLevelAboveLabels	1	Above labels
OverlayLevelAboveRoads	0	Above roads

125.33 class MKMarkerAnnotationViewMBS

125.33.1 class MKMarkerAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: An annotation view that displays a balloon-shaped marker at the designated location.
Example:

```
// show places as colored markers with a letter
// MyMapView is a subclass of DesktopMapKitViewControlMBS with the viewForAnnotation event implemented, placed on the window as MyMapView1.
MyMapView1.View.addAnnotation New MKPlacemarkMBS(New CLLocationCoordinate2DMBS(50.3569, 7.5890))

// in MyMapView:
Function viewForAnnotation(mapView As MKMapViewMBS, annotation As MKAnnotationMBS) As MKAnnotationViewMBS Handles viewForAnnotation
Var marker As New MKMarkerAnnotationViewMBS(annotation, "marker")
marker.markerTintColor = NSColorMBS.systemRedColor
marker.glyphText = "K"
marker.animatesWhenAdded = True
Return marker
End Function
```

Notes: Return an instance of this class from the viewForAnnotation event of your map view delegate when you want to display the same types of markers used in the Maps app.
The default displayPriority for an instance of this class is FeatureDisplayPriorityDefaultLow.

Available on macOS 11.0
Subclass of the MKAnnotationViewMBS class.

Xojo Developer Magazine

- 18.6, page 10: News

125.33.2 Methods

125.33.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Returns true on macOS 11.0 and newer.

125.33.4 Constructor(annotation as MKAnnotationMBS, reuseIdentifier as string = """, EnableEvents as Boolean = false)

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 125.33.5 Constructor(Handle as Integer) 17881

125.33.5 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKMarkerAnnotationView reference from a declare.
The object is retained.
See also:

- 125.33.4 Constructor(annotation as MKAnnotationMBS, reuseIdentifier as string = """, EnableEvents as Boolean = false) 17881

125.33.6 Properties

125.33.7 animatesWhenAdded as Boolean

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean that indicates whether the marker animates into position onscreen.
Notes: The default value of this property is false.
(Read and Write property)

125.33.8 glyphImage as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: An image to display in the marker balloon.
Notes: Use this property or the glyphText property to specify the marker balloon content. If you specify both an image and text, MapKit displays the text.

MapKit displays the glyph image when the marker is in the normal state. Create glyph images as template images so that MapKit can apply the glyph tint color to the image. Normally, you set the size of this image to 20 by 20 points on iOS and 40 by 40 points on tvOS. However, if you don,Äôt provide a separate selected image in the selectedGlyphImage property, make the size of this image 40 by 40 points on iOS and 60 by 40 points on tvOS instead. MapKit scales images that are larger or smaller than those sizes.
(Read and Write property)

125.33.9 glyphText as String

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The text to display in the marker balloon.
Notes: Use this property or the glyphText property to specify the marker balloon content. If you specify both an image and text, MapKit displays the text.
MapKit limits the amount of space available for displaying your glyph text. Specify no more than two or three characters for any strings you assign to this property.
(Read and Write property)

125.33.10 glyphTintColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The color to apply to the glyph text or image.
Notes: The default value of this property is nil, which applies the standard tint color for the current map style.
(Read and Write property)

125.33.11 markerTintColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The background color of the marker balloon.
Notes: The default value of this property is nil, which applies the standard color that,Äôs appropriate for the current map style.
(Read and Write property)

125.33.12 selectedGlyphImage as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: An image to display when the user selects the marker.

Notes: MapKit displays the glyph image when the marker is in the selected state. If you specify an image for this property, you should also specify an image in the glyphImage property.
Create glyph images as template images so that MapKit can apply the glyph tint color to the image. Set the size of this image to 40 by 40 points on iOS and 60 by 40 points on tvOS. MapKit scales images that are larger or smaller than those sizes.
(Read and Write property)

125.33.13 subtitleVisibility as Integer

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The visibility of the subtitle text rendered beneath the marker balloon.
Notes: MapKit shows the text when the user selects a marker.
(Read and Write property)

125.33.14 titleVisibility as Integer

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The visibility of the title text rendered beneath the marker balloon.
Notes: (Read and Write property)

125.33.15 Constants

Feature Visibility

Constant	Value	Description
FeatureVisibilityAdaptive	0	A constant indicating that the feature adapts to the current map state.
FeatureVisibilityHidden	1	A constant indicating that the feature is always hidden.
FeatureVisibilityVisible	2	A constant indicating that the feature is always visible.

125.34 class MKMultiPointMBS

125.34.1 class MKMultiPointMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The MKMultiPoint class is an abstract superclass used to define shapes composed of multiple points.
Notes: You should not create instances of this class directly. Instead, you should create instances of the MKPolyline or MKPolygon classes. However, you can use the method and properties of this class to access information about the specific points associated with the line or polygon.
Subclass of the MKShapeMBS class.

- 125.34.3 Constructor 17884

125.34.5 Coordinates as MKMapPointMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Queries list of coordinates for all the points.

125.34.6 points as MKMapPointMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Queries array with points.

125.34.7 Properties

125.34.8 pointCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Queries number of points for this multi point object.
Notes: (Read only property)

125.35 class MKMultiPolygonMBS

125.35.1 class MKMultiPolygonMBS

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A collection of multiple closed polygon shapes.
Example:

```
// show two areas as one overlay with one renderer
// MyMapView is a subclass of DesktopMapKitViewControlMBS with the rendererForOverlay event implemented, placed on the window as MyMapView1.
Var area1() As CLLocationCoordinate2DMBS
area1.Add New CLLocationCoordinate2DMBS(50.36, 7.58)
area1.Add New CLLocationCoordinate2DMBS(50.36, 7.60)
area1.Add New CLLocationCoordinate2DMBS(50.35, 7.59)

Var area2() As CLLocationCoordinate2DMBS
area2.Add New CLLocationCoordinate2DMBS(50.34, 7.58)
area2.Add New CLLocationCoordinate2DMBS(50.34, 7.60)
area2.Add New CLLocationCoordinate2DMBS(50.33, 7.59)

Var polygons() As MKPolygonMBS
polygons.Add MKPolygonMBS.polygonWithCoordinates(area1)
polygons.Add MKPolygonMBS.polygonWithCoordinates(area2)
MyMapView1.View.addOverlay New MKMultiPolygonMBS(polygons)

// in MyMapView:
Function rendererForOverlay(mapView As MKMapViewMBS, overlay As MKOverlayMBS) As MKOverlayRendererMBS Handles rendererForOverlay
If overlay IsA MKMultiPolygonMBS Then
Var renderer As New MKMultiPolygonRendererMBS(MKMultiPolygonMBS(overlay))
renderer.fillColor = NSColorMBS.colorWithRGB(0, 0.5, 1, 0.3)
renderer.strokeColor = NSColorMBS.blueColor
Return renderer
End If
End Function
```

Notes: Use a MKMultiPolygon when you have multiple distinct polygon shapes that you intend to render using the same style.
Available on macOS 10.15 and iOS 13 or newer.
Subclass of the MKShapeMBS class.

Interfaces: MKOverlayMBS

125.35.2 Methods

125.35.3 boundingMapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The projected rectangle that encompasses the overlay.
Notes: This property contains the smallest rectangle that completely encompasses the overlay. Implementers of this interface must set this area when implementing their overlay class, and after setting it, you must not change it. The rectangle should be specified using projected coordinates—that is, coordinates obtained by projecting the globe onto a two-dimensional surface.

Part of the MKOverlayMBS interface.

125.35.4 canReplaceMapContent as Boolean

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Returns a Boolean indicating whether the overlay content replaces the underlying map content.
Notes: true if the map view can skip the loading and drawing of the underlying map tiles or false if the map tiles should still be drawn.

The map view uses the return value of this method as a hint to determine whether it should load and render its tiles. If your overlay covers its designated region entirely with opaque content, and effectively replaces the content of underlying map tiles, implement this method and return true. Doing so alleviates the need for the map to render its tiles.
If you do not implement this method, or if you return false from it, the map view continues to load and render its tiles.

Part of MKOverlayMBS interface.

125.35.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

- 125.35.6 Constructor(Handle as Integer) 17888
- 125.35.7 Constructor(polygons() as MKPolygonMBS) 17888

125.35.6 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKMultiPolygon reference from a declare.
The object is retained.
See also:

- 125.35.5 Constructor 17887
- 125.35.7 Constructor(polygons() as MKPolygonMBS) 17888

125.35.7 Constructor(polygons() as MKPolygonMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Create a multipolygon object using the provided polygons.
See also:

- 125.35.5 Constructor 17887
- 125.35.6 Constructor(Handle as Integer) 17888

125.35.8 coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The center point of the circular area, specified as a latitude and longitude.

125.35.9 intersectsMapRect(mapRect as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Whether this overlay intersects with the given map rectangle.
Notes: Part of the MKOverlayMBS interface.

125.35.10 multiPolygon(polygons() as MKPolygonMBS) as MKMultiPolygonMBS

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Create a multipolygon object using the provided polygons.

125.35.11 polygons as MKPolygonMBS()

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: An array containing the polygons that make up the multipolygon object.

125.36 class MKMultiPolygonRendererMBS

125.36.1 class MKMultiPolygonRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The visual representation for a multipolygon overlay.
Notes: Use this renderer to provide the style for multiple polygons created using MKMultiPolygonMBS.
Available on macOS 10.15 and iOS 13 or newer.
Subclass of the MKOverlayPathRendererMBS class.

125.36.2 Methods

125.36.3 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKMultiPolygonRenderer reference from a declare.
The object is retained.
See also:

- 125.36.4 Constructor(multiPolygon as MKMultiPolygonMBS) 17890

125.36.4 Constructor(multiPolygon as MKMultiPolygonMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Initializes and returns a renderer that handles drawing for the specified multipolygon overlay object.
See also:

- 125.36.3 Constructor(Handle as Integer) 17890

125.36.5 Properties

125.36.6 multiPolygon as MKMultiPolygonMBS

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The multipolygon object that the renderer uses to draw the overlay,Äôs contents.
Notes: (Read only property)

125.37 class MKMultiPolylineMBS

125.37.1 class MKMultiPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A collection of multipolyline shapes, each consisting of one or more connected line segments.
Example:

```
// draw two routes as one overlay with one renderer
// MyMapView is a subclass of DesktopMapKitViewControlMBS with the rendererForOverlay event implemented, placed on the window as MyMapView1.
Var route1() As CLLocationCoordinate2DMBS
route1.Add New CLLocationCoordinate2DMBS(50.36, 7.58)
route1.Add New CLLocationCoordinate2DMBS(50.37, 7.60)
Var route2() As CLLocationCoordinate2DMBS
route2.Add New CLLocationCoordinate2DMBS(50.34, 7.58)
route2.Add New CLLocationCoordinate2DMBS(50.33, 7.61)

Var lines() As MKPolylineMBS
lines.Add MKPolylineMBS.polylineWithCoordinates(route1)
lines.Add MKPolylineMBS.polylineWithCoordinates(route2)
MyMapView1.View.addOverlay MKMultiPolylineMBS.multiPolyline(lines)

// in MyMapView:
Function rendererForOverlay(mapView As MKMapViewMBS, overlay As MKOverlayMBS) As MKOverlayRendererMBS Handles rendererForOverlay
If overlay IsA MKMultiPolylineMBS Then
Var r As New MKMultiPolylineRendererMBS(MKMultiPolylineMBS(overlay))
r.strokeColor = NSColorMBS.systemPurpleColor
r.lineWidth = 4
Return r
End If
End Function
```

Notes: Use a MKMultiPolyline object when you have multiple distinct polyline shapes that you intend to render using the same style.
Available on macOS 10.15 and iOS 13 or newer.
Subclass of the MKShapeMBS class.

125.37.8 coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The center point of the circular area, specified as a latitude and longitude.

125.37.9 intersectsMapRect(mapRect as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Whether this overlay intersects with the given map rectangle.
Notes: Part of the MKOverlayMBS interface.

125.37.10 multiPolyline(polylines() as MKPolylineMBS) as MKMultiPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Create a multipolyline object using the provided polylines.

125.37.11 polylines as MKPolylineMBS()

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: An array containing the polyline objects that make up the multipolyline object.

125.38 class MKMultiPolylineRendererMBS

125.38.1 class MKMultiPolylineRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The visual representation for a multipolygon overlay.
Notes: Use this renderer to provide the style for multiple polygons created using MKMultiPolygonMBS.
Available on macOS 10.15 and iOS 13 or newer.
Subclass of the MKOverlayPathRendererMBS class.

125.38.2 Methods

125.38.3 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKMultiPolylineRenderer reference from a declare.
The object is retained.
See also:

- 125.38.4 Constructor(multiPolyline as MKMultiPolylineMBS) 17896

125.38.4 Constructor(multiPolyline as MKMultiPolylineMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Initializes and returns a renderer that handles drawing for the specified multipolygon overlay object.
See also:

- 125.38.3 Constructor(Handle as Integer) 17896

125.38.5 Properties

125.38.6 multiPolyline as MKMultiPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The multipolygon object that the renderer uses to draw the overlay,Äôs contents.
Notes: (Read only property)

125.39 class MKOverlayPathRendererMBS

125.39.1 class MKOverlayPathRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The visual representation for a path-based overlay.
Example:

```
// draw a polygon with a dashed orange border
// MyMapView is a subclass of DesktopMapKitViewControlMBS with the rendererForOverlay event implemented, placed on the window as MyMapView1.
Var coords() As CLLocationCoordinate2DMBS
coords.Add New CLLocationCoordinate2DMBS(50.36, 7.58)
coords.Add New CLLocationCoordinate2DMBS(50.36, 7.60)
coords.Add New CLLocationCoordinate2DMBS(50.35, 7.60)
coords.Add New CLLocationCoordinate2DMBS(50.35, 7.58)
MyMapView1.View.addOverlay MKPolygonMBS.polygonWithCoordinates(coords)

// in MyMapView:
Function rendererForOverlay(mapView As MKMapViewMBS, overlay As MKOverlayMBS) As MKOverlayRendererMBS Handles rendererForOverlay
If overlay IsA MKPolygonMBS Then
// MKPolygonRendererMBS inherits from MKOverlayPathRendererMBS
Var renderer As New MKPolygonRendererMBS(MKPolygonMBS(overlay))
renderer.strokeColor = NSColorMBS.orangeColor
renderer.fillColor = NSColorMBS.colorWithRGB(1, 0.5, 0, 0.2)
renderer.lineWidth = 4

Var dashes() As Integer = Array(10, 5) // 10 points line, 5 points gap
renderer.SetLineDashPattern dashes
Return renderer
End If
End Function
```

Notes: Use this renderer when your overlay's shape is defined by a CGPath object. By default, this renderer fills and strokes the path using its current attributes.
You can use this class as-is or subclass to define additional drawing behaviors. If you subclass, you should override the createPath method and use that method to build the appropriate path object. To change the path, invalidate it and recreate the path using whatever new data your subclass has obtained.
Subclass of the MKOverlayRendererMBS class.

125.39.2 Methods

125.39.3 applyFillProperties(context as CGContextMBS, zoomScale as double)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Applies the receiver,Äôs current fill-related drawing properties to the specified graphics context.
Notes: context: The graphics context used to draw the view,Äôs contents.
zoomScale: The current zoom scale used for drawing.

This is a convenience method for applying all of the drawing properties used when filling a path. This method applies the current fill color to the specified graphics context.

125.39.4 applyStrokeProperties(context as CGContextMBS, zoomScale as double)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Applies the receiver,Äôs current stroke-related drawing properties to the specified graphics context.
Notes: context: The graphics context used to draw the view,Äôs contents.
zoomScale: The current zoom scale used for drawing.

This is a convenience method for applying all of the drawing properties used when stroking a path. This method applies the stroke color, line width, line join, line cap, miter limit, line dash phase, and line dash attributes to the specified graphics context. This method applies the scale factor in the zoomScale parameter to the line width and line dash pattern automatically so that lines scale appropriately.
This method does not save the current graphics state before applying the new attributes. If you want to preserve the existing state, you must save it yourself and restore it later when you finish drawing.

125.39.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

- 125.39.6 Constructor(Handle as Integer) 17899

125.39.6 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKOverlayPathRenderer reference from a declare.
The object is retained.
See also:

- 125.39.5 Constructor 17899

125.39.7 createPath

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates the path for the overlay.
Notes: The default implementation of this method does nothing. Subclasses should override it and use it to create the CGPathRef data type to be used for drawing. After creating the path, your implementation should assign it to the path property.

125.39.8 fillPath(path as CGPathMBS, context as CGContextMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Fills the area enclosed by the specified path.
Notes: path: The path to fill.
context: The graphics context in which to draw the path.

You must set the current fill color before calling this method. Typically you do this by calling the applyFillProperties method prior to drawing. If the fillColor property is currently nil, this method does nothing.

125.39.9 GetLineDashPattern as Integer()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: An array of numbers specifying the dash pattern to use for the path.
Notes: The array contains one or more numbers that indicate the lengths (measured in points) of the line segments and gaps in the pattern. The values in the array alternate, starting with the first line segment length, followed by the first gap length, followed by the second line segment length, and so on.
This property is set to nil by default, which indicates no line dash pattern.

125.39.10 invalidatePath

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Updates the path associated with the overlay renderer.
Notes: Call this method when a change in the path information would require you to recreate the overlay,Äôs path. This method sets the path property to nil and tells the overlay renderer to redisplay its contents.

125.39.11 SetLineDashPattern(values() as Integer)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Sets an array of numbers specifying the dash pattern to use for the path.
Notes: The array contains one or more numbers that indicate the lengths (measured in points) of the line segments and gaps in the pattern. The values in the array alternate, starting with the first line segment length, followed by the first gap length, followed by the second line segment length, and so on.
This property is set to nil by default, which indicates no line dash pattern.

125.39.12 strokePath(path as CGPathMBS, context as CGContextMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Draws a line along the specified path.
Notes: path: The path to draw.
context: The graphics context in which to draw the path.

You must set the current stroke color before calling this method. Typically you do this by calling the applyStrokePropertiesToContext method prior to drawing. If the strokeColor property is currently nil, this method does nothing.

125.39.13 Properties

125.39.14 fillColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The fill color to use for the path.
Notes: (Read and Write property)

125.39.15 lineCap as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The line cap style to apply to the open ends of the path.
Notes: The line cap style is applied to the start and end points of any open subpaths. This property does

not affect closed subpaths. The default line cap style is kCGLineCapRound.
(Read and Write property)

125.39.16 lineDashPhase as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The offset (in points) at which to start drawing the dash pattern.
Notes: Use this property to start drawing a dashed line partway through a segment or gap. For example, a phase value of 6 for the patter 5-2-3-2 would cause drawing to begin in the middle of the first gap.
The default value of this property is 0.
(Read and Write property)

125.39.17 lineJoin as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The line join style to apply to corners of the path.
Notes: The default line join style is kCGLineJoinRound.
(Read and Write property)

125.39.18 lineWidth as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The stroke width to use for the path.
Notes: The default value of this property is 0.
(Read and Write property)

125.39.19 miterLimit as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The limiting value that helps avoid spikes at junctions between connected line segments.
Notes: The miter limit helps you avoid spikes in paths that use the kCGLineJoinMiter join style. If the ratio of the miter length—that is, the diagonal length of the miter join—to the line thickness exceeds the miter limit, the joint is converted to a bevel join. The default miter limit is 10, which results in the conversion of miters whose angle at the joint is less than 11 degrees.
(Read and Write property)

125.39.20 Path as CGPathMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The path representing the overlay,Äôs shape.
Notes: Getting the value of this property causes the path to be created (using the createPath method) if it does not already exist. You can assign a path object to this property explicitly. When assigning a new path object to this property, the overlay renderer stores a strong reference to the path you provide.
(Read and Write property)

125.39.21 strokeColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The stroke color to use for the path.
Notes: (Read and Write property)

125.40 class MKOverlayRendererMBS

125.40.1 class MKOverlayRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The shared infrastructure used to draw overlays on the map surface.
Example:

```
// make all overlays half transparent when they are added to the map
// MyMapView is a subclass of DesktopMapKitViewControlMBS with the DidAddOverlayRenderers event implemented, placed on the window as MyMapView1.
MyMapView1.View.addOverlay New MKCircleMBS(50.3569, 7.5890, 1000)

// in MyMapView:
Sub DidAddOverlayRenderers(mapView As MKMapViewMBS, renderers() As MKOverlayRendererMBS) Handles DidAddOverlayRenderers
For Each r As MKOverlayRendererMBS In renderers
r.alpha = 0.5
Next
End Sub
```

Notes: An overlay renderer draws the visual representation of an overlay object—that is, an object that conforms to the MKOverlayMBS interface. This class defines the drawing infrastructure used by the map view. Subclasses are expected to override the drawMapRect method to draw the contents of the overlay.
The Map Kit framework provides several concrete instances of overlay renderers. Specifically, it provides renderers for each of the concrete overlay objects. You can use one of these existing renderers or define your own subclasses if you want to draw the overlay contents differently.

- MapKit Framework for Xojo

125.40.2 Methods

125.40.3 canDrawMapRect(Rect as MKMapRectMBS, zoomScale as Double) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean value indicating whether the overlay view is ready to draw its content.
Notes: mapRect: The map rectangle that needs to be updated.
zoomScale: The current scale factor applied to the map.

Returns true if this overlay renderer is ready to draw its contents on the map or false if it is not.

Overlay renderers can override this method in situations where they may depend on the availability of other information to draw their contents. For example, a renderer showing traffic information might want to delay drawing until it has all of the traffic data it needs. In such a case, it can return NO from this method to indicate that it is not ready. An overlay renderer might also return NO if it does not draw content in the specified rectangle.

If you return NO from this method, your application is responsible for calling the setNeedsDisplayInMapRect method when the overlay renderer subsequently becomes ready to draw its contents.
The default implementation of this method returns true.

125.40.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKOverlayRenderer reference from a declare.
The object is retained.
See also:

- 125.40.5 Constructor(overlay as MKOverlayMBS) 17905

125.40.5 Constructor(overlay as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns the overlay renderer and associates it with the specified overlay object.
Notes: overlay: The overlay object to use when drawing the overlay content on the map. This object provides the data needed to draw the overlay,Äôs shape. The overlay renderer stores a strong reference to this object.
Return Value

Initially, the overlay renderer assumes that the overlay is fully opaque and that it has a content scale factor of 1.0. You can change these values as needed using the alpha and contentScaleFactor properties.
See also:

- 125.40.4 Constructor(Handle as Integer) 17905

125.40.6 drawMapRect(Rect as MKMapRectMBS, zoomScale as Double, context as CGContextMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Draws the overlay,Äôs contents at the specified location on the map.
Notes: mapRect: The map rectangle that needs to be updated. Your drawing code should avoid drawing

outside of this rectangle.
zoomScale: The current zoom factor applied to the map content. You can use this value for configuring the stroke width of lines or other attributes that might be affected by the scale of the map,Äôs contents.
context: The graphics context to use for drawing the overlay,Äôs contents.

The default implementation of this method does nothing. Subclasses are expected to override this method and use it to draw the overlay,Äôs contents.

When determining where to draw content, make your initial calculations relative to the map itself. In other words, compute the position and size of any overlay content using map points and map rectangles, convert those values to regular CGPoint and CGRect types using the methods of this class, and then pass the converted points to any drawing primitives.
It is recommended that you use Core Graphics to draw any content for your overlays.

To improve drawing performance, the map view may divide your overlay into multiple tiles and render each one on a separate thread. Your implementation of this method must therefore be capable of safely running from multiple threads simultaneously. In addition, you should avoid drawing the entire contents of the overlay each time this method is called. Instead, always take the mapRect parameter into consideration and avoid drawing content outside that rectangle.

125.40.7 mapPointForPoint(point as CGPointMBS) as MKMapPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the point on the map that corresponds to the specified point in the overlay renderer,Äôs drawing area.
Notes: point: The point in the overlay,Äôs drawing area that you want to convert.
Returns the point on the two-dimensional map projection corresponding to the specified point.

125.40.8 mapRectForRect(Rect as CGRectMBS) as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the rectangle on the map that corresponds to the specified rectangle in the overlay renderer,Äôs drawing area.
Notes: rect: The rectangle in the overlay,Äôs drawing area that you want to convert.

Returns the rectangle on the two-dimensional map projection corresponding to the specified rectangle.

125.40.9 pointForMapPoint(mapRect as MKMapPointMBS) as CGPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the point in the overlay renderer,Äôs drawing area corresponding to the specified point on the map.
Notes: mapPoint: A point on the two-dimensional map projection. If you have a coordinate value (latitude and longitude), you can use the MKMapPointForCoordinate function to convert that coordinate to a map point.

Returns the point in the overlay,Äôs drawing area that corresponds to the map point.

