Function: Index of string descriptor describing product.
Notes: (Read only property)

202.4.12 IndexSerialNumber as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Index of string descriptor containing device serial number.
Notes: (Read only property)

202.4.13 Length as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Size of this descriptor (in bytes).
Notes: (Read only property)

202.4.14 MaxPacketSize0 as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maximum packet size for endpoint 0.
Notes: (Read only property)

202.4.15 NumConfigurations as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of possible configurations.
Notes: (Read only property)

202.4.16 ProductID as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: USB-IF product ID.
Notes: (Read only property)

202.4.17 USBReleaseNumber as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: USB specification release number in binary-coded decimal.
Notes: (Read only property)

202.4.18 VendorID as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: USB-IF vendor ID.
Notes: (Read only property)

202.4.19 Constants

USB Classes

Constant	Value	Description
kClassApplication	&hfe	Application
kClassAudio	1	Audio
kClassComm	2	Comm
kClassContentSecurity	13	Security
kClassData	10	Data
kClassDiagnosticDevice	&hdc	Diagnostic Device
kClassHID	3	HID
kClassHUB	9	HUB
kClassImage	6	Image
kClassMassStorage	8	Storage
kClassPerInterface	0	Classes per Interface
kClassPersonalHealthcare	15	Personal Healthcare
kClassPhysical	5	Physical
kClassPrinter	7	Printer
kClassPTP	6	PTP
kClassSmartCard	11	SmartCard
kClassVendorSpecific	255	Vendor Specific
kClassVideo	14	Video
kClassWireless	&he0	Wireless

202.5 class LibUSBDeviceMBS

202.5.1 class LibUSBDeviceMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a device.
Example:

```
// list connected USB devices with vendor and product IDs using libusb
If Not LibUSBDeviceMBS.LibraryLoaded Then
If Not LibUSBDeviceMBS.LoadLibrary(SpecialFolder.Resources.Child("libusb-1.0.dylib")) Then
MessageBox LibUSBDeviceMBS.LibraryLoadErrorMessage
Return
End If
End If
Call LibUSBDeviceMBS.Initialize

Var lines() As String
For Each device As LibUSBDeviceMBS In LibUSBDeviceMBS.Devices
Var d As LibUSBDeviceDescriptorMBS = device.GetDeviceDescriptor
lines.Add "Bus " + device.BusNumber.ToString + " device " + device.DeviceAddress.ToString + ": " +
Hex(d.VendorID) + ":" + Hex(d.ProductID)
Next
MessageBox String.FromArray(lines, EndOfLine)
```

Notes: This is both for a device as general and an open connection.

LibUSB abstracts on Mac, Windows and Linux for using USB devices. SO far it's the best generic USB interface we have.
You need libUSB dylib (mac), dll (Windows) and so (Linux) files from LibUSB. For Linux the LibUSB library is usually preinstalled with a LibUSB package, so the plugin finds it automatically.

For MacOS you can take a look on the MacUSBDeviceMBS class and the IORegistryMBS class.
See also WindowsDeviceMBS, WinUSBDeviceMBS and WinUSBMBS classes for WIndows.

- Presentation from Munich conference about MBS Plugins.

202.5.2 Methods

202.5.3 AttachKernelDriver(interfaceNumber as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Re-attach an interface's kernel driver, which was previously detached using libusb_detach_kernel_driver().
Notes: This call is only effective on Linux and returns kErrorNotSupported on all other platforms.

This functionality is not available on Darwin or Windows.

Parameters:
interfaceNumber: the interface to attach the driver from

Lasterror is set:
0 on success
kErrorNotFound if no kernel driver was active
kErrorInvalidParam if the interface does not exist
kErrorNoDevice if the device has been disconnected
kErrorNotSupported on platforms where the functionality is not available
kErrorBusy if the driver cannot be attached because the interface is claimed by a program or driver
another error code on other failure

202.5.4 BulkTransfer(endpoint as Integer, data as Ptr, Length as Integer, byref ActualLength as Integer, Timeout as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Perform a USB bulk transfer.
Notes: The direction of the transfer is inferred from the direction bits of the endpoint address.

For bulk reads, the length field indicates the maximum length of data you are expecting to receive. If less data arrives than expected, this function will return that data, so be sure to check the transferred output parameter.

You should also check the transferred parameter for bulk writes. Not all of the data may have been written.

Also check transferred when dealing with a timeout error code. libusb may have to split your transfer into a number of chunks to satisfy underlying O/S requirements, meaning that the timeout may expire after the

first few chunks have completed. libusb is careful not to lose any data that may have been transferred; do not assume that timeout conditions indicate a complete lack of I/O.

Parameters:

endpoint	the address of a valid endpoint to communicate with
data	a suitably-sized data buffer for either input or output (depending on endpoint)
length	for bulk writes, the number of bytes from data to be sent. for bulk reads, the maximum number of bytes to receive into the data buffer.
transferred	output location for the number of bytes actually transferred.
timeout	timeout (in millseconds) that this function should wait before giving up due to no response being received. For an unlimited timeout, use value 0.

Lasterror is set to:
0 on success (and populates transferred)
kErrorTimeout if the transfer timed out (and populates transferred)
kErrorPipe if the endpoint halted
kErrorOverflow if the device offered more data, see Packets and overflows
kErrorNoDevice if the device has been disconnected
another error code on other failures

202.5.5 ClaimInterface(interfaceNumber as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Claim an interface on a given device handle.
Notes: You must claim the interface you wish to use before you can perform I/O on any of its endpoints.

It is legal to attempt to claim an already-claimed interface, in which case libusb just returns 0 without doing anything.

Claiming of interfaces is a purely logical operation; it does not cause any requests to be sent over the bus. Interface claiming is used to instruct the underlying operating system that your application wishes to take ownership of the interface.

This is a non-blocking function.

Parameters:
interfaceNumber: the bInterfaceNumber of the interface you wish to claim

Lasterror is set:
0 on success
kErrorNotFound if the requested interface does not exist
kErrorBusy if another program or driver has claimed the interface
kErrorNoDevice if the device has been disconnected
a error code on other failure

202.5.6 ClearHalt(endpoint as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clear the halt/stall condition for an endpoint.
Notes: Endpoints with halt status are unable to receive or transmit data until the halt condition is stalled.

You should cancel all pending transfers before attempting to clear the halt condition.

This is a blocking function.

Parameters:
endpoint: the endpoint to clear halt status

Returns:
0 on success
kErrorNotFound if the endpoint does not exist
kErrorNoDevice if the device has been disconnected
another error code on other failure

202.5.7 Close

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Close a device handle.
Notes: Should be called on all open handles before your application exits.
Internally, this function destroys the reference that was added by Open on the given device.
This is a non-blocking function; no requests are sent over the bus.

202.5.8 ControlTransfer(requestType as Integer, Request as Integer, Value as Integer, Index as Integer, data as Ptr, Length as Integer, Timeout as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Perform a USB control transfer.
Notes: The direction of the transfer is inferred from the RequestType field of the setup packet.

The Value, Index and Length fields values should be given in host-endian byte order.

Parameters:

RequestType	the request type field for the setup packet
Request	the request field for the setup packet
Value	the value field for the setup packet
Index	the index field for the setup packet
data	a suitably-sized data buffer for either input or output (depending on direction bits within bmRequestType)
Length	the length field for the setup packet. The data buffer should be at least this size.
timeout	timeout (in millseconds) that this function should wait before giving up due to no response being received. For an unlimited timeout, use value 0.

on success, the number of bytes actually transferred is returned.

Lasterror is set to:
kErrorTimeout if the transfer timed out
kErrorPipe if the control request was not supported by the device
kErrorNoDevice if the device has been disconnected
another error code on other failures

202.5.9 DetachKernelDriver(interfaceNumber as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Detach a kernel driver from an interface.
Notes: If successful, you will then be able to claim the interface and perform I/O.
This functionality is not available on Darwin or Windows.

Parameters:
interfaceNumber: the interface to detach the driver from

Lasterror is set:
0 on success
kErrorNotFound if no kernel driver was active
kErrorInvalidParam if the interface does not exist
kErrorNoDevice if the device has been disconnected
kErrorNotSupported on platforms where the functionality is not available
another error code on other failure

202.5.10 Devices as LibUSBDeviceMBS()

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a list of USB devices currently attached to the system.
Notes: This is your entry point into finding a USB device to operate.

This return value of this function indicates the number of devices in the resultant list.

The number of devices in the outputted list.
Lasterror is set to zero on success or or any error codes according to errors encountered by the backend.

202.5.11 ErrorName(ErrorCode as Integer) as String

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a constant string with the ASCII name of a libusb error code.

202.5.12 GetActiveConfigDescriptor as LibUSBConfigDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the USB configuration descriptor for the currently active configuration.
Notes: This is a non-blocking function which does not involve any requests being sent to the device.

Lasterror is set to:
0 on success
kErrorNotFound if the device is in unconfigured state
another error code on error.

202.5.13 GetConfigDescriptor(Index as Integer) as LibUSBConfigDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get a USB configuration descriptor based on its index.
Notes: This is a non-blocking function which does not involve any requests being sent to the device.

Parameters:
Index: the index of the configuration you wish to retrieve

Lasterror is set to:
0 on success
kErrorNotFound if the configuration does not exist
another error code on error

202.5.14 GetConfigDescriptorByValue(Value as Integer) as LibUSBConfigDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get a USB configuration descriptor with a specific ConfigurationValue.
Notes: This is a non-blocking function which does not involve any requests being sent to the device.

Value: the bConfigurationValue of the configuration you wish to retrieve.

Lasterror is set to:
0 on success
kErrorNotFound if the configuration does not exist
another error code on error

202.5.15 GetConfiguration as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Determine the bConfigurationValue of the currently active configuration.
Notes: You could formulate your own control request to obtain this information, but this function has the advantage that it may be able to retrieve the information from operating system caches (no I/O involved).

If the OS does not cache this information, then this function will block while a control transfer is submitted to retrieve the information.

This function will return a value of 0 in the config output parameter if the device is in unconfigured state.

Returns Configuration value of the active configuration (only valid for return code 0)

The lasterror is set to:
0 on success
kErrorNoDevice if the device has been disconnected
another error code on other failure

202.5.16 GetDescriptor(descType as Integer, descIndex as Integer, data as Ptr, Length as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieve a descriptor from the default control pipe.
Notes: This is a convenience function which formulates the appropriate control message to retrieve the descriptor.

Parameters:

descType	the descriptor type, see libusb_descriptor_type
descIndex	the index of the descriptor to retrieve
data	output buffer for descriptor
length	size of data buffer

Returns number of bytes returned in data or zero.
Sets lasterror to error code on failure

202.5.17 GetDeviceDescriptor as LibUSBDeviceDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the USB device descriptor for a given device.
Notes: This is a non-blocking function; the device descriptor is cached in memory.

Returns 0 on success or a error code on failure.

202.5.18 GetMaxISOPacketSize(EndPoint as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calculate the maximum packet size which a specific endpoint is capable is sending or receiving in the duration of 1 microframe.
Notes: Only the active configution is examined. The calculation is based on the wMaxPacketSize field in the endpoint descriptor as described in section 9.6.6 in the USB 2.0 specifications.

If acting on an isochronous or interrupt endpoint, this function will multiply the value found in bits 0:10 by the number of transactions per microframe (determined by bits 11:12). Otherwise, this function just returns the numeric value found in bits 0:10.

This function is useful for setting up isochronous transfers, for example you might pass the return value from this function to libusb_set_iso_packet_lengths() in order to set the length field of every isochronous packet in a transfer.

Since v1.0.3.

Parameters:
endpoint: address of the endpoint in question

Returns the maximum packet size which can be sent/received on this endpoint.

The lasterror is set to:
0 for success.
kErrorNotFound if the endpoint does not exist
kErrorOther on other failure

202.5.19 GetMaxPacketSize(EndPoint as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Convenience function to retrieve the wMaxPacketSize value for a particular endpoint in the active device configuration.
Notes: This function was originally intended to be of assistance when setting up isochronous transfers, but a design mistake resulted in this function instead. It simply returns the wMaxPacketSize value without considering its contents. If you're dealing with isochronous transfers, you probably want libusb_get_max_iso_packet_size() instead.

Parameters:
endpoint: address of the endpoint in question

Returns the Max Packet Size value.

The lasterror is set:
0 for success.
kErrorNotFound if the endpoint does not exist
kErrorOther on other failure

202.5.20 GetStringDescriptor(descIndex as Integer, LangID as Integer = 0) as String

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieve a descriptor from a device.
Notes: This is a convenience function which formulates the appropriate control message to retrieve the descriptor. The string returned is Unicode, as detailed in the USB specifications.

Parameters:

descIndex	the index of the descriptor to retrieve
LangID	the language ID for the string descriptor

Returns string.
Lasterror is set to zero or error code on failure.
See also:

- 202.5.21 GetStringDescriptor(descIndex as Integer, LangID as Integer = 0, data as Ptr, Length as

Integer) as Integer 23711

202.5.21 GetStringDescriptor(descIndex as Integer, LangID as Integer = 0, data as Ptr, Length as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieve a descriptor from a device.
Notes: This is a convenience function which formulates the appropriate control message to retrieve the descriptor. The string returned is Unicode, as detailed in the USB specifications.

Parameters:

descIndex	the index of the descriptor to retrieve
LangID	the language ID for the string descriptor
data	output buffer for descriptor
length	size of data buffer

Returns number of bytes returned in data.
Lasterror is set to zero or error code on failure.
See also:

- 202.5.20 GetStringDescriptor(descIndex as Integer, LangID as Integer = 0) as String 23710

202.5.22 GetStringDescriptorAscii(descIndex as Integer) as String

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieve a string descriptor in ASCII.
Notes: Wrapper around GetStringDescriptor(). Uses the first language supported by the device.

descIndex: the index of the descriptor to retrieve

Returns string.
Lasterror is set to error code on failure and zero on success.
See also:

- 202.5.23 GetStringDescriptorAscii(descIndex as Integer, data as Ptr, Length as Integer) as Integer 23712

202.5.23 GetStringDescriptorAscii(descIndex as Integer, data as Ptr, Length as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieve a string descriptor in ASCII.
Notes: Wrapper around GetStringDescriptor(). Uses the first language supported by the device.

Parameters:

descIndex	the index of the descriptor to retrieve
data	output buffer for ASCII string descriptor
length	size of data buffer

Returns number of bytes returned in data.
Lasterror is set to error code on failure and zero on success.
See also:

- 202.5.22 GetStringDescriptorAscii(descIndex as Integer) as String 23711

202.5.24 HasCapability(Capability as UInt32) as Boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Check at runtime if the loaded library has a given capability.
Notes: Returns true if the running library has the capability, false otherwise.

202.5.25 Initialize as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Initialize libusb.

202.5.26 InterruptTransfer(endpoint as Integer, data as Ptr, Length as Integer, byref ActualLength as Integer, Timeout as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Perform a USB interrupt transfer.
Notes: The direction of the transfer is inferred from the direction bits of the endpoint address.

For interrupt reads, the length field indicates the maximum length of data you are expecting to receive. If less data arrives than expected, this function will return that data, so be sure to check the transferred output parameter.

You should also check the transferred parameter for interrupt writes. Not all of the data may have been written.

Also check transferred when dealing with a timeout error code. libusb may have to split your transfer into a number of chunks to satisfy underlying O/S requirements, meaning that the timeout may expire after the first few chunks have completed. libusb is careful not to lose any data that may have been transferred; do not assume that timeout conditions indicate a complete lack of I/O.

The default endpoint bInterval value is used as the polling interval.

Parameters:

endpoint	the address of a valid endpoint to communicate with
data	a suitably-sized data buffer for either input or output (depending on endpoint)
length	for bulk writes, the number of bytes from data to be sent. for bulk reads, the maximum number of bytes to receive into the data buffer.
transferred	output location for the number of bytes actually transferred.
timeout	timeout (in millseconds) that this function should wait before giving up due to no response being received. For an unlimited timeout, use value 0.

The lasterror property is set to:
0 on success (and populates transferred)
kErrorTimeout if the transfer timed out
kErrorPipe if the endpoint halted
kErrorOverflow if the device offered more data, see Packets and overflows
kErrorNoDevice if the device has been disconnected
another error code on other error

202.5.27 KernelDriverActive(interfaceNumber as Integer) as Boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Determine if a kernel driver is active on an interface.

Notes: If a kernel driver is active, you cannot claim the interface, and libusb will be unable to perform I/O.

This functionality is not available on Windows.

Parameters:
interfaceNumber: the interface to check

Lasterror is set:
0 if no kernel driver is active
1 if a kernel driver is active
kErrorNoDevice if the device has been disconnected
kErrorNotSupported on platforms where the functionality is not available
another error code on other failure

202.5.28 LibraryLoaded as Boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether library is loaded.

202.5.29 LibraryLoadErrorMessage as String

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error message from loading library.

202.5.30 LibVersion as LibUSBVersionMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries version of library.

202.5.31 LoadLibrary(file as folderitem) as boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the libusb library.
Notes: Returns true on success or false on failure.
The LibraryLoadErrorMessage function returns error message on failure.
See also:

- 202.5.32 LoadLibrary(path as string) as boolean 23715

202.5.32 LoadLibrary(path as string) as boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the libusb library.
Notes: Returns true on success or false on failure.
The LibraryLoadErrorMessage function returns error message on failure.
See also:

- 202.5.31 LoadLibrary(file as folderitem) as boolean 23714

202.5.33 Open as Boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Open a device and obtain a device handle.
Notes: A handle allows you to perform I/O on the device in question.

Internally, this function adds a reference to the device. This reference is removed during Close().

This is a non-blocking function; no requests are sent over the bus.

The last error to:
0 on success
kErrorNoMemory on memory allocation failure
kErrorAccess if the user has insufficient permissions
kErrorNoDevice if the device has been disconnected
another error code on other failure

202.5.34 OpenDevice(VID as Integer, PID as Integer) as LibUSBDeviceMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Convenience function for finding a device with a particular VID/PID combination.
Notes: This function is intended for those scenarios where you are using libusb to knock up a quick test application - it allows you to avoid calling libusb_get_device_list() and worrying about traversing/freeing the list.

This function has limitations and is hence not intended for use in real applications: if multiple devices have the same IDs it will only give you the first one, etc.

Parameters:

VID	the idVendor value to search for
PID	the idProduct value to search for

Returns:
a handle for the first found device, or NULL on error or if the device could not be found.

202.5.35 ReleaseInterface(interfaceNumber as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Release an interface previously claimed with ClaimInterface.
Notes: You should release all claimed interfaces before closing a device handle.

This is a blocking function. A SET_INTERFACE control request will be sent to the device, resetting interface state to the first alternate setting.

Parameters:
interfaceNumber: the bInterfaceNumber of the previously-claimed interface

The lasterror:
0 on success
kErrorNotFound if the interface was not claimed
kErrorNoDevice if the device has been disconnected
another error code on other failure

202.5.36 Reset

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Perform a USB port reset to reinitialize a device.
Notes: The system will attempt to restore the previous configuration and alternate settings after the reset has completed.

If the reset fails, the descriptors change, or the previous state cannot be restored, the device will appear to be disconnected and reconnected. This means that the device handle is no longer valid (you should close it) and rediscover the device. An error code of kErrorNotFound indicates when this is the case.

This is a blocking function which usually incurs a noticeable delay.

Lasterror is set:
0 on success
kErrorNotFound if re-enumeration is required, or if the device has been disconnected
another error code on other failure

202.5.37 SetConfiguration(configuration as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the active configuration for a device.
Notes: The operating system may or may not have already set an active configuration on the device. It is up to your application to ensure the correct configuration is selected before you attempt to claim interfaces and perform other operations.

If you call this function on a device already configured with the selected configuration, then this function will act as a lightweight device reset: it will issue a SET_CONFIGURATION request using the current configuration, causing most USB-related device state to be reset (altsetting reset to zero, endpoint halts cleared, toggles reset).

You cannot change/reset configuration if your application has claimed interfaces - you should free them with libusb_release_interface() first. You cannot change/reset configuration if other applications or drivers have claimed interfaces.

A configuration value of -1 will put the device in unconfigured state. The USB specifications state that a configuration value of 0 does this, however buggy devices exist which actually have a configuration 0.

You should always use this function rather than formulating your own SET_CONFIGURATION control request. This is because the underlying operating system needs to know when such changes happen.

This is a blocking function.

Parameters:
configuration: the bConfigurationValue of the configuration you wish to activate, or -1 if you wish to put the device in unconfigured state

The lasterror is set to:
0 on success
kErrorNotFound if the requested configuration does not exist
kErrorBusy if interfaces are currently claimed
kErrorNoDevice if the device has been disconnected
another error code on other failure

202.5.38 SetDebug(level as integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set message verbosity.
Notes: Level 0: no messages ever printed by the library (default)
Level 1: error messages are printed to stderr
Level 2: warning and error messages are printed to stderr
Level 3: informational messages are printed to stdout, warning and error messages are printed to stderr
The default level is 0, which means no messages are ever printed. If you choose to increase the message verbosity level, ensure that your application does not close the stdout/stderr file descriptors.

You are advised to set level 3. libusb is conservative with its message logging and most of the time, will only log messages that explain error conditions and other oddities. This will help you debug your software.

If the LIBUSB_DEBUG environment variable was set when libusb was initialized, this function does nothing: the message verbosity is fixed to the value in the environment variable.

If libusb was compiled without any message logging, this function does nothing: you'll never get any messages.
If libusb was compiled with verbose debug message logging, this function does nothing: you'll always get messages from all levels.

202.5.39 SetInterfaceAltSetting(interfaceNumber as Integer, alternateSetting as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Activate an alternate setting for an interface.
Notes: The interface must have been previously claimed with ClaimInterface().

You should always use this function rather than formulating your own SET_INTERFACE control request. This is because the underlying operating system needs to know when such changes happen.

This is a blocking function.

Parameters:

interfaceNumber	the InterfaceNumber of the previously-claimed interface
alternateSetting	the AlternateSetting of the alternate setting to activate

The lasterror:
0 on success
kErrorNotFound if the interface was not claimed, or the requested alternate setting does not exist
kErrorNoDevice if the device has been disconnected
another error code on other failure

202.5.40 Shutdown

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Deinitialize libusb.
Notes: Should be called after closing all open devices and before your application terminates.

202.5.41 Properties

202.5.42 BusNumber as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the number of the bus that a device is connected to.
Notes: (Read only property)

202.5.43 DeviceAddress as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the address of the device on the bus it is connected to.
Notes: (Read only property)

202.5.44 DeviceHandle as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The handle to the device.
Notes: (Read only property)

202.5.45 DeviceSpeed as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the negotiated connection speed for a device.
Notes: a speed value, where kSpeedUnknown means that the OS doesn't know or doesn't support returning the negotiated speed.
(Read only property)

202.5.46 Handle as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The handle to the open device.
Notes: (Read only property)

202.5.47 IsOpen as Boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether device is open.
Notes: True if you called OpenDevice successful.
(Read only property)

202.5.48 Lasterror as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

202.5.49 Constants

Capabilities

Constant	Value	Description
kCapabilitiesHasCapabilities	0	The HasCapability() API is available.
kCapabilitiesHasHIDAccess	256	The library can access HID devices without requiring user interventi Note that before being able to actually access an HID device, you have to call additional libusb functions such as DetachKernelDriver.
kCapabilitiesHasHotplug	1	Hotplug support is available on this platform.
kCapabilitiesSupportsDetachKernelDriver	257	The library supports detaching of the default USB driver, using De nelDriver, if one is set by the OS kernel.

Descriptor Types

Constant	Value	Description
kDescriptorTypeBOS	6	BOS descriptor
kDescriptorTypeConfig	2	Configuration descriptor.
kDescriptorTypeDevice	1	Device descriptor.
kDescriptorTypeDeviceCapabilities	16	Device Capability descriptor
kDescriptorTypeEndpoint	5	Endpoint descriptor.
kDescriptorTypeHID	&h21	HID descriptor.
kDescriptorTypeHub	&h29	Hub descriptor.
kDescriptorTypeInterface	4	Interface descriptor.
kDescriptorTypePhysical	&h23	Physical descriptor.
kDescriptorTypeReport	&h22	HID report descriptor.
kDescriptorTypeString	3	String descriptor.
kDescriptorTypeSuperSpeedEndpointCompanion	&h30	SuperSpeed Endpoint Companion descriptor
kDescriptorTypeSuperSpeedHub	&h2A	SuperSpeed Hub descriptor

Errors

Constant	Value	Description
kErrorAccess	-3	Access
kErrorBusy	-6	Busy
kErrorInterrupted	-10	Interrupted
kErrorInvalidParam	-2	Invalid parameter
kErrorIO	-1	I/O Error
kErrorNoDevice	-4	No device.
kErrorNoMemory	-11	Out of Memory
kErrorNotFound	-5	Not found
kErrorNotSupported	-12	Function not supported
kErrorOther	-99	Other errors
kErrorOverflow	-8	Overflow
kErrorPipe	-9	Pipe
kErrorTimeout	-7	Timeout

Log Levels

Constant	Value	Description
kLogLevelDebug	4	debug and informational messages are printed to stdout, warnings and errors to stderr
kLogLevelError	1	error messages are printed to stderr
kLogLevelInfo	3	informational messages are printed to stdout, warning and error messages are printed to stderr
kLogLevelNone	0	no messages ever printed by the library (default)
kLogLevelWarning	2	warning and error messages are printed to stderr

Speed Levels

Constant	Value	Description
kSpeedFull	2	The device is operating at full speed (12MBit/s).
kSpeedHigh	3	The device is operating at high speed (480MBit/s).
kSpeedLow	1	The device is operating at low speed (1.5MBit/s).
kSpeedSuper	4	The device is operating at super speed (5000MBit/s).
kSpeedUnknown	0	The OS doesn't report or know the device speed.

202.6 class LibUSBEndpointDescriptorMBS

202.6.1 class LibUSBEndpointDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class representing the standard USB endpoint descriptor.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

202.6.2 Methods

202.6.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

202.6.4 Properties

202.6.5 AttributesBitmap as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Attributes which apply to the endpoint when it is configured using the bConfigurationValue.
Notes: (Read only property)

202.6.6 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Descriptor type.
Notes: (Read only property)

202.6.7 EndpointAddress as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The address of the endpoint described by this descriptor.
Notes: (Read only property)

202.6.8 EndpointDirection as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The transfer direction.
Notes: (Read only property)

202.6.9 extra as MemoryBlock

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Extra descriptors.
Notes: (Read only property)

202.6.10 extraLength as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Length of the extra descriptors, in bytes.
Notes: (Read only property)

202.6.11 Interval as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Interval for polling endpoint for data transfers.
Notes: (Read only property)

202.6.12 Length as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Size of this descriptor (in bytes)
Notes: (Read only property)

202.6.13 MaxPacketSize as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maximum packet size this endpoint is capable of sending/receiving.
Notes: (Read only property)

202.6.14 Refresh as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: For audio devices only: the rate at which synchronization feedback is provided.
Notes: (Read only property)

202.6.15 SynchAddress as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: For audio devices only: the address if the synch endpoint.
Notes: (Read only property)

202.6.16 TransferType as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The transfer type.
Notes: (Read only property)

202.6.17 Constants

Endpoint Directions

Constant	Value	Description
kEndpointDirectionIn	0	In: device-to-host
kEndpointDirectionOut	128	Out: host-to-device.

Transfer Types

Constant	Value	Description
kTransferTypeBulk	2	Bulk endpoint.
kTransferTypeBulkStream	4	Bulk stream transfer.
kTransferTypeControl	0	Control endpoint.
kTransferTypeInterrupt	3	Interrupt endpoint.
kTransferTypeISOChronous	1	Isochronous endpoint.

202.7 class LibUSBInterfaceDescriptorMBS

202.7.1 class LibUSBInterfaceDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class representing the standard USB interface descriptor.
Example:

```
// list the interfaces and endpoints of a USB device with libusb
// The libusb library must be loaded and initialized, see LibUSBDeviceMBS.
Var device As LibUSBDeviceMBS = LibUSBDeviceMBS.OpenDevice(&h046D, &hC52B) // your vendor and product ID
If device = Nil Then Return

Var config As LibUSBConfigDescriptorMBS = device.GetActiveConfigDescriptor
For i As Integer = 0 To config.NumInterfaces - 1
Var iface As LibUSBInterfaceMBS = config.GetInterface(i)
For j As Integer = 0 To iface.Count - 1
Var d As LibUSBInterfaceDescriptorMBS = iface.InterfaceDescriptor(j)
System.DebugLog "Interface " + d.InterfaceNumber.ToString + " alt " + d.AlternateSetting.ToString + ": class " + d.InterfaceClass.ToString + ", " + d.NumEndpoints.ToString + " endpoints"
Next
Next
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

202.7.2 Methods

202.7.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

202.7.4 EndpointDescriptor(index as Integer) as LibUSBEndpointDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries endpoint descriptors by index.

202.7.5 Properties

202.7.6 AlternateSetting as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Value used to select this alternate setting for this interface.
Notes: (Read only property)

202.7.7 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Descriptor type.
Notes: (Read only property)

202.7.8 Endpoints as Variant

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Array of endpoint descriptors.
Notes: (Read only property)

202.7.9 extra as MemoryBlock

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Extra descriptors.
Notes: (Read only property)

202.7.10 ExtraLength as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Length of the extra descriptors, in bytes.
Notes: (Read only property)

202.7.11 IndexInterface as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Index of string descriptor describing this interface.
Notes: (Read only property)

202.7.12 InterfaceClass as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: USB-IF class code for this interface.
Notes: (Read only property)

202.7.13 InterfaceNumber as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of this interface.
Notes: (Read only property)

202.7.14 InterfaceProtocol as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: USB-IF protocol code for this interface, qualified by the InterfaceClass and InterfaceSubClass values.
Notes: (Read only property)

202.7.15 InterfaceSubClass as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: USB-IF subclass code for this interface, qualified by the InterfaceClass value.
Notes: (Read only property)

202.7.16 Length as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Size of this descriptor (in bytes)
Notes: (Read only property)

202.7.17 NumEndpoints as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of endpoints used by this interface (excluding the control endpoint).
Notes: (Read only property)

202.8 class LibUSBInterfaceMBS

202.8.1 class LibUSBInterfaceMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A collection of alternate settings for a particular USB interface.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

202.8.2 Methods

202.8.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

202.8.4 InterfaceDescriptor(index as Integer) as LibUSBInterfaceDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries interface descriptor by index.

202.8.5 Properties

202.8.6 Count as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of alternate settings that belong to this interface.
Notes: (Read only property)

202.8.7 InterfaceDescriptors as Variant

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Array of interface descriptors.
Notes: (Read only property)

202.9 class LibUSBISOPacketDescriptorMBS

202.9.1 class LibUSBISOPacketDescriptorMBS

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Isochronous packet descriptor.
Notes: See LibUSBTransferMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- News from the MBS Xojo Plugins Version 22.2

202.9.2 Methods

202.9.3 Constructor

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

202.9.4 Properties

202.9.5 ActualLength as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Amount of data that was actually transferred.
Notes: (Read and Write property)

202.9.6 Length as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Length of data to request in this packet.
Notes: (Read and Write property)

202.9.7 Status as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Status code for this packet.
Notes: See constants in LibUSBTransferMBS class.
(Read and Write property)

202.10 class LibUSBTransferMBS

202.10.1 class LibUSBTransferMBS

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for asynchronous USB transfer.
Notes: The user populates this class and then submits it in order to request a transfer. After the transfer has completed, the library populates the transfer with the results and passes it back to the user.

Please check LibUSB documentation and examples for asynchronous transfers.

- MBS Xojo Plugins, version 24.4pr1
- News from the MBS Xojo Plugins Version 22.2

202.10.2 Methods

202.10.3 Cancel as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Cancels a running transfer.
Notes: Returns error code.

202.10.4 Constructor(ISOPackets as Integer = 0)

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Allocates usb transfer object with given number of packets.

202.10.5 ControlTransferGetData as Ptr

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries pointer ot the setup part of the control transfer structure within the buffer.
Notes: Convenience function since there is a 8 byte control block in front of the data.

Returns nil if not possible.

202.10.6 ControlTransferGetSetup as Ptr

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries pointer ot the setup part of the control transfer structure within the buffer.
Notes: Convenience function since there is a 8 byte control block in front of the data.
Returns nil if not possible.

202.10.7 FillBulkStreamTransfer(Device as LibUSBDeviceMBS, EndPoint as Integer, StreamId as Integer, Buffer as MemoryBlock, Timeout as Integer)

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Helper function to populate the required fields for a bulk transfer using bulk streams.
Notes: Device: the device that will handle the transfer
endpoint: address of the endpoint where this transfer will be sent
StreamId: id for this transfer
buffer: data buffer
timeout: timeout for the transfer in milliseconds

202.10.8 FillBulkTransfer(Device as LibUSBDeviceMBS, EndPoint as Integer, Buffer as MemoryBlock, Timeout as Integer)

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Helper function to populate the required fields for a bulk transfer.
Notes: Device: the device that will handle the transfer
endpoint: address of the endpoint where this transfer will be sent
buffer: data buffer
timeout: timeout for the transfer in milliseconds

202.10.9 FillControlSetup(Buffer as MemoryBlock, RequestType as Integer, Request as Integer, Value as Integer, Index as Integer, Length as Integer)

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Helper function to populate the setup packet (first 8 bytes of the data buffer) for a control transfer.
Notes: The Index, Value and Length values should be given in host-endian byte order.

202.10.10 FillControlTransfer(Device as LibUSBDeviceMBS, Buffer as MemoryBlock, Timeout as Integer)

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Helper function to populate the required transfer fields for a control transfer.
Notes: If you pass a transfer buffer to this function, the first 8 bytes will be interpreted as a control setup packet.

Therefore the recommended approach is:

- Allocate a suitably sized MemoryBlock (including space for control setup)
- Call FillControlSetup()
- If this is a host-to-device transfer with a data stage, put the data in place after the setup packet
- Call this function
- Call Submit()

Device: the device that will handle the transfer
buffer: The data buffer. If provided, this function will interpret the first 8 bytes as a setup packet and infer the transfer length from that.
timeout: timeout for the transfer in milliseconds

202.10.11 FillInterruptTransfer(Device as LibUSBDeviceMBS, EndPoint as Integer, Buffer as MemoryBlock, Timeout as Integer)

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Helper function to populate the required fields for an interrupt transfer.
Notes: Device: the device that will handle the transfer
endpoint: address of the endpoint where this transfer will be sent
buffer: data buffer
timeout: timeout for the transfer in milliseconds

202.10.12 FillISOTransfer(Device as LibUSBDeviceMBS, EndPoint as Integer, Buffer as MemoryBlock, NumISOPackets as Integer, Timeout as Integer)

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Helper function to populate the required \ref libusb_transfer fields for an isochronous transfer.
Notes: Device: the device that will handle the transfer
endpoint: address of the endpoint where this transfer will be sent
buffer: data buffer
NumISOPackets: the number of isochronous packets
timeout: timeout for the transfer in milliseconds

202.10.13 ISOPacketBuffer(Index as Integer) as Ptr

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries buffer pointer for the packet.
Notes: This points within the buffer MemoryBlock.

202.10.14 ISOPacketDescriptor(index as Integer) as LibUSBISOPacketDescriptorMBS

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Isochronous packet descriptors, for isochronous transfers only.
Notes: Queries packet with given index. Zero based.

202.10.15 SetISOPacketLengths(Length as UInt32)

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets length field for all packets.
Example:

```
// 3 buffers
Var t As New LibUSBTransferMBS(3)
t.buffer = New MemoryBlock(100)

// set all length to 4
t.SetISOPacketLengths 4

Var p0 As LibUSBISOPacketDescriptorMBS = t.ISOPacketDescriptor(0)
Var p1 As LibUSBISOPacketDescriptorMBS = t.ISOPacketDescriptor(1)
Var p2 As LibUSBISOPacketDescriptorMBS = t.ISOPacketDescriptor(2)

Break // check
```

202.10.16 Submit as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Submits transfer asynchronously.
Notes: Returns error code.

Later Completed event is called.

202.10.17 Properties

202.10.18 ActualLength as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Actual length of data that was transferred.
Notes: Read-only, and only for use within transfer callback function.
Not valid for isochronous endpoint transfers.
(Read only property)

202.10.19 Buffer as MemoryBlock

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The memory buffer to use.
Notes: Please assign MemoryBlock of right size as this sets length property.
(Read and Write property)

202.10.20 Device as LibUSBDeviceMBS

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The device that this transfer will be submitted to.
Notes: (Read and Write property)

202.10.21 Endpoint as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Address of the endpoint where this transfer will be sent.
Notes: (Read and Write property)

202.10.22 Flags as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A bitwise OR combination of flags.
Notes: (Read and Write property)

202.10.23 ISOPackets as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of isochronous packets.
Notes: Only used for I/O with isochronous endpoints.
(Read only property)

202.10.24 Length as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Length of buffer.
Notes: Set to length of MemoryBlock assigned to buffer property.
(Read only property)

202.10.25 Status as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The status of the transfer.
Notes: Read-only, and only for use within transfer callback function.

If this is an isochronous transfer, this field may read kTransferStatusCompleted even if there were errors in the frames. Use the status in LibUSBISOPacketDescriptorMBS in each packet to determine if errors occurred.
(Read only property)

202.10.26 Tag as Variant

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The tag for the transfer.
Notes: A value you can use as you like, e.g. to store reference to your window.
(Read and Write property)

202.10.27 Timeout as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Timeout for this transfer in millseconds.
Notes: A value of 0 indicates no timeout.
(Read and Write property)

202.10.28 Type as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Type of the endpoint.
Notes: See kTransferType* constants.
(Read and Write property)

202.10.29 Events

202.10.30 Completed

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The completion event.
Notes: Called when transfer is done (successful or failed).
Dispatched on main thread.

Not implemented for 32-bit Linux on Intel.

202.10.31 Constants

Flags

Constant	Value	Description
kTransferFlagsAddZeroPacket	4	Terminate transfers that are a multiple of the endpoint's MaxPacketSize with an extra zero length packet. This is useful when a device protocol mandates that each logical request is terminated by an incomplete packet (i.e. the logical requests are not separated by other means). This flag only affects host-to-device transfers to bulk and interrupt endpoints. In other situations, it is ignored. This flag only affects transfers with a length that is a multiple of the endpoint's wMaxPacketSize. On transfers of other lengths, this flag has no effect. Therefore, if you are working with a device that needs a ZLP whenever the end of the logical request falls on a packet boundary, then it is sensible to set this flag on every transfer (you do not have to worry about only setting it on transfers that end on the boundary). This flag is currently only supported on Linux. On other systems, libusb_submit_transfer() will return LIBUSB_ERROR_NOT_SUPPORTED for every transfer where this flag is set. Available since libusb-1.0.9.
kTransferFlagsShortNotOK	1	Report short frames as errors.

Status Codes

Constant	Value	Description
kTransferStatusCancelled	3	Transfer was cancelled.
kTransferStatusCompleted	0	Transfer completed without error. Note that this does not indicate that the entire amount of requested data was transferred.
kTransferStatusError	1	Transfer failed
kTransferStatusNoDevice	5	Device was disconnected
kTransferStatusOverflow	6	Device sent more data than requested
kTransferStatusStall	4	For bulk/interrupt endpoints: halt condition detected (endpoint stalled). For control endpoints: control request not supported.
kTransferStatusTimeout	2	Transfer timed out.

Transfer Types

Constant	Value	Description
kTransferTypeBulk	2	Bulk endpoint
kTransferTypeBulkStream	4	Stream endpoint.
kTransferTypeControl	0	Control endpoint
kTransferTypeInterrupt	3	Interrupt endpoint
kTransferTypeISOChronous	1	Isochronous endpoint

202.11 class LibUSBVersionMBS

202.11.1 class LibUSBVersionMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Class representing the libusb version.
Example:

```
// show which libusb version the plugin uses
Var v As LibUSBVersionMBS = LibUSBDeviceMBS.LibVersion
MessageBox "libusb " + v.Major.ToString + "." + v.Minor.ToString + "." + v.Micro.ToString + "." +
v.Nano.ToString + v.RC + EndOfLine + v.Describe
```

202.11.2 Methods

202.11.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: Queries library version if possible.

202.11.4 Properties

202.11.5 Describe as String

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Output of git describe –tags at library build time.
Notes: (Read only property)

202.11.6 Major as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Library major version.
Notes: Currently 1.

(Read only property)

202.11.7 Micro as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Library micro version.
Notes: (Read only property)

202.11.8 Minor as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Library minor version.
Notes: (Read only property)

202.11.9 Nano as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Library nano version.
Notes: (Read only property)

202.11.10 RC as String

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Library release candidate suffix string, e.g. ”-rc4”.
Notes: (Read only property)

202.12 class LinuxHIDInterfaceMBS

202.12.1 class LinuxHIDInterfaceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The class for Linux to connect to USB HID devices.
Notes: For newer development, please use our HIDAPIMBS class.

The constructor does the initialisation of the HID Library and the destructor does the cleanup. This works with several instances, too.

The plugin tries to load one of libhid.so, libhid.so.0 or libhid.so.0.0.0 and one of libusb.so or libusb-0.1.so.4 from your /usr/lib folder (or where else the path environment variable points to). If the libraries are missing, this class will not work properly.

202.12.2 Methods

202.12.3 Available as boolean

MBS USB Plugin, Plugin Version: 10.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether libhid is available.
Notes: Not all Linux distribution have libusb and libhid installed by default.

202.12.4 Close as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Closes the device.
Notes: Returns error code. See kError* constants.

202.12.5 DumpTreeToStderr as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Dumps the device tree to stderr.
Example:

```
Var h as LinuxHIDInterfaceMBS
// open device
call h.DumpTreeToStderr
```

Notes: Returns error code. See kError* constants.

202.12.6 DumpTreeToStdout as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Dumps the device tree to stdout.
Example:

```
Var h as LinuxHIDInterfaceMBS
// open device
call h.DumpTreeToStdout
```

Notes: Returns error code. See kError* constants.

202.12.7 ForceOpen(theInterface as Integer, Vendor as Integer, Product as Integer, retries as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Opens the USB device with the given interface index, vendor and product codes.
Example:

```
Var h as new LinuxHIDInterfaceMBS

const vendor = &h7C0
const product = &h1500
const retries = 3

Var e as Integer = h.ForceOpen(0, vendor, product, retries)
```

Notes: Vendor or Product code can be kMatchAny (0) to match all devices.
You can use the MatchDevice event to learn which devices are there and return true there to select one.

Returns error code. See kError* constants.

202.12.8 GetInputReport(path() as Integer, data as memoryblock, offset as Integer, size as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Reads an input report.
Notes: Path: The path to the endpoint.
Data: the memoryblock to store the data.
Offset: The offset where to start inside the memoryblock.
Size: the length of the data int he memoryblock.

Returns error code. See kError* constants.

202.12.9 InterruptRead(EndPoint as Integer, mem as memoryblock, size as Integer, timeout as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Reads data from an endpoint with timeout.
Notes: EndPoint: The index of the endpoint.
mem: the memoryblock where to store the data.
size: the length of the data block to read.
timeout: the timeout in milliseconds.

Returns error code. See kError* constants.

202.12.10 InterruptWrite(EndPoint as Integer, mem as memoryblock, size as Integer, timeout as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: Writes data from an endpoint with timeout.
Notes: EndPoint: The index of the endpoint.
mem: the memoryblock where to store the data.
size: the length of the data block to read.
timeout: the timeout in milliseconds.

Returns error code. See kError* constants.

202.12.11 IsInitialised as boolean

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether the HID library was initialised in the constructor.
Notes: Should always be true on Linux.

202.12.12 IsOpen as boolean

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether the device is opened.
Notes: True if open, false if closed.

202.12.13 Open(theInterface as Integer, Vendor as Integer, Product as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Opens the USB device with the given interface index, vendor and product codes.
Example:

```
Var h as new LinuxHIDInterfaceMBS

const vendor = &h7C0
const product = &h1500

Var e as Integer = h.Open(0, vendor, product)
```

Notes: Vendor or Product code can be kMatchAny (0) to match all devices.
You can use the MatchDevice event to learn which devices are there and return true there to select one.
Returns error code. See kError* constants.

202.12.14 Reset

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Resets the device.
Notes: Returns error code. See kError* constants.

202.12.15 SetDebugLevel(level as Integer)

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Sets the debug level.
Example:

```
Var h as new LinuxHIDInterfaceMBS
h.SetDebugLevel(h.kDebugWarnings)
```

202.12.16 SetDebugOutputToStderr

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Tells HID library to write debug output to stderr.
Example:

```
Var h as new LinuxHIDInterfaceMBS
h.SetDebugOutputToStderr
```

202.12.17 SetDebugOutputToStdout

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Tells HID library to write debug output to stdout.
Example:

```
Var h as new LinuxHIDInterfaceMBS
h.SetDebugOutputToStdout
```

202.12.18 SetOutputReport(path() as Integer, data as memoryblock, offset as Integer, size as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Writes data to the output.
Example:

```
Var h as LinuxHIDInterfaceMBS // your interface
Var n as Integer // some value

const IOW_PIPE_IO_PINS=0

Var m as MemoryBlock = NewMemoryBlock(4) // a device with 4 byte packets
```

```
m.Byte(3)=n
m.Byte(0)=IOW_PIPE_IO_PINS

Var path(-1) as Integer

path.Add &h00010000
path.Add 0

Var e as Integer = h.SetOutputReport(path, m, 0, m.size)
```

Notes: Path: The path to the endpoint.
Data: the data to write.
Offset: The offset where to start inside the memoryblock.
Size: the length of the data int he memoryblock.

Returns error code. See kError* constants.
See also:

- 202.12.19 SetOutputReport(path() as Integer, data as string) as Integer 23752

202.12.19 SetOutputReport(path() as Integer, data as string) as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Writes data to the output.
Notes: Path: The path to the endpoint.
Data: the data to write.

Returns error code. See kError* constants.
See also:

- 202.12.18 SetOutputReport(path() as Integer, data as memoryblock, offset as Integer, size as Integer) as Integer 23751

202.12.20 WriteIdentificationToStderr as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Writes identification to stderr.
Notes: Returns error code. See kError* constants.

202.12.21 WriteIdentificationToStdout as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Writes identification to stdout.
Notes: Returns error code. See kError* constants.

202.12.22 Properties

202.12.23 Handle as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The internal handle to the device connection.
Notes: (Read and Write property)

202.12.24 Events

202.12.25 MatchDevice(usbdev as LinuxUSBDeviceHandleMBS) as boolean

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The event called to decide whether you want to connect to this device.
Example:

```
Function MatchDevice(usbdev as LinuxUSBDeviceHandleMBS) As boolean
MessageBox usbdev.Device.Descriptor.SerialNumber
End Function
```

Notes: If several devices match the given vendor/product codes in Open/ForceOpen, you can decide here which one you accept.
Return true to accept a device.

202.12.26 Constants

Constants

Constant	Value	Description
kDebugAll	31	One of the debug level constants. same as kDebugWarnings + kDebugTraces + kDebugNotices + kDebugErrors + kDebugAsserts
kDebugAsserts	16	One of the debug level constants.
kDebugErrors	1	One of the debug level constants.
kDebugNone	0	One of the debug level constants.
kDebugNotices	4	One of the debug level constants.
kDebugNoTraces	23	One of the debug level constants. same as kDebugWarnings + kDebugNotices + kDebugErrors + kDebugAsserts
kDebugTraces	8	One of the debug level constants.
kDebugWarnings	2	One of the debug level constants.
kErrorAlreadyInitialised	3	One of the error codes. Device alreay initialised.
kErrorDeviceAlreadyOpened	9	One of the error codes. Device already opened.
kErrorDeviceNotFound	7	One of the error codes. Device is not found.
kErrorDeviceNotOpened	8	One of the error codes. Device is not opened.
kErrorFailAlloc	17	One of the error codes. Failed to allocate.
kErrorFailClaimIFace	11	One of the error codes. Failed to claim the interface.
kErrorFailCloseDevice	10	One of the error codes. Failed to close device.
kErrorFailDetachDriver	12	One of the error codes. Failed to detach driver.
kErrorFailFindBusses	4	One of the error codes. Failed to find buses.
kErrorFailFindDevices	5	One of the error codes. Failed to find devices.
kErrorFailGetReport	20	One of the error codes. Get Report failed.
kErrorFailIntRead	21	One of the error codes.
kErrorFailOpenDevice	6	One of the error codes. Failed to open device.
kErrorFailSetReport	19	One of the error codes. Set Report failed.
kErrorHIDDescShort	14	One of the error codes.
kErrorInvalidParameter	1	One of the error codes. Invalid Parameter.
kErrorNotFound	22	One of the error codes. Device not found.
kErrorNotHIDDevice	13	One of the error codes. Not a HID Device.
kErrorNotInitialised	2	One of the error codes. Not initialised.
kErrorOutOfSpace	18	One of the error codes. Out of space.
kErrorReportDescLong	16	One of the error codes.
kErrorReportDescShort	15	One of the error codes.
kErrorSuccess	0	One of the error codes. Success. No error.
kMatchAny	0	The vendor/product ID to match any device.

202.13 class LinuxUSBBusMBS

202.13.1 class LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The class for an USB Bus on Linux.
Example:

```
// list all USB buses and devices on Linux
Call LinuxUSBBusMBS.RescanBusses
Call LinuxUSBBusMBS.RescanDevices

Var lines() As String
Var bus As LinuxUSBBusMBS = LinuxUSBBusMBS.Buses
While bus <>Nil
lines.Add "Bus " + bus.DirName
Var device As LinuxUSBDeviceMBS = bus.Devices
While device <>Nil
lines.Add " Device " + device.Filename
device = device.NextDevice
Wend
bus = bus.NextBus
Wend
MessageBox String.FromArray(lines, EndOfLine)
```

Notes: This class only works, if the plugin could load one of libusb.so or libusb-0.1.so.4 from your /usr/lib folder (or where else the path environment variable points to). If the libraries are missing, this class will not work properly.
Blog Entries

202.13.2 Methods

202.13.3 Buses as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 11.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Returns the buses list.
Notes: This function allows you to query the current buses and devices.
No device is opened and you just read through libusb data structures.

202.13.4 RescanBusses as Integer

MBS USB Plugin, Plugin Version: 14.2, Platform: Linux, Targets: Desktop, Console & Web.

Function: Finds all USB busses on system.
Notes: RescanBusses will find all of the busses on the system.
Returns the number of changes since previous call to this function (total of new busses and busses removed).

The plugin performs RescanBusses and RescanDevices automatically on application launch.

202.13.5 RescanDevices as Integer

MBS USB Plugin, Plugin Version: 14.2, Platform: Linux, Targets: Desktop, Console & Web.

Function: Find all devices on all USB devices.
Notes: RescanDevices will find all of the devices on each bus.
This should be called after RescanBusses.
Returns the number of changes since the previous call to this function (total of new device and devices removed).

The plugin performs RescanBusses and RescanDevices automatically on application launch. So you can call RescanDevices at any time.

202.13.6 Properties

202.13.7 Devices as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The devices attached to this bus.
Notes: (Read and Write property)

202.13.8 DirName as String

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The dir name.
Notes: (Read and Write property)

202.13.9 Location as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The location value.
Notes: (Read and Write property)

202.13.10 NextBus as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The next bus.
Notes: (Read and Write property)

202.13.11 PrevBus as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The previous bus.
Notes: (Read and Write property)

202.13.12 RootDevice as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The root device on this device.
Notes: (Read and Write property)

202.14 class LinuxUSBDeviceDescriptionMBS

202.14.1 class LinuxUSBDeviceDescriptionMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: A class for an USB device description.
Notes: Some Linux installations require app to be run with sudo to allow reading USB device strings.
Blog Entries

- MBS Real Studio Plugins, version 12.1pr6

- MBS REALbasic Plugins, version 10.3pr4

202.14.2 Properties

202.14.3 cdDevice as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The device version.
Notes: Identifies the version of the device. This value is a binary-coded decimal number.
(Read and Write property)

202.14.4 cdUSB as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The USB version.
Notes: Identifies the version of the USB specification that this descriptor structure complies with. This value is a binary-coded decimal number.
(Read and Write property)

202.14.5 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The descriptor type.
Notes: Specifies the descriptor type. Must be set to USB_DEVICE_DESCRIPTOR_TYPE.
(Read and Write property)

202.14.6 DeviceClass as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The device class.
Notes: Specifies the class code of the device as assigned by the USB specification group.
See the kDeviceClass* constants.
(Read and Write property)

202.14.7 DeviceProtocol as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The device protocol.
Notes: Specifies the protocol code of the device as assigned by the USB specification group.
(Read and Write property)

202.14.8 DeviceSubClass as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The device sub class.
Notes: Specifies the subclass code of the device as assigned by the USB specification group.
(Read and Write property)

202.14.9 Manufacturer as String

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The manufacturer name string.
Notes: A string containing the name of the manufacturer of this device.
Some Linux installations require app to be run with sudo to allow reading USB device strings.
(Read and Write property)

202.14.10 MaxPacketSize0 as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The maximum packet size.
Notes: Specifies the maximum packet size, in bytes, for endpoint zero of the device. The value must be set to 8, 16, 32, or 64.

(Read and Write property)

202.14.11 NumConfigurations as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The number of configurations.
Notes: Specifies the total number of possible configurations for the device.
(Read and Write property)

202.14.12 Product as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The product ID for this device.
Notes: Specifies the product identifier. This value is assigned by the manufacturer and is device-specific.
Only available when the device has been opened.
(Read and Write property)

202.14.13 ProductName as String

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The product name for this device.
Notes: A string that contains a description of the device.
Some Linux installations require app to be run with sudo to allow reading USB device strings.
(Read and Write property)

202.14.14 SerialNumber as String

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The serial number string for this device.
Notes: A string that contains a manufacturer-determined serial number for the device.
Can be empty if the library does not know it.
Some Linux installations require app to be run with sudo to allow reading USB device strings.
(Read and Write property)

202.14.15 Vendor as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The vendor code for this device.
Notes: Specifies the vendor identifier for the device as assigned by the USB specification committee.
Only available when the device has been opened.
(Read and Write property)

202.14.16 Constants

Constants

Constant	Value	Description
kDeviceClassAudio	1	One of the device class constants. Audio device.
kDeviceClassCOMM	2	One of the device class constants. COMM device.
kDeviceClassDATA	10	One of the device class constants. DATA device.
kDeviceClassHID	3	One of the device class constants. HID device.
kDeviceClassHUB	9	One of the device class constants. The device is an USB HUB.
kDeviceClassMassStorage	8	One of the device class constants. A mass storage device.
kDeviceClassPerInterface	0	One of the device class constants.
kDeviceClassPrinter	7	One of the device class constants. Printer device.
kDeviceClassVendorSpecific	255	One of the device class constants. Some vendor specific device.

202.15 class LinuxUSBDeviceHandleMBS

202.15.1 class LinuxUSBDeviceHandleMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The class for a device handle.
Blog Entries

- MBS Plugins 10.3 Release Notes

202.15.2 Properties

202.15.3 AltSetting as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Some alt setting value.
Notes: (Read and Write property)

202.15.4 Bus as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The bus for this device handle.
Notes: (Read and Write property)

202.15.5 Config as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: A config value.
Notes: (Read and Write property)

202.15.6 Device as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The device.
Notes: (Read and Write property)

202.15.7 InterfaceIndex as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The interface index.
Notes: (Read and Write property)

202.16 class LinuxUSBDeviceMBS

202.16.1 class LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The class for an USB device information on Linux.
Blog Entries

202.16.2 Methods

202.16.3 Children(index as Integer) as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Returns the child device with the given index.
Notes: Index is zero based and from 0 to ChildrenCount-1.

202.16.4 Properties

202.16.5 Bus as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The bus this device is attached to.
Notes: (Read and Write property)

202.16.6 ChildrenCount as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The number of child devices.
Notes: (Read and Write property)

202.16.7 Descriptor as LinuxUSBDeviceDescriptionMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The descriptior for this device.
Notes: (Read and Write property)

202.16.8 Filename as String

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The filename for this device.
Notes: (Read and Write property)

202.16.9 NextDevice as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The next device on the same level.
Notes: (Read and Write property)

202.16.10 PrevDevice as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The previous device on the same level.
Notes: (Read and Write property)

202.17 class MacHIDMBS

202.17.1 class MacHIDMBS

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class to work with HID devices on Mac OS X.
Notes: For newer development, please use our HIDAPIMBS class.

202.17.2 Methods

202.17.3 Close

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Closes the active connection.

202.17.4 Connect

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a connection to the current device.
Example:

```
Function OpenUSBDevice() As boolean
Var i as Integer
Var h as MacHIDMBS

h=FindDevice // see FindFirst example

if h=nil then
MessageBox "No XYZ device found."
Return false
end if

h.Connect
```

```
if h.Lasterror<>0 then
MessageBox "Failed to connect to USB Device."
Return false
end if

h.InstallCallback

Return true

End Function
```

Notes: Lasterror is set.

Lasterror values for this function:

-1	Not supported (Windows and Linux).
0	Everything okay.
1	Failed to get IOKit Plugin Interface for this IO object.
2	Failed to query interface
3	Failed to open interface
4	Failed to create async port
5	Failed to create async event source
6	no longer used
7	Failed to start queue

202.17.5 Disconnect

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Disconnets current USB device.
Notes: Lasterror is set.

202.17.6 FindFirstDevice as boolean

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first device and loads the properties.
Example:

```
Function FindDevice() As MyMacHIDMBS
```

```
Var h as MyMacHIDMBS
Var p as string

h=new MyMacHIDMBS // your own subclass of MacHIDMBS so you can get events

if h.FindFirstDevice then

p=h.Product
if p="MyProduct" then
Return h
end if

while h.FindNextDevice

p=h.Product
if p="MyProduct" then
Return h
end if

wend

end if
End Function
```

Notes: Returns true on success and false on failure.

202.17.7 FindNextDevice as boolean

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds next device.
Notes: Returns true on success and false on failure.

202.17.8 HIDProperties as Variant

MBS USB Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries HID properties dictionary.
Notes: Value is a CFDictionaryMBS with details about current device. Returned as Variant to reduce plugin dependencies.

The plugin queries this dictionary to return SerialNumber, ProductID, Manufacturer, Product, VendorID and VersionNumber.

202.17.9 InstallCallback

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Installs the callback used for the event handler.
Notes: Lasterror is set.
Please use after connect. For use with ReceivedData event.

202.17.10 Manufacturer as string

MBS USB Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The manufacturer name.
Notes: On any error an empty string is returned.

202.17.11 Product as string

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The product string of the selected device.
Notes: Lasterror is set.

202.17.12 ProductID as Integer

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The product ID of the selected device.
Notes: Lasterror is set.

202.17.13 ReadMessage(ReportID as Integer, reportType as Integer, length as Integer) as string

MBS USB Plugin, Plugin Version: 14.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Reads a message from usb device.
Notes: This is for synchronously operation without the event/callback.
You can specify report id, report type and the maximum length to read.
Also set timeout property.

Doesn't work if InstallCallback with event is used.

202.17.14 ReadMessageMemory(ReportID as Integer, reportType as Integer, length as Integer) as memoryblock

MBS USB Plugin, Plugin Version: 14.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Reads a message from usb device.
Notes: This is for synchronously operation without the event/callback.
You can specify report id, report type and the maximum length to read.
Also set timeout property.

Doesn't work if InstallCallback with event is used.

202.17.15 SendMessage(data as string)

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sends a message to the USB device.
Notes: A connection must be open.
Lasterror is set. Lasterror -536854447 is an USB timeout.
Uses kIOHIDReportTypeOutput.
See also:

- 202.17.16 SendMessage(ReportID as Integer, reportType as Integer, data as string) 23770

202.17.16 SendMessage(ReportID as Integer, reportType as Integer, data as string)

MBS USB Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sends a message to the USB device.
Notes: A connection must be open.
Lasterror is set. Lasterror -536854447 is an USB timeout.
ReportType can be kIOHIDReportTypeOutput or kIOHIDReportTypeFeature.
See also:

- 202.17.15 SendMessage(data as string) 23770

202.17.17 SendMessageMemory(data as memoryblock, offset as Integer, length as Integer)

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sends a message to the USB device.
Notes: A connection must be open.
Lasterror is set. Lasterror -536854447 is an USB timeout.
Internally ReportID=0 is used.

While writing a crossplatform application for one specific device we saw the following thing: The data buffer for the SendMessageMemory call must be 8 bytes long on Mac (with MacHIDMBS) and 61 bytes long for Windows (with WinHIDMBS) for our HID device. We have 1 byte for the ReportID and 60 data bytes where the first 8 are set like on the Mac. So if the calls fail on Windows, try with a higher length and check the WinHIDMBS.OutputReportByteLength property.
Uses kIOHIDReportTypeOutput.
See also:

- 202.17.18 SendMessageMemory(ReportID as Integer, reportType as Integer, data as memoryblock, offset as Integer, length as Integer) 23771

202.17.18 SendMessageMemory(ReportID as Integer, reportType as Integer, data as memoryblock, offset as Integer, length as Integer)

MBS USB Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sends a message to the USB device.
Notes: A connection must be open.
Lasterror is set. Lasterror -536854447 is an USB timeout.
ReportType can be kIOHIDReportTypeOutput or kIOHIDReportTypeFeature.
See also:

- 202.17.17 SendMessageMemory(data as memoryblock, offset as Integer, length as Integer) 23771

202.17.19 SerialNumber as string

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The serial number of the current selected device.
Notes: Lasterror is set.

202.17.20 VendorID as Integer

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The vendor ID of the selected device.
Notes: Lasterror is set.

202.17.21 VersionNumber as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The device specific version number.
Notes: Value can be anything.
On any error, 0 is returned.

202.17.22 Properties

202.17.23 IOHIDDeviceInterface122Handle as Integer

MBS USB Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal handle for the device interface object.
Notes: This is of type IOHIDDeviceInterface122** from IOKit.
(Read only property)

202.17.24 IOHIDObjectIteratorHandle as Integer

MBS USB Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The iterator used to find USB devices.
Notes: This is of type io_iterator_t from IOKit.
(Read only property)

202.17.25 IOObjectHandle as Integer

MBS USB Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference for current device.
Notes: This is of type io_object_t from IOKit.
(Read only property)

202.17.26 Lasterror as Integer

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Last error code.
Notes: 0 is success.
-1 means that the function is not available.
else Mac OS USB error codes.
See table below, e.g. error -536854447 (=&he0004051) is an USB timeout.

Constant	Number	LastError value	Description
kIOUSBUnknownPipeErr	&h61	&he0004061	Pipe ref not recognized
kIOUSBTooManyPipesErr	&h60	&he0004060	Too many pipes
kIOUSBNoAsyncPortErr	&h5f	&he000405f	no async port
kIOUSBNotEnoughPipesErr	&h5e	&he000405e	not enough pipes in interface
kIOUSBNotEnoughPowerErr	&h5d	&he000405d	not enough power for selected configuration
kIOUSBEndpointNotFound	&h57	&he0004057	Endpoint Not found
kIOUSBConfigNotFound	&h56	&he0004056	Configuration Not found
kIOUSBPortWasSuspended	&h52	&he0004052	The transaction was returned because the port was suspended
kIOUSBPipeStalled	&h4f	&he000404f	Pipe has stalled, error needs to be cleared
kIOUSBInterfaceNotFound	&h4e	&he000404e	Interface ref not recognized
kIOUSBLowLatencyBufferNotPreviouslyAllocated	&h4d	&he000404d	Attempted to use user land low latency isoc calls w/out calling PrepareBuffer (on the data buffer) first
kIOUSBLowLatencyFrameListNotPreviouslyAllocated	&h4c	&he000404c	Attempted to use user land low latency isoc calls w/out calling PrepareBuffer (on the frame list) first
kIOUSBHighSpeedSplitError	&h4b	&he000404b	Error to hub on high speed bus trying to do split transaction
kIOUSBSyncRequestOnWLThread	&h4a	&he000404a	A synchronous USB request was made on the workloop thread (from a callback?). Only async requests are permitted in that case
kIOUSBDeviceNotHighSpeed	&h49	&he0004049	Name is deprecated, see below
kIOUSBDeviceTransferredToCompanion	&h49	&he0004049	The device has been tranferred to another controller for enumeration
kIOUSBClearPipeStallNotRecursive	&h48	&he0004048	ClearPipeStall should not be called recursively
kIOUSBDevicePortWasNotSuspended	&h47	&he0004047	Port was not suspended
kIOUSBEndpointCountExceeded	&h46	&he0004046	The endpoint was not created because the controller cannot support more endpoints
kIOUSBDeviceCountExceeded	&h45	&he0004045	The device cannot be enumerated because the controller cannot support more devices
kIOUSBStreamsNotSupported	&h44	&he0004044	The request cannot be completed because the XHCI controller does not support streams
kIOUSBInvalidSSEndpoint	&h43	&he0004043	An endpoint found in a SuperSpeed device is invalid (usually because there is no Endpoint Companion Descriptor)
kIOUSBTooManyTransactionsPending	&h42	&he0004042	The transaction cannot be submitted because it would exceed the allowed number of pending transactions
kIOUSBTransactionReturned	&h50	&he0004050	The transaction has been returned to the caller
kIOUSBTransactionTimeout	&h51	&he0004051	Transaction timed out

(Read and Write property)

202.17.27 OnlyOneEventPerTick as Boolean

MBS USB Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether to limit ReceivedData event.
Notes: Some devices send a lot of measurement data.
This option allows to slow down and limit to 60 events per second.
So if device sends a thousand data records per second, we can ignore over 90% and just pick a few to display.
(Read and Write property)

202.17.28 TimeOut as Integer

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Timeout value to use for sending/reading USB data.
Notes: Please specify time in Milliseconds. Default is 500ms.
(Read and Write property)

202.17.29 Events

202.17.30 DeviceRemoved(result as Integer)

MBS USB Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The event called whenever the device is removed.
Notes: You need to call connect to install the callback which raises this event.

202.17.31 ReceivedData(data as string, size as Integer)

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Data was received and is available for processing.
Example:

```
Sub ReceivedData(data as string, size as Integer)
Var m as MemoryBlock
Var s as string
Var n,i as Integer

// Debug Output data received:

m=data

n=lenb(data)-1
for i=0 to n
s=s+str(m.Byte(i))+" "
next

s=s+"= "+data

System.DebugLog s

End Sub
```

Notes: Event is only called when InstallCallback was used and a connection is open.

202.17.32 Constants

Report Types

Constant	Value	Description
kIOHIDReportTypeFeature	2	Feature report.
kIOHIDReportTypeInput	0	Input report.
kIOHIDReportTypeOutput	1	Output report.

202.18 class MacUSBDeviceMBS

202.18.1 class MacUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for an USB Device on Mac OS X.
Example:

```
// iterate over all devices without recursion and count devices
Var devices(-1) as MacUSBDeviceMBS

devices.Add MacUSBDeviceMBS.root

Var count as Integer = -1 // do not count Mac itself

while devices.LastIndex>=0
Var dev as MacUSBDeviceMBS = devices.Pop

count = count + 1

for each child as MacUSBDeviceMBS in dev.children
devices.Add child
next
wend

MessageBox str(Count)+" USB devices."
```

Notes: Use the root method to get the device hierarchy.

For Windows you can take a look on the WindowsDeviceMBS and WinUSBDeviceMBS classes.
For cross platform development also check LibUSBDeviceMBS classes.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

202.18.2 Methods

202.18.3 children as MacUSBDeviceMBS()

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The array with all the USB device having the current device as parent.

202.18.4 Constructor

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes: This constructor makes sure you don't create useless MacUSBDeviceMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

202.18.5 root as MacUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The root of the device tree.
Example:

```
// display devices with serialnumbers.
Var devices(-1) as MacUSBDeviceMBS

devices.Add MacUSBDeviceMBS.root

Var lines(-1) as string

while devices.LastIndex>=0
Var dev as MacUSBDeviceMBS = devices.Pop

if len(dev.SerialNumber)>0 then
lines.Add dev.name+": "+dev.serialnumber
end if

for each child as MacUSBDeviceMBS in dev.children
devices.Add child
next
wend

MessageBox Join(lines,EndOfLine)
```

Notes: Root is the Mac itself. Below root you find the built in USB hubs.

202.18.6 Properties

202.18.7 Address as Integer

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The device address number.
Notes: (Read and Write property)

202.18.8 BusPowerAvailable as Integer

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The available bus power.
Notes: Value is in milli ampere.
(Read and Write property)

202.18.9 ClassName as String

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class name for this device.
Notes: Basicly this is what driver Apple uses.
(Read and Write property)

202.18.10 DeviceClass as Integer

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The device class.
Notes: See kUSB*Class constants.

And read here:
http://www.usb.org/developers/defined_class
(Read and Write property)

202.18.11 DeviceMaxPacketSize as Integer

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The maximum device packet size.
Notes: (Read and Write property)

202.18.12 DeviceNumConfigs as Integer

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The number of configurations for this device.
Notes: (Read and Write property)

202.18.13 DeviceProtocol as Integer

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The device protocol.
Notes: (Read and Write property)

202.18.14 DeviceReleaseNumber as Integer

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The device release number.
Notes: (Read and Write property)

202.18.15 DeviceSpeed as Integer

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The device speed.
Notes: (Read and Write property)

202.18.16 DeviceSubClass as Integer

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The device sub class.
Notes: See kUSB*SubClass constants.
(Read and Write property)

202.18.17 ExtraPowerForPorts as Integer

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The extra power asked for ports.
Notes: Value is in milli ampere.
(Read and Write property)

202.18.18 Name as String

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The name of this device node.
Example:

```
// show all names of all devices in a MessageBox
Var names(-1) as string

// iterate over all devices without recursion
Var devices(-1) as MacUSBDeviceMBS

devices.Add MacUSBDeviceMBS.root

while devices.LastIndex>=0
Var dev as MacUSBDeviceMBS = devices.Pop
names.Add dev.name

for each child as MacUSBDeviceMBS in dev.children
devices.Add child
next
wend

MessageBox Join(names,", ")
```

Notes: (Read and Write property)

202.18.19 NumEndpoints as Integer

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The number of endpoints.
Notes: (Read and Write property)

202.18.20 Path as String

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The object path.
Notes: This is internally used by the kernel.
(Read and Write property)

202.18.21 Ports as Integer

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The number of ports on an USB hub.
Notes: (Read and Write property)

202.18.22 ProductID as Integer

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The product ID
Notes: (Read and Write property)

202.18.23 ProductName as String

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The product name.
Notes: (Read and Write property)

202.18.24 Properties as Dictionary

MBS USB Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates dictionary with all the properties associated for this USB device in IORegistry.
Notes: (Read and Write property)

202.18.25 RequestedPower as Integer

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Requested power.
Notes: Value is in milli ampere.
(Read and Write property)

202.18.26 SerialNumber as String

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The device serial number.
Notes: (Read and Write property)

202.18.27 VendorID as Integer

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The vendor ID.
Notes: Assigned by USB Org.
(Read and Write property)

202.18.28 VendorName as String

MBS USB Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The vendor name.
Notes: (Read and Write property)

202.18.29 Constants

Constants

Constant	Value	Description
kUSBApplicationSpecificClass	254	One of the USB device class constants.
kUSBATMNetworkingSubClass	7	One of the USB device sub class constants. For kUSBCommunicationDataInterfaceClass.
kUSBAudioControlSubClass	1	One of the USB device sub class constants. For kUSBAudioInterfaceClass.
kUSBAudioStreamingSubClass	2	One of the USB device sub class constants. For kUSBAudioInterfaceClass.
kUSBCommAbstractSubClass	2	One of the USB device sub class constants. For kUSBCommunicationDataInterfaceClass.
kUSBCommCAPISubClass	5	One of the USB device sub class constants. For kUSBCommunicationDataInterfaceClass.
kUSBCommDirectLineSubClass	1	One of the USB device sub class constants. For kUSBCommunicationDataInterfaceClass.
kUSBCommEthernetNetworkingSubClass	6	One of the USB device sub class constants. For kUSBCommunicationDataInterfaceClass.
kUSBCommMultiChannelSubClass	4	One of the USB device sub class constants. For kUSBCommunicationDataInterfaceClass.
kUSBCommonClassSubClass	2	One of the USB device sub class constants. For kUSBMiscellaneousClass.
kUSBCommTelephoneSubClass	3	One of the USB device sub class constants. For kUSBCommunicationDataInterfaceClass.
kUSBCommunicationClass	2	One of the USB device class constants.
kUSBCompositeClass	0	One of the USB device class constants.
kUSBCompositeSubClass	0	One of the USB device sub class constants.
kUSBDataClass	10	One of the USB device class constants.
kUSBDFUSubClass	1	One of the USB device sub class constants. For kUSBApplicationSpecificInterfaceClass.
kUSBDiagnosticClass	220	One of the USB device class constants.
kUSBHIDBootInterfaceSubClass	1	One of the USB device sub class constants. For kUSBHIDBootInterfaceSubClass.
kUSBHubClass	9	One of the USB device class constants.
kUSBHubSubClass	0	One of the USB device sub class constants.
kUSBIrDABridgeSubClass	2	One of the USB device sub class constants. For kUSBApplicationSpecificInterfaceClass.
kUSBMassStorageATAPISubClass	2	One of the USB device sub class constants. For kUSBMassStorageInterfaceClass.
kUSBMassStorageQIC157SubClass	3	One of the USB device sub class constants. For kUSBMassStorageInterfaceClass.
kUSBMassStorageRBCSubClass	1	One of the USB device sub class constants. For kUSBMassStorageInterfaceClass.
kUSBMassStorageSCSISubClass	6	One of the USB device sub class constants. For kUSBMassStorageInterfaceClass.
kUSBMassStorageSFF8070iSubClass	5	One of the USB device sub class constants. For kUSBMassStorageInterfaceClass.
kUSBMassStorageUFISubClass	4	One of the USB device sub class constants. For kUSBMassStorageInterfaceClass.
kUSBMIDIStreamingSubClass	3	One of the USB device sub class constants. For kUSBAudioInterfaceClass.
kUSBMiscellaneousClass	239	One of the USB device class constants.
kUSBPersonalHealthcareClass	15	One of the USB device class constants.
kUSBReprogrammableDiagnosticSubClass	1	One of the USB device sub class constants. For kUSBDiagnosticDeviceInterfaceClass.
kUSBRFControllerSubClass	1	One of the USB device sub class constants. For kUSBWirelessControllerInterfaceClass.
kUSBTestMeasurementSubClass	3	One of the USB device sub class constants. For kUSBApplicationSpecificInterfaceClass.
kUSBVendorSpecificClass	255	One of the USB device class constants.
kUSBVideoControlSubClass	1	One of the USB device sub class constants.

202.19 class MacUSBMBS

202.19.1 class MacUSBMBS

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class to talk to an USB device.
Notes: Written for a client and probably not yet universally useable, so it may not work with your device.
Blog Entries

202.19.2 Methods

202.19.3 AbortPipe(PipeRef as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Aborts any outstanding transactions on the pipe with status kIOReturnAborted.
Notes: If there are outstanding asynchronous transactions on the pipe, the callbacks will happen.
Note that this command will also clear the halted bit on the endpoint in the controller, but will NOT clear the data toggle bit. If you want to clear the data toggle bit as well, see ClearPipeStall or ClearPipeStallBothEnds for more information. The interface must be open for the pipe to exist.
pipeRef: Index for the desired pipe (1 - GetNumEndpoints).
Lasterror is set to kIOReturnSuccess if successful, kIOReturnNoDevice if there is no connection to an IOService, or kIOReturnNotOpen if the interface is not open for exclusive access.

202.19.4 ClearPipeStall(PipeRef as Integer) as boolean

MBS USB Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Clears the halted bit and the data toggle bit on the pipe's endpoint in the controller.
Notes: This function also returns any outstanding transactions on the pipe with status kIOUSBTransactionReturned.
If there are outstanding asynchronous transactions on the pipe, the callbacks will happen. The data toggle may need to be resynchronized. The driver may handle this by sending a ClearFeature(ENDPOINT_HALT)

to the default control pipe, specifying the device's endpoint for this pipe.

pipeRef: Index for the desired pipe (1 - NumEndpoints).
Lasterror is set to kIOReturnSuccess if successful, kIOReturnNoDevice if there is no connection to an IOService, or kIOReturnNotOpen if the interface is not open for exclusive access.

202.19.5 Close

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Closes connection to the device.

202.19.6 ConfigurationValue as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the current configuration value set in the device (the interface will be part of that configuration.)
Notes: The interface does not have to be open to use this function.
Lasterror is set.

202.19.7 Connect as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Connects to the first device matching product and vendor IDs.
Notes: Returns true on success.

202.19.8 DeviceProduct as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the USB Product ID (idProduct) of the device.
Notes: The device does not have to be open to use this function.
Lasterror is set. Returns the actual product ID of the device.

202.19.9 DeviceReleaseNumber as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the Device Release Number (bcdDevice) of the device.
Notes: The device does not have to be open to use this function.
Lasterror is set.

202.19.10 DeviceVendor as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the USB Vendor ID (idVendor) of the device.
Notes: The device does not have to be open to use this function.
Lasterror is set. Returns the actual vendor ID of the device.

202.19.11 InterfaceClass as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the USB Class of the interface.
Notes: Lasterror is set.

202.19.12 InterfaceNumber as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the interface number (zero-based index) of this interface within the current configuration of the device.
Notes: Lasterror is set.

202.19.13 InterfaceProtocol as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the USB Protocol of the interface.
Notes: Lasterror is set.

202.19.14 InterfaceSubClass as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the USB Subclass of the interface.
Notes: Lasterror is set.

202.19.15 LocationID as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the location ID.
Notes: The location ID is a 32 bit number which is unique among all USB devices in the system, and which will not change on a system reboot unless the topology of the bus itself changes. The interface does not have to be open to use this function.
Lasterror is set.

202.19.16 NumEndpoints as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the number of endpoints in this interface.
Notes: The interface does not have to be open to use this function.
Lasterror is set.

202.19.17 ReadPacket(PipeRef as Integer, MaxSize as Integer = 1024) as Memoryblock

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Reads data packet.
Notes: We developed this function for a client, so it's probably useless for everyone else.

202.19.18 ReadRaw(PipeRef as Integer, MaxSize as Integer = 1024) as Memoryblock

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Reads data on a BULK IN or an INTERRUPT pipe.
Notes: Reads up to MaxSize bytes from the given pipe. Pipe is in range 1 to GetNumEndpoints.

202.19.19 ResetPipe(PipeRef as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Equivalent to ClearPipeStall.
Notes: The interface must be open for the pipe to exist.
pipeRef: Index for the desired pipe (1 - GetNumEndpoints).
Lasterror is set to kIOReturnSuccess if successful, kIOReturnNoDevice if there is no connection to an IOService, or kIOReturnNotOpen if the interface is not open for exclusive access.

202.19.20 WritePacket(PipeRef as Integer, Data as Memoryblock) as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sends data packet.
Notes: We developed this function for a client, so it's probably useless for everyone else.
Lasterror is set.
See also:

- 202.19.21 WritePacket(PipeRef as Integer, Data as string) as boolean 23788

202.19.21 WritePacket(PipeRef as Integer, Data as string) as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sends data packet.
Notes: We developed this function for a client, so it's probably useless for everyone else.
Lasterror is set.
See also:

- 202.19.20 WritePacket(PipeRef as Integer, Data as Memoryblock) as boolean 23788

202.19.22 WriteRaw(PipeRef as Integer, Data as Memoryblock) as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Writes data on a BULK OUT or INTERRUPT OUT pipe.
Notes: The interface must be open for the pipe to exist.
PipeRef: Index for the desired pipe (1 - GetNumEndpoints).
Data: the buffer of data to send.
Lasterror is set.
See also:

- 202.19.23 WriteRaw(PipeRef as Integer, Data as string) as boolean 23788

202.19.23 WriteRaw(PipeRef as Integer, Data as string) as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Writes data on a BULK OUT or INTERRUPT OUT pipe.
Notes: The interface must be open for the pipe to exist.
PipeRef: Index for the desired pipe (1 - GetNumEndpoints).
Data: the buffer of data to send.
Lasterror is set.
See also:

- 202.19.22 WriteRaw(PipeRef as Integer, Data as Memoryblock) as boolean 23788

202.19.24 Properties

202.19.25 completionTimeout as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The completion timeout.
Notes: Specifies a time value in milliseconds. Once the request is queued on the bus, if the entire request is not completed in this amount of time, the request will be aborted and returned.
Default is 1000.
(Read and Write property)

202.19.26 LastError as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

202.19.27 noDataTimeout as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The timeout for no data.
Notes: Specifies a time value in milliseconds. Once the request is queued on the bus, if no data is transferred in this amount of time, the request will be aborted and returned.
Default is 1000.
(Read and Write property)

202.19.28 ProductID as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The product ID for connecting to the device.
Notes: (Read and Write property)

202.19.29 VendorID as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The vendor ID for connecting to the device.
Notes: (Read and Write property)

202.19.30 Constants

Errors

Constant	Value	Description
kIOReturnSuccess	0	The error constant for no error.
kIOUSBConfigNotFound	&he0004056	Configuration Not found.
kIOUSBDeviceNotHighSpeed	&he0004049	The device is not a high speed device, so the EHC
kIOUSBDevicePortWasNotSuspended	&he0004050	Port was not suspended.
kIOUSBEndpointNotFound	&he0004057	Endpoint Not found.
kIOUSBHighSpeedSplitError	&he000404b	Error to hub on high speed bus trying to do split
kIOUSBInterfaceNotFound	&he000404e	Interface ref not recognized.
kIOUSBLowLatencyBufferNotPreviouslyAllocated	&he000404d	Attempted to use user land low latency isoc calls (on the data buffer) first.
kIOUSBLowLatencyFrameListNotPreviouslyAllocated	&he000404c	Attempted to use user land low latency isoc calls (on the frame list) first.
kIOUSBNoAsyncPortErr	&he000405f	No async port.
kIOUSBNotEnoughPipesErr	&he000405e	Not enough pipes in interface.
kIOUSBNotEnoughPowerErr	&he000405d	Not enough power for selected configuration.
kIOUSBPipeStalled	&he000404f	Pipe has stalled, error needs to be cleared.
kIOUSBSyncRequestOnWLThread	&he000404a	A synchronous USB request was made on the wo back?). Only async requests are permitted in that
kIOUSBTooManyPipesErr	&he0004060	Too many pipes.
kIOUSBTransactionReturned	&he0004050	The transaction has been returned to the caller.
kIOUSBTransactionTimeout	&he0004051	Transaction timed out.
kIOUSBUnknownPipeErr	&he0004061	Pipe ref not recognized.

202.20 class MacUSBNotificationMBS

202.20.1 class MacUSBNotificationMBS

MBS USB Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for receiving notifications if an USB device has been attached or removed.
Notes: Please make a subclass so you can put your own code in the events.

Use WinUSBNotificationMBS for Windows.
Blog Entries

- MBS Xojo Plugins, version 20.6pr1
- Showing USB Devices
- MBS Real Studio Plugins, version 11.2pr3

202.20.2 Methods

202.20.3 Constructor(vendor as Integer = 0, product as Integer = 0)

MBS USB Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Setup the notification system so you are informed about USB devices being attached or removed.
Example:

```
// look only for device with this vendor/product ID
Var m as new MyMacUSBNotificationMBS(&h5AC, &h263)
```

Notes: You can use vendor and product IDs to limit the class to look only for devices with matching IDs.
Lasterror is set.

202.20.4 GetUSBDeviceInfo(DeviceHandle as Integer, byref Vendor as string, byref Product as string, byref SerialNumber as string, byref Revision as Integer) as boolean

MBS USB Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries USB details for a given handle.
Notes: This is a convenience function to query details on the devices found within the events.
Returns true on success.

202.20.5 QueryBSDName(DeviceHandle as Integer) as string

MBS USB Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Function to query BSDName of a given device.
Notes: If the device is a disk or USB stick and has been mounted, this would give the bsd name of the disk.
Returns "" on any error.

202.20.6 Release(DeviceHandle as Integer)

MBS USB Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Releases an object reference when you don't need it any longer.
Notes: Please call Retain and Release in pairs.
Does nothing if handle is zero or when called on Linux/Windows.

202.20.7 Retain(DeviceHandle as Integer)

MBS USB Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Retains an object reference so it is available later.
Notes: Please call Retain and Release in pairs.
Does nothing if handle is zero or when called on Linux/Windows.

202.20.8 Properties

202.20.9 LastError as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Zero is no error while other values are Mac OS error codes.
(Read and Write property)

202.20.10 Events

202.20.11 DeviceAdded(properties as dictionary, NewDevice as boolean, ClassName as string, DeviceName as string, DeviceHandle as Integer)

MBS USB Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: This event is called when the device is added.
Notes: You find properties like product and vendor in the dictionary.
This event can be called from the constructor for existing devices with NewDevice = false. Later events have NewDevice = true so you see that this is a new device.

DeviceName and ClassName give details on the USB item found.
DeviceHandle is the internal object reference which can be used with other helper functions in this class (io_service_t).

202.20.12 DeviceRemoved(properties as dictionary, NewDevice as boolean, ClassName as string, DeviceName as string, DeviceHandle as Integer)

MBS USB Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: This event is called when the device is removed.
Notes: You find properties like product and vendor in the dictionary.
This event can be called from the constructor for existing devices with NewDevice = false. Later events have NewDevice = true so you see that this is a new device.

DeviceName and ClassName give details on the USB item found.
DeviceHandle is the internal object reference which can be used with other helper functions in this class (io_service_t).

202.21 class WinHIDMBS

202.21.1 class WinHIDMBS

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to work with HID devices on Windows.
Example:

```
// This example needs a window with ListBox1.
Var m as new WinHIDMBS
Var s as string

#if not TargetWin32
MessageBox "This example requires Windows."
#endif

if m.FindFirstDevice then

do
ListBox1.AddRow ""

ListBox1.CellTextAt(ListBox1.LastAddedRowIndex,0)=hex(m.ProductID)
ListBox1.CellTextAt(ListBox1.LastAddedRowIndex,1)=hex(m.VendorID)
ListBox1.CellTextAt(ListBox1.LastAddedRowIndex,2)=m.Product
ListBox1.CellTextAt(ListBox1.LastAddedRowIndex,3)=m.Manufacturer
ListBox1.CellTextAt(ListBox1.LastAddedRowIndex,4)=m.SerialNumber
ListBox1.CellTextAt(ListBox1.LastAddedRowIndex,5)=hex(m.VersionNumber)

if left(m.Product,3)="RF1" then // my test device

if m.Connect then
// write 9 bytes report
// first byte is report ID plus 8 byte data
s=chr(0)+"P"+chr(0)+chr(0)+chr(0)+chr(0)+chr(0)+chr(0)+chr(0)

MessageBox "Send bytes: "+str(m.SendMessage(s))

do
s=m.ReadMessage(17)
loop until lenb(s)>0 // until we got something
MessageBox midb(s,2) // shows result. First byte is ReportID again

m.Disconnect
end if
end if

loop until not m.FindNextDevice
```

```
end if

Title=str(ListBox1.ListCount)+" devices found."
```

Notes: For newer development, please use our HIDAPIMBS class.

Updated in version 10.4 of plugins to ignore devices which you don't have permissions to access them. So you will now see devices with VendorID=0 and ProductID=0.

This class can be used in three different ways. First normal with Connect and ReadMessage/SendMessage. Second with InstallListener and SendMessage/Poll functions. Third low level via GetInputReport and SetOutputReport.

202.21.2 Methods

202.21.3 Close

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Closes the active connection.

202.21.4 Connect as boolean

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a connection to the current device.
Example:

```
Function OpenUSBDevice() As boolean
Var i as Integer
Var h as WinHIDMBS

h=FindDevice // see FindFirst example

if h=nil then
MessageBox "No XYZ device found."
Return false
end if

call h.Connect

if h.Lasterror<>0 then
MessageBox "Failed to connect to USB Device."
Return false
end if

Return true

End Function
```

Notes: Lasterror is set.
Returns true on success and false on failure.

The plugin tries to open a read and a write connection. If both fail, connect returns false. If one is okay, it returns true.

Some devices don't allow read or write because of missing permissions.

202.21.5 DevicePath as string

MBS USB Plugin, Plugin Version: 9.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal path used by Windows to identify the device.
Notes: Only for debugging.

202.21.6 Disconnect

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Disconnets current USB device.
Notes: Lasterror is set.

202.21.7 FindFirstDevice as boolean

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Finds the first device and loads the properties.
Example:

```
Function FindDevice() As MyWinHIDMBS
Var h as MyWinHIDMBS
Var p as string

h=new MyWinHIDMBS // your own subclass of MacHIDMBS so you can get events

if h.FindFirstDevice then

p=h.Product
if p="MyProduct" then
Return h
end if

while h.FindNextDevice

p=h.Product
if p="MyProduct" then
Return h
end if

wend

end if
End Function
```

Notes: Returns true on success and false on failure.
On Windows finds only devices which can be opened for Read/Write.

202.21.8 FindNextDevice as boolean

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Finds next device.
Notes: Returns true on success and false on failure.

202.21.9 GetInputReport(data as MemoryBlock, Offset as Integer = 0, Length as Integer = 0) as boolean

MBS USB Plugin, Plugin Version: 15.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns an input reports from a top-level collection.
Notes: This is very low level.
First byte of data block is report ID.
If Length is 0, we use size of memoryblock.
Returns true on success.

see also:
https://msdn.microsoft.com/en-us/library/windows/hardware/ff538945(v=vs.85).aspx

202.21.10 InstallListener(PollSize as Integer) as boolean

MBS USB Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop, Console & Web.

Function: Installs a second thread which performs Read.
Example:

```
Var h as new WinHIDMBS

call h.InstallListener 9 // 8 bytes + Report ID
```

Notes: Use PollString or PollMemory in a timer or a loop to get the data.
This is an alternative way compared to ReadMessage functions.

202.21.11 Manufacturer as string

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The manufacturer name.
Notes: On any error an empty string is returned.
Lasterror is set.

202.21.12 PollMemory as memoryblock

MBS USB Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads a message from the device.
Notes: A connection must be open and InstallListener must be used.
Lasterror is set.
You may want to try this function in a loop or a timer till you get data.

202.21.13 PollString as string

MBS USB Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads a message from the device.
Example:

```
Var m as WinHIDMBS // your WinHIDMBS object
Var s as string

do
s=m.PollString
loop until lenb(s)>0 // until we got something
MessageBox midb(s,2) // shows result. First byte is ReportID again
```

Notes: A connection must be open and InstallListener must be used.
Lasterror is set.
You may want to try this function in a loop or a timer till you get data.

202.21.14 Product as string

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The product string of the selected device.
Notes: Lasterror is set.

202.21.15 ProductID as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The product ID of the selected device.

Notes: Lasterror is set.

202.21.16 ReadMessage(length as Integer, timeOut as Integer = 0) as string

MBS USB Plugin, Plugin Version: 13.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads a message from the device.
Example:

```
Var m as WinHIDMBS
Var s as string

do
s=m.ReadMessage(48)
loop until lenb(s)>0 // until we got something
MessageBox midb(s,2) // shows result. First byte is ReportID again
```

Notes: Length is the length of the receive buffer you want to use.
The string returned is 0 to length bytes long.
A connection must be open.
Lasterror is set.
You may want to try this function in a loop till you get data.
Timeout is a timeout value in milliseconds.

202.21.17 ReadMessageMemory(length as Integer, timeOut as Integer = 0) as memoryblock

MBS USB Plugin, Plugin Version: 13.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads a message from the device.
Example:

```
Var m as WinHIDMBS
Var s as memoryblock

do
s=m.ReadMessageMemory(48)
loop until s<>nil // until we got something
MessageBox midb(s,2) // shows result. First byte is ReportID again
```

Notes: Length is the length of the receive buffer you want to use.
The memoryblock returned has a size of 0 to length bytes.
A connection must be open.
Lasterror is set.

You may want to try this function in a loop till you get data.
Timeout is a timeout value in milliseconds.

202.21.18 SendMessage(data as string) as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends a message to the USB device.
Example:

```
Var m as WinHIDMBS // your hid object
Var s as string
// write 9 bytes report
// first byte is report ID plus 8 byte data
s=chr(0)+"P"+chr(0)+chr(0)+chr(0)+chr(0)+chr(0)+chr(0)+chr(0)
MessageBox "Send bytes: "+str(m.SendMessage(s))
```

Notes: A connection must be open.
Returns number of bytes sent.

The first byte must be the Report ID which seems to be zero for most devices.

202.21.19 SendMessageMemory(data as memoryblock, Offset as Integer = 0, length as Integer = 0) as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends a message to the USB device.
Notes: A connection must be open.
Lasterror is set.
Returns number of bytes sent.

While writing a crossplatform application we saw the following thing: The data buffer for the SendMessageMemory call must be 8 bytes long on Mac for our device (with MacHIDMBS) and 61 bytes long for Windows (with WinHIDMBS) for our HID device. We have 1 byte for the ReportID and 60 data bytes where the first 8 are set like on the Mac. So if the calls fail on Windows, try with a higher length and check the WinHIDMBS.OutputReportByteLength property.

The first byte must be the Report ID which seems to be zero for most devices.
If length is zero, we use the length of memoryblock.

202.21.20 SerialNumber as string

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The serial number of the current selected device.
Notes: Lasterror is set.

202.21.21 SetOutputReport(data as MemoryBlock, Offset as Integer = 0, Length as Integer = 0) as boolean

MBS USB Plugin, Plugin Version: 15.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends an output report.
Notes: This is very low level.
First byte of data block is report ID.
If Length is 0, we use size of memoryblock.
Returns true on success.

see also
https://msdn.microsoft.com/en-us/library/windows/hardware/ff539690(v=vs.85).aspx

202.21.22 VendorID as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The vendor ID of the selected device.
Notes: Lasterror is set.

202.21.23 VersionNumber as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device specific version number.
Notes: Value can be anything.
On any error, 0 is returned.
Lasterror is set.

202.21.24 Properties

202.21.25 FeatureReportByteLength as Integer

MBS USB Plugin, Plugin Version: 9.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum length, in bytes, of all the feature reports, including the report identifier, if report identifiers are used, which is added to the beginning of the report data.
Notes: (Read and Write property)

202.21.26 HidHandle as Integer

MBS USB Plugin, Plugin Version: 9.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle for the HID device.
Notes: (Read and Write property)

202.21.27 InputReportByteLength as Integer

MBS USB Plugin, Plugin Version: 9.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum size, in bytes, of the input reports, including the report identifier, if report identifiers are used, which is added to the beginning of the report data.
Notes: (Read and Write property)

202.21.28 Lasterror as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Last error code.
Notes: 0 is success.
-1 means that the function is not available.
else Windows error codes like 5 for Access Denied.
(Read and Write property)

202.21.29 LasterrorString as String

MBS USB Plugin, Plugin Version: 9.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code in a formatted and localized string.
Notes: This does not work for plugin error codes.

Like -1 if the function is not available.
(Read only property)

202.21.30 OutputReportByteLength as Integer

MBS USB Plugin, Plugin Version: 9.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum size, in bytes, of all the output reports, including the report identifier, if report identifiers are used, which is added to the beginning of the report data.
Notes: (Read and Write property)

202.21.31 PnPHandle as Integer

MBS USB Plugin, Plugin Version: 9.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle for Plug and Play.
Notes: (Read and Write property)

202.21.32 ReadHandle as Integer

MBS USB Plugin, Plugin Version: 9.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle of the stream for reading data from the USB device.
Notes: (Read and Write property)

202.21.33 ThreadHandle as Integer

MBS USB Plugin, Plugin Version: 9.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle for the thread which waits in the background for new data.
Notes: (Read and Write property)

202.21.34 WriteHandle as Integer

MBS USB Plugin, Plugin Version: 9.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle of the stream for writing data to the USB device.
Notes: (Read and Write property)

202.22 class WinUSBDeviceMBS

202.22.1 class WinUSBDeviceMBS

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class to query USB devices.
Example:

```
Var devices(-1) as WinUSBDeviceMBS = WinUSBDeviceMBS.Devices

for each d as WinUSBDeviceMBS in devices
MessageBox d.Vendor+" - "+d.Product
next
```

Blog Entries

- Showing USB Devices
- MBS Real Studio Plugins, version 11.2pr6

202.22.2 Methods

202.22.3 Devices as WinUSBDeviceMBS()

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries a list of all USB Devices.
Example:

```
Var devices() as WinUSBDeviceMBS = WinUSBDeviceMBS.devices
for each d as WinUSBDeviceMBS in devices
MessageBox d.vendor+" "+d.product+" "+d.serialnumber
next
```

Notes: Returns an emtpy array on errors.

202.22.4 Properties

202.22.5 cdUSB as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device USB version.

Notes: USB Specification Number which device complies too.

The cdUSB field reports the highest version of USB the device supports. The value is in binary coded decimal with a format of 0xJJMN where JJ is the major version number, M is the minor version number and N is the sub minor version number. e.g. USB 2.0 is reported as &h0200, USB 1.1 as 0x0110 and USB 1.0 as &h0100.
(Read and Write property)

202.22.6 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device descriptor type.
Notes: Device Descriptor (0x01)
(Read and Write property)

202.22.7 DeviceClass as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device class.
Notes: See constants in MacUSBDeviceMBS class.
Assigned by USB Org
(Read and Write property)

202.22.8 DeviceID as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device ID.
Notes: (Read and Write property)

202.22.9 DeviceProtocol as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device protocol.
Notes: Assigned by USB Org
(Read and Write property)

202.22.10 DeviceSubClass as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device sub class.
Notes: See constants in MacUSBDeviceMBS class.
Assigned by USB Org
(Read and Write property)

202.22.11 MaxEP0Size as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum Packet Size for Zero Endpoint.
Notes: Valid Sizes are 8, 16, 32, 64
(Read and Write property)

202.22.12 Product as String

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The product name.
Notes: (Read and Write property)

202.22.13 ProductID as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The product ID of the device.
Notes: (Read and Write property)

202.22.14 SerialNumber as String

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The serial number of the USB device.
Example:

```
Var devices(-1) as WinUSBDeviceMBS = WinUSBDeviceMBS.Devices

for each d as WinUSBDeviceMBS in devices
MessageBox d.Vendor+" - "+d.Product+": "+d.SerialNumber
```

next

Notes: Not all vendors save the serial number in the device.
(Read and Write property)

202.22.15 Vendor as String

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The vendor name of the USB device.
Notes: (Read and Write property)

202.22.16 VendorID as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The vendor ID of the USB device.
Notes: Assigned by USB Org.
(Read and Write property)

202.23 class WinUSBInterfaceDescriptionMBS

202.23.1 class WinUSBInterfaceDescriptionMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class is used by USB clients to retrieve a USB-defined interface descriptor.

202.23.2 Properties

202.23.3 AlternateSetting as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The index number of the alternate setting of the interface.
Notes: (Read and Write property)

202.23.4 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The descriptor type.
Notes: Descriptor must be set to USB_INTERFACE_DESCRIPTOR_TYPE.
(Read and Write property)

202.23.5 InterfaceClass as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class code of the device that the USB specification group assigned.
Notes: (Read and Write property)

202.23.6 InterfaceIndex as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The index of a string descriptor that describes the interface.
Notes: For information about this field, see section 9.6.5 in the "Universal Serial Bus Revision 2.0" specification at USB Technology.
(Read and Write property)

202.23.7 InterfaceNumber as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The index number of the interface.
Notes: (Read and Write property)

202.23.8 InterfaceProtocol as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The protocol code of the device that the USB specification group assigned.
Notes: (Read and Write property)

202.23.9 InterfaceSubClass as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The subclass code of the device that the USB specification group assigned.
Notes: (Read and Write property)

202.23.10 Length as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The length, in bytes, of the descriptor.
Notes: (Read and Write property)

202.23.11 NumEndpoints as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of endpoints that are used by the interface, excluding the default status endpoint.
Notes: (Read and Write property)

202.24 class WinUSBMBS

202.24.1 class WinUSBMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides access to any USB device on Windows.
Notes: This class provides functions exposed by Winusb.dll, which user-mode client drivers and applications can use to communicate with USB devices.
WinUSB functions require Windows XP or later.

202.24.2 Methods

202.24.3 AbortPipe(PipeID as Integer)

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Aborts all of the pending transfers for a pipe. This is a synchronous operation.
Notes: To reset a pipe associated with an endpoint in the first interface, use the WinUSBMBS object

created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: The identifier (ID) of the control pipe. The PipeID parameter is an 8-bit value that consists in a 7-bit address and a direction bit. This parameter corresponds to the EndpointAddress field in the endpoint descriptor.

Lasterror is zero on success and false on failure.

202.24.4 Available as boolean

MBS USB Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns true if winusb.dll has been found and loaded.
Notes: Always false on Linux and Mac OS X.

202.24.5 Constructor(path as string)

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a WinUSB object for the device specified by a device path.
Example:

```
Var path As String = "\\?\usb#vid_0e0f&pid_0003#6&30c8ca5f&0&5# { a5dcbf10-6530-11d2-901f-00c04fb951ed
} "
Var w As New WinUSBMBS(path)

If w.Lasterror <>0 Then
MessageBox "Lasterror: "+Str(w.Lasterror)
else
MessageBox "DeviceHandle: "+Hex(w.DeviceHandle)
End If
```

Notes: Use WindowsDeviceMBS class to find USB devices and their device paths.
Lasterror is set.
On success DeviceHandle and Handle properties are not nil.

When Constructor is called, the policy settings of the interface are reset to the default values.
The Constructor call queries the underlying USB stack for various descriptors and allocates enough memory to store the retrieved descriptor data.
Constructor first retrieves the device descriptor and then gets the associated configuration descriptor. From the configuration descriptor, the call derives the associated interface descriptors and stores them in an array. The interfaces in the array are identified by zero-based indexes. An index value of 0 indicates the first

interface (the default interface), a value of 1 indicates the second associated interface, and so on. Constructor parses the default interface descriptor for the endpoint descriptors and caches information such as the associated pipes or state specific data. The handle received in the InterfaceHandle parameter is a pointer to the memory block allocated for the first interface in the array.

If an application wants to use another interface on the device, it must call GetAssociatedInterface, specify the index of the interface, and retrieve a handle to the memory block allocated for the specified interface.

e.g. path like this format.
\\?\usb#vid_0e0f&pid_0003#6&30c8ca5f&0&5# { a5dcbf10-6530-11d2-901f-00c04fb951ed }

See also WinUSBDeviceMBS and WindowsDeviceMBS classes.
For cross platform development also check LibUSBDeviceMBS classes.

202.24.6 ControlTransfer(SetupPacket as WinUSBSetupPacketMBS, Buffer as MemoryBlock) as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Transmits control data over a default control endpoint.
Notes: To send a control request to the entire device or the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

SetupPacket: The 8-byte setup packet of type WinUSBSetupPacketMBS.
Buffer: A buffer that contains the data to transfer. Can be empty.

Returns the actual number of transferred bytes.
Lasterror property is set.
See also:

- 202.24.7 ControlTransfer(SetupPacket as WinUSBSetupPacketMBS, Buffer as String) as Integer 23813

202.24.7 ControlTransfer(SetupPacket as WinUSBSetupPacketMBS, Buffer as String) as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Transmits control data over a default control endpoint.
Notes: To send a control request to the entire device or the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

SetupPacket: The 8-byte setup packet of type WinUSBSetupPacketMBS.
Buffer: A buffer that contains the data to transfer. Can be empty.

Returns the actual number of transferred bytes.
Lasterror property is set.
See also:

- 202.24.6 ControlTransfer(SetupPacket as WinUSBSetupPacketMBS, Buffer as MemoryBlock) as Integer 23813

202.24.8 DeviceSpeed as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries device speed.
Notes: Lasterror is set.
Use constants LowSpeed, HighSpeed and FullSpeed.

202.24.9 FlushPipe(PipeID as Integer)

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Discards any data that is cached in a pipe. This is a synchronous operation.
Notes: To reset a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: The identifier (ID) of the control pipe. The PipeID parameter is an 8-bit value that consists in a 7-bit address and a direction bit. This parameter corresponds to the EndpointAddress field in the endpoint descriptor.

Lasterror is zero on success and false on failure.

202.24.10 GetAssociatedInterface(index as Integer) as WinUSBMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves a WinUSBMBS object for an associated interface.
Notes: This is a synchronous operation.

AssociatedInterfaceIndex: An index that specifies the associated interface to retrieve. A value of 0 indicates the first associated interface, a value of 1 indicates the second associated interface, and so on.

Returns new WinUBSMBS object.
The first associated interface is the interface that immediately follows the interface whose handle the WinUsb_Initialize routine retrieves.

Callers of GetAssociatedInterfacecan retrieve only one handle for each interface. If a caller attempts to retrieve more than one handle for the same interface, the routine will fail with an error of ERROR_ALREADY_EXISTS.

202.24.11 QueryInterfaceSettings(index as Integer) as WinUSBInterfaceDescriptionMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the interface descriptor for the specified alternate interface settings for a particular interface handle.
Notes: To retrieve the settings of the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

AlternateSettingNumber: A value that indicates which alternate settings to return. A value of 0 indicates the first alternate setting, a value of 1 indicates the second alternate setting, and so on.

Returns WinUSBInterfaceDescriptionMBS object on success or nil on any error.

202.24.12 QueryPipe(AlternateInterfaceNumber as Integer, PipeIndex as Integer) as WinUSBPipeInformationMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves information about the specified endpoint and the associated pipe for an interface.
Notes: To query a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

AlternateInterfaceNumber: A value that specifies the alternate interface to return the information for.
PipeIndex: A value that specifies the pipe to return information about. This value is not the same as the bEndpointAddress field in the endpoint descriptor. A PipeIndex value of 0 signifies the first endpoint that is associated with the interface, a value of 1 signifies the second endpoint, and so on. PipeIndex must be less

than the value in the NumEndpoints field of the interface descriptor.

Returns pipe information or nil on error. Also sets Lasterror property.

The QueryPipe function does not retrieve information about the control pipe.

Each interface on the USB device can have multiple endpoints. To communicate with each of these endpoints, the bus driver creates pipes for each endpoint on the interface. The pipe indices are zero-based. Therefore for n number of endpoints, the pipes' indices are set from n-1. WinUsb_QueryPipe parses the configuration descriptor to get the interface specified by the caller. It searches the interface descriptor for the endpoint descriptor associated with the caller-specified pipe. If the endpoint is found, the function populates a WinUSBPipeInformationMBS object with information from the endpoint descriptor.

202.24.13 ReadPipeMemory(PipeID as Integer, BufferLength as Integer) as Memoryblock

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads data from the specified pipe.
Notes: To read a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: PipeID corresponds to the EndpointAddress field in the endpoint descriptor. For information about the layout of this field, see Table 9-13 in "Universal Serial Bus Specification Revision 2.0" at USB Technology. In the EndpointAddress field, Bit 7 indicates the direction of the endpoint: 0 for OUT; 1 for IN.
BufferLength: The maximum number of bytes to read.

Returns memoryblock with the data read. This may be shorter than BufferLength.
Lasterror is set.

Lasterror is 0 if the operation succeeds. Otherwise, lasterror has the Windows error code.

If the data returned by the device is greater than a maximum transfer length, WinUSB divides the request into smaller requests of maximum transfer length and submits them serially. If the transfer length is not a multiple of the endpoint's maximum packet size (retrievable through the WinUSBPipeInformationMBS class's MaximumPacketSize member), WinUSB increases the size of the transfer to the next multiple of MaximumPacketSize.
USB packet size does not factor into the transfer for a read request. If the device responds with a packet that is too large for the client buffer, the behavior of the read request corresponds to the type of policy set on the pipe. If policy type for the pipe is ALLOW_PARTIAL_READS, WinUSB adds the remaining data to the beginning of the next transfer. If ALLOW_PARTIAL_READS is not set, the read request fails. For

more information about policy types, see WinUSB Functions for Pipe Policy Modification.

When no data is available in the endpoint (pipe is empty), ReadPipe does not return until there is data in the pipe. If an error condition occurs or the application-specified timeout expires, ReadPipe always returns false. To determine the actual reason for that return value, always check LastError. For example, in these cases the GetLastError error value indicates the actual reason:
If the application specified a timeout value in the pipe policy and that timeout expires, ReadPipe returns false and LastError is ERROR_SEM_TIMEOUT.
If an error condition occurs while reading data from the pipe, ReadPipe returns false and LastError is ERROR_GEN_FAILURE.

202.24.14 ReadPipePacket(PipeID as Integer, MaxSize as Integer = 1024) as Memoryblock

MBS USB Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads a data packet.
Notes: We developed this function for a client, so it's probably useless for everyone else.

202.24.15 ReadPipeString(PipeID as Integer, BufferLength as Integer) as string

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads data from the specified pipe.
Notes: To read a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: PipeID corresponds to the EndpointAddress field in the endpoint descriptor. For information about the layout of this field, see Table 9-13 in "Universal Serial Bus Specification Revision 2.0" at USB Technology. In the EndpointAddress field, Bit 7 indicates the direction of the endpoint: 0 for OUT; 1 for IN.
BufferLength: The maximum number of bytes to read.

Returns string with the data read. This may be shorter than BufferLength.
Lasterror is set.

Lasterror is 0 if the operation succeeds. Otherwise, lasterror has the Windows error code.

If the data returned by the device is greater than a maximum transfer length, WinUSB divides the request into smaller requests of maximum transfer length and submits them serially. If the transfer length is not a multiple of the endpoint's maximum packet size (retrievable through the WinUSBPipeInformationMBS

class's MaximumPacketSize member), WinUSB increases the size of the transfer to the next multiple of MaximumPacketSize.
USB packet size does not factor into the transfer for a read request. If the device responds with a packet that is too large for the client buffer, the behavior of the read request corresponds to the type of policy set on the pipe. If policy type for the pipe is ALLOW_PARTIAL_READS, WinUSB adds the remaining data to the beginning of the next transfer. If ALLOW_PARTIAL_READS is not set, the read request fails. For more information about policy types, see WinUSB Functions for Pipe Policy Modification.

When no data is available in the endpoint (pipe is empty), ReadPipe does not return until there is data in the pipe. If an error condition occurs or the application-specified timeout expires, ReadPipe always returns false. To determine the actual reason for that return value, always check LastError. For example, in these cases the GetLastError error value indicates the actual reason:
If the application specified a timeout value in the pipe policy and that timeout expires, ReadPipe returns false and LastError is ERROR_SEM_TIMEOUT.
If an error condition occurs while reading data from the pipe, ReadPipe returns false and LastError is ERROR_GEN_FAILURE.

202.24.16 ResetPipe(PipeID as Integer)

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Resets the data toggle and clears the stall condition on a pipe.
Notes: To reset a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: The identifier (ID) of the control pipe. The PipeID parameter is an 8-bit value that consists in a 7-bit address and a direction bit. This parameter corresponds to the EndpointAddress field in the endpoint descriptor.

Lasterror is zero on success and false on failure.

202.24.17 WritePipe(PipeID as Integer, Buffer as MemoryBlock) as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Writes data to a pipe.
Notes: To write to a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: PipeID corresponds to the EndpointAddress field in the endpoint descriptor. For information about

the layout of this field, see Table 9-13 in "Universal Serial Bus Specification Revision 2.0" at USB Technology.
In the bEndpointAddress field, Bit 7 indicates the direction of the endpoint: 0 for OUT; 1 for IN.
Buffer: A buffer that contains the data to write.

Returns the actual number of bytes that were written to the pipe.
Lasterror is set. Zero for success.

To create a write request, your the application must allocate a buffer, fill it with the data that you want to write to the device, and send the buffer to the host controller by calling WritePipe.
The following restrictions apply to the size of the buffer if RAW_IO is set:

- The buffer length must be a multiple of the maximum endpoint packet size.
- The length must be less than or equal to the value of MAXIMUM_TRANSFER_SIZE retrieved by GetPipePolicy.

There are no restrictions on the size of the buffer if RAW_IO is not set as the pipe's policy type. If the size of the buffer is greater than the maximum transfer length reported by MAXIMUM_TRANSFER_SIZE, WinUSB divides the request into smaller requests and submits them serially to the host controller.
A write request that contains zero-length data is forwarded down the USB stack.
See also:

- 202.24.18 WritePipe(PipeID as Integer, Buffer as String) as Integer 23819

202.24.18 WritePipe(PipeID as Integer, Buffer as String) as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Writes data to a pipe.
Notes: To write to a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: PipeID corresponds to the EndpointAddress field in the endpoint descriptor. For information about the layout of this field, see Table 9-13 in "Universal Serial Bus Specification Revision 2.0" at USB Technology.
In the bEndpointAddress field, Bit 7 indicates the direction of the endpoint: 0 for OUT; 1 for IN.
Buffer: A buffer that contains the data to write.

Returns the actual number of bytes that were written to the pipe.
Lasterror is set. Zero for success.

To create a write request, your the application must allocate a buffer, fill it with the data that you want to write to the device, and send the buffer to the host controller by calling WritePipe.

The following restrictions apply to the size of the buffer if RAW_IO is set:

- The buffer length must be a multiple of the maximum endpoint packet size.
- The length must be less than or equal to the value of MAXIMUM_TRANSFER_SIZE retrieved by GetPipePolicy.

There are no restrictions on the size of the buffer if RAW_IO is not set as the pipe's policy type. If the size of the buffer is greater than the maximum transfer length reported by MAXIMUM_TRANSFER_SIZE, WinUSB divides the request into smaller requests and submits them serially to the host controller.
A write request that contains zero-length data is forwarded down the USB stack.
See also:

- 202.24.17 WritePipe(PipeID as Integer, Buffer as MemoryBlock) as Integer 23818

202.24.19 WritePipePacket(PipeID as Integer, Buffer as MemoryBlock) as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends data packet.
Notes: We developed this function for a client, so it's probably useless for everyone else.
See also:

- 202.24.20 WritePipePacket(PipeID as Integer, Buffer as String) as Integer 23820

202.24.20 WritePipePacket(PipeID as Integer, Buffer as String) as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends data packet.
Notes: We developed this function for a client, so it's probably useless for everyone else.
See also:

- 202.24.19 WritePipePacket(PipeID as Integer, Buffer as MemoryBlock) as Integer 23820

202.24.21 Properties

202.24.22 DeviceHandle as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle to the device.
Notes: (Read and Write property)

202.24.23 Lasterror as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

202.24.24 LasterrorMessage as String

MBS USB Plugin, Plugin Version: 16.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error message.
Notes: (Read and Write property)

202.24.25 Parent as WinUSBMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Parent usb object.
Notes: Objects created with GetAssociatedInterface have here the parent object, so you can go back to main interface.
(Read and Write property)

202.24.26 Tag as Variant

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The attached value.
Notes: You can use this property as you like.
(Read and Write property)

202.24.27 USBHandle as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle to the USB device.
Notes: (Read and Write property)

202.24.28 CurrentAlternateSetting as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current alternate interface setting for an interface.
Notes: To get the current alternate setting in the first (default) interface on the device, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

Lasterror is set. You can set and get the value.
(Read and Write computed property)

202.24.29 PipePolicyAllowPartialReads(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to allow partial reads.
Notes: The default value is true. To disable set to false.
Disabling AllowPartialReads causes the read requests to fail whenever the device returns more data (on bulk and interrupt IN endpoints) than the caller requested.
Enabling AllowPartialReads causes WinUSB to save or discard the extra data when the device returns more data (on bulk and interrupt IN endpoints) than the caller requested. This behavior is defined by setting the auto flush value.
Lasterror is set.
(Read and Write computed property)

202.24.30 PipePolicyAutoClearStall(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether WinUSB resets the pipe in order to automatically clear the stall condition.
Notes: Data continues to flow on the bulk and interrupt IN endpoints again as soon as a new or a queued transfer arrives on the endpoint. This policy parameter does not affect control pipes.
Disabling AutoClearStall causes all transfers (that arrive to the endpoint after the stalled transfer) to fail until the caller manually resets the endpoint's pipe by calling ResetPipe.
Lasterror is set.
(Read and Write computed property)

202.24.31 PipePolicyAutoFlush(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to use auto flush.
Notes: The default value is false (zero). To enable auto flush set to true.
auto flush must be used with AllowPartialReads enabled. If AllowPartialReads is TRUE, the value of auto flush determines the action taken by WinUSB when the device returns more data than the caller requested.
Disabling AllowPartialReads causes WinUSB to ignore the auto flush value.
Disabling auto flush with AllowPartialReads enabled causes WinUSB to save the extra data, add the data to the beginning of the caller's next read request, and send it to the caller in the next read operation.
Enabling auto flush with AllowPartialReads enabled causes WinUSB to discard the extra data remaining from the read request.
Lasterror is set.
(Read and Write computed property)

202.24.32 PipePolicyIgnoreShortPackets(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enabling IgnoreShortPackets causes the host controller to not complete a read operation after it receives a short packet.
Notes: Instead, the host controller completes the operation only after the host has read the specified number of bytes.
Disabling IgnoreShortPackets causes the host controller to complete a read operation when either the host has read the specified number of bytes or the host has received a short packet.
The default value is false. To enable set to true.
Lasterror is set.
(Read and Write computed property)

202.24.33 PipePolicyMaximumTransferSize(PipeID as Integer) as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum size of a USB transfer supported by WinUSB.
Notes: This is a read-only policy.
Lasterror is set.
(Read and Write computed property)

202.24.34 PipePolicyPipeTransferTimeout(PipeID as Integer) as UInt32

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the time-out interval.
Notes: The default value is zero.
The PipeTransferTimeout value specifies the time-out interval, in milliseconds. The host controller cancels transfers that do not complete within the specified time-out interval.

A value of zero (default) indicates that transfers do not time out because the host controller never cancels the transfer.
Lasterror is set.
(Read and Write computed property)

202.24.35 PipePolicyRawIO(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to use Raw IO.
Notes: The default value is false.
Enabling raw IO causes WinUSB to send data directly to the USB driver stack, bypassing WinUSB's queuing and error handling mechanism.
The buffers that are passed to ReadPipe must be configured by the caller as follows:

- The buffer length must be a multiple of the maximum endpoint packet size.
- The length must be less than or equal to the value of PipePolicyMaximumTransferSize.

Disabling raw IO (false) does not impose any restriction on the buffers that are passed to ReadPipe.
Lasterror is set.
(Read and Write computed property)

202.24.36 PipePolicyResetPipeOnResume(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to reset pipe on resume.
Notes: True indicates that on resume from suspend, WinUSB resets the endpoint before it allows the caller to send new requests to the endpoint.
Lasterror is set.
(Read and Write computed property)

202.24.37 PipePolicyShortPacketTerminate(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the driver sends a zero-length packet at the end of every write request to the host controller.
Notes: Lasterror is set.
(Read and Write computed property)

202.24.38 Constants

Power Policy Type Constants.

Constant	Value	Description
AutoSuspend	&h81	
SuspendDelay	&h83	

Device Speed Constants

Constant	Value	Description
FullSpeed	2	Full Speed
HighSpeed	3	High Speed
LowSpeed	1	Low Speed

202.25 class WinUSBNotificationMBS

202.25.1 class WinUSBNotificationMBS

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for getting notifications about USB devices being connected or removed.
Notes: Use MacUSBNotificationMBS for Mac OS X.
Blog Entries

- Showing USB Devices
- MBS Real Studio Plugins, version 11.3pr15
- MBS Real Studio Plugins, version 11.2pr3

202.25.2 Methods

202.25.3 Constructor

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor initializes the notification engine.
Notes: On success WindowHandle and NotifyHandle is not zero.

202.25.4 Properties

202.25.5 NotifyHandle as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Internal handle to the notification system.
Notes: (Read and Write property)

202.25.6 WindowHandle as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Internal handle to the dummy window for receiving notification.
Notes: (Read only property)

202.25.7 Events

202.25.8 DeviceAdded(Name as string)

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: This event is called when a device has been attached.
Notes: Name is typically for an USB device: "\\?\USB#Vid_05ac&Pid_8403#000000009833# { a5dcbf10-6530-11d2-901f-00c04fb951ed } ".
That means you can get Vendor ID and Product ID from this string. Also the unique ID and finally the class GUID.

202.25.9 DeviceRemoved(Name as string)

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: This event is called when a device has been removed.
Notes: Name is typically for an USB device: "\\?\USB#Vid_05ac&Pid_8403#000000009833# { a5dcbf10-6530-11d2-901f-00c04fb951ed } ".
That means you can get Vendor ID and Product ID from this string. Also the unique ID and finally the class GUID.

202.26 class WinUSBPipeInformationMBS

202.26.1 class WinUSBPipeInformationMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for pipe details.

202.26.2 Properties

202.26.3 Interval as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The pipe interval.
Notes: (Read and Write property)

202.26.4 MaximumPacketSize as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The maximum size, in bytes, of the packets that are transmitted on the pipe.
Notes: (Read and Write property)

202.26.5 PipeId as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The pipe identifier (ID).
Notes: (Read and Write property)

202.26.6 PipeType as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The pipe type.
Notes: (Read and Write property)

202.26.7 Constants

Pipe Type Constants

Constant	Value	Description
UsbdPipeTypeBulk	2	Indicates that the pipe is a bulk transfer pipe.
UsbdPipeTypeControl	0	Indicates that the pipe is a control pipe.
UsbdPipeTypeInterrupt	3	Indicates that the pipe is a interrupt pipe.
UsbdPipeTypeIsochronous	1	Indicates that the pipe is an isochronous transfer pipe.

202.27 class WinUSBSetupPacketMBS

202.27.1 class WinUSBSetupPacketMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The metadata needed to create an USB packet.

202.27.2 Properties

202.27.3 Index as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The meaning of this member varies according to the request.
Notes: For an explanation of this member, see the Universal Serial Bus (USB) specification.
(Read and Write property)

202.27.4 Length as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of bytes to transfer.
Notes: (Read and Write property)

202.27.5 Request as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device request.
Notes: The values that are assigned to this member are defined in Table 9.3 of section 9.4 of the Universal Serial Bus (USB) specification.
(Read and Write property)

202.27.6 RequestType as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The request type.
Notes: The values that are assigned to this member are defined in Table 9.2 of section 9.3 of the Universal Serial Bus (USB) specification (www.usb.org).

(Read and Write property)

202.27.7 Value as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The meaning of this member varies according to the request.
Notes: For an explanation of this member, see the Universal Serial Bus (USB) specification.
(Read and Write property)

Chapter 203

User Notifications

203.1 class NSUserNotificationActionMBS

203.1.1 class NSUserNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use UNNotificationActionMBS class instead. **Function:** An action shown to the user as part of a NSUserNotification in the additionalActions property.
Example:

```
// show a notification with extra buttons and react to them
// MyNotificationDelegate is a subclass of NSUserNotificationCenterDelegateMBS with the didActivateNotification event implemented.
// NotificationDelegate is a property of the window: NotificationDelegate As MyNotificationDelegate
NotificationDelegate = New MyNotificationDelegate

Var actions() As NSUserNotificationActionMBS
actions.Add New NSUserNotificationActionMBS("remind", "Remind me later")
actions.Add New NSUserNotificationActionMBS("done", "Mark as done")

Var n As New NSUserNotificationMBS
n.title = "Meeting at 3 PM"
n.setAdditionalActions actions
NSUserNotificationCenterMBS.defaultUserNotificationCenter.deliverNotification n

// in MyNotificationDelegate:
Sub didActivateNotification(center As NSUserNotificationCenterMBS, notification As NSUserNotificationMBS) Handles didActivateNotification
If notification.additionalActivationAction <>Nil Then
System.DebugLog "Clicked: " + notification.additionalActivationAction.Identifier
```

```
End If
End Sub
```

Notes: Available on Mac OS X 10.10 and newer.

203.1.2 Methods

203.1.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Whether this class is available.
Notes: Returns true on Mac OS X 10.10 or newer. False in all other cases.

203.1.4 Constructor(identifier as string, title as string)

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.

203.1.5 copy as NSUserNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Creates a copy of this object.

203.1.6 Properties

203.1.7 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

203.1.8 Identifier as String

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The internal identifier for this action.
Notes: (Read only property)

203.1.9 Title as String

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The localized title of the action.
Notes: (Read only property)

203.2 class NSUserNotificationCenterDelegateMBS

203.2.1 class NSUserNotificationCenterDelegateMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use UNUserNotificationCenterMBS class instead. **Function:** This class allows you to react to events from the user notification center. **Example:**

```
// show notifications even while the app is in front and react to clicks
// MyNotificationDelegate is a subclass of NSUserNotificationCenterDelegateMBS with the events implemented.
// NotificationDelegate is a property of the app: NotificationDelegate As MyNotificationDelegate
NotificationDelegate = New MyNotificationDelegate

Var n As New NSUserNotificationMBS
n.title = "Download finished"
n.informativeText = "report.pdf is ready."
n.soundName = NSUserNotificationMBS.NSUserNotificationDefaultSoundName
NSUserNotificationCenterMBS.defaultUserNotificationCenter.deliverNotification n

// in MyNotificationDelegate:
Function shouldPresentNotification(center As NSUserNotificationCenterMBS, notification As NSUserNotificationMBS) As Boolean Handles shouldPresentNotification
Return True // also show it when the app is active
End Function

Sub didActivateNotification(center As NSUserNotificationCenterMBS, notification As NSUserNotificationMBS) Handles didActivateNotification
System.DebugLog "Clicked: " + notification.title
End Sub
```

Notes: This is for sending user notifications to the Mac your Xojo application runs on. Not for remote notifications or notifications to iOS devices.

203.2.2 Methods

203.2.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.

Notes: Must be called to have the class register itself.

203.2.4 Destructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The destructor.

203.2.5 Properties

203.2.6 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

203.2.7 Events

203.2.8 didActivateNotification(center as NSUserNotificationCenterMBS, notification as NSUserNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Sent to the delegate when a user clicks on a user notification presented by the user notification center.
Example:

```
Sub applicationDidFinishLaunching(Notification as NSNotificationMBS)
Var userInfo as Dictionary = Notification.userInfo
Var key as string = NSApplicationMBS.NSApplicationLaunchUserNotificationKey
Var UserNotification as NSUserNotificationMBS = userInfo.Lookup(key, nil)

if UserNotification <>nil then
MessageBox UserNotification.identifier+": "+UserNotification.informativeText
end if
End Sub
```

Notes: center: The user notification center.
notification: The user notification object.

This would be a good time to take action in response to user interacting with a specific notification.

To take an action when your application is launched as a result of a user clicking on a notification, be sure to implement the applicationDidFinishLaunching method in the application class that implements the NSApplicationDelegateMBS class. The notification parameter to that method has a userInfo dictionary, and if that dictionary has the NSApplicationLaunchUserNotificationKey key. The value of that key is the NSUserNotification object that caused the application to launch. The NSUserNotification object is delivered to the NSApplication delegate because that message will be sent before your application has a chance to set a delegate for the NSUserNotificationCenter.

Available in OS X v10.8 and later.

203.2.9 didDeliverNotification(center as NSUserNotificationCenterMBS, notification as NSUserNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Sent to the delegate when a notification delivery date has arrived.
Notes: center: The user notification center.
notification: The user notification object.

This method is always called, regardless of your application state and even if you deliver the user notification yourself using deliverNotification:.

This event is invoked before the shouldPresentNotification event.
Available in OS X v10.8 and later.

203.2.10 shouldPresentNotification(center as NSUserNotificationCenterMBS, notification as NSUserNotificationMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Sent to the delegate when the user notification center has decided not to present your notification.
Notes: center: The user notification center.
notification: The user notification object.

Return true if the user notification should be displayed regardless; false otherwise.
Available in OS X v10.8 and later.

203.3 class NSUserNotificationCenterMBS

203.3.1 class NSUserNotificationCenterMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use UNUserNotificationCenterMBS class instead. **Function:** The NSUserNotificationCenterMBS class delivers user notifications to the user from applications or helper applications.
Example:

```
Var u as new NSUserNotificationMBS

u.Title = "Hello World"
u.subtitle = "from Xojo."
u.informativeText = "Our first Notification from Xojo."

Var d as new date
d.Second = d.Second + 10
u.deliveryDate = d

Var c as new NSUserNotificationCenterMBS
c.scheduleNotification u
```

Notes: When a user notifications is delivery date has been reached, or it is manually delivered, the notification center it may display the notification to the user. The user notification center reserves the right to decide if a delivered user notification is presented to the user. For example, it may suppress the notification if the application is already frontmost (the delegate can override this action). The application can check the result of this decision by examining the presented property of a delivered user notification.

NSUserNotificationMBS instances the NSUserNotificationCenterMBS are tracking will be in one of two states: scheduled or delivered. A scheduled user notification has a deliveryDate. On that delivery date, the notification will move from being scheduled to being delivered. Note that the user notification may be displayed later than the delivery date depending on a number of factors.

A delivered user notification has an actualDeliveryDate. That is the date when it moved from being scheduled to delivered, or when it was manually delivered using the deliverNotification method.

The application and the user notification center are both ultimately subject to the user's preferences. If the user decides to hide all alerts from your application, the presented property will still behave as above, but the user will not see any animation or hear any sound.

The NSUserNotificationCenterDelegateMBS class provides more information about the delivered user notification and allows forcing the display of a user notification even if the application is frontmost.

Note: It the user wakes more than 15 minutes after a scheduled notification is scheduled to fire, it is discarded. If the notification repeats with an interval less than 15 minutes, then it expires in 1 minute. Expired notifications are just discarded, unless they repeat, in which case, they stay in the scheduled list and just fire again later.
Important Many of the NSUserNotificationCenterMBS class's methods involve talking to a server process, so calling them repeatedly can have a negative effect on performance.

This is for sending user notifications to the Mac your Xojo application runs on. Not for remote notifications or notifications to iOS devices.

The NSUserNotificationCenterMBS class and the NSUserNotificationMBS class are both thread safe.

203.3.2 Methods

203.3.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Whether user notification framework is available.
Notes: Returns true on Mac OS X 10.8 and false otherwise.

203.3.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.
Notes: Initializes this object to point to the default user notification center.
Available in OS X v10.8 and later.

203.3.5 defaultUserNotificationCenter as NSUserNotificationCenterMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns the default user notification center.
Notes: Available in OS X v10.8 and later.

203.3.6 deliveredNotifications as NSUserNotificationMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: An array of all user notifications delivered to the notification center.
Notes: The number of notifications the user actually sees in the user interface may be less than the size of this array.

Note that these may or may not have been actually presented to the user. See the presented property in the NSUserNotificationMBS class.

Note: A scheduled user notification that specifies a deliveryRepeatInterval remains in the scheduledNotifications list, even though it has been delivered. The item that goes into the deliveredNotifications list is a copy of the user notification item.

Available in OS X v10.8 and later.

203.3.7 deliverNotification(notification as NSUserNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Deliver the specified user notification.
Example:

```
Var u as new NSUserNotificationMBS

u.Title = "Hello World"
u.subtitle = "just a test"

Var c as new NSUserNotificationCenterMBS
c.deliverNotification u
```

Notes: notification: The user notification.

The notification will be presented to the user (subject to the user's preferences). The presented property of the NSUserNotification object will always be set to true if a notification is delivered using this method.

Available in OS X v10.8 and later.

203.3.8 removeAllDeliveredNotifications

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Remove all delivered user notifications from the user notification center.
Notes: Available in OS X v10.8 and later.

203.3.9 removeAllScheduledNotifications

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop only.

Function: Remove all scheduled user notifications from the user notification center.
Notes: Available in OS X v10.8 and later.

203.3.10 removeDeliveredNotification(notification as NSUserNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Remove a delivered user notification from the user notification center.
Notes: notification: The user notification.

If the user notification is not in deliveredNotifications, nothing happens.

Available in OS X v10.8 and later.

203.3.11 removeScheduledNotification(notification as NSUserNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Removes the specified user notification for the scheduled notifications.
Notes: notification: The user notification.

If the user notification's deliveryDate occurs before the cancellation finishes, the notification may still be delivered.
If the notification is not in the scheduled list, nothing happens.

Available in OS X v10.8 and later.

203.3.12 scheduledNotifications as NSUserNotificationMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies an array of scheduled user notifications that have not yet been delivered.
Notes: Newly scheduled notifications are added to the end of the array. You may also bulk-schedule notifications by setting this array. Bulk setting new scheduled notifications unschedules existing notifications.

Note: The scheduled user notification could be changing to a delivered notification at the time you are calling this method. and if that case the user notification will still be delivered.

Available in OS X v10.8 and later.

203.3.13 scheduleNotification(notification as NSUserNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Schedules the specified user notification.
Notes: notification: The user notification.

Scheduled notifications are added to the end of the notification queue.
Available in OS X v10.8 and later.

203.3.14 Properties

203.3.15 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

203.4 class NSUserNotificationMBS

203.4.1 class NSUserNotificationMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use UNNotificationMBS class instead. **Function:** The NSUserNotificationMBS class is used to configure a notification that is scheduled for display by the NSUserNotificationCenterMBS class.
Example:

```
Var u as new NSUserNotificationMBS

u.Title = "Hello World"
u.subtitle = "from Xojo."
u.informativeText = "Our first Notification from Xojo."

Var d as new date
d.Second = d.Second + 10
u.deliveryDate = d

Var c as new NSUserNotificationCenterMBS
c.scheduleNotification u
```

Notes: The NSUserNotificationMBS object not only configures the notification, when the notification is delivered information about when the notification was actually presented to the user (if at all) and other details are provided in the notification object. User applications can create NSUserNotification objects and register them with the NSUserNotificationCenterMBS object to notify the user when an application requires attention.

See NSUserNotificationCenterMBS Class Reference for more information.

Threading Information
The NSUserNotificationCenterMBS class and the NSUserNotificationMBS class are both thread safe.

This is for sending user notifications to the Mac your Xojo application runs on. Not for remote notifications or notifications to iOS devices.

203.4.2 Methods

203.4.3 additionalActions as NSUserNotificationActionMBS()

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Queries the array of additional actions.
Notes: For Mac OS X 10.10 and newer. Will not cause exception if called on older versions, but simply return empty array.

An array of NSUserNotificationActionMBS objects that describe the different actions that can be taken on a notification in addition to the default action described by actionButtonTitle.

203.4.4 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Whether this class is available.
Notes: Returns true on Mac OS X 10.8 and newer.
Returns false on other operating systems, e.g. older OS X, Windows or Linux.

203.4.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor to create a new notification.

203.4.6 copy as NSUserNotificationMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Creates a clone of the notification object.

203.4.7 NSUserNotificationDefaultSoundName as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The default sound played by the user notification center for this notification.
Notes: The default notification sound.
Available in OS X v10.8 and later.

203.4.8 Print

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Prints description of notification object to console for debugging.

203.4.9 setAdditionalActions(additionalActions() as NSUserNotificationActionMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Sets the array of additional actions.
Notes: For Mac OS X 10.10 and newer. Will not cause exception if called on older versions.

An array of NSUserNotificationActionMBS objects that describe the different actions that can be taken on a notification in addition to the default action described by actionButtonTitle.

203.4.10 Properties

203.4.11 actionButtonTitle as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies the title of the action button displayed in the notification.
Notes: This value should localized as it will be presented to the user. The string will be truncated to a length appropriate for display and the property will be modified to reflect the truncation.

Available in OS X v10.8 and later.
(Read and Write property)

203.4.12 activationType as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies what caused a user notification to occur.
Notes: This property specifies why the user notification was sent to the NSUserNotificationCenterDelegateMBS didActivateNotification event. The supported values are described in constants.

Available in OS X v10.8 and later.
(Read only property)

203.4.13 actualDeliveryDate as date

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The date this notification was actually delivered.
Notes: The notification center will set this value if a notification is put in the scheduled list and the delivery time arrives.

If the notification is delivered directly using the deliverNotification: method of the NSUserNotificationCenterMBS class, this value will be set to the deliveryDate value. If the deliveryDate value nil this value is set to the current date.

This value is used to sort the list of notifications in the user interface.

Available in OS X v10.8 and later.
(Read only property)

203.4.14 actualDeliveryDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: The date this notification was actually delivered.
Notes: The notification center will set this value if a notification is put in the scheduled list and the delivery time arrives.

If the notification is delivered directly using the deliverNotification: method of the NSUserNotificationCen-

terMBS class, this value will be set to the deliveryDate value. If the deliveryDate value nil this value is set to the current date.

This value is used to sort the list of notifications in the user interface.

Available in OS X v10.8 and later.
(Read only property)

203.4.15 additionalActivationAction as NSUserNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Queries which additional action was selected.
Notes: For Mac OS X 10.10 and newer. Will not cause exception if called on older versions, but always return nil.

When a user selects an additional action that action will be set on the notification's additionalActivationAction property when passed into the delegate event didActivateNotification.
(Read only property)

203.4.16 contentImage as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Image shown in the content of the notification.
Notes: (Read and Write property)

203.4.17 deliveryDate as date

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies when the notification should be delivered.
Notes: The delivery date is specified in an absolute time.
After a notification is delivered, it may be presented to the user.
Available in OS X v10.8 and later.
(Read and Write property)

203.4.18 deliveryDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: Specifies when the notification should be delivered.
Notes: The delivery date is specified in an absolute time.
After a notification is delivered, it may be presented to the user.
Available in OS X v10.8 and later.
(Read and Write property)

203.4.19 deliveryRepeatInterval as NSDateComponentsMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies the date components that control how often a user notification is repeated.
Notes: This value may be nil if the notification should not repeat.

The date component values are relative to the date the notification was delivered.

If the calendar value of the deliveryRepeatInterval is nil, the current calendar will be used to calculate the repeat interval. For example, if a notification should repeat every hour, set the hour property of the deliveryRepeatInterval to 1.

This value is ignored unless the user notification is scheduled with the NSUserNotificationCenterMBS object.
Available in OS X v10.8 and later.
(Read and Write property)

203.4.20 deliveryTimeZone as NSTimeZoneMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specify the time zone to interpret the delivery date in.
Notes: If this value is nil and the user switches time zones, the notification center will adjust the time of presentation to account for the time zone change.

If a notification should be delivered at a time in a specific time zone (regardless of whether the user switches time zones), set this value to the specific time zone, for example the current time zone.

Available in OS X v10.8 and later.
(Read and Write property)

203.4.21 description as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Description of notification object for debugging.
Notes: (Read only property)

203.4.22 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

203.4.23 hasActionButton as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies whether the notification displays an action button.
Notes: Set to false if the notification has no action button. This will be the case for notifications that are purely for informational purposes and have no user action.

The default value is true.

Available in OS X v10.8 and later.
(Read and Write property)

203.4.24 hasReplyButton as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Set to true if the notification has a reply button.
Notes: The default value is false. If both this and hasActionButton are true, the reply button will be shown.
(Read and Write property)

203.4.25 identifier as string

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: This identifier is used to uniquely identify a notification.
Notes: A notification delivered with the same identifier as an existing notification will replace that notification, rather then display a new one.

Available in OS X 10.9 and newer.
(Read and Write property)

203.4.26 informativeText as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The body text of the notification.
Notes: This value should localized as it will be presented to the user. The string will be truncated to a length appropriate for display and the property will be modified to reflect the truncation.
Available in OS X v10.8 and later.
(Read and Write property)

203.4.27 otherButtonTitle as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies a custom title for the close button in an alert-style notification.
Notes: This value should localized as it will be presented to the user. The string will be truncated to a length appropriate for display and the property will be modified to reflect the truncation.

An empty string will cause the default localized text to be used.

Available in OS X v10.8 and later.
(Read and Write property)

203.4.28 Presented as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies whether the user notification has been presented.
Notes: In some cases, for example when your application is frontmost, the notification center may decide not to actually present a delivered notification. In that case, the value of this property will be false. It will be set to true if the notification was presented according to user preferences.

Available in OS X v10.8 and later.
(Read only property)

203.4.29 remote as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies whether the remote was generated by a push notification.
Notes: If this property is true then the user notification was generated by a push notification (that is, remotely); if false it was generated locally.
Available in OS X v10.8 and later.
(Read only property)

203.4.30 response as NSAttributedStringMBS

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The response text.
Notes: When a notification has been responded to, the NSUserNotificationCenter event didActivateNotification will be called with the notification with the activationType set to NSUserNotificationActivationTypeReplied and the response set on the response property.
(Read only property)

203.4.31 responsePlaceholder as string

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Optional placeholder for inline reply field.
Notes: (Read and Write property)

203.4.32 soundName as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies the name of the sound to play when the notification is delivered.
Notes: Passing the NSUserNotificationDefaultSoundName constant causes the default notification center sound to be played.
A value of nil means no sound is played.
Available in OS X v10.8 and later.
(Read and Write property)

203.4.33 subtitle as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies the subtitle of the notification.
Notes: This value should localized as it will be presented to the user. The string will be truncated to a length appropriate for display and the property will be modified to reflect the truncation.
Available in OS X v10.8 and later.
(Read and Write property)

203.4.34 title as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies the title of the notification.
Notes: This value should localized as it will be presented to the user. The string will be truncated to a length appropriate for display and the property will be modified to reflect the truncation.
Available in OS X v10.8 and later.
(Read and Write property)

203.4.35 userInfo as dictionary

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Application-specific user info that can be attached to the notification.
Example:

```
Var u as new NSUserNotificationMBS
Var d as new dictionary
d.value("Key") = "Value"
u.userinfo = d
```

Notes: All items must be property list types or an exception will be thrown.
The userInfo content must be of reasonable serialized size (less than 1k) or an exception will be thrown.
Available in OS X v10.8 and later.
(Read and Write property)

203.4.36 Constants

Constants

Constant	Value	Description
NSUserNotificationActivationTypeReplied	3	The activation type for a notification which got a reply.

Activation Type Constant

Constant	Value	Description
NSUserNotificationActivationTypeActionButtonClicked	2	The user clicked on the action button of the notifica Available in OS X v10.8 and later.
NSUserNotificationActivationTypeAdditionalActionClicked	4	User did select an additional action. Only for Mac OS X 10.10 and newer.
NSUserNotificationActivationTypeContentsClicked	1	The user clicked on the contents of the notification Available in OS X v10.8 and later.
NSUserNotificationActivationTypeNone	0	The user did not interact with the notification alert Available in OS X v10.8 and later.

203.5 class UNCalendarNotificationTriggerMBS

203.5.1 class UNCalendarNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A trigger condition that causes a notification to be delivered at a specific date and time.
Notes: Create a UNCalendarNotificationTriggerMBS object when you want to schedule the delivery of a local notification at the specified date and time. You specify the temporal information using an NSDateComponentsMBS object, which lets you specify only the time values that matter to you. The system uses the provided information to determine the next date and time that matches the specified information.
Subclass of the UNNotificationTriggerMBS class.

203.5.2 Methods

203.5.3 Constructor(dateComponents as NSDateComponentsMBS, repeats as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a calendar trigger from the specified date components.
Notes: dateComponents: The temporal information to use when constructing the trigger. Provide only the date components that are relevant for your trigger.
repeats: Specify false to deliver the notification one time. Specify YES to reschedule the notification request each time the notification is delivered.

Returns a new calendar trigger based on the specified temporal information.

If you specify true for the repeats parameter, you must explicitly remove the notification request to stop the delivery of the associated notification. Use the methods of UNUserNotificationCenterMBS to remove notification requests that are no longer needed.

203.5.4 trigger(dateComponents as NSDateComponentsMBS, repeats as boolean) as UNCalendarNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a calendar trigger from the specified date components.
Notes: dateComponents: The temporal information to use when constructing the trigger. Provide only the date components that are relevant for your trigger.
repeats: Specify false to deliver the notification one time. Specify YES to reschedule the notification request each time the notification is delivered.

Returns a new calendar trigger based on the specified temporal information.

If you specify true for the repeats parameter, you must explicitly remove the notification request to stop the delivery of the associated notification. Use the methods of UNUserNotificationCenterMBS to remove notification requests that are no longer needed.

203.5.5 Properties

203.5.6 dateComponents as NSDateComponentsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The date components used to construct this object.
Notes: Use this property to review the date components associated with this trigger.
(Read only property)

203.5.7 nextTriggerDate as Date

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The next date at which the trigger conditions will be met.
Notes: Use this property to find out when a notification associated with this trigger will next be delivered.
(Read only property)

203.5.8 nextTriggerDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The next date at which the trigger conditions will be met.
Notes: Use this property to find out when a notification associated with this trigger will next be delivered.
(Read only property)

203.6 class UNMutableNotificationContentMBS

203.6.1 class UNMutableNotificationContentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The editable content for a notification.
Example:

```
// prepare the content of a notification with a badge and custom data
Var content As New UNMutableNotificationContentMBS
content.title = "Backup finished"
content.subtitle = "Documents"
content.body = "1234 files were saved."
content.badge = 1
content.sound = UNNotificationSoundMBS.defaultSound

Var info As New Dictionary
info.Value("BackupID") = 42
content.userInfo = info

// deliver it now (trigger Nil) with UNUserNotificationCenterMBS
// Center is a property of the window: Center As UNUserNotificationCenterMBS
Var request As New UNNotificationRequestMBS("backup-done", content, Nil)
Center.addNotificationRequest request
```

Notes: Create a UNMutableNotificationContent object when you want to specify the payload for a local notification. Specifically, use this object to specify the title and message for an alert, the sound to play, or the value to assign to your app's badge. You might also provide details about how the system handles the notification. For example, you can specify a custom launch image and a thread identifier for visually grouping related notifications.
After creating your content object, assign it to a UNNotificationRequest object, add a trigger condition, and schedule your notification. The trigger condition defines when the notification is delivered to the user. Listing 1 shows the scheduling of a local notification that displays an alert and plays a sound after a delay of five seconds. The strings for the alert's title and body are stored in the app,Äôs Localizable.strings file.
Subclass of the UNNotificationContentMBS class.

203.6.2 Methods

203.6.3 addAttachment(attachment as UNNotificationAttachmentMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Adds an attachment.

203.6.4 clearBadge

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Clears the badge.

203.6.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The constructor.

203.6.6 setAttachments(attachments() as UNNotificationAttachmentMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Sets an array of attachments to display in an alert-based notification.
Notes: Use this property to include images or movies, or to include playable audio files, with the contents of an alert. The system displays the attachments alongside the title and body of your alert. You can also customize the presentation of attachments using a notification content app extension.
All attachments must reside locally on the current device before they can be added. For local notifications, modify this property before scheduling the notification. For remote notifications, use a notification service app extension to locate and download the specified files and modify the notification content before it is delivered.
For more information on how to specify attachments, see UNNotificationAttachmentMBS.

203.6.7 Properties

203.6.8 badge as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The number to apply to the app,Äôs icon.
Notes: Use this property to specify the number to apply to the app,Äôs icon when the notification arrives. If your app is not authorized to display badge-based notifications, this property is ignored.
Specify the number 0 to remove the current badge, if present. Specify a number greater than 0 to display a badge with that number. Use clearBadge to leave the current badge unchanged.
(Read and Write property)

203.6.9 body as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The localized message to display in the notification alert.
Notes: Use this property to specify the body of the notification alert. If your app is not authorized to display alert-based notifications, this property is ignored.
The body text should contain the final text that you want to display, and should not contain any placeholder characters. To include a percent symbol (%) in the message body, use two percent symbols (%%). The system strips all other printf style escape characters from your string prior to display.
(Read and Write property)

203.6.10 categoryIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The identifier of the category object that represents the notification's type.
Notes: Use notification types to distinguish between the different types of notifications your app supports. You use this support primarily to create actionable notifications—that is, notifications with custom action buttons—and to redirect your notifications through either your notification service app extension or your notification content app extension.
Assign a value to this property that matches the identifier property of one of the UNNotificationCategory objects you previously registered with your app. If you assign a string that does not match one of your registered categories, the system displays your notification without custom actions and without routing it through your app extensions.
(Read and Write property)

203.6.11 sound as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The sound to play when the notification is delivered.
Notes: Use this property to specify the sound that you want played when the notification arrives. If your app is not authorized to play sounds for notifications, this property is ignored.
For information on how to specify sounds for your notifications, see UNNotificationSoundMBS.
(Read and Write property)

203.6.12 subtitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The localized subtitle, containing a secondary description of the reason for the alert.
Notes: Use this property to specify additional context about the purpose of the notification. Subtitles offer

additional context in cases where the title alone is not clear. Subtitles are not displayed in all cases. If your app is not authorized to display alert-based notifications, this property is ignored.
(Read and Write property)

203.6.13 summaryArgument as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The string the notification adds to the category,Äôs summary format string.
Notes: (Read and Write property)

203.6.14 summaryArgumentCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The number of items the notification adds to the category,Äôs summary format string.
Notes: (Read and Write property)

203.6.15 threadIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: An identifier that you use to group related notifications together.
Notes: You may specify any value for the string, but assign the same thread identifier string to all notifications that you want to group together visually.
(Read and Write property)

203.6.16 title as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The localized title, containing the reason for the alert.
Notes: Use this property to specify the title of your notification alert. If your app is not authorized to display alert-based notifications, this property is ignored.
Title strings should be short, usually only a couple of words describing the reason for the notification. In watchOS, the title string is displayed as part of the short look notification interface, which has limited space.
(Read and Write property)

203.6.17 userInfo as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A dictionary of custom information associated with the notification.
Notes: Use this property to associate custom information with the notification. The contents of the dictionary are not seen by the user, but are accessible to your app or to any notification-related app extensions. The keys in this dictionary must be property-list types—that is, they must be types that can be serialized into the property-list format.
(Read and Write property)

203.7 class UNNotificationActionMBS

203.7.1 class UNNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The class for an action for a notification.
Example:

```
// react when the user clicks a button in a notification
// MyNotificationCenter is a subclass of UNUserNotificationCenterMBS with the didReceiveNotificationRe-
sponse event implemented.
// Center is a property of the window: Center As MyNotificationCenter
Center = New MyNotificationCenter

Var actions() As UNNotificationActionMBS
actions.Add UNNotificationActionMBS.action("snooze", "Snooze", UNNotificationActionMBS.OptionNone)
actions.Add New UNTextInputNotificationActionMBS("reply", "Reply", UNNotificationActionMBS.Option-
None, "Send", "Your message")

Var intents() As String
Var categories() As UNNotificationCategoryMBS
categories.Add New UNNotificationCategoryMBS("message", actions, intents, UNNotificationCategoryMBS.Op-
tionNone)
Center.setNotificationCategories categories

// in MyNotificationCenter:
Sub didReceiveNotificationResponse(response As UNNotificationResponseMBS) Handles didReceiveNotifi-
cationResponse
If response IsA UNTextInputNotificationResponseMBS Then
System.DebugLog "Reply: " + UNTextInputNotificationResponseMBS(response).userText
ElseIf response.actionIdentifier = "snooze" Then
System.DebugLog "Snooze clicked."
End If
End Sub
```

Notes: Use UNNotificationAction objects to define the actions that your app can perform in response to a delivered notification. You define the actions that your app supports. For example, a meeting app might define actions for accepting or rejecting a meeting invitation. The action object itself contains the title to display in an action button and the button's appearance. After creating action objects, add them to a UNNotificationCategory object and register your categories with the system.
For information on how to define actions and categories, see Declaring Your Actionable Notification Types.

When the user selects one of your actions in response to a notification, the system notifies the delegate of the shared UNUserNotificationCenterMBS object. Specifically, the system calls the didReceiveNotification-Response event. The response object passed to your delegate includes the identifier string of the action that was selected, which you can use to perform the corresponding task.

Blog Entries

- MBS Xojo Plugins, version 20.6pr1

203.7.2 Methods

203.7.3 action(identifier as string, title as string, options as integer) as UNNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates an action object with the specified title and options.
Notes: identifier: The string that you use internally to identify the action. This string must be unique among all of your app's supported actions. When the user selects the action, the system passes this string to your app and asks you to perform the related task. This parameter must not be nil or an empty string.
title: The localized string to display to the user. This string is used as the title of a button, which is added to the notification interface. This parameter must not be nil.
options: Additional options describing how the action behaves. Include options when you need the related behavior. For a list of possible values, see constants.

203.7.4 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationAction class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

203.7.5 Constructor(identifier as string, title as string, options as integer)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates an action object with the specified title and options.
Notes: identifier: The string that you use internally to identify the action. This string must be unique among all of your app's supported actions. When the user selects the action, the system passes this string to your app and asks you to perform the related task. This parameter must not be nil or an empty string.
title: The localized string to display to the user. This string is used as the title of a button, which is added to the notification interface. This parameter must not be nil.
options: Additional options describing how the action behaves. Include options when you need the related behavior. For a list of possible values, see constants.

203.7.6 copy as UNNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

203.7.7 Properties

203.7.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

203.7.9 identifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The unique string that your app uses to identify the action.
Notes: When the user selects an action, the system reports the value of this string to your app. Because all actions are handled by a single delegate method, the identifier strings for all of your app's actions must be unique.
(Read only property)

203.7.10 options as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The behaviors associated with the action.
Notes: Options should be applied to an action when the corresponding behavior is required.
(Read only property)

203.7.11 title as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The localized string to use as the title of the action.
Notes: This string is used as the title of the button that the user taps or selects in the notification interface.
(Read only property)

203.7.12 Constants

Options

Constant	Value	Description
OptionAuthenticationRequired	1	The action can be performed only on an unlocked device. When the user selects an action with this option, the system prompts the user to unlock the device. After unlocking, the system notifies your app of the selected action. You might use option to perform actions that require accessing data that is encrypted while the device is locked.
OptionDestructive	2	The action performs a destructive task. Use this option for actions that delete user data or change the app irrevocably. The action button is displayed with special highlighting to indicate that it performs a destructive task.
OptionForeground	4	The action causes the app to launch in the foreground. When the user selects an action containing this option, the system brings the app to the foreground, asking the user to unlock the device as needed. Use this option for actions that require the user to interact further with your app. Do not use this option simply to bring your app to the foreground.
OptionNone	0	The action has the default behavior.

203.8 class UNNotificationAttachmentMBS

203.8.1 class UNNotificationAttachmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A media file associated with a notification.
Example:

```
// attach a picture to a notification
// Center is a property of the window: Center As UNUserNotificationCenterMBS
Var error As NSErrorMBS
Var file As FolderItem = SpecialFolder.Desktop.Child("photo.jpg")
Var attachment As UNNotificationAttachmentMBS = UNNotificationAttachmentMBS.attachment("photo",
file, Nil, error)
If attachment = Nil Then
MessageBox error.localizedDescription
Return
End If

Var content As New UNMutableNotificationContentMBS
content.title = "New photo"
content.body = "A new photo arrived."
content.addAttachment attachment

Center.addNotificationRequest New UNNotificationRequestMBS("photo", content, Nil)
```

Notes: Create a UNNotificationAttachmentMBS object when you want to include audio, image, or video content together in an alert-based notification. When creating the UNNotificationAttachmentMBS object, the file you specify must be on disk, and the file format must be one of the supported types.

You are responsible for supplying attachments before the system displays your notification's alert. For local notifications, add attachments when creating the notification,Äôs content. For remote notifications, use a notification service app extension to download the attached files and then add them to the notification's content before delivery.

The system validates attachments before displaying the associated notification. If you attach a file to a local notification request that is corrupted, invalid, or of an unsupported file type, the system doesn't schedule your request. For remote notifications, the system validates attachments after your notification service app extension finishes. Once validated, attached files are moved into the attachment data store so that they can be accessed by all of the appropriate processes. Attachments located inside an app,Äôs bundle are copied instead of moved.

Supported File Types
Table lists the types of files you can include as an attachment and the supported file formats. The table also

lists the maximum size allowed for attachments of each type. An image file may contain a static image or an animated image sequence.

Supported attachment file types

Attachment	Supported file types	Maximum size
Audio	kUTTypeAudioInterchangeFileFormat, kUTTypeWaveformAudio, kUTTypeMP3 and kUTTypeMPEG4Audio	5 MB
Image	kUTTypeJPEG, kUTTypeGIF and kUTTypePNG	10 MB
Movie	kUTTypeMPEG, kUTTypeMPEG2Video, kUTTypeMPEG4 and kUTTypeAVIMovie	50 MB

When creating an attachment, you can specify optional details about how to present the thumbnail image for the image or movie. Use the UNNotificationAttachmentOptionsThumbnailClippingRectKey option to use only the specified portion of an image as a thumbnail. For animated images and movies, use the UNNotificationAttachmentOptionsThumbnailTimeKey option to select which frame to use for the thumbnail image.

The amount of storage space allocated for attachments is limited for each app. To delete attachments, use the methods of the UNUserNotificationCenterMBS class to remove the notification requests that contain those attachments.

203.8.2 Methods

203.8.3 attachment(identifier as String, File as FolderItem, options as Dictionary = nil, byref error as NSErrorMBS) as UNNotificationAttachmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates an attachment object from the specified file and options.
Notes: identifier: The unique identifier of the attachment. Use this string to identify the attachment later. If you specify an empty string, this method creates a unique identifier string for you.
URL: The URL of the file you want to attach to the notification. The URL must be a file URL and the file must be readable by the current process. This parameter must not be nil. For a list of supported file types, see Supported File Types.
options: A dictionary of options related to the attached file. Use the options to specify meta information about the attachment, such as the clipping rectangle to use for the resulting thumbnail.
error: An error object indicating whether a problem occurred. If the attachment was created successfully, this parameter is set to nil. If an error occurs, it is set to an error object containing information about why the attachment was not created. You may specify nil for this parameter if you do not want the error information.

Returns an attachment object containing information about the specified file or nil if the attachment could not be created.

This method verifies that the specified file is readable and that the file format is one of the supported types. When errors occur, the method provides an appropriate error object.
When you schedule a notification request containing the attachment, the attachment,Äôs file is moved to a new location to facilitate access by the appropriate processes. After the move, the only way to access the file is using the methods of the UNUserNotificationCenterMBS object.

- 203.8.4 attachment(identifier as String, URL as String, options as Dictionary = nil, byref error as NSErrorMBS) as UNNotificationAttachmentMBS 23868

203.8.4 attachment(identifier as String, URL as String, options as Dictionary = nil, byref error as NSErrorMBS) as UNNotificationAttachmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates an attachment object from the specified file and options.
Notes: identifier: The unique identifier of the attachment. Use this string to identify the attachment later. If you specify an empty string, this method creates a unique identifier string for you.
URL: The URL of the file you want to attach to the notification. The URL must be a file URL and the file must be readable by the current process. This parameter must not be nil. For a list of supported file types, see Supported File Types.
options: A dictionary of options related to the attached file. Use the options to specify meta information about the attachment, such as the clipping rectangle to use for the resulting thumbnail.
error: An error object indicating whether a problem occurred. If the attachment was created successfully, this parameter is set to nil. If an error occurs, it is set to an error object containing information about why the attachment was not created. You may specify nil for this parameter if you do not want the error information.

Returns an attachment object containing information about the specified file or nil if the attachment could not be created.

This method verifies that the specified file is readable and that the file format is one of the supported types. When errors occur, the method provides an appropriate error object.
When you schedule a notification request containing the attachment, the attachment,Äôs file is moved to a new location to facilitate access by the appropriate processes. After the move, the only way to access the file is using the methods of the UNUserNotificationCenterMBS object.
See also:

- 203.8.3 attachment(identifier as String, File as FolderItem, options as Dictionary = nil, byref error as NSErrorMBS) as UNNotificationAttachmentMBS 23867

203.8.5 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationAttachment class is available.

Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

203.8.6 Constructor(identifier as String, File as FolderItem, options as Dictionary = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates an attachment object from the specified file and options.
Notes: identifier: The unique identifier of the attachment. Use this string to identify the attachment later. If you specify an empty string, this method creates a unique identifier string for you.
URL: The URL of the file you want to attach to the notification. The URL must be a file URL and the file must be readable by the current process. This parameter must not be nil. For a list of supported file types, see Supported File Types.
options: A dictionary of options related to the attached file. Use the options to specify meta information about the attachment, such as the clipping rectangle to use for the resulting thumbnail.
error: An error object indicating whether a problem occurred. If the attachment was created successfully, this parameter is set to nil. If an error occurs, it is set to an error object containing information about why the attachment was not created. You may specify nil for this parameter if you do not want the error information.

Returns an attachment object containing information about the specified file or nil if the attachment could not be created.

This method verifies that the specified file is readable and that the file format is one of the supported types. When errors occur, the method provides an appropriate error object.
When you schedule a notification request containing the attachment, the attachment,Äôs file is moved to a new location to facilitate access by the appropriate processes. After the move, the only way to access the file is using the methods of the UNUserNotificationCenterMBS object.
See also:

- 203.8.7 Constructor(identifier as String, URL as String, options as Dictionary = nil) 23869

203.8.7 Constructor(identifier as String, URL as String, options as Dictionary = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates an attachment object from the specified file and options.
Notes: identifier: The unique identifier of the attachment. Use this string to identify the attachment later. If you specify an empty string, this method creates a unique identifier string for you.
URL: The URL of the file you want to attach to the notification. The URL must be a file URL and the file must be readable by the current process. This parameter must not be nil. For a list of supported file types, see Supported File Types.
options: A dictionary of options related to the attached file. Use the options to specify meta information about the attachment, such as the clipping rectangle to use for the resulting thumbnail.

error: An error object indicating whether a problem occurred. If the attachment was created successfully, this parameter is set to nil. If an error occurs, it is set to an error object containing information about why the attachment was not created. You may specify nil for this parameter if you do not want the error information.

Returns an attachment object containing information about the specified file or nil if the attachment could not be created.

This method verifies that the specified file is readable and that the file format is one of the supported types. When errors occur, the method provides an appropriate error object.
When you schedule a notification request containing the attachment, the attachment,Äôs file is moved to a new location to facilitate access by the appropriate processes. After the move, the only way to access the file is using the methods of the UNUserNotificationCenterMBS object.
See also:

- 203.8.6 Constructor(identifier as String, File as FolderItem, options as Dictionary = nil) 23869

203.8.8 copy as UNNotificationAttachmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

203.8.9 UNNotificationAttachmentOptionsThumbnailClippingRectKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The clipping rectangle for a thumbnail image.
Notes: The value of this key is a dictionary containing a normalized CGRectMBS—that is, a unit rectangle whose values are in the range 0.0 to 1.0 and represent the portion of the original image that you want to display. For example, specifying an origin of (0.25, 0.25) and a size of (0.5, 0.5) defines a clipping rectangle that shows only the center portion of the image.

203.8.10 UNNotificationAttachmentOptionsThumbnailHiddenKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether the attachment,Äôs thumbnail is hidden.
Notes: The value of this key is a number containing a Boolean value. When set to true, the attachment,Äôs thumbnail is not displayed. If you do not include this key, the thumbnail is shown.

203.8.11 UNNotificationAttachmentOptionsThumbnailTimeKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The frame number of an animation to use as a thumbnail image.
Notes: For animated images, the value of this key is an number containing the frame number to use as the thumbnail. For movies, the value of this key is the time (in seconds) into the movie from which to grab the thumbnail image.

203.8.12 UNNotificationAttachmentOptionsTypeHintKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A hint about an attachment,Äôs file type.
Notes: The value of this key is a string containing a Uniform Type Identifier (UTI) that describes the file,Äôs type. If you do not include this key, the attachment,Äôs filename extension is used to determine its type.

203.8.13 Properties

203.8.14 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

203.8.15 identifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The unique identifier for the attachment.
Notes: (Read only property)

203.8.16 type as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The UTI type of the attachment.
Notes: The value of this property is derived from the attachment data.

(Read only property)

203.8.17 URL as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The URL of the file for this attachment.
Notes: The file at the specified URL is security scoped to your app. Before you access it, call the startAccessingSecurityScopedResource method of NSURL.
(Read only property)

203.9 class UNNotificationCategoryMBS

203.9.1 class UNNotificationCategoryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A type of notification that your app supports and the custom actions to display with it.
Example:

```
// register a category with two buttons for notifications
// Center is a property of the window: Center As UNUserNotificationCenterMBS
Var actions() As UNNotificationActionMBS
actions.Add New UNNotificationActionMBS("accept", "Accept", UNNotificationActionMBS.OptionForeground)
actions.Add New UNNotificationActionMBS("decline", "Decline", UNNotificationActionMBS.OptionDestructive)

Var intents() As String
Var category As New UNNotificationCategoryMBS("invitation", actions, intents, UNNotificationCategoryMBS.OptionNone)

Var categories() As UNNotificationCategoryMBS
categories.Add category
Center.setNotificationCategories categories

// a notification uses it by setting the categoryIdentifier
Var content As New UNMutableNotificationContentMBS
content.title = "Meeting at 3 PM"
content.categoryIdentifier = "invitation"
Center.addNotificationRequest New UNNotificationRequestMBS("meeting", content, Nil)
```

Notes: A UNNotificationCategoryMBS object defines a type of notification that your executable can receive. You create category objects to define your app's actionable notifications—that is, notifications that have action buttons that the user can select in response to the notification. Each category object you create stores the actions and other behaviors associated with a specific type of notification. Register your category objects using the setNotificationCategories method of UNUserNotificationCenterMBS. You can register as many category objects as you want.

To apply category objects to your notifications, include the category,Äôs identifier string in the payload of any notifications you create. For local notifications, put this string in the categoryIdentifier property of the UNMutableNotificationContentMBS object that you use to specify the notification,Äôs content. For remote notifications, use this string as the value of the category key in the aps dictionary of your payload.

Categories can have associated actions, which define custom buttons to display for notifications of that category. When space is unlimited, the system displays up to 10 actions. When space is limited, the system displays at most two actions.

203.9.2 Methods

203.9.3 actions as UNNotificationActionMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The actions to display when a notification of this type is presented.
Notes: When displaying a notification assigned to this category, the system adds a button to the notification interface for each action in this property. These buttons are displayed after the notification,Äôs content but before the Dismiss button.
When displaying banner notifications, the system displays only the first two actions.

203.9.4 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationCategory class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

203.9.5 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, categorySummaryFormat as String, options as Integer) as UNNotificationCategoryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a category object containing the specified actions and options, a hidden previous placeholder, and the category,Äôs summary format string.
See also:

- 203.9.6 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, options as Integer) as UNNotificationCategoryMBS 23874
- 203.9.7 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, options as Integer) as UNNotificationCategoryMBS 23875

203.9.6 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, options as Integer) as UNNotificationCategoryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a category object containing the specified actions, options, and a hidden previous placeholder.
Notes: identifier: The unique identifier for the category. Each category that your app uses must have a unique identifier. Do not specify an empty string.
actions: The actions to display when notifications of this type are delivered. When minimal space is available, only the first two actions in the array are displayed. You may specify nil for this parameter if you do not want to display custom actions.
intentIdentifiers: The intent identifier strings that you want to associate with notifications of this type. The Intents framework defines constants for each type of intent that you can associate with your notifications.
hiddenPreviewsBodyPlaceholder: A placeholder string to display when the user has disabled notification previews for the app. Include the characters %u in the string to represent the number of notifications with the same thread identifier. (No other formatting characters are supported.) For example, the string "%u Messages" becomes "2 Messages" when there are two messages.
To specify different strings for the singular and plural cases, use the localizedUserNotificationStringForKey method of string to specify the value for this parameter. The key passed to that method contains the identifier of an entry in a .stringsdict property list of your project. A strings dictionary lets you specify different formatted strings based on the language rules, and is as described in Internationalization and Localization Guide.
options: Additional options for handling notifications of this type. For a list of possible values, see UNNotificationCategoryOptions.
See also:

- 203.9.5 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, categorySummaryFormat as String, options as Integer) as UNNotificationCategoryMBS 23874
- 203.9.7 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, options as Integer) as UNNotificationCategoryMBS 23875

203.9.7 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, options as Integer) as UNNotificationCategoryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a category object containing the specified actions and options.
Notes: identifier: The unique identifier for the category. Each category that your app uses must have a unique identifier. Do not specify an empty string.
actions: The actions to display when notifications of this type are delivered. When minimal space is available, only the first two actions in the array are displayed. You may specify nil for this parameter if you do not want to display custom actions.
intentIdentifiers: The intent identifier strings that you want to associate with notifications of this type. The Intents framework defines constants for each type of intent that you can associate with your notifications.
options: Additional options for handling notifications of this type. For a list of possible values, see UNNotificationCategoryOptions.

Returns an initialized category object.

See also:

- 203.9.5 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, categorySummaryFormat as String, options as Integer) as UNNotificationCategoryMBS 23874

203.9.9 Constructor(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, options as Integer)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a category object containing the specified actions, options, and a hidden previous placeholder.
Notes: identifier: The unique identifier for the category. Each category that your app uses must have a unique identifier. Do not specify an empty string.
actions: The actions to display when notifications of this type are delivered. When minimal space is available, only the first two actions in the array are displayed. You may specify nil for this parameter if you do not want to display custom actions.
intentIdentifiers: The intent identifier strings that you want to associate with notifications of this type. The Intents framework defines constants for each type of intent that you can associate with your notifications.
hiddenPreviewsBodyPlaceholder: A placeholder string to display when the user has disabled notification previews for the app. Include the characters %u in the string to represent the number of notifications with the same thread identifier. (No other formatting characters are supported.) For example, the string "%u Messages" becomes "2 Messages" when there are two messages.
To specify different strings for the singular and plural cases, use the localizedUserNotificationStringForKey

method of string to specify the value for this parameter. The key passed to that method contains the identifier of an entry in a .stringsdict property list of your project. A strings dictionary lets you specify different formatted strings based on the language rules, and is as described in Internationalization and Localization Guide.
options: Additional options for handling notifications of this type. For a list of possible values, see UNNotificationCategoryOptions.
See also:

- 203.9.8 Constructor(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, categorySummaryFormat as String, options as Integer) 23876
- 203.9.10 Constructor(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, options as Integer) 23877

203.9.10 Constructor(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, options as Integer)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a category object containing the specified actions and options.
Notes: identifier: The unique identifier for the category. Each category that your app uses must have a unique identifier. Do not specify an empty string.
actions: The actions to display when notifications of this type are delivered. When minimal space is available, only the first two actions in the array are displayed. You may specify nil for this parameter if you do not want to display custom actions.
intentIdentifiers: The intent identifier strings that you want to associate with notifications of this type. The Intents framework defines constants for each type of intent that you can associate with your notifications.
options: Additional options for handling notifications of this type. For a list of possible values, see UNNotificationCategoryOptions.

Returns an initialized category object.
See also:

- 203.9.8 Constructor(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, categorySummaryFormat as String, options as Integer) 23876
- 203.9.9 Constructor(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, options as Integer) 23876

203.9.11 copy as UNNotificationCategoryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

203.9.12 intentIdentifiers as String()

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The intents related to notifications of this category.
Notes: When a notification is delivered, the presence of an intent identifier lets the system know that the notification is potentially related to the handling of a request made through Siri.

203.9.13 Properties

203.9.14 categorySummaryFormat as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A format string for the summary description used when the system groups the category,Äôs notifications.
Notes: (Read only property)

203.9.15 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

203.9.16 hiddenPreviewsBodyPlaceholder as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The placeholder text to display when notification previews are disabled for the app.
Notes: The string in this property may contain the special characters %u as a placeholder for the number of messages with the same thread identifier. If the string in this property is declared in a .stringsdict property list, the system formats the preview message using the information in that file. For more information about specifying a .stringsdict property file, see Internationalization and Localization Guide.
(Read only property)

203.9.17 identifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The unique string assigned to the category.

Notes: Use this string to differentiate the different types of notifications that your app can send. To assign a category to a local notification, assign this string to the categoryIdentifier property of the content object. To assign a category to a remote notification, use the string as the value of the category key in the aps dictionary of the notification payload.
(Read only property)

203.9.18 options as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Options for how to handle notifications of this type.
Notes: (Read only property)

203.9.19 Constants

Options

Constant	Value	Description
OptionAllowInCarPlay	2	Allow CarPlay to display notifications of this type. Apps must be approved for CarPlay overall and then you must enable CarP for the notification types you want displayed. If a category does not explic contain this option, notifications of that type are not displayed in a CarP environment.
OptionCustomDismissAction	1	Send dismiss actions to the UNUserNotificationCenter object,Äôs delegate handling.
OptionHiddenPreviewsShowSubtitle	8	Show the notification's subtitle, even if the user has disabled notification p views for the app.
OptionHiddenPreviewsShowTitle	4	Show the notification's title, even if the user has disabled notification previ for the app.
OptionNone	0	No options.

203.10 class UNNotificationContentMBS

203.10.1 class UNNotificationContentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The uneditable content of a notification.
Example:

```
// list the notifications of the app still shown in Notification Center
// MyNotificationCenter is a subclass of UNUserNotificationCenterMBS with the getDeliveredNotifications-
sCompleted event implemented.
// Center is a property of the window: Center As MyNotificationCenter
Center = New MyNotificationCenter
Center.getDeliveredNotifications

// in MyNotificationCenter:
Sub getDeliveredNotificationsCompleted(notifications() As UNNotificationMBS, tag As Variant) Handles
getDeliveredNotificationsCompleted
For Each n As UNNotificationMBS In notifications
Var content As UNNotificationContentMBS = n.request.content
System.DebugLog content.title + ": " + content.body + " (category " + content.categoryIdentifier + ")"
Next
End Sub
```

Notes: A UNNotificationContent object contains the data associated with a notification. When your app receives a notification, the associated UNNotificationRequestMBS object contains an object of this type with the content that your app received. Use the content object to get the details of the notification, including the type of notification that was delivered, any custom data you stored in the userInfo dictionary before scheduling the notification, and any attachments.
Don't create instances of this class directly. For remote notifications, the contents of this object are derived from the JSON payload that your server sends to the APNS server. For local notifications, create a UNMutableNotificationContentMBS object, and configure the contents of that object instead.
Blog Entries

- MBS Xojo Plugins, version 21.1pr4

203.10.2 Methods

203.10.3 attachment(Index as integer) as UNNotificationAttachmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Queries attachment with given index.
Notes: Index from 0 to attachmentCount-1.

203.10.4 attachments as UNNotificationAttachmentMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: An array of attachments to display with the notification.
Notes: Use this property to retrieve the images, movies, and audio files associated with your notification,Äôs content. A notification content app extension might use these values to add the associated content to its view controller.

203.10.5 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationContent class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

203.10.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The private constructor.
See also:

- 203.10.7 Constructor(Handle as Integer) 23881

203.10.7 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a UNNotificationContent reference from a declare.
The object is retained.
See also:

- 203.10.6 Constructor 23881

203.10.8 copy as UNNotificationContentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

203.10.9 mutableCopy as UNMutableNotificationContentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a mutable copy of the object.

203.10.10 Properties

203.10.11 attachmentCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The attachment count.
Notes: (Read only property)

203.10.12 badge as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The number to display as the app,Äôs icon badge.
Notes: When the number in this property is 0, the system does not display a badge. When the number is greater than 0, the system displays the badge with the specified number. When the value in this property is not set, the system leaves the current badge unchanged.
(Read only property)

203.10.13 body as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The message displayed in the notification alert.
Notes: The body text contains the final text that you want to display. If your app is not authorized to display alert-based notifications, this property is ignored.
If you specified two percent symbols (%%) in the message body, the system replaces it with a single percent symbol (%). The system strips all other printf style escape characters from your string prior to display.
(Read only property)

203.10.14 categoryIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The identifier of the app-defined category object.

Notes: Use notification types to distinguish between the different types of notifications your app supports. You use this support primarily to create actionable notifications—that is, notifications with custom action buttons—and to redirect your notifications through either your notification service app extension or your notification content app extension.
For remote notifications, this property is set to the value of the category key in the aps dictionary.
(Read only property)

203.10.15 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

203.10.16 sound as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The sound to play when the notification is delivered.
Notes: Notifications can play a default sound or a custom sound. For information on how to specify custom sounds for your notifications, see UNNotificationSoundMBS.
(Read only property)

203.10.17 subtitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A secondary description of the reason for the alert.
Notes: Subtitles offer additional context in cases where the title alone is not clear. Subtitles are not displayed in all cases. If your app is not authorized to display alert-based notifications, this property is ignored.
(Read only property)

203.10.18 summaryArgument as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The string the notification adds to the category,Äôs summary format string.
Notes: (Read only property)

203.10.19 summaryArgumentCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The number of items the notification adds to the category,Äôs summary format string.
Notes: (Read only property)

203.10.20 threadIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: An identifier that you use to group related notifications together.
Notes: For remote notifications, this property is set to the value of the thread-id key in the aps dictionary.
(Read only property)

203.10.21 title as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A short description of the reason for the alert.
Notes: When a title is present, the system attempts to display a notification alert. If your app is not authorized to display alert-based notifications, this property is ignored.
Title strings should be short, usually only a couple of words describing the reason for the notification. In watchOS, the title string is displayed as part of the short look notification interface, which has limited space.
(Read only property)

203.10.22 userInfo as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A dictionary of custom information associated with the notification.
Notes: For remote notifications, this property contains the entire notification payload. For local notifications, you configure the property directly before scheduling the notification.
The keys in this dictionary must be property-list types—that is, they must be types that can be serialized into the property-list format.
(Read only property)

203.11 class UNNotificationMBS

203.11.1 class UNNotificationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The data for a local or remote notification that was delivered to your app.
Example:

```
// show notifications as banner with sound even while the app is active
// MyNotificationCenter is a subclass of UNUserNotificationCenterMBS with the willPresentNotification event implemented.
// Center is a property of the window: Center As MyNotificationCenter
Center = New MyNotificationCenter

// in MyNotificationCenter:
Sub willPresentNotification(notification As UNNotificationMBS, ByRef options As Integer) Handles willPresentNotification
System.DebugLog "Delivered " + notification.DateTime.ToString + ": " + notification.request.content.title
options = UNUserNotificationCenterMBS.NotificationPresentationOptionBanner + UNUserNotificationCenterMBS.NotificationPresentationOptionSound
End Sub
```

Notes: A UNNotification object contains the initial notification request, which contains the notification's payload, and the date on which the notification was delivered.
Don't create notification objects directly. When handling notifications, the system delivers notification objects to your events. The UNUserNotificationCenterMBS object also maintains the list of notifications that were previously delivered, and you use the getDeliveredNotifications method to retrieve those objects.

203.11.2 Methods

203.11.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotification class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

203.11.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The private constructor.
See also:

- 203.11.5 Constructor(Handle as Integer) 23886

203.11.5 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a UNNotification reference from a declare.
The object is retained.
See also:

- 203.11.4 Constructor 23886

203.11.6 copy as UNNotificationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

203.11.7 UNErrorDomain as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The error domain for notifications.

203.11.8 Properties

203.11.9 Date as Date

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The delivery date of the notification.
Notes: This date is displayed to the user in Notification Center.
(Read only property)

203.11.10 DateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The delivery date of the notification.
Notes: This date is displayed to the user in Notification Center.
(Read only property)

203.11.11 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

203.11.12 request as UNNotificationRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The notification request containing the payload and trigger condition for the notification.
Notes: For local notifications, the request object is a copy of the one you originally configured. For remote notifications, the request object is synthesized from information received from Apple Push Notification service.
(Read only property)

203.11.13 Constants

Errors

Constant	Value	Description
UNErrorCodeAttachmentCorrupt	105	The file for an attachment is corrupt.
UNErrorCodeAttachmentInvalidFileSize	102	An attachment is too large.
UNErrorCodeAttachmentInvalidURL	100	The URL for an attachment was invalid.
UNErrorCodeAttachmentMoveIntoDataStoreFailed	104	An error occurred when trying to move an attachment to the
UNErrorCodeAttachmentNotInDataStore	103	The specified attachment is not in the system data store.
UNErrorCodeAttachmentUnrecognizedType	101	The file type of an attachment is not supported.
UNErrorCodeNotificationInvalidNoContent	1401	The notification has no user-facing content, but should.
UNErrorCodeNotificationInvalidNoDate	1400	The notification does not have an associated date, but shou
UNErrorCodeNotificationsNotAllowed	1	Notifications are not allowed. This error occurs when you try to submit a notification req or app extension is not authorized to schedule notifications.

203.12 class UNNotificationRequestMBS

203.12.1 class UNNotificationRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A request to schedule a local notification, which includes the content of the notification and the trigger conditions for delivery.
Example:

```
// schedule a notification to be shown every hour
// Center is a property of the window: Center As UNUserNotificationCenterMBS
Var content As New UNMutableNotificationContentMBS
content.title = "Take a break"
content.body = "Stand up and move a bit."

Var trigger As New UNTimeIntervalNotificationTriggerMBS(3600, True) // repeats
Var request As New UNNotificationRequestMBS("break-reminder", content, trigger)

Center.addNotificationRequest request
```

Notes: Create a UNNotificationRequestMBS object when you want to schedule the delivery of a local notification. A notification request object contains a UNNotificationContentMBS object with the payload to be delivered, and it contains the UNNotificationTriggerMBS object with the conditions that trigger the delivery of the notification. To schedule the delivery of your notification, pass your request object to the addNotificationRequest method of the shared user notification center object.

After scheduling a request, you interact with UNNotificationRequestMBS objects in the following ways:

- View your app's pending notifications by calling the getPendingNotificationRequestsWithCompletionHandler: method of your shared user notification center object.
- When a notification is delivered to your app, the provided UNNotificationMBS object contains a UNNotificationRequest object that you can inspect to get the notification details.
- Use the request's identifier to remove delivered notifications from Notification Center.

When receiving a local or remote notification, use the provided UNNotificationRequestMBS object to fetch details about the notification.

203.12.2 Methods

203.12.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationRequest class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

203.12.4 Constructor(identifier as string, content as UNNotificationContentMBS, trigger as UNNotificationTriggerMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a notification request object that you use to schedule a notification.
Notes: identifier: An identifier for the request; this parameter must not be nil. You can use this identifier to cancel the request if it is still pending (see the removePendingNotificationRequests method).
content: The content of the notification. This parameter must not be nil.
trigger: The condition that causes the notification to be delivered. Specify nil to deliver the notification right away.

Returns a new notification request object.

Use this method when you want to schedule the delivery of a local notification. This method creates the request object that you subsequently pass to the addNotificationRequest method.
The system uses the identifier parameter to determine how to handle the request:

- If you provide a unique identifier, the system creates a new notification.
- If the identifier matches a previously delivered notification, the system alerts the user again, replaces the old notification with the new one, and places the new notification at the top of the list.
- If the identifier matches a pending request, the new request replaces the pending request.

203.12.5 Copy as UNNotificationRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

203.12.6 request(identifier as string, content as UNNotificationContentMBS, trigger as UNNotificationTriggerMBS) as UNNotificationRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a notification request object that you use to schedule a notification.
Notes: identifier: An identifier for the request; this parameter must not be nil. You can use this identifier to cancel the request if it is still pending (see the removePendingNotificationRequests method).
content: The content of the notification. This parameter must not be nil.
trigger: The condition that causes the notification to be delivered. Specify nil to deliver the notification right away.

Returns a new notification request object.

Use this method when you want to schedule the delivery of a local notification. This method creates the request object that you subsequently pass to the addNotificationRequest method.
The system uses the identifier parameter to determine how to handle the request:

- If you provide a unique identifier, the system creates a new notification.
- If the identifier matches a previously delivered notification, the system alerts the user again, replaces the old notification with the new one, and places the new notification at the top of the list.
- If the identifier matches a pending request, the new request replaces the pending request.

203.12.7 Properties

203.12.8 content as UNNotificationContentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The content associated with the notification.
Notes: Use this property to access the contents of the notification.
(Read only property)

203.12.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

203.12.10 identifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The unique identifier for this notification request.
Notes: Use this string to identify notifications in your app. For example, you can pass this string to the removePendingNotificationRequests method to cancel a previously scheduled notification.
If you use the same identifier when scheduling a new notification, the system removes the previously scheduled notification with that identifier and replaces it with the new one.
For local notifications, this property is set to the value passed to the request,Äôs initializer (see the request method). For remote notifications, it is set to the value of the apns-collapse-id key that you specified in the APNs request header when generating the remote notification. If no value is set, the system automatically assigns an identifier.
(Read only property)

203.12.11 trigger as UNNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The conditions that trigger the delivery of the notification.
Notes: For notifications that have already been delivered, use this property to determine what caused the delivery to occur. For remote notifications, this property contains a UNPushNotificationTriggerMBS object. For other notifications, the type is based on the trigger condition specified in the original request.
(Read only property)

203.13 class UNNotificationResponseMBS

203.13.1 class UNNotificationResponseMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The user,Äôs response to an actionable notification.
Notes: When the user interacts with a delivered notification, the system delivers a UNNotificationResponseMBS object to your app so that you can process the response. Users can interact with delivered notifications in many ways. If the notification,Äôs category had associated action buttons, they can select one of those buttons. Users can also dismiss the notification without selecting one of your actions and they can open your app. A response object tells you which option the user selected.

You don't create UNNotificationResponseMBS objects yourself. Instead, the shared user notification center object creates them and delivers them to the didReceiveNotificationResponse event. Use that method to extract any needed information from the response object and take appropriate action.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

203.13.2 Methods

203.13.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationResponse class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

203.13.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The private constructor.

203.13.5 copy as UNNotificationResponseMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

203.13.6 UNNotificationDefaultActionIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: An action that indicates the user opened the app from the notification interface.
Notes: The delivery of this action does not require any special configuration of notification categories. Use the didReceiveNotificationResponse event to receive this action.

203.13.7 UNNotificationDismissActionIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The action that indicates the user explicitly dismissed the notification interface.
Notes: This action is delivered only if the notification,Äôs category object was configured with the UNNotificationCategoryOptionCustomDismissAction option. To trigger this action, the user must explicitly dismiss the notification interface. For example, the user must tap the Dismiss button or swipe down on the notification interface in watchOS to trigger this action.
Ignoring a notification or flicking away a notification banner does not trigger this action.

203.13.8 Properties

203.13.9 actionIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The identifier string of the action that the user selected.
Notes: This parameter may contain one the identifier of one of your UNNotificationActionMBS objects or it may contain a system-defined identifier. The system defined identifiers are UNNotificationDefaultActionIdentifier and UNNotificationDismissActionIdentifier, which indicate that the user opened the app or dismissed the notification without any further actions.
(Read only property)

203.13.10 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

203.13.11 notification as UNNotificationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The notification to which the user responded.
Notes: (Read only property)

203.14 class UNNotificationSettingsMBS

203.14.1 class UNNotificationSettingsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The object for managing notification-related settings and the authorization status of your app.
Example:

```
// check whether the user allows notifications for the app
// MyNotificationCenter is a subclass of UNUserNotificationCenterMBS with the getNotificationSettingsCompleted event implemented.
// Center is a property of the window: Center As MyNotificationCenter
Center = New MyNotificationCenter
Center.getNotificationSettings

// in MyNotificationCenter:
Sub getNotificationSettingsCompleted(settings As UNNotificationSettingsMBS, tag As Variant) Handles getNotificationSettingsCompleted
Select Case settings.authorizationStatus
Case UNNotificationSettingsMBS.AuthorizationStatusAuthorized
System.DebugLog "Allowed. Sound: " + Str(settings.soundSetting = UNNotificationSettingsMBS.NotificationSettingEnabled)
Case UNNotificationSettingsMBS.AuthorizationStatusDenied
System.DebugLog "Denied, please enable notifications in System Settings."
Case UNNotificationSettingsMBS.AuthorizationStatusNotDetermined
Me.requestAuthorization(UNUserNotificationCenterMBS.AuthorizationOptionAlert + UNUserNotificationCenterMBS.AuthorizationOptionSound)
End Select
End Sub
```

Notes: A UNNotificationSettingsMBS object contains the current authorization status and notification-related settings for your app. Apps must receive authorization to schedule notifications and to interact with the user. Apps that run in CarPlay must similarly receive authorization to do so. You use this object to determine what notification-related actions your app is allowed to perform. You might then use that information to enable, disable, or adjust your app's notification-related behaviors. Regardless of whether you take action, the system enforces your app's settings by preventing denied interactions from occurring.
You don't create instances of this class directly. Instead, call the getNotificationSettings method of your app,Äôs UNUserNotificationCenterMBS object to get the current settings.
For more information about requesting authorization for user interactions, see UNUserNotificationCenter.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

203.14.2 Methods

203.14.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationSettings class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

203.14.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The private constructor.

203.14.5 copy as UNNotificationSettingsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

203.14.6 settings as UNNotificationSettingsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The last settings received via getNotificationSettingsCompleted event.
Notes: You call getNotificationSettings and whether you implement and handle the event or not, the settings are stored by plugin in a global variable, so you can query them here.

203.14.7 Properties

203.14.8 alertSetting as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The authorization status for displaying alerts.
Notes: When the value of this property is NotificationSettingEnabled, the app is authorized to display alerts. Authorization does not guarantee that alerts always appear on the user,Äôs screen. When a device is unlocked, the alertStyle property determines the presentation style for the alert, which can include not displaying the alert at all.

The system tries to display an alert when the title, subtitle, or body properties of a UNNotificationContentMBS object contain values, or when the aps dictionary in a remote notification contains the alert key.
(Read only property)

203.14.9 alertStyle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The type of alert that the app may display when the device is unlocked.
Notes: When alerts are authorized, this property specifies the presentation style for alerts when the device is unlocked. The user may choose to display alerts as automatically disappearing banners or as modal windows that require explicit dismissal. The user may also choose not to display alerts at all.
(Read only property)

203.14.10 authorizationStatus as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The app's ability to schedule and receive local and remote notifications.
Notes: When the value of this property is AuthorizationStatusAuthorized, your app is allowed to schedule and receive local and remote notifications. When authorized, use the alertSetting, badgeSetting, and soundSetting properties to specify which types of interactions are allowed. When the value of the property is AuthorizationStatusDenied, the system doesn't deliver notifications to your app, and the system ignores any attempts to schedule local notifications.
The value of this property is AuthorizationStatusNotDetermined if your app has never requested authorization using the requestAuthorization method.
(Read only property)

203.14.11 badgeSetting as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The authorization status for badging your app,Äôs icon.
Notes: When the value of this property is NotificationSettingEnabled, the app is authorized to badge its icon. The system tries to badge your app's icon when the badge property of a UNNotificationContentMBS object contain a value, or when the aps dictionary in a remote notification contains the badge key.
(Read only property)

203.14.12 criticalAlertSetting as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The authorization status to play sounds for critical alerts.
Notes: When NotificationSettingEnabled, this property authorizes the app to play critical sounds that ignore Do Not Disturb and the device,Äôs mute switch.
For local notifications, the system attempts to play a critical sound when the sound property of the UNNotificationContentMBS object contains an object returned by the defaultCriticalSound property, the criticalSoundNamed method, or a related method.
For remote notifications, the system attempts to play a critical sound when the notification,Äôs payload contains a sound directory that contains the critical key.
Critical alerts require a special entitlement issued by Apple.
(Read only property)

203.14.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

203.14.14 lockScreenSetting as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The setting that indicates whether your app,Äôs notifications appear onscreen when the device is locked.
Notes: Even if the user disables lock screen notifications, your notifications may still appear onscreen when the device is unlocked.
(Read only property)

203.14.15 notificationCenterSetting as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The setting that indicates whether your app,Äôs notifications are displayed in Notification Center.
Notes: The default value of this property is NotificationSettingEnabled.
(Read only property)

203.14.16 providesAppNotificationSettings as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A Boolean value indicating the system displays a button for in-app notification settings.
Notes: (Read only property)

203.14.17 showPreviewsSetting as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The setting that indicates whether the app shows a preview of the notification's content.
Notes: (Read only property)

203.14.18 soundSetting as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The authorization status for playing sounds for incoming notifications.
Notes: When the value of this property is NotificationSettingEnabled, the app is authorized to play sounds. The system tries to play a sound when the sound property of the UNNotificationContentMBS object contains a value, or when the aps dictionary in a remote notification contains the sound key.
(Read only property)

203.14.19 Constants

Alert Style

Constant	Value	Description
AlertStyleAlert	2	Modal alerts. Alerts are displayed in a modal window that must be dismissed explicitly by the user.
AlertStyleBanner	1	Banner alerts. Alerts are displayed as a slide-down banner. Banners appear for a short time and then disappear automatically if the user does nothing.
AlertStyleNone	0	No alert.

Authorization Status

Constant	Value	Description
AuthorizationStatusAuthorized	2	The app is authorized to schedule or receive notifications.
AuthorizationStatusDenied	1	The app isn't authorized to schedule or receive notifications.
AuthorizationStatusNotDetermined	0	The user hasn't yet made a choice about whether the app is allowed to sched notifications.
AuthorizationStatusProvisional	3	The application is provisionally authorized to post noninterruptive user not cations.

Notification Settings

Constant	Value	Description
NotificationSettingDisabled	1	The setting is disabled.
NotificationSettingEnabled	2	The setting is enabled.
NotificationSettingNotSupported	0	The setting is not available to your app.

Show Preview Settings

Constant	Value	Description
ShowPreviewsSettingAlways	0	The notification's content is always shown, even when the device is lo
ShowPreviewsSettingNever	2	The notification's content is never shown, even when the device is un
ShowPreviewsSettingWhenAuthenticated	1	The notification's content is shown only when the device is unlocked.

203.15 class UNNotificationSoundMBS

203.15.1 class UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The sound played when a notification is delivered.
Example:

```
// show a notification with a custom sound
// Center is a property of the window: Center As UNUserNotificationCenterMBS
Var content As New UNMutableNotificationContentMBS
content.title = "Timer finished"
content.body = "Your tea is ready."
// the sound file must be in the Resources folder of the app bundle or in Library/Sounds
content.sound = UNNotificationSoundMBS.soundNamed("ding.aiff")
// or the default sound: content.sound = UNNotificationSoundMBS.defaultSound

Center.addNotificationRequest New UNNotificationRequestMBS("tea", content, Nil)
```

Notes: Create a UNNotificationSoundMBS object when you want the delivery of your notification to be accompanied by a specific sound. To play the default system sound, create your sound object using the defaultSound method. If you want to play a custom sound, create a new sound object and specify the name of the audio file that you want to play.

For local notifications, assign the sound object to the sound property of your UNMutableNotificationContentMBS object. For a remote notification, assign the name of your sound file to the sound key in the aps dictionary. You can also use a notification service app extension to add a sound file to a notification shortly before delivery. In your extension, create a UNNotificationSound object and add it to your notification content in the same way that you would for a local notification.
Audio files must already be on the user,Äôs device before they can be played. If you use a predefined set of sounds for your notifications, include the audio files in your app,Äôs bundle. For all other sounds, place a copy of the audio file in the Library/Sounds folder of your app,Äôs container directory. The UNNotificationSound object looks only in those two locations.

Prepare Sound Resources
The system sound facility plays custom alert sounds, so they must be in one of the following audio data formats:

- Linear PCM
- MA4 (IMA/ADPCM)
- ¬µLaw
- aLaw

You can package the audio data in an aiff, wav, or caf file. Sound files must be less than 30 seconds in length. If the sound file is longer than 30 seconds, the system plays the default sound instead.

You can use the afconvert command-line tool to convert sounds. For example, to convert the system sound Submarine.aiff to IMA4 audio in a CAF file, use the following command in Terminal:

afconvert /System/Library/Sounds/Submarine.aiff
textasciitilde /Desktop/sub.caf -d ima4 -f caff -v
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

203.15.2 Methods

203.15.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationSound class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

203.15.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The private constructor.

203.15.5 copy as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

203.15.6 criticalSoundNamed(name as string) as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a custom sound object for critical alerts.
Notes: name: The name of the sound file to play. This file must be located in the current executable,Äôs main bundle or in the Library/Sounds directory of the current app container directory. If files exist at both locations, the system uses the file from the Library/Sounds directory. This parameter must not be nil.

Returns a sound object representing a custom critical alert sound.

Critical alerts ignore the mute switch and Do Not Disturb. They require a special entitlement issued by Apple.
See also:

- 203.15.7 criticalSoundNamed(name as string, volume as double) as UNNotificationSoundMBS 23904

203.15.7 criticalSoundNamed(name as string, volume as double) as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a custom sound object for critical alerts with the specified volume.
Notes: name: The name of the sound file to play. This file must be located in the current executable,Äôs main bundle or in the Library/Sounds directory of the current app container directory. If files exist at both locations, the system uses the file from the Library/Sounds directory. This parameter must not be nil.
volume: The volume must be a value between 0.0 and 1.0.

Returns a sound object representing a custom critical alert sound at the specified volume.

Critical alerts ignore the mute switch and Do Not Disturb. They require a special entitlement issued by Apple.
See also:

- 203.15.6 criticalSoundNamed(name as string) as UNNotificationSoundMBS 23903

203.15.8 defaultCriticalSound as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The default sound used for critical alerts.
Notes: Critical alerts ingore the mute switch and Do Not Disturb. They require a special entitlement issued by Apple.

203.15.9 defaultCriticalSoundWithAudioVolume(volume as double) as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a sound object that plays the default critical alert sound at the specified volume.
Notes: volume: The volume must be a value between 0.0 and 1.0.

Returns a sound object representing the default critical alert sound at the specified volume.

Critical alerts ignore the mute switch and Do Not Disturb. They require a special entitlement issued by Apple.

203.15.10 defaultSound as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Returns an object representing the default sound for notifications.

203.15.11 soundNamed(name as string) as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a sound object that represents a custom sound file.
Notes: name: The name of the sound file to play. This file must be located in the current executable,Äôs main bundle or in the Library/Sounds directory of the current app container directory. This parameter must not be nil.

Returns a sound object representing the custom sound.

If a sound file with the given name exists both in the current bundle and in the Library/Sounds folder, this method chooses the file in the Library/Sounds folder.

203.15.12 Properties

203.15.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

203.16 class UNNotificationTriggerMBS

203.16.1 class UNNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The common behavior for subclasses that trigger the delivery of a local or remote notification.
Notes: The UNNotificationTrigger class is an abstract class for representing an event that triggers the delivery of a notification. You don't create instances of this class directly. Instead, you instantiate the concrete subclass that defines the trigger condition you want for your notification. You then assign the resulting object to the UNNotificationRequestMBS object that you use to schedule your notification.

Concrete trigger classes include the following:

- UNTimeIntervalNotificationTriggerMBS
- UNCalendarNotificationTriggerMBS
- UNLocationNotificationTriggerMBS
- UNPushNotificationTriggerMBS

This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

203.16.2 Methods

203.16.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationTrigger class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

203.16.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The private constructor.

203.16.5 copy as UNNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

203.16.6 Properties

203.16.7 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

203.16.8 repeats as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether the system reschedules the notification after it is delivered.
Notes: When this property is NO, the notification is delivered only once. When this property is YES, the notification request is rescheduled automatically, resulting in the notification being delivered each time the trigger condition is met. To unschedule the notification request, use the methods of the UNUserNotificationCenterMBS to remove the notification request.
(Read only property)

203.17 class UNPushNotificationTriggerMBS

203.17.1 class UNPushNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A trigger condition that indicates the notification was sent from Apple Push Notification Service (APNs).
Notes: You don't create instances of this class yourself. The system creates UNPushNotificationTrigger objects and associates them with requests that originated from Apple Push Notification service. You encounter instances of this class when managing your app,Äôs delivered notification requests, which store an object of this type in their trigger property.
Subclass of the UNNotificationTriggerMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

203.17.2 Methods

203.17.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The private constructor.

203.18 class UNTextInputNotificationActionMBS

203.18.1 class UNTextInputNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: An action that can accept user-typed text.
Notes: Use UNTextInputNotificationActionMBS objects to define an action that allows the user to provide a custom text-based response. When the user selects an action of this type, the system displays controls for the user to enter or dictate the text content. That text is then included in the response object that is delivered to your app.
Subclass of the UNNotificationActionMBS class.

203.18.2 Methods

203.18.3 action(identifier as string, title as string, options as integer, textInputButtonTitle as string, textInputPlaceholder as string) as UNTextInputNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates an action object that accepts text input from the user.
Notes: identifier: The string that you use internally to identify the action. This string must be unique among all of your app's supported actions. When the user selects the action, the system passes this string to your app and asks you to perform the related task. This parameter must not be nil or an empty string.
title: The localized string to display to the user. This string is used as the title of a button, which is added to the notification interface. This parameter must not be nil.
options: Additional options describing how the action behaves. Include options when you need the related behavior. For a list of possible values, see options.
textInputButtonTitle: The localized title of the text input button that is displayed to the user.
textInputPlaceholder: The localized placeholder text to display in the text input field.

Returns a new text input action object.

203.18.4 Constructor(identifier as string, title as string, options as integer, textInputButtonTitle as string, textInputPlaceholder as string)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates an action object that accepts text input from the user.
Notes: identifier: The string that you use internally to identify the action. This string must be unique among all of your app's supported actions. When the user selects the action, the system passes this string to your app and asks you to perform the related task. This parameter must not be nil or an empty string.

title: The localized string to display to the user. This string is used as the title of a button, which is added to the notification interface. This parameter must not be nil.
options: Additional options describing how the action behaves. Include options when you need the related behavior. For a list of possible values, see options.
textInputButtonTitle: The localized title of the text input button that is displayed to the user.
textInputPlaceholder: The localized placeholder text to display in the text input field.

Returns a new text input action object.

203.18.5 Properties

203.18.6 textInputButtonTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The localized title of the text input button that is displayed to the user.
Notes: (Read only property)

203.18.7 textInputPlaceholder as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The localized placeholder text to display in the text input field.
Notes: (Read only property)

203.19 class UNTextInputNotificationResponseMBS

203.19.1 class UNTextInputNotificationResponseMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The user,Äôs response to an actionable notification, including any custom text that the user typed or dictated.
Notes: The system delivers a UNTextInputNotificationResponse object to your app so that you can process user-provided text content. When defining your categories, you can specify an UNTextInputNotification-ActionMBS object instead of an UNNotificationActionMBS object for your action. If you do, the system creates an UNTextInputNotificationResponseMBS object when the user selects the accompanying action, and it fills the userText property with any user-entered text.

You don't create UNTextInputNotificationResponseMBS objects yourself. Instead, the shared user notification center object creates them and delivers them to the didReceiveNotificationResponse event. Use that method to extract any needed information from the response object and take appropriate action.
Subclass of the UNNotificationResponseMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

203.19.2 Methods

203.19.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The private constructor.

203.19.4 Properties

203.19.5 userText as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The text response provided by the user.
Notes: If the user does not specify any text, this property contains an empty string.
(Read only property)

203.20 class UNTimeIntervalNotificationTriggerMBS

203.20.1 class UNTimeIntervalNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A trigger condition that causes a notification to be delivered after the specified amount of time elapses.
Notes: Create a UNTimeIntervalNotificationTrigger object when you want to schedule the delivery of a local notification after the specified number of seconds elapse. You use this type of trigger to implement timers.
Subclass of the UNNotificationTriggerMBS class.

203.20.2 Methods

203.20.3 Constructor(timeInterval as double, repeats as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a time interval trigger from the specified time value.
Notes: timeInterval: The time (in seconds) that must elapse from the current time before the trigger fires. This value must be greater than zero.
repeats: Specify false to deliver the notification one time. Specify true to reschedule the notification request each time the notification is delivered. If this parameter is true, the value in the timeInterval parameter must be 60 seconds or greater.

Return Value:
A new time interval trigger based on the specified temporal information.

If you specify true for the repeats parameter, you must explicitly remove the notification request to stop the delivery of the associated notification. Use the methods of UNUserNotificationCenterMBS to remove notification requests that are no longer needed.

203.20.4 trigger(timeInterval as double, repeats as boolean) as UNTimeIntervalNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a time interval trigger from the specified time value.
Notes: timeInterval: The time (in seconds) that must elapse from the current time before the trigger fires. This value must be greater than zero.
repeats: Specify false to deliver the notification one time. Specify true to reschedule the notification request each time the notification is delivered. If this parameter is true, the value in the timeInterval parameter

must be 60 seconds or greater.

Return Value:
A new time interval trigger based on the specified temporal information.

If you specify true for the repeats parameter, you must explicitly remove the notification request to stop the delivery of the associated notification. Use the methods of UNUserNotificationCenterMBS to remove notification requests that are no longer needed.

203.20.5 Properties

203.20.6 nextTriggerDate as Date

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The next date at which the trigger conditions will be met.
Notes: Use this property to find out when a notification associated with this trigger will next be delivered.
(Read only property)

203.20.7 nextTriggerDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The next date at which the trigger conditions will be met.
Notes: Use this property to find out when a notification associated with this trigger will next be delivered.
(Read only property)

203.20.8 timeInterval as Double

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The time interval used to create the trigger.
Notes: This property contains the original time interval that you specified when creating the trigger object. The value in this property is not updated as time counts down. To find out when the trigger will fire next, call the nextTriggerDate method.
(Read only property)

203.21 class UNUserNotificationCenterMBS

203.21.1 class UNUserNotificationCenterMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The central object for managing notification-related activities for your app or app extension.
Example:

```
// ask for permission and show a notification after 5 seconds
// MyNotificationCenter is a subclass of UNUserNotificationCenterMBS with the events implemented.
// Center is a property of the app or window: Center As MyNotificationCenter

Center = New MyNotificationCenter
Center.requestAuthorization(UNUserNotificationCenterMBS.AuthorizationOptionAlert + UNUserNotificationCenterMBS.AuthorizationOptionSound)

// in MyNotificationCenter:
Sub requestAuthorizationCompleted(granted As Boolean, error As NSErrorMBS, tag As Variant) Handles requestAuthorizationCompleted
If Not granted Then Return

Var content As New UNMutableNotificationContentMBS
content.title = "Hello"
content.body = "This notification was sent from Xojo."
content.sound = UNNotificationSoundMBS.defaultSound

Var trigger As New UNTimeIntervalNotificationTriggerMBS(5, False)
Var request As New UNNotificationRequestMBS("hello", content, trigger)
Me.addNotificationRequest request
End Sub
```

- MBS Xojo Plugins, version 19.2pr4

203.21.2 Methods

203.21.3 addNotificationRequest(request as UNNotificationRequestMBS, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Schedules a local notification for delivery.
Notes: This method schedules local notifications only; you cannot use it to schedule the delivery of remote notifications. Upon calling this method, the system begins tracking the trigger conditions associated with your request. When the trigger condition is met, the system delivers your notification. If the request does not contain a UNNotificationTriggerMBS object, the notification is delivered right away.
You may call this method from any thread of your app.

request: The request object containing the notification payload and trigger information. This parameter must not be nil.

Calls addNotificationRequestCompleted event later. Request and tag parameter is passed through.

203.21.4 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNUserNotificationCenter class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

203.21.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Returns the shared user notification center object for your app or app extension.

203.21.6 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The destructor.

203.21.7 getDeliveredNotifications(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Returns a list of the app,Äôs notifications that are still displayed in Notification Center.
Notes: This method executes asynchronously, returning immediately and executing the provided block on a background thread when the results become available.

Calls getDeliveredNotificationsCompleted event later. Tag parameter is

203.21.8 getNotificationCategories(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Retrieves the app,Äôs currently registered notification categories.
Notes: Use this method to retrieve your app,Äôs currently registered notification types. You might use this method when you want to augment the current set of categories with new categories later on. Simply merge the returned set with any new category objects and register the updated set.

Calls getNotificationCategoriesCompleted event later. Tag parameter is passed through.

203.21.9 getNotificationSettings(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Requests the notification settings for this app.
Notes: Use this method to determine the user interactions and notification-related features that your app is authorized to use. You might then use this information to enable or disable specific notification-related features of your app.
When the user initially grants authorization to your app, the system gives your app a set of default notification-related settings. The user may change those settings at any time to enable or disable specific capabilities. For example, the user might disable the playing of sounds when a notification arrives.

Calls getNotificationSettingsCompleted event later. Tag parameter is passed through.

203.21.10 getPendingNotificationRequests(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Returns a list of all notification requests that are scheduled and waiting to be delivered.
Notes: This method executes asynchronously, returning immediately and executing the provided block on a secondary thread when the results are available.

Calls getPendingNotificationRequestsCompleted event later. Tag parameter is passed through.

203.21.11 removeAllDeliveredNotifications

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Removes all of the app,Äôs delivered notifications from Notification Center.
Notes: Use this method to remove all of your app,Äôs delivered notifications from Notification Center. The method executes asynchronously, returning immediately and removing the identifiers on a background thread. This method does not affect any notification requests that are scheduled, but have not yet been delivered.

203.21.12 removeAllPendingNotificationRequests

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Unschedules all pending notification requests.
Notes: This method executes asynchronously, removing all pending notification requests on a secondary thread.

203.21.13 removeDeliveredNotifications(identifiers() as string)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Removes the specified notification requests from Notification Center.
Notes: identifiers: An array of strings, each of which corresponds to a value in the identifier property of a UNNotificationRequestMBS object. This method ignores the identifiers of requests whose notifications are not currently displayed in Notification Center.

Use this method to selectively remove notifications that you no longer want displayed in Notification Center. The method executes asynchronously, returning immediately and removing the specified notifications on a background thread.

203.21.14 removePendingNotificationRequests(identifiers() as string)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Unschedules the specified notification requests.
Notes: identifiers: An array of strings, each of which contains the identifier of an active UNNotification-RequestMBS object. If the identifier belongs to a non repeating request, and the trigger condition for that request has already been met, this method ignores the identifier.

This method executes asynchronously, removing the pending notification requests on a secondary thread.

203.21.15 requestAuthorization(options as integer, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Requests authorization to interact with the user when local and remote notifications are delivered to the user's device.
Notes: options: The authorization options your app is requesting. You may combine the available constants to request authorization for multiple items. Request only the authorization options that you plan to use. For a list of possible values, see UNAuthorizationOptions.

Calls requestAuthorizationCompleted event later. The tag parameter is passed through.

If your app's local or remote notifications involve user interactions, you must request authorization for the system to perfom those interactions on your app's behalf. Interactions include displaying an alert, playing a sound, or badging the app's icon.

Always call this method before scheduling any local notifications and before registering with the Apple Push Notification service. Typically, you call this method at launch time when configuring your app's notification support.

The first time your app ever calls the method, the system prompts the user to authorize the requested interactions. The user may grant or deny authorization, and the system stores the user,Äôs response so that subsequent calls to this method do not prompt the user again. After determining the authorization status, the user notification center object executes the block in the completionHandler parameter. Use that block to make any adjustments to your app's behavior. For example, if authorization was denied, you might notify a remote notification server not to send notifications to the user,Äôs device.

The user may change the allowed interactions at any time in system settings. Use the getNotificationSettings method to determine what interactions are currently allowed for your app.

203.21.16 setNotificationCategories(categories() as UNNotificationCategoryMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Registers your app,Äôs notification types and the custom actions that they support.
Notes: categories: A set of UNNotificationCategoryMBS objects, each of which contains the actions that are displayed with the notification interface. This parameter must contain all of your app,Äôs supported categories.

Call this method at launch time to register your app,Äôs actionable notification types. This method registers all of your categories at once, replacing any previously registered categories with the new ones in the categories parameter. Typically, you call this method only once.

Each object in the categories parameter contains a string for identifying the notification's type. It also contains one or more custom actions that the user may perform in response to notifications of that type. When the system displays an alert for a notification, it looks in the notification payload for one of the identifier strings from your category objects. If it finds one, it adds user-selectable buttons for each action associated with that category object. Tapping a button notifies your app of the selected action, without bringing your app to the foreground.

203.21.17 Properties

203.21.18 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

203.21.19 supportsContentExtensions as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether the current device supports notification content extensions.
Notes: Notification content extensions let you customize the appearance of the alerts displayed for your app's notifications. The value of this property is YES for devices that support notification content extensions and NO for devices that do not support them.
(Read only property)

203.21.20 Events

203.21.21 addNotificationRequestCompleted(request as UNNotificationRequestMBS, error as NSErrorMBS, tag as variant)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Called by addNotificationRequest method when completed.
Notes: error: An error object indicating whether a problem occurred. If the notification was scheduled successfully, this parameter is nil; otherwise, it is set to an error object indicating the reason for the failure.

203.21.22 didReceiveNotificationResponse(response as UNNotificationResponseMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Asks you to process the user's response to a delivered notification.
Notes: response: The user,Äôs response to the notification. This object contains the original notification and the identifier string for the selected action. If the action allowed the user to provide a textual response, this parameter contains a UNTextInputNotificationResponseMBS object.

Use this method to process the user's response to a notification. If the user selected one of your app's custom actions, the response parameter contains the identifier for that action. (The response can also indicate that the user dismissed the notification interface, or launched your app, without selecting a custom action.) At the end of your implementation, call the completionHandler block to let the system know that you are done processing the user's response. If you do not implement this method, your app never responds to custom actions.

You specify your app,Äôs notification types at app launch using UNNotificationCategoryMBS objects, and you specify the custom actions for each type using UNNotificationActionMBS objects.

203.21.23 getDeliveredNotificationsCompleted(notifications() as UNNotificationMBS, tag as variant)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Called by getDeliveredNotifications method.
Notes: notifications: An array of UNNotificationMBS objects representing the local and remote notifications of your app that have been delivered and are still visible in Notification Center. If none of your app,Äôs notifications are visible in Notification Center, the array is empty.

203.21.24 getNotificationCategoriesCompleted(categories() as UNNotificationCategoryMBS, tag as variant)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Called by getNotificationCategories method later.
Notes: categories: The array of UNNotificationCategoryMBS objects containing your registered notification types. If your app has not yet registered any categories, this parameter is an empty set.

203.21.25 getNotificationSettingsCompleted(settings as UNNotificationSettingsMBS, tag as variant)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Called by getNotificationSettings when finished.

203.21.26 getPendingNotificationRequestsCompleted(requests() as UNNotificationRequestMBS, tag as variant)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Called by getPendingNotificationRequests method.
Notes: requests: An array of UNNotificationRequestMBS objects representing the scheduled notification requests. If there are no scheduled requests, this array is empty.

203.21.27 openSettingsForNotification(notification as UNNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Asks the delegate to display the in-app notification settings.

203.21.28 requestAuthorizationCompleted(granted as boolean, error as NSErrorMBS, tag as variant)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Called by requestAuthorization method when completed.
Notes: granted: A Boolean value indicating whether authorization was granted. The value of this parameter is YES when authorization was granted for one or more options. The value is false when authorization is denied for all options.
error: An object containing error information or nil if no error occurred.

203.21.29 willPresentNotification(notification as UNNotificationMBS, byref options as Integer)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Asks you how to handle a notification that arrived while the app was running in the foreground.
Notes: notification: The notification that is about to be delivered. Use the information in this object to determine an appropriate course of action. For example, you might use the information to update your

app,Äôs interface.

options
The option for notifying the user. Specify NotificationPresentationOptionNone to silence the notification completely. Specify other values to interact with the user. For a list of possible options, see constants.

If your app is in the foreground when a notification arrives, the shared user notification center calls this method to deliver the notification directly to your app. If you implement this method, you can take whatever actions are necessary to process the notification and update your app. When you finish, call the completionHandler block and specify how you want the system to alert the user, if at all.
If your event does not implement this method, the system behaves as if you had passed the UNNotificationPresentationOptionNone option to the completionHandler block. If you do not provide a delegate at all for the UNUserNotificationCenterMBS object, the system uses the notification,Äôs original options to alert the user.

203.21.30 Constants

Authorization Options

Constant	Value	Description
AuthorizationOptionAlert	4	The ability to display alerts.
AuthorizationOptionAnnouncement	128	The ability for Siri to automatically read out messages ov
AuthorizationOptionBadge	1	The ability to update the app,Äôs badge.
AuthorizationOptionCarPlay	8	The ability to display notifications in a CarPlay environm
AuthorizationOptionCriticalAlert	16	The ability to play sounds for critical alerts. Critical alerts ignore the mute switch and Do Not Disturb critical alert's sound regardless of the device's mute or Do You can specify a custom sound and volume. Critical alerts require a special entitlement issued by App
AuthorizationOptionNone	0	No options.
AuthorizationOptionProvidesAppNotificationSettings	32	An option indicating the system should display a button fo settings.
AuthorizationOptionProvisional	64	The ability to post noninterrupting notifications provisio tion Center.
AuthorizationOptionSound	2	The ability to play sounds.

Notification Presentation

Constant	Value	Description
NotificationPresentationOptionAlert	4	Display the alert using the content provided by the notification.
NotificationPresentationOptionBadge	1	Apply the notification's badge value to the app,Äôs icon. for MacOS 11.0 or newer, please use NotificationPresentationOptionBan NotificationPresentationOptionList + NotificationPresentationOptionBa
NotificationPresentationOptionBanner	16	New for macOS 11.0
NotificationPresentationOptionList	8	New for macOS 11.0
NotificationPresentationOptionNone	0	No alert. Specify this constant when you want to silence any user interactions notification.
NotificationPresentationOptionSound	2	Play the sound associated with the notification.

203.22 class WinUserNotificationCenterMBS

203.22.1 class WinUserNotificationCenterMBS

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for the window notification center.
Example:

```
// show a toast notification on Windows and react to clicks
// MyNotificationCenter is a subclass of WinUserNotificationCenterMBS with the events implemented.
// Center is a property of the window: Center As MyNotificationCenter
Var aumi As String = WinUserNotificationCenterMBS.configureAUMI("MyCompany", "MyApp", "", "1.0")
Center = New MyNotificationCenter("MyApp", aumi)

Var n As New WinUserNotificationMBS
n.Text(0) = "Backup finished"
n.Text(1) = "All 1234 files were saved."
Center.ShowNotification n

// in MyNotificationCenter:
Sub Activated(Notification As WinUserNotificationMBS) Handles Activated
System.DebugLog "Notification clicked."
End Sub

Sub Failed(Notification As WinUserNotificationMBS, ErrorCode As Integer) Handles Failed
System.DebugLog "Failed: " + ErrorCode.ToString
End Sub
```

Videos

- Presentation from London conference about MBS Plugins.

203.22.2 Methods

203.22.3 Available as Boolean

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this Windows version has required functions.

Notes: Returns true on Windows 8.1 and Windows 10.

203.22.4 configureAUMI(Company as String, Name as String, SurName as String, VersionInfo as String) as String

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Configures the AppUserModelID for Constructor.
Notes: Concats strings with dot between.
Please be aware of maximum ID length of 128 characters.

203.22.5 Constructor(appName as string, aumi as string)

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: Please pass your AppUserModelID and application name.

203.22.6 Destructor

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

203.22.7 HideNotification(notification as WinUserNotificationMBS)

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Hides a notification.
Notes: Boolean return value removed for MBS Plugins 22.2.

203.22.8 Setting as Integer

MBS Win Plugin, Plugin Version: 18.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a value that tells you whether there is an app, user, or system block that prevents the display of a toast notification.
Notes: Returns Enabled value, if you can show notifications.

When toast notifications have been disabled at more than one level, this property value reflects the setting with the largest scope. Precedence is as follows, from largest scope to smallest:

DisabledByManifest
DisabledByGroupPolicy
DisabledForUser
DisabledForApplication

If toast notifications have been disabled both by the user and by group policy, this property returns DisabledByGroupPolicy.

203.22.9 ShowNotification(notification as WinUserNotificationMBS)

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Shows a notification.
Notes: Boolean return value removed for MBS Plugins 22.2.

203.22.10 Properties

203.22.11 appName as String

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The application name used.
Notes: (Read only property)

203.22.12 aumi as String

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The unique id.
Notes: (Read only property)

203.22.13 Handle as Integer

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object handle.
Notes: (Read only property)

203.22.14 Events

203.22.15 Activated(Notification as WinUserNotificationMBS)

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The notification was activated.

203.22.16 Dismissed(Notification as WinUserNotificationMBS, Reason as Integer)

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The notification was dismissed.
Notes: See DismissalReason* constants.

203.22.17 Failed(Notification as WinUserNotificationMBS, ErrorCode as Integer)

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Called when notification failed.

203.22.18 Constants

Dismissal Reasons

Constant	Value	Description
DismissalReasonApplicationHidden	1	The application hid the notification using hide method.
DismissalReasonTimedOut	2	The notification has expired.
DismissalReasonUserCanceled	0	The user dismissed the notification.

Limitations Modes

Constant	Value	Description
SettingDisabledByGroupPolicy	3	An administrator has disabled all notifications on this computer through group policy. The group policy setting overrides the user's setting.
SettingDisabledByManifest	4	This app has not declared itself toast capable in its package.appxmanifest file. This setting is found on the manifest's Application UI page, under the Notification section. For an app to send toast, the Toast Capable option must be set to "Yes".
SettingDisabledForApplication	1	The user has disabled notifications for this app.
SettingDisabledForUser	2	The user or administrator has disabled all notifications for this user on this computer.
SettingEnabled	0	All notifications raised by this app can be displayed.

203.23 class WinUserNotificationExceptionMBS

203.23.1 class WinUserNotificationExceptionMBS

MBS Win Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: The exception class for user notifications.
Notes: Subclass of the RuntimeException class.

203.24 class WinUserNotificationMBS

203.24.1 class WinUserNotificationMBS

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for the notification.
Example:

```
Var n as new WinUserNotificationMBS

n.Image = "C:\test.png"
n.text(0) = "Hello World"
n.text(1) = "Greetings from Xojo"
```

203.24.2 Methods

203.24.3 Create

MBS Win Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates the OS object.
Notes: Please first set text/image and then when you set other properties we create the object for you. This method creates it automatically.

203.24.4 Properties

203.24.5 ExpiresOnReboot as Boolean

MBS Win Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates whether the toast notification will remain in the Notification Center after a reboot.
Notes: If true, notification will expire when the computer is rebooted.

Requires Windows 10, version 1903 (introduced in 10.0.18362.0)
(Read and Write property)

203.24.6 Group as String

MBS Win Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets or sets the group identifier for the notification.
Notes: In previous versions of Windows, the group property can be a maximum length of 16 characters long. However, in the Creators Update (15063), the maximum limit was increased to 64 characters.
(Read and Write property)

203.24.7 Handle as Integer

MBS Win Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

203.24.8 Image as String

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The image file path.
Notes: Leave empty if you don't need a picture.

May not be a network path as system needs to load it independent of your permissions.
Maybe better use image coming with application or put one in temp folder.
(Read and Write property)

203.24.9 NotificationMirroring as Integer

MBS Win Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets or sets a value that specifies whether notification mirroring is allowed.
Notes: Requires Windows 10 Anniversary Edition (introduced in 10.0.14393.0)
(Read and Write property)

203.24.10 Priority as Integer

MBS Win Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets or sets the priority of the toast notification.
Notes: Requires Windows 10 Creators Update (introduced in 10.0.15063.0)

The priority setting provides hints on how and at what urgency level a notification should be presented to the user (whether to wake up the screen, etc). Whether the notification is displayed in high priority is based on the state and power management policy of the device.
(Read and Write property)

203.24.11 RemoteId as String

MBS Win Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets or sets a remote id.
Notes: A remote id for the notification that enables the system to correlate this notification with another one generated on another device.

Requires Windows 10 Anniversary Edition (introduced in 10.0.14393.0)
(Read and Write property)

203.24.12 SuppressPopup as Boolean

MBS Win Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets or sets whether a toast's pop-up UI is displayed on the user's screen.
Notes: Set to true to suppress the popup message; otherwise, false. The default value is false, meaning the toast's pop-up message will be shown. Setting this property to true places the toast notification silently into the action center. This enables your app to communicate with the user without interrupting them.
(Read and Write property)

203.24.13 Tag as String

MBS Win Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets or sets the unique identifier of this notification within the notification Group.
Notes: This API returns an exception if the property is set to null or the empty string.
The tag can be maximum 16 characters long. However, the Creators Update (15063) extends this limit to 64 characters.
(Read and Write property)

203.24.14 Text as String

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The text to display.
Notes: Same as text(0).
(Read and Write property)
See also:

- 203.24.17 Text(Index as Integer) as String 23934

203.24.15 XMLUsed as String

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The XML template used.
Notes: For debugging.
(Read only property)

203.24.16 DataValues as Dictionary

MBS Win Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries or sets data values.
Example:

```
Var n as new WinUserNotificationMBS

// set it
Var d As New Dictionary
d.Value("Hello") = "World"

n.DataValues = d
```

```
// query back
Var dic As Dictionary = n.DataValues

MessageBox "Hello: "+dic.Lookup("Hello", "")
```

Notes: Allows you to store data for your app with the notfication.
(Read and Write computed property)

203.24.17 Text(Index as Integer) as String

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The text lines to display.
Notes: Index from 0 to 2.
(Read and Write computed property)
See also:

- 203.24.14 Text as String 23933

203.24.18 Constants

Notification Mirroring

Constant	Value	Description
NotificationMirroringAllowed	0	Notification mirroring is allowed.
NotificationMirroringDisabled	1	Notification mirroring is disabled.

Priorities

Constant	Value	Description
PriorityDefault	0	The notification should have default behavior in terms of delivery and display priority during connected standby mode.
PriorityHigh	1	The notification should be treated as high priority. For desktop PCs, this means during connected standby mode the incoming notification can turn on the screen for Surface-like devices if it doesn't have a closed lid detected.

Chapter 204

Vision

204.1 module VisionModuleMBS

204.1.1 module VisionModuleMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The Vision module.
Example:

```
// convert a normalized rectangle from a Vision observation into pixel coordinates
// Vision uses 0 to 1 coordinates with the origin at the bottom left.
Var normalized As CGRectMBS = CGMakeRectMBS(0.25, 0.5, 0.2, 0.3) // e.g. observation.boundingBox
Var pixels As CGRectMBS = VisionModuleMBS.ImageRectForNormalizedRect(normalized, 1920, 1080)
MessageBox "Vision " + VisionModuleMBS.VersionNumber.ToString + ": " + pixels.left.ToString + "/" +
pixels.top.ToString + ", " + pixels.width.ToString + " x " + pixels.height.ToString
```

Notes: Global declarations for the Vision framework on MacOS.
Requires MacOS 10.13 or newer.
Blog Entries

- Vision Framework for Xojo

204.1.2 Methods

204.1.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether the Vision module is available.

Notes: Returns true on MacOS 10.13 or newer.

204.1.4 ElementSize(ElementType as Integer) as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Queries byte size of an element type.
Notes: Returns 4 for floats and 8 for double.
Otherwise returns zero.

204.1.5 ImagePointForNormalizedPoint(normalizedPoint as CGPointMBS, imageWidth as Integer, imageHeight as Integer) as CGPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Projects a point from normalized coordinate space into image coordinates.
Notes: normalizedPoint: The input point, in normalized coordinate space.
imageWidth: The width of the image into whose coordinate space you're projecting the input point.
imageHeight: The height of the image into whose coordinate space you're projecting the input point.

Returns the input point projected into image coordinates.

The resulting point in image coordinate space may have nonintegral (floating-point) coordinates.

204.1.6 ImageRectForNormalizedRect(normalizedRect as CGRectMBS, imageWidth as Integer, imageHeight as Integer) as CGRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Projects a rectangle from normalized coordinate space into image coordinates.
Notes: normalizedRect: The input rect, in normalized coordinate space.
imageWidth: The width of the image into whose coordinate space you're projecting the input rect.
imageHeight: The height of the image into whose coordinate space you're projecting the input rect.

Returns the input rect projected into image (pixel) coordinates.

204.1.7 NormalizedIdentityRect as CGRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The normalized identity rectangle with origin (0,0) and unit length and width.

204.1.8 NormalizedRectForImageRect(imageRect as CGRectMBS, imageWidth as Integer, imageHeight as Integer) as CGRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Normalizes a rectangle from image coordinates.
Notes: imageRect: The input rect, in image coordinate space.
imageWidth: The width of the image in whose coordinates the input rect resides.
imageHeight: The height of the image in whose coordinates the input rect resides.

Returns the input rect projected into normalized coordinates.

204.1.9 NormalizedRectIsIdentityRect(rect as CGRectMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Returns true if the rectangle has origin (0,0) and unit length and width.
Notes: normalizedRect: Normalized input rect to test for identity.

Returns a Boolean value that indicates whether the input normalized rect is the identity rect.

204.1.10 VNErrorDomain as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The domain for NSError objects produced by Vision framework methods.

204.1.11 Properties

204.1.12 VersionNumber as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The current version number of the Vision framework.
Notes: (Read only property)

204.1.13 Constants

Error Codes

Constant	Value	Description
VNErrorDataUnavailable	17	Error code signifying unavailable data.
VNErrorInternalError	9	Error code signifying an error internal to the Vision system.
VNErrorInvalidArgument	14	Error code signifying an invalid parameter passed to a Vision request.
VNErrorInvalidFormat	2	Error code signifying an invalid image format.
VNErrorInvalidImage	13	Error code signifying a problematic image.
VNErrorInvalidModel	15	Error code signifying an invalid model.
VNErrorInvalidOperation	12	Error code signifying an unsupported operation for a Vision request.
VNErrorInvalidOption	5	Error code signifying an invalid option in a Vision request.
VNErrorIOError	6	Error code signifying an input or output error for an image, image sequence, or Core ML model.
VNErrorMissingOption	7	Error code signifying that a Vision request is missing a required option.
VNErrorNotImplemented	8	Error code signifying a method not implemented in the underlying model.
VNErrorOK	0	Error code signifying no error.
VNErrorOperationFailed	3	Error code signifying that a request operation failed.
VNErrorOutOfBoundsError	4	Error code signifying an out-of-bounds access.
VNErrorOutOfMemory	10	Error code signifying insufficient memory to complete a Vision request.
VNErrorRequestCancelled	1	Error code signifying a canceled Vision request.
VNErrorUnknownError	11	Error code signifying an unidentifiable error.
VNErrorUnsupportedRevision	16	Error code signifying an unsupported revision number.

204.1.14 Delegates

204.1.15 VNPerformRequestsCompletedMBS(Requests() as VNRequestMBS, result as boolean, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The delegate used for completed event calls.
Notes: You declare a method with (Requests() as VNRequestMBS, result as boolean, error as NSErrorMBS) as parameters and pass the method reference with addressOf or weakAddressOf to the plugin method. Later the plugin may invoke the delegate and call your method.

204.1.16 VNProgressHandlerMBS(Request as VNRequestMBS, fractionCompleted as double, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The delegate used for progress event calls.
Notes: You declare a method with (Request as VNRequestMBS, fractionCompleted as double, error as NSErrorMBS) as parameters and pass the method reference with addressOf or weakAddressOf to the plugin

method. Later the plugin may invoke the delegate and call your method.

204.1.17 VNRequestCompletedMBS(Request as VNRequestMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The delegate used for completed event calls.
Notes: You declare a method with (Request as VNRequestMBS, error as NSErrorMBS) as parameters and pass the method reference with addressOf or weakAddressOf to the plugin method. Later the plugin may invoke the delegate and call your method.

204.2 class VNBarcodeObservationMBS

204.2.1 class VNBarcodeObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Barcode information detected by an image analysis request.
Example:

```
// read barcodes and QR codes in a picture with Vision
Var request As New VNDetectBarcodesRequestMBS
Var handler As VNImageRequestHandlerMBS = VNImageRequestHandlerMBS.RequestWithFile(Special-
Folder.Desktop.Child("barcodes.png"))
Var requests() As VNRequestMBS
requests.Add request

Var error As NSErrorMBS
If handler.performRequests(requests, error) Then
For Each o As VNObservationMBS In request.results
Var code As VNBarcodeObservationMBS = VNBarcodeObservationMBS(o)
System.DebugLog code.symbology + ": " + code.payloadStringValue
Next
End If
```

Notes: This type of observation results from a VNDetectBarcodesRequestMBS. It contains information about the detected barcode, including parsed payload data for supported symbology.
Available on MacOS 10.13 or newer.
Subclass of the VNRectangleObservationMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

204.2.2 Methods

204.2.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

204.2.4 VNBarcodeSymbologyAztec as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for Aztec code recognition.

204.2.5 VNBarcodeSymbologyCodabar as String

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A constant that indicates Codabar symbology.
Available in iOS 15 or macOS 12 or later.

204.2.6 VNBarcodeSymbologyCode128 as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for standard Code 128 barcode recognition.

204.2.7 VNBarcodeSymbologyCode39 as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for standard Code 39 barcode recognition.

204.2.8 VNBarcodeSymbologyCode39Checksum as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for recognizing barcodes in standard Code 39 with checksum.

204.2.9 VNBarcodeSymbologyCode39FullASCII as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for recognizing barcodes in full ASCII Code 39.

204.2.10 VNBarcodeSymbologyCode39FullASCIIChecksum as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for recognizing barcodes in full ASCII Code 39 with checksum.

204.2.11 VNBarcodeSymbologyCode93 as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for standard Code 93 barcode recognition.

204.2.12 VNBarcodeSymbologyCode93i as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for standard Code 93i barcode recognition.

204.2.13 VNBarcodeSymbologyDataMatrix as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for Data Matrix barcode recognition.

204.2.14 VNBarcodeSymbologyEAN13 as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for EAN-13 barcode recognition.

204.2.15 VNBarcodeSymbologyEAN8 as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for EAN-8 barcode recognition.

204.2.16 VNBarcodeSymbologyGS1DataBar as String

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A constant that indicates GS1 DataBar symbology.
Available in iOS 15 or macOS 12 or later.

204.2.17 VNBarcodeSymbologyGS1DataBarExpanded as String

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A constant that indicates GS1 DataBar Expanded symbology.
Available in iOS 15 or macOS 12 or later.

204.2.18 VNBarcodeSymbologyGS1DataBarLimited as String

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A constant that indicates GS1 DataBar Limited symbology.
Available in iOS 15 or macOS 12 or later.

204.2.19 VNBarcodeSymbologyI2of5 as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for Interleaved 2 of 5 (ITF) barcode recognition.

204.2.20 VNBarcodeSymbologyI2of5Checksum as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for recognizing barcodes in Interleaved 2 of 5 (ITF) with checksum.

204.2.21 VNBarcodeSymbologyITF14 as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for ITF-14 barcode recognition.

204.2.22 VNBarcodeSymbologyMicroPDF417 as String

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A constant that indicates MicroPDF417 symbology.
Available in iOS 15 or macOS 12 or later.

204.2.23 VNBarcodeSymbologyMicroQR as String

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A constant that indicates MicroQR symbology.
Available in iOS 15 or macOS 12 or later.

204.2.24 VNBarcodeSymbologyPDF417 as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for PDF417 barcode recognition.

204.2.25 VNBarcodeSymbologyQR as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for QR code recognition.

204.2.26 VNBarcodeSymbologyUPCE as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for UPC-E barcode recognition.

204.2.27 Properties

204.2.28 barcodeDescriptor as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A CIBarcodeDescriptorMBS object with low-level details about the barcode and its data.
Notes: This object is sufficient for Core Image to regenerate the observed barcode.

Value must be a CIBarcodeDescriptorMBS. We use variant to reduce dependency to other plugins.
(Read only property)

204.2.29 isColorInverted as Boolean

MBS MacFrameworks Plugin, Plugin Version: 25.3, Platform: macOS, Targets: All.

Function: A boolean indicating if the barcode is color inverted.
Notes: (Read only property)

204.2.30 isGS1DataCarrier as Boolean

MBS MacFrameworks Plugin, Plugin Version: 25.3, Platform: macOS, Targets: All.

Function: Boolean indicating if the barcode carries any GS1 application specific data
Notes: (Read only property)

204.2.31 payloadData as MemoryBlock

MBS MacFrameworks Plugin, Plugin Version: 25.3, Platform: macOS, Targets: All.

Function: The raw data representation of the barcode's payload if available.
Notes: (Read only property)

204.2.32 payloadStringValue as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The string representation of the barcode's payload.
Notes: Depending on the symbology of the barcode or the payload data itself, a string representation of the payload may not be available.
(Read only property)

204.2.33 supplementalCompositeType as Integer

MBS MacFrameworks Plugin, Plugin Version: 25.3, Platform: macOS, Targets: All.

Function: Represents the supplemental composite type.
Notes: Currently, this can only refer to the composite flag of the 2D symbology as part of a GS1 composite symbology.
This attribute only exists when the primary descriptor is the 1D symbology of a GS1 composite symbology, and of which a valid 2D counterpart has been coalesced into.
(Read only property)

204.2.34 supplementalPayloadData as MemoryBlock

MBS MacFrameworks Plugin, Plugin Version: 25.3, Platform: macOS, Targets: All.

Function: Supplemental payload data.
Notes: Decode the supplemental code in the descriptor as a string value. Note: this property might be expensive the first time it is accessed
hen non-nil, and if the descriptor has supplemental raw payload data, the pointer will be set to the decoded supplemental payload raw data value.
(Read only property)

204.2.35 supplementalPayloadString as String

MBS MacFrameworks Plugin, Plugin Version: 25.3, Platform: macOS, Targets: All.

Function: Decode the supplemental code in the descriptor as a string value.
Notes: Note: this property might be expensive the first time it is accessed
When non-empty, and if the descriptor has supplemental raw payload data, the pointee will be set to the

decoded supplemental payload string value.
(Read only property)

204.2.36 symbology as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The symbology of the observed barcode.
Notes: To detect specific barcode symbologies in a Vision request, add the corresponding VNBarcodeSymbology to the supportedSymbologies property of your VNDetectBarcodesRequestMBS.
(Read only property)

204.3 class VNClassificationObservationMBS

204.3.1 class VNClassificationObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Classification information produced by an image analysis request.
Notes: This type of observation results from performing a VNCoreMLRequestMBS image analysis with a Core ML model whose role is classification (rather than prediction or image-to-image processing). Vision infers that an MLModel object is a classifier model if that model predicts a single feature. That is, the model's modelDescription object has a non-nil value for its predictedFeatureName property.
Subclass of the VNObservationMBS class.

- Vision Framework for Xojo

204.3.2 Methods

204.3.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

204.3.4 hasMinimumPrecision(minimumPrecision as single, recall as single) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Determines whether the observation for a specific recall has a minimum precision value.
Notes: minimumPrecision: The minimum percentage of classification results that are relevant.
recall: The percentage of relevant results that the algorithm correctly classified.

Returns a Boolean indicating whether or not this classification observation provides a minimum percentage of relevant results that meet the desired recall criterion.

204.3.5 hasMinimumRecall(minimumRecall as single, precision as single) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Determines whether the observation for a specific precision has a minimum recall value.

Notes: minimumRecall: The minimum percentage of relevant results that the algorithm correctly classified.
precision: The percentage of classification results that are relevant.

Returns a Boolean indicating whether or not this classification observation provides a minimum percentage of relevant results that meet the desired precision criterion.

204.3.6 Properties

204.3.7 hasPrecisionRecallCurve as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean variable indicating whether the observation contains precision and recall curves.
Notes: Precision refers to the percentage of your classification results that are relevant, while recall refers to the percentage of total relevant results correctly classified.
If this property is true, then you can call precision and recall-related methods in this observation. If this property is false, then the precision and recall-related methods won't return meaningful data.
(Read only property)

204.3.8 identifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Classification label identifying the type of observation.
Notes: An example classification could be a string like cat or hotdog. The model used for the classification defines the domain of strings that may result. Usually, these strings are unlocalized technical labels not meant for direct presentation to the end user.
(Read only property)

204.4 class VNClassifyImageRequestMBS

204.4.1 class VNClassifyImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A request to classify an image.
Example:

```
// we like to find animals in the image
Var request As New VNClassifyImageRequestMBS
Var requests() As VNRequestMBS = Array(request)

Var file As FolderItem = SpecialFolder.Desktop.Child("P8290009.JPG")
Var imageRequestHandler As VNImageRequestHandlerMBS = VNImageRequestHandlerMBS.RequestWith-
File(file)

// perform request synchronously. Asynchronously with callback is also possible
Var error As NSErrorMBS
Var r As Boolean = imageRequestHandler.performRequests(requests, error)