125.40.10 RectForMapRect(mapRect as MKMapRectMBS) as CGRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the rectangle in the overlay renderer,Äôs drawing area corresponding to the specified rectangle on the map.
Notes: mapRect: A rectangle on the two-dimensional map projection.

Returns the rectangle in the overlay,Äôs drawing area that corresponds to the map rectangle.

125.40.11 RoadWidthAtZoomScale(zoomScale as double) as double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the width (in screen points) of roads on a map at the specified zoom level.
Notes: zoomScale: The scale factor currently applied to the map view.

Returns the width of roads, measured in screen points. You can use the returned value to set the width of lines in drawing code that traces the path of a road.

125.40.12 setNeedsDisplay

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Invalidates the entire contents of the overlay for all zoom scales.
Notes: This method causes the entire contents of the overlay to be redrawn during the next update cycle. This method invalidates the overlay regardless of the current zoom scale associated with the map.

125.40.13 setNeedsDisplayInMapRect(mapRect as MKMapRectMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Invalidates the specified portion of the overlay at all zoom scales.
Notes: mapRect: The portion of the overlay to update. Specify this value using a map coordinates.

Marking a rectangle as invalid causes that portion of the overlay to be redrawn during the next update cycle. This method invalidates the overlay regardless of the current zoom scale associated with the map.
See also:

- 125.40.14 setNeedsDisplayInMapRect(mapRect as MKMapRectMBS, zoomScale as double) 17908

125.40.14 setNeedsDisplayInMapRect(mapRect as MKMapRectMBS, zoomScale as double)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Invalidates the specified portion of the overlay but only at the specified zoom scale.
Notes: mapRect: The portion of the overlay to update. Specify this value using a map coordinates.
zoomScale: The zoom scale for which you want to invalidate the overlay.

Marking a rectangle as invalid causes that portion of the overlay to be redrawn during the next update cycle. This method invalidates the overlay only at the specified zoom scale.
See also:

- 125.40.13 setNeedsDisplayInMapRect(mapRect as MKMapRectMBS) 17908

125.40.15 Properties

125.40.16 alpha as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The amount of transparency to apply to the overlay.
Notes: The value in this property can be in the range 0.0 to 1.0, where 0.0 represents total transparency and 1.0 represents total opacity. The default value of this property is 1.0.
(Read and Write property)

125.40.17 contentScaleFactor as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The scale factor used to draw the overlay,Äôs content.
Notes: The scale factor determines how content is mapped from the logical coordinate space (measured in points) to the device coordinate space (measured in pixels). This value is typically either 1.0 or 2.0. Higher scale factors indicate that each point is represented by more than one pixel on the screen. For example, if the scale factor is 2.0 and the drawing rectangle size is 50 x 50 points, the size of the underlying area is 100 x 100 pixels.
When drawing the content for your overlays, you can use this value to determine how best to render your content.
(Read only property)

125.40.18 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

125.40.19 overlay as MKOverlayMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The overlay object containing the data for drawing.
Notes: The overlay object contains the coordinate at which to draw the overlay and other information that your app provides.
(Read only property)

125.41 class MKPinAnnotationViewMBS

125.41.1 class MKPinAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The MKPinAnnotationView class provides a concrete annotation view that displays a pin icon like the ones found in the Maps application.
Example:

```
// show places as green pins dropping onto the map
// MyMapView is a subclass of DesktopMapKitViewControlMBS with the viewForAnnotation event implemented, placed on the window as MyMapView1.
MyMapView1.View.addAnnotation New MKPlacemarkMBS(New CLLocationCoordinate2DMBS(50.3569, 7.5890))

// in MyMapView:
Function viewForAnnotation(mapView As MKMapViewMBS, annotation As MKAnnotationMBS) As MKAnnotationViewMBS Handles viewForAnnotation
Var pin As New MKPinAnnotationViewMBS(annotation, "pin")
pin.pinTintColor = MKPinAnnotationViewMBS.greenPinColor
pin.animatesDrop = True
Return pin
End Function
```

Notes: Using this class, you can configure the type of pin to drop and whether you want the pin to be animated into place.
Subclass of the MKAnnotationViewMBS class.

125.41.2 Methods

125.41.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

- 125.41.4 Constructor(annotation as MKAnnotationMBS, reuseIdentifier as string = """, EnableEvents as Boolean = false) 17911
- 125.41.5 Constructor(Handle as Integer) 17911

125.41.4 Constructor(annotation as MKAnnotationMBS, reuseIdentifier as string = """, EnableEvents as Boolean = false)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 125.41.3 Constructor 17911
- 125.41.5 Constructor(Handle as Integer) 17911

125.41.5 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKPinAnnotationView reference from a declare.
The object is retained.
See also:

- 125.41.3 Constructor 17911
- 125.41.4 Constructor(annotation as MKAnnotationMBS, reuseIdentifier as string = """, EnableEvents as Boolean = false) 17911

125.41.6 greenPinColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the standard color for green pins.
Notes: The system uses green pins to indicate starting points on the map.

125.41.7 purplePinColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the standard color for purple pins.
Notes: The system uses purple pins to indicate user-specified points on the map.

125.41.8 redPinColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the standard color for red pins.
Notes: The system uses red pins to indicate destination points on the map.

125.41.9 Properties

125.41.10 animatesDrop as Boolean

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to animate the dropping of the pin.
Notes: (Read and Write property)

125.41.11 pinColor as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The color of the pin head.
Notes: The Maps application uses different pin colors for different types of map annotations. Your own map annotation should use the available pin colors in the same way.
Deprecated in favor of pinTintColor.
(Read and Write property)

125.41.12 pinTintColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The color of the pin head.
Notes: Use this property to specify custom a custom color for your pin. You can also specify one of the standard pin colors.

(Read and Write property)

125.41.13 Constants

Color constants

Constant	Value	Description
ColorBlue	2	The head of the pin is blue. Purple pins indicate user-specified points on the map.
ColorGreen	1	The head of the pin is green. Green pins indicate starting points on the map.
ColorRed	0	The head of the pin is red. Red pins indicate destination points on the map.

125.42 class MKPlacemarkMBS

125.42.1 class MKPlacemarkMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: A MKPlacemark object stores placemark data for a given latitude and longitude.
Example:

```
// put a placemark on a map
// Map is a property of the window: Map As MKMapViewMBS
Map = New MKMapViewMBS(0, 0, Self.Width, Self.Height)
Self.NSWindowMBS.contentView.addSubview Map

Var coordinate As New CLLocationCoordinate2DMBS(50.3569, 7.5890)
Var place As New MKPlacemarkMBS(coordinate)
Map.addAnnotation place
```

Notes: Placemark data includes information such as the country, state, city, and street address associated with the specified coordinate. Placemark objects are typically generated by a MKReverseGeocoderMBS object, although you can also create them explicitly yourself.

A placemark is also an annotation and conforms to the MKAnnotationMBS interface, whose properties and methods include the placemark coordinate and other information. Because they are annotations, you can add them directly to the map view.
Subclass of the CLPlacemarkMBS class.

125.42.2 Methods

125.42.3 Constructor(coordinate as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a placemark object using the specified coordinate only.
See also:

- 125.42.4 Constructor(coordinate as CLLocationCoordinate2DMBS, addressDictionary as dictionary) 17915
- 125.42.5 Constructor(coordinate as CLLocationCoordinate2DMBS, postalAddress as Variant) 17915
- 125.42.6 Constructor(Handle as Integer) 17916

125.42.4 Constructor(coordinate as CLLocationCoordinate2DMBS, addressDictionary as dictionary)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a placemark object using the specified coordinate and Address Book dictionary.
Notes: You can create placemark objects manually for entities for which you already have address information, such as contacts in the Address Book. Creating a placemark object explicitly avoids the need to query the reverse geocoder object for the same information.
See also:

- 125.42.3 Constructor(coordinate as CLLocationCoordinate2DMBS) 17915
- 125.42.5 Constructor(coordinate as CLLocationCoordinate2DMBS, postalAddress as Variant) 17915
- 125.42.6 Constructor(Handle as Integer) 17916

125.42.5 Constructor(coordinate as CLLocationCoordinate2DMBS, postalAddress as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a placemark object using the specified coordinate and CNPostalAddressMBS object.
Notes: You can create placemark objects manually for entities for which you already have address information, such as contacts in the Address Book. Creating a placemark object explicitly avoids the need to query the reverse geocoder object for the same information.
See also:

- 125.42.3 Constructor(coordinate as CLLocationCoordinate2DMBS) 17915

- 125.42.4 Constructor(coordinate as CLLocationCoordinate2DMBS, addressDictionary as dictionary) 17915
- 125.42.6 Constructor(Handle as Integer) 17916

125.42.6 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKPlacemark reference from a declare.
The object is retained.
See also:

- 125.42.3 Constructor(coordinate as CLLocationCoordinate2DMBS) 17915
- 125.42.4 Constructor(coordinate as CLLocationCoordinate2DMBS, addressDictionary as dictionary) 17915
- 125.42.5 Constructor(coordinate as CLLocationCoordinate2DMBS, postalAddress as Variant) 17915

125.42.7 Coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

125.42.8 SetCoordinate(newCoordinate as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Set the coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

125.42.9 SubTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKOverlayMBS interface.

125.42.10 Title as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes: Part of the MKAnnotationMBS interface.

125.42.11 Properties

125.42.12 countryCode as String

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The abbreviated country name.
Notes: This string is the standard abbreviation used to refer to the country. For example, if the placemark location was Apple's headquarters, the value for this property would be the string "US".
(Read only property)

125.43 class MKPointAnnotationMBS

125.43.1 class MKPointAnnotationMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The MKPointAnnotation class defines a concrete annotation object located at a specified point.
Example:

```
Var mapview as MKMapViewMBS // your map view

// new pin
Var pin as new MKPointAnnotationMBS

pin.coordinate = mapView.centerCoordinate
pin.title = "Hello"

// show on map
mapView.addAnnotation pin
```

Notes: You can use this class, rather than define your own, in situations where all you want to do is associate a point on the map with a title.
Subclass of the MKShapeMBS class.

125.43.2 Methods

125.43.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
Example:

```
Var mapview as MKMapViewMBS // your map view

// new pin
Var pin as new MKPointAnnotationMBS

pin.coordinate = mapView.centerCoordinate
pin.title = "Hello"

// show on map
mapView.addAnnotation pin
```

125.43.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKPointAnnotation reference from a declare.
The object is retained.
See also:

- 125.43.3 Constructor 17918

125.43.5 Properties

125.43.6 coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate point of the annotation, specified as a latitude and longitude.
Notes: (Read and Write property)

125.44 class MKPolygonMBS

125.44.1 class MKPolygonMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The MKPolygon class represents a shape consisting of one or more points that define a closed polygon.
Example:

```
// draw a filled area on a map, e.g. a delivery zone
// MyMapView is a subclass of DesktopMapKitViewControlMBS with the rendererForOverlay event implemented, placed on the window as MyMapView1.
Var coords() As CLLocationCoordinate2DMBS
coords.Add New CLLocationCoordinate2DMBS(50.40, 7.55)
coords.Add New CLLocationCoordinate2DMBS(50.40, 7.65)
coords.Add New CLLocationCoordinate2DMBS(50.33, 7.65)
coords.Add New CLLocationCoordinate2DMBS(50.33, 7.55)

Var zone As MKPolygonMBS = MKPolygonMBS.polygonWithCoordinates(coords)
MyMapView1.View.addOverlay zone

// in MyMapView:
Function rendererForOverlay(mapView As MKMapViewMBS, overlay As MKOverlayMBS) As MKOverlayRendererMBS Handles rendererForOverlay
If overlay IsA MKPolygonMBS Then
Var renderer As New MKPolygonRendererMBS(MKPolygonMBS(overlay))
renderer.fillColor = NSColorMBS.colorWithRGB(0, 0.5, 1, 0.3)
renderer.strokeColor = NSColorMBS.systemBlueColor
renderer.lineWidth = 2
Return renderer
End If
End Function
```

Notes: The points are connected end-to-end in the order they are provided. The first and last points are connected to each other to create the closed shape.

When creating a polygon, you can mask out portions of the polygon by specifying one or more interior polygons. For the polygons you specify, this class uses the even-odd fill rule to determine the final occupied area. When applied to overlapping polygons, this rule can cause specific regions to be masked out (and thereby removed) from the total occupied area. For more information about how fill rules are applied to paths, see "Paths" in Quartz 2D Programming Guide.
Subclass of the MKMultiPointMBS class.

- MapKit Framework for Xojo

Xojo Developer Magazine

- 19.2, page 49: Maps Part 9,ÄîPutting GPS Data on the Map, Helping out a fellow coder with the MapKitMBS plugin by Markus Winter

Interfaces: MKOverlayMBS

125.44.2 Methods

125.44.3 boundingMapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The projected rectangle that encompasses the overlay.
Notes: This property contains the smallest rectangle that completely encompasses the overlay. Implementers of this interface must set this area when implementing their overlay class, and after setting it, you must not change it. The rectangle should be specified using projected coordinates—that is, coordinates obtained by projecting the globe onto a two-dimensional surface.

Part of the MKOverlayMBS interface.

125.44.4 canReplaceMapContent as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean indicating whether the overlay content replaces the underlying map content.
Notes: true if the map view can skip the loading and drawing of the underlying map tiles or false if the map tiles should still be drawn.

The map view uses the return value of this method as a hint to determine whether it should load and render its tiles. If your overlay covers its designated region entirely with opaque content, and effectively replaces the content of underlying map tiles, implement this method and return true. Doing so alleviates the need for the map to render its tiles.
If you do not implement this method, or if you return false from it, the map view continues to load and render its tiles.

Part of MKOverlayMBS interface.

125.44.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

- 125.44.6 Constructor(coords() as CLLocationCoordinate2DMBS) 17922
- 125.44.7 Constructor(coords() as CLLocationCoordinate2DMBS, InteriorPolygons() as MKPolygonMBS) 17922

- 125.44.10 Constructor(points() as MKMapPointMBS, InteriorPolygons() as MKPolygonMBS) 17924

125.44.6 Constructor(coords() as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolygon object from the specified set of coordinates.
Notes: coords: The array of coordinates defining the shape.
Returns a new polygon object.
See also:

- 125.44.5 Constructor 17922
- 125.44.7 Constructor(coords() as CLLocationCoordinate2DMBS, InteriorPolygons() as MKPolygonMBS) 17922

125.44.7 Constructor(coords() as CLLocationCoordinate2DMBS, InteriorPolygons() as MKPolygonMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolygon object from the specified set of map points and interior polygons.
Notes: points: The array of map points defining the shape. The data in this array is copied to the new object.
interiorPolygons: An array of MKPolygon objects that define one or more cutout regions for the receiver,Äôs polygon.

- 125.44.8 Constructor(Handle as Integer) 17923
- 125.44.9 Constructor(points() as MKMapPointMBS) 17923

125.44.11 coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

125.44.12 interiorPolygons as MKPolygonMBS()

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The array of polygons nested inside the receiver.
Notes: When a polygon is rendered on screen, the area occupied by any interior polygons is masked out and not considered part of the polygon.

125.44.13 intersectsMapRect(mapRect as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this overlay intersects with the given map rectangle.
Notes: Part of the MKOverlayMBS interface.

125.44.14 polygonWithCoordinates(coords() as CLLocationCoordinate2DMBS) as MKPolygonMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolygon object from the specified set of coordinates.
Notes: coords: The array of coordinates defining the shape.
Returns a new polygon object.
See also:

- 125.44.15 polygonWithCoordinates(coords() as CLLocationCoordinate2DMBS, InteriorPolygons() as MKPolygonMBS) as MKPolygonMBS 17925

125.44.15 polygonWithCoordinates(coords() as CLLocationCoordinate2DMBS, InteriorPolygons() as MKPolygonMBS) as MKPolygonMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolygon object from the specified set of coordinates and interior polygons.
Notes: coords: The array of coordinates defining the shape.
interiorPolygons: An array of MKPolygon objects that define one or more cutout regions for the receiver's polygon.

Returns a new polygon object.
See also:

- 125.44.14 polygonWithCoordinates(coords() as CLLocationCoordinate2DMBS) as MKPolygonMBS 17925

125.44.16 polygonWithPoints(points() as MKMapPointMBS) as MKPolygonMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolygon object from the specified set of map points.
Notes: points: The array of map points defining the shape. The data in this array is copied to the new object.
See also:

- 125.44.17 polygonWithPoints(points() as MKMapPointMBS, InteriorPolygons() as MKPolygonMBS) as MKPolygonMBS 17926

125.44.17 polygonWithPoints(points() as MKMapPointMBS, InteriorPolygons() as MKPolygonMBS) as MKPolygonMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolygon object from the specified set of map points and interior polygons.
Notes: points: The array of map points defining the shape. The data in this array is copied to the new object.
interiorPolygons: An array of MKPolygon objects that define one or more cutout regions for the receiver,Äôs polygon.
See also:

- 125.44.16 polygonWithPoints(points() as MKMapPointMBS) as MKPolygonMBS 17925

125.45 class MKPolygonRendererMBS

125.45.1 class MKPolygonRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The visual representation for a polygon overlay.
Notes: This renderer fills and strokes the polygon represented by first filling the shape and then stroking its outline. You can change the color and other drawing attributes of the polygon by modifying the properties inherited from the parent class. You typically use this class as is and do not subclass it.
Subclass of the MKOverlayPathRendererMBS class.

125.45.2 Methods

125.45.3 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKPolygonRenderer reference from a declare.
The object is retained.
See also:

- 125.45.4 Constructor(polygon as MKPolygonMBS) 17927

125.45.4 Constructor(polygon as MKPolygonMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a new renderer that handles drawing for the specified polygon overlay object.
Notes: polygon: The polygon overlay containing information about the area to be drawn. This object must have at least three points defining the polygon to draw. This parameter must not be nil.
See also:

- 125.45.3 Constructor(Handle as Integer) 17927

125.45.5 Properties

125.45.6 polygon as MKPolygonMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The polygon object that contains the information used to draw the overlay,Äôs contents.
Notes: (Read only property)

125.46 class MKPolylineMBS

125.46.1 class MKPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The MKPolyline class represents a shape consisting of one or more points that define connecting line segments.
Example:

```
// draw a line through three locations on a map
// Map is a property of the window: Map As MKMapViewMBS
Map = New MKMapViewMBS(0, 0, Self.Width, Self.Height)
Self.NSWindowMBS.contentView.addSubview Map

Var coords() As CLLocationCoordinate2DMBS
coords.Add New CLLocationCoordinate2DMBS(50.3569, 7.5890) // Koblenz
coords.Add New CLLocationCoordinate2DMBS(50.9375, 6.9603) // Cologne
coords.Add New CLLocationCoordinate2DMBS(51.2277, 6.7735) // D√ºsseldorf

Var line As MKPolylineMBS = MKPolylineMBS.polylineWithCoordinates(coords)
Map.addOverlay line

// the overlay needs a renderer, e.g. MKPolylineRendererMBS returned in the rendererForOverlay event of a MKMapViewMBS subclass
```

Notes: The points are connected end-to-end in the order they are provided. The first and last points are not connected to each other.
Subclass of the MKMultiPointMBS class.

Interfaces: MKOverlayMBS

125.46.2 Methods

125.46.3 boundingMapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The projected rectangle that encompasses the overlay.
Notes: This property contains the smallest rectangle that completely encompasses the overlay. Implementers of this interface must set this area when implementing their overlay class, and after setting it, you must not change it. The rectangle should be specified using projected coordinates—that is, coordinates obtained by projecting the globe onto a two-dimensional surface.

Part of the MKOverlayMBS interface.

125.46.4 canReplaceMapContent as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean indicating whether the overlay content replaces the underlying map content.
Notes: true if the map view can skip the loading and drawing of the underlying map tiles or false if the map tiles should still be drawn.

The map view uses the return value of this method as a hint to determine whether it should load and render its tiles. If your overlay covers its designated region entirely with opaque content, and effectively replaces the content of underlying map tiles, implement this method and return true. Doing so alleviates the need for the map to render its tiles.
If you do not implement this method, or if you return false from it, the map view continues to load and render its tiles.

Part of MKOverlayMBS interface.

125.46.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

125.46.9 coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

125.46.10 intersectsMapRect(mapRect as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this overlay intersects with the given map rectangle.
Notes: Part of the MKOverlayMBS interface.

125.46.11 polylineWithCoordinates(coords() as CLLocationCoordinate2DMBS) as MKPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolyline object from the specified set of coordinates.
Notes: coords: The array of coordinates defining the shape. The data in this array is copied to the new object.
Returns a new polyline object.

125.46.12 polylineWithPoints(points() as MKMapPointMBS) as MKPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolyline object from the specified set of map points.
Notes: points: The array of map points defining the shape. The data in this array is copied to the new object.

125.47 class MKPolylineRendererMBS

125.47.1 class MKPolylineRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The visual representation for any polyline overlay object.
Notes: This renderer strokes the line only; it does not fill it. You can change the color and other drawing attributes of the polyline by modifying the properties inherited from the parent class. You typically use this class as is and do not subclass it.
Subclass of the MKOverlayPathRendererMBS class.

125.47.4 Constructor(polyline as MKPolylineMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a new overlay view using the specified polyline overlay object
Notes: polyline: The polyline overlay containing information about the area to be drawn. This object must have at least two points defining the line segment to draw. This parameter must not be nil.
See also:

- 125.47.3 Constructor(Handle as Integer) 17933

125.47.5 Properties

125.47.6 polyline as MKPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The polyline overlay object that contains the information used to draw the overlay.
Notes: (Read only property)

125.48 class MKRouteMBS

125.48.1 class MKRouteMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A single route between a requested start and end point.
Example:

```
// list the steps of a route and show it on a map
// This code goes into the calculateDirectionsCompleted event of your MKDirectionsMBS subclass.
// response is the MKDirectionsResponseMBS passed to the event
Var response As MKDirectionsResponseMBS // from the event
If response = Nil Then Return

For Each route As MKRouteMBS In response.routes
System.DebugLog route.name + ": " + Format(route.distance / 1000, "0.0") + " km"
For Each s As MKRouteStepMBS In route.steps
System.DebugLog " " + s.instructions + " (" + Format(s.distance, "0") + " m)"
Next
Next

// draw the first route as overlay: MapView.addOverlay response.firstRoute.polyline
```

Notes: An MKRouteMBS object defines the geometry for the route—that is, it contains line segments associated with specific map coordinates. A route object may also include other information, such as the name of the route, its distance, and the expected travel time.

You do not create instances of this class directly. When you use an MKDirectionsMBS object to request directions from Apple, the returned MKDirectionsResponseMBS object contains the possible routes.

125.48.2 Methods

125.48.3 advisoryNotices as String()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: An array of advisory notice strings for the route.
Notes: This property contains an array of strings. Each string is localized according to the user,Äôs lan-

guage preferences. The strings contain additional information that is important for the user to know about the route. For example, a string might note that a portion of the route is closed during the winter or after big storms.

125.48.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

- 125.48.5 Constructor(Handle as Integer) 17936

125.48.5 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKRoute reference from a declare.
The object is retained.
See also:

- 125.48.4 Constructor 17936

125.48.6 steps as MKRouteStepMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The array of steps that comprise the overall route.
Notes: The array contains one or more MKRouteStep objects representing distinct portions of the route. Each step corresponds to a single direction that must be followed along the route.

125.48.7 Properties

125.48.8 distance as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The route distance in meters.
Notes: This property reflects the distance that the user covers while traversing the path of the route. It is not a direct distance between the start and end points of the route.
(Read only property)

125.48.9 expectedTravelTime as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The expected travel time in seconds.
Notes: This expected travel time reflects the time it takes to traverse the route under ideal conditions. The actual amount of time may vary based on conditions.
(Read only property)

125.48.10 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

125.48.11 name as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The name assigned to the route.
Notes: The string in this property is localized according to the user,Äôs language preferences. You can display this string to the user from your app,Äôs user interface so that the user can distinguish one route from another.
The string itself describes the route using one of the route,Äôs significant features. For example, a route that uses a major highway for a significant portion of the route might use that highway for its name.
(Read only property)

125.48.12 polyline as MKPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The detailed route geometry.
Notes: The polyline object in this property reflects the complete path of the route, including all of its steps. You can use the polyline object as an overlay in a map view.
(Read only property)

125.48.13 transportType as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The overall route transport type.
Notes: This property reflects the primary transport type used for the route. Individual steps of the route might use different transport types.
(Read only property)

125.48.14 Constants

Transport Types

Constant	Value	Description
TransportTypeAny	&h0FFFFFFF	Directions suitable for any transportation option.
TransportTypeAutomobile	1	Directions suitable for use while driving.
TransportTypeTransit	3	Directions suitable for public transportation.
TransportTypeWalking	2	Directions suitable for a pedestrian.