If r Then

Var results() As VNObservationMBS = request.results
Var result As VNObservationMBS = results(0)
If result IsA VNClassificationObservationMBS Then
Var hresult As VNClassificationObservationMBS = VNClassificationObservationMBS(result)
// show first observation identifier
MessageBox hresult.identifier
End If
End If
```

Notes: This type of request produces a collection of VNClassificationObservationMBS objects that describe an image. Access the classifications through knownClassificationsForRevision function.

Available on MacOS 10.15 or newer.
Subclass of the VNImageBasedRequestMBS class.

204.4.2 Methods

204.4.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

204.4.4 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

204.4.5 knownClassificationsForRevision(requestRevision as Integer = 1, byref error as NSErrorMBS) as VNClassificationObservationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Requests the collection of classifications that the Vision framework recognizes.
Notes: requestRevision: The revision of the request for which classifications should be reported.
error: The address of the error variable to populate should the call fail.

Returns an array of classifications for the given revision, or nil if an error occurred.

204.4.6 supportedIdentifiers(byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 23.3, Platform: macOS, Targets: All.

Function: Obtain the collection of identifiers supported by the target request.
Notes: This method will return the collection of all possible classification identifiers that are produced by the target request based on its current state of configuration at the time of the call.

error: The variable that will be populated with the error if the call fails.

Returns an array of classification identifiers, or nil if a failure occurs.

Requires macOS 12.0 or iOS 15.0 or newer.

204.5 class VNCoreMLFeatureValueObservationMBS

204.5.1 class VNCoreMLFeatureValueObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A collection of key-value information produced by a Core ML image analysis request.
Notes: This type of observation results from performing a VNCoreMLRequestMBS image analysis with a Core ML model whose role is prediction rather than classification or image-to-image processing.
Vision infers that an MLModel object is a predictor model if that model predicts multiple features. You can tell that a model predicts multiple features when its modelDescription object has a nil value for its predictedFeatureName property, or when it inserts its output in an outputDescriptionsByName dictionary.
Subclass of the VNObservationMBS class.

- Vision Framework for Xojo

204.5.2 Methods

204.5.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

204.5.4 Properties

204.5.5 featureName as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The name used in the model description of the CoreML model that produced this observation.
Notes: (Read only property)

204.5.6 featureValue as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The feature result of a VNCoreMLRequestMBS that outputs neither a classification nor an image.
Notes: Refer to Core ML documentation and the model itself to learn about proper handling of the content.
Value is a MLFeatureValueMBS object.

(Read only property)

204.6 class VNCoreMLModelMBS

204.6.1 class VNCoreMLModelMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A container for a Core ML model used with Vision requests.
Notes: A Core ML model encapsulates the information trained from a data set used to drive Vision recognition requests. See Getting a Core ML Model for instructions on training your own. Once you have the trained model, use this class to initialize a VNCoreMLRequestMBS for identification.
Blog Entries

- Vision Framework for Xojo

204.6.2 Methods

204.6.3 Constructor(MLModel as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a model container to be used with VNCoreMLRequestMBS.
Notes: Please pass MLModelMBS object.

This method may fail if Vision does not support the created CoreML model. For example, a model that does not accept an image as any of its inputs will yield an VNErrorInvalidModel error.

204.6.4 modelForMLModel(MLModel as Variant) as VNCoreMLModelMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a model container to be used with VNCoreMLRequestMBS.
Notes: Please pass MLModelMBS object.

This method may fail if Vision does not support the created CoreML model. For example, a model that does not accept an image as any of its inputs will yield an VNErrorInvalidModel error.

204.6.5 Properties

204.6.6 featureProvider as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An optional object to support inputs outside Vision.
Notes: Value is a MLFeatureProviderMBS. We use variant to reduce dependency to other plugins.

This optional object conforms to the MLFeatureProvider protocol that the model uses to predict inputs that are not supplied by Vision. Vision provides the MLModel with the image for the inputImageFeatureName via the VNRequestHandlerMBS.
A feature provider is necessary for models that have more than one required input. Models with only one image input won't use the feature provider.

Available on MacOS 10.15 or newer.
(Read only property)

204.6.7 inputImageFeatureName as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The name of the MLFeatureValueMBS that Vision sets from the request handler.
Notes: By default, Vision uses the first input found, but you can manually set that input to another featureName instead.
(Read and Write property)

204.7 class VNCoreMLRequestMBS

204.7.1 class VNCoreMLRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that uses a Core ML model to process images.
Example:

```
// classify an image with your own Core ML model through Vision
Var error As NSErrorMBS
Var model As MLModelMBS = MLModelMBS.modelWithContentsOfFile(SpecialFolder.Desktop.Child("Classifier.mlmodelc"), error)
If model = Nil Then Return

Var request As New VNCoreMLRequestMBS(VNCoreMLModelMBS.modelForMLModel(model))
Var handler As VNImageRequestHandlerMBS = VNImageRequestHandlerMBS.RequestWithFile(SpecialFolder.Desktop.Child("photo.jpg"))
Var requests() As VNRequestMBS
requests.Add request

If handler.performRequests(requests, error) Then
For Each o As VNObservationMBS In request.results
If o IsA VNClassificationObservationMBS Then
System.DebugLog VNClassificationObservationMBS(o).identifier + ": " + Format(o.Confidence * 100, "0") + "%"
End If
Next
End If
```

Notes: The results array of a Core ML-based image analysis request contains a different observation type depending on the kind of MLModel object you create the request with:

- If the model predicts a single feature (that is, the model's modelDescription object has a non-nil value for its predictedFeatureName property), Vision treats that model as a classifier: the results are VNClassificationObservationMBS objects.
- If the model's outputs include at least one output whose feature type is MLFeatureTypeImage, Vision treats that model as an image-to-image model: the results are VNPixelBufferObservationMBS objects.
- Otherwise, Vision treats the model as a general predictor model: the results are VNCoreMLFeatureValueObservationMBS objects.

Subclass of the VNImageBasedRequestMBS class.

- Vision Framework for Xojo

204.7.2 Methods

204.7.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Whether this class is available.

204.7.4 Constructor(model as VNCoreMLModelMBS, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

204.7.5 Properties

204.7.6 imageCropAndScaleOption as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Determine what type of croping and scaling action should be applied to the image before generating the feature print.
Notes: The default value for this property is VNImageCropAndScaleOptionScaleFill.
(Read and Write property)

204.7.7 model as VNCoreMLModelMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The Core ML model on which the request is based, wrapped in a VNCoreMLModel.
Notes: (Read only property)

204.7.8 Constants

Crop and Scale options

Constant	Value	Description
VNImageCropAndScaleOptionCenterCrop	0	A scaling option that maintains aspect ratio to fit the short side, and centered image on its long side.
VNImageCropAndScaleOptionScaleFill	2	A scaling option that scales an image proportionally so that its short sion fills the canvas, potentially cropping along the longer dimension
VNImageCropAndScaleOptionScaleFit	1	An option that scales an image to fit the input image dimensions wl taining aspect ratio. This option ensures the entire image fits into the Vision algorithm's in dimensions by scaling down the longer dimension until it fits. This op the image along the shorter dimension to maintain aspect ratio.

204.8 class VNDetectBarcodesRequestMBS

204.8.1 class VNDetectBarcodesRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that finds and recognizes barcodes in an image.
Example:

```
// we like to find barcodes on the image
Var request As New VNDetectBarcodesRequestMBS
Var requests() As VNRequestMBS = Array(request)

Var file As FolderItem = SpecialFolder.Desktop.Child("test.png")
Var imageRequestHandler As VNImageRequestHandlerMBS = VNImageRequestHandlerMBS.RequestWith-
File(file)

// perform request synchronously. Asynchronously with callback is also possible
Var error As NSErrorMBS
Var r As Boolean = imageRequestHandler.performRequests(requests, error)

If r Then

Var results() As VNObservationMBS = request.results
Var result As VNObservationMBS = results(0)
If result IsA VNBarcodeObservationMBS Then
Var hresult As VNBarcodeObservationMBS = VNBarcodeObservationMBS(result)
MessageBox "Barcode text: "+hresult.payloadStringValue
End If
End If
```

Notes: By default, a barcode request first locates all barcodes in the input image, then analyzes each to decode payload. To specify or limit the types of barcodes sought in the request, set the symbologies property to an array of barcode types you would like to support.

This request returns an array of VNBarcodeObservationMBS objects, one for each barcode it detects.

See also ZBarMBS class and ZxingBarcodeMBS module for cross platform projects.
Subclass of the VNImageBasedRequestMBS class.

204.8.2 Methods

204.8.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Whether this class is available.

204.8.4 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

204.8.5 setSymbologies(symbologies() as String)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Sets an array of symbologies that Vision should detect in the image.
Notes: Use this array to specify or restrict the types of symbols you want the Vision algorithm to detect. The default value leads Vision to scan for all possible symbologies.

204.8.6 supportedSymbologies as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of VNBarcodeSymbology objects describing the symbologies that Vision currently supports.
Notes: Calling this method could be an expensive operation.
See also:

• 204.8.7 supportedSymbologies(byref error as NSErrorMBS) as String() 23962

204.8.7 supportedSymbologies(byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 23.3, Platform: macOS, Targets: All.

Function: Obtain the collection of barcode symbologies that can be recognized by the request in its current configuration.
Notes: Calling this method could be a potentially expensive operation.
Returns an array of VNBarcodeSymbology strings describing the symbologies recognized by the request in its current configuration.
Requires macOS 12.0 or iOS 15.0 or newer.
See also:

• 204.8.6 supportedSymbologies as String() 23961

204.8.8 symbologies as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of symbologies that Vision should detect in the image.
Notes: Use this array to specify or restrict the types of symbols you want the Vision algorithm to detect. The default value leads Vision to scan for all possible symbologies.

204.8.9 Properties

204.8.10 coalesceCompositeSymbologies as Boolean

MBS MacFrameworks Plugin, Plugin Version: 25.3, Platform: macOS, Targets: All.

Function: An option to coalesce multiple codes if applicable based on the symbology.
Notes: (Read and Write property)

204.9 class VNDetectDocumentSegmentationRequestMBS

204.9.1 class VNDetectDocumentSegmentationRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 24.5, Platforms: macOS, iOS, Targets: All.

Function: An object that detects rectangular regions that contain text in the input image.
Example:

```
// we like to find a document in a photo
Var request As New VNDetectDocumentSegmentationRequestMBS
Var requests() As VNRequestMBS = Array(request)

Var file As FolderItem = SpecialFolder.Desktop.Child("IMG_4302.jpeg")
Var imageRequestHandler As VNImageRequestHandlerMBS = VNImageRequestHandlerMBS.RequestWith-
File(file)

// perform request synchronously. Asynchronously with callback is also possible
Var error As NSErrorMBS
Var r As Boolean = imageRequestHandler.performRequests(requests, error)

If r Then

Var results() As VNObservationMBS = request.results
Var result As VNObservationMBS = results(0)
If result IsA VNRectangleObservationMBS Then
Var hresult As VNRectangleObservationMBS = VNRectangleObservationMBS(result)
Var boundingBox As CGRectMBS = hresult.boundingBox

MessageBox _
boundingBox.Origin.X.ToString+"/"+_
boundingBox.Origin.Y.ToString+" "+_
boundingBox.Size.Width.ToString+"x"+_
boundingBox.Size.Height.ToString

End If
End If
```

Notes: Perform this request to detect a document in an image. The result that the request generates contains the four corner points of a document,Äôs quadrilateral and saliency mask.

Results will contain VNRectangleObservationMBS objects.
Subclass of the VNImageBasedRequestMBS class.

204.9.2 Methods

204.9.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platforms: macOS, iOS, Targets: All.

Function: Whether this class is available.

204.9.4 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 24.5, Platforms: macOS, iOS, Targets: All.

Function: The constructor.

204.10 class VNDetectedObjectObservationMBS

204.10.1 class VNDetectedObjectObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis result that provides the position and extent of a detected image feature.
Notes: This type of observation results from a VNTrackObjectRequestMBS. It represents a detected object that the Vision request should track.
Subclass of the VNObservationMBS class.

204.10.2 Methods

204.10.3 Constructor(boundingBox as CGRectMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a detected object observation based on bounding box coordinates.
Notes: boundingBox: The observation's bounding box, in coordinates normalized to the dimensions of the processed image, with its origin at the image's lower-left corner.
See also:

- 204.10.4 Constructor(requestRevision as Integer, boundingBox as CGRectMBS) 23965

204.10.4 Constructor(requestRevision as Integer, boundingBox as CGRectMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a detected object observation with the specified revision number and bounding box coordinates.
See also:

- 204.10.3 Constructor(boundingBox as CGRectMBS) 23965

204.10.5 Properties

204.10.6 boundingBox as CGRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The bounding box of the detected object.
Notes: The coordinates are normalized to the dimensions of the processed image, with the origin at the image's lower-left corner.
(Read only property)

204.11 class VNDetectedPointMBS

204.11.1 class VNDetectedPointMBS

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: An object that represents a normalized point in an image, along with a confidence value.
Notes: Requires iOS 14, MacOS 11 or newer.
Subclass of the VNPointMBS class.

- MBS Xojo Plugins, version 26.3pr4

204.11.2 Methods

204.11.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The private constructor.
See also:

- 204.11.4 Constructor(x as double, y as double) 23967

204.11.4 Constructor(x as double, y as double)

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The private constructor.
See also:

- 204.11.3 Constructor 23967

204.11.5 Properties

204.11.6 confidence as Single

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: A confidence score that indicates the detected point,Äôs accuracy.
Notes: (Read only property)

204.12 class VNDetectFaceCaptureQualityRequestMBS

204.12.1 class VNDetectFaceCaptureQualityRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A request that produces a floating-point number representing the capture quality of a given face in a photo.
Example:

```
// we like to find faces in the image
Var request as New VNDetectFaceCaptureQualityRequestMBS
Var requests() As VNRequestMBS = Array(request)

Var file As FolderItem = SpecialFolder.Desktop.Child("image0.jpeg")
Var imageRequestHandler As VNImageRequestHandlerMBS = VNImageRequestHandlerMBS.RequestWith-
File(file)

// perform request synchronously. Asynchronously with callback is also possible
Var error as NSErrorMBS
Var r As Boolean = imageRequestHandler.performRequests(requests, error)

If r Then

Var results() As VNObservationMBS = request.results
Var result As VNObservationMBS = results(0)
If result IsA VNFaceObservationMBS Then
Var hresult As VNFaceObservationMBS = VNFaceObservationMBS(result)
// show first observation quality
MessageBox "faceCaptureQuality: "+format(hresult.faceCaptureQuality, "0%")
End If
End If
```

Notes: This request produces or updates a VNFaceObservationMBS object's property faceCaptureQuality with a floating-point value. The float will be a value between 0 and 1. Faces with quality closer to 1 are better lit, sharper, and centrally positioned than faces with quality closer to 0. If the request fails, or the face observation has never been processed, the property faceCaptureQuality will be nil.
Subclass of the VNImageBasedRequestMBS class.

- Vision Framework for Xojo

204.12.2 Methods

204.12.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

204.12.4 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

204.12.5 inputFaceObservations as VNFaceObservationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of VNFaceObservation objects to process as part of the request.

204.12.6 setInputFaceObservations(faces() as VNFaceObservationMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Sets an array of VNFaceObservation objects to process as part of the request.

204.13 class VNDetectFaceLandmarksRequestMBS

204.13.1 class VNDetectFaceLandmarksRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that finds facial features (such as the eyes and mouth) in an image.
Example:

```
// we like to find face landmarks in the image
Var request As New VNDetectFaceLandmarksRequestMBS
Var requests() As VNRequestMBS = Array(request)

Var file As FolderItem = SpecialFolder.Desktop.Child("image0.jpeg")
Var imageRequestHandler As VNImageRequestHandlerMBS = VNImageRequestHandlerMBS.RequestWith-
File(file)

// perform request synchronously. Asynchronously with callback is also possible
Var error As NSErrorMBS
Var r As Boolean = imageRequestHandler.performRequests(requests, error)

If r Then

Var results() As VNObservationMBS = request.results
Var result As VNObservationMBS = results(0)
If result IsA VNFaceObservationMBS Then
Var hresult As VNFaceObservationMBS = VNFaceObservationMBS(result)
// show first observation confidence. See boundingBox in debugger
Var boundingBox As CGRectMBS = hresult.boundingBox
Var landmarks As VNFaceLandmarks2DMBS = hresult.landmarks

Break // check all the parts in the debugger
End If
End If
```

Notes: By default, a face landmarks request first locates all faces in the input image, then analyzes each to detect facial features.
If you've already located all the faces in an image, or want to detect landmarks in only a subset of the faces in the image, set the inputFaceObservations property to an array of VNFaceObservationMBS objects representing the faces you want to analyze. (You can either use face observations output by a VNDetect-FaceRectanglesRequestMBS or manually create VNFaceObservation instances with the bounding boxes of the faces you want to analyze.)
Subclass of the VNImageBasedRequestMBS class.

204.13.2 Methods

204.13.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Whether this class is available.

204.13.4 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

204.13.5 inputFaceObservations as VNFaceObservationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of VNFaceObservation objects to process as part of the request.

204.13.6 setInputFaceObservations(faces() as VNFaceObservationMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Sets an array of VNFaceObservation objects to process as part of the request.

204.13.7 supportsConstellation(requestRevision as Integer = 1, constellation as Integer) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean variable that indicates whether the Vision framework supports a given constellation type for a given request revision.

204.13.8 Properties

204.13.9 constellation as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A variable describing how a face landmarks request orders or enumerates the resulting features.
Notes: Set this variable to one of the supported constellation types detailed in VNRequestFaceLandmarksConstellation. The default value is VNRequestFaceLandmarksConstellationNotDefined.
(Read and Write property)

204.13.10 Constants

Constellations

Constant	Value	Description
VNRequestFaceLandmarksConstellation65Points	1	A constellation with 65 points.
VNRequestFaceLandmarksConstellation76Points	2	A constellation with 76 points.
VNRequestFaceLandmarksConstellationNotDefined	0	An undefined constellation.

204.14 class VNDetectFaceRectanglesRequestMBS

204.14.1 class VNDetectFaceRectanglesRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that finds faces within an image.
Example:

```
// we like to find faces in the image
Var request As New VNDetectFaceRectanglesRequestMBS
Var requests() As VNRequestMBS = Array(request)

Var file As FolderItem = SpecialFolder.Desktop.Child("image0.jpeg")
Var imageRequestHandler As VNImageRequestHandlerMBS = VNImageRequestHandlerMBS.RequestWith-
File(file)

// perform request synchronously. Asynchronously with callback is also possible
Var error As NSErrorMBS
Var r As Boolean = imageRequestHandler.performRequests(requests, error)

If r Then

Var results() As VNObservationMBS = request.results
Var result As VNObservationMBS = results(0)
If result IsA VNFaceObservationMBS Then
Var hresult As VNFaceObservationMBS = VNFaceObservationMBS(result)
// show first observation confidence. See boundingBox in debugger
Var boundingBox As CGRectMBS = hresult.boundingBox
MessageBox "Found a face with "+Format(hresult.Confidence, "0%")
End If
End If
```

Notes: This request returns faces as rectangular bounding boxes with origin and size.
Subclass of the VNImageBasedRequestMBS class.

204.14.2 Methods

204.14.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Whether this class is available.

204.14.4 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

204.15 class VNDetectHorizonRequestMBS

204.15.1 class VNDetectHorizonRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that determines the horizon angle in an image.
Notes: This request returns the horizon angle detected in an image.

Observation will be VNHorizonObservationMBS class.
Subclass of the VNImageBasedRequestMBS class.

204.15.2 Methods

204.15.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Whether this class is available.

204.15.4 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

204.16 class VNDetectHumanBodyPose3DRequestMBS

204.16.1 class VNDetectHumanBodyPose3DRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: A request that detects points on human bodies in 3D space, relative to the camera.
Notes: This request generates a collection of VNHumanBodyPose3DObservation objects that describe the position of each body the request detects. If the system allows it, the request uses AVDepthData information to improve the accuracy.

Requires iOS 17, macOS 14 or later.
Subclass of the VNStatefulRequestMBS class.

204.16.2 Methods

204.16.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Whether this class is available.

204.16.4 bodyPoseResults as VNHumanBodyPose3DObservationMBS()

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The 3D body pose the request observes.
Notes: Same as results, but with proper declaration of the used VNHumanBodyPose3DObservationMBS class.

204.16.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Creates a new request with no completion handler.
See also:

- 204.16.6 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil) 23977

- 204.16.7 Constructor(Time as Double, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil) 23977

204.16.6 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Creates a new 3D body pose request with a completion handler.
See also:

- 204.16.5 Constructor 23976
- 204.16.7 Constructor(Time as Double, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil) 23977

204.16.7 Constructor(Time as Double, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Initializes a video-based request.
Notes: frameAnalysisSpacing: A time value that indicates the duration between analysis operations. Increase this value to reduce the number of frames analyzed on slower devices. Set this argument to 0 to analyze all frames.

DelegateHandler: A closure that,Äôs invoked after the request has completed its processing. The system invokes the completion handler on the same dispatch queue as the request performs its processing.
See also:

- 204.16.5 Constructor 23976
- 204.16.6 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil) 23977

204.16.8 supportedJointNames(byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Returns the joint names the request supports.

204.16.9 supportedJointsGroupNames(byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Returns the joint group names the request supports.

204.16.10 Constants

Constants

Constant	Value	Description
Revision1	1	The revision 1.

204.17 class VNDetectHumanBodyPoseRequestMBS

204.17.1 class VNDetectHumanBodyPoseRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: A request that detects a human body pose.
Example:

```
// find people in a photo and show where their noses and wrists are
Var request As New VNDetectHumanBodyPoseRequestMBS(Nil)
Var handler As VNImageRequestHandlerMBS = VNImageRequestHandlerMBS.RequestWithFile(SpecialFolder.Desktop.Child("people.jpg"))
Var requests() As VNRequestMBS
requests.Add request

Var error As NSErrorMBS
If Not handler.performRequests(requests, error) Then Return

Var lines() As String
For Each body As VNHumanBodyPoseObservationMBS In request.bodyPoseResults
Var nose As VNRecognizedPointMBS = body.recognizedPointForJointName(VNDetectHumanBodyPoseRequestMBS.VNHumanBodyPoseObservationJointNameNose, error)
If nose <>Nil And nose.confidence >0.3 Then
// coordinates are normalized from 0 to 1 with origin bottom left
lines.Add "Nose at " + Format(nose.x, "0.00") + "/" + Format(nose.y, "0.00")
End If
Next
MessageBox lines.Count.ToString + " people" + EndOfLine + String.FromArray(lines, EndOfLine)
```

Notes: The framework provides the detected body pose as a VNHumanBodyPoseObservationMBS.

Requires iOS 14, macOS 11 or later.
Subclass of the VNImageBasedRequestMBS class.

- 204.17.6 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil) 23980

204.17.6 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The constructor with delegate.
See also:

- 204.17.5 Constructor 23980

204.17.7 supportedJointNames(byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Retrieves the supported joint names.
Notes: error: If an error occurs, an error object that describes the error; otherwise, nil.

204.17.8 supportedJointNamesForRevision(Revision as Integer = 1, byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Retrieves the supported joint names for a revision.
Notes: revision: The body pose request revision.
error: On output, an error object that describes why the method failed, or nil if no error occurred. If you are not interested in the error information, pass nil for this parameter.

Returns the array of joint name objects for the specified revision. On failure, this method returns nil.

204.17.9 supportedJointsGroupNames(byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Retrieves the supported joint group names.
Notes: error: If an error occurs, an error object that describes the error; otherwise, nil.

204.17.10 supportedJointsGroupNamesForRevision(Revision as Integer = 1, byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Retrieves the supported joint group names for a revision.
Notes: revision: The body pose request revision.
error: On output, an error object that describes why the method failed, or nil if no error occurred. If you are not interested in the error information, pass nil for this parameter.

Returns the array of joint group name objects for the revision. On failure, this method returns nil.

204.17.11 VNHumanBodyPoseObservationJointNameLeftAnkle as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the body pose.
Notes: The left ankle.

204.17.12 VNHumanBodyPoseObservationJointNameLeftEar as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the body pose.
Notes: The left ear.

204.17.13 VNHumanBodyPoseObservationJointNameLeftElbow as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the body pose.
Notes: The left elbow.

204.17.14 VNHumanBodyPoseObservationJointNameLeftEye as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the body pose.
Notes: The left eye.

204.17.15 VNHumanBodyPoseObservationJointNameLeftHip as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the body pose.
Notes: The left hip.

204.17.16 VNHumanBodyPoseObservationJointNameLeftKnee as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the body pose.
Notes: The left knee.

204.17.17 VNHumanBodyPoseObservationJointNameLeftShoulder as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the body pose.
Notes: The left shoulder.

204.17.18 VNHumanBodyPoseObservationJointNameLeftWrist as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the body pose.
Notes: The left wrist.

204.17.19 VNHumanBodyPoseObservationJointNameNeck as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the body pose.
Notes: The neck.

204.17.20 VNHumanBodyPoseObservationJointNameNose as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the body pose.
Notes: The nose.

204.17.21 VNHumanBodyPoseObservationJointNameRightAnkle as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the body pose.
Notes: The right ankle.

204.17.22 VNHumanBodyPoseObservationJointNameRightEar as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the body pose.
Notes: The right ear.

204.17.23 VNHumanBodyPoseObservationJointNameRightElbow as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the body pose.
Notes: The right elbow.

204.17.24 VNHumanBodyPoseObservationJointNameRightEye as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the body pose.
Notes: The right eye.

204.17.25 VNHumanBodyPoseObservationJointNameRightHip as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the body pose.
Notes: The right hip.

204.17.26 VNHumanBodyPoseObservationJointNameRightKnee as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the body pose.
Notes: The right knee.

204.17.27 VNHumanBodyPoseObservationJointNameRightShoulder as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the body pose.
Notes: The right shoulder.

204.17.28 VNHumanBodyPoseObservationJointNameRightWrist as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the body pose.
Notes: The right wrist.

204.17.29 VNHumanBodyPoseObservationJointNameRoot as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the body pose.
Notes: The root (waist).

204.17.30 VNHumanBodyPoseObservationJointsGroupNameAll as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint group names for the body pose.
Notes: All body point groups.

204.17.31 VNHumanBodyPoseObservationJointsGroupNameFace as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint group names for the body pose.
Notes: The face.

204.17.32 VNHumanBodyPoseObservationJointsGroupNameLeftArm as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint group names for the body pose.
Notes: The left arm.

204.17.33 VNHumanBodyPoseObservationJointsGroupNameLeftLeg as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint group names for the body pose.
Notes: The left leg.

204.17.34 VNHumanBodyPoseObservationJointsGroupNameRightArm as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint group names for the body pose.
Notes: The right arm.

204.17.35 VNHumanBodyPoseObservationJointsGroupNameRightLeg as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint group names for the body pose.
Notes: The right leg.

204.17.36 VNHumanBodyPoseObservationJointsGroupNameTorso as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint group names for the body pose.
Notes: The torso.

204.17.37 Constants

Constants

Constant	Value	Description
Revision1	1	The revision 1.

204.18 class VNDetectHumanHandPoseRequestMBS

204.18.1 class VNDetectHumanHandPoseRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: A request that detects a human hand pose.
Example:

```
// detect hands in a picture and check whether thumb and index finger touch
Var request As New VNDetectHumanHandPoseRequestMBS(Nil)
Var handler As VNImageRequestHandlerMBS = VNImageRequestHandlerMBS.RequestWithFile(Special-
Folder.Desktop.Child("hand.jpg"))
Var requests() As VNRequestMBS
requests.Add request

Var error As NSErrorMBS
If Not handler.performRequests(requests, error) Then Return

For Each hand As VNHumanHandPoseObservationMBS In request.handPoseResults
Var thumb As VNRecognizedPointMBS = hand.recognizedPointForJointName(VNDetectHumanHandPoseRequestMBS.VN-
HumanHandPoseObservationJointNameThumbTip, error)
Var index As VNRecognizedPointMBS = hand.recognizedPointForJointName(VNDetectHumanHandPoseRequestMBS.VN-
HumanHandPoseObservationJointNameIndexTip, error)
If thumb <>Nil And index <>Nil Then
Var distance As Double = thumb.distanceToPoint(index)
MessageBox "Pinch: " + Str(distance <0.05) + " (distance " + Format(distance, "0.000") + ")"
End If
Next
```

Notes: The framework provides the detected hand pose as a VNIdentifiedPointsObservationMBS.
Subclass of the VNImageBasedRequestMBS class.

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the hand pose.
Notes: The index finger,Äôs distal interphalangeal (DIP) joint.

204.18.12 VNHumanHandPoseObservationJointNameIndexMCP as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the hand pose.
Notes: The index finger,Äôs metacarpophalangeal (MCP) joint.

204.18.13 VNHumanHandPoseObservationJointNameIndexPIP as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the hand pose.
Notes: The index finger,Äôs proximal interphalangeal (PIP) joint.

204.18.14 VNHumanHandPoseObservationJointNameIndexTip as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the hand pose.
Notes: The tip of the index finger.

204.18.15 VNHumanHandPoseObservationJointNameLittleDIP as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the hand pose.
Notes: The little finger,Äôs distal interphalangeal (DIP) joint.

204.18.16 VNHumanHandPoseObservationJointNameLittleMCP as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the hand pose.
Notes: The little finger,Äôs metacarpophalangeal (MCP) joint.

204.18.17 VNHumanHandPoseObservationJointNameLittlePIP as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the hand pose.
Notes: The little finger,Äôs proximal interphalangeal (PIP) joint.

204.18.18 VNHumanHandPoseObservationJointNameLittleTip as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the hand pose.
Notes: The tip of the little finger.

204.18.19 VNHumanHandPoseObservationJointNameMiddleDIP as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the hand pose.
Notes: The middle finger,Äôs distal interphalangeal (DIP) joint.

204.18.20 VNHumanHandPoseObservationJointNameMiddleMCP as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the hand pose.
Notes: The middle finger,Äôs metacarpophalangeal (MCP) joint.

204.18.21 VNHumanHandPoseObservationJointNameMiddlePIP as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the hand pose.
Notes: The middle finger,Äôs proximal interphalangeal (PIP) joint.

204.18.22 VNHumanHandPoseObservationJointNameMiddleTip as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the hand pose.
Notes: The tip of the middle finger.

204.18.23 VNHumanHandPoseObservationJointNameRingDIP as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the hand pose.
Notes: The ring finger,Äôs distal interphalangeal (DIP) joint.

204.18.24 VNHumanHandPoseObservationJointNameRingMCP as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the hand pose.
Notes: The ring finger,Äôs metacarpophalangeal (MCP) joint.

204.18.25 VNHumanHandPoseObservationJointNameRingPIP as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the hand pose.
Notes: The ring finger,Äôs proximal interphalangeal (PIP) joint.

204.18.26 VNHumanHandPoseObservationJointNameRingTip as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the hand pose.
Notes: The tip of the ring finger.

204.18.27 VNHumanHandPoseObservationJointNameThumbCMC as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the hand pose.
Notes: The thumb,Äôs carpometacarpal (CMC) joint.

204.18.28 VNHumanHandPoseObservationJointNameThumbIP as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the hand pose.
Notes: The thumb,Äôs interphalangeal (IP) joint.

204.18.29 VNHumanHandPoseObservationJointNameThumbMP as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the hand pose.
Notes: The thumb,Äôs metacarpophalangeal (MP) joint.

204.18.30 VNHumanHandPoseObservationJointNameThumbTip as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the hand pose.
Notes: The tip of the thumb.

204.18.31 VNHumanHandPoseObservationJointNameWrist as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint names for the hand pose.
Notes: The wrist.

204.18.32 VNHumanHandPoseObservationJointsGroupNameAll as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint group names for the hand pose.
Notes: All hand group names.

204.18.33 VNHumanHandPoseObservationJointsGroupNameIndexFinger as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint group names for the hand pose.
Notes: The index finger.

204.18.34 VNHumanHandPoseObservationJointsGroupNameLittleFinger as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint group names for the hand pose.
Notes: The little finger.

204.18.35 VNHumanHandPoseObservationJointsGroupNameMiddleFinger as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint group names for the hand pose.
Notes: The middle finger.

204.18.36 VNHumanHandPoseObservationJointsGroupNameRingFinger as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint group names for the hand pose.
Notes: The ring finger.

204.18.37 VNHumanHandPoseObservationJointsGroupNameThumb as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: One of the supported joint group names for the hand pose.
Notes: The thumb.

204.18.38 Constants

Constants

Constant	Value	Description
Revision1	1	The revision 1.

204.19 class VNDetectHumanRectanglesRequestMBS

204.19.1 class VNDetectHumanRectanglesRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that finds rectangular regions containing humans in an image.
Example:

```
// we like to find people in the image
Var request As New VNDetectHumanRectanglesRequestMBS
Var requests() As VNRequestMBS = Array(request)

Var file As FolderItem = SpecialFolder.Desktop.Child("image0.jpeg")
Var imageRequestHandler As VNImageRequestHandlerMBS = VNImageRequestHandlerMBS.RequestWith-
File(file)

// perform request synchronously. Asynchronously with callback is also possible
Var error As NSErrorMBS
Var r As Boolean = imageRequestHandler.performRequests(requests, error)

If r Then

Var results() As VNObservationMBS = request.results
Var result As VNObservationMBS = results(0)
If result IsA VNDetectedObjectObservationMBS Then
Var hresult As VNDetectedObjectObservationMBS = VNDetectedObjectObservationMBS(result)
// show first person coordinates (in %)

Var boundingBox As CGRectMBS = hresult.boundingBox

MessageBox _
boundingBox.Origin.X.ToString+"/"+_
boundingBox.Origin.Y.ToString+" "+_
boundingBox.Size.Width.ToString+"x"+_
boundingBox.Size.Height.ToString
End If
End If
```

Notes: Provides results in VNDetectedObjectObservationMBS objects.
Subclass of the VNImageBasedRequestMBS class.

204.19.2 Methods

204.19.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Whether this class is available.

204.19.4 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

204.20 class VNDetectRectanglesRequestMBS

204.20.1 class VNDetectRectanglesRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that finds projected rectangular regions in an image.
Example:

```
// we like to find a document in a photo
Var request As New VNDetectRectanglesRequestMBS
Var requests() As VNRequestMBS = Array(request)

Var file As FolderItem = SpecialFolder.Desktop.Child("IMG_4282.jpeg")
Var imageRequestHandler As VNImageRequestHandlerMBS = VNImageRequestHandlerMBS.RequestWith-
File(file)

// perform request synchronously. Asynchronously with callback is also possible
Var error As NSErrorMBS
Var r As Boolean = imageRequestHandler.performRequests(requests, error)

If r Then

Var results() As VNObservationMBS = request.results
Var result As VNObservationMBS = results(0)
If result IsA VNRectangleObservationMBS Then
Var hresult As VNRectangleObservationMBS = VNRectangleObservationMBS(result)
Var boundingBox As CGRectMBS = hresult.boundingBox

MessageBox _
boundingBox.Origin.X.ToString+"/"+_
boundingBox.Origin.Y.ToString+" "+_
boundingBox.Size.Width.ToString+"x"+_
boundingBox.Size.Height.ToString

End If
End If
```

Notes: A rectangle detection request locates regions of an image with rectangular shape, like credit cards, business cards, documents, and signs. The request returns its observations in the form of VNRectangleObservationMBS objects, which contain normalized coordinates of bounding boxes containing the rectangle.
Use this type of request to find the bounding boxes of rectangles in an image. Vision returns observations for rectangles found in all orientations and sizes, along with a confidence level to indicate how likely it is that the observation contains an actual rectangle.
To further configure or restrict the types of rectangles found, set properties on the request specifying a range of aspect ratios, sizes, and quadrature tolerance.
Subclass of the VNImageBasedRequestMBS class.

- Vision Framework for Xojo

204.20.2 Methods

204.20.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Whether this class is available.

204.20.4 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

204.20.5 Properties

204.20.6 maximumAspectRatio as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A float specifying the maximum aspect ratio of the rectangle to detect, defined as the shorter dimension over the longer dimension.
Notes: The value should range from 0.0 to 1.0, inclusive. The default value is 0.5.
(Read and Write property)

204.20.7 maximumObservations as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An integer specifying the maximum number of rectangles Vision returns.
Notes: The default value is 1.
Setting this property to 0 allows Vision algorithms to return an unlimited number of observations.
(Read and Write property)

204.20.8 minimumAspectRatio as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A float specifying the minimum aspect ratio of the rectangle to detect, defined as the shorter dimension over the longer dimension.
Notes: The value should range from 0.0 to 1.0, inclusive. The default value is 0.5.
(Read and Write property)

204.20.9 minimumConfidence as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A value specifying the minimum acceptable confidence level.
Notes: Vision won't return rectangles with a confidence score lower than the specified minimum.
The confidence score ranges from 0.0 to 1.0, inclusive, where 0.0 represents no confidence, and 1.0 represents full confidence.
(Read and Write property)

204.20.10 minimumSize as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A float specifying the minimum size of the rectangle to be detected, as a proportion of the smallest dimension.
Notes: The value should range from 0.0 to 1.0 inclusive. The default minimum size is 0.2.
Any smaller rectangles that Vision may have detected aren't returned.
(Read and Write property)

204.20.11 quadratureTolerance as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A float specifying the number of degrees a rectangle corner angle can deviate from 90¬∞.
Notes: The tolerance value should range from 0 to 45, inclusive. The default tolerance is 30.
(Read and Write property)

204.21 class VNDetectTextRectanglesRequestMBS

204.21.1 class VNDetectTextRectanglesRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that finds regions of visible text in an image.
Notes: This request returns detected text characters as rectangular bounding boxes with origin and size.

Observation uses VNTextObservation class.
Subclass of the VNImageBasedRequestMBS class.

204.21.2 Methods

204.21.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Whether this class is available.

204.21.4 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

204.21.5 Properties

204.21.6 reportCharacterBoxes as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean variable indicating interest in detecting character bounding boxes.
Notes: Set to true to have the detector return character bounding boxes as an array of VNRectangleObservationMBS objects.
(Read and Write property)

204.22 class VNFaceLandmarkRegion2DMBS

204.22.1 class VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: 2D geometry information for a specific facial feature.
Notes: This class represents the set of all facial landmark regions in 2D, exposed as properties.
Subclass of the VNFaceLandmarkRegionMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

204.22.2 Methods

204.22.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

204.22.4 normalizedPoints as CGPointMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A buffer in memory containing normalized landmark points.
Notes: Returns array with CGPointMBS representing landmark points.

204.22.5 pointsInImageOfSize(imageSize as CGSizeMBS) as CGPointMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A buffer in memory containing landmark points in the coordinate space of the specified image size.
Notes: imageSize: The pixel dimensions of the image in which to present landmark points.

204.22.6 precisionEstimatesPerPoint as Variant()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of precision estimates for each landmark point.
Notes: This property is only populated when you configure your VNDetectFaceLandmarksRequestMBS object with VNRequestFaceLandmarksConstellation76Points. For other constellation types, this array is set to nil.

204.23 class VNFaceLandmarkRegionMBS

204.23.1 class VNFaceLandmarkRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for information about a specific face landmark.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- Vision Framework for Xojo

204.23.2 Methods

204.23.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

204.23.4 copy as VNFaceLandmarkRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

204.23.5 Properties

204.23.6 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

204.23.7 pointCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The number of points in the face region.
Notes: The value is zero if no points for a region could be found.
(Read only property)

204.23.8 requestRevision as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The revision of the VNRequest subclass used to generate the implementing object.
Notes: (Read only property)

204.24 class VNFaceLandmarks2DMBS

204.24.1 class VNFaceLandmarks2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A collection of all facial features detected in a face observation, with 2D geometry information for each.
Example:

```
// find the eyes and lips of faces in a photo with Vision
Var request As New VNDetectFaceLandmarksRequestMBS
Var requests() As VNRequestMBS
requests.Add request
Var handler As VNImageRequestHandlerMBS = VNImageRequestHandlerMBS.RequestWithFile(SpecialFolder.Desktop.Child("portrait.jpg"))

Var error As NSErrorMBS
If handler.performRequests(requests, error) Then
For Each o As VNObservationMBS In request.results
Var face As VNFaceObservationMBS = VNFaceObservationMBS(o)
Var marks As VNFaceLandmarks2DMBS = face.landmarks
If marks = Nil Then Continue
System.DebugLog "Left eye: " + marks.leftEye.normalizedPoints.Count.ToString + " points, right eye: " + marks.rightEye.normalizedPoints.Count.ToString + _
" points, lips: " + marks.outerLips.normalizedPoints.Count.ToString + " points"
Next
End If
```

Notes: This class represents the set of all detectable 2D face landmarks and regions, exposed as properties. The coordinates of the face landmarks are normalized to the dimensions of the face observation,Äôs boundingBox, with the origin at the bounding box,Äôs lower-left corner. Use the VNImagePointForFaceLandmarkPointMBS function to convert normalized face landmark points into absolute points within the image,Äôs coordinate system.
Subclass of the VNFaceLandmarksMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

204.24.2 Methods

204.24.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

204.24.4 Properties

204.24.5 allPoints as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing all face landmark points.
Notes: (Read only property)

204.24.6 faceContour as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that trace the face contour from the left cheek, over the chin, to the right cheek.
Notes: (Read only property)

204.24.7 innerLips as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that outline the space between the lips.
Notes: (Read only property)

204.24.8 leftEye as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that outline the left eye.
Notes: (Read only property)

204.24.9 leftEyebrow as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that trace the left eyebrow.
Notes: (Read only property)

204.24.10 leftPupil as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing the point where the left pupil is located.
Notes: This value may be inaccurate if the eye is blinking.
(Read only property)

204.24.11 medianLine as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that trace a vertical line down the center of the face.
Notes: (Read only property)

204.24.12 nose as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that outline the nose.
Notes: (Read only property)

204.24.13 noseCrest as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that trace the center crest of the nose.
Notes: (Read only property)

204.24.14 outerLips as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that outline the outside of the lips.
Notes: (Read only property)

204.24.15 rightEye as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that outline the right eye.
Notes: (Read only property)

204.24.16 rightEyebrow as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that trace the right eyebrow.
Notes: (Read only property)

204.24.17 rightPupil as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing the point where the right pupil is located.
Notes: This value may be inaccurate if the eye is blinking.
(Read only property)

204.25 class VNFaceLandmarksMBS

204.25.1 class VNFaceLandmarksMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for containers of face landmark information.
Notes: This class represents the set of all detectable facial landmarks and regions, exposed as properties. This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- Vision Framework for Xojo

204.25.2 Methods

204.25.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

204.25.4 copy as VNFaceLandmarksMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

204.25.5 Properties

204.25.6 confidence as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A confidence estimate for the detected landmarks.
Notes: A value of 0 indicates no confidence. A value of 1 indicates full confidence.
(Read only property)

204.25.7 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

204.25.8 requestRevision as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The revision of the VNRequestMBS subclass used to generate the implementing object.
Notes: (Read only property)

204.26 class VNFaceObservationMBS

204.26.1 class VNFaceObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Face or facial-feature information detected by an image analysis request.
Example:

```
// find faces and show where they are and how they are turned
Var request As New VNDetectFaceRectanglesRequestMBS
Var handler As VNImageRequestHandlerMBS = VNImageRequestHandlerMBS.RequestWithFile(SpecialFolder.Desktop.Child("photo.jpg"))
Var requests() As VNRequestMBS
requests.Add request

Var error As NSErrorMBS
If Not handler.performRequests(requests, error) Then Return

Var lines() As String
For Each o As VNObservationMBS In request.results
Var face As VNFaceObservationMBS = VNFaceObservationMBS(o)
// the bounding box is normalized: 0 to 1 relative to the picture size, origin bottom left
Var box As CGRectMBS = face.boundingBox
Var line As String = "Face at " + Format(box.Left, "0.00") + ", " + Format(box.Top, "0.00")
If Not face.roll.IsNull Then line = line + ", roll " + Format(face.roll.DoubleValue, "0.00")
lines.Add line
Next
MessageBox String.FromArray(lines, EndOfLine)
```

Notes: This type of observation results from a VNDetectFaceRectanglesRequestMBS. It contains information about facial landmarks and regions found in the image.
Subclass of the VNDetectedObjectObservationMBS class.

204.26.2 Methods

204.26.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

204.26.4 faceObservationWithRequestRevision(requestRevision as Integer = 2, boundingBox as CGRectMBS, roll as Variant, yaw as Variant) as VNFaceObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a face observation with the given revision number, bounding box, roll, and yaw.

204.26.5 Properties

204.26.6 faceCaptureQuality as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The capture quality of the face, normalized between 0.0 and 1.0.
Notes: The capture quality of the face allows you to compare the quality of the face in terms of its capture attributes: lighting, blur, and prime positioning. Use this metric to compare the capture quality of a face against other captures of the same face in a given set. Faces with quality closer to 1.0 are better lit, sharper, and centrally positioned than faces with quality closer to 0.0.
(Read only property)

204.26.7 landmarks as VNFaceLandmarks2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The facial features found in the detected face.
Notes: This property's value is nil for face observations produced by a VNDetectFaceRectanglesRequestMBS analysis. Use the VNDetectFaceLandmarksRequestMBS class to find facial features.
(Read only property)

204.26.8 pitch as Variant

MBS MacFrameworks Plugin, Plugin Version: 25.3, Platform: macOS, Targets: All.

Function: The pitch angle of a face in radians.
Notes: This value indicates the rotational angle of the face around the x-axis.
If the request doesn,Äôt calculate the angle, the value is nil.

Requires iOS 15 or macOS 12 or newer.
(Read only property)

204.26.9 roll as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The detected face's roll angle, as populated by the VNDetectFaceRectanglesRequestMBS.
Notes: The roll is reported in radians. A positive angle corresponds to counterclockwise roll. The range is [-Pi, Pi). A nil value indicates that the roll angle hasn't been computed.
(Read only property)

204.26.10 yaw as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The detected face's yaw angle, as populated by the VNDetectFaceRectanglesRequestMBS.
Notes: The yaw is reported in radians. A positive angle corresponds to counterclockwise roll. The range is [-Pi/2, Pi/2). A nil value indicates that the yaw angle hasn't been computed.
(Read only property)

204.27 class VNFeaturePrintObservationMBS

204.27.1 class VNFeaturePrintObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The observation resulting from a VNGenerateImageFeaturePrintRequestMBS.
Example:

```
// find the photo in a folder that looks most like a given photo
// FeaturePrint is a method returning VNFeaturePrintObservationMBS for a file, see VNGenerateImage-
FeaturePrintRequestMBS
Var reference As VNFeaturePrintObservationMBS // feature print of your photo
Var candidates() As VNFeaturePrintObservationMBS // feature prints of other photos
If reference = Nil Then Return

Var bestIndex As Integer = -1
Var bestDistance As Single = 1000000
For i As Integer = 0 To candidates.LastIndex
Var d As Single
Var error As NSErrorMBS
If reference.computeDistance(d, candidates(i), error) And d <bestDistance Then
bestDistance = d
bestIndex = i
End If
Next
MessageBox "Most similar: " + bestIndex.ToString + " with " + reference.elementCount.ToString + " val-
ues per print"
```

Notes: The observations returned from a VNGenerateImageFeaturePrintRequestMBS are of this class.
Subclass of the VNObservationMBS class.

- Vision Framework for Xojo

204.27.2 Methods

204.27.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

204.27.4 computeDistance(byref outDistance as Single, featurePrint as VNFeaturePrintObservationMBS, byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Computes the distance between two observations.
Notes: The larger the distance the more dissimlar the feature prints are. In case of an error this method returns false with an error describing the error condition, for instance comparing two non-comparable feature prints.

204.27.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

204.27.6 Values as Double()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Queries values as a double array.
Notes: Floats are expanded to doubles for your convenience.

204.27.7 Properties

204.27.8 data as MemoryBlock

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The feature print data.
Notes: The data is divided into separate elements. Determine the type of element using elementType, and the number of elements using elementCount.
(Read only property)

204.27.9 elementCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The total number of elements in the data.
Notes: (Read only property)

204.27.10 elementType as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The type of each element in the data.
Notes: (Read only property)

204.27.11 Constants

Element Types

Constant	Value	Description
ElementTypeDouble	2	The elements are double-precision floating-point numbers.
ElementTypeFloat	1	The elements are floating-point numbers.
ElementTypeUnknown	0	The element type isn't known.

204.28 class VNGenerateAttentionBasedSaliencyImageRequestMBS

204.28.1 class VNGenerateAttentionBasedSaliencyImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Generates a heat map that identifies the parts of an image most likely to draw attention.
Notes: The resulting observation, VNSaliencyImageObservationMBS, encodes this data as a heat map, which you can use to highlight regions of interest.
Subclass of the VNImageBasedRequestMBS class.

- Vision Framework for Xojo

204.28.2 Methods

204.28.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

204.28.4 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

204.29 class VNGenerateForegroundInstanceMaskRequestMBS

204.29.1 class VNGenerateForegroundInstanceMaskRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 25.2, Platforms: macOS, iOS, Targets: All.

Function: A request that generates an instance mask of noticable objects to separate from the background.
Example:

```
// Window1 is a window of the example project.
// we like to find the foreground object and make an image mask
Var request As New VNGenerateForegroundInstanceMaskRequestMBS
Var requests() As VNRequestMBS = Array(request)

Var file As FolderItem = SpecialFolder.Desktop.Child("IMG_4302.jpeg")
Var imageRequestHandler As VNImageRequestHandlerMBS = VNImageRequestHandlerMBS.RequestWith-
File(file)

// perform request synchronously. Asynchronously with callback is also possible
Var error As NSErrorMBS
Var r As Boolean = imageRequestHandler.performRequests(requests, error)

If r Then

Var results() As VNObservationMBS = request.results
Var result As VNObservationMBS = results(0)
If result IsA VNInstanceMaskObservationMBS Then
Var hresult As VNInstanceMaskObservationMBS = VNInstanceMaskObservationMBS(result)

// render all the layers together to one pixel buffer
Var image As CVPixelBufferMBS = hresult.generateScaledMaskForImageForInstances(hresult.allInstances,
imageRequestHandler, error)

// and show in window
Var c As NSImageMBS = image.NSImage
Window1.Backdrop = c.CopyPicture
End If
End If
```

Notes: Results will be an array of VNInstanceMaskObservationMBS objects.
Revision is 1.

Requires iOS 17.0 or macOS 14.0 or newer.
Subclass of the VNImageBasedRequestMBS class.

- MBS Xojo Plugins, version 25.2pr3

204.29.2 Methods

204.29.3 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 25.2, Platforms: macOS, iOS, Targets: All.

Function: The constructor.

204.30 class VNGenerateImageFeaturePrintRequestMBS

204.30.1 class VNGenerateImageFeaturePrintRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image-based request to generate feature prints from an image.
Example:

```
// compare two photos for visual similarity
Var printA As VNFeaturePrintObservationMBS = FeaturePrint(SpecialFolder.Desktop.Child("photo1.jpg"))
Var printB As VNFeaturePrintObservationMBS = FeaturePrint(SpecialFolder.Desktop.Child("photo2.jpg"))
If printA = Nil Or printB = Nil Then Return

Var distance As Single
Var error As NSErrorMBS
If printA.computeDistance(distance, printB, error) Then
MessageBox "Distance: " + Format(distance, "0.00") + " (smaller means more similar)"
End If

// a method in the window:
Function FeaturePrint(file As FolderItem) As VNFeaturePrintObservationMBS
Var request As New VNGenerateImageFeaturePrintRequestMBS
Var handler As VNImageRequestHandlerMBS = VNImageRequestHandlerMBS.RequestWithFile(file)
Var requests() As VNRequestMBS
requests.Add request
Var error As NSErrorMBS
If handler.performRequests(requests, error) Then
Var results() As VNObservationMBS = request.results
If results.Count >0 Then Return VNFeaturePrintObservationMBS(results(0))
End If
End Function
```

Notes: This request returns an array of feature print elements in the form of data wrapped in VNFeaturePrintObservationMBS objects.
Available in MacOS 10.15 or newer.
Subclass of the VNImageBasedRequestMBS class.

- Vision Framework for Xojo

204.30.2 Methods

204.30.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Whether this class is available.

204.30.4 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

204.30.5 Properties

204.30.6 imageCropAndScaleOption as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Determine what type of croping and scaling action should be applied to the image before generating the feature print.
Notes: The default value for this property is VNImageCropAndScaleOptionScaleFill.
(Read and Write property)

204.30.7 Constants

Crop and Scale options

Constant	Value	Description
VNImageCropAndScaleOptionCenterCrop	0	A scaling option that maintains aspect ratio to fit the short side, and centered image on its long side.
VNImageCropAndScaleOptionScaleFill	2	A scaling option that scales an image proportionally so that its short sion fills the canvas, potentially cropping along the longer dimension
VNImageCropAndScaleOptionScaleFit	1	An option that scales an image to fit the input image dimensions wl taining aspect ratio. This option ensures the entire image fits into the Vision algorithm's in dimensions by scaling down the longer dimension until it fits. This op the image along the shorter dimension to maintain aspect ratio.

204.31 class VNGenerateObjectnessBasedSaliencyImageRequestMBS

204.31.1 class VNGenerateObjectnessBasedSaliencyImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Generates a heat map that identifies the parts of an image most likely to represent objects.
Notes: The resulting observation, VNSaliencyImageObservationMBS, encodes this data as a heat map, which you can use to highlight regions of interest.
Subclass of the VNImageBasedRequestMBS class.

204.31.2 Methods

204.31.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

204.31.4 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

204.32 class VNGeneratePersonInstanceMaskRequestMBS

204.32.1 class VNGeneratePersonInstanceMaskRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 25.2, Platforms: macOS, iOS, Targets: All.

Function: An object that produces a mask of individual people it finds in the input image.
Example:

```
// Window1 is a window of the example project.
// we like to find people and make an image mask
Var request As New VNGeneratePersonInstanceMaskRequestMBS
Var requests() As VNRequestMBS = Array(request)

Var file As FolderItem = SpecialFolder.Desktop.Child("image0.jpeg")
Var imageRequestHandler As VNImageRequestHandlerMBS = VNImageRequestHandlerMBS.RequestWith-
File(file)

// perform request synchronously. Asynchronously with callback is also possible
Var error As NSErrorMBS
Var r As Boolean = imageRequestHandler.performRequests(requests, error)

If r Then

Var results() As VNObservationMBS = request.results
Var result As VNObservationMBS = results(0)
If result IsA VNInstanceMaskObservationMBS Then
Var hresult As VNInstanceMaskObservationMBS = VNInstanceMaskObservationMBS(result)

// render all the layers together to one pixel buffer
Var image As CVPixelBufferMBS = hresult.generateScaledMaskForImageForInstances(hresult.allInstances,
imageRequestHandler, error)

// and show in window
Var c As NSImageMBS = image.NSImage
Window1.Backdrop = c.CopyPicture
End If
End If
```

Notes: Results will be an array of VNInstanceMaskObservationMBS objects.
Revision is 1.

Requires iOS 17.0 or macOS 14.0 or newer.
Subclass of the VNImageBasedRequestMBS class.

204.32.2 Methods

204.32.3 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 25.2, Platforms: macOS, iOS, Targets: All.

Function: The constructor.

204.33 class VNHomographicImageRegistrationRequestMBS

204.33.1 class VNHomographicImageRegistrationRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that determines the perspective warp matrix needed to align the content of two images.
Notes: Create and perform a homographic image registration request to align content in two images through a homography. A homography is an isomorphism of projected spaces, a bijection that maps lines to lines.
Requires MacOS 10.13 or newer.
Subclass of the VNImageRegistrationRequestMBS class.

204.33.2 Methods

204.33.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Whether this class is available.

204.33.4 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

204.34 class VNHorizonObservationMBS

204.34.1 class VNHorizonObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Horizon angle information detected by an image analysis request.
Example:

```
// we like to find the horizon
Var request As New VNDetectHorizonRequestMBS
Var requests() As VNRequestMBS = Array(request)

Var file As FolderItem = SpecialFolder.Desktop.Child("IMG_4307.jpeg")
Var imageRequestHandler As VNImageRequestHandlerMBS = VNImageRequestHandlerMBS.RequestWith-
File(file)

// perform request synchronously. Asynchronously with callback is also possible
Var error As NSErrorMBS
Var r As Boolean = imageRequestHandler.performRequests(requests, error)

If r Then

Var results() As VNObservationMBS = request.results
Var result As VNObservationMBS = results(0)
If result IsA VNHorizonObservationMBS Then
Var hresult As VNHorizonObservationMBS = VNHorizonObservationMBS(result)
MessageBox "Angle: "+hresult.angle.ToString
End If
End If
```

Notes: Instances of this class result from invoking a VNDetectHorizonRequestMBS and report the angle and transform of the horizon in an image.
Subclass of the VNObservationMBS class.

204.34.2 Methods

204.34.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

204.34.4 Properties

204.34.5 angle as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Angle of the observed horizon.
Notes: Use the angle to orient the image in an upright position and make the detected horizon level.
(Read only property)

204.34.6 transform as CGAffineTransformMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Transform applied to the detected horizon.
Notes: Apply the transform's inverse to orient the image in an upright position and make the detected horizon level.
(Read only property)

204.35 class VNHumanBodyPose3DObservationMBS

204.35.1 class VNHumanBodyPose3DObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: An observation that provides the 3D body points the request recognizes.
Notes: Requires iOS 17, macOS 14 or later.
Subclass of the VNRecognizedPoints3DObservationMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

204.35.2 Methods

204.35.3 availableJointNames as String()

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The names of the available joints in the observation.

204.35.4 availableJointsGroupNames as String()

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The available joint group names in the observation.

204.35.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The private constructor.

204.35.6 parentJointNameForJointName(jointName as String) as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Returns the parent joint of the joint name you specify.

204.35.7 recognizedPointForJointName(name as String, byref error as NSErrorMBS) as VNRecognizedPointMBS

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Returns the point for a joint name that the observation recognizes.
Notes: jointName: The joint name to retrieve.
error: On output, an error object that describes why the method failed, or nil if no error occurred. If you are not interested in the error information, pass nil for this parameter.

Returns the point for the joint name. On failure, this method returns nil.

204.35.8 recognizedPointsForJointsGroupName(name as String, byref error as NSErrorMBS) as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Returns a collection of points for the group name you specify.
Notes: jointsGroupName: The name of the human body joints group.
error: On output, a pointer to an error object that describes why the method failed, or nil if no error occurred. If you are not interested in the error information, pass nil for this parameter.

Returns a collection of points. On failure, this method returns nil.

204.35.9 Properties

204.35.10 bodyHeight as Single

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The estimated human body height, in meters.
Notes: (Read only property)

204.35.11 heightEstimation as Integer

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The technique the framework uses to estimate body height.
Notes: (Read only property)

204.35.12 Constants

Height Estimation

Constant	Value	Description
HeightEstimationMeasured	1	A technique that uses LiDAR depth data to measure body height, in meters.
HeightEstimationReference	0	A technique that uses a reference height.

204.36 class VNHumanBodyPoseObservationMBS

204.36.1 class VNHumanBodyPoseObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: An observation that provides the body points the analysis recognized.
Notes: Requires iOS 14, macOS 11 or later.
Subclass of the VNRecognizedPointsObservationMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

204.36.2 Methods

204.36.3 availableJointNames as String()

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The names of the available joints in the observation.

204.36.4 availableJointsGroupNames as String()

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The available joint group names in the observation.

204.36.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Private constructor.

204.36.6 recognizedPointForJointName(name as String, byref error as NSErrorMBS) as VNRecognizedPointMBS

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Retrieves the recognized point for a joint name.
Notes: jointName: The joint name of the point to retrieve.

error: On output, an error object that describes why the method failed, or nil if no error occurred. If you are not interested in the error information, pass nil for this parameter.

Returns the point for the joint name. On failure, this method returns nil.

204.36.7 recognizedPointsForJointsGroupName(name as String, byref error as NSErrorMBS) as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Retrieves the recognized points associated with the joint group name.
Notes: jointsGroupName: The joint group name of the points to retrieve.
error: On output, an error object that describes why the method failed, or nil if no error occurred. If you are not interested in the error information, pass nil for this parameter.

Returns the array of points associated with the joint group name. On failure, this method returns nil.

204.37 class VNHumanBodyRecognizedPoint3DMBS

204.37.1 class VNHumanBodyRecognizedPoint3DMBS

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: A recognized 3D point that includes a parent joint.
Notes: Requires iOS 17, macOS 14 or newer.
Subclass of the VNRecognizedPoint3DMBS class.

204.37.5 localPosition as Single()

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The three-dimensional position.

204.37.6 Properties

204.37.7 parentJoint as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The parent joint in the observation.
Notes: (Read only property)

204.38 class VNHumanHandPoseObservationMBS

204.38.1 class VNHumanHandPoseObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: An observation that provides the hand points the analysis recognized.
Notes: Requires iOS 14, macOS 11 or later.
Subclass of the VNRecognizedPointsObservationMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

204.38.2 Methods

204.38.3 availableJointNames as String()

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The names of the available joints in the observation.

204.38.4 availableJointsGroupNames as String()

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The joint group names available in the observation.

204.38.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The private constructor.

204.38.6 recognizedPointForJointName(name as String, byref error as NSErrorMBS) as VNRecognizedPointMBS

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Retrieves the recognized point for a joint name.
Notes: jointName: The joint name of the point to retrieve.

error: On output, an error object that describes why the method failed, or nil if no error occurred. If you are not interested in the error information, pass nil for this parameter.

Returns the point for the joint name. On failure, this method returns nil.

204.38.7 recognizedPointsForJointsGroupName(name as String, byref error as NSErrorMBS) as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Retrieves the recognized points associated with the joint group name.
Notes: jointsGroupName: The joint group name of the points to retrieve.
error: On output, an error object that describes why the method failed, or nil if no error occurred. If you are not interested in the error information, pass nil for this parameter.

Returns the array of points associated with the joint group name. On failure, this method returns nil.

204.38.8 Properties

204.38.9 chirality as Integer

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The chirality, or handedness, of a pose.
Notes: (Read only property)

204.38.10 Constants

Chirality

Constant	Value	Description
ChiralityLeft	-1	Indicates a left-handed pose.
ChiralityRight	1	Indicates a right-handed pose.
ChiralityUnknown	0	Indicates that the pose chirality is unknown.

204.39 class VNHumanObservationMBS

204.39.1 class VNHumanObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: An object that represents a person that the request detects.
Notes: Requires iOS 15, macOS 12 or newer.
Subclass of the VNDetectedObjectObservationMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

204.39.2 Methods

204.39.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The private constructor.

204.39.4 Properties

204.39.5 upperBodyOnly as Boolean

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the observation represents an upper-body or full-body rectangle.
Notes: (Read only property)

204.40 class VNImageAlignmentObservationMBS

204.40.1 class VNImageAlignmentObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for image analysis results that describe the relative alignment of two images.
Notes: This abstract superclass forms the basis of image alignment or registration output. You receive its subclasses, such as VNImageTranslationAlignmentObservationMBS and VNImageHomographicAlignmentObservationMBS, by performing specific registration requests. Don't create one of these classes yourself.
Subclass of the VNObservationMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

204.40.2 Methods

204.40.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

204.41 class VNImageBasedRequestMBS

204.41.1 class VNImageBasedRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for image analysis requests that focus on a specific part of an image.
Notes: Other Vision request handlers that operate on still images inherit from this abstract base class. Don't use it directly.
Subclass of the VNRequestMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

204.41.2 Methods

204.41.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

204.41.4 Properties

204.41.5 regionOfInterest as CGRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region of the image in which Vision will perform the request.
Notes: The rectangle is normalized to the dimensions of the processed image. Its origin is specified relative to the image's lower-left corner.

The default value is { { 0, 0 } , { 1, 1 } } .

Important
The request will fail to perform if you set this property to a rectangle outside the normalized coordinate space.
(Read and Write property)

204.42 class VNImageHomographicAlignmentObservationMBS

204.42.1 class VNImageHomographicAlignmentObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Perspective warp information produced by an image alignment request.
Notes: This type of observation results from a VNHomographicImageRegistrationRequestMBS, informing the warpTransform performed to align the input images.
Subclass of the VNImageAlignmentObservationMBS class.

204.42.2 Methods

204.42.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

204.42.4 Properties

204.42.5 warpTransform as MemoryBlock

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The warp transform matrix to morph the floating image into the reference image.
Notes: This is a 3x3 float matrix wrapped into a memoryblock.
(Read only property)

204.43 class VNImageRegistrationRequestMBS

204.43.1 class VNImageRegistrationRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for image analysis requests that align images based on their content.
Notes: This abstract superclass forms the basis of image alignment or registration requests. Make specific requests through one of its subclasses, VNTranslationalImageRegistrationRequestMBS or VNHomographicImageRegistrationRequestMBS. Don't create an instance of this superclass yourself.
Subclass of the VNTargetedImageRequestMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

204.43.2 Methods

204.43.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

204.44 class VNImageRequestHandlerMBS

204.44.1 class VNImageRequestHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An object that processes one or more image analysis requests pertaining to a single image.
Example:

```
// recognize the text in a picture file with Vision
Var request As New VNRecognizeTextRequestMBS
request.recognitionLevel = VNRecognizeTextRequestMBS.RecognitionLevelAccurate

Var handler As VNImageRequestHandlerMBS = VNImageRequestHandlerMBS.RequestWithFile(SpecialFolder.Desktop.Child("text.png"))

Var requests() As VNRequestMBS
requests.Add request

Var error As NSErrorMBS
If Not handler.performRequests(requests, error) Then
MessageBox error.localizedDescription
Return
End If

Var lines() As String
For Each o As VNObservationMBS In request.results
Var textObservation As VNRecognizedTextObservationMBS = VNRecognizedTextObservationMBS(o)
Var candidates() As VNRecognizedTextMBS = textObservation.topCandidates(1)
If candidates.Count >0 Then lines.Add candidates(0).String
Next
MessageBox String.FromArray(lines, EndOfLine)
```

Notes: Instantiate this handler to perform Vision requests on a single image. You specify the image and, optionally, a completion handler at the time of creation, and call performRequests to begin executing the request.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

204.44.2 Methods

204.44.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

204.44.4 Destructor

MBS MacFrameworks Plugin, Plugin Version: 25.2, Platform: macOS, Targets: All.

Function: The destructor.

204.44.5 performRequests(requests() as VNRequestMBS, byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Schedules Vision requests to be performed.
Notes: requests: A nonempty array of VNRequestMBS instances to perform.
error: An optional error parameter populated when problems arise in scheduling the requests. Check if the return value is false.

Returns true if all requests were scheduled and performed. If the return value is false, check the error parameter.

The function returns after all requests have either completed or failed. Check individual requests and errors for their respective successes and failures.

204.44.6 performRequestsAsync(requests() as VNRequestMBS, DelegateHandler as VNPerformRequestsCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Schedules Vision requests to be performed asynchronously in background.

Notes: requests: A nonempty array of VNRequestMBS instances to perform.
error: An optional error parameter populated when problems arise in scheduling the requests. Check if the return value is false.

Returns true if all requests were scheduled and performed. If the return value is false, check the error parameter.

The function returns immediately. Delegate will be called when finished.

204.44.7 RequestWithCGImage(CGImage as CGImageMBS, orientation as Integer = 0, Options as Dictionary = nil) as VNImageRequestHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a handler to be used for performing requests on a Core Graphics image.
Notes: image: A CGImageMBS containing the image to be used for performing the requests. Image content is immutable.
orientation: The orientation of the input image. Pass zero if unknown.
options: An optional dictionary containing VNImageOption keys to auxiliary image data.

204.44.8 RequestWithCIImage(CIImage as Variant, orientation as Integer = 0, Options as Dictionary = nil) as VNImageRequestHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a handler to be used for performing requests on CIImage data.
Notes: image: A CIImageMBS containing the image to be used for performing the requests. Image content is immutable.
orientation: The orientation of the input image. Pass zero if unknown.
options: An optional dictionary containing VNImageOption keys to auxiliary image data.

204.44.9 RequestWithCVPixelBuffer(CVPixelBuffer as Variant, orientation as Integer = 0, Options as Dictionary = nil) as VNImageRequestHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a handler to be used for performing requests on a Core Video pixel buffer of a known orientation.
Notes: pixelBuffer: A CVPixelBufferMBS containing the image to be used for performing the requests. Buffer contents can't be changed for the lifetime of the request handler.
orientation: The orientation of the input image. Pass zero if unknown.

options: An optional dictionary containing VNImageOption keys to auxiliary image data.

204.44.10 RequestWithData(Data as MemoryBlock, orientation as Integer = 0, Options as Dictionary = nil) as VNImageRequestHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a handler to be used for performing requests on an image, contained in a memoryblock.
Notes: imageData: Data containing the image to be used for performing the requests. Image content is immutable.
orientation: The orientation of the input image. Pass zero if unknown.
options: An optional dictionary containing VNImageOption keys to auxiliary image data.

The intended use cases of this type of initializer include compressed images and network downloads, where a client may receive a JPEG from a website or the cloud.

204.44.11 RequestWithFile(File as FolderItem, orientation as Integer = 0, Options as Dictionary = nil) as VNImageRequestHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a handler to be used for performing requests on an image, at the specified folderitem.
Notes: File: A folderitem pointing to the image to be used for performing the requests. The image must be in a format supported by Image I/O. Image content is immutable.
orientation: The orientation of the input image. pass zero if unknown.
options: An optional dictionary containing VNImageOption keys to auxiliary image data.

204.44.12 RequestWithPicture(Picture as Picture, orientation as Integer = 0, Options as Dictionary = nil) as VNImageRequestHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a handler to be used for performing requests on a picture.
Notes: image: A Picture containing the image to be used for performing the requests. Image content is immutable.
orientation: The orientation of the input image. Pass zero if unknown.
options: An optional dictionary containing VNImageOption keys to auxiliary image data.

204.44.13 VNImageOptionCameraIntrinsics as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An option to specify the camera intrinstics as an MemoryBlock object representing a matrix_float3x3.
Notes: see
https://developer.apple.com/documentation/vision/vnimageoptioncameraintrinsics?language=objc

204.44.14 VNImageOptionCIContext as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An option key to specify the CIContextMBS to be used in the handler's Core Image operations.
Notes: If this key isn't specified, Vision will create its own CIContext.
Specify a CIContextMBS when you've used one in processing an input CIImageMBS or executing a CIFilterMBS chain, so you can save the cost of creating a new context.

204.44.15 VNImageOptionProperties as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The dictionary from CGImageSourceCopyPropertiesAtIndex containing metadata for algorithms like horizon detection.

204.44.16 Properties

204.44.17 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

204.44.18 Constants

Orientations

Constant	Value	Description
kOrientationDown	3	The encoded image data is rotated 180¬∞ from the image's intended display orientation.
kOrientationDownMirrored	4	The encoded image data is vertically flipped from the image's intended display orientation.
kOrientationLeft	8	The encoded image data is rotated 90¬∞ clockwise from the image's intended display orientation.
kOrientationLeftMirrored	5	The encoded image data is horizontally flipped and rotated 90¬∞ counter-clockwise from the image's intended display orientation.
kOrientationRight	6	The encoded image data is rotated 90¬∞ clockwise from the image's intended display orientation.
kOrientationRightMirrored	7	The encoded image data is horizontally flipped and rotated 90¬∞ clockwise from the image's intended display orientation.
kOrientationUp	1	The encoded image data matches the image's intended display orientation.
kOrientationUpMirrored	2	The encoded image data is horizontally flipped from the image's intended display orientation.

204.45 class VNImageTranslationAlignmentObservationMBS

204.45.1 class VNImageTranslationAlignmentObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Affine transform information produced by an image alignment request.
Notes: This type of observation results from a VNTranslationalImageRegistrationRequestMBS, informing the alignmentTransform performed to align the input images.
Subclass of the VNImageAlignmentObservationMBS class.

- Vision Framework for Xojo

204.45.2 Methods

204.45.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

204.45.4 Properties

204.45.5 alignmentTransform as CGAffineTransformMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The alignment transform to align the floating image with the reference image.
Notes: (Read only property)

204.46 class VNInstanceMaskObservationMBS

204.46.1 class VNInstanceMaskObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 25.2, Platforms: macOS, iOS, Targets: All.

Function: An observation that contains an instance mask that labels instances in the mask.
Notes: Requires iOS 17.0 or macOS 14.0 or newer.
Subclass of the VNObservationMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

204.46.2 Methods

204.46.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 25.2, Platforms: macOS, iOS, Targets: All.

Function: The private constructor.

204.46.4 generateMaskedImageOfInstances(Instances as NSIndexSetMBS, requestHandler as VNImageRequestHandlerMBS, croppedToInstancesExtent as Boolean, byref Error as NSErrorMBS) as Variant

MBS MacFrameworks Plugin, Plugin Version: 25.2, Platforms: macOS, iOS, Targets: All.

Function: Creates a high-resolution image where everything becomes transparent black, except for the instances you specify.
Notes: instances: The collection of instances.
requestHandler: The image request callback.
cropResult: A Boolean value that indicates whether to crop the image to the smallest rectangle that contains all instances.
error: On output, an error object that describes why the method failed, or nil if no error occurred. If you are not interested in the error information, pass nil for this parameter.

Returns the pixel buffer that contains the image. On failure, this method returns nil.
Result is an object of CVPixelBufferMBS class.

204.46.5 generateMaskForInstances(Instances as NSIndexSetMBS, byref Error as NSErrorMBS) as Variant

MBS MacFrameworks Plugin, Plugin Version: 25.2, Platforms: macOS, iOS, Targets: All.

Function: Creates a low-resolution mask from the instances you specify.
Notes: instances: The collection of instances.
error: On output the error object that describes why the method failed, or nil if no error occurred. If you are not interested in the error information, pass nil for this parameter.

Returns the pixel buffer that contains the image. On failure, this method returns nil.
Result is an object of CVPixelBufferMBS class.

204.46.6 generateScaledMaskForImageForInstances(Instances as NSIndexSetMBS, requestHandler as VNImageRequestHandlerMBS, byref Error as NSErrorMBS) as Variant

MBS MacFrameworks Plugin, Plugin Version: 25.2, Platforms: macOS, iOS, Targets: All.

Function: Creates a high-resolution mask where everything becomes transparent black, except for the instances you specify.
Notes: instances: The collection of instances.
requestHandler: The image request callback.
error: On output, an error object that describes why the method failed, or nil if no error occurred. If you are not interested in the error information, pass nil for this parameter.

Returns the pixel buffer that contains the image. On failure, this method returns nil.
Result is an object of CVPixelBufferMBS class.

204.46.7 Properties

204.46.8 allInstances as NSIndexSetMBS

MBS MacFrameworks Plugin, Plugin Version: 25.2, Platforms: macOS, iOS, Targets: All.

Function: The collection that contains all instances, excluding the background.
Notes: (Read only property)

204.46.9 instanceMask as Variant

MBS MacFrameworks Plugin, Plugin Version: 25.2, Platforms: macOS, iOS, Targets: All.

Function: The resulting mask that represents all instances.
Notes: A pixel can only correspond to one instance. A 0 represents the background, and all other values represent the indices of the instances.
(Read only property)

204.47 class VNObservationMBS

204.47.1 class VNObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for analysis results.
Notes: Observations resulting from Vision image analysis requests inherit from this abstract base class. Do not use this abstract superclass directly.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

204.47.2 Methods

204.47.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

204.47.4 copy as VNObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

204.47.5 Properties

204.47.6 className as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Queries class name of the observation.
Notes: (Read only property)

204.47.7 Confidence as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The level of confidence in the observation's accuracy, normalized to [0, 1.0] .
Notes: A value of 0.0 indicates no confidence.
A value of 1.0 indicates the highest confidence. An observation that doesn't support or assign meaning to confidence also returns 1.0.
(Read only property)

204.47.8 description as String

MBS MacFrameworks Plugin, Plugin Version: 25.3, Platform: macOS, Targets: All.

Function: The debug description.
Notes: (Read only property)

204.47.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

204.47.10 requestRevision as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The revision used in request.
Notes: (Read only property)

204.47.11 UUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A unique identifier assigned to the Vision observation.
Notes: (Read only property)

204.48 class VNPixelBufferObservationMBS

204.48.1 class VNPixelBufferObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An output image produced by a Core ML image analysis request.
Notes: This type of observation results from performing a VNCoreMLRequestMBS image analysis with a Core ML model whose role is image-to-image processing. For example, this observation would result from a model that analyzes the style of one image and then transfers that style to a different image.
Vision infers that an MLModel object is an image-to-image model if that model includes an image. Its modelDescription object includes an image-typed feature description in its outputDescriptionsByName dictionary.
Subclass of the VNObservationMBS class.

204.48.2 Methods

204.48.3 CIImage as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates CIImageMBS object for given pixel buffer.
Notes: Value is a CIImageMBS. We use variant to reduce dependency to other plugins.

204.48.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

204.48.5 Properties

204.48.6 featureName as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The name used in the model description of the CoreML model that produced this observation.
Notes: This value can be empty if the observation is not the result of a VNCoreMLRequest operation.
Available in MacOS 10.15 or later.

(Read only property)

204.48.7 pixelBuffer as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The image that results from a request with image output.
Notes: VNCoreMLRequestMBS produces observations that contain images in pixel buffer format. The confidence level is always 1.0.
(Read only property)

204.49 class VNPoint3DMBS

204.49.1 class VNPoint3DMBS

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: An object that represents a 3D point in an image.
Notes: Requires iOS 17, macOS 14 or newer.
Blog Entries

- MBS Xojo Plugins, version 26.3pr4

204.49.2 Methods

204.49.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Creates a new point with zeros.
See also:

- 204.49.4 Constructor(values() as Single) 24058

204.49.4 Constructor(values() as Single)

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Creates a point based on the values.
See also:

- 204.49.3 Constructor 24058

204.49.5 copy as VNPoint3DMBS

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

204.49.6 position as Single()

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The three-dimensional position.

204.49.7 zeroPoint as VNPoint3DMBS

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The point with zero.

204.50 class VNPointMBS

204.50.1 class VNPointMBS

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: An immutable object that represents a single 2D point in an image.
Example:

```
// convert a normalized Vision point to pixel coordinates of a picture
Var pic As Picture = Picture.Open(SpecialFolder.Desktop.Child("photo.jpg"))
Var p As New VNPointMBS(0.25, 0.75) // normalized, origin bottom left

Var px As Double = p.x * pic.Width
Var py As Double = (1 - p.y) * pic.Height // flip for Xojo coordinates
MessageBox "Pixel: " + Format(px, "0") + "/" + Format(py, "0") + EndOfLine + _
"Distance to origin: " + Format(p.distanceToPoint(VNPointMBS.zeroPoint), "0.000")
```

Notes: Requires iOS 14, macOS 11 or newer.

204.50.2 Methods

204.50.3 Constructor(x as double, y as double)

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Creates a point object with the specified coordinates.

204.50.4 copy as VNPointMBS

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Creates a copy of the point object.

204.50.5 distanceToPoint(point as VNPointMBS) as Double

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Returns the distance to another point.
Notes: point: The point for which to calculate the distance.

Returns the calculated distance.

204.50.6 zeroPoint as VNPointMBS

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: A point object that represents the origin.

204.50.7 Properties

204.50.8 x as Double

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The x-coordinate.
Notes: (Read only property)

204.50.9 y as Double

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The y-coordinate.
Notes: (Read only property)

204.51 class VNRecognizeAnimalsRequestMBS

204.51.1 class VNRecognizeAnimalsRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A request that will recognize various animals in an image.
Example:

```
// we like to find animals in the image
Var request As New VNRecognizeAnimalsRequestMBS
Var requests() As VNRequestMBS = Array(request)

Var file As FolderItem = SpecialFolder.Desktop.Child("P8290009.JPG")
Var imageRequestHandler As VNImageRequestHandlerMBS = VNImageRequestHandlerMBS.RequestWith-
File(file)

// perform request synchronously. Asynchronously with callback is also possible
Var error As NSErrorMBS
Var r As Boolean = imageRequestHandler.performRequests(requests, error)

If r Then

Var results() As VNObservationMBS = request.results
Var result As VNObservationMBS = results(0)
If result IsA VNRecognizedObjectObservationMBS Then
Var hresult As VNRecognizedObjectObservationMBS = VNRecognizedObjectObservationMBS(result)
// show first observation identifier
Var labels() As VNClassificationObservationMBS = hresult.labels
MessageBox labels(0).identifier
End If
End If
```

Notes: The list of animals supported by the recognition algorithm can be queried by knownAnimalIdentifiersForRevision.
This request will generate VNRecognizedObjectObservationMBS objects with a defined boundingBox, label and confidence level.

Available on MacOS 10.15.
Subclass of the VNImageBasedRequestMBS class.

- Vision Framework for Xojo

204.51.2 Methods

204.51.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

204.51.4 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

204.51.5 knownAnimalIdentifiersForRevision(requestRevision as Integer = 1, byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: This class method returns a list of all animals supported by the recognition algorithm
Notes: This request will generate a collection of names for supported animals by current recognition algorithm.

204.51.6 VNAnimalIdentifierCat as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The identifier for cats.

204.51.7 VNAnimalIdentifierDog as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The identifier for dogs.

204.52 class VNRecognizedObjectObservationMBS

204.52.1 class VNRecognizedObjectObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A detected object observation with an array of classification labels that classify the recognized object.
Notes: The confidence of the classifications sum up to 1.0. Multiply the classification confidence with the confidence of this observation.

Available on MacOS 10.14 or newer.
Subclass of the VNDetectedObjectObservationMBS class.

204.55.2 Methods

204.55.3 availableGroupKeys as String()

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The available point group keys in the observation.

204.55.4 availableKeys as String()

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The available point keys in the observation.

204.55.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The private constructor.

204.55.6 recognizedPointForKey(name as String, byref error as NSErrorMBS) as VNRecognizedPoint3DMBS

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Returns a point for a key you specify.
Notes: pointKey: The key of the point to retrieve.

error: On output, an error object that describes why the method failed, or nil if no error occurred. If you are not interested in the error information, pass nil for this parameter.

Returns the point the observation associates with the key. On failure, this method returns nil.

204.55.7 recognizedPointsForGroupKey(name as String, byref error as NSErrorMBS) as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Returns a point for a group key you specify.
Notes: groupKey: The group key to retrieve points for.
error: On output, an error object that describes why the method failed, or nil if no error occurred. If you are not interested in the error information, pass nil for this parameter.

Returns a dictionary of labeled points for the group. On failure, this method returns nil.

204.55.8 VNRecognizedPoint3DGroupKeyAll as String

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: A group key identifying all three-dimensional landmarks.

204.56 class VNRecognizedPointsObservationMBS

204.56.1 class VNRecognizedPointsObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: An observation that provides the points the analysis recognized.
Notes: Requires iOS 14, macOS 11 or later.
Subclass of the VNObservationMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

204.56.2 Methods

204.56.3 availableGroupKeys as String()

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The available point group keys in the observation.

204.56.4 availableKeys as String()

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The available point keys in the observation.

204.56.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The private constructor.

204.56.6 recognizedPointForKey(name as String, byref error as NSErrorMBS) as VNRecognizedPointMBS

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Retrieves a recognized point for a key.
Notes: pointKey: The key of the point to retrieve.

error: On output, an error object that describes why the method failed, or nil if no error occurred. If you are not interested in the error information, pass nil for this parameter.

Returns the recognized point associated with the key. On failure, this method returns nil.

204.56.7 recognizedPointsForGroupKey(name as String, byref error as NSErrorMBS) as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Retrieves the recognized points for a key.
Notes: groupKey: The group key to retrieve recognized points for.
error: On output, an error object that describes why the method failed, or nil if no error occurred. If you are not interested in the error information, pass nil for this parameter.

Returns a dictionary of labeled points for the group. On failure, this method returns nil.

204.57 class VNRecognizedTextMBS

204.57.1 class VNRecognizedTextMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A block of recognized text.
Example:

```
// recognize text and show the confidence for each line
Var request As New VNRecognizeTextRequestMBS
Var handler As VNImageRequestHandlerMBS = VNImageRequestHandlerMBS.RequestWithFile(SpecialFolder.Desktop.Child("text.png"))
Var requests() As VNRequestMBS
requests.Add request

Var error As NSErrorMBS
If Not handler.performRequests(requests, error) Then Return

Var lines() As String
For Each o As VNObservationMBS In request.results
// up to 3 alternatives per line
For Each candidate As VNRecognizedTextMBS In VNRecognizedTextObservationMBS(o).topCandidates(3)
lines.Add candidate.String + " (" + Format(candidate.confidence * 100, "0") + "%)"
Next
Next
MessageBox String.FromArray(lines, EndOfLine)
```

Notes: There can be multiple VNRecognizedTextMBS objects returned in a VNRecognizedTextObservationMBS - one for each candidate.

204.57.2 Methods

204.57.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

204.57.4 boundingBoxForRange(range as NSRangeMBS, byref error as NSErrorMBS) as VNRectangleObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Calculate the bounding box around the characters in the range of the string.
Notes: The bounding boxes are not guaranteed to be an exact fit around the characters and are purely meant for UI purposes and not for image processing.
Range is zero based!

204.57.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

204.57.6 copy as VNRecognizedTextMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

204.57.7 Properties

204.57.8 confidence as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The level of confidence normalized to [0.0, 1.0] where 1.0 is most confident.
Notes: (Read only property)

204.57.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

204.57.10 string as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Field that contains recognized text.
Notes: This is the top candidate of the recognized text.
(Read only property)

204.58 class VNRecognizedTextObservationMBS

204.58.1 class VNRecognizedTextObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A request that detects and recognizes regions of text in an image.
Notes: This type of observation results from a VNRecognizeTextRequestMBS. It contains information about both the location and content of text and glyphs that Vision recognized in the input image.
Subclass of the VNRectangleObservationMBS class.
Blog Entries

- 22.4, page 59: Text Recognition, Using Apple's Vision to Extract Text from an Image by Stefanie Juchmes-Simonis

204.58.2 Methods

204.58.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

204.58.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

204.58.5 topCandidates(maxCandidateCount as integer) as VNRecognizedTextMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Requests the n top candidates for a recognized text string.
Notes: maxCandidateCount: The maximum number of candidates to return. This can't exceed 10.

Returns an array of the n top candidates, sorted by decreasing confidence score.

This function returns no more than n candidates, but it may return fewer than n candidates.

204.58.6 Properties

204.58.7 string as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The top candidate's string.
Notes: For your convenience.
(Read only property)

204.58.8 topCanditate as VNRecognizedTextMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: First top candidate.
Notes: For your convenience.
Same as first element of topCanditates(1).
(Read only property)

204.59 class VNRecognizeTextRequestMBS

204.59.1 class VNRecognizeTextRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that finds and recognizes text in an image.
Example:

```
// we like to find text on the image
Var request As New VNRecognizeTextRequestMBS
Var requests() As VNRequestMBS = Array(request)

Var file As FolderItem = SpecialFolder.Desktop.Child("image0.jpeg")
Var imageRequestHandler As VNImageRequestHandlerMBS = VNImageRequestHandlerMBS.RequestWith-
File(file)

// perform request synchronously. Asynchronously with callback is also possible
Var error As NSErrorMBS
Var r As Boolean = imageRequestHandler.performRequests(requests, error)

If r Then

Var results() As VNObservationMBS = request.results
Var result As VNObservationMBS = results(0)
If result IsA VNRecognizedTextObservationMBS Then
Var hresult As VNRecognizedTextObservationMBS = VNRecognizedTextObservationMBS(result)
// show first text
MessageBox hresult.String
End If
End If
```

Notes: By default, a text recognition request first locates all possible glyphs or characters in the input image, then analyzes each string. To specify or limit the languages sought in the request, set the recognitionLanguages property to an array containing the names of the languages of text you'd like to recognize. Vision returns the result of this request in a VNRecognizedTextObservationMBS object.

Available on MacOS 10.15.
Subclass of the VNImageBasedRequestMBS class.

204.59.2 Methods

204.59.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

204.59.4 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

204.59.5 customWords as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of strings to supplement the recognized languages at the word recognition stage.
Notes: The customWords list takes precedence over the standard lexicon.

204.59.6 recognitionLanguages as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of languages to detect, in priority order.
Notes: The order of the languages in the array defines the order in which languages are used during language processing and text recognition.
Specify the languages as ISO language codes.

204.59.7 setCustomWords(customWords() as String)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Sets an array of strings to supplement the recognized languages at the word recognition stage.
Notes: The customWords list takes precedence over the standard lexicon.

204.59.8 setProgressHandler(ProgressHandler as VNProgressHandlerMBS, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Sets progress handler.
Notes: The progress handler is an optional delegate that allows clients of the request to report progress to the user or to display partial results as they become available.

204.59.9 setRecognitionLanguages(recognitionLanguages() as String)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Sets array of languages to detect, in priority order.
Notes: The order of the languages in the array defines the order in which languages are used during language processing and text recognition.
Specify the languages as ISO language codes.

204.59.10 supportedRecognitionLanguages(recognitionLevel as Integer, byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Requests a list of languages recognized by the specified revision.
Example:

```
Var recognitionLevel As Integer = VNRecognizeTextRequestMBS.RecognitionLevelAccurate
Var languages() As String
Var error As NSErrorMBS

languages = VNRecognizeTextRequestMBS.supportedRecognitionLanguages(recognitionLevel, error)

MessageBox Join(languages, EndOfLine)

If error <>Nil Then
MessageBox error.LocalizedDescription
```

End If

Notes: recognitionLevel: The level of recognition to prioritize. Set this level to RecognitionLevelFast to prioritize speed over accuracy, and to RecognitionLevelAccurate to prioritize accuracy at the expense of speed.
error: An error that contains information about failed language support, or nil if no error occurred.

Request revision is set automatically by OS version.
Returns an array of supported languages, listed as ISO language codes.

A language supported in one recognition level may not be available in another recognition level.

Returns en-US in macOS 10.15 and iOS 13.0.
Returns en-US, fr-FR, it-IT, de-DE, es-ES and pt-BR in macOS 11.0 and iOS 14.0.
Returns en-US, fr-FR, it-IT, de-DE, es-ES, pt-BR, zh-Hans, zh-Hant in macOS 12.0
Returns en-US, fr-FR, it-IT, de-DE, es-ES, pt-BR, zh-Hans, zh-Hant, yue-Hans, yue-Hant, ko-KR, ja-JP, ru-RU, uk-UA in macOS 13.0 and iOS 16.0.
See also:

- 204.59.11 supportedRecognitionLanguages(recognitionLevel as Integer, requestRevision as Integer, byref error as NSErrorMBS) as String() 24079

204.59.11 supportedRecognitionLanguages(recognitionLevel as Integer, requestRevision as Integer, byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Requests a list of languages recognized by the specified revision.
Example:

```
Var recognitionLevel As Integer = VNRecognizeTextRequestMBS.RecognitionLevelAccurate
Var languages() As String
Var error As NSErrorMBS

languages = VNRecognizeTextRequestMBS.supportedRecognitionLanguages(recognitionLevel, error)

MessageBox Join(languages, EndOfLine)

If error <>Nil Then
MessageBox error.LocalizedDescription
End If
```

Notes: recognitionLevel: The level of recognition to prioritize. Set this level to RecognitionLevelFast to prioritize speed over accuracy, and to RecognitionLevelAccurate to prioritize accuracy at the expense of speed.

requestRevision: The revision of the text recognition algorithm for the Vision framework to use. Can be 1, 2 or 3. Or leave away for automatic mode.
error: An error that contains information about failed language support, or nil if no error occurred.

Returns an array of supported languages, listed as ISO language codes.

A language supported in one recognition level may not be available in another recognition level.

Returns en-US in macOS 10.15 and iOS 13.0.
Returns en-US, fr-FR, it-IT, de-DE, es-ES and pt-BR in macOS 11.0 and iOS 14.0.
Returns en-US, fr-FR, it-IT, de-DE, es-ES, pt-BR, zh-Hans, zh-Hant in macOS 12.0 with requestRevision = 2.
Returns en-US, fr-FR, it-IT, de-DE, es-ES, pt-BR, zh-Hans, zh-Hant, yue-Hans, yue-Hant, ko-KR, ja-JP, ru-RU, uk-UA in macOS 13.0 and iOS 16.0 with requestRevision = 3.

- 204.59.10 supportedRecognitionLanguages(recognitionLevel as Integer, byref error as NSErrorMBS) as String() 24078

204.59.12 Properties

204.59.13 automaticallyDetectsLanguage as Boolean

MBS MacFrameworks Plugin, Plugin Version: 26.1, Platform: macOS, Targets: All.

Function: Whether to automatically detect language.
Notes: Language detection will try to automatically identify the script/langauge during the detection and use the appropiate model for recognition and language correction. This can be particularly helpful, if the nature of the content is unkown and with this flag being set it will for instance determine if text is latin vs chinese so you don't have to pick the language model in the first case. But as the language correction cannot always guarantee the correct detection, it is advisable to set the languages, if you have domain knowledge of what language to expect.

The default value is false. Also note that this feature is only available since revision 3 and is a no-op before that.

Requires macOS 13.0 or iOS 16.0 or newer.
(Read and Write property)

204.59.14 indeterminate as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean set to true when a request can't determine its progress in fractions completed.
Notes: A value of true doesn't mean that the request will run forever. Rather, it means that the nature of the request can't be broken down into identifiable fractions to report. The progressHandler will still be called at suitable intervals.
(Read only property)

204.59.15 minimumTextHeight as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The minimum height of the text expected to be recognized, relative to the image height.
Notes: Specify a floating-point number relative to the image height. For example, to limit recognition to text that is half of the image height, use 0.5. Increasing the size reduces memory consumption and expedites recognition with the tradeoff of ignoring text smaller than the minimum height. The default value is 1/32, or 0.03125.
(Read and Write property)

204.59.16 recognitionLevel as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A value that determines whether the request prioritizes accuracy or speed in text recognition.
Notes: The recognition level determines which techniques are used during the text recognition. Set this value to RecognitionLevelFast to prioritize speed over accuracy, and to RecognitionLevelAccurate for longer, more computationally intensive recognition.
(Read and Write property)

204.59.17 usesLanguageCorrection as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean indicating whether Vision applies language correction during the recognition process.
Notes: When this Boolean is set to true, Vision applies language correction during the recognition process. Disabling this property returns the raw recognition results, which provides performance benefits but less accurate results.
(Read and Write property)

204.59.18 Constants

Recognition Levels

Constant	Value	Description
RecognitionLevelAccurate	0	Accurate text recognition takes more time to produce a more comprehensive result.
RecognitionLevelFast	1	Fast text recognition returns results more quickly at the expense of accuracy.

204.60 class VNRectangleObservationMBS

204.60.1 class VNRectangleObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Information about projected rectangular regions detected by an image analysis request.
Example:

```
// get the four corners of a detected rectangle in pixels
// pic is the Picture you analyzed, request a VNDetectRectanglesRequestMBS after performRequests
Var pic As Picture // your picture
Var request As VNDetectRectanglesRequestMBS // your request
If pic = Nil Or request = Nil Then Return

For Each o As VNObservationMBS In request.results
Var r As VNRectangleObservationMBS = VNRectangleObservationMBS(o)
// corners are normalized from 0 to 1 with origin bottom left, so flip y
Var x1 As Double = r.topLeft.x * pic.Width
Var y1 As Double = (1 - r.topLeft.y) * pic.Height
Var x2 As Double = r.bottomRight.x * pic.Width
Var y2 As Double = (1 - r.bottomRight.y) * pic.Height
System.DebugLog "From " + Format(x1, "0") + "/" + Format(y1, "0") + " to " + Format(x2, "0") + "/"
+ Format(y2, "0")
Next
```

Notes: This type of observation results from a VNDetectRectanglesRequestMBS. It defines the four vertices of a detected rectangle.
Subclass of the VNDetectedObjectObservationMBS class.

204.60.2 Methods

204.60.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

204.60.4 rectangleObservationWithRequestRevision(requestRevision as Integer = 1, topLeft as CGPointMBS, bottomLeft as CGPointMBS, bottomRight as CGPointMBS, topRight as CGPointMBS) as VNRectangleObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A convenience initializer for creating a rectangle observation from its corner points.
Notes: requestRevision: The rectangle detector revision number. A higher revision indicates more recent iterations of the framework.
topLeft: The upper-left corner point.
bottomLeft: The lower-left corner point.
bottomRight: The lower-right corner point.
topRight: The upper-right corner point.

Available on MacOS 10.15 or newer.

204.60.5 Properties

204.60.6 bottomLeft as CGPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The coordinates of the lower-left corner of the observation bounding box.
Notes: (Read only property)

204.60.7 bottomRight as CGPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The coordinates of the lower-right corner of the observation bounding box.
Notes: (Read only property)

204.60.8 topLeft as CGPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The coordinates of the upper-left corner of the observation bounding box.
Notes: (Read only property)

204.60.9 topRight as CGPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The coordinates of the upper-right corner of the observation bounding box.
Notes: (Read only property)

204.61 class VNRequestMBS

204.61.1 class VNRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for analysis requests.
Example:

```
// run two Vision requests on the same image at once
Var faces As New VNDetectFaceRectanglesRequestMBS
Var text As New VNRecognizeTextRequestMBS
Var requests() As VNRequestMBS
requests.Add faces
requests.Add text

Var handler As VNImageRequestHandlerMBS = VNImageRequestHandlerMBS.RequestWithFile(SpecialFolder.Desktop.Child("photo.jpg"))
Var error As NSErrorMBS
If handler.performRequests(requests, error) Then
For Each r As VNRequestMBS In requests
System.DebugLog r.className + ": " + r.results.Count.ToString + " results, revision " + r.revision.ToString
Next
End If
```

Notes: Other Vision request handlers that perform image analysis inherit from this abstract base class. Instantiate one of its subclasses to perform image analysis.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

204.61.2 Methods

204.61.3 cancel

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Cancels the request before it can finish executing.

204.61.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

204.61.5 copy as VNRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

204.61.6 currentRevision as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The current revison supported by the request.
Notes: Available on MacOS 10.14 or newer.

204.61.7 defaultRevision as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The revision of the latest request for the particular SDK linked with the client application.
Notes: Available on MacOS 10.14 or newer.

204.61.8 results as VNObservationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The collection of VNObservationMBS results generated by request processing.
Notes: If the request fails, this property is nil. Otherwise, it contains an array of VNObservationMBS

subclasses specific to the VNRequest subclass.
Don't access this property until the request has finished processing.

204.61.9 supportedRevisions as NSIndexSetMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The collection of currently-supported algorithm versions for the class of request.
Notes: This method allows clients to inspect at runtime what capabilities are available for each class of VNRequest in the Vision framework.
Available on MacOS 10.14 or newer.

204.61.10 Properties

204.61.11 className as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Queries class name of the request.
Notes: (Read only property)

204.61.12 ClassPath as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The class path.
Notes: Useful for debugging to know what super classes the request has.
(Read only property)

204.61.13 description as String

MBS MacFrameworks Plugin, Plugin Version: 25.3, Platform: macOS, Targets: All.

Function: The debug description.
Notes: (Read only property)

204.61.14 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

204.61.15 preferBackgroundProcessing as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A hint to minimize the resource burden of the request.
Notes: If set to true, this property reduces the request's memory footprint, processing footprint, and CPU/GPU contention at the potential cost of longer execution time.
Setting this value can help ensure that Vision processing doesn't block UI updates and other rendering on the main thread.
(Read and Write property)

204.61.16 revision as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The specific algorithm or implementation revision that is to be used to perform the request.
Notes: (Read and Write property)

204.61.17 usesCPUOnly as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean signifying that the Vision request should execute exclusively on the CPU.
Notes: This value defaults to false to signify that the Vision request is free to leverage the GPU to accelerate its processing.
(Read and Write property)

204.62 class VNSaliencyImageObservationMBS

204.62.1 class VNSaliencyImageObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An observation containing a grayscale heat map of important areas across an image.
Notes: The heat map is a CVPixelBufferRef in a one-component floating-point pixel format. Its dimensions are 64 x 64 when fetched in real time, or 68 x 68 when requested in its deferred form.
Available on MacOS 10.15 or later.
Subclass of the VNPixelBufferObservationMBS class.
Blog Entries

- Vision Framework for Xojo

204.62.2 Methods

204.62.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

204.62.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

204.62.5 salientObjects as VNRectangleObservationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A collection of objects describing the distinct areas of the saliency heat map.
Notes: The objects in this array don't follow any specific ordering. It's up to your app to iterate across the observations and apply desired ordering.
Requesting this array lazily computes the bounds of salient objects within the image.

204.63 class VNSequenceRequestHandlerMBS

204.63.1 class VNSequenceRequestHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An object that processes image analysis requests for each frame in a sequence.
Example:

```
// run the same Vision request on several frames, e.g. pictures from a video
Var handler As New VNSequenceRequestHandlerMBS
Var request As New VNDetectFaceRectanglesRequestMBS
Var requests() As VNRequestMBS
requests.Add request

Var folder As FolderItem = SpecialFolder.Desktop.Child("frames")
For Each file As FolderItem In folder.Children
Var error As NSErrorMBS
If handler.performRequestsOnImageFile(requests, file, 0, error) Then
System.DebugLog file.Name + ": " + request.results.Count.ToString + " faces"
End If
Next
```

Notes: Instantiate this handler to perform Vision requests on a series of images. Unlike the VNImageRequestHandlerMBS, you don't specify the image on creation. Instead, you supply each image frame one by one as you continue to call one of the perform methods.

- Vision Framework for Xojo

204.63.2 Methods

204.63.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

204.63.4 performRequestsOnCGImage(requests() as VNRequestMBS, CGImage as CGImageMBS, orientation as Integer = 0, byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Schedules one or more Vision requests to be performed on a Core Graphics image with known orientation.
Notes: requests: An array of VNRequestMBS requests to perform.
image: The input CGImageMBS on which to perform the request.
orientation: The orientation of the input image. Pass zero if unknown.
error: An optional error parameter populated when problems arise in scheduling the requests. Check if the return value is false.

Returns true if all requests were scheduled and performed. Check the error parameter if the return value is false.

204.63.5 performRequestsOnCIImage(requests() as VNRequestMBS, CIImage as Variant, orientation as Integer = 0, byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Schedules one or more Vision requests to be performed on CIImageMBS data with known orientation.
Notes: requests: An array of VNRequestMBS requests to perform.
image: The input CIImageMBS on which to perform the request.
orientation: The orientation of the input image. Pass zero if unknown.
error: An optional error parameter populated when problems arise in scheduling the requests. Check if the return value is false.

Returns true if all requests were scheduled and performed. Check the error parameter if the return value is false.

204.63.6 performRequestsOnCVPixelBuffer(requests() as VNRequestMBS, CVPixelBuffer as Variant, orientation as Integer = 0, byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Schedules one or more Vision requests to be performed on a Core Video pixel buffer with known orientation.
Notes: requests: An array of VNRequestMBS requests to perform.
pixelBuffer: The input CVPixelBufferMBS on which to perform the request.
orientation: The orientation of the input image. Pass zero if unknown.
error: An optional error parameter populated when problems arise in scheduling the requests. Check if the return value is false.

Returns true if all requests were scheduled and performed. Check the error parameter if the return value is false.

204.63.7 performRequestsOnImageData(requests() as VNRequestMBS, Data as MemoryBlock, orientation as Integer = 0, byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Schedules one or more Vision requests to be performed on raw data containing an image with known orientation.
Notes: requests: An array of VNRequestMBS requests to perform.
imageData: The input MemoryBlock on which to perform the request.
orientation: The orientation of the input image. Pass zero if unknown.
error: An optional error parameter populated when problems arise in scheduling the requests. Check if the return value is false.

Returns true if all requests were scheduled and performed. Check the error parameter if the return value is false.

204.63.8 performRequestsOnImageFile(requests() as VNRequestMBS, File as FolderItem, orientation as Integer = 0, byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Schedules one or more Vision requests to be performed on an image with known orientation, at a specific file.
Notes: requests: An array of VNRequestMBS requests to perform.
File: A folderitem pointing to the image on which to perform the request.
orientation: The orientation of the input image. Pass zero if unknown.
error: An optional error parameter populated when problems arise in scheduling the requests. Check if the return value is NO.

Returns true if all requests were scheduled and performed. Check the error parameter if the return value is false.

204.63.9 performRequestsOnPicture(requests() as VNRequestMBS, Picture as Picture, orientation as Integer = 0, byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Schedules one or more Vision requests to be performed on a Core Graphics image with known orientation.
Notes: requests: An array of VNRequestMBS requests to perform.
image: The input CGImageMBS on which to perform the request.
orientation: The orientation of the input image. Pass zero if unknown.
error: An optional error parameter populated when problems arise in scheduling the requests. Check if the return value is false.

Returns true if all requests were scheduled and performed. Check the error parameter if the return value is false.

204.63.10 Properties

204.63.11 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

204.63.12 Constants

Orientations

Constant	Value	Description
kOrientationDown	3	The encoded image data is rotated 180¬∞ from the image's intended display orientation.
kOrientationDownMirrored	4	The encoded image data is vertically flipped from the image's intended display orientation.
kOrientationLeft	8	The encoded image data is rotated 90¬∞ clockwise from the image's intended display orientation.
kOrientationLeftMirrored	5	The encoded image data is horizontally flipped and rotated 90¬∞ counter-clockwise from the image's intended display orientation.
kOrientationRight	6	The encoded image data is rotated 90¬∞ clockwise from the image's intended display orientation.
kOrientationRightMirrored	7	The encoded image data is horizontally flipped and rotated 90¬∞ clockwise from the image's intended display orientation.
kOrientationUp	1	The encoded image data matches the image's intended display orientation.
kOrientationUpMirrored	2	The encoded image data is horizontally flipped from the image's intended display orientation.

204.64 class VNStatefulRequestMBS

204.64.1 class VNStatefulRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: An abstract request type that builds evidence of a condition over time.
Notes: Requires iOS 14, macOS 11 or newer.
Subclass of the VNImageBasedRequestMBS class.
Blog Entries

- MBS Xojo Plugins, version 26.3pr4

204.64.2 Methods

204.64.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The private constructor.
See also:

- 204.64.4 Constructor(Time as Double, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil) 24096

204.64.4 Constructor(Time as Double, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Initializes a video-based request.
Notes: frameAnalysisSpacing: A time value that indicates the duration between analysis operations. Increase this value to reduce the number of frames analyzed on slower devices. Set this argument to 0 to analyze all frames.

DelegateHandler: A closure that,Äôs invoked after the request has completed its processing. The system invokes the completion handler on the same dispatch queue as the request performs its processing.
See also:

- 204.64.3 Constructor 24096

204.64.5 Properties

204.64.6 frameAnalysisSpacing as Double

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: A time value that indicates the interval between analysis operations.
Notes: (Read only property)

204.64.7 minimumLatencyFrameCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: The minimum number of frames a request processes before reporting an observation.
Notes: Video-based requests often need a minimum number of frames before they can report an observation. For example, a movement detection request requires a minimum of five frames before it can generate an observation. This value indicates how responsive a request is at processing incoming data.
(Read only property)

204.65 class VNTargetedImageRequestMBS

204.65.1 class VNTargetedImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for image analysis requests that operate on both the processed image and a secondary image.
Notes: Other Vision request handlers that operate on both the processed image and a secondary image inherit from this abstract base class. Instantiate one of its subclasses to perform image analysis, and pass in auxiliary image data by filling in the options dictionary at initialization.
Subclass of the VNImageBasedRequestMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

204.65.2 Methods

204.65.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

204.65.4 TargetedImageRequestWithCGImage(CGImage as CGImageMBS, orientation as Integer = 0, options as Dictionary, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil) as VNTargetedImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a new request targeting a Core Graphics image of known orientation, executing the completion handler when done.
Notes: cgImage: The targeted Core Graphics image.
orientation: The orientation of the image buffer, based on EXIF specification and superseding other orientation information. The value must be an integer from 1 to 8; see kCGImagePropertyOrientation for details. Value 0 means unknown.
options: A dictionary with options specifying auxiliary information for the image.

When work is done, the optional delegate method is invoked to provide result on success or error on failure.

204.65.5 TargetedImageRequestWithCIImage(CIImage as Variant, orientation as Integer = 0, options as Dictionary, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil) as VNTargetedImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a new request targeting a CIImageMBS of known orientation, executing the completion handler when done.
Notes: ciImage: The CIImage encapsulating the targeted image. Variant must be CIImageMBS.
orientation: The orientation of the image buffer, based on EXIF specification and superseding other orientation information. The value must be an integer from 1 to 8; see kCGImagePropertyOrientation for details. Pass zero if unknown.
options: A dictionary with options specifying auxiliary information for the image.

When work is done, the optional delegate method is invoked to provide result on success or error on failure.

204.65.6 TargetedImageRequestWithCVPixelBuffer(CVPixelBuffer as Variant, orientation as Integer = 0, options as Dictionary, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil) as VNTargetedImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a new request targeting an image in a CVPixelBufferMBS of known orientation, executing the completion handler when done.
Notes: pixelBuffer: The pixel buffer containing the targeted image. Variant must be CVPixelBufferMBS.
orientation: The orientation of the image buffer, based on EXIF specification and superseding other orientation information. The value must be an integer from 1 to 8; see kCGImagePropertyOrientation for details. Pass zero if unknown.
options: A dictionary with options specifying auxiliary information for the image.

When work is done, the optional delegate method is invoked to provide result on success or error on failure.

204.65.7 TargetedImageRequestWithImageData(Data as MemoryBlock, orientation as Integer = 0, options as Dictionary, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil) as VNTargetedImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a new request targeting a raw data image of known orientation, executing the completion handler when done.
Notes: imageData: The data containing the targeted image.
orientation: The orientation of the image buffer, based on EXIF specification and superseding other orientation information. The value must be an integer from 1 to 8; see kCGImagePropertyOrientation for details. Pass zero if unknown.
options: A dictionary with options specifying auxiliary information for the image.

When work is done, the optional delegate method is invoked to provide result on success or error on failure.

204.65.8 TargetedImageRequestWithImageFile(File as FolderItem, orientation as Integer = 0, options as Dictionary, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil) as VNTargetedImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a new request targeting an image of known orientation, at the specified file, executing the completion handler when done.
Notes: File: The file of the targeted image.
orientation: The orientation of the image buffer, based on EXIF specification and superseding other orientation information. The value must be an integer from 1 to 8; see kCGImagePropertyOrientation for details. Pass 0 if unknown.
options: A dictionary with options specifying auxiliary information for the image.

When work is done, the optional delegate method is invoked to provide result on success or error on failure.

204.65.9 TargetedImageRequestWithPicture(Picture as Picture, orientation as Integer = 0, options as Dictionary, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil) as VNTargetedImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a new request targeting a Core Graphics image of known orientation, executing the completion handler when done.

Notes: Picture: The targeted Core Graphics image.
orientation: The orientation of the image buffer, based on EXIF specification and superseding other orientation information. The value must be an integer from 1 to 8; see kCGImagePropertyOrientation for details. Value 0 means unknown.
options: A dictionary with options specifying auxiliary information for the image.

When work is done, the optional delegate method is invoked to provide result on success or error on failure.

204.66 class VNTextObservationMBS

204.66.1 class VNTextObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Information about regions of text detected by an image analysis request.
Notes: This type of observation results from a VNDetectTextRectanglesRequestMBS. It expresses the location of each detected character by its bounding box.
Available on MacOS 10.13 or newer.
Subclass of the VNRectangleObservationMBS class.

204.66.2 Methods

204.66.3 characterBoxes as VNRectangleObservationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of detected individual character bounding boxes.
Notes: If the associated VNDetectTextRectanglesRequestMBS request indicates interest in character boxes by setting the option VNRequestOptionReportCharacterBoxes to true, this property is non-nil. If no characters are found, it remains empty.

204.66.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

204.67 class VNTrackingRequestMBS

204.67.1 class VNTrackingRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for image analysis requests that track unique features across multiple images or video frames.
Notes: Instantiate a tracking request subclass to perform object tracking across multiple frames of an image. After initialization, configure the degree of accuracy by setting trackingLevel, and provide observations you would like to track by setting the inputObservation initial bounding box.
Subclass of the VNImageBasedRequestMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- Vision Framework for Xojo

204.67.2 Methods

204.67.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

204.67.4 Properties

204.67.5 inputObservation as VNDetectedObjectObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The observation object defining a region to track.
Notes: Providing an observation not returned from a tracker, such as a user-defined observation, begins a new tracker for the sequence. Providing an observation that was returned from a tracker continues the use of that tracker, to track the region to the next frame.
In general, unless specified in the request's documentation or header file, you must define the rectangle in normalized coordinates, with the origin at the lower-left corner.
(Read only property)

204.67.6 LastFrame as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean that indicates the last frame in a tracking sequence.
Notes: If set to true, the current tracker will be released to the pool of available trackers when the current frame finishes processing.
(Read and Write property)

204.67.7 trackingLevel as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A value for specifying whether to prioritize speed or location accuracy.
Notes: Use VNRequestTrackingLevelAccurate or VNRequestTrackingLevelFast.
(Read only property)

204.67.8 Constants

TrackingLevel

Constant	Value	Description
VNRequestTrackingLevelAccurate	0	Tracking level that favors location accuracy over speed.
VNRequestTrackingLevelFast	1	Tracking level that favors speed over location accuracy.

204.68 class VNTrackObjectRequestMBS

204.68.1 class VNTrackObjectRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that tracks movement of a previously identified arbitrary object across multiple images or video frames.
Notes: Use this type of request to track the bounding boxes around objects previously identified in an image. Vision will attempt to locate the same object from the input observation throughout the sequence.
Subclass of the VNTrackingRequestMBS class.
Blog Entries

- Vision Framework for Xojo

204.68.2 Methods

204.68.3 Constructor(observation as VNDetectedObjectObservationMBS, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a new object tracking request with a detected object observation.
Notes: observation: A detected object observation with bounding box information.

When work is done, the optional delegate method is invoked to provide result on success or error on failure.

204.69 class VNTrackRectangleRequestMBS

204.69.1 class VNTrackRectangleRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that tracks movement of a previously identified rectangular object across multiple images or video frames.
Notes: Use this type of request to track the bounding boxes of rectangles throughout a sequence of images. Vision returns locations for rectangles found in all orientations and sizes.
Subclass of the VNTrackingRequestMBS class.
Blog Entries

- Vision Framework for Xojo

204.69.2 Methods

204.69.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Whether this class is available.

204.69.4 Constructor(observation as VNRectangleObservationMBS, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a new rectangle tracking request with a rectangle observation.
Notes: observation: A rectangle observation with bounding box and corner location information.

When work is done, the optional delegate method is invoked to provide result on success or error on failure.

204.70 class VNTranslationalImageRegistrationRequestMBS

204.70.1 class VNTranslationalImageRegistrationRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that determines the affine transform needed to align the content of two images.
Notes: Create and perform a translational image registration request to align content in two images through translation.
Subclass of the VNImageRegistrationRequestMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- Vision Framework for Xojo

204.70.2 Methods

204.70.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 26.3, Platform: macOS, Targets: All.

Function: Whether this class is available.

204.70.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

Chapter 205

VLC

205.1 class VLCAudioOutputDeviceMBS

205.1.1 class VLCAudioOutputDeviceMBS

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for details on audio output devices.
Example:

```
Var DeviceNames() As String

Var devices As VLCAudioOutputDeviceMBS = mp.AudioOutputDevices
While devices <>Nil
DeviceNames.Add "* "+devices.Device+": "+devices.Description

devices = devices.NextOutput
Wend

MessageBox Join(DeviceNames, EndOfLine)
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

205.1.2 Methods

205.1.3 Constructor

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

205.1.4 Destructor

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

205.1.5 Properties

205.1.6 Description as String

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The User-friendly device description.
Notes: (Read and Write property)

205.1.7 Device as String

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The output device ID.
Notes: (Read and Write property)

205.1.8 NextOutput as VLCAudioOutputDeviceMBS

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The next entry in the list.
Notes: You can loop over entries. Last one has nil in this property.

(Read and Write property)

205.2 class VLCAudioOutputMBS

205.2.1 class VLCAudioOutputMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Description for audio output.
Example:

```
Var v As VLCInstanceMBS // your VLC instance

Var OutputModules() As String
Var outputModule As VLCAudioOutputMBS = v.GetAudioOutputList
While outputModule <>Nil
Var OutputModuleName As String = outputModule.Name
OutputModules.Add OutputModuleName+": "+outputModule.Description
outputModule = outputModule.NextOutput
Wend

MessageBox Join(OutputModules, EndOfLine)
```

Notes: It contains name, description and pointer to next record.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

205.2.2 Methods

205.2.3 Constructor

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

205.2.4 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

205.2.5 Properties

205.2.6 Description as String

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The description for this audio output.
Notes: (Read and Write property)

205.2.7 Name as String

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The name of this audio output.
Notes: (Read and Write property)

205.2.8 NextOutput as VLCAudioOutputMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The next audio output reference.
Notes: (Read and Write property)

205.3 class VLCEqualizerMBS

205.3.1 class VLCEqualizerMBS

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for equalizer in VLC.
Example:

```
// list the equalizer presets of VLC and use one for playback
// Player is a property of the window: Player As VLCMediaPlayerMBS (playing a media file)
Var lines() As String
For i As Integer = 0 To VLCEqualizerMBS.PresetCount - 1
lines.Add i.ToString + ": " + VLCEqualizerMBS.PresetName(i)
Next
System.DebugLog String.FromArray(lines, EndOfLine)

Var eq As New VLCEqualizerMBS(0) // first preset
eq.Preamp = 6.0 // dB
Player.SetEqualizer eq

// switch the equalizer off: Player.SetEqualizer Nil
```

Notes: Requires VLC 2.2.
Blog Entries

- MBS Xojo Plugins, version 18.0pr8

205.3.2 Methods

205.3.3 BandFrequency(index as Integer) as Double

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get a particular equalizer band frequency.
Notes: This value can be used, for example, to create a label for an equalizer band control in a user interface.

Index: index of the band, counting from zero
Returns equalizer band frequency (Hz), or -1 if there is no such band

Requires LibVLC 2.2.0 or later

205.3.4 Constructor(index as Integer, vlc as VLCInstanceMBS = nil)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a new equalizer, with initial frequency values copied from an existing preset.
Notes: The new equalizer can subsequently be applied to a media player by invoking VLCMediaPlayerMBS.SetEqualizer.

Index: index of the preset, counting from zero.

Requires VLC 2.2.
See also:

- 205.3.5 Constructor(vlc as VLCInstanceMBS = nil) 24115

205.3.5 Constructor(vlc as VLCInstanceMBS = nil)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a new default equalizer, with all frequency values zeroed.
Notes: The new equalizer can subsequently be applied to a media player by invoking VLCMediaPlayerMBS.SetEqualizer.
Requires VLC 2.2.
See also:

- 205.3.4 Constructor(index as Integer, vlc as VLCInstanceMBS = nil) 24115

205.3.6 Destructor

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

205.3.7 PresetName(index as Integer) as string

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the name of a particular equalizer preset.
Notes: This name can be used, for example, to prepare a preset label or menu in a user interface.

index: index of the preset, counting from zero
Returns name, or "" if there is no such preset
Requires LibVLC 2.2.0 or later.

205.3.8 Properties

205.3.9 BandCount as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the number of distinct frequency bands for an equalizer.
Notes: Requires LibVLC 2.2.0 or later.
(Read only property)

205.3.10 Handle as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

205.3.11 Preamp as Single

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set a new pre-amplification value for an equalizer.
Notes: The new equalizer settings are subsequently applied to a media player by invoking VLCMediaPlayer.SetEqualizer.

The supplied amplification value will be clamped to the -20.0 to +20.0 range.

preamp value (-20.0 to 20.0 Hz)
Returns zero on success, -1 on error.

Requires LibVLC 2.2.0 or later
(Read and Write property)

205.3.12 PresetCount as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the number of equalizer presets.
Notes: Requires LibVLC 2.2.0 or later
(Read only property)

205.3.13 VLC as VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the parent VLC instance object.
Notes: (Read only property)

205.3.14 Map(Index as Integer) as Single

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set a new amplification value for a particular equalizer frequency band.
Notes: The new equalizer settings are subsequently applied to a media player by invoking VLCMediaPlayerMBS.SetEqualizer.

The supplied amplification value will be clamped to the -20.0 to +20.0 range.

Value: amplification value (-20.0 to 20.0 Hz)
index, counting from zero, of the frequency band to set

Requires LibVLC 2.2.0 or later
(Read and Write computed property)

205.4 class VLCEventManagerMBS

205.4.1 class VLCEventManagerMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for getting event with VLC.
Example:

```
// get notified when VLC starts playing and when the media ended
// MyVLCEvents is a subclass of VLCEventManagerMBS with the events implemented.
// Player is a property of the window: Player As VLCMediaPlayerMBS (see VLCMediaPlayerMBS)
// Events is a property of the window: Events As MyVLCEvents
If Player = Nil Then Return
Events = New MyVLCEvents(Player)

// in MyVLCEvents:
Sub MediaPlayerPlaying() Handles MediaPlayerPlaying
System.DebugLog "Playing."
End Sub

Sub MediaPlayerEndReached() Handles MediaPlayerEndReached
System.DebugLog "Finished."
End Sub

Sub MediaPlayerTimeChanged(newTime As Int64) Handles MediaPlayerTimeChanged
System.DebugLog "Position: " + Format(newTime / 1000, "0.0") + " s"
End Sub
```

Notes: Only the events which the parent object sends are delivered.
With 12.3pr5 and newer plugins, this function sends events to main thread as it should be.

205.4.8 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

205.4.9 Listen

MBS VLC Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Registers internally events.
Notes: This is normally called in the constructor.
If you add event handlers later via AddHandler command, you need to call this method to have those event handlers also registered.

205.4.10 Properties

205.4.11 Handle as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

205.4.12 Parent as Variant

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The parent object.
Notes: Just a reference back, so the target object is not released too early.
(Read and Write property)

205.4.13 VLC as VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the VLC instance.
Notes: (Read only property)

205.4.14 Events

205.4.15 Log(Message as String, level as Integer, Name as String, Header as String, ModuleName as String, FileName as String, Line as Integer)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A log message arrived.
Notes: message: The message to log.
level: message level, e.g. kLogLevelError
Name: object name
Header: object header or empty.
ModuleName: module name
FileName: The source code file name.
Line: The source code line number.

Enable this event using VLCInstanceMBS.SetLogEvent method.

205.4.16 MediaDiscovererEnded

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Media discovered ended.

205.4.17 MediaDiscovererStarted

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Media discoverer started.

205.4.18 MediaDurationChanged(newDuration as Int64)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Duration of media changed.

205.4.19 MediaFreed(media as VLCMediaMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Media was released.

205.4.20 MediaListItemAdded(item as VLCMediaMBS, index as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Media list item added.

205.4.21 MediaListItemDeleted(item as VLCMediaMBS, index as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Media list item deleted.

205.4.22 MediaListPlayerNextItemSet(item as VLCMediaMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: One of the events.

205.4.23 MediaListPlayerPlayed

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Media list player played.

205.4.24 MediaListPlayerStopped

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Media list player stopped.

205.4.25 MediaListWillAddItem(item as VLCMediaMBS, index as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Media list will add item.

205.4.26 MediaListWillDeleteItem(item as VLCMediaMBS, index as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Media list will delete item.

205.4.27 MediaMetaChanged(metatype as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Metadata changed.

205.4.28 MediaParsedChanged(newStatus as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Parsed status changed.

205.4.29 MediaPlayerBackward

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Media player moved backwards.

205.4.30 MediaPlayerBuffering

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: One of the events.

205.4.31 MediaPlayerEncounteredError

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: One of the events.

205.4.32 MediaPlayerEndReached

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Media player reached end of media.

205.4.33 MediaPlayerForward

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Player moved forward.

205.4.34 MediaPlayerLengthChanged(NewLength as Int64)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The length of the media changed.

205.4.35 MediaPlayerMediaChanged(item as VLCMediaMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The media changed in the media player.

205.4.36 MediaPlayerNothingSpecial

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: One of the events.

205.4.37 MediaPlayerOpening

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Media player is opening.

205.4.38 MediaPlayerPausableChanged(pausable as boolean)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Media player's pausable state changed.

205.4.39 MediaPlayerPaused

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The player was paused.

205.4.40 MediaPlayerPlaying

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The player is playing.

205.4.41 MediaPlayerPositionChanged(newPosition as Double)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Position changed.
Notes: This event does not fire if you assigned new position. It is only to inform you that position changed due to playing video.

205.4.42 MediaPlayerScrambledChanged(newScrambled as Integer)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The scrambled property changed.

205.4.43 MediaPlayerSeekableChanged(seekable as boolean)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Media Player's seekable status changed.

205.4.44 MediaPlayerSnapshotTaken(filename as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A snapshot has been taken.

205.4.45 MediaPlayerStopped

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Media player stopped.

205.4.46 MediaPlayerTimeChanged(newTime as Int64)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Media player reached a new time.

205.4.47 MediaPlayerTitleChanged(newTitle as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The title changed.

205.4.48 MediaPlayerVout(newCount as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: One of the events.

205.4.49 MediaStateChanged(newState as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: State changed on media.

205.4.50 MediaSubItemAdded(media as VLCMediaMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Media got a new subitem.

205.4.51 MediaSubItemTreeAdded(media as VLCMediaMBS)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A media item got new sub items.

205.4.52 VlmMediaAdded(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: One of the events.

205.4.53 VlmMediaChanged(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: One of the events.

205.4.54 VlmMediaInstanceStarted(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: One of the events.

205.4.55 VlmMediaInstanceStatusEnd(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: One of the events.

205.4.56 VlmMediaInstanceStatusError(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: One of the events.

205.4.57 VlmMediaInstanceStatusInit(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: One of the events.

205.4.58 VlmMediaInstanceStatusOpening(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: One of the events.

205.4.59 VlmMediaInstanceStatusPause(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: One of the events.

205.4.60 VlmMediaInstanceStatusPlaying(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: One of the events.

205.4.61 VlmMediaInstanceStopped(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: One of the events.

205.4.62 VlmMediaRemoved(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Media was removed.

205.4.63 Constants

Log Levels

Constant	Value	Description
kLogLevelDebug	0	Debug message
kLogLevelError	4	Error message.
kLogLevelNotice	2	Important informational message
kLogLevelWarning	3	Warning (potential error) message

205.5 class VLCExitHandlerMBS

205.5.1 class VLCExitHandlerMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to receive exit events from VLC user interface.
Notes: As you probably use this plugin with your own user interface, you don't need this class.

205.5.2 Events

205.5.3 ExitEvent

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An exit event was received from VLC user interface.

205.6 class VLCInstanceMBS

205.6.1 class VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The main VLC class.
Example:

```
// load the VLC library and create a VLC instance
#If TargetMacOS Then
Var path As String = "/Applications/VLC.app/Contents/MacOS/lib/libvlc.dylib"
#ElseIf TargetWindows Then
Var path As String = "C:\Program Files\VideoLAN\VLC\libvlc.dll"
#Else
Var path As String = "libvlc.so.5"
#EndIf

If Not VLCInstanceMBS.LoadLibrary(path) Then
MessageBox "Failed to load VLC: " + VLCInstanceMBS.ErrorMessage
Return
End If

Var args() As String
// Instance is a property of the window: Instance As VLCInstanceMBS
Instance = New VLCInstanceMBS(args)
Instance.SetUserAgent("MyApp", "MyApp/1.0")
MessageBox "VLC version " + VLCInstanceMBS.GetVersion
```

Notes: Keep the instance in memory as long as you use any other VLC classes.
Only one instance per app, please.
Blog Entries

- MBS Xojo Plugins, version 23.4pr7
- MBS Xojo Plugins, version 18.6pr4

205.6.2 Methods

205.6.3 AddUserInterface(name as string) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Try to start a user interface for the libvlc instance.
Notes: name: interface name, or nil for default.

Return true on success, false on error.

205.6.4 AudioOutputDevices(ModuleName as string) as VLCAudioOutputDeviceMBS

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets a list of audio output devices for a given audio output module.
Notes: Not all audio outputs support this. In particular, an empty (nil)
list of devices does not imply that the specified audio output does
not work.

The list might not be exhaustive.

Some audio output devices in the list might not actually work in some circumstances. By default, it is recommended to not specify any explicit audio device.

Modulename: audio output name.

Returns a nil-terminated linked list of potential audio output devices.
Requires VLC 2.1.

205.6.5 ClearError

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clears the LibVLC error status for the current thread.
Notes: This is optional.
By default, the error status is automatically overridden when a new error occurs, and destroyed when the thread exits.

205.6.6 ClearLog

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Unsets the logging callback for a LibVLC instance.
Notes: This is rarely needed: the callback is implicitly unset when the instance is destroyed.

This function will wait for any pending callbacks invocation to complete
(causing a deadlock if called from within the callback).

Requires VLC 2.1.

205.6.7 Clock as Int64

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return the current time as defined by LibVLC.
Notes: The unit is the microsecond.
Time increases monotonically (regardless of time zone changes and RTC adjustments).
The origin is arbitrary but consistent across the whole system (e.g. the system uptim, the time since the system was booted). On systems that support it, the POSIX monotonic clock is used.

205.6.8 Constructor(args() as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create and initialize a libvlc instance.
Notes: This functions accept a list of "command line" arguments similar to the main(). These arguments affect the LibVLC instance default configuration.

Arguments are meant to be passed from the command line to LibVLC, just like VLC media player does. The list of valid arguments depends on the LibVLC version, the operating system and platform, and set of available LibVLC plugins. Invalid or unsupported arguments will cause the function to fail (i.e. return nil). Also, some arguments may alter the behaviour or otherwise interfere with other LibVLC functions.

There is absolutely no warranty or promise of forward, backward and cross-platform compatibility with regards to this Constructor() arguments. We recommend that you do not use them, other than when debugging.

On success handle property is not nil.
For Version 19.0 of the plugins, please do not pass app path as first argument.

For MacOS, please set VLC_PLUGIN_PATH environment variable for the path to the plugins folder.

205.6.9 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

205.6.10 ErrorMessage as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns an human-readable error message for the last VLC error in the calling thread.

205.6.11 GetAudioFilterList as VLCModuleDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a list of audio filters that are available.
Notes: Return a list of module descriptions.

205.6.12 GetAudioOutputDeviceCount(AudioOutputName as string) as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get count of devices for audio output, these devices are hardware oriented like analor or digital output of sound card.
Notes: AudioOutputName: name of audio output.
Returns number of devices.

205.6.13 GetAudioOutputDeviceID(AudioOutputName as string, index as Integer) as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get id name of device.
Notes: AudioOutputName: name of audio output.

Index: device index.
Returns id name of device, use for setting device.

205.6.14 GetAudioOutputDeviceLongName(AudioOutputName as string, index as Integer) as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get long name of device, if not available short name given.
Notes: AudioOutputName: name of audio output.
Index: Device Index.
Returns long name of device.

205.6.15 GetAudioOutputList as VLCAudioOutputMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the list of available audio outputs.
Example:

```
Var v As VLCInstanceMBS // your VLC instance

Var OutputModules() As String
Var outputModule As VLCAudioOutputMBS = v.GetAudioOutputList
While outputModule <>Nil
Var OutputModuleName As String = outputModule.Name
OutputModules.Add OutputModuleName+": "+outputModule.Description
outputModule = outputModule.NextOutput
Wend

MessageBox Join(OutputModules, EndOfLine)
```

Notes: Returns list of available audio outputs. In case of error, nil is returned.

205.6.16 GetChangeset as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieve libvlc changeset.
Notes: Example: "aa9bce0bc4"

Return a string containing the libvlc changeset.

205.6.17 GetCompiler as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieve libvlc compiler version.
Notes: Example: "gcc version 4.2.3 (Ubuntu 4.2.3-2ubuntu6)"
Return a string containing the libvlc compiler version.

205.6.18 getenv(name as string) as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the environment variable with given name.

205.6.19 GetLoadError as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns error string from LoadLibrary function.

205.6.20 GetVersion as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieve libvlc version.
Notes: Example: "1.1.0-git The Luggage"
Return a string containing the libvlc version.

205.6.21 GetVideoFilterList as VLCModuleDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a list of video filters that are available.
Notes: Return a list of module descriptions

205.6.22 LoadLibrary(path as folderitem) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the vlc library.
Notes: Returns true on success and false on failure.
Please point to libVLC.dylib on Mac and libVLC.dll on Windows.
See also:

- 205.6.23 LoadLibrary(path as string) as boolean 24138

205.6.23 LoadLibrary(path as string) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the vlc library.
Notes: Returns true on success and false on failure.
Please point to libVLC.dylib on Mac and libVLC.dll on Windows.
See also:

- 205.6.22 LoadLibrary(path as folderitem) as boolean 24138

205.6.24 SetAppID(ID as string, Version as string, Icon as String)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets some meta-information about the application.
Notes: See also SetUserAgent().

id: Java-style application identifier, e.g. "com.acme.foobar"
version: application version numbers, e.g. "1.2.3"
icon: application icon name, e.g. "foobar"

Requires VLC 2.1.

205.6.25 setlocale(category as Integer, locale as string) as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the locale to use.
Notes: The Setlocale function sets the C library's notion of natural language formatting style for particular sets of routines. Each such style is called a 'locale' and is invoked using an appropriate name passed as a C string.

The setlocale() function recognizes several categories of routines. These are the categories and the sets of routines they select:

LocaleAll	Set the entire locale generically.
LocaleCollate	Set a locale for string collation routines. This controls alphabetic ordering in strcoll() and strxfrm().
LocaleCType	Set a locale for the ctype and multibyte functions. This controls recognition of upper and lower case, alphabetic or non-alphabetic characters, and so on.
LocaleMessages	Set a locale for message catalogs, see catopen function.
LocaleMonetary	Set a locale for formatting monetary values; this affects the localeconv() function.
LocaleNumeric	Set a locale for formatting numbers. This controls the formatting of decimal points in input and output of floating point numbers in functions such as printf() and scanf(), as well as values returned by localeconv().
LocaleTime	Set a locale for formatting dates and times using the strftime() function.

Only three locales are defined by default: the empty string "" (which denotes the native environment) and the "C" and "POSIX" locales (which denote the C-language environment). By default, C programs start in the "C" locale.

205.6.26 SetLogEvent

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the logging callback for a LibVLC instance.
Notes: This function is thread-safe: it will wait for any pending callbacks
invocation to complete.

Some log messages (especially debug) are emitted by LibVLC while
is being initialized. These messages cannot be captured with this interface.

A deadlock may occur if this function is called from the event.

Requires VLC 2.1.

205.6.27 SetLogFile(File as FolderItem)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets up logging to a file.
Notes: Requires VLC 2.1.

205.6.28 SetUserAgent(AppName as string, httpUserAgent as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the application name.
Notes: VLC passes this as the user agent string when a protocol requires it.

name: human-readable application name, e.g. "FooBar player 1.2.3"
http: HTTP User Agent, e.g. "FooBar/1.2.3 Python/2.6.0"

205.6.29 WaitUserInterface

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Waits until an interface causes the instance to exit.
Notes: You should start at least one interface first, using AddUserInterface.

205.6.30 Properties

205.6.31 Handle as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

205.6.32 ExitHandler as VLCExitHandlerMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Registers a callback for the LibVLC exit event.
Notes: This is mostly useful if you have started at least one interface with AddUserInterface. Typically, this function will wake up your application main loop (from another thread).

This function and WaitUserInterface() cannot be used at the same time.
Use either or none of them but not both.
(Read and Write computed property)

205.6.33 Constants

Audio Channels

Constant	Value	Description
kAudioChannelDolbys	5	Dolbys channel
kAudioChannelError	-1	Error state
kAudioChannelLeft	3	Left channel
kAudioChannelRight	4	Right channel
kAudioChannelRStereo	2	RStereo
kAudioChannelStereo	1	Stereo

Audio Device Types

Constant	Value	Description
kAudioOutputDevice2F2R	4	2F2R
kAudioOutputDevice3F2R	5	3F2R
kAudioOutputDeviceError	-1	Error state
kAudioOutputDeviceMono	1	Mono
kAudioOutputDeviceSPDIF	10	SPDIF
kAudioOutputDeviceStereo	2	Stereo
kAudioOutputDevice_5_1	6	5.1 channel
kAudioOutputDevice_6_1	7	6.1 channel
kAudioOutputDevice_7_1	8	7.1 channel

205.7 class VLCMediaDiscovererMBS

205.7.1 class VLCMediaDiscovererMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The plugin class for the VLC media discovery.
Example:

```
// discover media servers in the local network with VLC (UPnP)
// Instance is a property of the window: Instance As VLCInstanceMBS (created after VLCInstanceMBS.LoadLibrary)
// Discoverer is a property of the window: Discoverer As VLCMediaDiscovererMBS
Discoverer = New VLCMediaDiscovererMBS(Instance, "upnp")
MessageBox Discoverer.LocalizedName + " running: " + Discoverer.IsRunning.ToString

// later: the found media servers are in Discoverer.MediaList
```

Notes: LibVLC media discovery finds available media via various means.
This corresponds to the service discovery functionality in VLC media player.
Different plugins find potential medias locally (e.g. user media directory), from peripherals (e.g. video capture device), on the local network (e.g. SAP) or on the Internet (e.g. Internet radios).

205.7.2 Methods

205.7.3 Constructor(vlc as VLCInstanceMBS, name as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Discover media service by name.
Notes: vlc: The VLC instance.
Name: service name.
Handle is not nil on success.

205.7.4 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

205.7.5 IsRunning as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query if media service discover object is running.
Notes: Returns true if running, false if not.

205.7.6 LocalizedName as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the localized name.

205.7.7 MediaList as VLCMediaListMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get media service discover media list.

205.7.8 Properties

205.7.9 Handle as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Internal object reference.
Notes: (Read and Write property)

205.7.10 VLC as VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the VLC instance.
Notes: (Read only property)

205.8 class VLCMediaLibraryMBS

205.8.1 class VLCMediaLibraryMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for VLC media library.

205.8.2 Methods

205.8.3 Constructor(vlc as VLCInstanceMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create an new Media Library object.
Notes: On success handle property is not nil.

205.8.4 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

205.8.5 Load as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Load media library.
Notes: Return true on success, false on error.

205.8.6 MediaList as VLCMediaListMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get media library subitems.

205.8.7 Properties

205.8.8 Handle as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

205.8.9 VLC as VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the VLC instance.
Notes: (Read only property)

205.9 class VLCMediaListMBS

205.9.1 class VLCMediaListMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a media list.
Example:

```
// build a playlist of all MP3 files in a folder
// Instance is a property of the window: Instance As VLCInstanceMBS (created after VLCInstanceMBS.Load-Library)
Var list As New VLCMediaListMBS(Instance)
Var folder As FolderItem = SpecialFolder.Music

list.Lock
For Each file As FolderItem In folder.Children
If file.Name.EndsWith(".mp3") Then
Var media As VLCMediaMBS = VLCMediaMBS.MediaWithFile(Instance, file)
If media <>Nil Then Call list.AddMedia(media)
End If
Next
list.Unlock

MessageBox list.Count.ToString + " files in playlist"
```

205.9.2 Methods

205.9.3 AddMedia(item as VLCMediaMBS) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add media instance to media list.
Notes: item: a media instance
Return true on success, false if the media list is read-only.
The Lock should be held upon entering this function.

205.9.4 Constructor(vlc as VLCInstanceMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create an empty media list.
Notes: On success the handle property is not zero.

205.9.5 Count as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get count on media list items.
Notes: The Lock should be held upon entering this function.
Return number of items in media list.

205.9.6 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

205.9.7 GetMedia as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get media instance from this media list instance.
Notes: The Lock should NOT be held upon entering this function.
Returns media instance or nil.

205.9.8 IndexOfItem(item as VLCMediaMBS) as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Find index position of List media instance in media list.
Notes: Warning: the function will return the first matched position.
The Lock should be held upon entering this function.

Returns position of media instance or -1 if media not found.

205.9.9 InsertMedia(item as VLCMediaMBS, index as Integer) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Insert media instance in media list on a position.
Notes: The Lock should be held upon entering this function.
item: a media instance
index: position in array where to insert

Return true on success, false if the media list is read-only.

205.9.10 isReadOnly as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether this media list is read-only from a user point of view.
Notes: Returns true if readonly and false if read/write.

205.9.11 ItemAtIndex(index as Integer) as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: List media instance in media list at a position.
Notes: The Lock should be held upon entering this function.
index: position in array where to get item.
Returns instance at position index, or nil if not found.

205.9.12 Lock

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get lock on media list items.

205.9.13 Remove(index as Integer) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Remove media instance from media list on a position.
Notes: The Lock should be held upon entering this function.
index: position in array where to insert
Returns true on success, false if the list is read-only or the item was not found.

205.9.14 SetMedia(item as VLCMediaMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Associate media instance with this media list instance.
Notes: If another media instance was present it will be released.
The Lock should NOT be held upon entering this function.

205.9.15 Unlock

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Release lock on media list items.
Notes: The Lock should be held upon entering this function.

205.9.16 Properties

205.9.17 Handle as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Internal object reference.
Notes: (Read and Write property)

205.9.18 VLC as VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the VLC instance.
Notes: (Read only property)

205.10 class VLCMediaListPlayerMBS

205.10.1 class VLCMediaListPlayerMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a VLC media list player.
Example:

```
// play a playlist in a loop with VLC
// Instance is a property of the window: Instance As VLCInstanceMBS (created after VLCInstanceMBS.Load-
Library)
// ListPlayer is a property of the window: ListPlayer As VLCMediaListPlayerMBS
Var list As New VLCMediaListMBS(Instance)
Call list.AddMedia(VLCMediaMBS.MediaWithFile(Instance, SpecialFolder.Desktop.Child("song1.mp3")))
Call list.AddMedia(VLCMediaMBS.MediaWithFile(Instance, SpecialFolder.Desktop.Child("song2.mp3")))

ListPlayer = New VLCMediaListPlayerMBS(Instance)
ListPlayer.SetMediaList list
ListPlayer.SetPlaybackMode VLCMediaListPlayerMBS.kPlaybackModeLoop
ListPlayer.Play

// skip to the next song with ListPlayer.MoveNext
```

Notes: This is required to especially support playlist files.
The normal media player can only play a single media, and does not handle playlist files properly.

205.10.2 Methods

205.10.3 Constructor(vlc as VLCInstanceMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create new media list player.

205.10.4 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

205.10.5 IsPlaying as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Is media list playing?
Notes: Return true for playing and false for not playing.

205.10.6 MoveNext as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Play next item from media list.
Notes: Return true upon success false if there is no next item.

205.10.7 MovePrevious as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Play previous item from media list.
Notes: Return true upon success false if there is no previous item.

205.10.8 Pause

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pause media list

205.10.9 Play

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Play media list.

205.10.10 PlayItem(item as VLCMediaMBS) as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Play the given media item.
Notes: Return true upon success, false if the media is not part of the media list.

205.10.11 PlayItemAtIndex(index as Integer) as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Play media list item at position index.
Notes: index: index in media list to play.
Return true upon success false if the item wasn't found.

205.10.12 SetMediaList(list as VLCMediaListMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the media list associated with the player.

205.10.13 SetMediaPlayer(player as VLCMediaPlayerMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Replace media player in media list player with this instance.

205.10.14 SetPlaybackMode(mode as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the playback mode for the playlist.
Notes: See kPlaybackMode* constants.

205.10.15 State as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get current State of media list player.

205.10.16 Stop

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Stop playing media list.

205.10.17 Properties

205.10.18 Handle as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

205.10.19 List as VLCMediaListMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The list assigned to this media list player.
Notes: (Read and Write property)

205.10.20 Player as VLCMediaPlayerMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The player assigned to this media list player.
Notes: (Read and Write property)

205.10.21 VLC as VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the VLC instance.
Notes: (Read only property)

205.10.22 Constants

Playback Mode Constants

Constant	Value	Description
kPlaybackModeDefault	0	Default
kPlaybackModeLoop	1	Loop
kPlaybackModeRepeat	2	Repeat

205.11 class VLCMediaMBS

205.11.1 class VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The VLC class for a media item.
Example:

```
// read the title and length of a media file with VLC
// Instance is a property of the window: Instance As VLCInstanceMBS (created after VLCInstanceMBS.Load-
Library)
Var media As VLCMediaMBS = VLCMediaMBS.MediaWithFile(Instance, SpecialFolder.Desktop.Child("test.mp3"))
If media = Nil Then Return

media.Parse
MessageBox "Title: " + media.Meta(VLCMediaMBS.kMetaTitle) + EndOfLine + _
"Duration: " + Str(media.Duration \1000) + " seconds"
```

Blog Entries

- MBS Xojo Plugins, version 20.3pr9
- MBS Xojo / Real Studio Plugins, version 14.0pr5

205.11.2 Methods

205.11.3 AddOption(options as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add an option to the media.
Notes: This option will be used to determine how the media_player will read the media. This allows to use VLC's advanced reading/streaming options on a per-media basis.

The options are detailed in vlc –long-help, for instance "–sout-all"

205.11.4 AddOptionFlag(options as string, flags as UInt32)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add an option to the media with configurable flags.
Notes: This option will be used to determine how the media_player will read the media. This allows to use VLC's advanced reading/streaming options on a per-media basis.

The options are detailed in vlc –long-help, for instance "–sout-all"

205.11.5 Clone as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a duplicate of media object.

205.11.6 Constructor(original as VLCMediaMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a copy of the media object.
See also:

- 205.11.7 Constructor(vlc as VLCInstanceMBS, URL as string) 24156

205.11.7 Constructor(vlc as VLCInstanceMBS, URL as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a media with a certain given media resource location, for instance a valid URL.
Notes: Do not pass a file path here! This is for URLs.

URL: the media location

To refer to a local file with this function, the file://... URI syntax must be used (see IETF RFC3986).
We recommend using MediaWithPath() instead when dealing with local files.
See also:

- 205.11.6 Constructor(original as VLCMediaMBS) 24156

205.11.8 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor to cleanup the media.

205.11.9 Duration as Int64

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get duration (in ms) of media descriptor object item.
Notes: Return duration of media item or -1 on error.

205.11.10 IsParsed as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get Parsed status for media descriptor object.
Notes: Returns true if media object has been parsed otherwise it returns false.

205.11.11 MediaWithData(vlc as VLCInstanceMBS, data as memoryblock) as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a media for a certain data.
Notes: Internally creates temp file for the data and opens the file.
File is later deleted when VLCMediaMBS goes out of scope.
Returns new media object or nil.
See also:

- 205.11.12 MediaWithData(vlc as VLCInstanceMBS, data as string) as VLCMediaMBS 24157

205.11.12 MediaWithData(vlc as VLCInstanceMBS, data as string) as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a media for a certain data.
Notes: Internally creates temp file for the data and opens the file.
File is later deleted when VLCMediaMBS goes out of scope.
Returns new media object or nil.
See also:

- 205.11.11 MediaWithData(vlc as VLCInstanceMBS, data as memoryblock) as VLCMediaMBS 24157

205.11.13 MediaWithFile(vlc as VLCInstanceMBS, file as folderitem) as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a media for a certain file path.
Notes: file: local filesystem path as folderitem.
Returns new media object or nil.

205.11.14 MediaWithFileDescriptor(vlc as VLCInstanceMBS, fd as Integer) as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a media for an already open file descriptor.
Notes: The file descriptor shall be open for reading (or reading and writing).

Regular file descriptors, pipe read descriptors and character device descriptors (including TTYs) are supported on all platforms. Block device descriptors are supported where available.
Directory descriptors are supported on systems that provide fdopendir(). Sockets are supported on all platforms where they are file descriptors, i.e. all except Windows.

This library will not automatically close the file descriptor under any circumstance. Nevertheless, a file descriptor can usually only be rendered once in a media player. To render it a second time, the file descriptor should probably be rewound to the beginning with lseek().

Returns new media object or nil.

205.11.15 MediaWithPath(vlc as VLCInstanceMBS, Path as string) as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a media for a certain file path.
Notes: path: local filesystem path
Returns new media object or nil.

205.11.16 MediaWithURL(vlc as VLCInstanceMBS, URL as string) as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a media with a certain given media resource location, for instance a valid URL.
Example:

```
Var v as VLCInstanceMBS // your vlc object
Var m as VLCMediaMBS

// load with URL
m = VLCMediaMBS.MediaWithURL(v, "https://www.monkeybreadsoftware.com/filemaker/video/WriteInvoice-iPhone.m4v")

// or with file URL:
m = VLCMediaMBS.MediaWithURL(v, moviefile.URLPath)
```

Notes: URL: the media location
Returns the new media object or nil.
To refer to a local file with this function, the file://... URI syntax must be used (see IETF RFC3986).
We recommend using MediaWithPath() instead when dealing with local files.

205.11.17 Meta(type as Integer) as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the meta of the media.
Notes: If the media has not yet been parsed this will return an empty string.

This methods automatically calls ParseAsync(), so after calling it you may receive a MediaMetaChanged event. If you prefer a synchronous version ensure that you call Parse() before get_meta().

205.11.18 MRL as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the media resource locator (mrl) from a media descriptor object.

205.11.19 NewAsNode(vlc as VLCInstanceMBS, name as string) as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a media as an empty node with a given name.
Notes: Name: The name of the new node.
Returns new media object or nil.

205.11.20 Parse

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Parse a media.
Notes: This fetches (local) meta data and tracks information.
The method is synchronous.

205.11.21 ParseAsync

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Parse a media.
Notes: This fetches (local) meta data and tracks information.
The method is the asynchronous of Parse.
To track when this is over you can listen to MediaParsedChanged event. However if the media was already parsed you will not receive this event.

205.11.22 SaveMeta as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Save the meta previously set.
Notes: Return true if the write operation was successful.

205.11.23 SetMeta(meta as Integer, value as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the meta of the media
Notes: This function will not save the meta, call SaveMeta in order to save the meta.

meta: Which meta data. See kMeta* constants.
Value: the media's meta

205.11.24 State as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get current state of media descriptor object.
Notes: See kState* constants.

205.11.25 Stats as VLCMediaStatsMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the current statistics about the media.
Notes: Returns statistics for media.

205.11.26 SubItems as VLCMediaListMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get subitems of media descriptor object.

205.11.27 TrackInfos as VLCMediaTrackInfoMBS()

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get media descriptor's elementary streams description.
Notes: Note, you need to call Parse or play the media at least once before calling this function.
Not doing this will result in an empty array.

205.11.28 Tracks as VLCMediaTrackMBS()

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get media descriptor's elementary streams description.
Notes: Note, you need to call Parse or play the media at least once before calling this function.
Not doing this will result in an empty array.

Requires LibVLC 2.1.0 and later.

Returns an array of track objects.

205.11.29 Properties

205.11.30 Handle as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

205.11.31 Tag as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The media descriptor's user_data.
Notes: This is a value you can use as you like.
This value survives even if the VLCMediaMBS object is destroyed and later recreated with the same VLC media object behind.
(Read and Write property)

205.11.32 VLC as VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the VLC instance.
Notes: (Read only property)

205.11.33 Constants

Metadata Types Constants

Constant	Value	Description
kMetaActors	22	Actors
kMetaAlbum	4	Album
kMetaAlbumArtist	23	Album artist
kMetaArtist	1	Artist
kMetaArtworkURL	15	Artwork URL
kMetaCopyright	3	Copyright
kMetaDate	8	Date
kMetaDescription	6	Description
kMetaDirector	18	Director
kMetaDiscNumber	24	Disc number
kMetaDiscTotal	25	Disc total
kMetaEncodedBy	14	Encode By
kMetaEpisode	20	Episode
kMetaGenre	2	Genre
kMetaLanguage	11	Language
kMetaNowPlaying	12	Now Playing
kMetaPublisher	13	Publisher
kMetaRating	7	Rating
kMetaSeason	19	Season
kMetaSetting	9	Setting
kMetaShowName	21	ShowName
kMetaTitle	0	Title
kMetaTrackID	16	Track ID
kMetaTrackNumber	5	Track Number
kMetaTrackTotal	17	Total
kMetaURL	10	URL

Media Option Constants

Constant	Value	Description
kOptionTrusted	2	Trusted
kOptionUnique	16	Unique

State Constants

Constant	Value	Description
kStateBuffering	2	Buffering
kStateEnded	6	Ended
kStateError	7	Error
kStateNothingSpecial	0	Nothing special. Video closed for example.
kStateOpening	1	Opening
kStatePaused	4	Paused
kStatePlaying	3	Playing
kStateStopped	5	Stopped

Track Type Constants

Constant	Value	Description
kTrackTypeAudio	0	Audio
kTrackTypeText	2	Text
kTrackTypeUnknown	-1	Unknown type
kTrackTypeVideo	1	Video

205.12 class VLCMediaPlayerMBS

205.12.1 class VLCMediaPlayerMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The VLC class for video playback.
Example:

```
// play a sound file with VLC
// Instance is a property of the window: Instance As VLCInstanceMBS (created after VLCInstanceMBS.LoadLibrary)
// Player is a property of the window: Player As VLCMediaPlayerMBS
Var media As VLCMediaMBS = VLCMediaMBS.MediaWithFile(Instance, SpecialFolder.Desktop.Child("test.mp3"))
If media = Nil Then Return

Player = New VLCMediaPlayerMBS(media)
Player.Volume = 80
If Not Player.Play Then
MessageBox "Failed to play."
End If

// later: Player.Stop
```

205.12.2 Methods

205.12.3 Constructor(media as VLCMediaMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a Media Player object from a Media.
Notes: On success handle is not nil.
See also:

- 205.12.4 Constructor(VLCInstance as VLCInstanceMBS) 24167

205.12.4 Constructor(VLCInstance as VLCInstanceMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create an empty Media Player object.
Notes: On success handle is not nil.
See also:

- 205.12.3 Constructor(media as VLCMediaMBS) 24167

205.12.5 CopyCGImage as Variant

MBS VLC Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Copies current frame as CGImageMBS.
Notes: This method set HasNewFrame to false.

205.12.6 CopyMemory as memoryblock

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Copies current frame as memoryblock.
Notes: This method set HasNewFrame to false.
The format depends on what you passed to VideoSetFormat.
Byte order usually is BGRA.

205.12.7 CopyPicture as Picture

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Copies current frame as picture.
Notes: This method set HasNewFrame to false.
If using CGContext, this returns a CGImageMBS. Else a Picture.

With version 19.0, this returns always a picture.

205.12.8 CopyToMemory(dest as Ptr, offset as Integer, RowBytes as Integer) as boolean

MBS VLC Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Copies current frame into a given memory block.
Notes: Offset: Position of first byte in memoryblock.
RowBytes: The row size in bytes of your memoryblock.

This way you can have your frame go into a buffer of bigger width/height representing an OpenGL texture for example.
Byte order usually is BGRA.

205.12.9 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

205.12.10 GetChapterCountForTitle(title as Integer) as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get title chapter count.
Notes: Return number of chapters in title, or -1.

205.12.11 GetChapterDescription(index as Integer) as VLCTrackDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the description of available chapters for specific title.
Notes: Return list containing description of available chapter for title with index.

205.12.12 GetMemory as Ptr

MBS VLC Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns pointer to memory with current frame.
Notes: This method set HasNewFrame to false.
The format depends on what you passed to VideoSetFormat.

205.12.13 Navigate(Navigate as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Navigate through DVD Menu.

205.12.14 NextChapter

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set next chapter (if applicable)

205.12.15 NextFrame

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Display the next frame (if supported)

205.12.16 Pause

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Toggle pause (no effect if there is no media)
See also:

- 205.12.17 Pause(pause as boolean) 24170

205.12.17 Pause(pause as boolean)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pause or resume (no effect if there is no media)
Notes: pause: play/resume if false, pause if true.
See also:

- 205.12.16 Pause 24170

205.12.18 Play as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Plays video.
Notes: Return true if playback started (and was already started), or false on error.

205.12.19 PreviousChapter

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set previous chapter (if applicable)

205.12.20 SetAudioOutput(AudioOutputName as string) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the audio output.
Notes: Change will be applied after stop and play.

Name: name of audio output.
Return true on success.

205.12.21 SetAudioOutputDevice(AudioOutputName as string, deviceID as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set audio output device. Changes are only effective after stop and play.
Notes: AudioOutputName: name of audio output.
deviceID: device ID.

205.12.22 SetEqualizer(Equalizer as VLCEqualizerMBS = nil)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Apply new equalizer settings to a media player.
Notes: It is possible to apply new equalizer settings to a media player whether the media player is currently playing media or not.
Invoking this method will immediately apply the new equalizer settings to the audio output of the currently playing media if there is any.
If there is no currently playing media, the new equalizer settings will be applied later if and when new media is played.

Equalizer settings will automatically be applied to subsequently played media.

To disable the equalizer for a media player invoke this method passing nil for the equalizer parameter.

The media player does not keep a reference to the supplied equalizer so it is safe for an application to release the equalizer reference any time after this method returns.

Requires VLC 2.2.

205.12.23 SetSubtitleFile(filename as string) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set new video subtitle file.
Notes: filename: new video subtitle file

Returns the success status.

205.12.24 SetVideoTitleDisplay(position as Integer, timeout as Integer)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set if, and how, the video title will be shown when media is played.
Notes: position: position at which to display the title, or kVideoTitleDisplayPositionDisable to prevent the title from being displayed.
timeout: title display timeout in milliseconds (ignored if libvlc_position_disable)

Requires VLC 2.1.

205.12.25 Stop

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Stop (no effect if there is no media)

205.12.26 ToggleFullScreen

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Toggle fullscreen status on non-embedded video outputs.
Notes: See also Fullscreen property.

205.12.27 ToggleMute

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Toggle mute status.

205.12.28 ToggleTeletext

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Toggle teletext transparent status on video output.

205.12.29 VideoGetCursor(num as Integer, byref px as Integer, byref py as Integer) as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the mouse pointer coordinates over a video.
Notes: Coordinates are expressed in terms of the decoded video resolution, not in terms of pixels on the screen/viewport (to get the latter, you can query your windowing system directly).

Either of the coordinates may be negative or larger than the corresponding dimension of the video, if the cursor is outside the rendering area.

The coordinates may be out-of-date if the pointer is not located on the video rendering area. LibVLC does not track the pointer if it is outside of the video widget.

LibVLC does not support multiple pointers (it does of course support multiple input devices sharing the same pointer) at the moment.

num: number of the video (starting from, and most commonly 0)
px: get the abscissa.
py: get the ordinate.
Returns true on success, false if the specified video does not exist

205.12.30 VideoGetSize(num as Integer, byref px as UInt32, byref py as UInt32) as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the pixel dimensions of a video.
Notes: num: number of the video (starting from, and most commonly 0)
px: get the pixel width [OUT]
py: get the pixel height [OUT]
Return true on success, false if the specified video does not exist.

205.12.31 VideoSetCallback(width as integer, height as integer, CGContextHandle as integer = 0)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets video callbacks, so the plugin can provide current frame with CopyPicture method.
Notes: You can use CopyPicture and CopyMemory methods to query new frame content.
The hasNewFrame property tells you whether a new frame is available.
The plugin will optionally draw the frames into the CGContext you provide.
Please use CopyCGImage to get a CGImage from image buffer.

205.12.32 VideoSetDeinterlace(Mode as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable or disable deinterlace filter.
Notes: Mode: Type of deinterlace filter, "" to disable.

205.12.33 VideoSetFormat(chroma as string, width as UInt32, height as UInt32, pitch as UInt32)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set decoded video chroma and dimensions.
Notes: This only works in combination with SetVideoCallbacks().
chroma: a four-characters string identifying the chroma (e.g. "RV32" or "YUYV")
width: pixel width
height: pixel height
pitch: line pitch (in bytes)

All pixel planes are expected to have the same pitch.

205.12.34 VideoSetKeyInput(on as boolean)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable or disable key press events handling, according to the LibVLC hotkeys configuration.
Notes: By default and for historical reasons, keyboard events are handled by the LibVLC video widget.

On X11, there can be only one subscriber for key press and mouse click events per window. If your application has subscribed to those events for the X window ID of the video widget, then LibVLC will not be able to handle key presses and mouse clicks in any case.

This function is only implemented for X11 and Win32 at the moment.

on: true to handle key press events, false to ignore them.

205.12.35 VideoSetLogoString(option as Integer, logo as String)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set logo option as string.
Notes: Options that take a different type value are ignored.

205.12.36 VideoSetMouseInput(on as boolean)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable or disable mouse click events handling.
Notes: By default, those events are handled. This is needed for DVD menus to work, as well as a few video filters such as "puzzle".

This function is only implemented for X11 and Win32 at the moment.

on: true to handle mouse click events, false to ignore them.

205.12.37 VideoTakeSnapshot(num as Integer, path as string, width as Integer, height as Integer) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Take a snapshot of the current video window.
Notes: If width AND height is 0, original size is used.

If width XOR height is 0, original aspect-ratio is preserved. (e.g. width = 0 and height = -1)

num: number of video output (typically 0 for the first/only one)
Path: the path where to save the screenshot to
Width: the snapshot's width
Height: the snapshot's height

Returns true on success, false if the video was not found

205.12.38 Properties

205.12.39 AGL as UInt32

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set the agl handler where the media player should render its video output.
Notes: Returns the agl handler or 0 if none where set.
(Read and Write property)

205.12.40 AspectRatio as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/set current video aspect ratio.
Notes: Set new video aspect-ratio or "" to reset to default. Invalid aspect ratios are ignored.
Get the video aspect ratio or "" if unspecified.

The value must be something like "4:3", "16:9", "16:10", ...
(Read and Write property)

205.12.41 AudioChannel as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Current audio channel.
Notes: (Read and Write property)

205.12.42 AudioDelay as Int64

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Current audio delay in microseconds.
Notes: The audio delay will be reset to zero each time the media changes.
(Read and Write property)

205.12.43 AudioOutputDevices as VLCAudioOutputDeviceMBS

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets a list of potential audio output devices,
Example:

```
Var DeviceNames() As String

Var devices As VLCAudioOutputDeviceMBS = mp.AudioOutputDevices
While devices <>Nil
DeviceNames.Add "* "+devices.Device+": "+devices.Description

devices = devices.NextOutput
Wend

MessageBox Join(DeviceNames, EndOfLine)
```

Notes: See also SetAudioOutputDevice method.