125.49 class MKRouteStepMBS

125.49.1 class MKRouteStepMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: One portion of an overall route.
Example:

```
// get driving directions between two places with turn-by-turn steps
// MyDirections is a subclass of MKDirectionsMBS with the calculateDirectionsCompleted event implemented.
// Directions is a property of the window: Directions As MyDirections
Var request As New MKDirectionsRequestMBS
request.source = New MKMapItemMBS(New MKPlacemarkMBS(New CLLocationCoordinate2DMBS(50.3569, 7.5890))) // Koblenz
request.destination = New MKMapItemMBS(New MKPlacemarkMBS(New CLLocationCoordinate2DMBS(50.9375, 6.9603))) // Cologne
Directions = New MyDirections(request)
Directions.calculateDirections

// in MyDirections:
Sub calculateDirectionsCompleted(response As MKDirectionsResponseMBS, error As NSErrorMBS, tag As Variant) Handles calculateDirectionsCompleted
If response = Nil Then Return
For Each route As MKRouteMBS In response.routes
System.DebugLog route.name + ": " + Format(route.distance / 1000, "0.0") + " km"
For Each s As MKRouteStepMBS In route.steps
System.DebugLog " " + s.instructions + " (" + Format(s.distance, "0") + " m)"
Next
Next
End Sub
```

Notes: Each MKRouteStepMBS object corresponds to a single instruction that would need to be followed by the user when navigating between two points. For example, a step might involve following a single road until a turn is required.

You do not create instances of this class directly. An MKRouteMBS object contains the MKRouteStepMBS objects associated with a route. For more information about requesting directions, see MKDirectionsMBS.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

125.49.2 Methods

125.49.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

125.49.4 Properties

125.49.5 distance as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The step distance in meters.
Notes: This property reflects the distance that the user covers while traversing the path of the step. It is not a direct distance between the start and end points of the step.
(Read only property)

125.49.6 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

125.49.7 instructions as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The written instructions for following the path represented by this step.
Notes: The string in this property is localized according to the user,Äôs language preferences. You can present this string to the user from your app,Äôs interface.
(Read only property)

125.49.8 notice as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Additional notices that apply to the step.
Notes: Notices may include legal information or warning notices that apply to the step. For example, if

the step crosses railroad tracks, it might contain a notice that warns the user not to cross the tracks when the lights are flashing.
(Read only property)

125.49.9 polyline as MKPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The detailed step geometry.
Notes: The polyline object in this property contains the geometry for this step. You can use the polyline object as an overlay in a map view.
(Read only property)

125.49.10 transportType as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The transport type of the step.
Notes: This property reflects the transport type employed by the step and may differ from the transport type of the overall route.
(Read only property)

125.49.11 Constants

Transport Types

Constant	Value	Description
TransportTypeAny	&h0FFFFFFF	Directions suitable for any transportation option.
TransportTypeAutomobile	1	Directions suitable for use while driving.
TransportTypeTransit	3	Directions suitable for public transportation.
TransportTypeWalking	2	Directions suitable for a pedestrian.

125.50 class MKShapeMBS

125.50.1 class MKShapeMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The MKShape class is an abstract class that defines the basic properties for all shape-based annotation objects.
Notes: This class must be subclassed and cannot be used as is. Subclasses are responsible for defining the geometry of the shape and providing an appropriate value for the coordinate property inherited from the MKAnnotationMBS interface.

Interfaces: MKAnnotationMBS

125.50.2 Methods

125.50.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

- 125.50.4 Constructor(Handle as Integer) 17942

125.50.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKShape reference from a declare.
The object is retained.
See also:

- 125.50.3 Constructor 17942

125.50.5 Coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

125.50.6 SetCoordinate(newCoordinate as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Set the coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

125.50.7 SubTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKAnnotationMBS interface.
See also:

- 125.50.11 subtitle as String 17943

125.50.8 Title as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes: Part of the MKAnnotationMBS interface.
See also:

- 125.50.12 title as String 17944

125.50.9 Properties

125.50.10 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

125.50.11 subtitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKAnnotationMBS interface.

(Read and Write property)
See also:

- 125.50.7 SubTitle as String 17943

125.50.12 title as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes: Part of the MKAnnotationMBS interface.
(Read and Write property)
See also:

- 125.50.8 Title as String 17943

125.51 class MKTileOverlayMBS

125.51.1 class MKTileOverlayMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: MKTileOverlay represents a data source for raster image tiles in the spherical mercator projection (EPSG:3857).
Example:

```
// show OpenStreetMap tiles instead of the Apple map
// MyMapView is a subclass of DesktopMapKitViewControlMBS with the rendererForOverlay event implemented, placed on the window as MyMapView1.
Var tiles As New MKTileOverlayMBS("https://tile.openstreetmap.org/ { z } / { x } / { y } .png")
tiles.canReplaceMapContent = True // don't load Apple map tiles below
tiles.maximumZ = 19
MyMapView1.View.addOverlay tiles

// in MyMapView:
Function rendererForOverlay(mapView As MKMapViewMBS, overlay As MKOverlayMBS) As MKOverlayRendererMBS Handles rendererForOverlay
If overlay IsA MKTileOverlayMBS Then
Return New MKTileOverlayRendererMBS(MKTileOverlayMBS(overlay))
End If
End Function
```

Blog Entries

- MapKit Framework for Xojo

Interfaces: MKOverlayMBS, MKAnnotationMBS

125.51.2 Methods

125.51.3 boundingMapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The projected rectangle that encompasses the overlay.
Notes: This property contains the smallest rectangle that completely encompasses the overlay. Implementers of this interface must set this area when implementing their overlay class, and after setting it, you must not change it. The rectangle should be specified using projected coordinates—that is, coordinates obtained by projecting the globe onto a two-dimensional surface.

Part of the MKOverlayMBS interface.

125.51.4 canReplaceMapContent as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean indicating whether the overlay content replaces the underlying map content.
Notes: true if the map view can skip the loading and drawing of the underlying map tiles or false if the map tiles should still be drawn.

The map view uses the return value of this method as a hint to determine whether it should load and render its tiles. If your overlay covers its designated region entirely with opaque content, and effectively replaces the content of underlying map tiles, implement this method and return true. Doing so alleviates the need for the map to render its tiles.
If you do not implement this method, or if you return false from it, the map view continues to load and render its tiles.

Part of MKOverlayMBS interface.
See also:

- 125.51.15 canReplaceMapContent as Boolean 17949

125.51.5 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKTileOverlay reference from a declare.
The object is retained.
See also:

- 125.51.6 Constructor(URL as string) 17946

125.51.6 Constructor(URL as string)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a tile overlay object using the specified tile-access template.
Notes: URLTemplate: A string that can be used to build a URL to access your tile images. The string you specify can point to a local file or to an image on a remote server. To facilitate retrieving multiple tiles using the string, use the placeholder values { x } , { y } , { z } , and { scale } as stand-ins for the x and y tile indexes, the zoom level, and the resolution of the tile image. If this parameter is nil, you must provide custom implementations for the tile-loading methods of this class.

Returns an initialized tile overlay object.

The default tile overlay object uses the template string you specify to request tiles. This template string should incorporate the { x } , { y } , { z } , and { scale } placeholder strings to facilitate the creation of a URL for requesting the appropriate tile. For example, if you have a server that vends tiles when you provide a URL of the form http://myserver/tile?x=0&y=0&z=0&scale=1.0, you would specify a template string of http://myserver/tile?x= { x } &y= { y } &z= { z } &scale= { scale } . The tile overlay object substitutes actual index values in for your template,Äôs placeholders before requesting the actual tile.
See also:

- 125.51.5 Constructor(Handle as Integer) 17946

125.51.7 Coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.
See also:

- 125.51.16 coordinate as CLLocationCoordinate2DMBS 17949

125.51.8 intersectsMapRect(mapRect as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this overlay intersects with the given map rectangle.
Notes: Part of the MKOverlayMBS interface.

125.51.9 loadTileAtPath(Path as MKTileOverlayPathMBS, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Loads the specified tile asynchronously.
Notes: Path: The path structure that identifies the specific tile you want. This structure incorporates the tile,Äôs X-Y coordinate at a given zoom level and scale factor.

The default implementation of this method uses the URLForTilePath method to retrieve the URL for the specified tile and then loads that tile into memory asynchronously using an NSURLConnectionMBS object. The specified tile may be located either on the local file system or on a remote server. Subclasses may override this method and implement their own custom tile-loading behavior.

When a tile overlay renderer (that is, an instance of MKTileOverlayRendererMBS) needs to display tiles, it uses this method to request the data for each tile.

125.51.10 SetCoordinate(newCoordinate as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Set the coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

125.51.11 SubTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKOverlayMBS interface.
See also:

- 125.51.22 subtitle as String 17950

125.51.12 Title as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes: Part of the MKAnnotationMBS interface.
See also:

- 125.51.24 title as String 17951

125.51.13 URLForTilePath(Path as MKTileOverlayPathMBS) as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the URL to use to access the specified tile.
Notes: path: The path structure that identifies the specific tile you want. This structure incorporates the tile,Äôs X-Y coordinate at a given zoom level and scale factor.

Returns the URL to use to retrieve the tile.

The default implementation of this method uses the template string you provided at initialization time to build a URL to the specified tile image. Subclasses can override this method and use a different scheme to provide URLs for tiles. Tiles can be located either on a local file system or on a remote server.

125.51.14 Properties

125.51.15 canReplaceMapContent as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the tile content is fully opaque.
Notes: If the tile content you provide can cover the entire drawing area with opaque content, set this property to true. Doing so serves as a hint to the map view that it does not need to draw any additional content underneath your tiles. Set this property to false if your tiles contain any transparency.
The default value for this property is false.
(Read and Write property)
See also:

- 125.51.4 canReplaceMapContent as Boolean 17946

125.51.16 coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.
(Read only property)
See also:

- 125.51.7 Coordinate as CLLocationCoordinate2DMBS 17947

125.51.17 geometryFlipped as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates the orientation of tile indexes along the y axis.
Notes: When set to NO, tile indexes start in the upper-left corner of the map and proceed down and to the right. Thus, the tile at (0, 0) is in the upper-left corner of the map, the tile at (1, 0) is to its immediate right and the tile at (0, 1) is immediately below it. Setting this property to true causes the map to start indexes at the lower-left corner of the map and proceed up and to the right.
The default value of this property is false.
(Read and Write property)

125.51.18 latitude as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The latitude of the coordinates.
Notes: (Read only property)

125.51.19 longitude as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The longitude of the coordinates.
Notes: (Read only property)

125.51.20 maximumZ as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The maximum zoom level supported by the tiles of this overlay object.
Notes: If you use different overlay objects to represent different tiles at different zoom levels, use this property to specify the maximum zoom level supported by this overlay,Äôs tiles. At zoom level 0, tiles cover the entire world map; at zoom level 1, tiles cover 1/4 of the world; at zoom level 2, tiles cover 1/16 of the world, and so on. The map never tries to load tiles for a zoom level greater than the value specified by this property.
The default value of this property is 21. Setting the value of this property to a number greater than the default does not guarantee the use of those extra zoom levels.
(Read and Write property)

125.51.21 minimumZ as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The minimum zoom level supported by the tiles of this overlay object.
Notes: If you use different overlay objects to represent different tiles at different zoom levels, use this property to specify the minimum zoom level supported by this overlay,Äôs tiles. At zoom level 0, tiles cover the entire world map; at zoom level 1, tiles cover 1/4 of the world; at zoom level 2, tiles cover 1/16 of the world, and so on. The map never tries to load tiles for a zoom level less than the value specified by this property.

The default value of this property is 0.
(Read and Write property)

125.51.22 subtitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKOverlayMBS interface.

(Read only property)
See also:

- 125.51.11 SubTitle as String 17948

125.51.23 TileSize as CGSizeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The size (in pixels) of your tile images.
Notes: On Retina displays, the images are rendered pixel for pixel and are not scaled. This means that if the tile size is 256 x 256 pixels and the scale factor is 2.0, the image would be rendered as if it were 128 x 128 points in size. This behavior causes the tile to appear smaller but preserves the original image data.
The default tile size is set to 256 x 256 pixels.
(Read and Write property)

125.51.24 title as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes: Part of the MKAnnotationMBS interface.
(Read only property)
See also:

- 125.51.12 Title as String 17948

125.51.25 URLTemplate as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The template for generating tile image URLs.
Notes: You specify this string at initialization time.
(Read only property)

125.51.26 Events

125.51.27 TileLoaded(path as MKTileOverlayPathMBS, tileData as MemoryBlock, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Called by loadTileAtPath when loading finished.
Notes: The tileData parameter contains the raw data loaded from the corresponding image file. You can use this data to initialize an image object. If an error occurred, this parameter is nil.

The error parameter contains an error object if there was a problem loading the tile image. If no errors occurred, this parameter is nil.

125.52 class MKTileOverlayPathMBS

125.52.1 class MKTileOverlayPathMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Use this class to specify the index values for a single tile.
Example:

```
// see which URL a tile overlay loads for a given tile
Var tiles As New MKTileOverlayMBS("https://tile.openstreetmap.org/ { z } / { x } / { y } .png")
Var path As New MKTileOverlayPathMBS(68, 44, 7, 2.0) // x, y, zoom level, scale for Retina
MessageBox tiles.URLForTilePath(path)
```

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 125.52.3 Constructor(other as MKTileOverlayPathMBS) 17953

125.52.5 Properties

125.52.6 ContentScaleFactor as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The screen scale factor for which the tile is intended.
Notes: (Read and Write property)

125.52.7 X as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The index of the tile along the x axis of the map.
Notes: (Read and Write property)

125.52.8 Y as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The index of the tile along the y axis of the map.
Notes: (Read and Write property)

125.52.9 Z as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The zoom level number for the tile.
Notes: (Read and Write property)

125.53 class MKTileOverlayRendererMBS

125.53.1 class MKTileOverlayRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The renderer for a tile overlay that handles the drawing of bitmap images on the map surface.
Notes: You create instances of this class when tile overlays become visible on the map view. A renderer works closely with its associated tile overlay object to coordinate the loading and drawing of tiles at appropriate times.
For information about how to specify the tiles to display on the map, see MKTileOverlayMBS.
Subclass of the MKOverlayRendererMBS class.

125.53.2 Methods

125.53.3 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKTileOverlayRenderer reference from a declare.
The object is retained.
See also:

- 125.53.4 Constructor(TileOverlay as MKTileOverlayMBS) 17955

125.53.4 Constructor(TileOverlay as MKTileOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a tile renderer with the specified overlay object.
Notes: overlay: The tile overlay object whose contents you want to draw.
See also:

- 125.53.3 Constructor(Handle as Integer) 17955

125.53.5 reloadData

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Forces tiles to be reloaded and displayed.
Notes: Use this method to remove the overlay,Äôs existing tile images and reload them from the original

source. This method automatically causes the renderer to redraw the new tiles as soon as they are loaded into memory.

125.54 class MKUserLocationMBS

125.54.1 class MKUserLocationMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The MKUserLocation class defines a specific type of annotation that identifies the user's current location.
Example:

```
// show the own location on the map and follow it
// The app needs location access and the location entitlement.
// MyMapView is a subclass of DesktopMapKitViewControlMBS with the didUpdateUserLocation event implemented, placed on the window as MyMapView1.
MyMapView1.View.showsUserLocation = True

// in MyMapView:
Sub didUpdateUserLocation(mapView As MKMapViewMBS, userLocation As MKUserLocationMBS) Handles didUpdateUserLocation
Var c As CLLocationCoordinate2DMBS = userLocation.Coordinate
System.DebugLog "You are at " + c.latitude.ToString + ", " + c.longitude.ToString
mapView.setCenterCoordinate(c, True)
End Sub
```

Notes: You do not create instances of this class directly. Instead, you retrieve an existing MKUserLocation object from the userLocation property of the map view displayed in your application.

Interfaces: MKAnnotationMBS

125.54.2 Methods

125.54.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

• 125.54.4 Constructor(Handle as Integer) 17958

125.54.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKUserLocation reference from a declare.
The object is retained.
See also:

• 125.54.3 Constructor 17957

125.54.5 Coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

125.54.6 SetCoordinate(newCoordinate as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Set the coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.
Do not use.

125.54.7 SubTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKOverlayMBS interface.

125.54.8 Title as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes: Part of the MKAnnotationMBS interface.

125.54.9 Properties

125.54.10 heading as CLHeadingMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The heading for the user location.
Notes: Returns nil if not in MKUserTrackingModeFollowWithHeading is used.
(Read only property)

125.54.11 location as CLLocationMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The current location of the device.
Notes: This property contains nil if the map view is not currently showing the user location or if the user's location has not yet been determined.
(Read only property)

125.54.12 updating as Boolean

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the user's location is currently being updated.
Notes: (Read only property)

Chapter 126

MarkDown

126.1 class MarkdownDocumentMBS

126.1.1 class MarkdownDocumentMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class ot process markdown text.
Example:

```
// convert markdown text to HTML
Var text As String = "# Hello" + EndOfLine + EndOfLine + "This is **bold** and this is a [ link ]
(https://www.mbsplugins.de/)."
Var doc As New MarkdownDocumentMBS(text)

If doc.Compile Then
Var html As String = doc.Document
MessageBox html
End If
```

Blog Entries

- MBS Xojo Plugins, version 20.6pr1

126.1.2 Methods

126.1.3 Compile(flags as Integer = 35799040) as boolean

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compiles the markdown code.

126.1.4 Constructor(data as string, flags as Integer = 35799040)

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new document with the content of the file.
Notes: Text should have EndOfLine.Unix as newline character.
Text must be in UTF-8 encoding to work best.
See also:

- 126.1.5 Constructor(file as folderitem, flags as Integer = 35799040) 17962

126.1.5 Constructor(file as folderitem, flags as Integer = 35799040)

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new document with the content of the file.
Notes: Text should have EndOfLine.Unix as newline character.
Text must be in UTF-8 encoding to work best.
See also:

- 126.1.4 Constructor(data as string, flags as Integer = 35799040) 17962

126.1.6 CSS as string

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates CSS for the html code.

126.1.7 Document as string

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates HTML document.
Notes: Creates HTML if needed.

126.1.8 Footnotes as MarkdownFootnoteMBS()

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of foot notes.

126.1.9 GenerateCSS(File as folderitem) as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates a css file.
Notes: Returns number of bytes written. Or -1 on any error.

126.1.10 GenerateHTML(File as folderitem) as boolean

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates a html file.
Notes: Returns true on success and false on failure.

126.1.11 Properties

126.1.12 Author as MarkdownLineMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The author line.
Notes: Can be nil if not used.
(Read only property)

126.1.13 Code as MarkdownParagraphMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Intermediate code generated by compile.
Notes: (Read only property)

126.1.14 Compiled as Boolean

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether document is compiled already.
Notes: (Read only property)

126.1.15 Date as MarkdownLineMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The date line.
Notes: Can be nil if not used.
(Read only property)

126.1.16 ExtraFootnotePrefix as String

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The extra footnote prefix.
Notes: (Read and Write property)

126.1.17 Handle as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Internal object reference.
Notes: (Read only property)

126.1.18 HasHTML as Boolean

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether html is available.
Notes: Set to true when html is generated.
(Read only property)

126.1.19 Title as MarkdownLineMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The title line.
Notes: Can be nil if not used.
(Read only property)

126.1.20 URLBase as String

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The URL base.
Notes: (Read and Write property)

126.1.21 Constants

Flags

Constant	Value	Description
kAutoLink	&h4000	make http://foo.com link even without <>s
kCDATA	&h80	generate code for xml ! [CDATA [...]]
kExtraFootnote	&h200000	Enable markdown extra-style footnotes.
kInputMask	&h00030000	
kIsLabel	&h08000000	
kNoAlphaList	&h80000	Forbid alphabetic lists.
kNoDivQuote	&h40000	Forbid >%class% blocks.
kNoDList	&h100000	Forbid definition lists.
kNoExt	&h40	Don't allow pseudo-protocols.
kNoHeader	&h10000	Don't process header blocks.
kNoHTML	8	Don't allow raw html through AT ALL
kNoImage	2	Don't do image processing, block <img>.
kNoLinks	1	Don't do link processing, block <a>tags.
kNoPants	4	don't run smartypants.
kNoRelaxed	&h200	emphasis happens /everywhere/
kNoStrikethrough	&h800	Forbid strikethrough.
kNoSuperscript	&h100	no A^B
kNoTables	&h400	Disallow tables.
kSafeLink	&h8000	Paranoid check for link protocol.
kStrict	&h10	Disable SUPERSCRIPT, RELAXED_EMPHASIS.
kTabStop	&h20000	Expand tabs to 4 spaces.
kTagText	&h20	process text inside an html tag; no * , no <bold>, no html or [ ] expansion
kTOC	&h1000	Do table-of-contents processing.
kUserFlags	&h0FFFFFFF	

126.2 class MarkdownFootnoteMBS

126.2.1 class MarkdownFootnoteMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a foot note.
Example:

```
// list the reference style links of a markdown document
Var text As String = "See [ our site ] [ mbs ] and [ the blog ] [ blog ] ." + EndOfLine + EndOfLine + _
" [ mbs ] : https://www.monkeybreadsoftware.de ""Monkeybread""" + EndOfLine + _
" [ blog ] : https://www.mbsplugins.de"
Var doc As New MarkdownDocumentMBS(text)
If Not doc.Compile Then Return

Var lines() As String
For Each f As MarkdownFootnoteMBS In doc.Footnotes
lines.Add f.Tag + " ->" + f.Link + If(f.Title <>"", " (" + f.Title + ")", "")
Next
MessageBox String.FromArray(lines, EndOfLine)
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

126.2.2 Methods

126.2.3 Constructor

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

126.2.4 Properties

126.2.5 Document as MarkdownDocumentMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The back reference to the markdown document.
Notes: (Read only property)

126.2.6 Flags as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags.
Notes: Can be zero or a combination of kFlagExtraBookmark and kFlagReferenced.
(Read only property)

126.2.7 Height as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The dimensions for image link.
Notes: (Read only property)

126.2.8 Link as String

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: What this footnote points to.
Notes: (Read only property)

126.2.9 RefNumber as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reference number.
Notes: (Read only property)

126.2.10 Tag as String

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag for the reference link.
Notes: (Read only property)

126.2.11 Title as String

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The title of the footnode.
Notes: (Read only property)

126.2.12 Width as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The dimensions for image link.
Notes: (Read only property)

126.2.13 Constants

Footnote Flags

Constant	Value	Description
kFlagExtraBookmark	1	
kFlagReferenced	2	Set if this footnote is referenced.

126.3 class MarkdownLineMBS

126.3.1 class MarkdownLineMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a line in the markdown text.
Example:

```
// read title, author and date from the header lines of a markdown text
Var text As String = "% My Report" + EndOfLine + "% Jane Miller" + EndOfLine + "% 2026-11-07" +
EndOfLine + EndOfLine + "Some text."
Var doc As New MarkdownDocumentMBS(text)
If Not doc.Compile Then Return

Var info As String
If doc.Title <>Nil Then info = info + "Title: " + doc.Title.Text + EndOfLine
If doc.Author <>Nil Then info = info + "Author: " + doc.Author.Text + EndOfLine
If doc.Date <>Nil Then info = info + "Date: " + doc.Date.Text
MessageBox info
```

Notes: Each input line is read into a Line, which contains the line, the offset of the first non-space character [this assumes that all tabs will be expanded to spaces!] , and a pointer to the next line.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

126.3.2 Methods

126.3.3 Constructor

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

126.3.4 Properties

126.3.5 Count as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The kind of this line.
Notes: See kKind* constants.
(Read only property)

126.3.6 DLE as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The leading indent on the line.
Notes: (Read only property)

126.3.7 Document as MarkdownDocumentMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The back reference to the markdown document.
Notes: (Read only property)

126.3.8 Flags as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Special attributes for this line.
Notes: Can be combination of kFlag* constants.
(Read only property)

126.3.9 Kind as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The line type.
Notes: See kKind* constants.
(Read only property)

126.3.10 NextLine as MarkdownLineMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The next line.
Notes: (Read only property)

126.3.11 Text as String

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text of the line.
Notes: (Read only property)

126.3.12 Constants

Flag Values

Constant	Value	Description
kFlagChecked	2	The line was already processed.
kFlagPipeChar	1	line contains a |

Kind Values

Constant	Value	Description
kKindCode	1	Code
kKindDash	3	Dash line
kKindEqual	5	Equal line
kKindHR	2	HR line
kKindText	0	Text line
kKindTilde	4	Tilde line

126.4 class MarkdownParagraphMBS

126.4.1 class MarkdownParagraphMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class ofr a paragraph.
Example:

```
// list the headlines of a markdown text
Var text As String = "# Intro" + EndOfLine + EndOfLine + "Some text." + EndOfLine + EndOfLine +
"## Details" + EndOfLine + EndOfLine + "More text."
Var doc As New MarkdownDocumentMBS(text)
If Not doc.Compile Then Return

Var lines() As String
Var p As MarkdownParagraphMBS = doc.Code
While p <>Nil
If p.Typ = MarkdownParagraphMBS.kTypeHDR And p.Text <>Nil Then
lines.Add "Level " + p.hNumber.ToString + ": " + p.Text.Text
End If
p = p.NextParagraph
Wend
MessageBox String.FromArray(lines, EndOfLine)
```

Notes: A paragraph is a collection of Lines, with links to the next paragraph and (if it's a QUOTE, UL, or OL) to the reparsed contents of this paragraph.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

126.4.2 Methods

126.4.3 Constructor

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

126.4.4 Properties

126.4.5 Align as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The paragraph alignment.
Notes: Can be kAlignPara, kAlignImplicit or kAlignCenter.
(Read only property)

126.4.6 Document as MarkdownDocumentMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The back reference to the markdown document.
Notes: (Read only property)

126.4.7 Down as MarkdownParagraphMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Recompiled contents of this paragraph.
Notes: (Read only property)

126.4.8 hNumber as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The header level for HDR.
Notes: (Read only property)

126.4.9 Ident as String

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: ID tag for quote.
Notes: (Read only property)

126.4.10 Lang as String

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: lang attribute for CODE
Notes: (Read only property)

126.4.11 NextParagraph as MarkdownParagraphMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The next paragraph.
Notes: (Read only property)

126.4.12 Text as MarkdownLineMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: All the text in this paragraph.
Notes: (Read only property)

126.4.13 Typ as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of paragraph.
Notes: See kType* constants.
(Read only property)

126.4.14 Constants

Alignment Values

Constant	Value	Description
kAlignCenter	2	Center
kAlignImplicit	0	Implicit alignment
kAlignPara	1	Paragraph

Typ Codes

Constant	Value	Description
kTypeAL	9	AL
kTypeCode	1	Code
kTypeDL	6	DL
kTypeHDR	11	HDR
kTypeHR	12	HR
kTypeHTML	4	HTML
kTypeListItem	10	ListItem
kTypeMarkup	3	Markup
kTypeOL	8	OL
kTypeQuote	2	Quote
kTypeSource	14	Source
kTypeStyle	5	Style
kTypeTable	13	Table
kTypeUL	7	UL
kTypeWhitespace	0	Whitespace

Chapter 127

Math

127.1 class BiggerNumberMBS

127.1.1 class BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a big number.
Example:

```
// speed of light in m/s
Var SpeedOfLight As New BiggerNumberMBS("299792458")

// seconds per day
Var SecondsPerDay As New BiggerNumberMBS(24 * 3600)

Var DaysPerYear As New BiggerNumberMBS(365.25)

Var LightYear As BiggerNumberMBS = SpeedOfLight * DaysPerYear * SecondsPerDay
MessageBox LightYear.StringValue+" meter per light year"

// 9.460.730.472.580.800 matches number from Wikipedia

Var AgeOfUniversum As New BiggerNumberMBS(13810000000)

Var MaxDistance As BiggerNumberMBS = LightYear * AgeOfUniversum

MessageBox MaxDistance.GetStringValue(10, False, 100, 3, True)+" meter maximum"
```

Notes: This is floating point number with 320 bits in BigNumber and 2560 bits in BiggerNumber class.

Precision is about 77 digits dot for the smaller one and 617 for the bigger one.
So use first for speed and second for precision.

So if you want to store currency or other values where rounding should not happen, better store values multiplied, e.g. in cents.

Compared to normal double values, you have 5 times the bits.
And we check for math errors and raise exceptions if something goes wrong.

127.1.2 Methods

127.1.3 Abs as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries absolute value.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS(-123)
Var z as BiggerNumberMBS = o.Abs

MessageBox z.StringValue
```

Notes: Removes sign.
See also:

- 127.1.4 Abs(value as BiggerNumberMBS) as BiggerNumberMBS 17979

127.1.4 Abs(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Absolute value of x.
Example:

```
Var c As New BiggerNumberMBS(-3)
Var d As BiggerNumberMBS = BiggerNumberMBS.Abs(c)
Var e As BiggerNumberMBS = c.Abs

MessageBox d.StringValue+EndOfLine+e.StringValue // shows 3
```

See also:

- 127.1.3 Abs as BiggerNumberMBS 17979

127.1.5 ACos(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Arc Cosine.
Example:

```
Var c As New BiggerNumberMBS(0.5)
Var d As BiggerNumberMBS = BiggerNumberMBS.ACos(c)

Var x As Double = ACos(0.5)

MessageBox d.StringValue+EndOfLine+Str(x)
```

Notes: we're using the formula: acos(x) = pi/2 - asin(x)

127.1.6 ACosh(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverse hyperbolic cosine.
Example:

```
Var c As New BiggerNumberMBS(2.0)
Var d As BiggerNumberMBS = BiggerNumberMBS.ACosh(c)

// ACosHMBS is in MBS Xojo Util Plugin
Var x As Double = ACosHMBS(2.0)

MessageBox d.StringValue+EndOfLine+Str(x)
```

Notes: acosh(x) = ln(x + sqrt(x^2 - 1)) x in <1, infinity)

127.1.7 ACot(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Arc Cotangent.
Notes: we're using the formula: actan(x) = pi/2 - atan(x)

127.1.8 ACoth(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates inverse hyperbolic cotangent.
Notes: acoth(x) = 0.5 * ln((x+1) / (x-1)) x in (-infinity, -1) or (1, infinity)

127.1.9 Add(other as BiggerNumberMBS, round as boolean = true) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a number.
Example:

```
Var x as new BiggerNumberMBS(2)
Var d as new BiggerNumberMBS(3)
Var p as BiggerNumberMBS = x.Add(d)

MessageBox p.StringValue // shows 5
```

127.1.10 ASin(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Arc Sine.
Example:

```
Var c As New BiggerNumberMBS(1.0)
Var d As BiggerNumberMBS = BiggerNumberMBS.ASin(c)

Var x As Double = ASin(1.0)

MessageBox d.StringValue+EndOfLine+Str(x)
```

Notes: Range is from -1 to 1.

127.1.11 ASinh(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverse hyperbolic sine.
Example:

```
Var c As New BiggerNumberMBS(0.5)
Var d As BiggerNumberMBS = BiggerNumberMBS.ASinH(c)

// ASinHMBS is in MBS Xojo Util Plugin
Var x As Double = ASinHMBS(0.5)

MessageBox d.StringValue+EndOfLine+Str(x)
```

Notes: asinh(x) = ln(x + sqrt(x^2 + 1))

127.1.12 ATan(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Arc Tangent.
Example:

```
Var c As New BiggerNumberMBS(0.5)
Var d As BiggerNumberMBS = BiggerNumberMBS.ATan(c)

Var x As Double = ATan(0.5)

MessageBox d.StringValue+EndOfLine+Str(x)
```

127.1.13 ATanh(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates inverse hyperbolic tangent.
Example:

```
Var c As New BiggerNumberMBS(0.5)
Var d As BiggerNumberMBS = BiggerNumberMBS.ATanh(c)

// ATanhMBS is in MBS Xojo Util Plugin
Var x As Double = ATanhMBS(0.5)

MessageBox d.StringValue+EndOfLine+Str(x)
```

Notes: atanh(x) = 0.5 * ln((1+x) / (1-x)) x in (-1, 1)

127.1.14 BitAnd(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates bitwise AND operation.
Example:

```
Var x as new BiggerNumberMBS(17)
Var y as new BiggerNumberMBS(16)
Var r as BiggerNumberMBS = x.BitAnd(y)
```

```
MessageBox r.StringValue
```

127.1.15 BitOr(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates bitwise or operation.
Example:

```
Var x as new BiggerNumberMBS(17)
Var y as new BiggerNumberMBS(16)
Var r as BiggerNumberMBS = x.BitOr(y)

MessageBox r.StringValue
```

127.1.16 BitXOr(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates bitwise xor operation.
Example:

```
Var x as new BiggerNumberMBS(17)
Var y as new BiggerNumberMBS(16)
Var r as BiggerNumberMBS = x.BitXOr(y)

MessageBox r.StringValue
```

127.1.17 Ceil as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns a value representing the smallest integer that is greater than or equal to x.
Example:

```
Var c As New BiggerNumberMBS(-3.7)
Var d As BiggerNumberMBS = c.Ceil

MessageBox d // shows -3
```

Notes: e.g.
Ceil(-3.7) = -3
Ceil(-3.1) = -3
Ceil(-3.0) = -3

Ceil(4.0) = 4
Ceil(4.2) = 5
Ceil(4.8) = 5

127.1.18 Constructor

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialize the number with zero value.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS
MessageBox o.StringValue
```

- 127.1.27 Constructor(value as UInt64) 17989

127.1.19 Constructor(other as BiggerNumberMBS)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialize the number with other value.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS(2.5)
Var c as BiggerNumberMBS = new BiggerNumberMBS(o)

MessageBox c.StringValue
```

- 127.1.26 Constructor(value as UInt32) 17989
- 127.1.27 Constructor(value as UInt64) 17989

127.1.20 Constructor(value as Currency)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number object with a currency object.
Example:

```
Var v as Currency = 123.456
Var b as new BiggerNumberMBS(v)
MessageBox b.StringValue
```

- 127.1.26 Constructor(value as UInt32) 17989
- 127.1.27 Constructor(value as UInt64) 17989

127.1.21 Constructor(value as Double)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialize the number with double value.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS(2.5)
MessageBox str(o.DoubleValue)+" = "+str(o.StringValue)#
```

- 127.1.23 Constructor(value as Int64) 17987
- 127.1.24 Constructor(value as Single) 17987
- 127.1.25 Constructor(value as String) 17988
- 127.1.26 Constructor(value as UInt32) 17989
- 127.1.27 Constructor(value as UInt64) 17989

127.1.22 Constructor(value as Int32)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with a 32-bit integer.
Example:

```
Var v as Int32 = 123
Var b as new BiggerNumberMBS(v)
MessageBox b.StringValue
```

- 127.1.21 Constructor(value as Double) 17986

- 127.1.23 Constructor(value as Int64) 17987
- 127.1.24 Constructor(value as Single) 17987
- 127.1.25 Constructor(value as String) 17988
- 127.1.26 Constructor(value as UInt32) 17989
- 127.1.27 Constructor(value as UInt64) 17989

127.1.23 Constructor(value as Int64)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with a 64-bit integer.
Example:

```
Var v as Int64 = 123
Var b as new BiggerNumberMBS(v)
MessageBox b.StringValue
```

- 127.1.21 Constructor(value as Double) 17986
- 127.1.22 Constructor(value as Int32) 17986
- 127.1.24 Constructor(value as Single) 17987
- 127.1.25 Constructor(value as String) 17988
- 127.1.26 Constructor(value as UInt32) 17989
- 127.1.27 Constructor(value as UInt64) 17989

127.1.24 Constructor(value as Single)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with a 32-bit floating point number.
Example:

```
Var v as Single = 123
Var b as new BiggerNumberMBS(v)
```

MessageBox b.StringValue

- 127.1.21 Constructor(value as Double) 17986
- 127.1.22 Constructor(value as Int32) 17986
- 127.1.23 Constructor(value as Int64) 17987
- 127.1.25 Constructor(value as String) 17988
- 127.1.26 Constructor(value as UInt32) 17989
- 127.1.27 Constructor(value as UInt64) 17989

127.1.25 Constructor(value as String)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialize the number with string value.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS("123.456")
MessageBox o.StringValue
```

See also:

- 127.1.18 Constructor 17984

- 127.1.21 Constructor(value as Double) 17986
- 127.1.22 Constructor(value as Int32) 17986
- 127.1.23 Constructor(value as Int64) 17987
- 127.1.24 Constructor(value as Single) 17987
- 127.1.26 Constructor(value as UInt32) 17989
- 127.1.27 Constructor(value as UInt64) 17989

127.1.26 Constructor(value as UInt32)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with an unsigned 32-bit integer.
Example:

```
Var v as UInt32 = 123
Var b as new BiggerNumberMBS(v)
MessageBox b.StringValue
```

See also:

- 127.1.18 Constructor 17984

- 127.1.21 Constructor(value as Double) 17986
- 127.1.22 Constructor(value as Int32) 17986
- 127.1.23 Constructor(value as Int64) 17987
- 127.1.24 Constructor(value as Single) 17987
- 127.1.25 Constructor(value as String) 17988
- 127.1.27 Constructor(value as UInt64) 17989

127.1.27 Constructor(value as UInt64)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with an unsigned 32-bit integer.
Example:

```
Var v as UInt64 = 123
Var b as new BiggerNumberMBS(v)
MessageBox b.StringValue
```

See also:

- 127.1.18 Constructor 17984

- 127.1.20 Constructor(value as Currency) 17985
- 127.1.21 Constructor(value as Double) 17986

- 127.1.22 Constructor(value as Int32) 17986
- 127.1.23 Constructor(value as Int64) 17987
- 127.1.24 Constructor(value as Single) 17987
- 127.1.25 Constructor(value as String) 17988
- 127.1.26 Constructor(value as UInt32) 17989

127.1.28 Cos(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the cosine value.
Example:

```
Var c As New BiggerNumberMBS(1.0)
Var d As BiggerNumberMBS = BiggerNumberMBS.Cos(c)

Var x As Double = Cos(1.0)

MessageBox d.StringValue+EndOfLine+Str(x)
```

Notes: We're using the formula cos(x) = sin(x + PI/2).

127.1.29 Cosh(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Hyperbolic Cosine.
Example:

```
Var c As New BiggerNumberMBS(0.5)
Var d As BiggerNumberMBS = BiggerNumberMBS.CosH(c)

// CosHMBS is in MBS Xojo Util Plugin
Var x As Double = CosHMBS(0.5)

MessageBox d.StringValue+EndOfLine+Str(x)
```

Notes: We're using the formula cosh(x)= (e^x + e^(-x)) / 2.

127.1.30 Cot(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Cotangent.
Notes: We're using the formula tan(x) = cos(x) / sin(x).

127.1.31 Coth(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Hyperbolic Cotangent.
Notes: We're using the formula coth(x)= (e^x + e^(-x)) / (e^x - e^(-x))

127.1.32 DegToDeg(d as BiggerNumberMBS, m as BiggerNumberMBS, s as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts degrees in the long format into one value.
Notes: long format: (degrees, minutes, seconds)
minutes and seconds must be greater than or equal zero

result:
if d>=0 : result= d + ((s/60)+m)/60
if d<0 : result= d - ((s/60)+m)/60

((s/60)+m)/60 = (s+60*m)/3600 (second version is faster because there's only one division)

for example:
DegToDeg(10, 30, 0) = 10.5
DegToDeg(10, 24, 35.6)=10.4098(8)

127.1.33 DegToGrad(d as BiggerNumberMBS, m as BiggerNumberMBS, s as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts degrees in the long format to gradians.
See also:

- 127.1.34 DegToGrad(value as BiggerNumberMBS) as BiggerNumberMBS 17992

127.1.34 DegToGrad(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts degrees to gradians.
Notes: it returns: x * 200 / 180
See also:

- 127.1.33 DegToGrad(d as BiggerNumberMBS, m as BiggerNumberMBS, s as BiggerNumberMBS) as BiggerNumberMBS 17991

127.1.35 DegToRad(d as BiggerNumberMBS, m as BiggerNumberMBS, s as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts degrees in the long format to radians.
See also:

- 127.1.36 DegToRad(value as BiggerNumberMBS) as BiggerNumberMBS 17992

127.1.36 DegToRad(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts degrees to radians.
Notes: It returns: x * pi / 180
See also:

- 127.1.35 DegToRad(d as BiggerNumberMBS, m as BiggerNumberMBS, s as BiggerNumberMBS) as BiggerNumberMBS 17992

127.1.37 Divide(other as BiggerNumberMBS, round as boolean = true) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides the number.
Example:

```
Var x as new BiggerNumberMBS(8)
Var d as new BiggerNumberMBS(2)
Var p as BiggerNumberMBS = x.Divide(d)
```

```
MessageBox p.StringValue // shows 4
```

127.1.38 E as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value zero.
Example:

```
Var b as BiggerNumberMBS = BiggerNumberMBS.e
MessageBox b.StringValue
```

127.1.39 Equals(other as BiggerNumberMBS) as Boolean

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if two numbers are the same.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS(123)
Var z as BiggerNumberMBS = new BiggerNumberMBS(123)

if o.Equals(z) then
MessageBox "equal"
else
Break // error
end if
```

Notes: Returns true if equal.

127.1.40 Exp(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates e^value.
Example:

```
Var x as new BiggerNumberMBS(2)
Var p as BiggerNumberMBS = BiggerNumberMBS.Exp(x)

MessageBox p.StringValue // shows e^2 = 7.38
```

127.1.41 Floor as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes any fraction part.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS(2.3)
Var s as BiggerNumberMBS = o.Floor

MessageBox s.StringValue

Var a as BiggerNumberMBS = new BiggerNumberMBS(-2.3)
Var b as BiggerNumberMBS = a.Floor

MessageBox b.StringValue
```

127.1.42 Frac as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the fraction part.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS(2.5)
Var s as BiggerNumberMBS = o.Frac

MessageBox s.StringValue

Var a as BiggerNumberMBS = new BiggerNumberMBS(-2.5)
Var b as BiggerNumberMBS = a.Frac

MessageBox b.StringValue
```

127.1.43 GetStringValue(Base as Integer = 10, scientific as boolean = false, scientificFrom as Integer = 15, round as Integer = -1, TrimZeros as Boolean = true, comma as String = ".") as String

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries string value.
Example:

```
Var o as new BiggerNumberMBS(1234)

// show as hex
```

```
MessageBox o.GetStringValue(16)

// show as number with comma and 3 digits
Var z as new BiggerNumberMBS(12.345)
MessageBox z.GetStringValue(10, false, 15, 3, true, ",")
```

Notes: Base: The base of the number system. Normally 10, but also 16 for hex is common.
scientific: Whether to use scientific notation.
scientificFrom: How many digits we show.
Round: Whether to round to n digits.
TrimZeros: Whether to trim unneeded zeros.
comma: The character to use as decimal dot.
See also:

- 127.1.44 GetStringValue(Conversion as BigNumberConversionMBS) as String 17995

127.1.44 GetStringValue(Conversion as BigNumberConversionMBS) as String

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries string value.
Example:

```
Var o As New BiggerNumberMBS(1234567.890)

Var conv As New BigNumberConversionMBS
conv.Comma = ","
conv.Group = "'"
conv.Scientific = False
conv.Round = 3

Var s1 As String = o.GetStringValue(conv)
// 1'234'567,89

conv.Comma = "."
conv.Group = ","

Var s2 As String = o.GetStringValue(conv)
// 1,234,567,89

conv.Comma = ","
conv.Group = "'"
conv.Scientific = True

Var s3 As String = o.GetStringValue(conv)
// 1,235e+6
```

Break

See also:

- 127.1.43 GetStringValue(Base as Integer = 10, scientific as boolean = false, scientificFrom as Integer = 15, round as Integer = -1, TrimZeros as Boolean = true, comma as String = ".") as String 17994

127.1.45 GradToDeg(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts degrees to gradians.
Notes: it returns: x * 180 / 200

127.1.46 GradToRad(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts gradians to radians.
Notes: It returns: x * pi / 200.

127.1.47 HalfPi as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value pi/2.
Example:

```
Var b as BiggerNumberMBS = BiggerNumberMBS.HalfPi
MessageBox b.StringValue
```

127.1.48 LibTypeStr as String

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries what implementation is used for this platform.
Notes: Shows asm in the text if assembler code is used.
Assembler code is not available for all platforms.

127.1.49 Ln(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates natural logarithm.
Example:

```
Var x as new BiggerNumberMBS(2)
Var p as BiggerNumberMBS = BiggerNumberMBS.Ln(x)

MessageBox p.StringValue // shows ln(2) = 0.69
```

127.1.50 Ln10 as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value ln(10).
Example:

```
Var b as BiggerNumberMBS = BiggerNumberMBS.Ln10
MessageBox b.StringValue
```

127.1.51 Ln2 as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value ln(2).
Example:

```
Var b as BiggerNumberMBS = BiggerNumberMBS.Ln2
MessageBox b.StringValue
```

127.1.52 Log(value as BiggerNumberMBS, base as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates logarithm in a given base.
Example:

```
Var x as new BiggerNumberMBS(100)
Var d as new BiggerNumberMBS(10)
Var p as BiggerNumberMBS = BiggerNumberMBS.Log(x, d)
```

```
MessageBox p.StringValue // shows ln(100)/ln(10) = 2
```

127.1.53 Max as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with maximum value.
Example:

```
Var b as BiggerNumberMBS = BiggerNumberMBS.Min
MessageBox b.StringValue
```

127.1.54 Min as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with minimum value.
Example:

```
Var b as BiggerNumberMBS = BiggerNumberMBS.Min
MessageBox b.StringValue
```

127.1.55 Modulate(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modulates a number.
Example:

```
Var x as new BiggerNumberMBS(17)
Var y as new BiggerNumberMBS(3)
Var r as BiggerNumberMBS = x.Modulate(y)

MessageBox r.StringValue
```

Notes: Similar to mod keyword in Xojo.

127.1.56 Modulate2 as Integer

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modulates by 2.
Example:

```
Var x as new BiggerNumberMBS(8)
Var y as new BiggerNumberMBS(9)

MessageBox str(x.Modulate2)+" "+str(y.Modulate2)
```

Notes: Returns 0 or 1.

127.1.57 Multiply(other as BiggerNumberMBS, round as boolean = true) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies two numbers.
Example:

```
Var x as new BiggerNumberMBS(8)
Var d as new BiggerNumberMBS(2)
Var p as BiggerNumberMBS = x.Multiply(d)

MessageBox p.StringValue // shows 16
```

See also:

- 127.1.58 Multiply(value as Integer) as BiggerNumberMBS 17999
- 127.1.59 Multiply(value as UInt32) as BiggerNumberMBS 18000

127.1.58 Multiply(value as Integer) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply by an integer.
Example:

```
Var x as new BiggerNumberMBS(2)
Var p as BiggerNumberMBS = x.Multiply(3)

MessageBox p.StringValue // shows 6
```

See also:

- 127.1.57 Multiply(other as BiggerNumberMBS, round as boolean = true) as BiggerNumberMBS 17999

• 127.1.59 Multiply(value as UInt32) as BiggerNumberMBS 18000

127.1.59 Multiply(value as UInt32) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply by an unsigned integer.
Example:

```
Var x as new BiggerNumberMBS(17)
Var r as BiggerNumberMBS = x.Multiply(3)

MessageBox r.StringValue
```

See also:

• 127.1.57 Multiply(other as BiggerNumberMBS, round as boolean = true) as BiggerNumberMBS 17999

• 127.1.58 Multiply(value as Integer) as BiggerNumberMBS 17999

127.1.60 Nan as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value NaN.
Example:

```
Var b as BiggerNumberMBS = BiggerNumberMBS.Nan
MessageBox b.StringValue
```

127.1.61 Negate as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negates the number.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS(123)
Var z as BiggerNumberMBS = o.Negate

MessageBox z.StringValue
```

127.1.62 NumberWithCurrency(value as Currency) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with a currency value.
Example:

```
Var v as Currency = 123.456
Var b as BiggerNumberMBS = BiggerNumberMBS.NumberWithCurrency(v)

MessageBox b.StringValue
```

127.1.63 NumberWithDouble(value as Double) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with a 64-bit floating number.
Example:

```
Var v as Double = 123.456
Var b as BiggerNumberMBS = BiggerNumberMBS.NumberWithDouble(v)

MessageBox b.StringValue
```

127.1.64 NumberWithInt32(value as Int32) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with a signed 32-bit integer.
Example:

```
Var v as Int32 = 123
Var b as BiggerNumberMBS = BiggerNumberMBS.NumberWithInt32(v)

MessageBox b.StringValue
```

127.1.65 NumberWithInt64(value as Int64) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with a signed 64-bit integer.
Example:

```
Var v as Int64 = 123
Var b as BiggerNumberMBS = BiggerNumberMBS.NumberWithInt64(v)
```

MessageBox b.StringValue

127.1.66 NumberWithInteger(value as Integer) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an integer.
Example:

```
Var v as Integer = 123
Var b as BiggerNumberMBS = BiggerNumberMBS.NumberWithInteger(v)

MessageBox b.StringValue
```

127.1.67 NumberWithSingle(value as single) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an 32-bit floating point number.
Example:

```
Var v as Single = 123
Var b as BiggerNumberMBS = BiggerNumberMBS.NumberWithSingle(v)

MessageBox b.StringValue
```

127.1.68 NumberWithString(value as String) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with value from string.
Example:

```
Var v as String = "123"
Var b as BiggerNumberMBS = BiggerNumberMBS.NumberWithString(v)

MessageBox b.StringValue
```

127.1.69 NumberWithUInt32(value as UInt32) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an unsigned 32-bit integer.
Example:

```
Var v as UInt32 = 123
Var b as BiggerNumberMBS = BiggerNumberMBS.NumberWithUInt32(v)

MessageBox b.StringValue
```

127.1.70 NumberWithUInt64(value as UInt64) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an unsigned 64-bit integer.
Example:

```
Var v as UInt64 = 123
Var b as BiggerNumberMBS = BiggerNumberMBS.NumberWithUInt64(v)

MessageBox b.StringValue
```

127.1.71 NumberWithUInteger(value as UInteger) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an unsigned integer.
Example:

```
Var v as UInteger = 123
Var b as BiggerNumberMBS = BiggerNumberMBS.NumberWithUInteger(v)

MessageBox b.StringValue
```

127.1.72 NumberWithVariant(value as Variant) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number based on a variant.
Example:

```
Var v as Variant = 123.456
Var b as BiggerNumberMBS = BiggerNumberMBS.NumberWithVariant(v)

MessageBox b.StringValue
```

Notes: Internally redirects to other NumberWith functions based on the value type.