Not all audio outputs support enumerating devices.
The audio output may be functional even if the list is empty (nil).

The list may not be exhaustive.

Some audio output devices in the list might not actually work in some circumstances. By default, it is recommended to not specify any explicit audio device.

Returns a nil-terminated linked list of potential audio output devices.
Requires LibVLC 2.2.0 or later.
(Read only property)

205.12.44 AudioOutputDeviceType as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set/Get current audio device type.
Notes: Device type describes something like character of output sound - stereo sound, 2.1, 5.1 etc.
(Read and Write property)

205.12.45 AudioTrack as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Current audio track.
Notes: Get or set current audio track.
(Read and Write property)

205.12.46 AudioTrackCount as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get number of available audio tracks.
Notes: Returns the number of available audio tracks (int), or -1 if unavailable.
(Read only property)

205.12.47 CanPause as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Can this media player be paused?
Notes: Returns true if the media player can pause.
(Read only property)

205.12.48 Chapter as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/set movie chapter.
Notes: Returns chapter number currently playing, or -1 if there is no media.
Sets movie chapter (if applicable).
(Read and Write property)

205.12.49 ChapterCount as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get movie chapter count.
Notes: Returns number of chapters in movie, or -1.
(Read only property)

205.12.50 CropGeometry as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set current crop filter geometry.
Notes: Returns the crop filter geometry or "" if unset.
Set with new crop filter geometry ("" to unset).

Seems to be broken in our tests inside libVLC.
(Read and Write property)

205.12.51 FPS as Double

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get movie fps rate
Notes: Returns frames per second (fps) for this playing movie, or 0 if unspecified.
(Read only property)

205.12.52 FullScreen as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable or disable fullscreen.
Notes: With most window managers, only a top-level windows can be in full-screen mode. Hence, this function will not operate properly if XWindow property was used to embed the video in a non-top-level window. In that case, the embedding window must be reparented to the root window before fullscreen mode is enabled. You will want to reparent it back to its normal parent when disabling fullscreen.
(Read and Write property)

205.12.53 GetAudioTrackDescription as VLCTrackDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the description of available audio tracks.
Notes: Returns list with description of available audio tracks, or nil.
(Read only property)

205.12.54 GetSPUDescription as VLCTrackDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the description of available video subtitles.
Notes: Return list containing description of available video subtitles or nil.
(Read only property)

205.12.55 GetVideoTitleDescription as VLCTrackDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the description of available titles.
Notes: Return list containing description of available titles.
(Read only property)

205.12.56 Handle as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

205.12.57 HasNewFrame as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether a new frame is available.
Notes: (Read and Write property)

205.12.58 HasVOut as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: How many video outputs does this media player have?
Notes: Return the number of video outputs.
(Read only property)

205.12.59 Height as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get current video height.
Notes: Returns the video pixel height or 0 if not applicable.
(Read only property)

205.12.60 HWND as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set a Win32/Win64 API window handle (HWND) where the media player should render its video output.
Notes: If LibVLC was built without Win32/Win64 API output support, then this has no effects.

Get the Windows API window handle (HWND) previously set with this property. The handle will be returned even if LibVLC is not currently outputting any video to it.
Currently not supported by our plugin.
(Read and Write property)

205.12.61 IsPlaying as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether player is playing.
Notes: (Read only property)

205.12.62 IsSeekable as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Is this media player seekable?
Notes: Returns true if the media player can seek.
(Read only property)

205.12.63 Length as Int64

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the current movie length (in ms).
Notes: Return the movie length (in ms), or -1 if there is no media.
(Read only property)

205.12.64 Media as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set current media.
Notes: (Read and Write property)

205.12.65 Mute as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Current mute status.
Notes: If true then mute, otherwise unmute.

(Read and Write property)

205.12.66 NSObject as Ptr

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set the NSView handler where the media player should render its video output.
Notes: Currently not supported by our plugin.
(Read and Write property)

205.12.67 Position as Double

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set movie position.
Notes: Movie position as percentage between 0.0 and 1.0.
Returns movie position, or -1. in case of error.
Set movie position. This has no effect if playback is not enabled. This might not work depending on the underlying input format and protocol.
(Read and Write property)

205.12.68 ProgramScrambled as boolean

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Check if the current program is scrambled.
Notes: true if the current program is scrambled.
Requires VLC 2.2.
(Read only property)

205.12.69 Rate as Double

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set the requested movie play rate.
Notes: Depending on the underlying media, the requested rate may be different from the real playback rate.

(Read and Write property)

205.12.70 Scale as Double

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set the current video scaling factor.
Notes: That is the ratio of the number of pixels on screen to the number of pixels in the original decoded video in each dimension. Zero is a special value; it will adjust the video to the output window/drawable (in windowed mode) or the entire screen.

Note that not all video outputs support scaling.
(Read and Write property)

205.12.71 SPU as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set current video subtitle.
Notes: Returns the video subtitle selected, or -1 if none.
(Read and Write property)

205.12.72 SPUCount as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the number of available video subtitles.
Notes: (Read only property)

205.12.73 SPUDelay as Int64

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set the current subtitle delay.
Notes: This affects the timing of when the subtitle will be displayed.
Positive values means subtitles are being displayed later, while negative values will result in subtitles being displayed earlier.

The subtitle delay will be reset to zero each time the media changes.
(Read and Write property)

205.12.74 State as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get current movie state.
Notes: Returns the current state of the media player (playing, paused, ...)
(Read only property)

205.12.75 Tag as Variant

MBS VLC Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The tag value.
Notes: You can store whatever you like in this property.
(Read only property)

205.12.76 Time as Int64

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set the current movie time (in ms).
Notes: Return the movie time (in ms), or -1 if there is no media.
Set the movie time (in ms). This has no effect if no media is being played.
Not all formats and protocols support this.
(Read and Write property)

205.12.77 Title as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set/Get movie title.
Notes: Returns title number currently playing, or -1.
(Read and Write property)

205.12.78 TitleCount as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get movie title count.
Notes: Returns title number count, or -1.
(Read only property)

205.12.79 VideoTeleText as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set current teletext page requested.
Notes: (Read and Write property)

205.12.80 VideoTrack as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set video track.
Notes: (Read and Write property)

205.12.81 VideoTrackCount as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get number of available video tracks.
Notes: Returns the number of available video tracks.
(Read only property)

205.12.82 VideoTrackDescription as VLCTrackDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the description of available video tracks.
Notes: Returns list with description of available video tracks, or nil on error.

(Read only property)

205.12.83 VLC as VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the VLC instance.
Notes: (Read only property)

205.12.84 Volume as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Current software audio volume.
Notes: The volume in percents.
0 = mute, 100 = nominal / 0dB.
(Read and Write property)

205.12.85 Width as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get current video width.
Notes: Returns the video pixel width or 0 if not applicable.
(Read only property)

205.12.86 WillPlay as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Is the player able to play.
Notes: (Read only property)

205.12.87 XWindow as UInt32

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set an X Window System drawable where the media player should render its video output.
Notes: If LibVLC was built without X11 output support, then this has no effects.

The specified identifier must correspond to an existing Input/Output class X11 window. Pixmaps are not supported. The caller shall ensure that the X11 server is the same as the one the VLC instance has been configured with. This function must be called before video playback is started; otherwise it will only take effect after playback stop and restart.

Get the X Window System window identifier previously set with this property. Note that this will return the identifier even if VLC is not currently using it (for instance if it is playing an audio-only input).
Currently not supported by our plugin.
(Read and Write property)

205.12.88 VideoAdjust(option as Integer) as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/set adjust option as Integer.
Notes: option: See kAdjust* constants.
Options that take a different type value are ignored.

Using kAdjustEnable with value 0 stops adjust filter. With other values you start adjust filter.
(Read and Write computed property)

205.12.89 VideoAdjustFloat(option as Integer) as single

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/set adjust option as float.
Notes: option: See kAdjust* constants.
Options that take a different type value are ignored.
(Read and Write computed property)

205.12.90 VideoLogo(option as Integer) as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set logo option as Integer.
Notes: Options that take a different type value are ignored.
Passing kLogoEnable as option value has the side effect of starting (arg not 0) or stopping (arg 0) the logo filter.
(Read and Write computed property)

205.12.91 VideoMarquee(option as Integer) as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get, Enable, disable or set an integer marquee option.
Notes: Setting kMarqueeEnable has the side effect of enabling (arg not 0) or disabling (arg 0) the marq filter.
(Read and Write computed property)

205.12.92 VideoMarqueeString(option as Integer) as String

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set a string marquee option value
Notes: (Read and Write computed property)

205.12.93 Constants

Adjust Constants

Constant	Value	Description
kAdjustBrightness	2	Brightness
kAdjustContrast	1	Contrast
kAdjustEnable	0	Enable
kAdjustGamma	5	Gamma
kAdjustHue	3	Hue
kAdjustSaturation	4	Saturation

Audio channels Constants

Constant	Value	Description
kAudioChannelDolbys	5	Dolbys
kAudioChannelError	-1	Error
kAudioChannelLeft	3	Left channel
kAudioChannelRight	4	Right channel
kAudioChannelRStereo	2	RStereo
kAudioChannelStereo	1	Stereo

Audio device type Constants

Constant	Value	Description
kAudioOutputDevice_2F2R	4	2F2R
kAudioOutputDevice_3F2R	5	3F2R
kAudioOutputDevice_5_1	6	5/1
kAudioOutputDevice_6_1	7	6/1
kAudioOutputDevice_7_1	8	7/1
kAudioOutputDevice_Error	-1	Error
kAudioOutputDevice_Mono	1	Mono
kAudioOutputDevice_SPDIF	10	SPDIF
kAudioOutputDevice_Stereo	2	Stereo

Option Parameters for VideoLogo

Constant	Value	Description
kLogoDelay	4	Delay
kLogoEnable	0	Enable/Disable
kLogoFile	1	File path.
		Use with VideoSetLogoString: ”file,d,t;file,d,t;...”
kLogoOpacity	6	Opacity
kLogoPosition	7	Position
kLogoRepeat	5	Repeat
kLogoX	2	X Position
kLogoY	3	Y Position

Marq options definition Constants

Constant	Value	Description
kMarqueeColor	2	Color
kMarqueeEnable	0	Enable
kMarqueeOpacity	3	Opacity
kMarqueePosition	4	Position
kMarqueeRefresh	5	Refresh
kMarqueeSize	6	Size
kMarqueeText	1	Text
kMarqueeTimeout	7	Timeout
kMarqueeX	8	X
kMarqueeY	9	Y

Navigation Mode Constants

Constant	Value	Description
kNavigateActivate	0	Activate
kNavigateDown	2	Down
kNavigateLeft	3	Left
kNavigateRight	4	Right
kNavigateUp	1	Up

State Constants

Constant	Value	Description
kStateBuffering	2	Buffering
kStateEnded	6	Ended
kStateError	7	Error
kStateNothingSpecial	0	Nothing special. Video closed for example.
kStateOpening	1	Opening
kStatePaused	4	Paused
kStatePlaying	3	Playing
kStateStopped	5	Stopped

Video Title Display Positions

Constant	Value	Description
kVideoTitleDisplayPositionBottom	6	Bottom
kVideoTitleDisplayPositionBottomLeft	7	Bottom Left
kVideoTitleDisplayPositionBottomRight	8	Bottom Right
kVideoTitleDisplayPositionCenter	0	Center
kVideoTitleDisplayPositionDisable	-1	Disabled
kVideoTitleDisplayPositionLeft	1	Left
kVideoTitleDisplayPositionRight	2	Right
kVideoTitleDisplayPositionTop	3	Top
kVideoTitleDisplayPositionTopLeft	4	Top Left
kVideoTitleDisplayPositionTopRight	5	Top Right

205.13 class VLCMediaStatsMBS

205.13.1 class VLCMediaStatsMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for media statistics.
Example:

```
// show playback statistics of the media a VLC player is playing
// Player is a property of the window: Player As VLCMediaPlayerMBS (playing, see there)
If Player = Nil Or Player.Media = Nil Then Return

Var s As VLCMediaStatsMBS = Player.Media.Stats
If s = Nil Then Return
System.DebugLog "Input " + Format(s.InputBitrate * 8000, "0") + " kbit/s, " + _
s.DecodedVideo.ToString + " video frames decoded, " + s.DisplayedPictures.ToString + " shown, " + s.Lost-
Pictures.ToString + " lost"
```

205.13.2 Properties

205.13.3 DecodedAudio as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decoded audio.
Notes: (Read and Write property)

205.13.4 DecodedVideo as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decoded video.
Notes: (Read and Write property)

205.13.5 DemuxBitrate as Single

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bitrate for demux input.
Notes: (Read and Write property)

205.13.6 DemuxCorrupted as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Demux corrupted.
Notes: (Read and Write property)

205.13.7 DemuxDiscontinuity as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The demux discontinuity.
Notes: (Read and Write property)

205.13.8 DemuxRead_bytes as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of read bytes by demuxer.
Notes: (Read and Write property)

205.13.9 DisplayedPictures as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of displayed video frames.
Notes: (Read and Write property)

205.13.10 InputBitrate as Single

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The input bit rate.
Notes: (Read and Write property)

205.13.11 LostAbuffers as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of lost audio buffers.
Notes: (Read and Write property)

205.13.12 LostPictures as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of lost video frames.
Notes: (Read and Write property)

205.13.13 PlayedAbuffers as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of played Audio buffers.
Notes: (Read and Write property)

205.13.14 ReadBytes as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of bytes read from input.
Notes: (Read and Write property)

205.13.15 SendBitrate as Single

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The sending bit rate.
Notes: (Read and Write property)

205.13.16 SentBytes as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of bytes sent.
Notes: (Read and Write property)

205.13.17 SentPackets as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of packets sent.
Notes: (Read and Write property)

205.14 class VLCMediaTrackInfoMBS

205.14.1 class VLCMediaTrackInfoMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for track information.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Real Studio Plugins, version 12.3pr2

205.14.2 Methods

205.14.3 Constructor

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

205.14.4 Destructor

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

205.14.5 Properties

205.14.6 Channels as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of channels in an audio track.
Notes: (Read and Write property)

205.14.7 Codec as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The track's codec identifier.
Notes: (Read and Write property)

205.14.8 CodecString as String

MBS VLC Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The track's codec identifier as string.
Notes: (Read and Write property)

205.14.9 Height as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The height in pixel of a video track.
Notes: (Read and Write property)

205.14.10 ID as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The track'S ID.
Notes: (Read and Write property)

205.14.11 Level as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The codec's level.
Notes: (Read and Write property)

205.14.12 Profile as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The codec's profile.
Notes: (Read and Write property)

205.14.13 Rate as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The rate for an audio track.
Notes: e.g. 44000 Hz.
(Read and Write property)

205.14.14 Type as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The track type.
Notes: Can be TrackAudio, TrackText, TrackVideo or TrackUnknown.
(Read and Write property)

205.14.15 Width as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The width in pixel of a video track.
Notes: (Read and Write property)

205.14.16 Constants

Track Types

Constant	Value	Description
TrackAudio	0	Audio
TrackText	2	Text track, e.g. subtitles.
TrackUnknown	-1	Unknown
TrackVideo	1	Video

205.15 class VLCMediaTrackMBS

205.15.1 class VLCMediaTrackMBS

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for the media track.
Example:

```
// show the audio and video tracks of a movie file with VLC
Var args() As String
Var vlc As New VLCInstanceMBS(args)
Var media As New VLCMediaMBS(vlc, SpecialFolder.Desktop.Child("movie.mp4").URLPath)
media.Parse

For Each track As VLCMediaTrackMBS In media.Tracks
Select Case track.Type
Case VLCMediaTrackMBS.TrackVideo
System.DebugLog "Video: " + track.CodecString + " " + track.Width.ToString + " x " + track.Height.ToString
+ ", " + Format(track.FrameRate, "0.00") + " fps"
Case VLCMediaTrackMBS.TrackAudio
System.DebugLog "Audio: " + track.CodecString + " " + track.Channels.ToString + " channels, " +
track.Rate.ToString + " Hz, " + track.Language
Case VLCMediaTrackMBS.TrackText
System.DebugLog "Subtitle: " + track.Language
End Select
Next
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

205.15.2 Methods

205.15.3 Constructor

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

205.15.4 Destructor

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

205.15.5 Properties

205.15.6 Bitrate as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The bitrate.
Notes: (Read and Write property)

205.15.7 Channels as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of channels.
Notes: (Read and Write property)

205.15.8 Codec as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The codec ID.
Notes: (Read and Write property)

205.15.9 CodecString as String

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The codec ID as 4 letter text.
Notes: (Read and Write property)

205.15.10 Description as String

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The track description.
Notes: (Read and Write property)

205.15.11 Encoding as String

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The text encoding for subtitles.
Notes: (Read and Write property)

205.15.12 FrameRate as Double

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The framerate.
Notes: (Read and Write property)

205.15.13 FrameRateDen as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The framerate.
Notes: (Read and Write property)

205.15.14 FrameRateNum as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The framerate.
Notes: (Read and Write property)

205.15.15 Height as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The height of a video track.
Notes: (Read and Write property)

205.15.16 ID as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The ID of the track.
Notes: (Read and Write property)

205.15.17 Language as String

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The language for this track.
Notes: (Read and Write property)

205.15.18 Level as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The codec specific level value.
Notes: (Read and Write property)

205.15.19 OriginalCode as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The original code for codec.
Notes: (Read and Write property)

205.15.20 Profile as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Codec specific profile value.
Notes: (Read and Write property)

205.15.21 Rate as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The sound rate in Hz.
Notes: (Read and Write property)

205.15.22 Sar as Double

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The aspect ratio.
Notes: (Read and Write property)

205.15.23 SarDen as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The aspect ratio.
Notes: (Read and Write property)

205.15.24 SarNum as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The aspect ratio.
Notes: (Read and Write property)

205.15.25 Type as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The track type.
Notes: (Read and Write property)

205.15.26 Width as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The width of a video track.
Notes: (Read and Write property)

205.15.27 Constants

Track Types

Constant	Value	Description
TrackAudio	0	Audio
TrackText	2	Text
TrackUnknown	-1	Unknown type
TrackVideo	1	Video

205.16 class VLCMissingFunctionExceptionMBS

205.16.1 class VLCMissingFunctionExceptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The exception which is raised if you call a function which is not available.
Notes: Either your VLC shared library does not have the function or you did not yet load the library.
Subclass of the RuntimeException class.

205.17 class VLCModuleDescriptionMBS

205.17.1 class VLCModuleDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a module description.

205.17.2 Methods

205.17.3 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

205.17.4 Properties

205.17.5 Help as String

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The help text.
Notes: (Read and Write property)

205.17.6 LongName as String

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The long name.
Notes: (Read and Write property)

205.17.7 Name as String

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The name of the module.
Notes: (Read and Write property)

205.17.8 NextModule as VLCModuleDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The link to the next module.
Notes: (Read and Write property)

205.17.9 ShortName as String

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The short name.
Notes: (Read and Write property)

205.18 class VLCNotInitializedExceptionMBS

205.18.1 class VLCNotInitializedExceptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This exception is raised if you call a method on an uninitialized object.
Notes: Should not happen. And if it happens, you have a bug in your code.
Subclass of the RuntimeException class.

205.19 class VLCTrackDescriptionMBS

205.19.1 class VLCTrackDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Description for video, audio tracks and subtitles.
Notes: It contains id, name (description string) and reference to next record.

205.19.2 Methods

205.19.3 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

205.19.4 Properties

205.19.5 ID as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The track ID.
Notes: (Read and Write property)

205.19.6 Name as String

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The track name.
Notes: (Read and Write property)

205.19.7 NextTrack as VLCTrackDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The next track in the list.
Notes: (Read and Write property)

Chapter 206

WebKit2

206.1 control DesktopWKWebViewControlMBS

206.1.1 control DesktopWKWebViewControlMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: A WKWebView object displays interactive web content, such as for an in-app browser.
Example:

```
// print a WKWebViewControlMBS to PDF file:

Var browser as WKWebViewControlMBS // your control showing website
Var pi As NSPrintInfoMBS = NSPrintInfoMBS.sharedPrintInfo

Var f As FolderItem = SpecialFolder.Desktop.Child("test.pdf")
pi.SetSaveDestination f

Var po As NSPrintOperationMBS = browser.printOperation(pi)

po.showsPrintPanel = False
po.showsProgressPanel = False

If po.runOperation Then
f.launch
End If
```

Notes: This is a control to use WebKit in 32-bit and WebKit 2 in 64-bit.
Most of the events provided by Xojo for the control will not work.
But we can add features over time as needed.
Let us know if you need a method from WKWebView or an event from WKNavigationDelegate or WKUIDel-

egate.

206.1.2 Methods

206.1.3 addScriptMessageHandler(Name as String)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Adds a script message handler.
Example:

```
// register once
browser.addScriptMessageHandler "test"
// later use in javascript:
browser.EvaluateJavaScript("window.webkit.messageHandlers.test.postMessage('Hello');")
```

Notes: Name: The name of the message handler.

Adding a script message handler with name name causes the JavaScript function window.webkit.messageHandlers.name.postMessage(messageBody) to be defined in all frames in all web views that use the user content controller.

206.1.4 addUserScript(userScript as WKUserScriptMBS)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Adds an user script.

206.1.5 EvaluateJavaScript(JavaScript as String, byref Error as NSErrorMBS) as Variant

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Evaluates JavaScript.
Example:

```
Var e As NSErrorMBS

// returns array of variants with doubles
Var v As Variant = DesktopWKWebViewControlMBS1.EvaluateJavaScript("o = [ 1,2,3 ] ;", e)
Var vd() As Variant = v

// returns array of variants with strings
Var vv As Variant = DesktopWKWebViewControlMBS1.EvaluateJavaScript("o = [ ""a"","b"","d"" ] ;",
e)
Var vs() As Variant = vv
```

```
// returns dictionary
Var v3 As Variant = DesktopWKWebViewControlMBS1.EvaluateJavaScript("o = { a:1 } ", e)
Var dd As Dictionary = v3

Break
```

Notes: Synchronous version which waits for JavaScript to return the value.
Error is set in case of errors.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.

206.1.6 EvaluateJavaScript(JavaScript as String, Tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Evaluates JavaScript.
Notes: Calls later JavaScriptEvaluated event with result and passed tag value.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.
See also:

- 206.1.5 EvaluateJavaScript(JavaScript as String, byref Error as NSErrorMBS) as Variant 24215

206.1.7 findString(Text as String, FindConfiguration as WKFindConfigurationMBS = nil, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 26.5, Platform: macOS, Targets: Desktop only.

Function: Searches for the specified string in the web view,Äôs content.
Example:

```
var browser as DesktopWKWebViewControlMBS // your control

browser.findString "Xojo"
```

Notes: Text: The search string to use.
configuration: The search parameters. Use this object to specify whether the search is case-sensitive, moves forward or backward, and wraps when it reaches the end of the page.

206.1.8 goBack

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Navigates to the back item in the back-forward list.
Notes: Sets Navigation property.

206.1.9 goForward

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Navigates to the forward item in the back-forward list.
Notes: Sets Navigation property.

206.1.10 goToBackForwardListItem(Item as WKBackForwardListItemMBS)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Navigates to an item from the back-forward list and sets it as the current item.
Notes: item: The item to which to navigate. Must be one of the items in the web view's back-forward list.

Sets Navigation property.

206.1.11 LoadData(Data as MemoryBlock, MIMEType as String, textEncodingName as String, baseURL as string = "")

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Sets the webpage contents and base URL.
Example:

```
Var browser As DesktopWKWebViewControlMBS // your instance

browser.LoadData "<p>Hello World</p>", "text/html", "UTF-8", ""
```

Notes: data: The data to use as the contents of the webpage.
MIMEType: The MIME type of the data.
characterEncodingName: The data's character encoding name.
baseURL: A URL used to resolve relative URLs within the document.

Sets Navigation property.

206.1.12 LoadFileURL(File as FolderItem, readAccessItem as FolderItem)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Navigates to a requested file.
Example:

```
Var w as DesktopWKWebViewControlMBS // your web viewer
Var HTMLFile as folderItem = New FolderItem("test.html")

// pass folderitem parent to allow read to other files in same folder
w.LoadFileURL HTMLFile, HTMLFile.parent
```

Notes: Navigates to the requested file URL on the filesystem.
file: The file URL to which to navigate.
readAccessItem: The file or folder to allow read access to.
If readAccessItem references a single file, only that file may be loaded by WebKit.
If readAccessItem references a directory, files inside that file may be loaded by WebKit.

Sets Navigation property.

206.1.13 LoadHTML(htmlText as String, baseURL as string = "")

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Sets the webpage contents and base URL.
Example:

```
Var browser As DesktopWKWebViewControlMBS // your instance

browser.LoadHTML "<p>Hello World</p>"
```

Notes: htmlText: The string to use as the contents of the webpage.
baseURL: A URL used to resolve relative URLs within the document.

Sets Navigation property.

206.1.14 LoadURL(URL as string)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Navigates to a requested URL.
Example:

```
Var browser As DesktopWKWebViewControlMBS // your instance

call browser.LoadURL "https://www.mbsplugins.de/xojo"
```

Notes: Sets Navigation property.
Sets Navigation property.

206.1.15 LoadURLRequest(Request as NSURLRequestMBS)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Navigates to a requested URL.
Notes: Sets Navigation property.

206.1.16 pauseAllMediaPlayback

MBS Mac64bit Plugin, Plugin Version: 24.5, Platform: macOS, Targets: Desktop only.

Function: Pauses playback of all media in the web view.
Notes: Calls pauseAllMediaPlaybackCompleted event later.

206.1.17 printOperation(printInfo as NSPrintInfoMBS) as NSPrintOperationMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Creates a print operation for the current web viewer.
Example:

```
Var browser as DesktopWKWebViewControlMBS // your web viewer
Var pi As NSPrintInfoMBS = NSPrintInfoMBS.sharedPrintInfo
Var po As NSPrintOperationMBS = browser.printOperation(pi)

po.showsPrintPanel = True
po.showsProgressPanel = True

po.runOperationModalForWindow(Self)
```

Notes: Works for WebKit 1.x and 2.x.

For WebKit 2.x may run into endless loop for some websites due to bugs in Apple's WebKit framework.

206.1.18 reload

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Reloads the current page.
Example:

```
Public Sub Reload(browser as DesktopWKWebViewControlMBS, force as Boolean)
If force Then
Call browser.reloadFromOrigin
Else
Call browser.reload
End If
End Sub
```

Notes: Sets Navigation property.

206.1.19 reloadFromOrigin

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Reloads the current page, performing end-to-end revalidation using cache-validating conditionals if possible.
Example:

```
Public Sub Reload(browser as DesktopWKWebViewControlMBS, force as Boolean)
If force Then
call browser.reloadFromOrigin
Else
call browser.reload
End If
End Sub
```

Notes: Sets Navigation property.

206.1.20 removeAllUserScripts

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Removes all associated user scripts.
Example:

```
Var browser As DesktopWKWebViewControlMBS // your instance

browser.removeAllUserScripts
```

206.1.21 removeScriptMessageHandler(Name as String)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Removes a script message handler.
Notes: name: The name of the message handler to remove.

206.1.22 requestMediaPlaybackState

MBS Mac64bit Plugin, Plugin Version: 24.5, Platform: macOS, Targets: Desktop only.

Function: Requests the playback status of media in the web view.
Notes: Calls requestMediaPlaybackStateCompleted event later.

206.1.23 runOpenPanelWithParametersCompleted(URLs() as NSURLMBS)

MBS Mac64bit Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop only.

Function: Pass result for a runOpenPanelWithParameters event here.
Notes: Pass nil to indicate cancel was pressed.

206.1.24 setMagnification(magnification as double, pointX as double, pointY as double)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Scales the page content by a specified factor and centers the result on a specified point.
Example:

```
Var browser As DesktopWKWebViewControlMBS // your instance

// zoom to 200% on 100/100
browser.setMagnification(2, 100, 100)
```

Notes: magnification: The factor by which to scale the content.
x/y: The point (in view space) to center magnification on. As usual with Cocoa, bottom is y = 0.

For MacOS 64-bit only.

206.1.25 setUsePrivateBrowsing(value as Boolean)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether to create DesktopWKWebViewControlMBS with private browsing enabled.
Example:

DesktopWKWebViewControlMBS.setUsePrivateBrowsing True

Notes: Set this property to true before creating the DesktopWKWebViewControlMBS control, so the plugin can enable private browsing.
Set to false later to create a normal control again.

You may want to set this to true or false before the window opens and control initialized.

206.1.26 stopLoading

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Stops loading all resources on the current page.
Example:

Var browser As DesktopWKWebViewControlMBS // your instance

browser.stopLoading

206.1.27 takeSnapshot(byref error as NSErrorMBS) as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Requests a snapshot.
Notes: This is synchronous version which waits for image to be finished.
In case of error the result is nil and error may be set.
See also:

- 206.1.28 takeSnapshot(Tag as Variant = nil) 24222

206.1.28 takeSnapshot(Tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Requests a snapshot.
Notes: Calls later takeSnapshotCompleted event.
Tag is passed to event to distinguish various snapshot requests.
See also:

- 206.1.27 takeSnapshot(byref error as NSErrorMBS) as NSImageMBS 24222

206.1.29 userScripts as WKUserScriptMBS()

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The user scripts associated with the user content controller.

206.1.30 Properties

206.1.31 AcceptTabs as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether the control should accept tab keys.
Notes: If true, the plugin will not forward the tab keydown/keyup events to Xojo, because Xojo would do switch to next control.
(Read and Write property)

206.1.32 allowFileAccessFromFileURLs as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Allow file access for file URLs.
Example:

```
Var browser As DesktopWKWebViewControlMBS // your instance

browser.allowFileAccessFromFileURLs = True
```

Notes: Access to files is allowed for some files.
Please check WebKit documentation for details.

Set allowFileAccessFromFileURLs and allowUniversalAccessFromFileURLs to true to disable all the security checks to block local file access for websites. allowUniversalAccessFromFileURLs would allow all file URLs. allowFileAccessFromFileURLs would only allow in same path.
(Read and Write property)

206.1.33 allowsBackForwardNavigationGestures as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether horizontal swipe gestures will trigger back-forward list navigations.
Example:

```
Var browser As DesktopWKWebViewControlMBS // your instance

browser.allowsBackForwardNavigationGestures = True
```

Notes: The default value is false.
Available for 64-bit on macOS 10.10 or newer.
(Read and Write property)

206.1.34 allowsLinkPreview as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that determines whether pressing on a link displays a preview of the destination for the link.
Example:

```
Var browser As WKWebViewMBS // your instance

browser.allowsLinkPreview = True
```

Notes: (Read and Write property)

206.1.35 allowsMagnification as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether magnify gestures will change the web view,Äôs magnification.
Example:

```
Var browser As WKWebViewMBS // your instance

browser.allowsMagnification = True
```

Notes: The default value is false. You can set the magnification property even if allowsMagnification is set to false.
For MacOS 64-bit only.

(Read and Write property)

206.1.36 allowUniversalAccessFromFileURLs as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Allow universal file access for URLs.
Notes: Any file URL will be loaded if true.
Please check WebKit documentation for details.

Does not work in MacOS 10.14.
(Read and Write property)

206.1.37 backForwardList as WKBackForwardListMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The web view's back-forward list.
Notes: (Read only property)

206.1.38 CanGoBack as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether there is a back item in the back-forward list that can be navigated to.
Example:

```
Var browser As DesktopWKWebViewControlMBS // your instance

MessageBox "CanGoBack: "+If(Browser.CanGoBack, "yes", "no")
```

Notes: (Read only property)

206.1.39 CanGoForward as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether there is a forward item in the back-forward list that can be navigated to.
Example:

```
'Dim browser As DesktopWKWebViewControlMBS // your instance

MessageBox "CanGoForward: "+If(Browser.CanGoForward, "yes", "no")
```

Notes: (Read only property)

206.1.40 customUserAgent as String

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The custom user agent string.
Example:

```
Var browser As DesktopWKWebViewControlMBS // your instance

browser.customUserAgent = "MyBrowser/1.0"
```

Notes: If no custom user agent string has been set, this is set to "".
Available in 32-bit. Available in 64-bit for macOS 10.11 or newer.
(Read and Write property)

206.1.41 developerExtrasEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether developer extras are enabled.
Example:

```
Var browser As DesktopWKWebViewControlMBS // your instance

// enable context menu entry to show developer extras
browser.developerExtrasEnabled = True
```

Notes: For WebKit 2 (64bit) to enable the context menu to inspect items.
(Read and Write property)

206.1.42 EstimatedProgress as Double

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: An estimate of what fraction of the current navigation has been loaded.
Notes: This value ranges from 0.0 to 1.0 based on the total number of bytes expected to be received,

including the main document and all of its potential subresources. After a navigation loading completes, the estimatedProgress remains at 1.0 until a new navigation starts, at which point the estimatedProgress is reset to 0.0.
(Read only property)

206.1.43 hasOnlySecureContent as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether all resources on the page have been loaded through securely encrypted connections.
Example:

```
Var browser As DesktopWKWebViewControlMBS // your instance

MessageBox "hasOnlySecureContent: "+If(Browser.hasOnlySecureContent, "yes", "no")
```

Notes: Only set for 64-bit, always false on 32-bit.
(Read only property)

206.1.44 IsLoading as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether the view is currently loading content.
Example:

```
Var browser As DesktopWKWebViewControlMBS // your instance

// load a page
browser.LoadURL "https://www.mbsplugins.de/xojo"

// wait synchronously for website loading
While browser.IsLoading
DelayMBS 0.1
Wend

MessageBox "loaded"
```

Notes: (Read only property)

206.1.45 javaEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether java is enabled.
Example:

```
Var browser As DesktopWKWebViewControlMBS // your instance

MessageBox "JavaScript Enabled: "+If(Browser.javaEnabled, "yes", "no")
```

Notes: (Read and Write property)

206.1.46 javaScriptCanOpenWindowsAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether javascript can open new windows.
Example:

```
Var browser As DesktopWKWebViewControlMBS // your instance

// disable popup windows
Browser.javaScriptCanOpenWindowsAutomatically = False
```

Notes: (Read and Write property)

206.1.47 javaScriptEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether javascript is enabled.
Example:

```
Var browser As DesktopWKWebViewControlMBS // your instance

MessageBox "JavaScript Enabled: "+If(Browser.javaScriptEnabled, "yes", "no")
```

Notes: (Read and Write property)

206.1.48 loadsImagesAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether to load images automatically.
Example:

```
Var browser As DesktopWKWebViewControlMBS // your instance

// disable loading of images
browser.loadsImagesAutomatically = False#
```

Notes: (Read and Write property)

206.1.49 magnification as Double

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The factor by which the page content is currently scaled.
Example:

```
Var browser As DesktopWKWebViewControlMBS // your instance

browser.magnification = 2.0
```

Notes: The default value is 1.0.
For MacOS 64-bit only.
(Read and Write property)

206.1.50 minimumFontSize as Double

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The minimum font size to use.
Example:

```
Var browser As DesktopWKWebViewControlMBS // your instance

browser.minimumFontSize = 20
```

Notes: (Read and Write property)

206.1.51 Navigation as WKNavigationMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The current navigation action.
Notes: (Read only property)

206.1.52 plugInsEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether plugins are enabled.
Example:

```
Var browser As DesktopWKWebViewControlMBS // your instance

MessageBox "plugInsEnabled: "+If(Browser.plugInsEnabled, "yes", "no")
```

Notes: (Read and Write property)

206.1.53 privateBrowsing as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether private browsing is enabled.
Example:

```
Var browser As DesktopWKWebViewControlMBS // your instance

MessageBox "privateBrowsing: "+If(Browser.privateBrowsing, "yes", "no")
```

Notes: If enabled, no data should be stored for cookies or cache on disk, so it's cleared when web viewer is destroyed (Inkognito mode).
Default is non-private mode for the web viewer.

For WebKit 2.x, it looks like you can't change mode after web viewer was created.
So use UsePrivateBrowsing there.
(Read and Write property)

206.1.54 Title as String

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The page title.
Example:

```
Var browser As DesktopWKWebViewControlMBS // your instance

MessageBox Browser.Title
```

Notes: (Read only property)

206.1.55 URL as String

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The active URL.
Example:

```
Var browser As DesktopWKWebViewControlMBS // your instance

MessageBox Browser.URL
```

Notes: This is the URL that should be reflected in the user interface.
(Read only property)

206.1.56 UsePrivateBrowsing as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether to create DesktopWKWebViewControlMBS with private browsing enabled.
Example:

```
WVWebViewModuleMBS.UsePrivateBrowsing = True
```

Notes: Set this property to true before creating the DesktopWKWebViewControlMBS control, so the plugin can enable private browsing.
Set to false later to create a normal control again.

You may want to set this to true or false before the window opens and control initialized.

Due to a bug in Xojo 2019r2 and older, please use WVWebViewModuleMBS.UsePrivateBrowsing property instead.
(Read and Write property)

206.1.57 View as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The used view.
Notes: Should be either a WebView (32bit) or WKWebView (64bit).
(Read only property)

206.1.58 WKWebView as WKWebViewMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The used WKWebViewMBS view.
Notes: Always a WKWebViewMBS in 64-bit, but nil for 32-bit applications.
(Read only property)

206.1.59 Events

206.1.60 BoundsChanged

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The event called when the bounds, but not the frame, changed.

206.1.61 Closing

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

206.1.62 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 22.1, Platform: macOS, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

206.1.63 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Called when a menuitem is chosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

206.1.64 CreateWebView(URL as String, request as NSURLRequestMBS) as Variant

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Creates a new web view.
Notes: If needed we can add configuration, windowFeatures and navigationAction parameters in future version.

Return a web viewer control or nil.

The web view returned must be created with the specified configuration. WebKit will load the request in the returned web view.

If you do not implement this method or return nil, the web view will cancel the navigation.

206.1.65 decidePolicyForNavigationAction(navigationAction as WKNavigationActionMBS, decisionHandler as WKPolicyForNavigationActionDecisionHandlerMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop only.

Function: Decides whether to allow or cancel a navigation.
Notes: Please inspect navigationAction to find the information about what action happened.

You can show a dialog to ask user and once you know the decision call a method on decisionHandler object to report the decision.

If you want to open this in a new window/tab, please call decisionHandler.Cancel method here, take the URL and load it in the new WebView in the new window/tab.

Like the CancelClose event in Xojo, you can call decisionHandler.Cancel method to call it.

206.1.66 decidePolicyForNavigationResponse(navigationResponse as WKNavigationResponseMBS, decisionHandler as WKPolicyForNavigationResponseDecisionHandlerMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop only.

Function: Decides whether to allow or cancel a navigation after its response is known.
Example:

```
Sub decidePolicyForNavigationResponse(navigationResponse as WKNavigationResponseMBS, decisionHandler as WKPolicyForNavigationResponseDecisionHandlerMBS) Handles decidePolicyForNavigationResponse
Var MimeType as string = navigationResponse.response.MIMEType

if MimeType = "application/zip" or _
MimeType = "application/x-tar" or _
MimeType = "application/octet-stream" then
// we download archive files
decisionHandler.Download
else
// allow normal website to load
decisionHandler.Allow

end if
End Sub
```

Notes: navigationResponse: Descriptive information about the navigation response.

You can show a dialog to ask user and once you know the decision call a method on decisionHandler object to report the decision.

206.1.67 DidClose

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The webviewer closed.
Notes: Notifies your app that the DOM window object's close() method completed successfully.

Your app should remove the web view from the view hierarchy and update the UI as needed, such as by closing the containing browser tab or window.

206.1.68 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Did close contextual menu.
Notes: Allows you to restart any animation you may have stopped in the willShowContextualMenu event.

206.1.69 didCommitNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Invoked when content starts arriving for the main frame.
Notes: Added navigation parameter with version 20.3.
Sets Navigation property.

206.1.70 didFailNavigation(navigation as WKNavigationMBS, Error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Invoked when an error occurs during a committed main frame navigation.
Notes: Added navigation parameter with version 20.3.
Sets Navigation property.

206.1.71 didFailProvisionalNavigation(navigation as WKNavigationMBS, Error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Invoked when an error occurs while starting to load data for the main frame.
Notes: Added navigation parameter with version 20.3.
Sets Navigation property.

206.1.72 didFinishNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Invoked when a main frame navigation completes.
Notes: Added navigation parameter with version 20.3.
Sets Navigation property.

Same as DocumentComplete in HTMLViewer.

206.1.73 DidReceiveAuthenticationChallenge(challenge as NSURLAuthenticationChallengeMBS, byref AuthChallengeDisposition as Integer, byref credentials as NSURLCredentialMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop only.

Function: Asks the app to respond to an authentication challenge.
Notes: challenge: The authentication challenge.

AuthChallengeDisposition: The option to use to handle the challenge. For a list of options, see AuthChallenge* constants.
credential: The credential to use for authentication when the disposition parameter contains the value AuthChallengeUseCredential. Specify nil to continue without a credential.

If you don,Äôt implement this method, the web view responds to the authentication challenge with the AuthChallengeRejectProtectionSpace disposition.

206.1.74 didReceiveScriptMessage(Body as Variant, name as String)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Invoked when a script message is received from a webpage.
Notes: body: The body of the message. Automatic translated from Javascript types.
name: The name of the message handler to which the message is sent.

206.1.75 didReceiveServerRedirectForProvisionalNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Invoked when a server redirect is received for the main frame.
Notes: Added navigation parameter with version 20.3.
Sets Navigation property.

206.1.76 didStartProvisionalNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Invoked when a main frame navigation starts.
Notes: Added navigation parameter with version 20.3.
Sets Navigation property.

206.1.77 downloadDecideDestinationUsingResponse(download as WKDownloadMBS, response as NSURLResponseMBS, suggestedFilename as String, byref destination as FolderItem)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop only.

Function: Asks the app to provide a file destination where the system should write the download data.
Notes: download: The download that needs a file destination where the systems should write the download data.
response: A response from the server for an HTTP request, or a synthesized response for a blob download.
suggestedFilename: A string with a filename suggestion to use in creating the file destination.
destination: A file destination where the systems should write the download data.

Set destination to where to store the file. Or set to nil to cancel.

The suggested filename can come from the response or from the web content.
The destination file URL must meet the following requirements:

- It,Äôs a file that doesn,Äôt exist.
- It,Äôs in a directory that exists.
- It,Äôs in a directory that WebKit can write to.

206.1.78 downloadDidFailWithError(download as WKDownloadMBS, error as NSErrorMBS, resumeData as MemoryBlock)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop only.

Function: Tells your app that the download failed, with error information and data you can use to restart the download.
Notes: download: The download that failed.
error: An error describing what caused the download to fail.
resumeData: A data object you use to restart the download.

To restart a failed download, call resumeDownloadFromResumeData with resumeData.

206.1.79 downloadDidFinish(download as WKDownloadMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop only.

Function: This event tells you that the download finished.
Notes: download: The download that finished.

206.1.80 downloadDidReceiveAuthenticationChallenge(download as WKDownloadMBS, challenge as NSURLAuthenticationChallengeMBS, byref AuthChallengeDisposition as Integer, byref credentials as NSURLCredentialMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop only.

Function: Asks the delegate to respond to an authentication challenge.
Notes: download: The download that received the authentication challenge.
challenge: The authentication challenge.

Determine how to respond to the authentication challenge in this method. Then set AuthChallengeDisposition to AuthChallenge* constants and pass the credentials to use.

If you don,Äôt implement this method, the web view responds to the challenge with AuthChallengeRejectProtectionSpace.

206.1.81 downloadWillPerformHTTPRedirection(download as WKDownloadMBS, response as NSURLResponseMBS, request as NSURLRequestMBS, byref DownloadRedirectPolicy as Integer)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop only.

Function: Asks the delegate to respond to the download,Äôs redirect response.
Notes: download: The download that receives the redirect response.
response: The redirect response.
request: The new request the web view sends as a result of the redirect response.

Set DownloadRedirectPolicy to either DownloadRedirectPolicyAllow or DownloadRedirectPolicyCancel.

A download redirect policy that indicates whether to proceed with the redirect.

Determine whether to proceed with the redirect. Then invoke the decisionHandler closure, providing a download redirect policy that indicates whether to proceed with the redirect.

If you don,Äôt implement this event, the web view proceeds with all redirects.

206.1.82 EstimatedProgressChanged(estimatedProgress as double, oldEstimatedProgress as double)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The estimated progress for loading the webpage changed.
Notes: This event may be called often, so don't do much here!

206.1.83 findStringCompleted(Text as String, FindConfiguration as WKFindConfigurationMBS, result as WKFindResultMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 26.5, Platform: macOS, Targets: Desktop only.

Function: The find operation completed.
Notes: See result.matchFound to see if you found something.

206.1.84 FocusLost

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

This only fires if the control itself lost focus and not a sub control.

206.1.85 FocusReceived

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes:

This only fires if the control itself got focus and not a sub control.

206.1.86 FrameChanged

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

206.1.87 JavaScriptEvaluated(JavaScript as String, Result as Variant, Error as NSErrorMBS, Tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: JavaScript was evaluated.
Notes: Error is only set with 64-bit, not with 32-bit.
Tag is passed from EvaluateJavaScript call.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.

206.1.88 MenuBarSelected

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

206.1.89 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.

- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

206.1.90 MouseDrag(x as Integer, y as Integer)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

206.1.91 MouseUp(x as Integer, y as Integer)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

206.1.92 navigationActionDidBecomeDownload(navigationAction as WKNavigationActionMBS, download as WKDownloadMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop only.

Function: Tells the app that a navigation action became a download.
Example:

```
Sub navigationActionDidBecomeDownload(navigationAction as WKNavigationActionMBS, download as WKDownloadMBS) Handles navigationActionDidBecomeDownload
System.DebugLog CurrentMethodName

// add download to your list of downloads you monitor
End Sub
```

Notes: navigationAction: Descriptive information about the navigation response that turned into a download.
download: An object that represents the download of a web resource.

Implement this method to begin tracking download progress.

206.1.93 navigationResponseDidBecomeDownload(navigationResponse as WKNavigationResponseMBS, download as WKDownloadMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop only.

Function: Tells the app that a navigation response became a download.
Example:

```
Sub navigationResponseDidBecomeDownload(navigationResponse as WKNavigationResponseMBS, download as WKDownloadMBS) Handles navigationResponseDidBecomeDownload
System.DebugLog CurrentMethodName

// add download to your list of downloads you monitor
End Sub
```

Notes: navigationResponse: Descriptive information about the navigation response that turned into a download.
download: An object that represents the download of a web resource.

Implement this method to begin tracking download progress.

206.1.94 Opening

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

206.1.95 pauseAllMediaPlaybackCompleted

MBS Mac64bit Plugin, Plugin Version: 24.5, Platform: macOS, Targets: Desktop only.

Function: The event the system executes after the web view pauses media playback.

206.1.96 requestMediaPlaybackStateCompleted(state as Integer)

MBS Mac64bit Plugin, Plugin Version: 24.5, Platform: macOS, Targets: Desktop only.

Function: The event the system executes after the web view determines the current state of media playback.
Notes: State: A value that indicates whether the media in the web view is playing, paused, or suspended.

If there,Äôs no media in the web view to play, this method provides MediaPlaybackStateNone.

206.1.97 runJavaScriptAlertPanel(initiatedByFrame as WKFrameInfoMBS, message as String)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Displays a JavaScript alert panel.
Notes: message: The message to display.

If you do not implement this method, the web view will behave as if the user selected the OK button.

206.1.98 runJavaScriptConfirmPanel(initiatedByFrame as WKFrameInfoMBS, message as String) as boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Displays a JavaScript confirm panel.
Notes: message: The message to display.

Return true if the user chose OK, false if the user chose Cancel.

If you do not implement this method, the web view will behave as if the user selected the Cancel button.

206.1.99 runJavaScriptTextInputPanel(initiatedByFrame as WKFrameInfoMBS, prompt as String, defaultText as String) as String

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Displays a JavaScript text input panel.
Notes: message: The message to display.
defaultText: The initial text to display in the text entry field.

Return the entered text if the user chose OK, otherwise "".

If you do not implement this method, the web view will behave as if the user selected the Cancel button.

206.1.100 runOpenPanelWithParameters(initiatedByFrame as WKFrameInfoMBS, allowsMultipleSelection as Boolean, allowsDirectories as Boolean)

MBS Mac64bit Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop only.

Function: Displays a file upload panel.
Notes: Please call runOpenPanelWithParametersCompleted method later with result. Pass the selected URLs if the user chose "OK", otherwise nil.

You can use sheet window for the file picker and later call the runOpenPanelWithParametersCompleted method or call it right in the event if you do it synchronously.

If this method is not implemented, the web view behaves as if the user selected the Cancel button.

Not available on iOS. Implemented for macOS 64-bit applications.

206.1.101 ScaleFactorChanged(NewFactor as Double)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

206.1.102 takeSnapshotCompleted(image as NSImageMBS, error as NSErrorMBS, Tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Called when snapshot of website is completed.
Notes: If snapshot creation failed, error is set.

206.1.103 TitleChanged(Title as String, oldTitle as string)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The title of the webpage changed.

206.1.104 WebContentProcessDidTerminate

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop only.

Function: Tells the app that the web view,Äôs content process was terminated.
Notes: Web views use a separate process to render and manage web content. WebKit calls this method when the process for the specified web view terminates for any reason.

206.1.105 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

206.1.106 Constants

Authentication Challenge Responses

Constant	Value	Description
AuthChallengeCancelAuthenticationChallenge	2	Cancel the entire request. The provided credential parameter is
AuthChallengePerformDefaultHandling	1	Use the default handling for the challenge as though this delegate not implemented. The provided credential parameter is ignored.
AuthChallengeRejectProtectionSpace	3	Reject this challenge, and call the authentication delegate meth the next authentication protection space. The provided credent is ignored.
AuthChallengeUseCredential	0	Use the specified credential, which may be nil.

Redirect Policy

Constant	Value	Description
DownloadRedirectPolicyAllow	1	Allow a redirect to proceed.
DownloadRedirectPolicyCancel	0	Cancel the redirect action.

206.2 class WKBackForwardListItemMBS

206.2.1 class WKBackForwardListItemMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A WKBackForwardListItem object represents a webpage in the back-forward list of a web view.
Notes: For 32-bit a WebHistoryItem object, for 64-bit a WKBackForwardListItem object.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 20.0pr5

206.2.2 Methods

206.2.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

206.2.4 Properties

206.2.5 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

206.2.6 initialURL as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The URL of the initial request that created this item.
Notes: (Read only property)

206.2.7 title as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the webpage represented by this item.
Notes: (Read only property)

206.2.8 URL as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The URL of the webpage represented by this item.
Notes: (Read only property)

206.3 class WKBackForwardListMBS

206.3.1 class WKBackForwardListMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A WKBackForwardList object is a list of webpages previously visited in a web view that can be reached by going back or forward.
Example:

```
// This example needs a window with WKWebViewControlMBS1.
// list the pages the user visited in a web viewer and go back two pages
Var history As New WKBackForwardListMBS(WKWebViewControlMBS1.WKWebView)

Var lines() As String
For Each item As WKBackForwardListItemMBS In history.backList
lines.Add item.title + " - " + item.URL
Next
System.DebugLog String.FromArray(lines, EndOfLine)

Var target As WKBackForwardListItemMBS = history.itemAtIndex(-2)
If target <>Nil Then WKWebViewControlMBS1.WKWebView.goToBackForwardListItem target
```

Notes: For 32-bit a WebBackForwardList object, for 64-bit a WKBackForwardList object.

206.3.2 Methods

206.3.3 backList as WKBackForwardListItemMBS()

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The portion of the list preceding the current item.
Notes: The items are in the order in which they were originally visited.

206.3.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

• 206.3.5 Constructor(WKWebView as WKWebViewMBS) 24250

206.3.5 Constructor(WKWebView as WKWebViewMBS)

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Queries back forward list for a web view.
See also:

• 206.3.4 Constructor 24249

206.3.6 forwardList as WKBackForwardListItemMBS()

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The portion of the list following the current item.
Notes: The items are in the order in which they were originally visited.

206.3.7 itemAtIndex(index as Integer) as WKBackForwardListItemMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the item at a specified distance from the current item.
Notes: index: Index of the desired list item relative to the current item:
0 for the current item, -1 for the immediately preceding item, 1 for the immediately following item, and so on.

Returns the item at the specified distance from the current item, or nil if the index parameter exceeds the limits of the list.

206.3.8 Properties

206.3.9 backItem as WKBackForwardListItemMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The item immediately preceding the current item, or nil if there isn't one.
Notes: (Read only property)

206.3.10 currentItem as WKBackForwardListItemMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The current item.
Notes: (Read only property)

206.3.11 forwardItem as WKBackForwardListItemMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The item immediately following the current item, or nil if there isn't one.
Notes: (Read only property)

206.3.12 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

206.4 class WKDownloadMBS

206.4.1 class WKDownloadMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop & iOS.

Function: An object that represents the download of a web resource.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

206.4.2 Methods

206.4.3 Cancel

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels the download, and optionally captures data so that you can resume the download later.

206.4.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

206.4.5 Properties

206.4.6 file as FolderItem

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop & iOS.

Function: The target file as folderitem.
Notes: (Read only property)

206.4.7 fileURL as String

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop & iOS.

Function: The target file as URL.
Notes: (Read only property)

206.4.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

206.4.9 originalRequest as NSURLRequestMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop & iOS.

Function: An object that represents the request that initiated the download.
Notes: (Read only property)

206.4.10 totalBytesExpected as Int64

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop & iOS.

Function: Total number of bytes expected to download.
Notes: (Read only property)

206.4.11 totalBytesWritten as Int64

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop & iOS.

Function: Number of bytes written to temp file.
Notes: (Read only property)

206.4.12 webView as WKWebViewMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop & iOS.

Function: The web view where the download initiated.
Notes: (Read only property)

206.5 class WKFindConfigurationMBS

206.5.1 class WKFindConfigurationMBS

MBS Mac64bit Plugin, Plugin Version: 26.5, Platform: iOS, Targets: Desktop & iOS.

Function: The configuration parameters to use when searching the contents of the web view.
Notes: Create a WKFindConfiguration object and configure its attributes to specify how to perform searches within the web view,Äôs contents. To initiate a search, call the appropriate method of WKWebView and pass this object along with the search string.
Blog Entries

- MBS Xojo Plugins, version 26.5pr4

206.5.2 Methods

206.5.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 26.5, Platform: iOS, Targets: Desktop & iOS.

Function: The constructor.
Notes: To create a new configuration.

206.5.4 Properties

206.5.5 backwards as Boolean

MBS Mac64bit Plugin, Plugin Version: 26.5, Platform: iOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates the search direction, relative to the current selection.
Notes: When the value of this property is true, searches proceed backward from the current selection. When the value is false, searches proceed forward from the current selection. The default value of this property is false.

The web view respects the writing direction of its content. For example, a forward search moves right-to-left and top-to-bottom for a right-to-left language.
(Read and Write property)

206.5.6 caseSensitive as Boolean

MBS Mac64bit Plugin, Plugin Version: 26.5, Platform: iOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether to consider case when matching the search string.
Notes: When the value of this property is true, the web view takes case into account when matching the search string. The default value of this property is false.
(Read and Write property)

206.5.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 26.5, Platform: iOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

206.5.8 wraps as Boolean

MBS Mac64bit Plugin, Plugin Version: 26.5, Platform: iOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the search wraps around to the other side of the page.
Notes: When the value of this property is true, the search wraps and continues at the other end of the page. For example, when a forward search reaches the bottom of the page, the search wraps back to the top of the page and continues. When a backward search reaches the top of the page, the search wraps back to the bottom of the page. The default value of this property is true.
(Read and Write property)

206.6 class WKFindResultMBS

206.6.1 class WKFindResultMBS

MBS Mac64bit Plugin, Plugin Version: 26.5, Platform: iOS, Targets: Desktop & iOS.

Function: An object that contains the results of searching the web view,Äôs contents.
Notes: When you perform a search using the methods of WKWebView, the web view creates a WKFindResult object and delivers it to your event handler. You don,Äôt create instances of this class directly. Use the objects that the web view provides to determine whether it found a match for the content.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

MBS Mac64bit Plugin, Plugin Version: 26.5, Platform: iOS, Targets: Desktop & iOS.

Function: The private constructor.

206.6.4 Properties

206.6.5 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 26.5, Platform: iOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

206.6.6 matchFound as Boolean

MBS Mac64bit Plugin, Plugin Version: 26.5, Platform: iOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the web view found a match during the search.
Notes: The value of this property is true if the web view found a match, or false if it didn,Äôt.
(Read only property)

206.7 class WKFrameInfoMBS

206.7.1 class WKFrameInfoMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: An object that contains information about a frame on a webpage.
Notes: An instance of this class is a transient, data-only object; it does not uniquely identify a frame across multiple event calls.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

206.7.2 Methods

206.7.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.

206.7.4 Properties

206.7.5 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

206.7.6 isMainFrame as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the frame is the web site's main frame or a subframe.
Notes: (Read only property)

206.7.7 request as NSURLRequestMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The frame,Äôs current request.
Notes: (Read only property)

206.7.8 webView as WKWebViewMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The matching web viewer.
Notes: (Read only property)

206.8 class WKHTTPCookieStoreMBS

206.8.1 class WKHTTPCookieStoreMBS

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: An object that manages the HTTP cookies associated with a particular WKWebsiteDataStore.
Example:

```
Var CookieStore As WKHTTPCookieStoreMBS = WKWebViewControlMBS1.WKWebView.HTTPCookieStore
Var cookies() As NSHTTPCookieMBS = CookieStore.AllCookies
Var cookie As NSHTTPCookieMBS = cookies(0)

// now check in debugger
Break
```

Notes: Requires macOS 10.13 or iOS 11.0 or newer.

206.8.2 Methods

206.8.3 AllCookies as NSHTTPCookieMBS()

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop only.

Function: Fetches all stored cookies.
Example:

```
Var CookieStore As WKHTTPCookieStoreMBS = WKWebViewControlMBS1.WKWebView.HTTPCookieStore
Var cookies() As NSHTTPCookieMBS = CookieStore.AllCookies
Var cookie As NSHTTPCookieMBS = cookies(0)

// now check in debugger
Break
```

206.8.4 Constructor(WKWebView as WKWebViewMBS)

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
Notes: Creates an object for the http cookie store used by web view.
Adds an observer to the cookie store to call DidChange event.

206.8.5 deleteCookie(cookie as NSHTTPCookieMBS, wait as boolean = true)

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop only.

Function: Deletes the specified cookie.
Notes: By default waits for this to complete.
Otherwise this is set asynchronously.

206.8.6 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

206.8.7 setCookie(cookie as NSHTTPCookieMBS, wait as boolean = true)

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop only.

Function: Sets a cookie.
Notes: By default waits for this to complete.
Otherwise this is set asynchronously.

206.8.8 Properties

206.8.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

206.8.10 Events

206.8.11 DidChange

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Called when the cookies in the cookie store have changed.

206.9 class WKNavigationActionMBS

206.9.1 class WKNavigationActionMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: An object that contains information about an action that causes navigation to occur.
Example:

```
// open clicked links in the default browser instead of the web view
// MyWebView is a subclass of DesktopWKWebViewControlMBS with the decidePolicyForNavigationAction event implemented, placed on the window as MyWebView1.
MyWebView1.LoadURL "https://www.monkeybreadsoftware.de/"

// in MyWebView:
Sub decidePolicyForNavigationAction(navigationAction As WKNavigationActionMBS, decisionHandler As WKPolicyForNavigationActionDecisionHandlerMBS) Handles decidePolicyForNavigationAction
If navigationAction.navigationType = WKNavigationActionMBS.NavigationTypeLinkActivated Then
System.GotoURL navigationAction.request.URL
decisionHandler.Cancel
Else
decisionHandler.Allow
End If
End Sub
```

Notes: Use a WKNavigationAction object to make policy decisions about whether to allow navigation within your app,Äôs web view. You don,Äôt create WKNavigationAction objects directly. Instead, the web view creates them and delivers them to the appropriate delegate objects. Use the methods of your delegate to analyze the action and determine whether to allow the resulting navigation to occur.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

206.9.2 Methods

206.9.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.

206.9.4 Properties

206.9.5 buttonNumber as Integer

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop only.

Function: The number of the mouse button causing the navigation to be requested.
Notes: (Read only property)

206.9.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

206.9.7 modifierFlags as Integer

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop only.

Function: The modifier keys that were in effect when the navigation was requested.
Notes: (Read only property)

206.9.8 navigationType as Integer

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The type of action that triggered the navigation.
Notes: See constants.
(Read only property)

206.9.9 newWindow as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Whether this targets a new window.
Notes: (Read only property)

206.9.10 request as NSURLRequestMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The navigation's request.
Notes: (Read only property)

206.9.11 shouldPerformDownload as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A value indicating whether the web content used a download attribute to indicate that this should be downloaded.
Notes: Requires macOS 11.3 or iOS 14.5.

This is only true if WebKit saw a download attribut ein the html link.
(Read only property)

206.9.12 sourceFrame as WKFrameInfoMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The frame requesting the navigation.
Notes: (Read only property)

206.9.13 targetFrame as WKFrameInfoMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The target frame, or nil if this is a new window navigation.
Notes: (Read only property)

206.9.14 Constants

Navigation Types

Constant	Value	Description
NavigationTypeBackForward	2	An item from the back-forward list was requested.
NavigationTypeFormResubmitted	4	A form was resubmitted (for example by going back, going forward, or reloading).
NavigationTypeFormSubmitted	1	A form was submitted.
NavigationTypeLinkActivated	0	A link with an href attribute was activated by the user.
NavigationTypeOther	-1	Navigation is taking place for some other reason.
NavigationTypeReload	3	The webpage was reloaded.

206.10 class WKNavigationMBS

206.10.1 class WKNavigationMBS

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: A WKNavigation object contains information for tracking the loading progress of a webpage.
Notes: A navigation object is returned from the web view load methods and is also passed to the navigation delegate methods to uniquely identify a webpage load from start to finish. It has no method or properties of its own.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

206.10.2 Methods

206.10.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

206.10.4 Properties

206.10.5 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: The handle for the navigation action.
Notes: (Read only property)

206.10.6 request as NSURLRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: The request.
Notes: May be nil if not available.
(Read only property)

206.11 class WKNavigationResponseMBS

206.11.1 class WKNavigationResponseMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A WKNavigationResponse object contains information about a navigation response, used for making policy decisions.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

206.11.2 Methods

206.11.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

206.11.4 Properties

206.11.5 canShowMIMEType as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether WebKit can display the response,Äôs MIME type natively.
Notes: (Read only property)

206.11.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

206.11.7 isForMainFrame as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the frame being navigated is the main frame.
Notes: (Read only property)

206.11.8 response as NSURLResponseMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The frame,Äôs response.
Notes: Allowing a navigation response with a MIME type that can,Äôt be shown will cause the navigation to fail.
(Read only property)

206.12 class WKPolicyForNavigationActionDecisionHandlerMBS

206.12.1 class WKPolicyForNavigationActionDecisionHandlerMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The class for the decision handler to tell webkit what to do with the navigation action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Xojo Plugins, version 25.3pr7

206.12.2 Methods

206.12.3 Allow

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Allow the navigation action to continue.

206.12.4 Cancel

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Cancel this navigation action.

206.12.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.

206.12.6 Download

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Change the navigation action to a download.

206.12.7 Properties

206.12.8 Decided as Boolean

MBS Mac64bit Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Whether you called one of the methods to decide.
Notes: If you forget to decide, the destructor will do the default policy.
(Read only property)

206.12.9 DefaultPolicy as Integer

MBS Mac64bit Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The default policy to be called in destructor if you didn't decide.
Notes: Value is 0 for Cancel, 1 for Allow and 2 for Download.
(Read and Write property)

206.13 class WKPolicyForNavigationResponseDecisionHandlerMBS

206.13.1 class WKPolicyForNavigationResponseDecisionHandlerMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The class for the decision handler to tell webkit what to do with the navigation response.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

206.13.2 Methods

206.13.3 Allow

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Allow the response to proceed.

206.13.4 Cancel

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Cancel the navigation.

206.13.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.

206.13.6 Download

MBS Mac64bit Plugin, Plugin Version: 22.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Change the navigation response to a download.

206.13.7 Properties

206.13.8 Decided as Boolean

MBS Mac64bit Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Whether you called one of the methods to decide.
Notes: If you forget to decide, the destructor will do the default policy.
(Read only property)

206.13.9 DefaultPolicy as Integer

MBS Mac64bit Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The default policy to be called in destructor if you didn't decide.
Notes: Value is 0 for Cancel, 1 for Allow and 2 for Download.
(Read and Write property)

206.14 class WKPreferencesMBS

206.14.1 class WKPreferencesMBS

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A WKPreferences object encapsulates the preference settings for a web view.
Example:

```
// This example needs a window with WKWebViewControlMBS1.
// change settings of a web viewer
Var prefs As WKPreferencesMBS = WKWebViewControlMBS1.WKWebView.Preferences
prefs.minimumFontSize = 14
prefs.javaScriptCanOpenWindowsAutomatically = False
prefs.developerExtrasEnabled = True // allows the web inspector

WKWebViewControlMBS1.LoadURL "https://www.example.com"
```

Notes: The preferences object associated with a web view is specified by its web view configuration.
Available on MacOS 10.10 or newer.

206.14.2 Methods

206.14.3 Constructor(WKWebView as WKWebViewMBS)

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Queries preferences object for a web view.

206.14.4 Properties

206.14.5 crossOriginResourcePolicyEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to enable/disable cross origin resource policy.
Example:

```
// This example needs a window with HTMLViewer1.
Var w As WKPreferencesMBS = HTMLViewer1.WKWebViewMBS.Preferences

w.crossOriginResourcePolicyEnabled = False
```

Notes: Disabling some cross policy checks may allow JavaScript to access a website loaded in a frame.

Default is true.

This property is included in the WebKit project, but not documented by Apple, so use with care and be aware that it may break in future (or gets officially documented in a future version of macOS).
(Read and Write property)

206.14.6 defaultFontSize as Integer

MBS Mac64bit Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The default font size for fonts.
Example:

```
// This example needs a window with HTMLViewer1.
HTMLViewer1.WKWebView.Preferences.defaultFontSize = 10
```

Notes: (Read and Write property)

206.14.7 developerExtrasEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether developer extras are enabled.
Example:

```
// This example needs a window with HTMLViewer1.
HTMLViewer1.WKWebView.Preferences.developerExtrasEnabled = true
```

Notes: Set to true, so you can inspect elements via contextual menus.

This property is included in the WebKit project, but not documented by Apple, so use with care and be aware that it may break in future (or gets officially documented in a future version of macOS).
(Read and Write property)

206.14.8 ElementFullscreenEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 23.3, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether a web view can display content full screen.
Notes: The default value for this preference is false.
Requires macOS 12.3 or newer.
(Read and Write property)

206.14.9 FraudulentWebsiteWarningEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether warnings should be shown for suspected fraudulent content such as phishing or malware.
Notes: The default value is true. This feature is currently available in the following region: China.
(Read and Write property)

206.14.10 fullScreenEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to allow fullscreen mode.
Example:

```
// This example needs a window with HTMLViewer1.
Var w As WKPreferencesMBS = HTMLViewer1.WKWebViewMBS.Preferences
```

w.fullScreenEnabled = true

Notes: Default is false.

This property is included in the WebKit project, but not documented by Apple, so use with care and be aware that it may break in future (or gets officially documented in a future version of macOS).
(Read and Write property)

206.14.11 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

206.14.12 javaEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether Java is enabled.
Example:

WKWebViewControlMBS1.WKWebView.Preferences.javaEnabled = False

Notes: The default value is false.
Deprecated for macOS 10.15.
(Read and Write property)

206.14.13 javaScriptCanOpenWindowsAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether JavaScript can open windows without user interaction.
Example:

WKWebViewControlMBS1.WKWebView.Preferences.javaScriptCanOpenWindowsAutomatically = False

Notes: The default value is false in iOS and true in macOS.
(Read and Write property)

206.14.14 javaScriptEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether JavaScript is enabled.
Example:

```
WKWebViewControlMBS1.WKWebView.Preferences.javaScriptEnabled = False
```

Notes: The default value is true. Setting this property to false disables JavaScripts that are loaded or executed by the web page. This setting does not affect user scripts. See WKUserScriptMBS class.
(Read and Write property)

206.14.15 loadsImagesAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether images are loaded automatically.
Example:

```
// This example needs a window with HTMLViewer1.
HTMLViewer1.WKWebView.Preferences.loadsImagesAutomatically = False
```

Notes: (Read and Write property)

206.14.16 logsPageMessagesToSystemConsoleEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether page log messages go to system console.
Example:

```
// This example needs a window with HTMLViewer1.
Var w As WKPreferencesMBS = HTMLViewer1.WKWebViewMBS.Preferences
w.logsPageMessagesToSystemConsoleEnabled = true
```

Notes: Default is false.

This property is included in the WebKit project, but not documented by Apple, so use with care and be aware that it may break in future (or gets officially documented in a future version of macOS).
(Read and Write property)

206.14.17 mediaDevicesEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to allow access to media devices in JavaScript.
Example:

```
// This example needs a window with HTMLViewer1.
Var w As WKPreferencesMBS = HTMLViewer1.WKWebViewMBS.Preferences
w.mediaDevicesEnabled = true
w.mediaStreamEnabled = true
```

Notes: Default is false.

You may need to enable mediaStreamEnabled and mediaDevicesEnabled together to allow WebRTC. Also you need permissions to access camera and microphone via AVFoundation functions.

This property is included in the WebKit project, but not documented by Apple, so use with care and be aware that it may break in future (or gets officially documented in a future version of macOS).
(Read and Write property)

206.14.18 mediaStreamEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to allow access to media streaming in JavaScript.
Example:

```
// This example needs a window with HTMLViewer1.
Var w As WKPreferencesMBS = HTMLViewer1.WKWebViewMBS.Preferences
w.mediaDevicesEnabled = true
w.mediaStreamEnabled = true
```

Notes: Default is false.

You may need to enable mediaStreamEnabled and mediaDevicesEnabled together to allow WebRTC. Also you need permissions to access camera and microphone via AVFoundation functions.

This property is included in the WebKit project, but not documented by Apple, so use with care and be aware that it may break in future (or gets officially documented in a future version of macOS).
(Read and Write property)

206.14.19 minimumFontSize as Double

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The minimum font size in points.
Example:

```
WKWebViewControlMBS1.WKWebView.Preferences.minimumFontSize = 20
```

Notes: The default value is 0.
(Read and Write property)

206.14.20 plugInsEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether plug-ins are enabled.
Example:

```
WKWebViewControlMBS1.WKWebView.Preferences.plugInsEnabled = False
```

Notes: The default value is false.
Deprecated for macOS 10.15.
(Read and Write property)

206.14.21 shouldPrintBackgrounds as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether webkit draws background on printing.
Example:

```
// This example needs a window with HTMLViewer1.
HTMLViewer1.WKWebView.Preferences.shouldPrintBackgrounds = False
```

Notes: (Read and Write property)

206.14.22 siteSpecificQuirksModeEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 23.3, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean that indicates whether to apply site-specific compatibility workarounds.
Notes: The default value for this preference is true.

Requires macOS 12.3 or newer.
(Read and Write property)

206.14.23 standardFontFamily as String

MBS Mac64bit Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The name of the standard font family.
Notes: (Read and Write property)

206.14.24 tabFocusesLinks as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop only.

Function: If tabFocusesLinks is true, the tab key will focus links and form controls.
Notes: The Option key temporarily reverses this preference.
(Read and Write property)

206.14.25 telephoneNumberDetectionIsEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether phone number detection in text is enabled.
Example:

```
// This example needs a window with HTMLViewer1.
Var w As WKPreferencesMBS = HTMLViewer1.WKWebViewMBS.Preferences

w.telephoneNumberDetectionIsEnabled = True
```

Notes: Default is false.

This property is included in the WebKit project, but not documented by Apple, so use with care and be aware that it may break in future (or gets officially documented in a future version of macOS).
(Read and Write property)

206.14.26 TextInteractionEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop & iOS.

Function: Whether text interactions are enabled.
Notes: Requires macOS 12.0 or iOS 15.0 or newer.
(Read and Write property)

206.14.27 webSecurityEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to enable/disable web security.
Example:

```
// This example needs a window with HTMLViewer1.
Var w As WKPreferencesMBS = HTMLViewer1.WKWebViewMBS.Preferences
w.webSecurityEnabled = False
```

Notes: Default is true.

This property is included in the WebKit project, but not documented by Apple, so use with care and be aware that it may break in future (or gets officially documented in a future version of macOS).
(Read and Write property)

206.15 class WKUserScriptMBS

206.15.1 class WKUserScriptMBS

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop & iOS.

Function: A WKUserScript object represents a script that can be injected into a webpage.
Example:

```
// This example needs a window with WKWebViewControlMBS1.
// inject a script into every page the web viewer loads
Var source As String = "document.body.style.backgroundColor = 'lightyellow';"
Var script As New WKUserScriptMBS(source, WKUserScriptMBS.InjectionTimeAtDocumentEnd, True)
WKWebViewControlMBS1.addUserScript script

WKWebViewControlMBS1.LoadURL "https://www.example.com"
```

Notes: Requires MacOS 10.10 or newer.
64-bit target only.

206.15.2 Methods

206.15.3 Constructor(Source as String, injectionTime as Integer, isForMainFrameOnly as Boolean)

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop & iOS.

Function: Returns an initialized user script that can be added to a user content controller.
Notes: source: The script,Äôs source code.
injectionTime: The time when the script should be injected into the webpage. Either InjectionTimeAtDocumentStart
or InjectionTimeAtDocumentEnd.
isForMainFrameOnly: A Boolean value indicating whether the script should be injected only into the main frame (YES) or into all frames (NO).

206.15.4 Properties

206.15.5 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

206.15.6 injectionTime as Integer

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop & iOS.

Function: The time when the script should be injected into the webpage.
Notes: Either InjectionTimeAtDocumentStart or InjectionTimeAtDocumentEnd.
(Read only property)

206.15.7 isForMainFrameOnly as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the script should be injected only into the main frame (true) or into all frames (false).
Notes: (Read only property)

206.15.8 Source as String

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop & iOS.

Function: The script,Äôs source code.
Notes: (Read only property)

206.15.9 Constants

InjectionTime

Constant	Value	Description
InjectionTimeAtDocumentEnd	1	Inject the script after the document finishes loading, but before other subresources finish loading.
InjectionTimeAtDocumentStart	0	Inject the script after the document element is created, but before any other content is loaded.

206.16 class WKWebViewConfigurationMBS

206.16.1 class WKWebViewConfigurationMBS

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A collection of properties used to initialize a web view.
Example:

```
// This example needs a window with WKWebViewControlMBS1.
// show the configuration of a web viewer
Var config As WKWebViewConfigurationMBS = WKWebViewControlMBS1.WKWebView.Configuration
MessageBox "App name for user agent: " + config.applicationNameForUserAgent + EndOfLine + _
"Upgrade known hosts to HTTPS: " + config.upgradeKnownHostsToHTTPS.ToString + EndOfLine + _
"AirPlay: " + config.allowsAirPlayForMediaPlayback.ToString

// many settings only apply when set before the web view is created
config.Preferences.minimumFontSize = 12
```

Notes: Using the WKWebViewConfiguration class, you can determine how soon a webpage is rendered, how media playback is handled, the granularity of items that the user can select, and many other options. WKWebViewConfiguration is only used when a web view is first initialized. You cannot use this class to change the web view's configuration after it has been created.

206.16.3 Constructor(WKWebView as WKWebViewMBS)

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates Xojo object referencing configuration object for web viewer.

206.16.4 copy as WKWebViewConfigurationMBS

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the configuration object.

206.16.5 Properties

206.16.6 allowsAirPlayForMediaPlayback as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether AirPlay is allowed.
Notes: The default value is true.
(Read and Write property)

206.16.7 allowsInlineMediaPlayback as Boolean

MBS Mac64bit Plugin, Plugin Version: 23.3, Platform: iOS, Targets: iOS only.

Function: A Boolean value that indicates whether HTML5 videos play inline or use the native full-screen controller.
Notes: Set this property to true to play videos inline, or false to use the native full-screen controller. When adding a video element to an HTML document on iPhone, you must also include the playsinline attribute. The default value of this property is false for iPhone and true for iPad.
(Read and Write property)

206.16.8 allowsPictureInPictureMediaPlayback as Boolean

MBS Mac64bit Plugin, Plugin Version: 23.3, Platform: iOS, Targets: iOS only.

Function: A Boolean value that indicates whether HTML5 videos can play Picture in Picture.
Notes: The default value of this property is true.

(Read and Write property)

206.16.9 applicationNameForUserAgent as String

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The name of the application as used in the user agent string.
Notes: (Read and Write property)

206.16.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

206.16.11 limitsNavigationsToAppBoundDomains as Boolean

MBS Mac64bit Plugin, Plugin Version: 23.3, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the web view limits navigation to pages within the app,Äôs domain.
Notes: Requires macOS 11.0 or newer.
(Read and Write property)

206.16.12 mediaTypesRequiringUserActionForPlayback as Integer

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Determines which media types require a user gesture to begin playing.
Notes: Use AudiovisualMediaTypeNone to indicate that no user gestures are required to begin playing media.
(Read and Write property)

206.16.13 Preferences as WKPreferencesMBS

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The preference object to be used by the web view.
Notes: (Read and Write property)

206.16.14 supportsAdaptiveImageGlyph as Boolean

MBS Mac64bit Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the web view supports adaptive images in the input.
Notes: When this property is false, the input system doesn,Äôt allow the text input to contain adaptive images. Set the value of this property to true only if your document supports adaptive images and handles them properly. For more information, see NSAdaptiveImageGlyphMBS class.
(Read and Write property)

206.16.15 suppressesIncrementalRendering as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the web view suppresses content rendering until it is fully loaded into memory.
Notes: The default value is false.
(Read and Write property)

206.16.16 upgradeKnownHostsToHTTPS as Boolean

MBS Mac64bit Plugin, Plugin Version: 23.3, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the web view should automatically upgrade supported HTTP requests to HTTPS.
Notes: Requires macOS 11.3 or newer.
(Read and Write property)

206.16.17 userInterfaceDirectionPolicy as Integer

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The directionality of user interface elements.
Notes: The default value is serInterfaceDirectionPolicyContent. For other possible values, see constants.
Available on MacOS 10.12 or newer.

The policy used to determine the directionality of user interface elements in a web view.
When UserInterfaceDirectionPolicyContent is specified, the directionality of user interface elements is affected by the dir attribute or the direction CSS property. When UserInterfaceDirectionPolicySystem is specified, the directionality of user interface elements is affected by the direction of the view.

(Read and Write property)

206.16.18 Constants

Audiovisual Media Types

Constant	Value	Description
AudiovisualMediaTypeAll	-1	All media types require a user gesture to begin playing.
AudiovisualMediaTypeAudio	1	Media types containing audio require a user gesture to begin playing.
AudiovisualMediaTypeNone	0	No media types require a user gesture to begin playing.
AudiovisualMediaTypeVideo	2	Media types containing video require a user gesture to begin playing.

User Interface Direction Policy

Constant	Value	Description
UserInterfaceDirectionPolicyContent	0	The directionality follows the CSS/HTML/XHTML specifications. This is default value of userInterfaceDirectionPolicy.
UserInterfaceDirectionPolicySystem	1	The directionality follows the view's userInterfaceLayoutDirection propert

206.17 control WKWebViewControlMBS

206.17.1 control WKWebViewControlMBS

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: A WKWebView object displays interactive web content, such as for an in-app browser.
Example:

```
// print a WKWebViewControlMBS to PDF file:

Var browser as WKWebViewControlMBS // your control showing website
Var pi As NSPrintInfoMBS = NSPrintInfoMBS.sharedPrintInfo

Var f As FolderItem = SpecialFolder.Desktop.Child("test.pdf")
pi.SetSaveDestination f