127.1.73 One as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value one.
Example:

```
Var b as BiggerNumberMBS = BiggerNumberMBS.One
MessageBox b.StringValue
```

127.1.74 Operator_Add(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a number.
Example:

```
Var a as new BiggerNumberMBS(3)
Var b as new BiggerNumberMBS(4)

// add
Var c as BiggerNumberMBS = a + b

MessageBox c.StringValue
```

127.1.75 Operator_AddRight(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a number.
Example:

```
Var a as new BiggerNumberMBS(3)
Var b as new BiggerNumberMBS(4)

// add
Var c as BiggerNumberMBS = a + b

MessageBox c.StringValue
```

127.1.76 Operator_Compare(other as BiggerNumberMBS) as Integer

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two numbers.
Example:

```
Var a as new BiggerNumberMBS(1.2)
Var b as new BiggerNumberMBS(1.2)
Var c as new BiggerNumberMBS(1.3)

if a = b then
// ok
else
break
end if

if a <c then
// ok
else
Break
end if

if c >b then
// ok
else
break
end if
```

127.1.77 Operator_Convert as String

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts big number to string automatically.
Example:

```
Var b as new BiggerNumberMBS
Var n as Double = 5

// convert from double to big number automatically
b = n

// convert to string automatically
MessageBox b
```

See also:

• 127.1.78 Operator_Convert(value as String) 18006

127.1.78 Operator_Convert(value as String)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a string to a big number.
Example:

```
Var b as new BiggerNumberMBS
Var n as string = "5"

// convert from string to big number automatically
b = n

// convert to double automatically
Var d as Double = b
MessageBox str(d)
```

See also:

• 127.1.77 Operator_Convert as String 18005

127.1.79 Operator_Divide(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides two numbers.
Example:

```
Var a as new BiggerNumberMBS(9.3)
Var b as new BiggerNumberMBS(3.0)

Var r as BiggerNumberMBS = a / b

MessageBox r.StringValue
```

127.1.80 Operator_DivideRight(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides two numbers.

127.1.81 Operator_IntegerDivide(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates an integer divide.
Example:

```
Var a as new BiggerNumberMBS(9.3)
Var b as new BiggerNumberMBS(3.0)

Var r as BiggerNumberMBS = a \b

MessageBox r.StringValue
```

Notes: Same as normal divide, but removes fraction part.

127.1.82 Operator_IntegerDivideRight(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates an integer divide.
Notes: Same as normal divide, but removes fraction part.

127.1.83 Operator_Modulo(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the modulo of two numbers.
Example:

```
Var a as new BiggerNumberMBS(9.3)
Var b as new BiggerNumberMBS(3.0)

Var r as BiggerNumberMBS = a mod b

MessageBox r.StringValue
```

127.1.84 Operator_ModuloRight(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the modulo of two numbers.

127.1.85 Operator_Multiply(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply two numbers.
Example:

```
// speed of light in m/s
Var SpeedOfLight As New BiggerNumberMBS("299792458")

// seconds per day
Var SecondsPerDay As New BiggerNumberMBS(24 * 3600)

Var DaysPerYear As New BiggerNumberMBS(365.25)

Var LightYear As BiggerNumberMBS = SpeedOfLight * DaysPerYear * SecondsPerDay
MessageBox LightYear.StringValue+" meter per light year"

// 9.460.730.472.580.800 matches number from Wikipedia

Var AgeOfUniversum As New BiggerNumberMBS(13810000000)

Var MaxDistance As BiggerNumberMBS = LightYear * AgeOfUniversum

MessageBox MaxDistance.GetStringValue(10, False, 100, 3, True)+" meter maximum"
```

127.1.86 Operator_MultiplyRight(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply two numbers.

127.1.87 Operator_Negate as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negates a number.
Example:

```
Var a as new BiggerNumberMBS(3)
```

```
// negate
Var c as BiggerNumberMBS = -a

MessageBox c.StringValue
```

127.1.88 Operator_Power(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates power of two numbers.
Example:

```
Var a as new BiggerNumberMBS(3)
Var b as new BiggerNumberMBS(4)

// pow
Var c as BiggerNumberMBS = a ^b

MessageBox c.StringValue
```

127.1.89 Operator_PowerRight(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates power of two numbers.

127.1.90 Operator_Subtract(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts one number from other.
Example:

```
Var a as new BiggerNumberMBS(3)
Var b as new BiggerNumberMBS(4)

// subtract
Var c as BiggerNumberMBS = a - b

MessageBox c.StringValue
```

127.1.91 Operator_SubtractRight(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts one number from other.

127.1.92 Pi as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value pi.
Example:

```
Var b as BiggerNumberMBS = BiggerNumberMBS.Pi
MessageBox b.StringValue
```

127.1.93 Pow(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the power of the number.
Example:

```
Var x as new BiggerNumberMBS(2)
Var o as new BiggerNumberMBS(5)
Var p as BiggerNumberMBS = x.Pow(o)

MessageBox p.StringValue // shows 32
```

127.1.94 RadToDeg(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts radians to degrees.
Notes: It returns: x * 180 / pi.

127.1.95 RadToGrad(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts radians to gradians.

Notes: it returns: x * 200 / pi

127.1.96 Rand as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates random number.
Notes: Mantissa and exponent are filled with random bytes to generate a random names.

127.1.97 Root(value as BiggerNumberMBS, index as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Indexth Root of x
Example:

```
Var c As New BiggerNumberMBS(5*5*5*5)
Var e As New BiggerNumberMBS(4)
Var d As BiggerNumberMBS = BiggerNumberMBS.Root(c, e)

MessageBox d.StringValue
```

Notes: index must be integer and not negative <0;1;2;3....)

if index==0 the result is one
if x==0 the result is zero and we assume root(0;0) is not defined

if index is even (2;4;6...) the result is x^(1/index) and x>0
if index is odd (1;2;3;...) the result is either

-(abs(x)^(1/index)) if x<0
or
x^(1/index)) if x>0

(for index==1 the result is equal x)

127.1.98 Round as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rounds the number.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS(2.3)
Var s as BiggerNumberMBS = o.Round

MessageBox s.StringValue

Var a as BiggerNumberMBS = new BiggerNumberMBS(-2.3)
Var b as BiggerNumberMBS = a.Round

MessageBox b.StringValue
```

127.1.99 SetStringValue(Text As String, Base as Integer, byref AfterText as String, Byref ValueRead as boolean)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses number from string.
Example:

```
// set to 1.2 and show
Var o as new BiggerNumberMBS

Var after as string
Var ValueRead as Boolean

o.SetStringValue "1.2 hello", 10, after, ValueRead

MessageBox "value: "+o.StringValue+EndOfLine+"after: "+after
Break
```

Notes: Returns also the text after the given text following the number.
Also sets ValueRead if a value was read.
See also:

- 127.1.100 SetStringValue(Text As String, Conversion as BigNumberConversionMBS) 18012
- 127.1.101 SetStringValue(Text As String, Conversion as BigNumberConversionMBS, byref AfterText as String, Byref ValueRead as boolean) 18013

127.1.100 SetStringValue(Text As String, Conversion as BigNumberConversionMBS)

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses number from string.
Example:

```
Var o As New BiggerNumberMBS

Var conv As New BigNumberConversionMBS
conv.Comma = ","
conv.Group = "'"
conv.Scientific = False
conv.Round = 3

o.SetStringValue("1'234'567,89", conv)

MessageBox o.StringValue
```

See also:

- 127.1.99 SetStringValue(Text As String, Base as Integer, byref AfterText as String, Byref ValueRead as boolean) 18012
- 127.1.101 SetStringValue(Text As String, Conversion as BigNumberConversionMBS, byref AfterText as String, Byref ValueRead as boolean) 18013

127.1.101 SetStringValue(Text As String, Conversion as BigNumberConversionMBS, byref AfterText as String, Byref ValueRead as boolean)

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses number from string.
Example:

```
Var o As New BiggerNumberMBS

Var conv As New BigNumberConversionMBS
conv.Comma = ","
conv.Group = "'"
conv.Scientific = False
conv.Round = 3

Var after As String
Var read As Boolean

o.SetStringValue("1'234'567,89abc", conv, after, read)
// read will be true and after contains "abc".

Var value As String = o.StringValue

Var after2 As String
```

```
Var read2 As Boolean

o.SetStringValue("abc", conv, after2, read2)
// read2 will be false and after2 contains "abc".

Break
```

Notes: Returns the text after the given text following the number in AfterText parameter.
Sets ValueRead if a value was read.
See also:

- 127.1.99 SetStringValue(Text As String, Base as Integer, byref AfterText as String, Byref ValueRead as boolean) 18012
- 127.1.100 SetStringValue(Text As String, Conversion as BigNumberConversionMBS) 18012

127.1.102 Sgn(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries sign of number.
Example:

```
Var negative As New BiggerNumberMBS(-5.6)
Var sign1 As BiggerNumberMBS = BiggerNumberMBS.Sgn(negative)

Var positive As New BiggerNumberMBS(5.6)
Var sign2 As BiggerNumberMBS = BiggerNumberMBS.Sgn(positive)

Break
```

127.1.103 Sin(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the sinus value.
Example:

```
Var c As New BiggerNumberMBS(1.0)
Var d As BiggerNumberMBS = BiggerNumberMBS.Sin(c)

Var x As Double = Sin(1.0)

MessageBox d.StringValue+EndOfLine+Str(x)
```

127.1.104 Sinh(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Hyperbolic Sine.
Example:

```
Var c As New BiggerNumberMBS(0.5)
Var d As BiggerNumberMBS = BiggerNumberMBS.SinH(c)

// SinHMBS is in MBS Xojo Util Plugin
Var x As Double = SinHMBS(0.5)

MessageBox d.StringValue+EndOfLine+Str(x)
```

Notes: we're using the formula sinh(x) = (e^x - e^(-x)) / 2

127.1.105 SkipFraction as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function skips the fraction.
Example:

```
Var c As New BiggerNumberMBS(-3.7)
Var d As BiggerNumberMBS = c.SkipFraction

MessageBox d // shows -3
```

Notes: Similar to floor, but different for negative ones.

e.g
2.2 =>2
2.7 =>2
-2.2 =>2
-2.7 =>2

127.1.106 Sqrt as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the square root.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS(256)
Var s as BiggerNumberMBS = o.Sqrt

MessageBox s.StringValue
```

127.1.107 Subtract(other as BiggerNumberMBS, round as boolean = true) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts a number.
Example:

```
Var x as new BiggerNumberMBS(2)
Var d as new BiggerNumberMBS(3)
Var p as BiggerNumberMBS = x.Subtract(d)

MessageBox p.StringValue // shows -1
```

127.1.108 Tan(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Tangent.
Example:

```
Var c As New BiggerNumberMBS(1.0)
Var d As BiggerNumberMBS = BiggerNumberMBS.Tan(c)

Var x As Double = Tan(1.0)
```

```
MessageBox d.StringValue+EndOfLine+Str(x)
```

Notes: We're using the formula tan(x) = sin(x) / cos(x).

127.1.109 Tanh(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Hyperbolic Tangent.
Example:

```
Var c As New BiggerNumberMBS(0.5)
Var d As BiggerNumberMBS = BiggerNumberMBS.TanH(c)

// TanHMBS is in MBS Xojo Util Plugin
Var x As Double = TanHMBS(0.5)

MessageBox d.StringValue+EndOfLine+Str(x)
```

Notes: We're using the formula tanh(x)= (e^x - e^(-x)) / (e^x + e^(-x))

127.1.110 TwoPi as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value 2 * PI.
Example:

```
Var b as BiggerNumberMBS = BiggerNumberMBS.TwoPi
MessageBox b.StringValue
```

127.1.111 Zero as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value zero.
Example:

```
Var b as BiggerNumberMBS = BiggerNumberMBS.Zero
MessageBox b.StringValue
```

127.1.112 Properties

127.1.113 CurrencyValue as Currency

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets/Queries currency value.
Example:

```
Var u as Currency = 1234.5678
Var b as new BiggerNumberMBS(u)
MessageBox str(b.CurrencyValue)
```

Notes: (Read and Write property)

127.1.114 DataExponent as MemoryBlock

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exponent for this number.
Notes: Setting this may need to update flags, too.
(Read and Write property)

127.1.115 DataFlags as Integer

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags.
Notes: Bits are 128 for Sign, 64 for NAN and 32 for zero.
(Read and Write property)

127.1.116 DataMantissa as MemoryBlock

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mantissa for this number.
Notes: Setting this may need to update flags, too.
(Read and Write property)

127.1.117 DoubleValue as Double

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or Set the double value.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS(2.5)

MessageBox str(o.DoubleValue)+" = "+str(o.StringValue)
```

Notes: (Read and Write property)

127.1.118 Int64Value as Int64

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set value as Int64.
Example:

```
Var u as Int64 = &h7FFFFFFFFFFFFFFF // maximum Int64
Var b as new BiggerNumberMBS(u)
MessageBox str(b.Int64Value)

Var one as new BiggerNumberMBS(1)
b = b + one

// raises exception due to overflow
MessageBox str(b.Int64Value)
```

Notes: (Read and Write property)

127.1.119 IntegerValue as Integer

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or Set the integer value.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS(2.5)

MessageBox str(o.IntegerValue)+" = "+str(o.StringValue)
```

Notes: (Read and Write property)

127.1.120 IsInteger as Boolean

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this number is an integer.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS(1)
Var z as BiggerNumberMBS = new BiggerNumberMBS(1.5)

if o.IsInteger then
MessageBox o.StringValue+" is integer"
else
break // error
end if

if z.IsInteger then
break // error
else
MessageBox z.StringValue+" is not integer"
end if
```

Notes: If true, there are no digits after the dot.
(Read only property)

127.1.121 IsNan as Boolean

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is an invalid number.
Example:

```
Var o as BiggerNumberMBS = BiggerNumberMBS.zero
Var z as BiggerNumberMBS = BiggerNumberMBS.Nan

if z.IsNan then
MessageBox z.StringValue+" is NaN"
else
break // error
end if

if o.IsNan then
break // error
else
```

```
MessageBox o.StringValue+" is not NaN"
end if
```

Notes: (Read only property)

127.1.122 IsNegative as Boolean

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this value is negative.
Example:

```
Var o as BiggerNumberMBS = BiggerNumberMBS.one
Var z as BiggerNumberMBS = BiggerNumberMBS.one.Negate

if z.IsNegative then
MessageBox z.StringValue+" is negative"
else
break // error
end if

if o.IsNegative then
break // error
else
MessageBox o.StringValue+" is not negative"
end if
```

Notes: (Read only property)

127.1.123 IsZero as Boolean

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if value is zero.
Example:

```
Var o as BiggerNumberMBS = BiggerNumberMBS.one
Var z as BiggerNumberMBS = BiggerNumberMBS.zero

if z.IsZero then
MessageBox z.StringValue+" is zero"
else
break // error
end if
```

```
if o.IsZero then
break // error
else
MessageBox o.StringValue+" is not zero"
end if
```

Notes: (Read only property)

127.1.124 StringValue as String

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set string value of text.
Example:

```
// set to 1.2 and show
Var o as new BiggerNumberMBS("1.2")
MessageBox o.StringValue

// set to 2.3
o.StringValue = "2.3"
MessageBox o.StringValue
```

Notes: (Read and Write property)
See also:

- 127.1.127 StringValue(Base as Integer) as String 18023

127.1.125 UInt64Value as UInt64

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set value as UInt64.
Example:

```
Var u as UInt64 = 12345678901234567890
Var b as new BiggerNumberMBS(u)
MessageBox str(b.UInt64Value)
```

Notes: (Read and Write property)

127.1.126 VariantValue as Variant

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries/Sets value with variant.
Notes: Floating point values are given as Double.
Integer types as Int32, Int64 or UInt64.
If value exceeds the ranges of those data types, we fall back to string.

When setting, the value is converted to a big number similiar to NumberWithVariant.
(Read and Write property)

127.1.127 StringValue(Base as Integer) as String

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set string value with a given base.
Example:

```
Var o as new BiggerNumberMBS(1234)

// show as hex
MessageBox o.StringValue(16)
```

Notes: (Read and Write computed property)
See also:

- 127.1.124 StringValue as String 18022

127.2 class BigNumberConversionMBS

127.2.1 class BigNumberConversionMBS

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This class holds information to convert numbers to/from text.
Example:

```
Var o As New BigNumberMBS(1234567.890)

Var conv As New BigNumberConversionMBS
conv.Comma = ","
conv.Group = "'"
conv.Scientific = False
conv.Round = 3

Var s1 As String = o.GetStringValue(conv)
// 1'234'567,89

conv.Comma = "."
conv.Group = ","

Var s2 As String = o.GetStringValue(conv)
// 1,234,567,89

conv.Comma = ","
conv.Group = "'"
conv.Scientific = True

Var s3 As String = o.GetStringValue(conv)
// 1,235e+6

Break
```

127.2.2 Methods

127.2.3 Constructor

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.

127.2.4 Properties

127.2.5 Base as Integer

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: base (radix) on which the value will be shown (or read)
Notes: default: 10
(Read and Write property)

127.2.6 BaseRound as Boolean

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to round last digit.
Notes: if 'base_round' is true and 'base' is different from 2, 4, 8, or 16 and the result value is not an integer then we make an additional rounding (after converting the last digit from the result is skipped)
default: true
(Read and Write property)

127.2.7 Comma as String

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The main comma operator (used when reading and writing)
Notes: default is a dot "."
(Read and Write property)

127.2.8 Comma2 as String

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Additional comma operator (used only when reading)
Example:

```
Var o1 As New BigNumberMBS
Var o2 As New BigNumberMBS
Var o3 As New BigNumberMBS

Var conv As New BigNumberConversionMBS
Var after1, after2, after3 As String
Var read1, read2, read3 As Boolean

conv.Comma = "."
conv.Comma2 = ","

// by default comma accepts dot and comma
o1.SetStringValue("1,2", conv, after1, read1)
o2.SetStringValue("1.2", conv, after2, read2)

// now set us conversion
conv.Comma = "."
conv.Comma2 = ""
conv.Group = ","

o3.SetStringValue("1,234.5", conv, after3, read3)

Var value1 As String = o1.StringValue
Var value2 As String = o2.StringValue
Var value3 As String = o3.StringValue

Break
```

Notes: If you don't want it just set it to zero.
default is a comma ','

This allowes you to convert from a value:
123.45 as well as from 123,45
(Read and Write property)

127.2.9 Group1 as String

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: It sets the character which is used for grouping after comma.
Notes: If group1 and group2 are both a space then: 1234,56789 will be printed as: 1 234,567 89
If you don't want grouping just set it to "" (which is default)
(Read and Write property)

127.2.10 Group2 as String

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: It sets the character which is used for grouping before comma.
Notes: If group1 and group2 are both a space then: 1234,56789 will be printed as: 1 234,567 89
If you don't want grouping just set it to "" (which is default)
(Read and Write property)

127.2.11 GroupDigits as Integer

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: How many digits should be grouped (it is used if 'group' is non "")
Notes: default: 3
(Read and Write property)

127.2.12 Round as Integer

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tells how many digits after comma are possible.
Notes: default: -1 which means all digits are printed

set it to zero if you want integer value only.

for example when the value is: 12.345678 and 'round' is 4 then the result will be 12.3457 (the last digit was rounded)
(Read and Write property)

127.2.13 Scientific as Boolean

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to use scientific mode.

Notes: If true the value will be always shown in the scientific mode, e.g: 123e+30

default: false
(Read and Write property)

127.2.14 ScientificFrom as Integer

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Scientific from this exponent value.
Notes: If scient is false then the value will be printed in the scientific mode only if the exponent is greater than ScientificFrom.

default: 15
(Read and Write property)

127.2.15 TrimZeroes as Boolean

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to trim zeros.
Notes: If true that not mattered digits in the mantissa will be cut off
(zero characters at the end – after the comma operator)
e.g. 1234,78000 will be: 1234,78
default: true
(Read and Write property)

127.3 class BigNumberErrorExceptionMBS

127.3.1 class BigNumberErrorExceptionMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exception class for big number math.
Example:

```
Var b as new BigNumberMBS(5)
Var c as BigNumberMBS = BigNumberMBS.Zero

// raises exception due to division by zero
Var x as BigNumberMBS = b/c
```

Notes: Raised when operations fail due to division by zero, invalid numbers or overflow/underflow.
Subclass of the RuntimeException class.

- Big numbers for Xojo

Xojo Developer Magazine

- 17.6, page 65: Big Numbers and Large Numbers, How you can use the BigNumberMBS and LargeNumberMBS class in Xojo by Stefanie Juchmes

127.4 class BigNumberMBS

127.4.1 class BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a big number.
Example:

```
// speed of light in m/s
Var SpeedOfLight As New BigNumberMBS("299792458")

// seconds per day
Var SecondsPerDay As New BigNumberMBS(24 * 3600)

Var DaysPerYear As New BigNumberMBS(365.25)

Var LightYear As BigNumberMBS = SpeedOfLight * DaysPerYear * SecondsPerDay
MessageBox LightYear.StringValue+" meter per light year"

// 9.460.730.472.580.800 matches number from Wikipedia

Var AgeOfUniversum As New BigNumberMBS(13810000000)

Var MaxDistance As BigNumberMBS = LightYear * AgeOfUniversum

MessageBox MaxDistance.GetStringValue(10, False, 100, 3, True)+" meter maximum"
```

Notes: This is floating point number with 320 bits in BigNumber and 2560 bits in BiggerNumber class.
Precision is about 77 digits dot for the smaller one and 617 for the bigger one.
So use first for speed and second for precision.

So if you want to store currency or other values where rounding should not happen, better store values multiplied, e.g. in cents.

Compared to normal double values, you have 5 times the bits.
And we check for math errors and raise exceptions if something goes wrong.

127.4.2 Methods

127.4.3 Abs as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries absolute value.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS(-123)
Var z as BigNumberMBS = o.Abs

MessageBox z.StringValue
```

Notes: Removes sign.
See also:

- 127.4.4 Abs(value as BigNumberMBS) as BigNumberMBS 18032

127.4.4 Abs(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Absolute value of x.
Example:

```
Var c As New BigNumberMBS(-3)
Var d As BigNumberMBS = BigNumberMBS.Abs(c)
Var e As BigNumberMBS = c.Abs

MessageBox d.StringValue+EndOfLine+e.StringValue // shows 3
```

See also:

- 127.4.3 Abs as BigNumberMBS 18032

127.4.5 ACos(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Arc Cosine.
Example:

```
Var c As New BigNumberMBS(0.5)
Var d As BigNumberMBS = BigNumberMBS.ACos(c)

Var x As Double = ACos(0.5)

MessageBox d.StringValue+EndOfLine+Str(x)
```

Notes: we're using the formula: acos(x) = pi/2 - asin(x)

127.4.6 ACosh(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverse hyperbolic cosine.
Example:

```
Var c As New BigNumberMBS(2.0)
Var d As BigNumberMBS = BigNumberMBS.ACosh(c)

// ACosHMBS is in MBS Xojo Util Plugin
Var x As Double = ACosHMBS(2.0)

MessageBox d.StringValue+EndOfLine+Str(x)
```

Notes: acosh(x) = ln(x + sqrt(x^2 - 1)) x in <1, infinity)

127.4.7 ACot(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Arc Cotangent.
Notes: we're using the formula: actan(x) = pi/2 - atan(x)

127.4.8 ACoth(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates inverse hyperbolic cotangent.
Notes: acoth(x) = 0.5 * ln((x+1) / (x-1)) x in (-infinity, -1) or (1, infinity)

127.4.9 Add(other as BigNumberMBS, round as boolean = true) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a number.
Example:

```
Var x as new BigNumberMBS(2)
Var d as new BigNumberMBS(3)
Var p as BigNumberMBS = x.Add(d)

MessageBox p.StringValue // shows 5
```

127.4.10 ASin(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Arc Sine.
Example:

```
Var c As New BigNumberMBS(1.0)
Var d As BigNumberMBS = BigNumberMBS.ASin(c)

Var x As Double = ASin(1.0)

MessageBox d.StringValue+EndOfLine+Str(x)
```

Notes: Range is from -1 to 1.

127.4.11 ASinh(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverse hyperbolic sine.
Example:

```
Var c As New BigNumberMBS(0.5)
Var d As BigNumberMBS = BigNumberMBS.ASinH(c)

// ASinHMBS is in MBS Xojo Util Plugin
Var x As Double = ASinHMBS(0.5)

MessageBox d.StringValue+EndOfLine+Str(x)
```

Notes: asinh(x) = ln(x + sqrt(x^2 + 1))

127.4.12 ATan(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Arc Tangent.
Example:

```
Var c As New BigNumberMBS(0.5)
Var d As BigNumberMBS = BigNumberMBS.ATan(c)

Var x As Double = ATan(0.5)

MessageBox d.StringValue+EndOfLine+Str(x)
```

127.4.13 ATanh(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates inverse hyperbolic tangent.
Example:

```
Var c As New BigNumberMBS(0.5)
Var d As BigNumberMBS = BigNumberMBS.ATanh(c)

// ATanhMBS is in MBS Xojo Util Plugin
Var x As Double = ATanhMBS(0.5)

MessageBox d.StringValue+EndOfLine+Str(x)
```

Notes: atanh(x) = 0.5 * ln((1+x) / (1-x)) x in (-1, 1)

127.4.14 BitAnd(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates bitwise AND operation.
Example:

```
Var x as new BigNumberMBS(17)
Var y as new BigNumberMBS(16)
Var r as BigNumberMBS = x.BitAnd(y)
```

```
MessageBox r.StringValue
```

127.4.15 BitOr(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates bitwise or operation.
Example:

```
Var x as new BigNumberMBS(17)
Var y as new BigNumberMBS(16)
Var r as BigNumberMBS = x.BitOr(y)

MessageBox r.StringValue
```

127.4.16 BitXOr(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates bitwise xor operation.
Example:

```
Var x as new BigNumberMBS(17)
Var y as new BigNumberMBS(16)
Var r as BigNumberMBS = x.BitXOr(y)

MessageBox r.StringValue
```

127.4.17 Ceil as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns a value representing the smallest integer that is greater than or equal to x.
Example:

```
Var c As New BigNumberMBS(-3.7)
Var d As BigNumberMBS = c.Ceil

MessageBox d // shows -3
```

Notes: e.g.
Ceil(-3.7) = -3
Ceil(-3.1) = -3
Ceil(-3.0) = -3

Ceil(4.0) = 4
Ceil(4.2) = 5
Ceil(4.8) = 5

127.4.18 Constructor

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialize the number with zero value.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS
MessageBox o.StringValue
```

See also:

- 127.4.19 Constructor(other as BigNumberMBS) 18037

- 127.4.26 Constructor(value as UInt32) 18042
- 127.4.27 Constructor(value as UInt64) 18042

127.4.19 Constructor(other as BigNumberMBS)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialize the number with other value.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS(2.5)
Var c as BigNumberMBS = new BigNumberMBS(o)

MessageBox c.StringValue
```

See also:

- 127.4.18 Constructor 18037

- 127.4.21 Constructor(value as Double) 18039
- 127.4.22 Constructor(value as Int32) 18039
- 127.4.23 Constructor(value as Int64) 18040
- 127.4.24 Constructor(value as Single) 18040
- 127.4.25 Constructor(value as String) 18041
- 127.4.26 Constructor(value as UInt32) 18042
- 127.4.27 Constructor(value as UInt64) 18042

127.4.20 Constructor(value as Currency)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number object with a currency object.
Example:

```
Var v as Currency = 123.456
Var b as new BigNumberMBS(v)
MessageBox b.StringValue
```

See also:

- 127.4.18 Constructor 18037

- 127.4.26 Constructor(value as UInt32) 18042
- 127.4.27 Constructor(value as UInt64) 18042

127.4.21 Constructor(value as Double)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialize the number with double value.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS(2.5)
MessageBox str(o.DoubleValue)+" = "+str(o.StringValue)#
```

See also:

- 127.4.18 Constructor 18037

- 127.4.26 Constructor(value as UInt32) 18042
- 127.4.27 Constructor(value as UInt64) 18042

127.4.22 Constructor(value as Int32)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with a 32-bit integer.
Example:

```
Var v as Int32 = 123
Var b as new BigNumberMBS(v)
MessageBox b.StringValue
```

- 127.4.26 Constructor(value as UInt32) 18042
- 127.4.27 Constructor(value as UInt64) 18042

127.4.23 Constructor(value as Int64)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with a 64-bit integer.
Example:

```
Var v as Int64 = 123
Var b as new BigNumberMBS(v)
MessageBox b.StringValue
```

- 127.4.26 Constructor(value as UInt32) 18042
- 127.4.27 Constructor(value as UInt64) 18042

127.4.24 Constructor(value as Single)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with a 32-bit floating point number.
Example:

```
Var v as Single = 123
Var b as new BigNumberMBS(v)
```

MessageBox b.StringValue

- 127.4.19 Constructor(other as BigNumberMBS) 18037
- 127.4.20 Constructor(value as Currency) 18038
- 127.4.21 Constructor(value as Double) 18039
- 127.4.22 Constructor(value as Int32) 18039
- 127.4.23 Constructor(value as Int64) 18040
- 127.4.25 Constructor(value as String) 18041
- 127.4.26 Constructor(value as UInt32) 18042
- 127.4.27 Constructor(value as UInt64) 18042

127.4.25 Constructor(value as String)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialize the number with string value.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS("123.456")
MessageBox o.StringValue
```

- 127.4.26 Constructor(value as UInt32) 18042
- 127.4.27 Constructor(value as UInt64) 18042

127.4.26 Constructor(value as UInt32)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with an unsigned 32-bit integer.
Example:

```
Var v as UInt32 = 123
Var b as new BigNumberMBS(v)
MessageBox b.StringValue
```

- 127.4.23 Constructor(value as Int64) 18040
- 127.4.24 Constructor(value as Single) 18040
- 127.4.25 Constructor(value as String) 18041
- 127.4.27 Constructor(value as UInt64) 18042

127.4.27 Constructor(value as UInt64)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with an unsigned 32-bit integer.
Example:

```
Var v as UInt64 = 123
Var b as new BigNumberMBS(v)
MessageBox b.StringValue
```

- 127.4.26 Constructor(value as UInt32) 18042

127.4.28 Cos(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the cosine value.
Example:

```
Var c As New BigNumberMBS(1.0)
Var d As BigNumberMBS = BigNumberMBS.Cos(c)

Var x As Double = Cos(1.0)

MessageBox d.StringValue+EndOfLine+Str(x)
```

Notes: We're using the formula cos(x) = sin(x + PI/2).

127.4.29 Cosh(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Hyperbolic Cosine.
Example:

```
Var c As New BigNumberMBS(0.5)
Var d As BigNumberMBS = BigNumberMBS.CosH(c)

// CosHMBS is in MBS Xojo Util Plugin
Var x As Double = CosHMBS(0.5)

MessageBox d.StringValue+EndOfLine+Str(x)
```

Notes: We're using the formula cosh(x)= (e^x + e^(-x)) / 2.

127.4.30 Cot(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Cotangent.
Notes: We're using the formula tan(x) = cos(x) / sin(x).

127.4.31 Coth(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Hyperbolic Cotangent.
Notes: We're using the formula coth(x)= (e^x + e^(-x)) / (e^x - e^(-x))

127.4.32 DegToDeg(d as BigNumberMBS, m as BigNumberMBS, s as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts degrees in the long format into one value.
Notes: long format: (degrees, minutes, seconds)
minutes and seconds must be greater than or equal zero

result:
if d>=0 : result= d + ((s/60)+m)/60
if d<0 : result= d - ((s/60)+m)/60

((s/60)+m)/60 = (s+60*m)/3600 (second version is faster because there's only one division)

for example:
DegToDeg(10, 30, 0) = 10.5
DegToDeg(10, 24, 35.6)=10.4098(8)

127.4.33 DegToGrad(d as BigNumberMBS, m as BigNumberMBS, s as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts degrees in the long format to gradians.
See also:

- 127.4.34 DegToGrad(value as BigNumberMBS) as BigNumberMBS 18045

127.4.34 DegToGrad(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts degrees to gradians.
Notes: it returns: x * 200 / 180
See also:

- 127.4.33 DegToGrad(d as BigNumberMBS, m as BigNumberMBS, s as BigNumberMBS) as BigNumberMBS 18044

127.4.35 DegToRad(d as BigNumberMBS, m as BigNumberMBS, s as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts degrees in the long format to radians.
See also:

- 127.4.36 DegToRad(value as BigNumberMBS) as BigNumberMBS 18045

127.4.36 DegToRad(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts degrees to radians.
Notes: It returns: x * pi / 180
See also:

- 127.4.35 DegToRad(d as BigNumberMBS, m as BigNumberMBS, s as BigNumberMBS) as BigNumberMBS 18045

127.4.37 Divide(other as BigNumberMBS, round as boolean = true) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides the number.
Example:

```
Var x as new BigNumberMBS(8)
Var d as new BigNumberMBS(2)
Var p as BigNumberMBS = x.Divide(d)
```

```
MessageBox p.StringValue // shows 4
```

127.4.38 E as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value zero.
Example:

```
Var b as BigNumberMBS = BigNumberMBS.e
MessageBox b.StringValue
```

127.4.39 Equals(other as BigNumberMBS) as Boolean

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if two numbers are the same.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS(123)
Var z as BigNumberMBS = new BigNumberMBS(123)

if o.Equals(z) then
MessageBox "equal"
else
Break // error
end if
```

Notes: Returns true if equal.

127.4.40 Exp(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates e^value.
Example:

```
Var x as new BigNumberMBS(2)
Var p as BigNumberMBS = BigNumberMBS.Exp(x)

MessageBox p.StringValue // shows e^2 = 7.38
```

127.4.41 Floor as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes any fraction part.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS(2.3)
Var s as BigNumberMBS = o.Floor

MessageBox s.StringValue

Var a as BigNumberMBS = new BigNumberMBS(-2.3)
Var b as BigNumberMBS = a.Floor

MessageBox b.StringValue
```

127.4.42 Frac as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the fraction part.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS(2.5)
Var s as BigNumberMBS = o.Frac

MessageBox s.StringValue

Var a as BigNumberMBS = new BigNumberMBS(-2.5)
Var b as BigNumberMBS = a.Frac

MessageBox b.StringValue
```

127.4.43 GetStringValue(Base as Integer = 10, scientific as boolean = false, scientificFrom as Integer = 15, round as Integer = -1, TrimZeros as Boolean = true, comma as String = ".") as String

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries string value.
Example:

```
Var o as new BigNumberMBS(1234)

// show as hex
```

```
MessageBox o.GetStringValue(16)

// show as number with comma and 3 digits
Var z as new BigNumberMBS(12.345)
MessageBox z.GetStringValue(10, false, 15, 3, true, ",")
```

Notes: Base: The base of the number system. Normally 10, but also 16 for hex is common.
scientific: Whether to use scientific notation.
scientificFrom: How many digits we show.
Round: Whether to round to n digits.
TrimZeros: Whether to trim unneeded zeros.
comma: The character to use as decimal dot.
See also:

- 127.4.44 GetStringValue(Conversion as BigNumberConversionMBS) as String 18048

127.4.44 GetStringValue(Conversion as BigNumberConversionMBS) as String

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries string value.
Example:

```
Var o As New BigNumberMBS(1234567.890)

Var conv As New BigNumberConversionMBS
conv.Comma = ","
conv.Group = "'"
conv.Scientific = False
conv.Round = 3

Var s1 As String = o.GetStringValue(conv)
// 1'234'567,89

conv.Comma = "."
conv.Group = ","

Var s2 As String = o.GetStringValue(conv)
// 1,234,567,89

conv.Comma = ","
conv.Group = "'"
conv.Scientific = True

Var s3 As String = o.GetStringValue(conv)
// 1,235e+6
```

Break

See also:

- 127.4.43 GetStringValue(Base as Integer = 10, scientific as boolean = false, scientificFrom as Integer = 15, round as Integer = -1, TrimZeros as Boolean = true, comma as String = ".") as String 18047

127.4.45 GradToDeg(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts degrees to gradians.
Notes: it returns: x * 180 / 200

127.4.46 GradToRad(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts gradians to radians.
Notes: It returns: x * pi / 200.

127.4.47 HalfPi as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value pi/2.
Example:

```
Var b as BigNumberMBS = BigNumberMBS.HalfPi
MessageBox b.StringValue
```

127.4.48 LibTypeStr as String

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries what implementation is used for this platform.
Notes: Shows asm in the text if assembler code is used.
Assembler code is not available for all platforms.

127.4.49 Ln(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates natural logarithm.
Example:

```
Var x as new BigNumberMBS(2)
Var p as BigNumberMBS = BigNumberMBS.Ln(x)

MessageBox p.StringValue // shows ln(2) = 0.69
```

127.4.50 Ln10 as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value ln(10).
Example:

```
Var b as BigNumberMBS = BigNumberMBS.Ln10
MessageBox b.StringValue
```

127.4.51 Ln2 as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value ln(2).
Example:

```
Var b as BigNumberMBS = BigNumberMBS.Ln2
MessageBox b.StringValue
```

127.4.52 Log(value as BigNumberMBS, base as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates logarithm in a given base.
Example:

```
Var x as new BigNumberMBS(100)
Var d as new BigNumberMBS(10)
Var p as BigNumberMBS = BigNumberMBS.Log(x, d)
```

```
MessageBox p.StringValue // shows ln(100)/ln(10) = 2
```

127.4.53 Max as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with maximum value.
Example:

```
Var b as BigNumberMBS = BigNumberMBS.Min
MessageBox b.StringValue
```

127.4.54 Min as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with minimum value.
Example:

```
Var b as BigNumberMBS = BigNumberMBS.Min
MessageBox b.StringValue
```

127.4.55 Modulate(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modulates a number.
Example:

```
Var x as new BigNumberMBS(17)
Var y as new BigNumberMBS(3)
Var r as BigNumberMBS = x.Modulate(y)

MessageBox r.StringValue
```

Notes: Similar to mod keyword in Xojo.

127.4.56 Modulate2 as Integer

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modulates by 2.
Example:

```
Var x as new BigNumberMBS(8)
Var y as new BigNumberMBS(9)

MessageBox str(x.Modulate2)+" "+str(y.Modulate2)
```

Notes: Returns 0 or 1.

127.4.57 Multiply(other as BigNumberMBS, round as boolean = true) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies two numbers.
Example:

```
Var x as new BigNumberMBS(8)
Var d as new BigNumberMBS(2)
Var p as BigNumberMBS = x.Multiply(d)

MessageBox p.StringValue // shows 16
```

See also:

- 127.4.58 Multiply(value as Integer) as BigNumberMBS 18052
- 127.4.59 Multiply(value as UInt32) as BigNumberMBS 18053

127.4.58 Multiply(value as Integer) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply by an integer.
Example:

```
Var x as new BigNumberMBS(2)
Var p as BigNumberMBS = x.Multiply(3)

MessageBox p.StringValue // shows 6
```

See also:

- 127.4.57 Multiply(other as BigNumberMBS, round as boolean = true) as BigNumberMBS 18052

• 127.4.59 Multiply(value as UInt32) as BigNumberMBS 18053

127.4.59 Multiply(value as UInt32) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply by an unsigned integer.
Example:

```
Var x as new BigNumberMBS(17)
Var r as BigNumberMBS = x.Multiply(3)

MessageBox r.StringValue
```

See also:

• 127.4.57 Multiply(other as BigNumberMBS, round as boolean = true) as BigNumberMBS 18052

• 127.4.58 Multiply(value as Integer) as BigNumberMBS 18052

127.4.60 Nan as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value NaN.
Example:

```
Var b as BigNumberMBS = BigNumberMBS.Nan
MessageBox b.StringValue
```

127.4.61 Negate as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negates the number.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS(123)
Var z as BigNumberMBS = o.Negate

MessageBox z.StringValue
```

127.4.62 NumberWithCurrency(value as Currency) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with a currency value.
Example:

```
Var v as Currency = 123.456
Var b as BigNumberMBS = BigNumberMBS.NumberWithCurrency(v)

MessageBox b.StringValue
```

127.4.63 NumberWithDouble(value as Double) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with a 64-bit floating number.
Example:

```
Var v as Double = 123.456
Var b as BigNumberMBS = BigNumberMBS.NumberWithDouble(v)

MessageBox b.StringValue
```

127.4.64 NumberWithInt32(value as Int32) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with a signed 32-bit integer.
Example:

```
Var v as Int32 = 123
Var b as BigNumberMBS = BigNumberMBS.NumberWithInt32(v)

MessageBox b.StringValue
```

127.4.65 NumberWithInt64(value as Int64) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with a signed 64-bit integer.
Example:

```
Var v as Int64 = 123
Var b as BigNumberMBS = BigNumberMBS.NumberWithInt64(v)
```

MessageBox b.StringValue

127.4.66 NumberWithInteger(value as Integer) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an integer.
Example:

```
Var v as Integer = 123
Var b as BigNumberMBS = BigNumberMBS.NumberWithInteger(v)

MessageBox b.StringValue
```

127.4.67 NumberWithSingle(value as single) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an 32-bit floating point number.
Example:

```
Var v as Single = 123
Var b as BigNumberMBS = BigNumberMBS.NumberWithSingle(v)

MessageBox b.StringValue
```

127.4.68 NumberWithString(value as String) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with value from string.
Example:

```
Var v as String = "123"
Var b as BigNumberMBS = BigNumberMBS.NumberWithString(v)

MessageBox b.StringValue
```

127.4.69 NumberWithUInt32(value as UInt32) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an unsigned 32-bit integer.
Example:

```
Var v as UInt32 = 123
Var b as BigNumberMBS = BigNumberMBS.NumberWithUInt32(v)

MessageBox b.StringValue
```

127.4.70 NumberWithUInt64(value as UInt64) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an unsigned 64-bit integer.
Example:

```
Var v as UInt64 = 123
Var b as BigNumberMBS = BigNumberMBS.NumberWithUInt64(v)

MessageBox b.StringValue
```

127.4.71 NumberWithUInteger(value as UInteger) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an unsigned integer.
Example:

```
Var v as UInteger = 123
Var b as BigNumberMBS = BigNumberMBS.NumberWithUInteger(v)

MessageBox b.StringValue
```

127.4.72 NumberWithVariant(value as Variant) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number based on a variant.
Example:

```
Var v as Variant = 123.456
Var b as BigNumberMBS = BigNumberMBS.NumberWithVariant(v)

MessageBox b.StringValue
```

Notes: Internally redirects to other NumberWith functions based on the value type.

127.4.73 One as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value one.
Example:

```
Var b as BigNumberMBS = BigNumberMBS.One
MessageBox b.StringValue
```

127.4.74 Operator_Add(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a number.
Example:

```
Var a as new BigNumberMBS(3)
Var b as new BigNumberMBS(4)

// add
Var c as BigNumberMBS = a + b

MessageBox c.StringValue
```

127.4.75 Operator_AddRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a number.
Example:

```
Var a as new BigNumberMBS(3)
Var b as new BigNumberMBS(4)

// add
Var c as BigNumberMBS = a + b

MessageBox c.StringValue
```

127.4.76 Operator_Compare(other as BigNumberMBS) as Integer

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two numbers.
Example:

```
Var a as new BigNumberMBS(1.2)
Var b as new BigNumberMBS(1.2)
Var c as new BigNumberMBS(1.3)

if a = b then
// ok
else
break
end if

if a <c then
// ok
else
Break
end if

if c >b then
// ok
else
break
end if
```

127.4.77 Operator_Convert as String

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts big number to string automatically.
Example:

```
Var b as new BigNumberMBS
Var n as Double = 5

// convert from double to big number automatically
b = n

// convert to string automatically
MessageBox b
```

See also:

• 127.4.78 Operator_Convert(value as String) 18059

127.4.78 Operator_Convert(value as String)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a string to a big number.
Example:

```
Var b as new BigNumberMBS
Var n as string = "5"

// convert from string to big number automatically
b = n

// convert to double automatically
Var d as Double = b
MessageBox str(d)
```

See also:

• 127.4.77 Operator_Convert as String 18058

127.4.79 Operator_Divide(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides two numbers.
Example:

```
Var a as new BigNumberMBS(9.3)
Var b as new BigNumberMBS(3.0)

Var r as BigNumberMBS = a / b

MessageBox r.StringValue
```

127.4.80 Operator_DivideRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides two numbers.

127.4.81 Operator_IntegerDivide(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates an integer divide.
Example:

```
Var a as new BigNumberMBS(9.3)
Var b as new BigNumberMBS(3.0)

Var r as BigNumberMBS = a \b

MessageBox r.StringValue
```

Notes: Same as normal divide, but removes fraction part.

127.4.82 Operator_IntegerDivideRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates an integer divide.
Notes: Same as normal divide, but removes fraction part.

127.4.83 Operator_Modulo(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the modulo of two numbers.
Example:

```
Var a as new BigNumberMBS(9.3)
Var b as new BigNumberMBS(3.0)

Var r as BigNumberMBS = a mod b

MessageBox r.StringValue
```

127.4.84 Operator_ModuloRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the modulo of two numbers.

127.4.85 Operator_Multiply(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply two numbers.
Example:

```
// speed of light in m/s
Var SpeedOfLight As New BigNumberMBS("299792458")

// seconds per day
Var SecondsPerDay As New BigNumberMBS(24 * 3600)

Var DaysPerYear As New BigNumberMBS(365.25)

Var LightYear As BigNumberMBS = SpeedOfLight * DaysPerYear * SecondsPerDay
MessageBox LightYear.StringValue+" meter per light year"

// 9.460.730.472.580.800 matches number from Wikipedia

Var AgeOfUniversum As New BigNumberMBS(13810000000)

Var MaxDistance As BigNumberMBS = LightYear * AgeOfUniversum

MessageBox MaxDistance.GetStringValue(10, False, 100, 3, True)+" meter maximum"
```

127.4.86 Operator_MultiplyRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply two numbers.

127.4.87 Operator_Negate as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negates a number.
Example:

```
Var a as new BigNumberMBS(3)

// negate
```

```
Var c as BigNumberMBS = -a

MessageBox c.StringValue
```

127.4.88 Operator_Power(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates power of two numbers.
Example:

```
Var a as new BigNumberMBS(3)
Var b as new BigNumberMBS(4)

// pow
Var c as BigNumberMBS = a ^b

MessageBox c.StringValue
```

127.4.89 Operator_PowerRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates power of two numbers.

127.4.90 Operator_Subtract(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts one number from other.
Example:

```
Var a as new BigNumberMBS(3)
Var b as new BigNumberMBS(4)

// subtract
Var c as BigNumberMBS = a - b

MessageBox c.StringValue
```

127.4.91 Operator_SubtractRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts one number from other.

127.4.92 Pi as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value pi.
Example:

```
Var b as BigNumberMBS = BigNumberMBS.Pi
MessageBox b.StringValue
```

127.4.93 Pow(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the power of the number.
Example:

```
Var x as new BigNumberMBS(2)
Var o as new BigNumberMBS(5)
Var p as BigNumberMBS = x.Pow(o)

MessageBox p.StringValue // shows 32
```

127.4.94 RadToDeg(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts radians to degrees.
Notes: It returns: x * 180 / pi.

127.4.95 RadToGrad(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts radians to gradians.
Notes: it returns: x * 200 / pi

127.4.96 Rand as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates random number.
Notes: Mantissa and exponent are filled with random bytes to generate a random names.

127.4.97 Root(value as BigNumberMBS, index as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Indexth Root of x
Example:

```
Var c As New BigNumberMBS(5*5*5*5)
Var e As New BigNumberMBS(4)
Var d As BigNumberMBS = BigNumberMBS.Root(c, e)

MessageBox d.StringValue
```

Notes: index must be integer and not negative <0;1;2;3....)

if index==0 the result is one
if x==0 the result is zero and we assume root(0;0) is not defined

if index is even (2;4;6...) the result is x^(1/index) and x>0
if index is odd (1;2;3;...) the result is either

-(abs(x)^(1/index)) if x<0
or
x^(1/index)) if x>0

(for index==1 the result is equal x)

127.4.98 Round as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rounds the number.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS(2.3)
Var s as BigNumberMBS = o.Round

MessageBox s.StringValue

Var a as BigNumberMBS = new BigNumberMBS(-2.3)
Var b as BigNumberMBS = a.Round

MessageBox b.StringValue
```

127.4.99 SetStringValue(Text As String, Base as Integer, byref AfterText as String, Byref ValueRead as boolean)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses number from string.
Example:

```
// set to 1.2 and show
Var o as new BigNumberMBS

Var after as string
Var ValueRead as Boolean

o.SetStringValue "1.2 hello", 10, after, ValueRead

MessageBox "value: "+o.StringValue+EndOfLine+"after: "+after
Break
```

Notes: Returns also the text after the given text following the number.
Also sets ValueRead if a value was read.
See also:

- 127.4.100 SetStringValue(Text As String, Conversion as BigNumberConversionMBS) 18065
- 127.4.101 SetStringValue(Text As String, Conversion as BigNumberConversionMBS, byref AfterText as String, Byref ValueRead as boolean) 18066

127.4.100 SetStringValue(Text As String, Conversion as BigNumberConversionMBS)

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses number from string.
Example:

```
Var o As New BigNumberMBS

Var conv As New BigNumberConversionMBS
conv.Comma = ","
conv.Group = "'"
conv.Scientific = False
conv.Round = 3

o.SetStringValue("1'234'567,89", conv)

MessageBox o.StringValue
```

See also:

- 127.4.99 SetStringValue(Text As String, Base as Integer, byref AfterText as String, Byref ValueRead as boolean) 18065
- 127.4.101 SetStringValue(Text As String, Conversion as BigNumberConversionMBS, byref AfterText as String, Byref ValueRead as boolean) 18066

127.4.101 SetStringValue(Text As String, Conversion as BigNumberConversionMBS, byref AfterText as String, Byref ValueRead as boolean)

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses number from string.
Example:

```
Var o As New BigNumberMBS

Var conv As New BigNumberConversionMBS
conv.Comma = ","
conv.Group = "'"
conv.Scientific = False
conv.Round = 3

Var after As String
Var read As Boolean

o.SetStringValue("1'234'567,89abc", conv, after, read)
// read will be true and after contains "abc".

Var value As String = o.StringValue

Var after2 As String
```

```
Var read2 As Boolean

o.SetStringValue("abc", conv, after2, read2)
// read2 will be false and after2 contains "abc".

Break
```

Notes: Returns the text after the given text following the number in AfterText parameter.
Sets ValueRead if a value was read.
See also:

- 127.4.99 SetStringValue(Text As String, Base as Integer, byref AfterText as String, Byref ValueRead as boolean) 18065
- 127.4.100 SetStringValue(Text As String, Conversion as BigNumberConversionMBS) 18065

127.4.102 Sgn(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries sign of number.
Example:

```
Var negative As New BigNumberMBS(-5.6)
Var sign1 As BigNumberMBS = BigNumberMBS.Sgn(negative)

Var positive As New BigNumberMBS(5.6)
Var sign2 As BigNumberMBS = BigNumberMBS.Sgn(positive)

Break
```

127.4.103 Sin(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the sinus value.
Example:

```
Var c As New BigNumberMBS(1.0)
Var d As BigNumberMBS = BigNumberMBS.Sin(c)

Var x As Double = Sin(1.0)

MessageBox d.StringValue+EndOfLine+Str(x)
```

127.4.104 Sinh(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Hyperbolic Sine.
Example:

```
Var c As New BigNumberMBS(0.5)
Var d As BigNumberMBS = BigNumberMBS.SinH(c)

// SinHMBS is in MBS Xojo Util Plugin
Var x As Double = SinHMBS(0.5)

MessageBox d.StringValue+EndOfLine+Str(x)
```

Notes: we're using the formula sinh(x) = (e^x - e^(-x)) / 2

127.4.105 SkipFraction as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function skips the fraction.
Example:

```
Var c As New BigNumberMBS(-3.7)
Var d As BigNumberMBS = c.SkipFraction

MessageBox d // shows -3
```

Notes: Similar to floor, but different for negative ones.

e.g
2.2 =>2
2.7 =>2
-2.2 =>2
-2.7 =>2

127.4.106 Sqrt as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the square root.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS(256)
Var s as BigNumberMBS = o.Sqrt

MessageBox s.StringValue
```

127.4.107 Subtract(other as BigNumberMBS, round as boolean = true) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts a number.
Example:

```
Var x as new BigNumberMBS(2)
Var d as new BigNumberMBS(3)
Var p as BigNumberMBS = x.Subtract(d)

MessageBox p.StringValue // shows -1
```

127.4.108 Tan(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Tangent.
Example:

```
Var c As New BigNumberMBS(1.0)
Var d As BigNumberMBS = BigNumberMBS.Tan(c)

Var x As Double = Tan(1.0)
```

```
MessageBox d.StringValue+EndOfLine+Str(x)
```

Notes: We're using the formula tan(x) = sin(x) / cos(x).

127.4.109 Tanh(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Hyperbolic Tangent.
Example:

```
Var c As New BigNumberMBS(0.5)
Var d As BigNumberMBS = BigNumberMBS.TanH(c)

// TanHMBS is in MBS Xojo Util Plugin
Var x As Double = TanHMBS(0.5)

MessageBox d.StringValue+EndOfLine+Str(x)
```

Notes: We're using the formula tanh(x)= (e^x - e^(-x)) / (e^x + e^(-x))

127.4.110 TwoPi as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value 2 * PI.
Example:

```
Var b as BigNumberMBS = BigNumberMBS.TwoPi
MessageBox b.StringValue
```

127.4.111 Zero as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value zero.
Example:

```
Var b as BigNumberMBS = BigNumberMBS.Zero
MessageBox b.StringValue
```

127.4.112 Properties

127.4.113 CurrencyValue as Currency

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets/Queries currency value.
Example:

```
Var u as Currency = 1234.5678
Var b as new BigNumberMBS(u)
MessageBox str(b.CurrencyValue)
```

Notes: (Read and Write property)

127.4.114 DataExponent as MemoryBlock

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exponent for this number.
Notes: Setting this may need to update flags, too.
(Read and Write property)

127.4.115 DataFlags as Integer

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags.
Notes: Bits are 128 for Sign, 64 for NAN and 32 for zero.
(Read and Write property)

127.4.116 DataMantissa as MemoryBlock

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mantissa for this number.
Notes: Setting this may need to update flags, too.
(Read and Write property)

127.4.117 DoubleValue as Double

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or Set the double value.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS(2.5)

MessageBox str(o.DoubleValue)+" = "+str(o.StringValue)
```

Notes: (Read and Write property)

127.4.118 Int64Value as Int64

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set value as Int64.
Example:

```
Var u as Int64 = &h7FFFFFFFFFFFFFFF // maximum Int64
Var b as new BigNumberMBS(u)
MessageBox str(b.Int64Value)

Var one as new BigNumberMBS(1)
b = b + one

// raises exception due to overflow
MessageBox str(b.Int64Value)
```

Notes: (Read and Write property)

127.4.119 IntegerValue as Integer

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or Set the integer value.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS(2.5)

MessageBox str(o.IntegerValue)+" = "+str(o.StringValue)
```

Notes: (Read and Write property)

127.4.120 IsInteger as Boolean

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this number is an integer.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS(1)
Var z as BigNumberMBS = new BigNumberMBS(1.5)

if o.IsInteger then
MessageBox o.StringValue+" is integer"
else
break // error
end if

if z.IsInteger then
break // error
else
MessageBox z.StringValue+" is not integer"
end if
```

Notes: If true, there are no digits after the dot.
(Read only property)

127.4.121 IsNan as Boolean

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is an invalid number.
Example:

```
Var o as BigNumberMBS = BigNumberMBS.zero
Var z as BigNumberMBS = BigNumberMBS.Nan

if z.IsNan then
MessageBox z.StringValue+" is NaN"
else
break // error
end if

if o.IsNan then
break // error
else
```

```
MessageBox o.StringValue+" is not NaN"
end if
```

Notes: (Read only property)

127.4.122 IsNegative as Boolean

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this value is negative.
Example:

```
Var o as BigNumberMBS = BigNumberMBS.one
Var z as BigNumberMBS = BigNumberMBS.one.Negate

if z.IsNegative then
MessageBox z.StringValue+" is negative"
else
break // error
end if

if o.IsNegative then
break // error
else
MessageBox o.StringValue+" is not negative"
end if
```

Notes: (Read only property)

127.4.123 IsZero as Boolean

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if value is zero.
Example:

```
Var o as BigNumberMBS = BigNumberMBS.one
Var z as BigNumberMBS = BigNumberMBS.zero

if z.IsZero then
MessageBox z.StringValue+" is zero"
else
break // error
end if
```

```
if o.IsZero then
break // error
else
MessageBox o.StringValue+" is not zero"
end if
```

Notes: (Read only property)

127.4.124 StringValue as String

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set string value of text.
Example:

```
// set to 1.2 and show
Var o as new BigNumberMBS("1.2")
MessageBox o.StringValue

// set to 2.3
o.StringValue = "2.3"
MessageBox o.StringValue
```

Notes: (Read and Write property)
See also:

- 127.4.127 StringValue(Base as Integer) as String 18076

127.4.125 UInt64Value as UInt64

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set value as UInt64.
Example:

```
Var u as UInt64 = 12345678901234567890
Var b as new BigNumberMBS(u)
MessageBox str(b.UInt64Value)
```

Notes: (Read and Write property)

127.4.126 VariantValue as Variant

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries/Sets value with variant.
Notes: Floating point values are given as Double.
Integer types as Int32, Int64 or UInt64.
If value exceeds the ranges of those data types, we fall back to string.

When setting, the value is converted to a big number similiar to NumberWithVariant.
(Read and Write property)

127.4.127 StringValue(Base as Integer) as String

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set string value with a given base.
Example:

```
Var o as new BigNumberMBS(1234)

// show as hex
MessageBox o.StringValue(16)
```

Notes: (Read and Write computed property)
See also:

- 127.4.124 StringValue as String 18075

127.5 Globals

127.5.1 IsValidCreditCardNumberMBS(Number as String) as boolean

MBS Util Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies a credit card number.
Example:

```
MessageBox "test 49927398716 gives "+str(IsValidCreditCardNumberMBS("49927398716"))+EndOfLine+_
"test 49927398717 gives "+str(IsValidCreditCardNumberMBS("49927398717"))
```

Notes: This function implements the Luhn algorithm. This is a simple checksum formula used to validate a variety of identification numbers, such as credit card numbers, IMEI numbers, National Provider Identifier numbers in US and Canadian Social Insurance Numbers.
Returns true on success or false on failure.

If this function returns false, you can be sure the number is not valid. But if the function returns true, you may want to check the number online with some database.

- MBS Real Studio Plugins, version 11.3pr5

127.5.2 CompareNumbersMBS(v1 as Variant, v2 as Variant) as Integer

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares numbers.
Example:

```
Var u As UInt64 = 12345678901234567890
Var i As Int64 = -1

If u >i Then
Break // 12345678901234567890 >-1
Else
Break // xojo says it's smaller!
End If

If CompareNumbersMBS(u,i) >0 Then
Break // Plugin does it right
Else
Break
End If
```

Notes: The goal: compare numbers better than Xojo.

Especially UInt64/Int64 edge cases.

We treat nil as 0 value and ptr as UInt64.
If first argument is string, we just compare both as string. If first argument is numeric and second argument is string, we convert second one to number.

127.5.3 ACosHMBS(x as Double) as Double

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the inverse hyperbolic cosine of the real argument x.
Example:

MessageBox str(ACosHMBS(5))

Notes: acosh(1) returns +0.
acosh(x) returns a NAN for x <1.
acosh(+infinity) returns +infinity.

127.5.4 ACosMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the principal value of the arc cosine of x in the range [0, pi] .
Example:

MessageBox str(ACosMBS(5))

Notes: acos(1) returns +0.
acos(x) returns a NAN for | x | >1.

- MBS SQLite Extension, version 1.1pr1

127.5.5 ArithmeticShiftMBS(value as UInt64, count as Integer) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does an arithmetic Shift of value and cares for the sign (+ or -).
Example:

```
MessageBox str(ArithmeticShiftMBS(5,3))

// displays 40 which is 5*(2^3) = 5 * 8
```

Notes: Always using 32bit.

127.5.6 ASinHMBS(x as Double) as Double

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the principal value of the arc sine of x in the range [-pi/2, +pi/2] .
Example:

```
MessageBox str(ASinHMBS(5))
```

Notes: asin(+-0) returns +-0.
asin(x) returns a NAN for | x | >1.

127.5.7 ASinMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the principal value of the arc sine of x in the range [-pi/2, +pi/2] .
Example:

```
MessageBox str(ASinMBS(5))
```

Notes: asin(+-0) returns +-0.
asin(x) returns a NAN for | x | >1.

127.5.8 ATan2MBS(x as Double, y as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the principal value of the arc tangent of y/x, using the signs of both arguments to determine the quadrant of the return value.
Example:

MessageBox str(ATan2MBS(3,4))

Notes: atan2(+-0, -0) returns +-pi.
atan2(+-0, +0) returns +-0.
atan2(+-0, x) returns +-pi for x <0.
atan2(+-0, x) returns +-0 for x >0.
atan2(y, +-0) returns -pi/2 for y >0.
atan2(+-y, -infinity) returns +-pi for finite y >0.
atan2(+-y, +infinity) returns +-0 for finite y >0.
atan2(+-infinity, +x) returns +-pi/2 for finite x.
atan2(+-infinity, -infinity) returns +-3*pi/4.
atan2(+-infinity, +infinity) returns +-pi/4.
Blog Entries

- MBS SQLite Extension in version 1.1
- MBS SQLite Extension, version 1.1pr1

127.5.9 ATanHMBS(x as Double) as Double

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the inverse hyperbolic tangent of the real argument x.
Example:

MessageBox str(ATanHMBS(5))

Notes: atanh(+-0) returns +-0.
atanh(+-1) returns +-infinity.
atanh(x) returns a NaN for | x | >1.

127.5.10 ATanMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The atan() function computes the principal value of the arc tangent of x in the range [-pi/2, +pi/2] .
Example:

MessageBox str(ATanMBS(5))

Notes: atan(+-0) returns +-0.
atan(+-infinity) returns +-pi/2.

- MBS SQLite Extension in version 1.1
- MBS SQLite Extension, version 1.1pr1

127.5.11 BitClearMBS(value as UInt64, mask as UInt64) as UInt64

MBS Util Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the bits in the mask from the value.
Example:

```
MessageBox bin(BitClearMBS(&b1111,&b0110)) // 1001
```

Notes: Does not work for 64 bit integers.

127.5.12 BitCountMBS(value as UInt64) as Integer

MBS Util Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts the number of bits set.
Example:

```
MessageBox str(BitCountMBS(&b101)) // 2
MessageBox str(BitCountMBS(&b10101)) // 5
MessageBox str(BitCountMBS(&b11111111111100001111)) // 16
MessageBox str(BitCountMBS(&hFFFFFFFF)) // 32
```

Notes: Does not work for 64 bit integers.

127.5.13 BitExclMBS(value as UInt64, bitNumber as Integer) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function:

Does an bitwiseAnd using the value and bitwisenot of 2^bitNumber.
Or: Switches off the bit bitNumber inside value.
Example:

```
MessageBox str(BitExclMBS(80,4))
' displays 64 which is 80 without 16 = 2^4+2^5 without 2^4
```

Notes:

Always using 64-bit.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.2pr6

127.5.14 BitInclMBS(value as UInt64, bitNumber as Integer) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function:

Does an bitwiseOr using the value and 2^bitNumber
Or: Switches on the bit bitNumber inside value.
Example:

```
MessageBox str(BitInclMBS(64,4))
' displays 80 which is 64 + 16 = 64 + 2^4
```

Notes:

Always using 64-bit.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.2pr6

127.5.15 BitIsSetMBS(value as UInt64, bitNumber as Integer) as Boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tests whether a certain bit is set inside the value
Example:

```
Var bool as boolean

bool=BitIsSetMBS(80,4)
' true, because 2^4=16 is included in 80=2^4+2^6
```

Notes: Always using 64-bit.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.2pr6

127.5.16 BitValMBS(bitNumber as Integer) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns 2^bitNumber
Example:

```
MessageBox str(BitValMBS(5))
' displays 32
```

Notes: Always using 64-bit.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.2pr6

127.5.17 BitwiseDiffMBS(x as UInt64, y as UInt64) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all bits of val1 which are not in val2.
Example:

```
MessageBox str(BitwiseDiffMBS(65,80))
' displays 1, because 65=2^0+2^5 includes 1=2^0, which is not part of 80=2^4+2^5.
```

Notes: Always using 32bit.

127.5.18 BitwiseNAndMBS(x as UInt64, y as UInt64) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: negates both values and does bitwiseAnd on them.
Example:

```
MessageBox str(bitwiseNandMBS(65,80))
' displays -82
```

Notes: Always using 32bit.

127.5.19 BitwiseNOrMBS(x as UInt64, y as UInt64) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: negates both values and does bitwiseor on them.
Example:

```
MessageBox str(bitwisenorMBS(65,80))
' displays -65
```

Notes: Always using 32bit.

127.5.20 BitwiseNotMBS(value as UInt64) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does an bitwise negation of value.
Example:

```
MessageBox str(BitwiseNotMBS(5))
' displays -6
```

Notes: Always using 32bit.

127.5.21 BitwiseRotateMBS(value as UInt64, count as Integer, offset as Integer, width as Integer) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does an bitwise rotation of value.
Example:

```
MessageBox str(BitwiseRotateMBS(5,2,0,32))
' displays 20
```

Notes: Always using 32bit.

127.5.22 ConvertFromFloat16MBS(Number as UInt16) as Single

MBS Util Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a 16bit floating point number to a 32bit floating point number.
Example:

```
Var h1 as UInt16 = ConvertToFloat16MBS(1.0)
Var f1 as single = ConvertFromFloat16MBS(h1) // should be 1.0
```

```
Var h2 as UInt16 = ConvertToFloat16MBS(-1.0)
Var f2 as single = ConvertFromFloat16MBS(h2) // should be -1.0

Var h3 as UInt16 = ConvertToFloat16MBS(1000.0)
Var f3 as single = ConvertFromFloat16MBS(h3) // should be 1000.0

Var h4 as UInt16 = ConvertToFloat16MBS(-1000.0)
Var f4 as single = ConvertFromFloat16MBS(h4) // should be -1000.0

Var inf as single = 65504.0
Var h5 as UInt16 = ConvertToFloat16MBS(inf)
Var f5 as single = ConvertFromFloat16MBS(h5) // should be 65504

Var nan as single = sqrt(-1)
Var h6 as UInt16 = ConvertToFloat16MBS(nan)
Var f6 as single = ConvertFromFloat16MBS(h6) // should be NAN

Break // check in debugger
```

Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.5pr4

127.5.23 ConvertToFloat16MBS(Number as Single) as UInt16

MBS Util Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a 32bit floating point number to a 16bit floating point number.
Example:

```
Var h1 as UInt16 = ConvertToFloat16MBS(1.0)
Var f1 as single = ConvertFromFloat16MBS(h1) // should be 1.0

Var h2 as UInt16 = ConvertToFloat16MBS(-1.0)
Var f2 as single = ConvertFromFloat16MBS(h2) // should be -1.0

Var h3 as UInt16 = ConvertToFloat16MBS(1000.0)
Var f3 as single = ConvertFromFloat16MBS(h3) // should be 1000.0
```

```
Var h4 as UInt16 = ConvertToFloat16MBS(-1000.0)
Var f4 as single = ConvertFromFloat16MBS(h4) // should be -1000.0

Var inf as single = 65504.0
Var h5 as UInt16 = ConvertToFloat16MBS(inf)
Var f5 as single = ConvertFromFloat16MBS(h5) // should be 65504

Var nan as single = sqrt(-1)
Var h6 as UInt16 = ConvertToFloat16MBS(nan)
Var f6 as single = ConvertFromFloat16MBS(h6) // should be NAN

Break // check in debugger
```

Notes: This looses precision as 16bit fit less bits than 32 bit.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.5pr4

127.5.24 CosHMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the hyperbolic cosine of x.
Example:

```
MessageBox str(CosHMBS(5))
```

Notes: cosh(+-0) returns 1.
cosh(+-infinity) returns +infinity.
Blog Entries

- MBS SQLite Extension in version 1.1
- MBS SQLite Extension, version 1.1pr1

127.5.25 CosMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the cosine of x (measured in radians).
Example:

```
MessageBox str(CosMBS(5))
```

Notes: cos(+-0) returns 1.
cos(+-infinity) returns a NaN.
Blog Entries

- MBS SQLite Extension in version 1.1
- MBS SQLite Extension, version 1.1pr1

127.5.26 CurrencyAddMBS(value1 as Currency, value2 as Currency) as Currency

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds two currency values.
Example:

```
// add prices exactly with Currency values
Var total As Currency = CurrencyAddMBS(CurrencyValueMBS("19.99"), CurrencyValueMBS("0.01"))
MessageBox total.ToString // 20
```

Notes: This function uses 64bit integer math to avoid rounding issues.

127.5.27 CurrencyDivMBS(value1 as Currency, value2 as Integer) as Currency

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides currency value by integer.
Example:

```
// split a bill between 3 people
Var share As Currency = CurrencyDivMBS(CurrencyValueMBS("100.00"), 3)
MessageBox share.ToString // 33.3333
```

Notes: Rest is ignored.
This function uses 64bit integer math to avoid rounding issues.

127.5.28 CurrencyMulMBS(value1 as Currency, value2 as Integer) as Currency

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies currency value with integer.
Example:

```
Var c1 as Currency = 1234567890.1234

// in xojo
Var c3 as Currency = c1 * 12345

// with plugin
Var c4 as Currency = CurrencyMulMBS(c1, 12345)

// verify by 64bit math
Var c5 as Int64 = 12345678901234
Var c6 as int64 = c5 * 12345

// and plugin is correct
MessageBox str(c3)+" "+str(c4)+" "+str(c6)
```

Notes: This function uses 64bit integer math to avoid rounding issues.

127.5.29 CurrencySubMBS(value1 as Currency, value2 as Currency) as Currency

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts value2 from value1.
Example:

```
// subtract a discount from a price
Var price As Currency = CurrencySubMBS(CurrencyValueMBS("49.90"), CurrencyValueMBS("5.00"))
MessageBox price.ToString // 44.9
```

Notes: This function uses 64bit integer math to avoid rounding issues.

127.5.30 CurrencyValueMBS(value as string) as Currency

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses string into currency value.
Example:

```
// parse a price without rounding errors of Double
Var price As Currency = CurrencyValueMBS("19.99")
Var total As Currency = price * 3
```

MessageBox total.ToString // 59.97

Notes: Replacement for val() which works better with large numbers and raises exceptions on errors.
Blog Entries

- Currency Data Type
- MBS Xojo / Real Studio Plugins, version 14.3pr9
- Currency Data Type

127.5.31 DoubleToExtendedStrMBS(x as Double) as string

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns the double as an 80bit Float stored inside a ten byte string.
Example:

```
Var s as string
Var d as Double

d=5
s=DoubleToExtendedStrMBS(d)
MessageBox s
d=extendedStrToDoubleMBS(s)
MessageBox str(d)
```

Notes: Returns "" if there is not enough memory to create the string.

127.5.32 Exp2MBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes 2^x, the base-2 exponential of x.
Example:

```
MessageBox str(Exp2MBS(5))
```

Notes: exp2(+-0) return 1.
exp2(-infinity) return +0.
exp2(+infinity) return +infinity.

127.5.33 ExpMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes e^x, the base-e exponential of x.
Example:

```
MessageBox str(ExpMBS(5))
```

Notes: exp(+-0) return 1.
exp(-infinity) return +0.
exp(+infinity) return +infinity.
Blog Entries

- REAL Server Plugin 0.4

127.5.34 ExtendedStrToDoubleMBS(v as string) as Double

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns the 80bit Float as a double.
Example:

```
Var s as string
Var d as Double

d=5
s=DoubleToExtendedStrMBS(d)
MessageBox s
d=extendedStrToDoubleMBS(s)
MessageBox str(d)
```

Notes: Returns NAN (255) if the string is not valid. e.g. "".
Returns always NAN on Windows.

127.5.35 FacMBS(x as Integer) as Double

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates (value!).
Example:

```
Sub Open()
// Fill a listbox with Fac values:
Var x as Integer
Var y as Double
```

```
for x=1 to 100
ListBox1.addrow format(x,"0")
y=FacMBS(x)
if y=0 then
exit
else
ListBox1.CellTextAt(ListBox1.LastAddedRowIndex,1)=format(y,"0")
end if
next
End Sub
```

Notes: MessageBox str(facMBS(5))
' displays 120 which is 1*2*3*4*5

127.5.36 FloorMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns the largest integral value less than or equal to x.
Example:

```
MessageBox str(FloorMBS(5.45))
```

Notes: floor(+-0) returns +-0.
floor(+-infinity) returns +-infinity.
Blog Entries

- REAL Server Plugin 0.4

127.5.37 FRExpMBS(inputx as Double, byref expValue as Integer) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Breaks floating-point number into normalized fraction and power of 2.
Example:

```
Var x as Double = 123.456

Var y as Integer
Var r as Double = FRExpMBS(x, y)

MessageBox str(X)+": "+str(y)+" "+str(r)
```

Notes: This functions break the floating-point number value into a normalized fraction and an integral

power of 2. They store the integer in the int object pointed to by exp.

The functions return a number x such that x has a magnitude in the interval [1/2, 1) or 0, and value = x*(2^exp).

frexp(+-0, exp) returns +-0, and stores 0 in the object pointed to by exp.

frexp(+-infinity, exp) returns +-infinity, and stores an unspecified value in the object pointed to by exp.

frexp(Nan, exp) returns a Nan, and stores an unspecified value in the object pointed to by exp.

127.5.38 HiWordMBS(i as Integer) as Integer

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the high word part of the integer.
Example:

```
MessageBox hex(HiWordMBS(&H12345678)) // shows 1234
```

Notes: equal to bitwiseshiftright(i,16)

127.5.39 HypotMBS(x as Double, y as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the sqrt(x*x+y*y) without undue overflow or underflow.
Example:

```
MessageBox str(HypotMBS(3,4)) // shows 5
```

Notes: hypot(x, y) , hypot(y, x) , and hypot(x, -y) are equivalent.
hypot(x, +-0) is equivalent to fabs(x).
hypot(+-infinity, y) returns +infinity even if y is a NaN.

127.5.40 IsFiniteMBS(x as Double) as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the parameter is finite.

Example:

```
Var x as Double

x=1/0
if not isfiniteMBS(x) then
MessageBox "the result is Infinite."
end if
```

127.5.41 IsInfMBS(x as Double) as boolean

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the double passed in is an infinity value.
Example:

```
Var e as Double = 0.0000000000000000000000000000000000000000000000001
Var d as Double = 1.0/e/e/e/e/e/e/e

MessageBox str(d)+" is inf: "+str(IsInfMBS(d))
```

127.5.42 IsNANMBS(x as Double) as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the parameter is not a number.
Example:

```
Var x as Double
x=sqrt(-1)
if isnanMBS(x) then
MessageBox "the square root of -1 is not correct."
end if
```

127.5.43 Log10MBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the value of the logarithm of argument x to base 10.
Example:

```
MessageBox str(Log10MBS(5))
```

Notes: log10(1) return +0.

log10(x) return a NaN for x <0.
log10(+infinity) return +infinity.
Blog Entries

- REAL Server Plugin 0.4

127.5.44 Log2MBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the value of the logarithm of argument x to base 2.
Example:

MessageBox str(Log2MBS(5))

Notes: log2(1) return +0.
log2(x) return a NaN for x <0.
log2(+infinity) return +infinity.

127.5.45 LogicalShiftMBS(value as UInt64, count as Integer) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does an logical Shift of value and doesn't take care for the sign (+ or -).
Example:

MessageBox str(LogicalShiftMBS(5,3))

Notes: Always using 32bit.

127.5.46 LogMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the value of the logarithm of argument x to base e.
Example:

MessageBox str(LogMBS(5))

Notes: log(1) return +0.
log(x) return a NaN for x <0.
log(+infinity) return +infinity.
Blog Entries

- REAL Server Plugin 0.4

127.5.47 LoWordMBS(i as Integer) as Integer

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the low word part of the integer.
Example:

```
MessageBox hex(LoWordMBS(&H12345678)) // shows 5678
```

Notes: equal to bitwiseand(i,&HFFFF)

127.5.48 NormInvMBS(p as Double, mu as double = 0.0, sigma as double = 1.0) as double

MBS Util Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Calculates NormInv function like in Excel.
Example:

```
MessageBox Str(NormInvMBS(0.56, 5, 2)) // should show 5.3019
```

Blog Entries

127.5.49 PowMBS(x as Double, y as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes x raised to the power y.
Example:

```
MessageBox str(PowMBS(5,5))
```

Notes: pow(+-0, y) returns +-infinity for y an odd integer <0.
pow(+-0, y) returns +infinity for y <0 and not an odd integer.
pow(+-0, y) returns +-0 for y an odd integer >0.
pow(+-0, y) returns +0 for y >0 and not an odd integer.
pow(-1, +-infinity) returns 1.
pow(1, y) returns 1 for any y, even a NaN.

pow(x, +-0) returns 1 for any x, even a NaN.
pow(x, y) returns a NaN for finite x <0 and finite non-integer y.
pow(x, -infinity) returns +infinity for | x | <1.
pow(x, -infinity) returns +0 for | x | >1.
pow(x, +infinity) returns +0 for | x | <1.
pow(x, +infinity) returns +infinity for | x | >1.
pow(-infinity, y) returns -0 for y an odd integer <0.
pow(-infinity, y) returns +0 for y <0 and not an odd integer.
pow(-infinity, y) returns -infinity for y an odd integer >0.
pow(-infinity, y) returns +infinity for y >0 and not an odd integer.
pow(+infinity, y) returns +0 for y <0.
pow(+infinity, y) returns +infinity for y >0.

Range errors may occur.

- REAL Server Plugin 0.4

127.5.50 RandomExponentialDistributionMBS(lambda as Double) as double

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Generates a random number using exponential distribution.
Example:

```
// simulate waiting times between arrivals with 2 customers per minute on average
Var lines() As String
For i As Integer = 1 To 5
lines.Add Format(RandomExponentialDistributionMBS(2) * 60, "0") + " seconds"
Next
MessageBox String.FromArray(lines, EndOfLine)
```

Notes: Produces random non-negative floating-point values, distributed according to probability density function.

127.5.51 RandomNormalDistributionMBS(Mean as Double, StdDev as Double) as double

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Generates a random number using normal distribution.
Example:

```
// simulate 1000 body heights with mean 175 cm and standard deviation 8 cm
Var sum As Double
For i As Integer = 1 To 1000
sum = sum + RandomNormalDistributionMBS(175, 8)
Next
MessageBox "Average: " + Format(sum / 1000, "0.0") + " cm"
```

Notes: Generates random numbers according to the Normal (or Gaussian) random number distribution.

127.5.52 RandomPoissonDistributionMBS(Mean as Integer) as Integer

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Generates a random number using poisson distribution.
Example:

```
// simulate the number of customers per hour, which is 12 on average
Var counts() As String
For hour As Integer = 9 To 17
counts.Add hour.ToString + ":00 " + RandomPoissonDistributionMBS(12).ToString
Next
MessageBox String.FromArray(counts, EndOfLine)
```

Notes: Produces random non-negative integer values i, distributed according to discrete probability function.

127.5.53 RoundMBS(x as Double, decimals as Integer = 0) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns the integral value nearest to x rounding half-way cases away from zero, regardless of the current rounding direction.
Example:

```
MessageBox str(RoundMBS(5.5))

Var lines(-1) as string

for i as Integer = -5 to 5
lines.Add str(i)+": "+Format(RoundMBS(123456789.123456789, i), "0.0000000")
next

MessageBox join(lines,EndOfLine)
```

Notes: round(+-0) returns +-0.
round(+-infinity) returns +-infinity.
Blog Entries

- REAL Server Plugin 0.4

127.5.54 SinHMBS(x as Double) as Double

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the hyperbolic sine of x.
Example:

```
MessageBox str(SinHMBS(5.5))
```

Notes: sinh(+-0) returns +-0.
sinh(+-infinity) returns +-infinity.
Blog Entries

- MBS SQLite Extension in version 1.1
- MBS SQLite Extension, version 1.1pr1

127.5.55 SinMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the sine of x (measured in radians).
Example:

```
MessageBox str(SinMBS(5.5))
```

Notes: sin(+-0) returns +-0.
sin(+-infinity) returns a NaN.
Blog Entries

- MBS SQLite Extension in version 1.1
- MBS SQLite Extension, version 1.1pr1

127.5.56 SqrtMBS(x as Double, y as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function compute the yth root of x.
Example:

```
Var r,x,y as Double

r=SqrtMBS(x,y)
// r^y=x
```

Notes: sqrt(-0) returns -0.
sqrt(x,y) returns a NaN if the root can't be calculated.
Blog Entries

- REAL Server Plugin 0.4

127.5.57 TanHMBS(x as Double) as Double

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the hyperbolic tangent of x.
Example:

```
MessageBox str(TanHMBS(5.5))
```

Notes: tanh(+-0) returns +-0.
tanh(+-infinity) returns +-1.
Blog Entries

- MBS SQLite Extension in version 1.1
- MBS SQLite Extension, version 1.1pr1

127.5.58 TanMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the tangent of x (measured in radians).
Example:

```
MessageBox str(TanMBS(5.5))
```

Notes: tan(+-0) returns +-0.
tan(+-infinity) returns a NaN.
Blog Entries

- MBS SQLite Extension, version 1.1pr1

127.5.59 DoubleToInt64MBS(value as Double) as Int64

MBS Util Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a double value to Int64.
Example:

```
// convert a floating point number to a 64 bit integer (truncates the fraction)
Var seconds As Double = 1234567890.75
Var whole As Int64 = DoubleToInt64MBS(seconds)
MessageBox whole.ToString // 1234567890
```

Blog Entries

- MBS Real Studio Plugins, version 12.1pr7

127.5.60 DoubleToUInt64MBS(value as Double) as UInt64

MBS Util Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a double value to UInt64 correctly.
Example:

```
// set d to a very high UInt64 value
Var d as Double = pow(256.0,8.0) - 10000
```

```
// RB will convert to Int64 here! so number is cut to 9... instead of 18...
Var u1 as UInt64 = d

// plugin does it right
Var u2 as UInt64 = DoubleToUInt64MBS(d)

MessageBox str(u1)+" "+str(u2)
```

Notes: Xojo converts UInt64 to Double with an intermediate Int64 which breaks big numbers. This function does it correctly.

127.5.61 Int64ToDoubleMBS(value as Int64) as Double

MBS Util Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts an Int64 to Double.
Example:

```
// convert a big integer to a floating point number
Var bytes As Int64 = 123456789012
Var gb As Double = Int64ToDoubleMBS(bytes) / 1e9
MessageBox Format(gb, "0.00") + " GB"
```

- MBS Real Studio Plugins, version 12.1pr7

127.5.62 UInt64ToDoubleMBS(value as UInt64) as Double

MBS Util Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts an UInt64 to Double.
Example:

```
Var d as Double = 18446744073709541376
MessageBox str(d) // fails

Var e as Double = UInt64ToDoubleMBS(18446744073709541376)
MessageBox str(e) // works
```

Notes: Xojo likes to use Int64 internally when doing math with UInt64, so we added this method to fix it.

127.6 class Int128MBS

127.6.1 class Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class to wrap a 128-bit number for Xojo.
Example:

```
Var n As New Int128MBS(123)
MessageBox n
```

Notes: Not supported for 32-bit Linux targets.
We cache small numbers.

127.6.2 Methods

127.6.3 BitwiseAnd(Value as Int128MBS) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise AND operation on two numbers.
Example:

```
Var n As New Int128MBS("1234")
var x as Int128MBS = 211

n = n.BitwiseAnd(x)

Var s As String = n.stringValue
Break // shows 210
```

See also:

- 127.6.4 BitwiseAnd(Value as Int64) as Int128MBS 18103

127.6.4 BitwiseAnd(Value as Int64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise AND operation on two numbers.
Example:

```
Var n As New Int128MBS("1234")

n = n.BitwiseAnd(211)

Var s As String = n.stringValue
Break // shows 210
```

See also:

- 127.6.3 BitwiseAnd(Value as Int128MBS) as Int128MBS 18103

127.6.5 BitwiseOr(Value as Int128MBS) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise OR operation on two numbers.
Example:

```
Var n As New Int128MBS("1234")

// or one bit
n = n.BitwiseOr(Int128MBS.one)

Var s As String = n.stringValue
Break // shows 1235
```

See also:

- 127.6.6 BitwiseOr(Value as Int64) as Int128MBS 18104

127.6.6 BitwiseOr(Value as Int64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise OR operation on two numbers.
Example:

```
Var n As New Int128MBS("1234")

// or one bit
n = n.BitwiseOr(1)

Var s As String = n.stringValue
Break // shows 1235
```

See also:

- 127.6.5 BitwiseOr(Value as Int128MBS) as Int128MBS 18103

127.6.7 BitwiseXOr(Value as Int128MBS) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise XOR operation on two numbers.
Example:

```
Var n As New Int128MBS("1234")
var o as Int128MBS = 211

n = n.BitwiseXor(o)

Var s As String = n.stringValue
Break // shows 1025
```

See also:

- 127.6.8 BitwiseXOr(Value as Int64) as Int128MBS 18105

127.6.8 BitwiseXOr(Value as Int64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise XOR operation on two numbers.
Example:

```
Var n As New Int128MBS("1234")

n = n.BitwiseXor(211)

Var s As String = n.stringValue
Break // shows 1025
```

See also:

- 127.6.7 BitwiseXOr(Value as Int128MBS) as Int128MBS 18104

127.6.9 Constructor

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor to create a null value.
Example:

```
Var n As New Int128MBS
n.stringValue = "1234"
Break
```

See also:

- 127.6.10 Constructor(Data as Ptr, Size as Integer, isUnsigned as boolean = false) 18106
- 127.6.11 Constructor(value as Int128MBS) 18106
- 127.6.12 Constructor(value as Int64) 18106
- 127.6.13 Constructor(value as String) 18107
- 127.6.14 Constructor(value as UInt128MBS) 18107

127.6.10 Constructor(Data as Ptr, Size as Integer, isUnsigned as boolean = false)

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new number based on data in memory.
Notes: Size should be 1, 2, 4, 8 or 16 bytes.
See also:

- 127.6.9 Constructor 18105
- 127.6.11 Constructor(value as Int128MBS) 18106
- 127.6.12 Constructor(value as Int64) 18106
- 127.6.13 Constructor(value as String) 18107
- 127.6.14 Constructor(value as UInt128MBS) 18107

127.6.11 Constructor(value as Int128MBS)

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new 128-bit integer from an existing 128-bit integer.
Example:

```
Var n As New Int128MBS("1234")
var c as new Int128MBS(n)
Var s As String = c
Break
```

Notes: The copy constructor.
See also:

- 127.6.9 Constructor 18105
- 127.6.10 Constructor(Data as Ptr, Size as Integer, isUnsigned as boolean = false) 18106
- 127.6.12 Constructor(value as Int64) 18106
- 127.6.13 Constructor(value as String) 18107
- 127.6.14 Constructor(value as UInt128MBS) 18107

127.6.12 Constructor(value as Int64)

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new 128-bit integer from an Int64.
Example:

```
Var n As New Int128MBS(1234)
Var s As String = n
Break
```

See also:

- 127.6.9 Constructor 18105
- 127.6.10 Constructor(Data as Ptr, Size as Integer, isUnsigned as boolean = false) 18106
- 127.6.11 Constructor(value as Int128MBS) 18106
- 127.6.13 Constructor(value as String) 18107
- 127.6.14 Constructor(value as UInt128MBS) 18107

127.6.13 Constructor(value as String)

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new 128-bit integer from a string.
Example:

```
Var n As New Int128MBS("1234")
Var s As String = n
Break
```

Notes: Ignores any non digit numbers.
See also:

- 127.6.9 Constructor 18105
- 127.6.10 Constructor(Data as Ptr, Size as Integer, isUnsigned as boolean = false) 18106
- 127.6.11 Constructor(value as Int128MBS) 18106
- 127.6.12 Constructor(value as Int64) 18106
- 127.6.14 Constructor(value as UInt128MBS) 18107

127.6.14 Constructor(value as UInt128MBS)

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new 128-bit integer from an existing unsigned 128-bit integer.
Example:

```
Var n As New UInt128MBS("1234")
var c as new Int128MBS(n)
Var s As String = c
Break
```

Notes: Raises exception if the UInt128MBS is out of range.
See also:

- 127.6.10 Constructor(Data as Ptr, Size as Integer, isUnsigned as boolean = false) 18106
- 127.6.11 Constructor(value as Int128MBS) 18106
- 127.6.12 Constructor(value as Int64) 18106
- 127.6.13 Constructor(value as String) 18107

127.6.15 Dec

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Decreases the number by one.
Example:

```
var n As Int128MBS = 123

n.Dec

var v as String = n // 122

Break
```

See also:

- 127.6.16 Dec as Int128MBS 18108

127.6.16 Dec as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Decreases the number by one.
Example:

```
var n As Int128MBS = 123
var o as Int128MBS = n.Dec
var v as String = o // 122
```

Break

Notes: Returns the new value.
See also:

- 127.6.15 Dec 18108

127.6.17 Equals(other as Int128MBS) as Boolean

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if two numbers are equal.
Example:

```
Var o As Int128MBS = -1
Var i As Int128MBS = 123
Var u As UInt128MBS = 123

If u.Equals(i) Then
Break // <- goes here
Else
Break
End If

If u.Equals(o) Then
Break
Else
Break // <- goes here
End If
```

See also:

- 127.6.18 Equals(other as Int64) as Boolean 18109
- 127.6.19 Equals(other as UInt128MBS) as Boolean 18110

127.6.18 Equals(other as Int64) as Boolean

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if two numbers are equal.
See also:

- 127.6.17 Equals(other as Int128MBS) as Boolean 18109
- 127.6.19 Equals(other as UInt128MBS) as Boolean 18110

127.6.19 Equals(other as UInt128MBS) as Boolean

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if two numbers are equal.
Example:

```
Var o As Int128MBS = -1
Var i As Int128MBS = 123
Var u As UInt128MBS = 123

If i.Equals(u) Then
Break // <- goes here
Else
Break
End If

If o.Equals(u) Then
Break
Else
Break // <- goes here
End If
```

See also:

- 127.6.17 Equals(other as Int128MBS) as Boolean 18109
- 127.6.18 Equals(other as Int64) as Boolean 18109

127.6.20 Inc

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Increases the number by one.
Example:

```
var n As Int128MBS = 123

n.inc

var v as String = n // 124

Break
```

See also:

- 127.6.21 Inc as Int128MBS 18111

127.6.21 Inc as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Increases the number by one.
Example:

```
var n As Int128MBS = 123
var o as Int128MBS = n.inc
var v as String = o // 124
```

Break

Notes: Returns the new value.
See also:

- 127.6.20 Inc 18110

127.6.22 one as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns one as a constant.
Example:

```
MessageBox Int128MBS.one
```

Notes: We cache the object, so calling this multiple times will return the same object.

127.6.23 Operator_Add(other as Int128MBS) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Adds a number.
Example:

```
Var n As New Int128MBS("1234")
// calls Operator_Add
n = n + Int128MBS.one
```

Break

See also:

- 127.6.24 Operator_Add(other as Int64) as Int128MBS 18112

127.6.24 Operator_Add(other as Int64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Adds a number.
Example:

```
Var n As New Int128MBS("1234")
// calls Operator_Add
n = n + 1

Break
```

See also:

- 127.6.23 Operator_Add(other as Int128MBS) as Int128MBS 18111

127.6.25 Operator_AddRight(other as Int128MBS) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Adds a number.

127.6.26 Operator_Compare(other as Int128MBS) as Integer

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Compares two numbers.
Example:

```
Var n As New Int128MBS(6)
// calls Operator_Compare

If n >6 Then
Break
Else
Break
end if

If n = 6 Then
Break
Else
Break
End If

If n <6 Then
```

```
Break
Else
Break
End If

Break
```

See also:

- 127.6.27 Operator_Compare(other as Int64) as Integer 18113
- 127.6.28 Operator_Compare(other as UInt128MBS) as Integer 18113

127.6.27 Operator_Compare(other as Int64) as Integer

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Compares two numbers.
Example:

```
Var v As Int128MBS = 5
var u as Int64 = 5

If u = v Then
// okay
Break
Else
// failed?
Break
End If
```

See also:

- 127.6.26 Operator_Compare(other as Int128MBS) as Integer 18112
- 127.6.28 Operator_Compare(other as UInt128MBS) as Integer 18113

127.6.28 Operator_Compare(other as UInt128MBS) as Integer

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Compares two numbers.
Example:

```
Var n As New Int128MBS(6)
var u as UInt128MBS = 5
Var x As New Int128MBS(-6)
```

```
Var v As Int128MBS = 5

// calls Operator_Compare

If x <u Then
// okay, negative number is always smaller
Break
Else
// failed?
Break
End If

If x <n Then
// okay
Break
Else
// failed?
Break
End If

If v = u Then
// okay
Break
Else
// failed?
Break
End If
```

See also:

- 127.6.26 Operator_Compare(other as Int128MBS) as Integer 18112
- 127.6.27 Operator_Compare(other as Int64) as Integer 18113

127.6.29 Operator_Convert as Int64

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts an 128-bit number to an Int64.
Example:

```
Var n As New Int128MBS("1234")

// auto convert
var s as int64 = n

Break
```

Notes: Raises an exception if the number is out of range for an Int64.
See also:

- 127.6.30 Operator_Convert as String 18115
- 127.6.31 Operator_Convert(value as Int64) 18115
- 127.6.32 Operator_Convert(value as String) 18116

127.6.30 Operator_Convert as String

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts the 128-bit integer to a string.
Example:

```
var n As Int128MBS = "123"

// convert to int64
Var v As Int64 = n
// convert to string
Var s As String = n
// convert to double via Int64
var d as Double = n

Break
```

See also:

- 127.6.29 Operator_Convert as Int64 18114
- 127.6.31 Operator_Convert(value as Int64) 18115
- 127.6.32 Operator_Convert(value as String) 18116

127.6.31 Operator_Convert(value as Int64)

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts an Int64 to an 128-bit integer.
Example:

```
var n As Int128MBS = 123
```

See also:

- 127.6.29 Operator_Convert as Int64 18114

- 127.6.30 Operator_Convert as String 18115
- 127.6.32 Operator_Convert(value as String) 18116

127.6.32 Operator_Convert(value as String)

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts a string to an 128-bit integer.
Example:

```
var n As Int128MBS = "123"
```

See also:

- 127.6.29 Operator_Convert as Int64 18114
- 127.6.30 Operator_Convert as String 18115
- 127.6.31 Operator_Convert(value as Int64) 18115

127.6.33 Operator_Divide(other as Int128MBS) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Divides a number.
Example:

```
Var n As New Int128MBS("1234")
// calls Operator_Divide
var x as Int128MBS = 2
n = n / x
Var s As String = n // 617

Break
```

See also:

- 127.6.34 Operator_Divide(other as Int64) as Int128MBS 18116

127.6.34 Operator_Divide(other as Int64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Divides the number by the other one.
Example:

```
Var n As New Int128MBS("1234")
// calls Operator_Divide
n = n / 2
Var s As String = n // 617

Break
```

See also:

- 127.6.33 Operator_Divide(other as Int128MBS) as Int128MBS 18116

127.6.35 Operator_DivideRight(other as Int64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Divides a number.
Example:

```
Var n As New Int128MBS("1234")
// calls Operator_DivideRight
n = 2468 / n
Var s As String = n // 2

Break
```

127.6.36 Operator_Modulo(other as Int128MBS) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Calculates modulo operation.
Example:

```
Var n As New Int128MBS(33)
var x as new Int128MBS(5)
// calls Operator_Modulo
n = n mod x
Var s As String = n // 3

Break
```

Notes: Performs division and returns the left over.
See also:

- 127.6.37 Operator_Modulo(other as Int64) as Int128MBS 18118

127.6.37 Operator_Modulo(other as Int64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Calculates modulo operation.
Example:

```
Var n As New Int128MBS(33)
// calls Operator_Modulo
n = n mod 5
Var s As String = n // 3

Break
```

Notes: Performs division and returns the left over.
See also:

- 127.6.36 Operator_Modulo(other as Int128MBS) as Int128MBS 18117

127.6.38 Operator_ModuloRight(other as Int64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Calculates modulo operation.
Example:

```
Var n As New Int128MBS(5)
// calls Operator_ModuloRight
n = 33 mod n
Var s As String = n // 3

Break
```

Notes: Performs division and returns the left over.

127.6.39 Operator_Multiply(other as Int128MBS) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Multiplies the number with the other one.
Example:

```
Var n As New Int128MBS(6)
var x as new Int128MBS(5)
// calls Operator_Multiply
n = n * x
```

```
Var s As String = n // 30

Break
```

See also:

- 127.6.40 Operator_Multiply(other as Int64) as Int128MBS 18119

127.6.40 Operator_Multiply(other as Int64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Multiplies the number with the other one.
Example:

```
Var n As New Int128MBS(6)
// calls Operator_Multiply
n = n * 5
Var s As String = n // 30

Break
```

See also:

- 127.6.39 Operator_Multiply(other as Int128MBS) as Int128MBS 18118

127.6.41 Operator_MultiplyRight(other as Int64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Multiplies the number with the other one.
Example:

```
Var n As New Int128MBS("6")
// calls Operator_MultiplyRight
n = 5 * n
Var s As String = n // 30

Break
```

127.6.42 Operator_Negate as Int128MBS