Var po As NSPrintOperationMBS = browser.printOperation(pi)

po.showsPrintPanel = False
po.showsProgressPanel = False

If po.runOperation Then
f.launch
End If
```

Notes: This is a control to use WebKit in 32-bit and WebKit 2 in 64-bit.
Most of the events provided by Xojo for the control will not work.
But we can add features over time as needed.
Let us know if you need a method from WKWebView or an event from WKNavigationDelegate or WKUIDelegate.

206.17.2 Methods

206.17.3 addScriptMessageHandler(Name as String)

MBS Mac64bit Plugin, Plugin Version: 18.0, Platform: macOS, Targets: Desktop only.

Function: Adds a script message handler.
Example:

```
// register once
browser.addScriptMessageHandler "test"
// later use in javascript:
browser.EvaluateJavaScript("window.webkit.messageHandlers.test.postMessage('Hello');")
```

Notes: Name: The name of the message handler.

Adding a script message handler with name name causes the JavaScript function window.webkit.messageHandlers.name.postMessage(messageBody) to be defined in all frames in all web views that use the user content controller.

206.17.4 addUserScript(userScript as WKUserScriptMBS)

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Adds an user script.

206.17.5 EvaluateJavaScript(JavaScript as String, byref Error as NSErrorMBS) as Variant

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: Evaluates JavaScript.
Example:

```
Var e As NSErrorMBS

// returns array of variants with doubles
Var v As Variant = WKWebViewControlMBS1.EvaluateJavaScript("o = [ 1,2,3 ] ;", e)
Var vd() As Variant = v

// returns array of variants with strings
Var vv As Variant = WKWebViewControlMBS1.EvaluateJavaScript("o = [ ""a"",""b"",""d"" ] ;", e)
Var vs() As Variant = vv

// returns dictionary
Var v3 As Variant = WKWebViewControlMBS1.EvaluateJavaScript("o = { a:1 } ", e)
Var dd As Dictionary = v3

Break
```

Notes: Synchronous version which waits for JavaScript to return the value.
Error is set in case of errors.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.
See also:

- 206.17.6 EvaluateJavaScript(JavaScript as String, Tag as Variant = nil) 24292

206.17.6 EvaluateJavaScript(JavaScript as String, Tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Evaluates JavaScript.
Notes: Calls later JavaScriptEvaluated event with result and passed tag value.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.
See also:

- 206.17.5 EvaluateJavaScript(JavaScript as String, byref Error as NSErrorMBS) as Variant 24292

206.17.7 findString(Text as String, FindConfiguration as WKFindConfigurationMBS = nil, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 26.5, Platform: macOS, Targets: Desktop only.

Function: Searches for the specified string in the web view,Äôs content.
Example:

```
var browser as WKWebViewControlMBS // your control

browser.findString "Xojo"
```

Notes: Text: The search string to use.
configuration: The search parameters. Use this object to specify whether the search is case-sensitive, moves forward or backward, and wraps when it reaches the end of the page.

206.17.8 goBack

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Navigates to the back item in the back-forward list.
Notes: Sets Navigation property.

206.17.9 goForward

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Navigates to the forward item in the back-forward list.
Notes: Sets Navigation property.

206.17.10 goToBackForwardListItem(Item as WKBackForwardListItemMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: Navigates to an item from the back-forward list and sets it as the current item.
Notes: item: The item to which to navigate. Must be one of the items in the web view's back-forward list.

Sets Navigation property.

206.17.11 LoadData(Data as MemoryBlock, MIMEType as String, textEncodingName as String, baseURL as string = "")

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Sets the webpage contents and base URL.
Example:

```
Var browser As WKWebViewControlMBS // your instance

browser.LoadData "<p>Hello World</p>", "text/html", "UTF-8", ""
```

Notes: data: The data to use as the contents of the webpage.
MIMEType: The MIME type of the data.
characterEncodingName: The data's character encoding name.
baseURL: A URL used to resolve relative URLs within the document.

Sets Navigation property.

206.17.12 LoadFileURL(File as FolderItem, readAccessItem as FolderItem)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: Navigates to a requested file.
Example:

```
Var w as WKWebViewControlMBS // your web viewer
Var HTMLFile as folderItem = New FolderItem("test.html")

// pass folderitem parent to allow read to other files in same folder
w.LoadFileURL HTMLFile, HTMLFile.parent
```

Notes: Navigates to the requested file URL on the filesystem.
file: The file URL to which to navigate.
readAccessItem: The file or folder to allow read access to.
If readAccessItem references a single file, only that file may be loaded by WebKit.
If readAccessItem references a directory, files inside that file may be loaded by WebKit.

Sets Navigation property.

206.17.13 LoadHTML(htmlText as String, baseURL as string = "")

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Sets the webpage contents and base URL.
Example:

```
Var browser As WKWebViewControlMBS // your instance

browser.LoadHTML "<p>Hello World</p>"
```

Notes: htmlText: The string to use as the contents of the webpage.
baseURL: A URL used to resolve relative URLs within the document.

Sets Navigation property.

206.17.14 LoadURL(URL as string)

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Navigates to a requested URL.
Example:

```
Var browser As WKWebViewControlMBS // your instance

call browser.LoadURL "https://www.mbsplugins.de/xojo"
```

Notes: Sets Navigation property.
Sets Navigation property.

206.17.15 LoadURLRequest(Request as NSURLRequestMBS)

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Navigates to a requested URL.
Notes: Sets Navigation property.

206.17.16 pauseAllMediaPlayback

MBS Mac64bit Plugin, Plugin Version: 24.5, Platform: macOS, Targets: Desktop only.

Function: Pauses playback of all media in the web view.
Notes: Calls pauseAllMediaPlaybackCompleted event later.

206.17.17 printOperation(printInfo as NSPrintInfoMBS) as NSPrintOperationMBS

MBS Mac64bit Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Desktop only.

Function: Creates a print operation for the current web viewer.
Example:

```
Var browser as WKWebViewControlMBS // your web viewer
Var pi As NSPrintInfoMBS = NSPrintInfoMBS.sharedPrintInfo
Var po As NSPrintOperationMBS = browser.printOperation(pi)

po.showsPrintPanel = True
po.showsProgressPanel = True

po.runOperationModalForWindow(Self)
```

Notes: Works for WebKit 1.x and 2.x.

For WebKit 2.x may run into endless loop for some websites due to bugs in Apple's WebKit framework.

206.17.18 reload

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Reloads the current page.
Example:

```
Public Sub Reload(browser as WKWebViewControlMBS, force as Boolean)
If force Then
Call browser.reloadFromOrigin
Else
Call browser.reload
End If
End Sub
```

Notes: Sets Navigation property.

206.17.19 reloadFromOrigin

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Reloads the current page, performing end-to-end revalidation using cache-validating conditionals if possible.
Example:

```
Public Sub Reload(browser as WKWebViewControlMBS, force as Boolean)
If force Then
call browser.reloadFromOrigin
Else
call browser.reload
End If
End Sub
```

Notes: Sets Navigation property.

206.17.20 removeAllUserScripts

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Removes all associated user scripts.
Example:

```
Var browser As WKWebViewControlMBS // your instance

browser.removeAllUserScripts
```

206.17.21 removeScriptMessageHandler(Name as String)

MBS Mac64bit Plugin, Plugin Version: 18.0, Platform: macOS, Targets: Desktop only.

Function: Removes a script message handler.
Notes: name: The name of the message handler to remove.

206.17.22 requestMediaPlaybackState

MBS Mac64bit Plugin, Plugin Version: 24.5, Platform: macOS, Targets: Desktop only.

Function: Requests the playback status of media in the web view.
Notes: Calls requestMediaPlaybackStateCompleted event later.

206.17.23 runOpenPanelWithParametersCompleted(URLs() as NSURLMBS)

MBS Mac64bit Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop only.

Function: Pass result for a runOpenPanelWithParameters event here.
Notes: Pass nil to indicate cancel was pressed.

206.17.24 setMagnification(magnification as double, pointX as double, pointY as double)

MBS Mac64bit Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Desktop only.

Function: Scales the page content by a specified factor and centers the result on a specified point.
Example:

```
Var browser As WKWebViewControlMBS // your instance

// zoom to 200% on 100/100
browser.setMagnification(2, 100, 100)
```

Notes: magnification: The factor by which to scale the content.
x/y: The point (in view space) to center magnification on. As usual with Cocoa, bottom is y = 0.

For MacOS 64-bit only.

206.17.25 setUsePrivateBrowsing(value as Boolean)

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: Whether to create WKWebViewControlMBS with private browsing enabled.
Example:

```
WKWebViewControlMBS.setUsePrivateBrowsing True
```

Notes: Set this property to true before creating the WKWebViewControlMBS control, so the plugin can enable private browsing.
Set to false later to create a normal control again.

You may want to set this to true or false before the window opens and control initialized.

206.17.26 stopLoading

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Stops loading all resources on the current page.
Example:

```
Var browser As WKWebViewControlMBS // your instance

browser.stopLoading
```

206.17.27 takeSnapshot(byref error as NSErrorMBS) as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: Requests a snapshot.
Notes: This is synchronous version which waits for image to be finished.
In case of error the result is nil and error may be set.
See also:

- 206.17.28 takeSnapshot(Tag as Variant = nil) 24299

206.17.28 takeSnapshot(Tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop only.

Function: Requests a snapshot.
Notes: Calls later takeSnapshotCompleted event.
Tag is passed to event to distinguish various snapshot requests.
See also:

- 206.17.27 takeSnapshot(byref error as NSErrorMBS) as NSImageMBS 24299

206.17.29 userScripts as WKUserScriptMBS()

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: The user scripts associated with the user content controller.

206.17.30 Properties

206.17.31 AcceptTabs as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: macOS, Targets: Desktop only.

Function: Whether the control should accept tab keys.
Notes: If true, the plugin will not forward the tab keydown/keyup events to Xojo, because Xojo would do switch to next control.
(Read and Write property)

206.17.32 allowFileAccessFromFileURLs as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.0, Platform: macOS, Targets: Desktop only.

Function: Allow file access for file URLs.
Example:

```
Var browser As WKWebViewControlMBS // your instance

browser.allowFileAccessFromFileURLs = True
```

Notes: Access to files is allowed for some files.
Please check WebKit documentation for details.

Set allowFileAccessFromFileURLs and allowUniversalAccessFromFileURLs to true to disable all the security checks to block local file access for websites. allowUniversalAccessFromFileURLs would allow all file URLs. allowFileAccessFromFileURLs would only allow in same path.
(Read and Write property)

206.17.33 allowsBackForwardNavigationGestures as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether horizontal swipe gestures will trigger back-forward list navigations.
Example:

```
Var browser As WKWebViewControlMBS // your instance

browser.allowsBackForwardNavigationGestures = True
```

Notes: The default value is false.
Available for 64-bit on macOS 10.10 or newer.

(Read and Write property)

206.17.34 allowsLinkPreview as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that determines whether pressing on a link displays a preview of the destination for the link.
Example:

```
Var browser As WKWebViewMBS // your instance

browser.allowsLinkPreview = True
```

Notes: (Read and Write property)

206.17.35 allowsMagnification as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether magnify gestures will change the web view,Äôs magnification.
Example:

```
Var browser As WKWebViewMBS // your instance

browser.allowsMagnification = True
```

Notes: The default value is false. You can set the magnification property even if allowsMagnification is set to false.
For MacOS 64-bit only.
(Read and Write property)

206.17.36 allowUniversalAccessFromFileURLs as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.0, Platform: macOS, Targets: Desktop only.

Function: Allow universal file access for URLs.
Notes: Any file URL will be loaded if true.
Please check WebKit documentation for details.

Does not work in MacOS 10.14.
(Read and Write property)

206.17.37 backForwardList as WKBackForwardListMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: The web view's back-forward list.
Notes: (Read only property)

206.17.38 CanGoBack as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether there is a back item in the back-forward list that can be navigated to.
Example:

```
Var browser As WKWebViewControlMBS // your instance

MessageBox "CanGoBack: "+If(Browser.CanGoBack, "yes", "no")
```

Notes: (Read only property)

206.17.39 CanGoForward as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether there is a forward item in the back-forward list that can be navigated to.
Example:

```
'Dim browser As WKWebViewControlMBS // your instance

MessageBox "CanGoForward: "+If(Browser.CanGoForward, "yes", "no")
```

Notes: (Read only property)

206.17.40 customUserAgent as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The custom user agent string.
Example:

```
Var browser As WKWebViewControlMBS // your instance

browser.customUserAgent = "MyBrowser/1.0"
```

Notes: If no custom user agent string has been set, this is set to "".
Available in 32-bit. Available in 64-bit for macOS 10.11 or newer.
(Read and Write property)

206.17.41 developerExtrasEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Whether developer extras are enabled.
Example:

```
Var browser As WKWebViewControlMBS // your instance

// enable context menu entry to show developer extras
browser.developerExtrasEnabled = True
```

Notes: For WebKit 2 (64bit) to enable the context menu to inspect items.
(Read and Write property)

206.17.42 EstimatedProgress as Double

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: An estimate of what fraction of the current navigation has been loaded.
Notes: This value ranges from 0.0 to 1.0 based on the total number of bytes expected to be received, including the main document and all of its potential subresources. After a navigation loading completes, the estimatedProgress remains at 1.0 until a new navigation starts, at which point the estimatedProgress is reset to 0.0.
(Read only property)

206.17.43 hasOnlySecureContent as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether all resources on the page have been loaded through securely encrypted connections.

Example:

```
Var browser As WKWebViewControlMBS // your instance

MessageBox "hasOnlySecureContent: "+If(Browser.hasOnlySecureContent, "yes", "no")
```

Notes: Only set for 64-bit, always false on 32-bit.
(Read only property)

206.17.44 IsLoading as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether the view is currently loading content.
Example:

```
Var browser As WKWebViewControlMBS // your instance

// load a page
browser.LoadURL "https://www.mbsplugins.de/xojo"

// wait synchronously for website loading
While browser.IsLoading
DelayMBS 0.1
Wend

MessageBox "loaded"
```

Notes: (Read only property)

206.17.45 javaEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Whether java is enabled.
Example:

```
Var browser As WKWebViewControlMBS // your instance

MessageBox "JavaScript Enabled: "+If(Browser.javaEnabled, "yes", "no")
```

Notes: (Read and Write property)

206.17.46 javaScriptCanOpenWindowsAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Whether javascript can open new windows.
Example:

```
Var browser As WKWebViewControlMBS // your instance

// disable popup windows
Browser.javaScriptCanOpenWindowsAutomatically = False
```

Notes: (Read and Write property)

206.17.47 javaScriptEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Whether javascript is enabled.
Example:

```
Var browser As WKWebViewControlMBS // your instance

MessageBox "JavaScript Enabled: "+If(Browser.javaScriptEnabled, "yes", "no")
```

Notes: (Read and Write property)

206.17.48 loadsImagesAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Whether to load images automatically.
Example:

```
Var browser As WKWebViewControlMBS // your instance

// disable loading of images
browser.loadsImagesAutomatically = False#
```

Notes: (Read and Write property)

206.17.49 magnification as Double

MBS Mac64bit Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Desktop only.

Function: The factor by which the page content is currently scaled.
Example:

```
Var browser As WKWebViewControlMBS // your instance

browser.magnification = 2.0
```

Notes: The default value is 1.0.
For MacOS 64-bit only.
(Read and Write property)

206.17.50 minimumFontSize as Double

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: The minimum font size to use.
Example:

```
Var browser As WKWebViewControlMBS // your instance

browser.minimumFontSize = 20
```

Notes: (Read and Write property)

206.17.51 Navigation as WKNavigationMBS

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: The current navigation action.
Notes: (Read only property)

206.17.52 plugInsEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Whether plugins are enabled.
Example:

```
Var browser As WKWebViewControlMBS // your instance
```

```
MessageBox "plugInsEnabled: "+If(Browser.plugInsEnabled, "yes", "no")
```

Notes: (Read and Write property)

206.17.53 privateBrowsing as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Whether private browsing is enabled.
Example:

```
Var browser As WKWebViewControlMBS // your instance

MessageBox "privateBrowsing: "+If(Browser.privateBrowsing, "yes", "no")
```

Notes: If enabled, no data should be stored for cookies or cache on disk, so it's cleared when web viewer is destroyed (Inkognito mode).
Default is non-private mode for the web viewer.

For WebKit 2.x, it looks like you can't change mode after web viewer was created.
So use UsePrivateBrowsing there.
(Read and Write property)

206.17.54 Title as String

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: The page title.
Example:

```
Var browser As WKWebViewControlMBS // your instance

MessageBox Browser.Title
```

Notes: (Read only property)

206.17.55 URL as String

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: The active URL.
Example:

```
Var browser As WKWebViewControlMBS // your instance

MessageBox Browser.URL
```

Notes: This is the URL that should be reflected in the user interface.
(Read only property)

206.17.56 UsePrivateBrowsing as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Whether to create WKWebViewControlMBS with private browsing enabled.
Example:

```
WVWebViewModuleMBS.UsePrivateBrowsing = True
```

Notes: Set this property to true before creating the WKWebViewControlMBS control, so the plugin can enable private browsing.
Set to false later to create a normal control again.

You may want to set this to true or false before the window opens and control initialized.

Due to a bug in Xojo 2019r2 and older, please use WVWebViewModuleMBS.UsePrivateBrowsing property instead.
(Read and Write property)

206.17.57 View as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: The used view.
Notes: Should be either a WebView (32bit) or WKWebView (64bit).
(Read only property)

206.17.58 WKWebView as WKWebViewMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: The used WKWebViewMBS view.
Notes: Always a WKWebViewMBS in 64-bit, but nil for 32-bit applications.
(Read only property)

206.17.59 Events

206.17.60 BoundsChanged

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the bounds, but not the frame, changed.

206.17.61 Close

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function:

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

206.17.62 Closing

Plugin Version: 16.4, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

206.17.63 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: This event is called when it is appropriate to display a contextual menu for the control.

206.17.64 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: Called when a menuitem is chosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

206.17.65 CreateWebView(URL as String, request as NSURLRequestMBS) as Variant

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: Creates a new web view.
Notes: If needed we can add configuration, windowFeatures and navigationAction parameters in future version.

Return a web viewer control or nil.

The web view returned must be created with the specified configuration. WebKit will load the request in the returned web view.

If you do not implement this method or return nil, the web view will cancel the navigation.

206.17.66 decidePolicyForNavigationAction(navigationAction as WKNavigationActionMBS, decisionHandler as WKPolicyForNavigationActionDecisionHandlerMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop only.

Function: Decides whether to allow or cancel a navigation.
Notes: Please inspect navigationAction to find the information about what action happened.

You can show a dialog to ask user and once you know the decision call a method on decisionHandler object to report the decision.

If you want to open this in a new window/tab, please call decisionHandler.Cancel method here, take the URL and load it in the new WebView in the new window/tab.

Like the CancelClose event in Xojo, you can call decisionHandler.Cancel method to call it.

206.17.67 decidePolicyForNavigationResponse(navigationResponse as WKNavigationResponseMBS, decisionHandler as WKPolicyForNavigationResponseDecisionHandlerMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop only.

Function: Decides whether to allow or cancel a navigation after its response is known.
Example:

```
Sub decidePolicyForNavigationResponse(navigationResponse as WKNavigationResponseMBS, decisionHandler as WKPolicyForNavigationResponseDecisionHandlerMBS) Handles decidePolicyForNavigationResponse
Var MimeType as string = navigationResponse.response.MIMEType

if MimeType = "application/zip" or _
MimeType = "application/x-tar" or _
MimeType = "application/octet-stream" then
// we download archive files
decisionHandler.Download
else
// allow normal website to load
decisionHandler.Allow

end if
End Sub
```

Notes: navigationResponse: Descriptive information about the navigation response.

You can show a dialog to ask user and once you know the decision call a method on decisionHandler object to report the decision.

206.17.68 DidClose

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: The webviewer closed.
Notes: Notifies your app that the DOM window object's close() method completed successfully.

Your app should remove the web view from the view hierarchy and update the UI as needed, such as by closing the containing browser tab or window.

206.17.69 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: macOS, Targets: Desktop only.

Function: Did close contextual menu.
Notes: Allows you to restart any animation you may have stopped in the willShowContextualMenu event.

206.17.70 didCommitNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop only.

Function: Invoked when content starts arriving for the main frame.
Notes: Added navigation parameter with version 20.3.
Sets Navigation property.

206.17.71 didFailNavigation(navigation as WKNavigationMBS, Error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop only.

Function: Invoked when an error occurs during a committed main frame navigation.
Notes: Added navigation parameter with version 20.3.
Sets Navigation property.

206.17.72 didFailProvisionalNavigation(navigation as WKNavigationMBS, Error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop only.

Function: Invoked when an error occurs while starting to load data for the main frame.
Notes: Added navigation parameter with version 20.3.
Sets Navigation property.

206.17.73 didFinishNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop only.

Function: Invoked when a main frame navigation completes.
Notes: Added navigation parameter with version 20.3.
Sets Navigation property.

Same as DocumentComplete in HTMLViewer.

206.17.74 DidReceiveAuthenticationChallenge(challenge as NSURLAuthenticationChallengeMBS, byref AuthChallengeDisposition as Integer, byref credentials as NSURLCredentialMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop only.

Function: Asks the app to respond to an authentication challenge.
Notes: challenge: The authentication challenge.

AuthChallengeDisposition: The option to use to handle the challenge. For a list of options, see AuthChallenge* constants.
credential: The credential to use for authentication when the disposition parameter contains the value AuthChallengeUseCredential. Specify nil to continue without a credential.

If you don,Äôt implement this method, the web view responds to the authentication challenge with the AuthChallengeRejectProtectionSpace disposition.

206.17.75 didReceiveScriptMessage(Body as Variant, name as String)

MBS Mac64bit Plugin, Plugin Version: 18.0, Platform: macOS, Targets: Desktop only.

Function: Invoked when a script message is received from a webpage.
Notes: body: The body of the message. Automatic translated from Javascript types.
name: The name of the message handler to which the message is sent.

206.17.76 didReceiveServerRedirectForProvisionalNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop only.

Function: Invoked when a server redirect is received for the main frame.
Notes: Added navigation parameter with version 20.3.
Sets Navigation property.

206.17.77 didStartProvisionalNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop only.

Function: Invoked when a main frame navigation starts.
Notes: Added navigation parameter with version 20.3.
Sets Navigation property.

206.17.78 downloadDecideDestinationUsingResponse(download as WKDownloadMBS, response as NSURLResponseMBS, suggestedFilename as String, byref destination as FolderItem)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop only.

Function: Asks the app to provide a file destination where the system should write the download data.
Notes: download: The download that needs a file destination where the systems should write the download data.
response: A response from the server for an HTTP request, or a synthesized response for a blob download.
suggestedFilename: A string with a filename suggestion to use in creating the file destination.
destination: A file destination where the systems should write the download data.

Set destination to where to store the file. Or set to nil to cancel.

The suggested filename can come from the response or from the web content.
The destination file URL must meet the following requirements:

- It,Äôs a file that doesn,Äôt exist.
- It,Äôs in a directory that exists.
- It,Äôs in a directory that WebKit can write to.

206.17.79 downloadDidFailWithError(download as WKDownloadMBS, error as NSErrorMBS, resumeData as MemoryBlock)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop only.

Function: Tells your app that the download failed, with error information and data you can use to restart the download.
Notes: download: The download that failed.
error: An error describing what caused the download to fail.
resumeData: A data object you use to restart the download.

To restart a failed download, call resumeDownloadFromResumeData with resumeData.

206.17.80 downloadDidFinish(download as WKDownloadMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop only.

Function: This event tells you that the download finished.
Notes: download: The download that finished.

206.17.81 downloadDidReceiveAuthenticationChallenge(download as WKDownloadMBS, challenge as NSURLAuthenticationChallengeMBS, byref AuthChallengeDisposition as Integer, byref credentials as NSURLCredentialMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop only.

Function: Asks the delegate to respond to an authentication challenge.
Notes: download: The download that received the authentication challenge.
challenge: The authentication challenge.

Determine how to respond to the authentication challenge in this method. Then set AuthChallengeDisposition to AuthChallenge* constants and pass the credentials to use.

If you don,Äôt implement this method, the web view responds to the challenge with AuthChallengeRejectProtectionSpace.

206.17.82 downloadWillPerformHTTPRedirection(download as WKDownloadMBS, response as NSURLResponseMBS, request as NSURLRequestMBS, byref DownloadRedirectPolicy as Integer)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop only.

Function: Asks the delegate to respond to the download,Äôs redirect response.
Notes: download: The download that receives the redirect response.
response: The redirect response.
request: The new request the web view sends as a result of the redirect response.

Set DownloadRedirectPolicy to either DownloadRedirectPolicyAllow or DownloadRedirectPolicyCancel.

A download redirect policy that indicates whether to proceed with the redirect.

Determine whether to proceed with the redirect. Then invoke the decisionHandler closure, providing a download redirect policy that indicates whether to proceed with the redirect.

If you don,Äôt implement this event, the web view proceeds with all redirects.

206.17.83 EnableMenuItems

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function:

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

206.17.84 EstimatedProgressChanged(estimatedProgress as double, oldEstimatedProgress as double)

MBS Mac64bit Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The estimated progress for loading the webpage changed.
Notes: This event may be called often, so don't do much here!

206.17.85 findStringCompleted(Text as String, FindConfiguration as WKFindConfigurationMBS, result as WKFindResultMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 26.5, Platform: macOS, Targets: Desktop only.

Function: The find operation completed.
Notes: See result.matchFound to see if you found something.

206.17.86 FocusLost

Plugin Version: 17.1, Platform: macOS, Targets: .

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

This only fires if the control itself lost focus and not a sub control.

206.17.87 FocusReceived

Plugin Version: 17.1, Platform: macOS, Targets: .

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes:

This only fires if the control itself got focus and not a sub control.

206.17.88 FrameChanged

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

206.17.89 GotFocus

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function:

The control itself got focus.
In Xojo version 2021r3 and newer this event is named FocusReceived.
Notes:

This only fires if the control itself got focus and not a sub control.

206.17.90 JavaScriptEvaluated(JavaScript as String, Result as Variant, Error as NSErrorMBS, Tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: JavaScript was evaluated.
Notes: Error is only set with 64-bit, not with 32-bit.
Tag is passed from EvaluateJavaScript call.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.

206.17.91 LostFocus

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function:

The control lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.
Notes:

This only fires if the control itself lost focus and not a sub control.

206.17.92 MenuBarSelected

Plugin Version: 17.1, Platform: macOS, Targets: .

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

206.17.93 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

206.17.94 MouseDrag(x as Integer, y as Integer)

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: Mouse location is local to the control passed in to x, y.

As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

206.17.95 MouseUp(x as Integer, y as Integer)

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

206.17.96 navigationActionDidBecomeDownload(navigationAction as WKNavigationActionMBS, download as WKDownloadMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop only.

Function: Tells the app that a navigation action became a download.
Example:

```
Sub navigationActionDidBecomeDownload(navigationAction as WKNavigationActionMBS, download as WKDownloadMBS) Handles navigationActionDidBecomeDownload
System.DebugLog CurrentMethodName

// add download to your list of downloads you monitor
End Sub
```

Notes: navigationAction: Descriptive information about the navigation response that turned into a download.
download: An object that represents the download of a web resource.

Implement this method to begin tracking download progress.

206.17.97 navigationResponseDidBecomeDownload(navigationResponse as WKNavigationResponseMBS, download as WKDownloadMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop only.

Function: Tells the app that a navigation response became a download.
Example:

```
Sub navigationResponseDidBecomeDownload(navigationResponse as WKNavigationResponseMBS, download as WKDownloadMBS) Handles navigationResponseDidBecomeDownload
```

```
System.DebugLog CurrentMethodName

// add download to your list of downloads you monitor
End Sub
```

Notes: navigationResponse: Descriptive information about the navigation response that turned into a download.
download: An object that represents the download of a web resource.

Implement this method to begin tracking download progress.

206.17.98 Open

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function:

The control is about to was created and you can initialize it.
In Xojo version 2021r3 and newer this event is named Opening.

206.17.99 Opening

Plugin Version: 16.4, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

206.17.100 pauseAllMediaPlaybackCompleted

MBS Mac64bit Plugin, Plugin Version: 24.5, Platform: macOS, Targets: Desktop only.

Function: The event the system executes after the web view pauses media playback.

206.17.101 requestMediaPlaybackStateCompleted(state as Integer)

MBS Mac64bit Plugin, Plugin Version: 24.5, Platform: macOS, Targets: Desktop only.

Function: The event the system executes after the web view determines the current state of media playback.
Notes: State: A value that indicates whether the media in the web view is playing, paused, or suspended.

If there,Äôs no media in the web view to play, this method provides MediaPlaybackStateNone.

206.17.102 runJavaScriptAlertPanel(initiatedByFrame as WKFrameInfoMBS, message as String)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Displays a JavaScript alert panel.
Notes: message: The message to display.

If you do not implement this method, the web view will behave as if the user selected the OK button.

206.17.103 runJavaScriptConfirmPanel(initiatedByFrame as WKFrameInfoMBS, message as String) as boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Displays a JavaScript confirm panel.
Notes: message: The message to display.

Return true if the user chose OK, false if the user chose Cancel.

If you do not implement this method, the web view will behave as if the user selected the Cancel button.

206.17.104 runJavaScriptTextInputPanel(initiatedByFrame as WKFrameInfoMBS, prompt as String, defaultText as String) as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Displays a JavaScript text input panel.
Notes: message: The message to display.
defaultText: The initial text to display in the text entry field.

Return the entered text if the user chose OK, otherwise "".

If you do not implement this method, the web view will behave as if the user selected the Cancel button.

206.17.105 runOpenPanelWithParameters(initiatedByFrame as WKFrameInfoMBS, allowsMultipleSelection as Boolean, allowsDirectories as Boolean)

MBS Mac64bit Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop only.

Function: Displays a file upload panel.
Notes: Please call runOpenPanelWithParametersCompleted method later with result. Pass the selected URLs if the user chose "OK", otherwise nil.

You can use sheet window for the file picker and later call the runOpenPanelWithParametersCompleted method or call it right in the event if you do it synchronously.

If this method is not implemented, the web view behaves as if the user selected the Cancel button.

Not available on iOS. Implemented for macOS 64-bit applications.

206.17.106 ScaleFactorChanged(NewFactor as Double)

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

206.17.107 takeSnapshotCompleted(image as NSImageMBS, error as NSErrorMBS, Tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop only.

Function: Called when snapshot of website is completed.
Notes: If snapshot creation failed, error is set.

206.17.108 TitleChanged(Title as String, oldTitle as string)

MBS Mac64bit Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The title of the webpage changed.

206.17.109 WebContentProcessDidTerminate

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: macOS, Targets: Desktop only.

Function: Tells the app that the web view,Äôs content process was terminated.
Notes: Web views use a separate process to render and manage web content. WebKit calls this method when the process for the specified web view terminates for any reason.

206.17.110 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: macOS, Targets: Desktop only.

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

206.17.111 Constants

Authentication Challenge Responses

Constant	Value	Description
AuthChallengeCancelAuthenticationChallenge	2	Cancel the entire request. The provided credential parameter is
AuthChallengePerformDefaultHandling	1	Use the default handling for the challenge as though this delegate not implemented. The provided credential parameter is ignored.
AuthChallengeRejectProtectionSpace	3	Reject this challenge, and call the authentication delegate meth the next authentication protection space. The provided credent is ignored.
AuthChallengeUseCredential	0	Use the specified credential, which may be nil.

Redirect Policy

Constant	Value	Description
DownloadRedirectPolicyAllow	1	Allow a redirect to proceed.
DownloadRedirectPolicyCancel	0	Cancel the redirect action.

206.18 control WKWebViewIOSControlMBS

206.18.1 control WKWebViewIOSControlMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: A WKWebView object displays interactive web content, such as for an in-app browser.
Notes: This is a control is for iOS only and uses 64-bit.

But we can add features over time as needed.
Let us know if you need a method from WKWebView or an event from WKNavigationDelegate or WKUIDelegate.

206.18.2 Methods

206.18.3 addScriptMessageHandler(Name as String)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Adds a script message handler.
Example:

```
// register once
browser.addScriptMessageHandler "test"
// later use in javascript:
browser.EvaluateJavaScript("window.webkit.messageHandlers.test.postMessage('Hello');")
```

Notes: Name: The name of the message handler.

Adding a script message handler with name name causes the JavaScript function window.webkit.messageHandlers.name.postMessage(messageBody) to be defined in all frames in all web views that use the user content controller.

206.18.4 addUserScript(userScript as WKUserScriptMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Adds an user script.

206.18.5 EvaluateJavaScript(JavaScript as String, byref Error as NSErrorMBS) as Variant

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Evaluates JavaScript.
Example:

```
Var e As NSErrorMBS

// returns array of variants with doubles
Var v As Variant = WKWebViewIOSControlMBS1.EvaluateJavaScript("o = [ 1,2,3 ] ;", e)
Var vd() As Variant = v

// returns array of variants with strings
Var vv As Variant = WKWebViewIOSControlMBS1.EvaluateJavaScript("o = [ ""a"",""b"",""d"" ] ;", e)
Var vs() As Variant = vv

// returns dictionary
Var v3 As Variant = WKWebViewIOSControlMBS1.EvaluateJavaScript("o = { a:1 } ", e)
Var dd As Dictionary = v3

Break
```

Notes: Synchronous version which waits for JavaScript to return the value.
Error is set in case of errors.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.
See also:

- 206.18.6 EvaluateJavaScript(JavaScript as String, Tag as Variant = nil) 24326

206.18.6 EvaluateJavaScript(JavaScript as String, Tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Evaluates JavaScript.
Notes: Calls later JavaScriptEvaluated event with result and passed tag value.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.
See also:

- 206.18.5 EvaluateJavaScript(JavaScript as String, byref Error as NSErrorMBS) as Variant 24325

206.18.7 findString(Text as String, FindConfiguration as WKFindConfigurationMBS = nil, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 26.5, Platform: iOS, Targets: iOS only.

Function: Searches for the specified string in the web view,Äôs content.
Notes: Text: The search string to use.
configuration: The search parameters. Use this object to specify whether the search is case-sensitive, moves forward or backward, and wraps when it reaches the end of the page.

206.18.8 goBack

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Navigates to the back item in the back-forward list.
Notes: Sets Navigation property.

206.18.9 goForward

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Navigates to the forward item in the back-forward list.
Notes: Sets Navigation property.

206.18.10 goToBackForwardListItem(Item as WKBackForwardListItemMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Navigates to an item from the back-forward list and sets it as the current item.
Notes: item: The item to which to navigate. Must be one of the items in the web view's back-forward list.

Sets Navigation property.

206.18.11 LoadData(Data as MemoryBlock, MIMEType as String, textEncodingName as String, baseURL as string = "")

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Sets the webpage contents and base URL.
Example:

```
Var browser As WKWebViewIOSControlMBS // your instance

browser.LoadData "<p>Hello World</p>", "text/html", "UTF-8", ""
```

Notes: data: The data to use as the contents of the webpage.
MIMEType: The MIME type of the data.
characterEncodingName: The data's character encoding name.
baseURL: A URL used to resolve relative URLs within the document.

Sets Navigation property.

206.18.12 LoadFileURL(File as FolderItem, readAccessItem as FolderItem)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Navigates to a requested file.
Notes: Navigates to the requested file URL on the filesystem.
file: The file URL to which to navigate.
readAccessItem: The file or folder to allow read access to.
If readAccessItem references a single file, only that file may be loaded by WebKit.
If readAccessItem references a directory, files inside that file may be loaded by WebKit.

Sets Navigation property.

206.18.13 LoadHTML(htmlText as String, baseURL as string = "")

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Sets the webpage contents and base URL.
Example:

```
Var browser As WKWebViewIOSControlMBS // your instance

browser.LoadHTML "<p>Hello World</p>"
```

Notes: htmlText: The string to use as the contents of the webpage.
baseURL: A URL used to resolve relative URLs within the document.

Sets Navigation property.

206.18.14 LoadURL(URL as string)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Navigates to a requested URL.
Example:

```
Var browser As WKWebViewIOSControlMBS // your instance

call browser.LoadURL "https://www.mbsplugins.de/xojo"
```

Notes: Sets Navigation property.
Sets Navigation property.

206.18.15 LoadURLRequest(Request as NSURLRequestMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Navigates to a requested URL.
Notes: Sets Navigation property.

206.18.16 pauseAllMediaPlayback

MBS Mac64bit Plugin, Plugin Version: 24.5, Platform: iOS, Targets: iOS only.

Function: Pauses playback of all media in the web view.
Notes: Calls pauseAllMediaPlaybackCompleted event later.

206.18.17 reload

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Reloads the current page.
Example:

```
Public Sub Reload(browser as WKWebViewIOSControlMBS, force as Boolean)
If force Then
Call browser.reloadFromOrigin
Else
Call browser.reload
End If
End Sub
```

Notes: Sets Navigation property.

206.18.18 reloadFromOrigin

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Reloads the current page, performing end-to-end revalidation using cache-validating conditionals if possible.
Example:

```
Public Sub Reload(browser as WKWebViewIOSControlMBS, force as Boolean)
If force Then
call browser.reloadFromOrigin
Else
call browser.reload
End If
End Sub
```

Notes: Sets Navigation property.

206.18.19 removeAllUserScripts

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Removes all associated user scripts.
Example:

```
Var browser As WKWebViewIOSControlMBS // your instance

browser.removeAllUserScripts
```

206.18.20 removeScriptMessageHandler(Name as String)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Removes a script message handler.
Notes: name: The name of the message handler to remove.

206.18.21 requestMediaPlaybackState

MBS Mac64bit Plugin, Plugin Version: 24.5, Platform: iOS, Targets: iOS only.

Function: Requests the playback status of media in the web view.
Notes: Calls requestMediaPlaybackStateCompleted event later.

206.18.22 setUsePrivateBrowsing(value as Boolean)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Whether to create WKWebViewIOSControlMBS with private browsing enabled.
Example:

```
WKWebViewIOSControlMBS.setUsePrivateBrowsing True
```

Notes: Set this property to true before creating the WKWebViewIOSControlMBS control, so the plugin can enable private browsing.
Set to false later to create a normal control again.

You may want to set this to true or false before the window opens and control initialized.

206.18.23 stopLoading

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Stops loading all resources on the current page.
Example:

```
Var browser As WKWebViewIOSControlMBS // your instance

browser.stopLoading
```

206.18.24 takeSnapshot(byref error as NSErrorMBS) as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Requests a snapshot.
Notes: This is synchronous version which waits for image to be finished.
In case of error the result is nil and error may be set.
See also:

- 206.18.25 takeSnapshot(Tag as Variant = nil) 24331

206.18.25 takeSnapshot(Tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Requests a snapshot.
Notes: Calls later takeSnapshotCompleted event.
Tag is passed to event to distinguish various snapshot requests.
See also:

- 206.18.24 takeSnapshot(byref error as NSErrorMBS) as NSImageMBS 24331

206.18.26 userScripts as WKUserScriptMBS()

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The user scripts associated with the user content controller.

206.18.27 Properties

206.18.28 allowFileAccessFromFileURLs as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Allow file access for file URLs.
Example:

```
Var browser As WKWebViewIOSControlMBS // your instance

browser.allowFileAccessFromFileURLs = True
```

Notes: Access to files is allowed for some files.
Please check WebKit documentation for details.

Set allowFileAccessFromFileURLs and allowUniversalAccessFromFileURLs to true to disable all the security checks to block local file access for websites. allowUniversalAccessFromFileURLs would allow all file URLs. allowFileAccessFromFileURLs would only allow in same path.
(Read and Write property)

206.18.29 allowsBackForwardNavigationGestures as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: A Boolean value indicating whether horizontal swipe gestures will trigger back-forward list navigations.
Example:

```
Var browser As WKWebViewIOSControlMBS // your instance

browser.allowsBackForwardNavigationGestures = True
```

Notes: The default value is false.
Available for 64-bit on macOS 10.10 or newer.
(Read and Write property)

206.18.30 allowsLinkPreview as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: A Boolean value that determines whether pressing on a link displays a preview of the destination for the link.
Example:

```
Var browser As WKWebViewMBS // your instance

browser.allowsLinkPreview = True
```

Notes: (Read and Write property)

206.18.31 allowUniversalAccessFromFileURLs as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Allow universal file access for URLs.
Notes: Any file URL will be loaded if true.
Please check WebKit documentation for details.

Does not work in MacOS 10.14.
(Read and Write property)

206.18.32 backForwardList as WKBackForwardListMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The web view's back-forward list.
Notes: (Read only property)

206.18.33 CanGoBack as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: A Boolean value indicating whether there is a back item in the back-forward list that can be navigated to.
Example:

```
Var browser As WKWebViewIOSControlMBS // your instance

MessageBox "CanGoBack: "+If(Browser.CanGoBack, "yes", "no")
```

Notes: (Read only property)

206.18.34 CanGoForward as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: A Boolean value indicating whether there is a forward item in the back-forward list that can be navigated to.
Example:

```
'Dim browser As WKWebViewIOSControlMBS // your instance

MessageBox "CanGoForward: "+If(Browser.CanGoForward, "yes", "no")
```

Notes: (Read only property)

206.18.35 customUserAgent as String

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The custom user agent string.
Example:

```
Var browser As WKWebViewIOSControlMBS // your instance

browser.customUserAgent = "MyBrowser/1.0"
```

Notes: If no custom user agent string has been set, this is set to "".
Available in 32-bit. Available in 64-bit for macOS 10.11 or newer.
(Read and Write property)

206.18.36 developerExtrasEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Whether developer extras are enabled.
Example:

```
Var browser As WKWebViewIOSControlMBS // your instance

// enable context menu entry to show developer extras
browser.developerExtrasEnabled = True
```

Notes: For WebKit 2 (64bit) to enable the context menu to inspect items.
(Read and Write property)

206.18.37 EstimatedProgress as Double

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: An estimate of what fraction of the current navigation has been loaded.
Notes: This value ranges from 0.0 to 1.0 based on the total number of bytes expected to be received, including the main document and all of its potential subresources. After a navigation loading completes, the estimatedProgress remains at 1.0 until a new navigation starts, at which point the estimatedProgress is reset to 0.0.
(Read only property)

206.18.38 hasOnlySecureContent as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: A Boolean value indicating whether all resources on the page have been loaded through securely encrypted connections.

Example:

```
Var browser As WKWebViewIOSControlMBS // your instance

MessageBox "hasOnlySecureContent: "+If(Browser.hasOnlySecureContent, "yes", "no")
```

Notes: Only set for 64-bit, always false on 32-bit.
(Read only property)

206.18.39 IsLoading as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: A Boolean value indicating whether the view is currently loading content.
Example:

```
Var browser As WKWebViewIOSControlMBS // your instance

// load a page
browser.LoadURL "https://www.mbsplugins.de/xojo"

// wait synchronously for website loading
While browser.IsLoading
DelayMBS 0.1
Wend

MessageBox "loaded"
```

Notes: (Read only property)

206.18.40 javaScriptCanOpenWindowsAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Whether javascript can open new windows.
Example:

```
Var browser As WKWebViewIOSControlMBS // your instance

// disable popup windows
Browser.javaScriptCanOpenWindowsAutomatically = False
```

Notes: (Read and Write property)

206.18.41 javaScriptEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Whether javascript is enabled.
Example:

```
Var browser As WKWebViewIOSControlMBS // your instance

MessageBox "JavaScript Enabled: "+If(Browser.javaScriptEnabled, "yes", "no")
```

Notes: (Read and Write property)

206.18.42 loadsImagesAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Whether to load images automatically.
Example:

```
Var browser As WKWebViewIOSControlMBS // your instance

// disable loading of images
browser.loadsImagesAutomatically = False#
```

Notes: (Read and Write property)

206.18.43 minimumFontSize as Double

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The minimum font size to use.
Example:

```
Var browser As WKWebViewIOSControlMBS // your instance

browser.minimumFontSize = 20
```

Notes: (Read and Write property)

206.18.44 Navigation as WKNavigationMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The current navigation action.
Notes: (Read only property)

206.18.45 privateBrowsing as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Whether private browsing is enabled.
Example:

```
Var browser As WKWebViewIOSControlMBS // your instance

MessageBox "privateBrowsing: "+If(Browser.privateBrowsing, "yes", "no")
```

Notes: If enabled, no data should be stored for cookies or cache on disk, so it's cleared when web viewer is destroyed.
Default is non-private mode for the web viewer.

For WebKit 2.x, it looks like you can't change mode after web viewer was created.
So use UsePrivateBrowsing there.
(Read and Write property)

206.18.46 Title as String

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The page title.
Example:

```
Var browser As WKWebViewIOSControlMBS // your instance

MessageBox Browser.Title
```

Notes: (Read only property)

206.18.47 URL as String

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The active URL.
Example:

```
Var browser As WKWebViewIOSControlMBS // your instance

MessageBox Browser.URL
```

Notes: This is the URL that should be reflected in the user interface.
(Read only property)

206.18.48 UsePrivateBrowsing as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Whether to create WKWebViewIOSControlMBS with private browsing enabled.
Example:

```
WVWebViewModuleMBS.UsePrivateBrowsing = True
```

Notes: Set this property to true before creating the WKWebViewIOSControlMBS control, so the plugin can enable private browsing.
Set to false later to create a normal control again.

You may want to set this to true or false before the window opens and control initialized.

Due to a bug in Xojo 2019r2 and older, please use WVWebViewModuleMBS.UsePrivateBrowsing property instead.
(Read and Write property)

206.18.49 View as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The used view.
Notes: Should be either a WKWebView (64bit).
(Read only property)

206.18.50 WKWebView as WKWebViewMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The used WKWebViewMBS view.
Notes: Always a WKWebViewMBS in 64-bit, but nil for 32-bit applications.
(Read only property)

206.18.51 Events

206.18.52 Close

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: The control is about to close.

206.18.53 CreateWebView(URL as String, request as NSURLRequestMBS) as WKWebViewIOSControlMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Creates a new web view.
Notes: If needed we can add configuration, windowFeatures and navigationAction parameters in future version.

Return a web viewer control or nil.

The web view returned must be created with the specified configuration. WebKit will load the request in the returned web view.

If you do not implement this method or return nil, the web view will cancel the navigation.

206.18.54 decidePolicyForNavigationAction(navigationAction as WKNavigationActionMBS, decisionHandler as WKPolicyForNavigationActionDecisionHandlerMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: Desktop & iOS.

Function: Decides whether to allow or cancel a navigation.
Notes: Please inspect navigationAction to find the information about what action happened.

You can show a dialog to ask user and once you know the decision call a method on decisionHandler object to report the decision.

If you want to open this in a new window/tab, please call decisionHandler.Cancel method here, take the URL and load it in the new WebView in the new window/tab.

Like the CancelClose event in Xojo, you can call decisionHandler.Cancel method to call it.

206.18.55 decidePolicyForNavigationResponse(navigationResponse as WKNavigationResponseMBS, decisionHandler as WKPolicyForNavigationResponseDecisionHandlerMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: Desktop & iOS.

Function: Decides whether to allow or cancel a navigation after its response is known.
Example:

```
Sub decidePolicyForNavigationResponse(navigationResponse as WKNavigationResponseMBS, decisionHandler as WKPolicyForNavigationResponseDecisionHandlerMBS) Handles decidePolicyForNavigationResponse
Var MimeType as string = navigationResponse.response.MIMEType

if MimeType = "application/zip" or _
MimeType = "application/x-tar" or _
MimeType = "application/octet-stream" then
// we download archive files
decisionHandler.Download
else
// allow normal website to load
decisionHandler.Allow

end if
End Sub
```

Notes: navigationResponse: Descriptive information about the navigation response.

You can show a dialog to ask user and once you know the decision call a method on decisionHandler object to report the decision.

206.18.56 DidClose

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: The webviewer closed.
Notes: Notifies your app that the DOM window object's close() method completed successfully.

Your app should remove the web view from the view hierarchy and update the UI as needed, such as by closing the containing browser tab or window.

206.18.57 didCommitNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Invoked when content starts arriving for the main frame.
Notes: Added navigation parameter with version 20.3.
Sets Navigation property.

206.18.58 didFailNavigation(navigation as WKNavigationMBS, Error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Invoked when an error occurs during a committed main frame navigation.
Notes: Sets Navigation property.

206.18.59 didFailProvisionalNavigation(navigation as WKNavigationMBS, Error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Invoked when an error occurs while starting to load data for the main frame.
Notes: Added navigation parameter with version 20.3.
Sets Navigation property.

206.18.60 didFinishNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Invoked when a main frame navigation completes.
Notes: Added navigation parameter with version 20.3.
Sets Navigation property.
Same as DocumentComplete in HTMLViewer.

206.18.61 DidReceiveAuthenticationChallenge(challenge as NSURLAuthenticationChallengeMBS, byref AuthChallengeDisposition as Integer, byref credentials as NSURLCredentialMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: Desktop & iOS.

Function: Asks the app to respond to an authentication challenge.
Notes: challenge: The authentication challenge.

AuthChallengeDisposition: The option to use to handle the challenge. For a list of options, see AuthChallenge* constants.
credential: The credential to use for authentication when the disposition parameter contains the value AuthChallengeUseCredential. Specify nil to continue without a credential.

If you don,Äôt implement this method, the web view responds to the authentication challenge with the AuthChallengeRejectProtectionSpace disposition.

206.18.62 didReceiveScriptMessage(Body as Variant, name as String)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Invoked when a script message is received from a webpage.
Notes: body: The body of the message. Automatic translated from Javascript types.
name: The name of the message handler to which the message is sent.

206.18.63 didReceiveServerRedirectForProvisionalNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Invoked when a server redirect is received for the main frame.
Notes: Added navigation parameter with version 20.3.
Sets Navigation property.

206.18.64 didStartProvisionalNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Invoked when a main frame navigation starts.
Notes: Added navigation parameter with version 20.3.
Sets Navigation property.

206.18.65 downloadDecideDestinationUsingResponse(download as WKDownloadMBS, response as NSURLResponseMBS, suggestedFilename as String, byref destination as FolderItem)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: Desktop & iOS.

Function: Asks the app to provide a file destination where the system should write the download data.
Notes: download: The download that needs a file destination where the systems should write the download data.
response: A response from the server for an HTTP request, or a synthesized response for a blob download.
suggestedFilename: A string with a filename suggestion to use in creating the file destination.
destination: A file destination where the systems should write the download data.

Set destination to where to store the file. Or set to nil to cancel.

The suggested filename can come from the response or from the web content.
The destination file URL must meet the following requirements:

- It,Äôs a file that doesn,Äôt exist.
- It,Äôs in a directory that exists.
- It,Äôs in a directory that WebKit can write to.

206.18.66 downloadDidFailWithError(download as WKDownloadMBS, error as NSErrorMBS, resumeData as MemoryBlock)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: Desktop & iOS.

Function: Tells your app that the download failed, with error information and data you can use to restart the download.
Notes: download: The download that failed.
error: An error describing what caused the download to fail.
resumeData: A data object you use to restart the download.

To restart a failed download, call resumeDownloadFromResumeData with resumeData.

206.18.67 downloadDidFinish(download as WKDownloadMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: Desktop & iOS.

Function: This event tells you that the download finished.
Notes: download: The download that finished.

206.18.68 downloadDidReceiveAuthenticationChallenge(download as WKDownloadMBS, challenge as NSURLAuthenticationChallengeMBS, byref AuthChallengeDisposition as Integer, byref credentials as NSURLCredentialMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: Desktop & iOS.

Function: Asks the delegate to respond to an authentication challenge.
Notes: download: The download that received the authentication challenge.
challenge: The authentication challenge.

Determine how to respond to the authentication challenge in this method. Then set AuthChallengeDisposition to AuthChallenge* constants and pass the credentials to use.

If you don,Äôt implement this method, the web view responds to the challenge with AuthChallengeRejectProtectionSpace.

206.18.69 downloadWillPerformHTTPRedirection(download as WKDownloadMBS, response as NSURLResponseMBS, request as NSURLRequestMBS, byref DownloadRedirectPolicy as Integer)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: Desktop & iOS.

Function: Asks the delegate to respond to the download,Äôs redirect response.
Notes: download: The download that receives the redirect response.
response: The redirect response.
request: The new request the web view sends as a result of the redirect response.

Set DownloadRedirectPolicy to either DownloadRedirectPolicyAllow or DownloadRedirectPolicyCancel.

A download redirect policy that indicates whether to proceed with the redirect.

Determine whether to proceed with the redirect. Then invoke the decisionHandler closure, providing a download redirect policy that indicates whether to proceed with the redirect.

If you don,Äôt implement this event, the web view proceeds with all redirects.

206.18.70 EstimatedProgressChanged(estimatedProgress as double, oldEstimatedProgress as double)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: The estimated progress for loading the webpage changed.
Notes: This event may be called often, so don't do much here!

206.18.71 findStringCompleted(Text as String, FindConfiguration as WKFindConfigurationMBS, result as WKFindResultMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 26.5, Platform: iOS, Targets: Desktop & iOS.

Function: The find operation completed.
Notes: See result.matchFound to see if you found something.

206.18.72 GotFocus

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

206.18.73 JavaScriptEvaluated(JavaScript as String, Result as Variant, Error as NSErrorMBS, Tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: JavaScript was evaluated.
Notes: Error is only set with 64-bit, not with 32-bit.
Tag is passed from EvaluateJavaScript call.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.

206.18.74 LostFocus

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: The control lost focus.

Notes: This only fires if the control itself lost focus and not a sub control.

206.18.75 navigationActionDidBecomeDownload(navigationAction as WKNavigationActionMBS, download as WKDownloadMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the app that a navigation action became a download.
Example:

```
Sub navigationActionDidBecomeDownload(navigationAction as WKNavigationActionMBS, download as WKDownloadMBS) Handles navigationActionDidBecomeDownload
System.DebugLog CurrentMethodName

// add download to your list of downloads you monitor
End Sub
```

Notes: navigationAction: Descriptive information about the navigation response that turned into a download.
download: An object that represents the download of a web resource.

Implement this method to begin tracking download progress.

206.18.76 navigationResponseDidBecomeDownload(navigationResponse as WKNavigationResponseMBS, download as WKDownloadMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the app that a navigation response became a download.
Example:

```
Sub navigationResponseDidBecomeDownload(navigationResponse as WKNavigationResponseMBS, download as WKDownloadMBS) Handles navigationResponseDidBecomeDownload
System.DebugLog CurrentMethodName

// add download to your list of downloads you monitor
End Sub
```

Notes: navigationResponse: Descriptive information about the navigation response that turned into a download.
download: An object that represents the download of a web resource.

Implement this method to begin tracking download progress.

206.18.77 Open

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: The control is about to was created and you can initialize it.

206.18.78 pauseAllMediaPlaybackCompleted

MBS Mac64bit Plugin, Plugin Version: 24.5, Platform: iOS, Targets: Desktop & iOS.

Function: The event the system executes after the web view pauses media playback.

206.18.79 requestMediaPlaybackStateCompleted(state as Integer)

MBS Mac64bit Plugin, Plugin Version: 24.5, Platform: iOS, Targets: Desktop & iOS.

Function: The event the system executes after the web view determines the current state of media playback.
Notes: State: A value that indicates whether the media in the web view is playing, paused, or suspended. If there,Äôs no media in the web view to play, this method provides MediaPlaybackStateNone.

206.18.80 runJavaScriptAlertPanel(initiatedByFrame as WKFrameInfoMBS, message as String)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Displays a JavaScript alert panel.
Notes: message: The message to display.

If you do not implement this method, the web view will behave as if the user selected the OK button.

206.18.81 runJavaScriptConfirmPanel(initiatedByFrame as WKFrameInfoMBS, message as String) as boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Displays a JavaScript confirm panel.
Notes: message: The message to display.

Return true if the user chose OK, false if the user chose Cancel.

If you do not implement this method, the web view will behave as if the user selected the Cancel button.

206.18.82 runJavaScriptTextInputPanel(initiatedByFrame as WKFrameInfoMBS, prompt as String, defaultText as String) as String

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Displays a JavaScript text input panel.
Notes: message: The message to display.
defaultText: The initial text to display in the text entry field.

Return the entered text if the user chose OK, otherwise "".

If you do not implement this method, the web view will behave as if the user selected the Cancel button.

206.18.83 takeSnapshotCompleted(image as NSImageMBS, error as NSErrorMBS, Tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Called when snapshot of website is completed.
Notes: If snapshot creation failed, error is set.

206.18.84 TitleChanged(Title as String, oldTitle as string)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: The title of the webpage changed.

206.18.85 WebContentProcessDidTerminate

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the app that the web view,Äôs content process was terminated.
Notes: Web views use a separate process to render and manage web content. WebKit calls this method when the process for the specified web view terminates for any reason.

206.18.86 Constants

Authentication Challenge Responses

Constant	Value	Description
AuthChallengeCancelAuthenticationChallenge	2	Cancel the entire request. The provided credential parameter is
AuthChallengePerformDefaultHandling	1	Use the default handling for the challenge as though this delegate not implemented. The provided credential parameter is ignored.
AuthChallengeRejectProtectionSpace	3	Reject this challenge, and call the authentication delegate meth the next authentication protection space. The provided credent is ignored.
AuthChallengeUseCredential	0	Use the specified credential, which may be nil.

Redirect Policy

Constant	Value	Description
DownloadRedirectPolicyAllow	1	Allow a redirect to proceed.
DownloadRedirectPolicyCancel	0	Cancel the redirect action.

206.19 class WKWebViewMBS

206.19.1 class WKWebViewMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: An object that displays interactive web content, such as for an in-app browser.
Example:

```
// This example needs a window with WKWebViewControlMBS1.
// run JavaScript in the page and read the result
Var web As WKWebViewMBS = WKWebViewControlMBS1.WKWebView
web.customUserAgent = "MyApp/1.0"

Var error As NSErrorMBS
Var result As Variant = web.EvaluateJavaScript("document.title", error)
If error <>Nil Then
MessageBox error.localizedDescription
Else
MessageBox "Title: " + result.StringValue + EndOfLine + "URL: " + web.URL
End If
```

Notes: see
https://developer.apple.com/documentation/webkit/wkwebview

If something is missing, please let us know and we can add it for you.
Subclass of the NSViewMBS class.

206.19.2 Methods

206.19.3 addUserScript(userScript as WKUserScriptMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Adds an user script.

206.19.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new web view with size 100/100 and position 0/0
Example:

```
Var x as new WebViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 206.19.5 Constructor(Handle as Integer) 24351
- 206.19.6 Constructor(left as double, top as double, width as double, height as double) 24352

206.19.5 Constructor(Handle as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an object based on the given WKWebView handle.
Example:

```
Var t as new WKWebViewMBS(0, 0, 100, 100)
Var v as new WKWebViewMBS(t.handle)

MessageBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a WKWebView and the plugin retains this handle.
See also:

- 206.19.4 Constructor 24351
- 206.19.6 Constructor(left as double, top as double, width as double, height as double) 24352

206.19.6 Constructor(left as double, top as double, width as double, height as double)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new button with the given size and position.
Example:

```
Var w as new WKWebViewMBS(0,0,800,600)

w.LoadHTMLString "Hello World",""
```

Notes: On success the handle property is not zero.
See also:

- 206.19.4 Constructor 24351
- 206.19.5 Constructor(Handle as Integer) 24351

206.19.7 copy

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Copies current text selection.

206.19.8 cut

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Cuts current text selection.

206.19.9 deleteSelection

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Deletes current text selection.

206.19.10 EvaluateJavaScript(JavaScript as String, byref Error as NSErrorMBS) as Variant

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Evaluates JavaScript.
Example:

```
Var w As WKWebViewMBS = WKWebViewControlMBS1.WKWebView
Var e As NSErrorMBS

// returns array of variants with doubles
Var v As Variant = w.EvaluateJavaScript("o = [ 1,2,3 ] ;", e)
Var vd() As Variant = v

// returns array of variants with strings
Var vv As Variant = w.EvaluateJavaScript("o = [ ""a"",""b"",""d"" ] ;", e)
Var vs() As Variant = vv

// returns dictionary
Var v3 As Variant = w.EvaluateJavaScript("o = { a:1 } ", e)
Var dd As Dictionary = v3

Break
```

Notes: Synchronous version which waits for JavaScript to return the value.
Error is set in case of errors.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.

206.19.11 findString(Text as String, FindConfiguration as WKFindConfigurationMBS = nil) as WKFindResultMBS

MBS Mac64bit Plugin, Plugin Version: 26.5, Platform: macOS, Targets: Desktop only.

Function: Searches for the specified string in the web view,Äôs content.
Example:

```
var w as WKWebViewMBS = Browser.WKWebView // your webviewer

Var c As New WKFindConfigurationMBS
c.wraps = True

Var r As WKFindResultMBS = w.findString("FileMaker", c)

If r.matchFound Then
MessageBox "found"
End If
```

Notes: Text: The search string to use.
configuration: The search parameters. Use this object to specify whether the search is case-sensitive, moves forward or backward, and wraps when it reaches the end of the page.

Waits for the search to finish and returns the result object.

206.19.12 getMediaPlaybackState as Integer

MBS Mac64bit Plugin, Plugin Version: 24.5, Platform: macOS, Targets: Desktop only.

Function: Requests the playback status of media in the web view.
Notes: See MediaPlaybackState* constants.

206.19.13 goBack

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates to the back item in the back-forward list.

206.19.14 goForward

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates to the forward item in the back-forward list.

206.19.15 goToBackForwardListItem(Item as WKBackForwardListItemMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates to an item from the back-forward list and sets it as the current item.
Notes: item: The item to which to navigate. Must be one of the items in the web view's back-forward list.

206.19.16 handlesURLScheme(urlScheme as String) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether or not WKWebViews handle the given URL scheme by default.
Notes: urlScheme: The URL scheme to check.

Returns true if supported.

206.19.17 HTMLText as String

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: Queries HTML text for the current main page.
Notes: This is live, so any changes made after loading will be included.

206.19.18 LoadData(Data as MemoryBlock, MIMEType as String, textEncodingName as String, baseURL as string = "")

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the webpage contents and base URL.
Example:

```
Var browser As WKWebViewMBS // your instance

browser.LoadData "<p>Hello World</p>", "text/html", "UTF-8", ""
```

Notes: data: The data to use as the contents of the webpage.
MIMEType: The MIME type of the data.
characterEncodingName: The data's character encoding name.
baseURL: A URL used to resolve relative URLs within the document.

206.19.19 LoadFileURL(File as FolderItem, readAccessItem as FolderItem)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates to a requested file.
Example:

```
Var w as WKWebViewMBS // your web viewer
Var HTMLFile as folderItem = New FolderItem("test.html")

// pass folderitem parent to allow read to other files in same folder
w.LoadFileURL HTMLFile, HTMLFile.parent
```

Notes: Navigates to the requested file URL on the filesystem.
file: The file URL to which to navigate.
readAccessItem: The file or folder to allow read access to.

If readAccessItem references a single file, only that file may be loaded by WebKit.
If readAccessItem references a directory, files inside that file may be loaded by WebKit.

206.19.20 LoadHTML(htmlText as String, baseURL as string = "")

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the webpage contents and base URL.
Example:

```
Var browser As WKWebViewMBS // your instance

browser.LoadHTML "<p>Hello World</p>"
```

Notes: htmlText: The string to use as the contents of the webpage.
baseURL: A URL used to resolve relative URLs within the document.

206.19.21 LoadURL(URL as string)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates to a requested URL.
Example:

```
Var browser As WKWebViewMBS // your instance

browser.LoadURL "https://www.mbsplugins.de/xojo"
```

206.19.22 LoadURLRequest(Request as NSURLRequestMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates to a requested URL.

206.19.23 MainResourceData(byref error as NSErrorMBS) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: Queries the source data from the webviewer.
Notes: Returns nil in case of error.
Also sets error parameter to NSErrorMBS for details on the error.

206.19.24 paste

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Pastes clipboard into current position in document.

206.19.25 pauseAllMediaPlayback

MBS Mac64bit Plugin, Plugin Version: 24.5, Platform: macOS, Targets: Desktop only.

Function: Pauses playback of all media in the web view.

206.19.26 PDFData(byref error as NSErrorMBS) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a PDF document representation from the web page currently displayed in the WKWebView.
Notes: Returns PDF data of new PDF Document.
If the data is written to a file the resulting file is a valid PDF document.

Available in macOS 11.0 or newer.
May also work if Safari 14 is installed on older macOS versions.

206.19.27 PlainText as String

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: Queries plain text for the current main page.
Notes: This is live, so any changes made after loading will be included.

206.19.28 printOperation(printInfo as NSPrintInfoMBS) as NSPrintOperationMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: Creates a print operation for the current web viewer.
Example:

```
Var browser as WKWebViewMBS // your web viewer
Var pi As NSPrintInfoMBS = NSPrintInfoMBS.sharedPrintInfo
```

```
Var po As NSPrintOperationMBS = browser.printOperation(pi)

po.showsPrintPanel = True
po.showsProgressPanel = True

po.runOperationModalForWindow(Self)
```

Notes: Works for WebKit 1.x and 2.x.

For WebKit 2.x may run into endless loop for some websites due to bugs in Apple's WebKit framework.

206.19.29 reload

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Reloads the current page.
Example:

```
Public Sub Reload(browser as WKWebViewMBS, force as Boolean)
If force Then
browser.reloadFromOrigin
Else
browser.reload
End If
End Sub
```

206.19.30 reloadFromOrigin

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Reloads the current page, performing end-to-end revalidation using cache-validating conditionals if possible.
Example:

```
Public Sub Reload(browser as WKWebViewMBS, force as Boolean)
If force Then
browser.reloadFromOrigin
Else
browser.reload
End If
End Sub
```

206.19.31 removeAllUserScripts

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Removes all associated user scripts.
Example:

```
Var browser As WKWebViewMBS // your instance

browser.removeAllUserScripts
```

206.19.32 selectAll

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Selects all.

206.19.33 setMagnification(magnification as double, pointX as double, pointY as double)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: Scales the page content by a specified factor and centers the result on a specified point.
Example:

```
Var browser As WKWebViewMBS // your instance

// zoom to 200% on 100/100
browser.setMagnification(2, 100, 100)
```

Notes: magnification: The factor by which to scale the content.
x/y: The point (in view space) to center magnification on. As usual with Cocoa, bottom is y = 0.

For MacOS 64-bit only.

206.19.34 stopLoading

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Stops loading all resources on the current page.
Example:

```
Var browser As WKWebViewMBS // your instance
```

browser.stopLoading

206.19.35 takeSnapshot(byref error as NSErrorMBS) as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Requests a snapshot.
Example:

```
// This example needs a window with HTMLViewer1.
// get a webview reference
Var web As WKWebViewMBS = HTMLViewer1.WKWebViewMBS

// take snapshot
Var error As NSErrorMBS
Var image As NSImageMBS = web.takeSnapshot(error)

If error <>Nil Then
MessageBox error.LocalizedDescription
return
End If

// save as PNG
Var png As String = image.PNGRepresentation

// write to file
Var f As FolderItem = SpecialFolder.Desktop.Child("test.png")
Var b As BinaryStream = BinaryStream.Create(f, True)
b.Write png
```

Notes: This is synchronous version which waits for image to be finished.
In case of error the result is nil and error may be set.

206.19.36 userScripts as WKUserScriptMBS()

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The user scripts associated with the user content controller.

206.19.37 WebArchiveData(byref error as NSErrorMBS) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: Queries web archive data for the website.
Example:

```
// This example needs a window with HTMLViewer1.
Var w As WKWebViewMBS = HTMLViewer1.WKWebViewMBS

Var error As NSErrorMBS
Var data As MemoryBlock = w.WebArchiveData(error)

Break // inspect in debugger
```

Notes: May return nil in case of error and maybe report the NSError in case of an error.

206.19.38 Properties

206.19.39 allowFileAccessFromFileURLs as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Allow file access for file URLs.
Example:

```
Var browser As WKWebViewMBS // your instance

browser.allowFileAccessFromFileURLs = True
```

Notes: Access to files is allowed for some files.
Please check WebKit documentation for details.

Set allowFileAccessFromFileURLs and allowUniversalAccessFromFileURLs to true to disable all the security checks to block local file access for websites. allowUniversalAccessFromFileURLs would allow all file URLs. allowFileAccessFromFileURLs would only allow in same path.
(Read and Write property)

206.19.40 allowsBackForwardNavigationGestures as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether horizontal swipe gestures will trigger back-forward list navigations.

Example:

```
Var browser As WKWebViewMBS // your instance

browser.allowsBackForwardNavigationGestures = True
```

Notes: The default value is false.
(Read and Write property)

206.19.41 allowsLinkPreview as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether pressing on a link displays a preview of the destination for the link.
Example:

```
Var browser As WKWebViewMBS // your instance

browser.allowsLinkPreview = True
```

Notes: (Read and Write property)

206.19.42 allowsMagnification as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether magnify gestures will change the web view,Äôs magnification.
Example:

```
Var browser As WKWebViewMBS // your instance

browser.allowsMagnification = True
```

Notes: The default value is false. You can set the magnification property even if allowsMagnification is set to false.
For MacOS 64-bit only.
(Read and Write property)

206.19.43 allowUniversalAccessFromFileURLs as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Allow universal file access for URLs.
Notes: Any file URL will be loaded if true.
Please check WebKit documentation for details.

Does not work in MacOS 10.14.
(Read and Write property)

206.19.44 backForwardList as WKWebViewMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The web view's back-forward list.
Notes: (Read only property)

206.19.45 backgroundColor as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The background color.
Example:

```
// This example needs a window with HTMLViewer1.
Var w As WKWebViewMBS = HTMLViewer1.WKWebViewMBS // your webviewer

w.drawsBackground = False
w.backgroundColor = NSColorMBS.clearColor
```

Notes: If background is not drawn and/or transparent, you may see through.
Requires also CSS to have web view page transparent.
(Read and Write property)

206.19.46 CanGoBack as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether there is a back item in the back-forward list that can be navigated to.
Example:

```
Var browser As WKWebViewMBS // your instance

MessageBox "CanGoBack: "+If(Browser.CanGoBack, "yes", "no")
```

Notes: (Read only property)

206.19.47 CanGoForward as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether there is a forward item in the back-forward list that can be navigated to.
Example:

```
Var browser As WKWebViewMBS // your instance

MessageBox "CanGoForward: "+If(Browser.CanGoForward, "yes", "no")
```

Notes: (Read only property)

206.19.48 Configuration as WKWebViewConfigurationMBS

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the configuration used to initialize the WKWebView.
Notes: (Read only property)

206.19.49 customUserAgent as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The custom user agent string.
Example:

```
Var browser As WKWebViewMBS // your instance

browser.customUserAgent = "MyBrowser/1.0"
```

Notes: If no custom user agent string has been set, this is set to "".
Available in 32-bit. Available in 64-bit for macOS 10.11 or newer.
(Read and Write property)

206.19.50 developerExtrasEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether developer extras are enabled.
Example:

```
Var browser As WKWebViewMBS // your instance

// enable context menu entry to show developer extras
browser.developerExtrasEnabled = True
```

Notes: Enables the context menu to inspect items.
(Read and Write property)

206.19.51 drawsBackground as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to draw background for the view.
Example:

```
// This example needs a window with HTMLViewer1.
Var w As WKWebViewMBS = HTMLViewer1.WKWebViewMBS // your webviewer

w.drawsBackground = False
w.backgroundColor = NSColorMBS.clearColor
```

Notes: If background is not drawn and/or transparent, you may see through.
Requires also CSS to have web view page transparent.
(Read and Write property)

206.19.52 EstimatedProgress as Double

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: An estimate of what fraction of the current navigation has been loaded.
Notes: This value ranges from 0.0 to 1.0 based on the total number of bytes expected to be received, including the main document and all of its potential subresources. After a navigation loading completes, the estimatedProgress remains at 1.0 until a new navigation starts, at which point the estimatedProgress is reset to 0.0.
(Read only property)

206.19.53 hasOnlySecureContent as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether all resources on the page have been loaded through securely encrypted connections.
Example:

```
Var browser As WKWebViewMBS // your instance

MessageBox "hasOnlySecureContent: "+If(Browser.hasOnlySecureContent, "yes", "no")
```

Notes: Only set for 64-bit, always false on 32-bit.
(Read only property)

206.19.54 HTTPCookieStore as WKHTTPCookieStoreMBS

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Convenience property to directly query HTTP cookie store for WKWebview configuration.
Example:

```
Var CookieStore As WKHTTPCookieStoreMBS = WKWebViewControlMBS1.WKWebView.HTTPCookieStore
Var cookies() As NSHTTPCookieMBS = CookieStore.AllCookies
Var cookie As NSHTTPCookieMBS = cookies(0)

// now check in debugger
Break
```

Notes: (Read only property)

206.19.55 IsLoading as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the view is currently loading content.
Example:

```
Var browser As WKWebViewMBS // your instance

// load a page
browser.LoadURL "https://www.mbsplugins.de/xojo"

// wait synchronously for website loading
While browser.IsLoading
DelayMBS 0.1
Wend
```

```
MessageBox "loaded"
```

Notes: (Read only property)

206.19.56 javaEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether java is enabled.
Example:

```
Var browser As WKWebViewMBS // your instance

MessageBox "JavaScript Enabled: "+If(Browser.javaEnabled, "yes", "no")
```

Notes: (Read and Write property)

206.19.57 javaScriptCanOpenWindowsAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether javascript can open new windows.
Example:

```
Var browser As WKWebViewMBS // your instance

// disable popup windows
Browser.javaScriptCanOpenWindowsAutomatically = False
```

Notes: (Read and Write property)

206.19.58 javaScriptEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: JavaScript was evaluated.
Example:

```
Var browser As WKWebViewMBS // your instance

MessageBox "JavaScript Enabled: "+If(Browser.javaScriptEnabled, "yes", "no")
```

Notes: Error is only set with 64-bit, not with 32-bit.
Tag is passed from EvaluateJavaScript call.
(Read and Write property)

206.19.59 loadsImagesAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to load images automatically.
Example:

```
Var browser As WKWebViewMBS // your instance

// disable loading of images
browser.loadsImagesAutomatically = False
```

Notes: (Read and Write property)

206.19.60 magnification as Double

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: The factor by which the page content is currently scaled.
Example:

```
Var browser As WKWebViewMBS // your instance

browser.magnification = 2.0
```

Notes: The default value is 1.0.
For MacOS 64-bit only.
(Read and Write property)

206.19.61 mediaType as String

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: The media type for the WKWebView.
Notes: The value of mediaType will override the normal value of the CSS media property.
Setting the value to "" will restore the normal value.
The default value is "".

Available in macOS 11.0 or newer.
(Read and Write property)

206.19.62 MIMEType as String

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: Queries current mime type for showing document.
Notes: Should be "text/html" for a website or "application/pdf" for a PDF document.
(Read only property)

206.19.63 minimumFontSize as Double

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The minimum font size to use.
Example:

```
Var browser As WKWebViewMBS // your instance

browser.minimumFontSize = 20
```

Notes: (Read and Write property)

206.19.64 pageZoom as Double

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: The factor by which page content is scaled relative to the viewport.
Notes: The default value is 1.0.
Changing this value is equivalent to web content setting the CSS "zoom" property on all page content.

Available in macOS 11.0 or newer.
(Read and Write property)

206.19.65 plugInsEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether plugins are enabled.
Example:

```
Var browser As WKWebViewMBS // your instance

MessageBox "plugInsEnabled: "+If(Browser.plugInsEnabled, "yes", "no")
```

Notes: (Read and Write property)

206.19.66 Preferences as WKPreferencesMBS

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Convenience property to directly query HTTP cookie store for WKWebview preferences.
Notes: (Read only property)

206.19.67 privateBrowsing as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether private browsing is enabled.
Example:

```
Var browser As WKWebViewMBS // your instance

MessageBox "privateBrowsing: "+If(Browser.privateBrowsing, "yes", "no")
```

Notes: If enabled, no data should be stored for cookies or cache on disk, so it's cleared when web viewer is destroyed.
Default is non-private mode for the web viewer.

It looks like you can't change mode after web viewer was created.
(Read and Write property)

206.19.68 Title as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The page title.
Example:

```
Var browser As WKWebViewMBS // your instance

MessageBox Browser.Title
```

Notes: (Read only property)

206.19.69 URL as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The active URL.
Example:

```
Var browser As WKWebViewMBS // your instance

MessageBox Browser.URL
```

Notes: This is the URL that should be reflected in the user interface.
(Read only property)

206.19.70 Constants

Media Playback States

Constant	Value	Description
MediaPlaybackStateNone	0	There is no media to play back.
MediaPlaybackStatePaused	2	The media playback is paused.
MediaPlaybackStatePlaying	1	The media is playing.
MediaPlaybackStateSuspended	3	The media is not playing, and cannot be resumed until the user revokes the suspension.

206.20 module WVWebViewModuleMBS

206.20.1 module WVWebViewModuleMBS

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: The module for global options to WKWebView.
Example:

WVWebViewModuleMBS.UsePrivateBrowsing = True

Blog Entries

- MBS Xojo Plugins, version 19.5pr5

206.20.2 Properties

206.20.3 UsePrivateBrowsing as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Whether to create WKWebViewControlMBS with private browsing enabled.
Example:

WVWebViewModuleMBS.UsePrivateBrowsing = True

Notes: Set this property to true before creating the WKWebViewControlMBS control, so the plugin can enable private browsing.
Set to false later to create a normal control again.

You may want to set this to true or false before the window opens and control initialized.
(Read and Write property)

Chapter 207

WebView2

207.1 control DesktopWebView2ControlMBS

207.1.1 control DesktopWebView2ControlMBS

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The MBS control for the Chrome based WebView2 control from Microsoft.
Notes: Read about WebView2 control here:
https://developer.microsoft.com/en-us/microsoft-edge/webview2/

There you also fine the installers needed to install it, unless you have the 2021 version of Windows, which may include it preinstalled.

If you use this control on macOS and Linux, it will do nothing.
On Windows if the control fails to initialize, the Opened event will not fire.
But if it fires, it will be some time after the open event fired as initialization is asynchronous.

If you call LoadURL, LoadHTML or set URL property too early, we cache that and perform the action later when the web viewer is initialized properly.

If you add an event, we register it with the C++ control. So if you don't specify an event, you may get the default behavior.

207.1.2 Methods

207.1.3 AddBrowserExtension(extensionFolderPath as String, tag as Variant = nil)

MBS WinFrameworks Plugin, Plugin Version: 24.5, Platform: Windows, Targets: Desktop only.

Function: Adds the browser extension using the extension path for unpacked extensions from the local device.
Notes: Extension is running right after installation. The extension folder path is the topmost folder of an unpacked browser extension and contains the browser extension manifest file. If the extensionFolderPath is an invalid path or doesn't contain the extension manifest.json file, this function will return ERROR_FILE_NOT_FOUND to callers. Installed extension will default IsEnabled to true. When AreBrowserExtensionsEnabled is FALSE, AddBrowserExtension will fail and return HRESULT ERROR_NOT_SUPPORTED. During installation, the content of the extension is not copied to the user data folder. Once the extension is installed, changing the content of the extension will cause the extension to be removed from the installed profile. When an extension is added the extension is persisted in the corresponding profile. The extension will still be installed the next time you use this profile. When an extension is installed from a folder path, adding the same extension from the same folder path means reinstalling this extension. When

two extensions with the same Id are installed, only the later installed extension will be kept.

Extensions that are designed to include any UI interactions (e.g. icon, badge, pop up, etc.) can be loaded and used but will have missing UI entry points due to the lack of browser UI elements to host these entry points in WebView2.

207.1.4 AddScriptToExecuteOnDocumentCreated(JavaScript as String, tag as variant = nil)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Add the provided JavaScript to a list of scripts that should be executed after the global object has been created, but before the HTML document has been parsed and before any other script included by the HTML document is executed.
Notes: This method injects a script that runs on all top-level document and child frame page navigations. This method runs asynchronously, and you must wait for the completion handler to finish before the injected script is ready to run. When this method completes, the handler's Invoke method is called with the id of the injected script. id is a string. To remove the injected script, use RemoveScriptToExecuteOnDocumentCreated.
Note that if an HTML document has sandboxing of some kind via sandbox properties or the Content-Security-Policy HTTP header this will affect the script run here. So, for example, if the 'allow-modals' keyword is not set then calls to the alert function will be ignored.

Calls AddScriptToExecuteOnDocumentCreatedCompleted event later when done.

207.1.5 AddWebResourceRequestedFilter(URL as String, resourceType as Integer)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Adds a URI and resource context filter to the WebResourceRequested event.
Notes: The URI parameter can be a wildcard string ('*': zero or more, '?': exactly one). See kWebResourceContext constants for description of resource context filters.

207.1.6 AvailableCoreWebView2BrowserVersionString as string

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The available version of the WebView2 browser.
Notes: Allows you to query the browser version before creating a control.
Returns empty text if none is available.

207.1.7 CanGoBack as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Returns true if the WebView can navigate to a previous page in the navigation history.
Notes: The HistoryChanged event will fire if CanGoBack changes value.

Returns false if the browser is not yet initialized.

207.1.8 CanGoForward as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Returns true if the WebView can navigate to a next page in the navigation history.
Notes: The HistoryChanged event will fire if CanGoForward changes value.

Returns false if the browser is not yet initialized.

207.1.9 CapturePreview(ImageFormat as Integer = 0)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Capture an image of what WebView is displaying.
Notes: Specify the format of the image with the imageFormat parameter. The resulting image binary data is passed to the CapturePreviewCompleted event.

Calls CapturePreviewCompleted event when done or failed.

207.1.10 ClearSelection

MBS WinFrameworks Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: Asks webview to clear current selection.
Notes: This is the reverse for SelectAll.

207.1.11 ClearVirtualHostNameToFolderMapping(hostName as String)

MBS WinFrameworks Plugin, Plugin Version: 23.4, Platform: Windows, Targets: Desktop only.

Function: Clears a host name mapping for local folder that was added by SetVirtualHostNameToFolderMapping.
Notes: hostName: The host name to be removed from the mapping.

207.1.12 Copy

MBS WinFrameworks Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: Asks webview to copy current selection to clipboard.

207.1.13 CreatePrintSettings as WebView2PrintSettingsMBS

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop only.

Function: Creates the WebView2PrintSettingsMBS object used by the PrintToPdf method.

207.1.14 Cut

MBS WinFrameworks Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: Asks webview to cut current selection.
Notes: May do a copy, if selection is read only.

207.1.15 ExecuteScript(JavaScript as String, tag as variant = nil)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Execute JavaScript code from the javascript parameter in the current top level document rendered in the WebView.
Example:

```
Var web as DesktopWebView2ControlMBS // your control

web.ExecuteScript "1+5" , "tag value"

// triggers ExecuteScriptCompeleted later with result "6"

web.ExecuteScript "window.chrome.webview.postMessage( { 'Test': 'Hello, world!' } );"
```

```
// triggers later WebMessageReceived later
```

Notes: This will execute asynchronously and when complete, if a handler is provided in the ExecuteScriptCompletedHandler parameter, its Invoke method will be called with the result of evaluating the provided JavaScript. The result value is a JSON encoded string. If the result is undefined, contains a reference cycle, or otherwise cannot be encoded into JSON, the JSON null value will be returned as the string 'null'. Note that a function that has no explicit return value returns undefined. If the executed script throws an unhandled exception, then the result is also 'null'. This method is applied asynchronously. If the method is called after NavigationStarting event during a navigation, the script will be executed in the new document when loading it, around the time ContentLoading is fired. ExecuteScript will work even if IsScriptEnabled is set to false.

Calls ExecuteScriptCompleted event later.

207.1.16 ExecuteScriptSync(JavaScript as String, byref ErrorCode as Integer) as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Execute JavaScript code from the javascript parameter in the current top level document rendered in the WebView.
Example:

```
Var web as DesktopWebView2ControlMBS // your control

Var errorCode as integer
Var s as string = web.ExecuteScriptSync("1+2", errorCode)

Break // s contains 3
```

Notes: Same as ExecuteScript, but waits for event and returns result directly.
errorCode is zero on success.
Result is JSON as text, e.g. "null" if there is no result.

207.1.17 GetFavicon(ImageFormat as Integer = 0)

MBS WinFrameworks Plugin, Plugin Version: 25.4, Platform: Windows, Targets: Desktop only.

Function: Async function for getting the actual image data of the favicon.
Notes: Raises FaviconCompleted event later.

Please pass a kFaviconImageFormatJPEG or kFaviconImageFormatPNG values for the image format.

207.1.18 GoBack

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Navigates the WebView to the previous page in the navigation history.

207.1.19 GoForward

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Navigates the WebView to the next page in the navigation history.

207.1.20 HTMLText as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Queries HTML text of the current website.
Example:

```
Var web as DesktopWebView2ControlMBS // your control

Var text as string = web.plaintext
Var html as string = web.HTMLText

break // check in debugger
```

Notes: Please don't call directly from NavigationCompleted event since that can freeze. Better use timer.CallLater to call a method later to do this a millisecond later.

207.1.21 LoadHTML(HTML as String)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Initiates a navigation to htmlContent as source HTML of a new document.
Notes: The htmlContent parameter may not be larger than 2 MB in total size. The origin of the new page will be about:blank.

207.1.22 LoadURL(URL as String)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Cause a navigation of the top level document to the specified URI.
Notes: See the navigation events for more information. Note that this starts a navigation and the corresponding NavigationStarting event will fire sometime after this Navigate call completes.

207.1.23 MoveFocus(reason as integer = 0)

MBS WinFrameworks Plugin, Plugin Version: 26.2, Platform: Windows, Targets: Desktop only.

Function: Moves focus.
Example:

```
// set focus in Xojo and then also Focus to WebView:

DesktopWebView2ControlMBS1.SetFocus
DesktopWebView2ControlMBS1.MoveFocus(DesktopWebView2ControlMBS1.kMoveFocusReasonProgrammatic)
```

Notes: WebView will get focus and focus will be set to correspondent element in the page hosted in the WebView. For Programmatic reason, focus is set to previously focused element or the default element if no previously focused element exists. For Next reason, focus is set to the first element. For Previous reason, focus is set to the last element. WebView changes focus through user interaction including selecting into a WebView or Tab into it. For tabbing, the app runs MoveFocus with Next or Previous to align with Tab and Shift+Tab respectively when it decides the WebView is the next tabable element.

Pass kMoveFocusReasonNext, kMoveFocusReasonPrevious or kMoveFocusReasonProgrammatic as value.

207.1.24 OpenDevToolsWindow

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Opens the DevTools window for the current document in the WebView.
Notes: Does nothing if called when the DevTools window is already open.

207.1.25 Paste

MBS WinFrameworks Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: Asks webview to paste clipboard content into the current field.
Notes: This may do nothing if there is nothing to paste or nothing to receive (no field in focus).

207.1.26 PlainText as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Queries plain text of the current website.
Example:

```
Var web as DesktopWebView2ControlMBS // your control

Var text as string = web.plaintext
Var html as string = web.HTMLText

break // check in debugger
```

Notes: Please don't call directly from NavigationCompleted event since that can freeze. Better use timer.CallLater to call a method later to do this a millisecond later.

207.1.27 PostWebMessageAsJson(webMessageAsJson as String)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Post the specified webMessage to the top level document in this WebView.
Notes: The top level document's window.chrome.webview's message event fires. JavaScript in that document may subscribe and unsubscribe to the event via the following:

```
window.chrome.webview.addEventListener('message', handler)
window.chrome.webview.removeEventListener('message', handler)
```

The event args is an instance of MessageEvent. The IsWebMessageEnabled setting must be true or this method will fail with E_INVALIDARG. The event arg's data property is the webMessage string parameter parsed as a JSON string into a JavaScript object. The event arg's source property is a reference to the window.chrome.webview object. See add_WebMessageReceived for information on sending messages from the HTML document in the WebView to the host. This message is sent asynchronously. If a navigation occurs before the message is posted to the page, then the message will not be sent.

207.1.28 PostWebMessageAsString(webMessageAsString as String)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: This is a helper for posting a message that is a simple string rather than a JSON string representation of a JavaScript object..

Notes: This behaves in exactly the same manner as PostWebMessageAsJson but the window.chrome.webview message event arg's data property will be a string with the same value as webMessageAsString. Use this instead of PostWebMessageAsJson if you want to communicate via simple strings rather than JSON objects.

207.1.29 Print

MBS WinFrameworks Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: Asks webview to show print dialog.

207.1.30 PrintToPdf(File as FolderItem, PrintSettings as WebView2PrintSettingsMBS = nil)

MBS WinFrameworks Plugin, Plugin Version: 26.4, Platform: Windows, Targets: Desktop only.

Function: Print the current page to PDF asynchronously with the provided settings.
See also:

- 207.1.31 PrintToPdf(Path as String, PrintSettings as WebView2PrintSettingsMBS = nil) 24382

207.1.31 PrintToPdf(Path as String, PrintSettings as WebView2PrintSettingsMBS = nil)

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: Print the current page to PDF asynchronously with the provided settings.
Notes: Use Path to specify the path to the PDF file. The host should provide an absolute path, including file name. If the path points to an existing file, the file will be overwritten. If the path is not valid, the method fails with E_INVALIDARG.

The async PrintToPdf operation completes when the data has been written to the PDF file. At this time the PrintCompleted event is invoked. If the application exits before printing is complete, the file is not saved. Only one Printing operation can be in progress at a time. If PrintToPdf is called while a printing operation is in progress, the event is immediately invoked with isSuccessful set to false.

Requires WebView2 in version 1.0.1020.30 or later.
See also:

- 207.1.30 PrintToPdf(File as FolderItem, PrintSettings as WebView2PrintSettingsMBS = nil) 24382

207.1.32 Reload

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Reload the current page.
Notes: This is similar to navigating to the URI of current top level document including all navigation events firing and respecting any entries in the HTTP cache. But, the back/forward history will not be modified.

207.1.33 RemoveScriptToExecuteOnDocumentCreated(ID as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Remove the corresponding JavaScript added using AddScriptToExecuteOnDocumentCreated with the specified script id.

207.1.34 RemoveWebResourceRequestedFilter(URL as String, resourceType as Integer)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Removes a matching WebResource filter that was previously added for the WebResourceRequested event.
Notes: If the same filter was added multiple times, then it will need to be removed as many times as it was added for the removal to be effective. Raises exception with E_INVALIDARG for a filter that was never added.

207.1.35 SelectAll

MBS WinFrameworks Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: Asks webview to select all text.

207.1.36 SetVirtualHostNameToFolderMapping(hostName as String, folderPath as String, accessKind as Integer)

MBS WinFrameworks Plugin, Plugin Version: 23.4, Platform: Windows, Targets: Desktop only.

Function: Sets a mapping between a virtual host name and a folder path to make available to web sites via that host name.
Notes: hostName: A virtual host name.
folderPath: A folder path name to be mapped to the virtual host name. The length must not exceed the

Windows MAX_PATH limit.
accessKind: The level of access to resources under the virtual host from other sites.

See kHostResourceAccessKind* constants.

207.1.37 Stop

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Stop all navigations and pending resource fetches.
Notes: Does not stop scripts.

207.1.38 Properties

207.1.39 AdditionalBrowserArguments as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Additional browser arguments can be specified to change the behavior of the WebView.
Notes: These will be passed to the browser process as part of the command line. See Run Chromium with Flags for more information about command line switches to browser process. If the app is launched with a command line switch –edge-webview-switches=xxx the value of that switch (xxx in the above example) will also be appended to the browser process command line. Certain switches like –user-data-dir are internal and important to WebView. Those switches will be ignored even if specified. If the same switches are specified multiple times, the last one wins. There is no attempt to merge the different values of the same switch, except for disabled and enabled features. The features specified by –enable-features and –disable-features will be merged with simple logic: the features will be the union of the specified features and built-in features, and if a feature is disabled, it will be removed from the enabled features list. App process's command line –edge-webview-switches value are processed after the additionalBrowserArguments parameter is processed. Certain features are disabled internally and can't be enabled. If parsing failed for the specified switches, they will be ignored. Default is to run browser process with no extra flags.
(Read and Write property)

207.1.40 AllowSingleSignOnUsingOSPrimaryAccount as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The AllowSingleSignOnUsingOSPrimaryAccount property is used to enable single sign on with Azure Active Directory (AAD) resources inside WebView using the logged in Windows account and single sign on with web sites using Microsoft account associated with the login in Windows account.
Notes: Default is disabled. Universal Windows Platform apps must also declare enterpriseCloudSSO restricted capability for the single sign on to work.

(Read and Write property)

207.1.41 areBrowserAcceleratorKeysEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Whether all accelerator keys are enabled.
Notes: When this setting is set to false, it disables all accelerator keys that access features specific to a web browser, including but not limited to:

- Ctrl-F and F3 for Find on Page
- Ctrl-P for Print
- Ctrl-R and F5 for Reload
- Ctrl-Plus and Ctrl-Minus for zooming
- Ctrl-Shift-C and F12 for DevTools
- Special keys for browser functions, such as Back, Forward, and Search

It does not disable accelerator keys related to movement and text editing, such as:

- Home, End, Page Up, and Page Down
- Ctrl-X, Ctrl-C, Ctrl-V
- Ctrl-A for Select All
- Ctrl-Z for Undo

Those accelerator keys will always be enabled unless they are handled in the AcceleratorKeyPressed event. This setting has no effect on the AcceleratorKeyPressed event. The event will be fired for all accelerator keys, whether they are enabled or not.

The default value for AreBrowserAcceleratorKeysEnabled is true.

Needs WebView2 in version 1.0.864.35 or newer.
(Read and Write property)

207.1.42 AreBrowserExtensionsEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 24.5, Platform: Windows, Targets: Desktop only.

Function: Enable/disable browser extensions.
Notes: When AreBrowserExtensionsEnabled is set to true, new extensions can be added to user profile and used. AreBrowserExtensionsEnabled is default to be false, in this case, new extensions can't be installed, and already installed extension won't be available to use in user profile. If connecting to an already running environment with a different value for AreBrowserExtensionsEnabled property, it will fail with invalidate state error.

Must be set before browser is initialized.
(Read and Write property)

207.1.43 AreDefaultContextMenusEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The AreDefaultContextMenusEnabled property is used to prevent default context menus from being shown to user in WebView.
Notes: It is true by default.
(Read and Write property)

207.1.44 AreDefaultScriptDialogsEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: AreDefaultScriptDialogsEnabled is used when loading a new HTML document.
Notes: If set to false, then WebView won't render the default JavaScript dialog box (Specifically those shown by the JavaScript alert, confirm, prompt functions and beforeunload event). Instead, if an event handler is set via add_ScriptDialogOpening, WebView will send an event that will contain all of the information for the dialog and allow the host app to show its own custom UI. It is true by default.
(Read and Write property)

207.1.45 AreDevToolsEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: AreDevToolsEnabled controls whether the user is able to use the context menu or keyboard shortcuts to open the DevTools window.
Notes: It is true by default.
(Read and Write property)

207.1.46 AreHostObjectsAllowed as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The AreHostObjectsAllowed property is used to control whether host objects are accessible from the page in WebView.
Notes: It is true by default.
(Read and Write property)

207.1.47 Browser as WebView2BrowserMBS

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Queries the browser object for the WebView2 control.
Notes: (Read only property)

207.1.48 BrowserExecutableFolder as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The path to the browser executable to use.
Notes: Must be assigned very early, e.g. in Configure event, before initialization of the control runs.

Use browserExecutableFolder to specify whether WebView2 controls use a fixed or installed version of the WebView2 Runtime that exists on a user machine. To use a fixed version of the WebView2 Runtime, pass the relative folder path that contains the fixed version of the WebView2 Runtime to browserExecutableFolder. To create WebView2 controls that use the installed version of the WebView2 Runtime that exists on user machines, pass a empty string to browserExecutableFolder. In this scenario, the API tries to find a compatible version of the WebView2 Runtime that is installed on the user machine (first at the machine level, and then per user) using the selected channel preference. The path of fixed version of the WebView2 Runtime should not contain \Edge\Application\. When such a path is used, the API fails with HRESULT_FROM_WIN32(ERROR_NOT_SUPPORTED).
(Read and Write property)

207.1.49 BrowserVersionString as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The browser version info of the current environment, including channel name if it is not the stable channel.
Notes: This matches the format of the AvailableCoreWebView2BrowserVersionString API. Channel names are 'beta', 'dev', and 'canary'.

(Read only property)

207.1.50 ContainsFullScreenElement as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Indicates if the WebView contains a fullscreen HTML element.
Notes: (Read only property)

207.1.51 CookieManager as WebView2CookieManagerMBS

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: Gets the cookie manager object associated with this webview.
Notes: Requires WebView2 version 1.0.705.50 from January 2021.
(Read only property)

207.1.52 DefaultBackgroundColor as Color

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The DefaultBackgroundColor property is the color WebView renders underneath all web content.
Example:

```
// set transparent in Opened event:

web.DefaultBackgroundColor = &cFFFFFFFF
```

Notes: This means WebView renders this color when there is no web content loaded such as before the initial navigation or between navigations. This also means web pages with undefined css background properties or background properties containing transparent pixels will render their contents over this color. Web pages with defined and opaque background properties that span the page will obscure the DefaultBackgroundColor and display normally. The default value for this property is white to resemble the native browser experience.

The Color is specified by the color that represents an RGBA value. The A represents an Alpha value, meaning DefaultBackgroundColor can be transparent. In the case of a transparent DefaultBackgroundColor WebView will render hosting app content as the background. This Alpha value is not supported on Windows 7. Any A value other than 255 will result in an exception on Windows 7. It is supported on all other WebView compatible platforms.

Semi-transparent colors are not currently supported by this API and setting DefaultBackgroundColor to a semi-transparent color will fail with an exception. The only supported alpha values are 0 and 255, all other

values will result in exception. DefaultBackgroundColor can only be an opaque color or transparent.

Requires version 1.0.774.44 of Webview2 or newer.
Can't be set in Open event as the control is not yet ready.
(Read and Write property)

207.1.53 DefaultDownloadFolderPath as String

MBS WinFrameworks Plugin, Plugin Version: 25.5, Platform: Windows, Targets: Desktop only.

Function: The default download folder path.
Notes: The default value is the system default download folder path for the user. The default download folder path is persisted in the user data folder across sessions. The value should be an absolute path to a folder that the user and application can write to. Throws an exception if the value is invalid, and the default download path is not changed. Otherwise the path is changed immediately. If the directory does not yet exist, it is created at the time of the next download. If the host application does not have permission to create the directory, then the user is prompted to provide a new path through the Save As dialog. The user can override the default download folder path for a given download by choosing a different path in the Save As dialog.
(Read and Write property)

207.1.54 DocumentTitle as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The title for the current top level document.
Notes: If the document has no explicit title or is otherwise empty, a default that may or may not match the URI of the document will be used.
(Read only property)

207.1.55 FaviconURI as String

MBS WinFrameworks Plugin, Plugin Version: 25.4, Platform: Windows, Targets: Desktop only.

Function: Get the current Uri of the favicon as a string.
Example:

```
Var url As String = web.FaviconURI

MessageBox url
```

Notes: If a page has no favicon then the value is an empty string.

(Read only property)

207.1.56 HiddenPdfToolbarItems as Integer

MBS WinFrameworks Plugin, Plugin Version: 24.2, Platform: Windows, Targets: Desktop only.

Function: Customize the PDF toolbar items.
Notes: By default, it is 0 and so it displays all of the items. Changes to this property apply to all CoreWebView2s in the same environment and using the same profile. Changes to this setting apply only after the next navigation.

Available values:

Bookmarks	256	The contents button on PDF toolbar.
FitPage	64	The fit to width button on PDF toolbar.
FullScreen	2048	The full screen button on PDF toolbar.
MoreSettings	4096	The setting and more button on PDF toolbar. Gear icon.
None	0	No item. By default the HiddenPdfToolbarItems equal to this value.
PageLayout	128	The page view button on PDF toolbar.
PageSelector	512	The page number button on PDF toolbar.
Print	2	The print button on PDF toolbar.
Rotate	32	The rotate button on PDF toolbar.
Save	1	The save button on PDF toolbar.
SaveAs	4	The save as button on PDF toolbar.
Search	1024	The search button on PDF toolbar.
ZoomIn	8	The zoom in button on PDF toolbar.
ZoomOut	16	The zoom out button on PDF toolbar.

Seems like 256 hides the whole toolbar.
(Read and Write property)

207.1.57 IsBuiltInErrorPageEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The IsBuiltInErrorPageEnabled property is used to disable built in error page for navigation failure and render process failure.
Notes: It is true by default. When disabled, blank page will be shown when related error happens.
(Read and Write property)

207.1.58 IsDocumentPlayingAudio as Boolean

MBS WinFrameworks Plugin, Plugin Version: 24.5, Platform: Windows, Targets: Desktop only.

Function: Indicates whether any audio output from this web viewer is playing.
Notes: This property will be true if audio is playing even if IsMuted is true.
(Read only property)

207.1.59 IsGeneralAutofillEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Whether autofill for information like names, street and email addresses, phone numbers, and arbitrary input is enabled.
Notes: This excludes password and credit card information. When IsGeneralAutofillEnabled is false, no suggestions appear, and no new information is saved. When IsGeneralAutofillEnabled is true, information is saved, suggestions appear and clicking on one will populate the form fields. The default value is true.

Needs WebView2 in version 1.0.902.49 or newer.
(Read and Write property)

207.1.60 IsInPrivateModeEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Whether private mode is enabled.
Notes: (Read only property)

207.1.61 IsMuted as Boolean

MBS WinFrameworks Plugin, Plugin Version: 24.5, Platform: Windows, Targets: Desktop only.

Function: Indicates or sets whether all audio output from this web viewer is muted or not.
Notes: Can be read and set.
(Read and Write property)

207.1.62 IsPasswordAutosaveEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Whether autosave for password information is enabled.
Notes: The IsPasswordAutosaveEnabled property behaves independently of the IsGeneralAutofillEnabled property. When IsPasswordAutosaveEnabled is false, no new password data is saved and no Save/Update Password prompts are displayed. However, if there was password data already saved before disabling this setting, then that password information is auto-populated, suggestions are shown and clicking on one will populate the fields. When IsPasswordAutosaveEnabled is true, password information is auto-populated, suggestions are shown and clicking on one will populate the fields, new data is saved, and a Save/Update Password prompt is displayed. The default value is false.

Needs WebView2 in version 1.0.902.49 or newer.
(Read and Write property)

207.1.63 IsPinchZoomEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Enable or disable pitch zoom.
Notes: Pinch-zoom, referred to as "Page Scale" zoom, is performed as a post-rendering step, it changes the page scale factor property and scales the surface the web page is rendered onto when user performs a pinch zooming action.

It does not change the layout but rather changes the viewport and clips the web content, the content outside of the viewport isn't visible onscreen and users can't reach this content using mouse.
The IsPinchZoomEnabled property enables or disables the ability of the end user to use a pinching motion on touch input enabled devices to scale the web content in the WebView2. It defaults to TRUE. When set to FALSE, the end user cannot pinch zoom after the next navigation. Disabling/Enabling IsPinchZoomEnabled only affects the end user's ability to use pinch motions and does not change the page scale factor. This API only affects the Page Scale zoom and has no effect on the existing browser zoom properties (IsZoomControlEnabled and ZoomFactor) or other end user mechanisms for zooming.

Needs WebView2 in version 1.0.902.49 or newer.
(Read and Write property)

207.1.64 IsScriptEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Controls if JavaScript execution is enabled in all future navigations in the WebView.
Notes: This only affects scripts in the document; scripts injected with ExecuteScript will run even if script is disabled. It is true by default.
(Read and Write property)

207.1.65 IsStatusBarEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: IsStatusBarEnabled controls whether the status bar will be displayed.
Notes: The status bar is usually displayed in the lower left of the WebView and shows things such as the URI of a link when the user hovers over it and other information. It is true by default.
(Read and Write property)

207.1.66 IsSwipeNavigationEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 24.2, Platform: Windows, Targets: Desktop only.

Function: Determines whether the end user to use swiping gesture on touch input enabled devices to navigate in WebView2.
Notes: Swiping gesture navigation on touch screen includes:

- Swipe left/right (swipe horizontally) to navigate to previous/next page in navigation history.
- Pull to refresh (swipe vertically) the current page. (This feature is currently disabled by default in the browser, to enable in WebView2, set AdditionalBrowserArguments property with –pull-to-refresh switch).

It defaults to true. When set to false, the end user cannot swipe to navigate or pull to refresh. This API only affects the overscrolling navigation functionality and has no effect on the scrolling interaction used to explore the web content shown in WebView2.
(Read and Write property)

207.1.67 IsWebMessageEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The IsWebMessageEnabled property is used when loading a new HTML document.
Notes: If set to true, communication from the host to the WebView's top level HTML document is allowed via PostWebMessageAsJson, PostWebMessageAsString, and window.chrome.webview's message event (see PostWebMessageAsJson documentation for details). Communication from the WebView's top level HTML document to the host is allowed via window.chrome.webview's postMessage function and add_WebMessageReceived method (see add_WebMessageReceived documentation for details). If set to false, then communication is disallowed. PostWebMessageAsJson and PostWebMessageAsString will fail with E_ACCESSDENIED and window.chrome.webview.postMessage will fail by throwing an instance of an Error object. It is true by default.
(Read and Write property)

207.1.68 IsZoomControlEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The IsZoomControlEnabled property is used to prevent the user from impacting the zoom of the WebView.
Notes: It is true by default. When disabled, user will not be able to zoom using ctrl+/- or ctrl+mouse wheel, but the zoom can be set via ZoomFactor API.
(Read and Write property)

207.1.69 Language as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The default language that WebView will run with.
Notes: It applies to browser UIs like context menu and dialogs. It also applies to the accept-languages HTTP header that WebView sends to web sites. It is in the format of language [-country] where language is the 2 letter code from ISO 639 and country is the 2 letter code from ISO 3166.
(Read and Write property)

207.1.70 MemoryUsageTargetLevel as Integer

MBS WinFrameworks Plugin, Plugin Version: 25.4, Platform: Windows, Targets: Desktop only.

Function: Indicates desired memory consumption level of WebView.
Notes: Scripts will not be impacted and continue to run. This is useful for inactive apps that still want to run scripts and/or keep network connections alive and therefore could not call TrySuspend and Resume to reduce memory consumption. These apps can set memory usage target level to kMemoryUsageTargetLevelLow when the app becomes inactive, and set back to kMemoryUsageTargetLevelNormal when the app becomes active.

It is not necessary to set CoreWebView2Controller's IsVisible property to false when setting the property. It is a best effort operation to change memory usage level, and the API will return before the operation completes. Setting the level to kMemoryUsageTargetLevelLow could potentially cause memory for some WebView browser processes to be swapped out to disk in some circumstances. It is a best effort to reduce memory usage as much as possible. If a script runs after its related memory has been swapped out, the memory will be swapped back in to ensure the script can still run, but performance might be impacted. Therefore, the app should set the level back to kMemoryUsageTargetLevelNormal when the app becomes active again. Setting memory usage target level back to normal will not happen automatically.

An app should choose to use either the combination of TrySuspend and Resume or the combination of setting MemoryUsageTargetLevel to low and normal. It is not advisable to mix them. Trying to set MemoryUsageTargetLevel while suspended will be ignored. The TrySuspend and Resume methods will change the MemoryUsageTargetLevel. TrySuspend will automatically set MemoryUsageTargetLevel to low while

Resume on suspended WebView will automatically set MemoryUsageTargetLevel to normal. Calling Resume when the WebView is not suspended would not change MemoryUsageTargetLevel.
(Read and Write property)

207.1.71 PreferredColorScheme as Integer

MBS WinFrameworks Plugin, Plugin Version: 25.5, Platform: Windows, Targets: Desktop only.

Function: The PreferredColorScheme property sets the overall color scheme of the WebView2s associated with this profile.
Example:

```
var web as DesktopWebView2ControlMBS // your web viewer
web.PreferredColorScheme = web.kPreferredColorSchemeDark
```

Notes: This sets the color scheme for WebView2 UI like dialogs, prompts, and menus by setting the media feature prefers-color-scheme. The default value for this is kPreferredColorSchemeAuto, which will follow whatever color scheme the OS is currently set to.
(Read and Write property)

207.1.72 ProcessID as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The process id of the browser process that hosts the WebView.
Notes: (Read only property)

207.1.73 ProfilePath as String

MBS WinFrameworks Plugin, Plugin Version: 25.5, Platform: Windows, Targets: Desktop only.

Function: Full path of the profile directory.
Notes: (Read only property)

207.1.74 TargetCompatibleBrowserVersion as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The version of the Edge WebView2 Runtime binaries required to be compatible with the calling application.
Notes: This defaults to the Edge WebView2 Runtime version that corresponds with the version of the SDK

the application is using. The format of this value is the same as the format of the BrowserVersionString property and other BrowserVersion values. Only the version part of the BrowserVersion value is respected. The channel suffix, if it exists, is ignored. The version of the Edge WebView2 Runtime binaries actually used may be different from the specified TargetCompatibleBrowserVersion. They are only guaranteed to be compatible. You can check the actual version on the BrowserVersionString property on the control.
(Read and Write property)

207.1.75 URL as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The URI of the current top level document.
Notes: This value potentially changes as a part of the SourceChanged event firing for some cases such as navigating to a different site or fragment navigations. It will remain the same for other types of navigations such as page reloads or history.pushState with the same URL as the current page.

If assigned, calls LoadURL method.
(Read and Write property)

207.1.76 UserAgent as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The User Agent.
Notes: The default value is the default User Agent of the Microsoft Edge browser.

This property may be overridden if the User-Agent header is set in a request. If the parameter is empty the User Agent will not be updated and the current User Agent will remain.

Needs WebView2 in version 1.0.864.35 or newer.
(Read and Write property)

207.1.77 UserDataFolder as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The user data folder location.
Example:

```
Var w As DesktopWebView2ControlMBS // your control

Var SupportFolder As FolderItem = SpecialFolder.ApplicationData.Child("MyApp")
```

SupportFolder.CreateAsFolder

w.UserDataFolder = SupportFolder.NativePath

Notes: Must be assigned very early, e.g. in Configure event, before initialization of the control runs.

You may specify the userDataFolder to change the default user data folder location for WebView2. The path is either an absolute file path or a relative file path that is interpreted as relative to the compiled code for the current process. For UWP apps, the default user data folder is the app data folder for the package. For non-UWP apps, the default user data ({ Executable File Name } .WebView2) folder is created in the same directory next to the compiled code for the app. WebView2 creation fails if the compiled code is running in a directory in which the process does not have permission to create a new directory. The app is responsible to clean up the associated user data folder when it is done.
(Read and Write property)

207.1.78 ZoomFactor as Double

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The ZoomFactor property.
Notes: (Read and Write property)

207.1.79 Events

207.1.80 AddBrowserExtensionCompleted(extensionFolderPath as String, errorCode as Integer, Tag as Variant)

MBS WinFrameworks Plugin, Plugin Version: 24.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event called for AddBrowserExtension result.

207.1.81 AddScriptToExecuteOnDocumentCreatedCompleted(JavaScript as String, ErrorCode as Integer, ID as String, Tag as Variant)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event to report that AddScriptToExecuteOnDocumentCreated is done and provide the ID.

207.1.82 BasicAuthenticationRequested(URL as string, Challenge as String, byref UserName as String, byref Password as String, byref Cancel as boolean)

MBS WinFrameworks Plugin, Plugin Version: 25.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event to ask for authentication.
Example:

```
Sub BasicAuthenticationRequested(URL as string, Challenge as String, byref UserName as String, byref Password as String, byref Cancel as boolean) Handles BasicAuthenticationRequested
System.DebugLog CurrentMethodName
System.DebugLog "URL: "+url
System.DebugLog "Challenge: "+Challenge

UserName = "xxx"
Password = "yyy"

// or
// Cancel = True

End Sub
```

Notes: BasicAuthenticationRequested event is raised when WebView encounters a Basic HTTP Authentication request as described in https://developer.mozilla.org/docs/Web/HTTP/Authentication, a Digest HTTP Authentication request as described in https://developer.mozilla.org/docs/Web/HTTP/Headers/Authorization#digest, an NTLM authentication or a Proxy Authentication request.

The host can provide a response with credentials for the authentication or cancel the request. If the host sets the Cancel property to false but does not provide either UserName or Password properties on the Response property, then WebView2 will show the default authentication challenge dialog prompt to the user.

207.1.83 CapturePreviewCompleted(ImageFormat as Integer, ErrorCode as Integer, PictureData as String)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event called when CapturePreview call is done.
Example:

```
Sub CapturePreviewCompleted(ImageFormat as Integer, ErrorCode as Integer, PictureData as String) Handles CapturePreviewCompleted
If PictureData.Length >0 Then

// write to a file on desktop and open it.
Var file As FolderItem = SpecialFolder.Desktop.Child("webview.png")
```

```
Var b As BinaryStream = BinaryStream.Create(file, True)

b.Write PictureData
b.Close

file.Launch
End If
End Sub
```

Notes: We pass you the image data as a string, so you can e.g. write it to a PNG or JPEG file.
Otherwise ErrorCode tells you the reason for the error.

207.1.84 Closing

Plugin Version: 21.5, Platform: Windows, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

207.1.85 Configure

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event called while initializing, where you can apply properties just before plugin reads them.
Example:

```
Sub Configure() Handles Configure

// define where data goes for this web viewer:

Var folder As FolderItem = SpecialFolder.ApplicationData.Child("MyApp")
folder.CreateAsFolder

Me.UserDataFolder = folder.NativePath
End Sub
```

Notes: Can be used to set UserDataFolder property.

207.1.86 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 22.1, Platform: Windows, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

207.1.87 ContainsFullScreenElementChanged

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: ContainsFullScreenElementChanged fires when the ContainsFullScreenElement property changes.
Notes: This means that an HTML element inside the WebView is entering fullscreen to the size of the WebView or leaving fullscreen. This event is useful when, for example, a video element requests to go fullscreen. The listener of ContainsFullScreenElementChanged can then resize the WebView in response.

207.1.88 ContentLoading(isErrorPage as Boolean, NavigationID as UInt64)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The content loading event.d
Notes: ContentLoading fires before any content is loaded, including scripts added with AddScriptToExecuteOnDocumentCreated. ContentLoading will not fire if a same page navigation occurs (such as through fragment navigations or history.pushState navigations). This follows the NavigationStarting and SourceChanged events and precedes the HistoryChanged and NavigationCompleted events.

207.1.89 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 22.1, Platform: Windows, Targets: .

Function: Called when a menuitem is chosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

207.1.90 DocumentTitleChanged

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event to report a document title change.
Notes: DocumentTitleChanged fires when the DocumentTitle property of the WebView changes and may

fire before or after the NavigationCompleted event.

207.1.91 ExecuteScriptCompleted(JavaScript as String, ErrorCode as Integer, resultObjectAsJson as String, Tag as Variant)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event to report ExecuteScript method is done.

207.1.92 Failed(ErrorCode as Integer, ErrorMessage as String)

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event called when creating the control failed.
Notes: Allows you to close the window, show an error message or switch to a Xojo HTMLViewer.
e.g. you get a file not found error if the WebView2 component ist not installed.

207.1.93 FaviconChanged

MBS WinFrameworks Plugin, Plugin Version: 25.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: This event is raised when the favicon had a different URL then the previous URL.
Notes: The FaviconChanged event will be raised for first navigating to a new document, whether or not a document declares a Favicon in HTML if the favicon is different from the previous fav icon. The event will be raised again if a favicon is declared in its HTML or has script to set its favicon. The favicon information can then be retrieved with GetFavicon method and FaviconUri property.

207.1.94 FaviconCompleted(ImageFormat as Integer, ErrorCode as Integer, PictureData as String)

MBS WinFrameworks Plugin, Plugin Version: 25.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event called when the GetFavicon method completed.
Notes: PictureData contains JPEG or PNG data.

207.1.95 FocusLost

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function:

LostFocus fires when WebView lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

In the case where MoveFocusRequested event is fired, the focus is still on WebView when MoveFocusRequested event fires. LostFocus only fires afterwards when app's code or default action of MoveFocusRequested event set focus away from WebView.

207.1.96 FocusReceived

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function:

GotFocus fires when WebView got focus.
In older Xojo versions, this event is named GotFocus.

207.1.97 FrameNavigationCompleted(isSuccess as Boolean, ErrorStatus as Integer, NavigationID as UInt64)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: FrameNavigationCompleted fires when a child frame has completely loaded (body.onload has fired) or loading stopped with error.

207.1.98 FrameNavigationStarting(URL as String, IsUserInitiated as Boolean, IsRedirected as Boolean, NavigationID as UInt64) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: FrameNavigationStarting fires when a child frame in the WebView requests permission to navigate to a different URI. This will fire for redirects as well.
Notes: Corresponding navigations can be blocked until the event handler returns.
Return true to block the request.

207.1.99 HistoryChanged

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event to report history change.

Notes: HistoryChanged listens to the change of navigation history for the top level document. Use HistoryChanged to check if CanGoBack/CanGoForward value has changed. HistoryChanged also fires for using GoBack/GoForward. HistoryChanged fires after SourceChanged and ContentLoading.

207.1.100 LaunchingExternalUriScheme(URI as String, InitiatingOrigin as String, IsUserInitiated as Boolean, byref Cancel as Boolean)

MBS WinFrameworks Plugin, Plugin Version: 26.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The LaunchingExternalUriScheme event is raised when a navigation request is made to a URI scheme that is registered with the OS
Example:

```
Sub LaunchingExternalUriScheme(URI as String, InitiatingOrigin as String, IsUserInitiated as Boolean,
byref Cancel as Boolean) Handles LaunchingExternalUriScheme
// use ShowURL to open FMP URLs directly
If Left(URI,4) = "FMP:" Then
ShowURL URI
cancel = True
End If
End Sub
```

Notes: The LaunchingExternalUriScheme event handler may suppress the default dialog or replace the default dialog with a custom dialog.

The host has the option to cancel the URI scheme launch by setting Cancel to true.

The NavigationStarting and NavigationCompleted events will be raised, regardless of whether the Cancel property is set to TRUE or FALSE. The NavigationCompleted event will be raised with the IsSuccess property set to FALSE and the WebErrorStatus property set to ConnectionAborted regardless of whether the host sets the Cancel parameter. The SourceChanged, ContentLoading, and HistoryChanged events will not be raised for this navigation to the external URI scheme regardless of the Cancel property. The LaunchingExternalUriScheme event will be raised after the NavigationStarting event and before the NavigationCompleted event.

The WebView2 may not display the default dialog based on user settings, browser settings, and whether the origin is determined as a trustworthy origin; however, the event will still be raised.

If the request is initiated by a cross-origin frame without a user gesture, the request will be blocked and the LaunchingExternalUriScheme event will not be raised.

207.1.101 MenuBarSelected

MBS WinFrameworks Plugin, Plugin Version: 22.1, Platform: Windows, Targets: Desktop, Console & Web.

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

207.1.102 NavigationCompleted(isSuccess as Boolean, ErrorStatus as Integer, NavigationID as UInt64)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event to report a navigation action completed.
Notes: NavigationCompleted fires when the WebView has completely loaded (body.onload has fired) or loading stopped with error.

Please don't process directly here, but maybe call a method with timer.CallLater to do processing like using HTMLText or PlainText functions.

Like the DocumentCompleted event in Xojo.

207.1.103 NavigationStarting(URL as String, IsUserInitiated as Boolean, IsRedirected as Boolean, NavigationID as UInt64) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event to report a navigation action.
Notes: NavigationStarting fires when the WebView main frame is requesting permission to navigate to a different URI. This will fire for redirects as well.
Corresponding navigations can be blocked until the event handler returns.

Return true to cancel it like Xojo's CancelLoad event.

This event is great to check the URL. If you like to block it, you may just return true. If the user initiated the request, you may instead want to load a warning page. Also check the URL and decide whether to turn scripting on or off.

207.1.104 NewWindowRequested(URL as String, IsUserInitiated as Boolean, WindowFeatures as WebView2WindowFeaturesMBS, byref NewWindow as Variant) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event called when a new window needs to be opened.
Notes: Return true to indicate you handled the event.
If you create a new window with a DesktopWebView2ControlMBS (or DesktopDesktopWebView2ControlMBS), you can put it in NewWindow property.

IsUserInitiated:
True when the new window request was initiated through a user gesture.

Examples of user initiated requests are:
Selecting an anchor tag with target
Programmatic window open from a script that directly run as a result of user interaction such as via onclick handlers.
Non-user initiated requests are programmatic window opens from a script that are not directly triggered by user interaction, such as those that run while loading a new page or via timers. The Microsoft Edge popup blocker is disabled for WebView so the app is able to use this flag to block non-user initiated popups.

URL: The target uri of the new window requested.

NewWindow: Set the new control to use.

If the NewWindow is set, the top-level window returns as the opened WindowProxy. The NewWindow property should be set to a control that has not been navigated previously. Don't use methods that cause navigation or interact with the DOM on this web view. Setting event handlers, changing Settings properties, or other methods are fine to call. Changes to settings should be made before NewWindow is called to ensure that those settings take effect for the newly setup WebView. Once the NewWindow is set the underlying web contents of this CoreWebView2 will be replaced and navigated as appropriate for the new window. After setting new window it cannot be changed and error will be return otherwise.

207.1.105 Opened

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event called when browser initialization is done.
Notes: Typical event flow is like this:

- Configure
- Open
- Window.Open
- Opened

Opened is called a few milliseconds later.

If you load an URL, the events happen like this:

- NavigationStarting
- SourceChanged
- ContentLoading
- HistoryChanged
- DocumentTitleChanged
- NavigationCompleted

207.1.106 Opening

Plugin Version: 21.5, Platform: Windows, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

207.1.107 PermissionRequested(URL as String, PermissionKind as Integer, IsUserInitiated as Boolean, byref State as Integer)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event to query permissions from user.
Notes: PermissionRequested fires when content in a WebView requests permission to access some privileged resources.
If a deferral is not taken on the event args, the subsequent scripts can be blocked until the event handler returns. If a deferral is taken, then the scripts are blocked until the deferral is completed.

URL: The origin of the web content that requests the permission.
PermissionKind: The type of the permission that is requested.
IsUserInitiated: True when the permission request was initiated through a user gesture.
State: The status of a permission request, i.e.

Please assign State the answer you like to provide.

207.1.108 PrintCompleted(Path as String, errorCode as Integer, isSuccessful as boolean)

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Receives the result of the PrintToPdf method.
Notes: If the print to PDF operation succeeds, isSuccessful is true. Otherwise, if the operation failed, isSuccessful is set to false. An invalid path returns E_INVALIDARG in errorCode.

207.1.109 ProcessFailed(processFailedKind as Integer)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: ProcessFailed fires when a WebView process is terminated unexpectedly or becomes unresponsive.

207.1.110 SourceChanged(isNewDocument as Boolean)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event to report a change in the URL.
Notes: SourceChanged fires when the Source property changes. SourceChanged fires for navigating to a different site or fragment navigations. It will not fire for other types of navigations such as page reloads or history.pushState with the same URL as the current page. SourceChanged fires before ContentLoading for navigation to a new document.

207.1.111 WebMessageReceived(Source as String, webMessageAsJson as String, webMessageAsString as String)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event called for a web message.
Notes: WebMessageReceived fires when the IsWebMessageEnabled setting is set and the top level document of the WebView calls window.chrome.webview.postMessage. The postMessage function is void postMessage(object) where object is any object supported by JSON conversion.

webMessageAsString is empty if we can't serialize it to text.

207.1.112 WindowCloseRequested

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event where JavaScript asks to close window.
Notes: WindowCloseRequested fires when content inside the WebView requested to close the window, such as after window.close is called. The app should close the WebView and related app window if that makes sense to the app.

207.1.113 ZoomFactorChanged

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: ZoomFactorChanged fires when the ZoomFactor property of the WebView changes.
Notes: The event could fire because the caller modified the ZoomFactor property, or due to the user manually modifying the zoom. When it is modified by the caller via the ZoomFactor property, the internal zoom factor is updated immediately and there will be no ZoomFactorChanged event. WebView associates the last used zoom factor for each site. Therefore, it is possible for the zoom factor to change when navigating to a different page. When the zoom factor changes due to this, the ZoomFactorChanged event fires right after the ContentLoading event.

207.1.114 Constants

Image Formats

Constant	Value	Description
kCapturePreviewImageFormatJPEG	1	JPEG format.
kCapturePreviewImageFormatPNG	0	PNG format.

Favicon Image Format

Constant	Value	Description
kFaviconImageFormatJPEG	1	JPEG format
kFaviconImageFormatPNG	0	PNG format

HostResourceAccessKind

Constant	Value	Description
kHostResourceAccessKindAllow	1	All cross origin resource access is allowed, including accesses that are subj to Cross-Origin Resource Sharing(CORS) check. The behavior is similar t web site sends back http header Access-Control-Allow-Origin: *.
kHostResourceAccessKindDeny	0	All cross origin resource access is denied, including normal sub resource acc as src of a script or image element.
kHostResourceAccessKindDenyCors	2	Cross origin resource access is allowed for normal sub resource access like src of a script or image element, while any access that subjects to CORS ch will be denied.

Memory Usage Target Levels

Constant	Value	Description
kMemoryUsageTargetLevelLow	1	Reduced memory usage.
kMemoryUsageTargetLevelNormal	0	Normal usage levels.

Move Focus Reasons

Constant	Value	Description
kMoveFocusReasonNext	1	Specifies that the focus is moving due to Tab traversal forward.
kMoveFocusReasonPrevious	2	Specifies that the focus is moving due to Tab traversal backward.
kMoveFocusReasonProgrammatic	0	Specifies that the code is setting focus into WebView.

Permission Kind

Constant	Value	Description
kPermissionKindCamera	2	Permission to capture video.
kPermissionKindClipboardRead	6	Permission to read system clipboard without a user gesture.
kPermissionKindGeoLocation	3	Permission to access geolocation.
kPermissionKindMicrophone	1	Permission to capture audio.
kPermissionKindNotifications	4	Permission to send web notifications.
kPermissionKindOtherSensors	5	Permission to access generic sensor.
kPermissionKindUnknownPermission	0	Unknown permission.

Permission States

Constant	Value	Description
kPermissionStateAllow	1	Grant the permission request.
kPermissionStateDefault	0	Use default browser behavior, which normally prompt users for decision.
kPermissionStateDeny	2	Deny the permission request.

Preferred Color Scheme

Constant	Value	Description
kPreferredColorSchemeAuto	0	Auto color scheme.
kPreferredColorSchemeDark	2	Dark color scheme.
kPreferredColorSchemeLight	1	Light color scheme.

Process Failure Kinds

Constant	Value	Description
kProcessFailedKindBrowserProcessExited	0	Indicates the browser process terminated unexpectedly.
kProcessFailedKindRenderProcessExited	1	Indicates the render process terminated unexpectedly.
kProcessFailedKindRenderProcessUnresponsive	2	Indicates the render process becomes unresponsive.

Error Status Values

Constant	Value	Description
kWebErrorStatusCannotConnect	12	Cannot connect to destination.
kWebErrorStatusCertificateCommonNameIsIncorrect	1	The SSL certificate common name does not match the we
kWebErrorStatusCertificateExpired	2	The SSL certificate has expired.
kWebErrorStatusCertificateIsInvalid	5	The SSL certificate is invalid –this could mean the certi the public key pins for the host name, the certificate is sig authority or using a weak sign algorithm, the certificate violate name constraints, the certificate contains a weak validity period is too long, lack of revocation information anism, non-unique host name, lack of certificate transpar the certificate is chained to a legacy Symantec root.
kWebErrorStatusCertificateRevoked	4	The SSL certificate has been revoked.
kWebErrorStatusClientCertificateContainsErrors	3	The SSL client certificate contains errors.
kWebErrorStatusConnectionAborted	9	The connection was aborted.
kWebErrorStatusConnectionReset	10	The connection was reset.
kWebErrorStatusDisconnected	11	The Internet connection has been lost.
kWebErrorStatusErrorHttpInvalidServerResponse	8	The server returned an invalid or unrecognized response.
kWebErrorStatusHostNameNotResolved	13	Could not resolve provided host name.
kWebErrorStatusOperationCanceled	14	The operation was canceled.
kWebErrorStatusRedirectFailed	15	The request redirect failed.
kWebErrorStatusServerUnreachable	6	The host is unreachable.
kWebErrorStatusTimeout	7	The connection has timed out.
kWebErrorStatusUnexpectedError	16	An unexpected error occurred.
kWebErrorStatusUnknown	0	An unknown error occurred.

Web Resource Context

Constant	Value	Description
kWebResourceContextAll	0	All resources.
kWebResourceContextCspViolationReport	15	CSP Violation Reports.
kWebResourceContextDocument	1	Document resources.
kWebResourceContextEventSource	10	EventSource API communication.
kWebResourceContextFetch	8	Fetch API communication.
kWebResourceContextFont	5	Font resources.
kWebResourceContextImage	3	Image resources.
kWebResourceContextManifest	12	Web App Manifests.
kWebResourceContextMedia	4	Other media resources such as videos.
kWebResourceContextOther	16	Other resources.
kWebResourceContextPing	14	Ping requests.
kWebResourceContextScript	6	Script resources.
kWebResourceContextSignedExchange	13	Signed HTTP Exchanges.
kWebResourceContextStylesheet	2	CSS resources.
kWebResourceContextTextTrack	9	TextTrack resources.
kWebResourceContextWebSocket	11	WebSocket API communication.
kWebResourceContextXMLHttpRequest	7	XML HTTP requests.

207.2 class WebView2BrowserMBS

207.2.1 class WebView2BrowserMBS

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: The class for a WebView2 browser.
Notes: The WebView2BrowserMBS class allows you to use the same methods for both WebView2ControlMBS and a Xojo HTMLViewer using WebView2.

207.2.2 Methods

207.2.3 AddBrowserExtension(extensionFolderPath as String, theDelegate as AddBrowserExtensionCompletedMBS = nil)

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Adds the browser extension using the extension path for unpacked extensions from the local device.
Notes: Extension is running right after installation. The extension folder path is the topmost folder of an unpacked browser extension and contains the browser extension manifest file. If the extensionFolderPath is an invalid path or doesn't contain the extension manifest.json file, this function will return ERROR_FILE_NOT_FOUND to callers. Installed extension will default IsEnabled to true. When AreBrowserExtensionsEnabled is FALSE, AddBrowserExtension will fail and return HRESULT ERROR_NOT_SUPPORTED. During installation, the content of the extension is not copied to the user data folder. Once the extension is installed, changing the content of the extension will cause the extension to be removed from the installed profile. When an extension is added the extension is persisted in the corresponding profile. The

extension will still be installed the next time you use this profile. When an extension is installed from a folder path, adding the same extension from the same folder path means reinstalling this extension. When two extensions with the same Id are installed, only the later installed extension will be kept.

Extensions that are designed to include any UI interactions (e.g. icon, badge, pop up, etc.) can be loaded and used but will have missing UI entry points due to the lack of browser UI elements to host these entry points in WebView2.

207.2.4 AddScriptToExecuteOnDocumentCreated(JavaScript as String, theDelegate as AddScriptToExecuteOnDocumentCreatedCompletedMBS = nil)

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Add the provided JavaScript to a list of scripts that should be executed after the global object has been created, but before the HTML document has been parsed and before any other script included by the HTML document is executed.
Notes: This method injects a script that runs on all top-level document and child frame page navigations. This method runs asynchronously, and you must wait for the completion handler to finish before the injected script is ready to run. When this method completes, the handler's Invoke method is called with the id of the injected script. id is a string. To remove the injected script, use RemoveScriptToExecuteOnDocumentCreated.
Note that if an HTML document has sandboxing of some kind via sandbox properties or the Content-Security-Policy HTTP header this will affect the script run here. So, for example, if the 'allow-modals' keyword is not set then calls to the alert function will be ignored.

Calls AddScriptToExecuteOnDocumentCreatedCompleted event later when done.

207.2.5 AddWebResourceRequestedFilter(URL as String, resourceType as Integer)

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Adds a URI and resource context filter to the WebResourceRequested event.
Notes: The URI parameter can be a wildcard string ('*': zero or more, '?': exactly one). See kWebResourceContext constants for description of resource context filters.

207.2.6 CanGoBack as Boolean

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Returns true if the WebView can navigate to a previous page in the navigation history.
Notes: The HistoryChanged event will fire if CanGoBack changes value.

Returns false if the browser is not yet initialized.

207.2.7 CanGoForward as Boolean

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Returns true if the WebView can navigate to a next page in the navigation history.
Notes: The HistoryChanged event will fire if CanGoForward changes value.

Returns false if the browser is not yet initialized.

207.2.8 CapturePreview(theDelegate as CapturePreviewCompletedMBS, ImageFormat as Integer = 0)

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Capture an image of what WebView is displaying.
Notes: Specify the format of the image with the imageFormat parameter. The resulting image binary data is passed to the CapturePreviewCompleted event.

Calls CapturePreviewCompleted delegate when done or failed.

207.2.9 ClearSelection

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Asks webview to clear current selection.
Notes: This is the reverse for SelectAll.

207.2.10 ClearVirtualHostNameToFolderMapping(hostName as String)

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Clears a host name mapping for local folder that was added by SetVirtualHostNameToFolderMapping.

Notes: hostName: The host name to be removed from the mapping.

207.2.11 Copy

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Asks webview to copy current selection to clipboard.

207.2.12 CreatePrintSettings as WebView2PrintSettingsMBS

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Creates the WebView2PrintSettingsMBS object used by the PrintToPdf method.

207.2.13 Cut

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Asks webview to cut current selection.
Notes: May do a copy, if selection is read only.

207.2.14 ExecuteScript(JavaScript as String, theDelegate as ExecuteScriptCompletedMBS = nil)

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Execute JavaScript code from the javascript parameter in the current top level document rendered in the WebView.
Example:

```
Var web as WebView2BrowserMBS // your control

web.ExecuteScript "1+5" , "tag value"

// triggers ExecuteScriptCompeleted later with result "6"

web.ExecuteScript "window.chrome.webview.postMessage( { 'Test': 'Hello, world!' } );"

// triggers later WebMessageReceived later
```

Notes: This will execute asynchronously and when complete, if a handler is provided in the ExecuteScriptCompletedHandler parameter, its Invoke method will be called with the result of evaluating the provided JavaScript. The result value is a JSON encoded string. If the result is undefined, contains a reference cycle, or otherwise cannot be encoded into JSON, the JSON null value will be returned as the string 'null'. Note that a function that has no explicit return value returns undefined. If the executed script throws an unhandled exception, then the result is also 'null'. This method is applied asynchronously. If the method is called after NavigationStarting event during a navigation, the script will be executed in the new document when loading it, around the time ContentLoading is fired. ExecuteScript will work even if IsScriptEnabled is set to false.

Calls ExecuteScriptCompleted event later.

207.2.15 ExecuteScriptSync(JavaScript as String, byref ErrorCode as Integer) as String

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Execute JavaScript code from the javascript parameter in the current top level document rendered in the WebView.
Example:

```
Var web as WebView2BrowserMBS // your control

Var errorCode as integer
Var s as string = web.ExecuteScriptSync("1+2", errorCode)

Break // s contains 3
```

Notes: Same as ExecuteScript, but waits for event and returns result directly.
errorCode is zero on success.
Result is JSON as text, e.g. "null" if there is no result.

207.2.16 GetFavicon(theDelegate as FaviconCompletedMBS, ImageFormat as Integer = 0)

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Async function for getting the actual image data of the favicon.
Notes: Calles FaviconCompleted delegate later.

Please pass a kFaviconImageFormatJPEG or kFaviconImageFormatPNG values for the image format.

207.2.17 GoBack

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Navigates the WebView to the previous page in the navigation history.

207.2.18 GoForward

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Navigates the WebView to the next page in the navigation history.

207.2.19 HTMLText as String

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Queries HTML text of the current website.
Example:

```
Var web as WebView2BrowserMBS // your control

Var text as string = web.plaintext
Var html as string = web.HTMLText

break // check in debugger
```

Notes: Please don't call directly from NavigationCompleted event since that can freeze. Better use timer.CallLater to call a method later to do this a millisecond later.

207.2.20 LoadHTML(HTML as String)

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Initiates a navigation to htmlContent as source HTML of a new document.
Notes: The htmlContent parameter may not be larger than 2 MB in total size. The origin of the new page will be about:blank.

207.2.21 LoadURL(URL as String)

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Cause a navigation of the top level document to the specified URI.
Notes: See the navigation events for more information. Note that this starts a navigation and the corresponding NavigationStarting event will fire sometime after this Navigate call completes.

207.2.22 OpenDevToolsWindow

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Opens the DevTools window for the current document in the WebView.
Notes: Does nothing if called when the DevTools window is already open.

207.2.23 Paste

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Asks webview to paste clipboard content into the current field.
Notes: This may do nothing if there is nothing to paste or nothing to receive (no field in focus).

207.2.24 PlainText as String

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Queries plain text of the current website.
Example:

```
Var web as WebView2BrowserMBS // your control

Var text as string = web.plaintext
Var html as string = web.HTMLText

break // check in debugger
```

Notes: Please don't call directly from NavigationCompleted event since that can freeze. Better use timer.CallLater to call a method later to do this a millisecond later.

207.2.25 PostWebMessageAsJson(webMessageAsJson as String)

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Post the specified webMessage to the top level document in this WebView.
Notes: The top level document's window.chrome.webview's message event fires. JavaScript in that docu-

ment may subscribe and unsubscribe to the event via the following:

window.chrome.webview.addEventListener('message', handler)
window.chrome.webview.removeEventListener('message', handler)

The event args is an instance of MessageEvent. The IsWebMessageEnabled setting must be true or this method will fail with E_INVALIDARG. The event arg's data property is the webMessage string parameter parsed as a JSON string into a JavaScript object. The event arg's source property is a reference to the window.chrome.webview object. See add_WebMessageReceived for information on sending messages from the HTML document in the WebView to the host. This message is sent asynchronously. If a navigation occurs before the message is posted to the page, then the message will not be sent.

207.2.26 PostWebMessageAsString(webMessageAsString as String)

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: This is a helper for posting a message that is a simple string rather than a JSON string representation of a JavaScript object..
Notes: This behaves in exactly the same manner as PostWebMessageAsJson but the window.chrome.webview message event arg's data property will be a string with the same value as webMessageAsString. Use this instead of PostWebMessageAsJson if you want to communicate via simple strings rather than JSON objects.

207.2.27 Print

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Asks webview to show print dialog.

207.2.28 PrintToPdf(File as Folderitem, PrintSettings as WebView2PrintSettingsMBS = nil, theDelegate as PrintCompletedMBS = nil)

MBS WinFrameworks Plugin, Plugin Version: 26.4, Platform: Windows, Targets: Desktop only.

Function: Print the current page to PDF asynchronously with the provided settings.
See also:

- 207.2.29 PrintToPdf(Path as String, PrintSettings as WebView2PrintSettingsMBS = nil, theDelegate as PrintCompletedMBS = nil) 24420

207.2.29 PrintToPdf(Path as String, PrintSettings as WebView2PrintSettingsMBS = nil, theDelegate as PrintCompletedMBS = nil)

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Print the current page to PDF asynchronously with the provided settings.
Notes: Use Path to specify the path to the PDF file. The host should provide an absolute path, including file name. If the path points to an existing file, the file will be overwritten. If the path is not valid, the method fails with E_INVALIDARG.

The async PrintToPdf operation completes when the data has been written to the PDF file. At this time the PrintCompleted event is invoked. If the application exits before printing is complete, the file is not saved. Only one Printing operation can be in progress at a time. If PrintToPdf is called while a printing operation is in progress, the event is immediately invoked with isSuccessful set to false.

Requires WebView2 in version 1.0.1020.30 or later.
See also:

- 207.2.28 PrintToPdf(File as Folderitem, PrintSettings as WebView2PrintSettingsMBS = nil, theDelegate as PrintCompletedMBS = nil) 24419

207.2.30 Reload

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Reload the current page.
Notes: This is similar to navigating to the URI of current top level document including all navigation events firing and respecting any entries in the HTTP cache. But, the back/forward history will not be modified.

207.2.31 RemoveScriptToExecuteOnDocumentCreated(ID as String

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Remove the corresponding JavaScript added using AddScriptToExecuteOnDocumentCreated with the specified script id.

207.2.32 RemoveWebResourceRequestedFilter(URL as String, resourceType as Integer)

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Removes a matching WebResource filter that was previously added for the WebResourceRequested event.

Notes: If the same filter was added multiple times, then it will need to be removed as many times as it was added for the removal to be effective. Raises exception with E_INVALIDARG for a filter that was never added.

207.2.33 SelectAll

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Asks webview to select all text.

207.2.34 SetVirtualHostNameToFolderMapping(hostName as String, folderPath as String, accessKind as Integer)

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Sets a mapping between a virtual host name and a folder path to make available to web sites via that host name.
Notes: hostName: A virtual host name.
folderPath: A folder path name to be mapped to the virtual host name. The length must not exceed the Windows MAX_PATH limit.
accessKind: The level of access to resources under the virtual host from other sites.

See kHostResourceAccessKind* constants.

207.2.35 Stop

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Stop all navigations and pending resource fetches.
Notes: Does not stop scripts.

207.2.36 Properties

207.2.37 areBrowserAcceleratorKeysEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Whether all accelerator keys are enabled.
Notes: When this setting is set to false, it disables all accelerator keys that access features specific to a web

browser, including but not limited to:

- Ctrl-F and F3 for Find on Page
- Ctrl-P for Print
- Ctrl-R and F5 for Reload
- Ctrl-Plus and Ctrl-Minus for zooming
- Ctrl-Shift-C and F12 for DevTools
- Special keys for browser functions, such as Back, Forward, and Search

It does not disable accelerator keys related to movement and text editing, such as:

- Home, End, Page Up, and Page Down
- Ctrl-X, Ctrl-C, Ctrl-V
- Ctrl-A for Select All
- Ctrl-Z for Undo

Those accelerator keys will always be enabled unless they are handled in the AcceleratorKeyPressed event. This setting has no effect on the AcceleratorKeyPressed event. The event will be fired for all accelerator keys, whether they are enabled or not.

The default value for AreBrowserAcceleratorKeysEnabled is true.

Needs WebView2 in version 1.0.864.35 or newer.
(Read and Write property)

207.2.38 AreDefaultContextMenusEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: The AreDefaultContextMenusEnabled property is used to prevent default context menus from being shown to user in WebView.
Notes: It is true by default.
(Read and Write property)

207.2.39 AreDefaultScriptDialogsEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: AreDefaultScriptDialogsEnabled is used when loading a new HTML document.
Notes: If set to false, then WebView won't render the default JavaScript dialog box (Specifically those shown by the JavaScript alert, confirm, prompt functions and beforeunload event). Instead, if an event handler is set via add_ScriptDialogOpening, WebView will send an event that will contain all of the information for the dialog and allow the host app to show its own custom UI. It is true by default.
(Read and Write property)

207.2.40 AreDevToolsEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: AreDevToolsEnabled controls whether the user is able to use the context menu or keyboard shortcuts to open the DevTools window.
Notes: It is true by default.
(Read and Write property)

207.2.41 AreHostObjectsAllowed as Boolean

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: The AreHostObjectsAllowed property is used to control whether host objects are accessible from the page in WebView.
Notes: It is true by default.
(Read and Write property)

207.2.42 BrowserVersionString as String

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: The browser version info of the current environment, including channel name if it is not the stable channel.
Notes: This matches the format of the AvailableCoreWebView2BrowserVersionString API. Channel names are 'beta', 'dev', and 'canary'.
(Read only property)

207.2.43 ContainsFullScreenElement as Boolean

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Indicates if the WebView contains a fullscreen HTML element.
Notes: (Read only property)

207.2.44 ControllerHandle as Integer

MBS WinFrameworks Plugin, Plugin Version: 26.4, Platform: Windows, Targets: Desktop only.

Function: The internal reference for the webview controller.
Notes: This is a pointer to a ICoreWebView2Controller object.
(Read only property)

207.2.45 CookieManager as WebView2BrowserMBS

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Gets the cookie manager object associated with this webview.
Notes: Requires WebView2 version 1.0.705.50 from January 2021.
(Read only property)

207.2.46 DefaultBackgroundColor as Color

MBS WinFrameworks Plugin, Plugin Version: 26.4, Platform: Windows, Targets: Desktop only.

Function: The DefaultBackgroundColor property is the color WebView renders underneath all web content.
Notes: This means WebView renders this color when there is no web content loaded such as before the initial navigation or between navigations. This also means web pages with undefined css background properties or background properties containing transparent pixels will render their contents over this color. Web pages with defined and opaque background properties that span the page will obscure the DefaultBackgroundColor and display normally. The default value for this property is white to resemble the native browser experience.

The Color is specified by the color that represents an RGBA value. The A represents an Alpha value, meaning DefaultBackgroundColor can be transparent. In the case of a transparent DefaultBackgroundColor WebView will render hosting app content as the background. This Alpha value is not supported on Windows 7. Any A value other than 255 will result in an exception on Windows 7. It is supported on all other WebView compatible platforms.

Semi-transparent colors are not currently supported by this API and setting DefaultBackgroundColor to a semi-transparent color will fail with an exception. The only supported alpha values are 0 and 255, all other

values will result in exception. DefaultBackgroundColor can only be an opaque color or transparent.

Requires version 1.0.774.44 of Webview2 or newer.
Can't be set in Open event as the control is not yet ready.

Requires the controller handle to be set.
(Read and Write property)

207.2.47 DefaultDownloadFolderPath as String

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: The default download folder path.
Notes: The default value is the system default download folder path for the user. The default download folder path is persisted in the user data folder across sessions. The value should be an absolute path to a folder that the user and application can write to. Throws an exception if the value is invalid, and the default download path is not changed. Otherwise the path is changed immediately. If the directory does not yet exist, it is created at the time of the next download. If the host application does not have permission to create the directory, then the user is prompted to provide a new path through the Save As dialog. The user can override the default download folder path for a given download by choosing a different path in the Save As dialog.
(Read and Write property)

207.2.48 DocumentTitle as String

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: The title for the current top level document.
Notes: If the document has no explicit title or is otherwise empty, a default that may or may not match the URI of the document will be used.
(Read only property)

207.2.49 EnvironmentHandle as Integer

MBS WinFrameworks Plugin, Plugin Version: 26.4, Platform: Windows, Targets: Desktop only.

Function: The internal reference for the environment object.
Notes: This is a pointer to a ICoreWebView2Environment object.
(Read only property)

207.2.50 FaviconURI as String

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Get the current Uri of the favicon as a string.
Example:

Var url As String = web.FaviconURI

MessageBox url

Notes: If a page has no favicon then the value is an empty string.
(Read only property)

207.2.51 Handle as Integer

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: The internal object reference for the WebView object.
Notes: This is a pointer to a ICoreWebView2 object.
(Read only property)

207.2.52 HiddenPdfToolbarItems as Integer

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Customize the PDF toolbar items.
Notes: By default, it is 0 and so it displays all of the items. Changes to this property apply to all CoreWebView2s in the same environment and using the same profile. Changes to this setting apply only after the next navigation.

Available values:

Seems like 256 hides the whole toolbar.
(Read and Write property)

207.2.53 IsBuiltInErrorPageEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: The IsBuiltInErrorPageEnabled property is used to disable built in error page for navigation failure and render process failure.

Bookmarks	256	The contents button on PDF toolbar.
FitPage	64	The fit to width button on PDF toolbar.
FullScreen	2048	The full screen button on PDF toolbar.
MoreSettings	4096	The setting and more button on PDF toolbar. Gear icon.
None	0	No item. By default the HiddenPdfToolbarItems equal to this value.
PageLayout	128	The page view button on PDF toolbar.
PageSelector	512	The page number button on PDF toolbar.
Print	2	The print button on PDF toolbar.
Rotate	32	The rotate button on PDF toolbar.
Save	1	The save button on PDF toolbar.
SaveAs	4	The save as button on PDF toolbar.
Search	1024	The search button on PDF toolbar.
ZoomIn	8	The zoom in button on PDF toolbar.
ZoomOut	16	The zoom out button on PDF toolbar.

Notes: It is true by default. When disabled, blank page will be shown when related error happens.
(Read and Write property)

207.2.54 IsDocumentPlayingAudio as Boolean

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Indicates whether any audio output from this web viewer is playing.
Notes: This property will be true if audio is playing even if IsMuted is true.
(Read only property)

207.2.55 IsGeneralAutofillEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Whether autofill for information like names, street and email addresses, phone numbers, and arbitrary input is enabled.
Notes: This excludes password and credit card information. When IsGeneralAutofillEnabled is false, no suggestions appear, and no new information is saved. When IsGeneralAutofillEnabled is true, information is saved, suggestions appear and clicking on one will populate the form fields. The default value is true.

Needs WebView2 in version 1.0.902.49 or newer.
(Read and Write property)

207.2.56 IsInPrivateModeEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Whether private mode is enabled.
Notes: (Read only property)

207.2.57 IsMuted as Boolean

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Indicates or sets whether all audio output from this web viewer is muted or not.
Notes: Can be read and set.
(Read and Write property)

207.2.58 IsPasswordAutosaveEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Whether autosave for password information is enabled.
Notes: The IsPasswordAutosaveEnabled property behaves independently of the IsGeneralAutofillEnabled property. When IsPasswordAutosaveEnabled is false, no new password data is saved and no Save/Update Password prompts are displayed. However, if there was password data already saved before disabling this setting, then that password information is auto-populated, suggestions are shown and clicking on one will populate the fields. When IsPasswordAutosaveEnabled is true, password information is auto-populated, suggestions are shown and clicking on one will populate the fields, new data is saved, and a Save/Update Password prompt is displayed. The default value is false.

Needs WebView2 in version 1.0.902.49 or newer.
(Read and Write property)

207.2.59 IsPinchZoomEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Enable or disable pitch zoom.
Notes: Pinch-zoom, referred to as "Page Scale" zoom, is performed as a post-rendering step, it changes the page scale factor property and scales the surface the web page is rendered onto when user performs a pinch zooming action.

It does not change the layout but rather changes the viewport and clips the web content, the content outside of the viewport isn't visible onscreen and users can't reach this content using mouse.

The IsPinchZoomEnabled property enables or disables the ability of the end user to use a pinching motion on touch input enabled devices to scale the web content in the WebView2. It defaults to TRUE. When set to FALSE, the end user cannot pinch zoom after the next navigation. Disabling/Enabling IsPinchZoomEnabled only affects the end user's ability to use pinch motions and does not change the page scale factor. This API only affects the Page Scale zoom and has no effect on the existing browser zoom properties (IsZoomControlEnabled and ZoomFactor) or other end user mechanisms for zooming.

Needs WebView2 in version 1.0.902.49 or newer.
(Read and Write property)

207.2.60 IsScriptEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Controls if JavaScript execution is enabled in all future navigations in the WebView.
Notes: This only affects scripts in the document; scripts injected with ExecuteScript will run even if script is disabled. It is true by default.
(Read and Write property)

207.2.61 IsStatusBarEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: IsStatusBarEnabled controls whether the status bar will be displayed.
Notes: The status bar is usually displayed in the lower left of the WebView and shows things such as the URI of a link when the user hovers over it and other information. It is true by default.
(Read and Write property)

207.2.62 IsSwipeNavigationEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Determines whether the end user to use swiping gesture on touch input enabled devices to navigate in WebView2.
Notes: Swiping gesture navigation on touch screen includes:

- Swipe left/right (swipe horizontally) to navigate to previous/next page in navigation history.
- Pull to refresh (swipe vertically) the current page. (This feature is currently disabled by default in the browser, to enable in WebView2, set AdditionalBrowserArguments property with –pull-to-refresh switch).

It defaults to true. When set to false, the end user cannot swipe to navigate or pull to refresh. This API only affects the overscrolling navigation functionality and has no effect on the scrolling interaction used to explore the web content shown in WebView2.
(Read and Write property)

207.2.63 IsWebMessageEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: The IsWebMessageEnabled property is used when loading a new HTML document.
Notes: If set to true, communication from the host to the WebView's top level HTML document is allowed via PostWebMessageAsJson, PostWebMessageAsString, and window.chrome.webview's message event (see PostWebMessageAsJson documentation for details). Communication from the WebView's top level HTML document to the host is allowed via window.chrome.webview's postMessage function and add_WebMessageReceived method (see add_WebMessageReceived documentation for details). If set to false, then communication is disallowed. PostWebMessageAsJson and PostWebMessageAsString will fail with E_ACCESSDENIED and window.chrome.webview.postMessage will fail by throwing an instance of an Error object. It is true by default.
(Read and Write property)

207.2.64 IsZoomControlEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: The IsZoomControlEnabled property is used to prevent the user from impacting the zoom of the WebView.
Notes: It is true by default. When disabled, user will not be able to zoom using ctrl+/- or ctrl+mouse wheel, but the zoom can be set via ZoomFactor API.
(Read and Write property)

207.2.65 MemoryUsageTargetLevel as Integer

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Indicates desired memory consumption level of WebView.
Notes: Scripts will not be impacted and continue to run. This is useful for inactive apps that still want to run scripts and/or keep network connections alive and therefore could not call TrySuspend and Resume to reduce memory consumption. These apps can set memory usage target level to kMemoryUsageTargetLevelLow when the app becomes inactive, and set back to kMemoryUsageTargetLevelNormal when the app becomes active.

It is not necessary to set CoreWebView2Controller's IsVisible property to false when setting the property.

It is a best effort operation to change memory usage level, and the API will return before the operation completes. Setting the level to kMemoryUsageTargetLevelLow could potentially cause memory for some WebView browser processes to be swapped out to disk in some circumstances. It is a best effort to reduce memory usage as much as possible. If a script runs after its related memory has been swapped out, the memory will be swapped back in to ensure the script can still run, but performance might be impacted. Therefore, the app should set the level back to kMemoryUsageTargetLevelNormal when the app becomes active again. Setting memory usage target level back to normal will not happen automatically.

An app should choose to use either the combination of TrySuspend and Resume or the combination of setting MemoryUsageTargetLevel to low and normal. It is not advisable to mix them. Trying to set MemoryUsageTargetLevel while suspended will be ignored. The TrySuspend and Resume methods will change the MemoryUsageTargetLevel. TrySuspend will automatically set MemoryUsageTargetLevel to low while Resume on suspended WebView will automatically set MemoryUsageTargetLevel to normal. Calling Resume when the WebView is not suspended would not change MemoryUsageTargetLevel.
(Read and Write property)

207.2.66 PreferredColorScheme as Integer

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: The PreferredColorScheme property sets the overall color scheme of the WebView2s associated with this profile.
Example:

```
var web as WebView2BrowserMBS // your web viewer
web.PreferredColorScheme = web.kPreferredColorSchemeDark
```

Notes: This sets the color scheme for WebView2 UI like dialogs, prompts, and menus by setting the media feature prefers-color-scheme. The default value for this is kPreferredColorSchemeAuto, which will follow whatever color scheme the OS is currently set to.
(Read and Write property)

207.2.67 ProcessID as Integer

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: The process id of the browser process that hosts the WebView.
Notes: (Read only property)

207.2.68 ProfilePath as String

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Full path of the profile directory.
Notes: (Read only property)

207.2.69 SettingsHandle as Integer

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: The internal object reference for the settings object.
Notes: This is a pointer to a ICoreWebView2Settings object.
(Read only property)

207.2.70 URL as String

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: The URI of the current top level document.
Notes: This value potentially changes as a part of the SourceChanged event firing for some cases such as navigating to a different site or fragment navigations. It will remain the same for other types of navigations such as page reloads or history.pushState with the same URL as the current page.

If assigned, calls LoadURL method.
(Read and Write property)

207.2.71 UserAgent as String

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: The User Agent.
Notes: The default value is the default User Agent of the Microsoft Edge browser.

This property may be overridden if the User-Agent header is set in a request. If the parameter is empty the User Agent will not be updated and the current User Agent will remain.

Needs WebView2 in version 1.0.864.35 or newer.
(Read and Write property)

207.2.72 ZoomFactor as Double

MBS WinFrameworks Plugin, Plugin Version: 26.4, Platform: Windows, Targets: Desktop only.

Function: The ZoomFactor property.
Notes: Requires the controller handle to be set.
(Read and Write property)

207.2.73 Constants

Image Formats

Constant	Value	Description
kCapturePreviewImageFormatJPEG	1	JPEG format.
kCapturePreviewImageFormatPNG	0	PNG format.

Favicon Image Format

Constant	Value	Description
kFaviconImageFormatJPEG	1	JPEG format
kFaviconImageFormatPNG	0	PNG format

Memory Usage Target Levels

Constant	Value	Description
kMemoryUsageTargetLevelLow	1	Reduced memory usage.
kMemoryUsageTargetLevelNormal	0	Normal usage levels.

207.2.74 Delegates

207.2.75 AddBrowserExtensionCompletedMBS(Browser as WebView2BrowserMBS, extensionFolderPath as String, errorCode as Integer)

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: The delegate called for AddBrowserExtension result.

207.2.76 AddScriptToExecuteOnDocumentCreatedCompletedMBS(Browser as WebView2BrowserMBS, JavaScript as String, ErrorCode as Integer, ID as String)

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: The delegate to report that AddScriptToExecuteOnDocumentCreated is done and provide the ID.

207.2.77 CapturePreviewCompletedMBS(Browser as WebView2BrowserMBS, ImageFormat as Integer, ErrorCode as Integer, PictureData as String)

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: The delegate called when CapturePreview call is done.
Example:

```
Sub CapturePreviewCompleted(Browser as WebView2BrowserMBS, ImageFormat as Integer, ErrorCode as
Integer, PictureData as String)
If PictureData.Length >0 Then

// write to a file on desktop and open it.
Var file As FolderItem = SpecialFolder.Desktop.Child("webview.png")
Var b As BinaryStream = BinaryStream.Create(file, True)

b.Write PictureData
b.Close

file.Launch
End If
End Sub
```

Notes: We pass you the image data as a string, so you can e.g. write it to a PNG or JPEG file.
Otherwise ErrorCode tells you the reason for the error.

207.2.78 ExecuteScriptCompletedMBS(Browser as WebView2BrowserMBS, JavaScript as String, ErrorCode as Integer, resultObjectAsJson as String)

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: The delegate called to report ExecuteScript method is done.

207.2.79 FaviconCompletedMBS(Browser as WebView2BrowserMBS, ImageFormat as Integer, ErrorCode as Integer, PictureData as String)

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: The delegate called when the GetFavicon method completed.
Notes: PictureData contains JPEG or PNG data.

207.2.80 PrintCompletedMBS(Browser as WebView2BrowserMBS, Path as String, errorCode as Integer, isSuccessful as boolean)

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Receives the result of the PrintToPdf method.
Notes: If the print to PDF operation succeeds, isSuccessful is true. Otherwise, if the operation failed, isSuccessful is set to false. An invalid path returns E_INVALIDARG in errorCode.

207.3 control WebView2ControlMBS

207.3.1 control WebView2ControlMBS

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The MBS control for the Chrome based WebView2 control from Microsoft.
Notes: Read about WebView2 control here:
https://developer.microsoft.com/en-us/microsoft-edge/webview2/

There you also fine the installers needed to install it, unless you have the 2021 version of Windows, which may include it preinstalled.

If you use this control on macOS and Linux, it will do nothing.
On Windows if the control fails to initialize, the Opened event will not fire.
But if it fires, it will be some time after the open event fired as initialization is asynchronous.

If you call LoadURL, LoadHTML or set URL property too early, we cache that and perform the action later when the web viewer is initialized properly.

If you add an event, we register it with the C++ control. So if you don't specify an event, you may get the default behavior.

All functions may raise WebView2ExceptionMBS in case of errors.

207.3.2 Methods

207.3.3 AddBrowserExtension(extensionFolderPath as String, tag as Variant = nil)

MBS WinFrameworks Plugin, Plugin Version: 24.5, Platform: Windows, Targets: Desktop only.

Function: Adds the browser extension using the extension path for unpacked extensions from the local device.
Notes: Extension is running right after installation. The extension folder path is the topmost folder of an unpacked browser extension and contains the browser extension manifest file. If the extensionFolderPath is an invalid path or doesn't contain the extension manifest.json file, this function will return ERROR_FILE_NOT_FOUND to callers. Installed extension will default IsEnabled to true. When AreBrowserExtensionsEnabled is FALSE, AddBrowserExtension will fail and return HRESULT ERROR_NOT_SUPPORTED. During installation, the content of the extension is not copied to the user data folder. Once the extension is installed, changing the content of the extension will cause the extension to be removed from the installed profile. When an extension is added the extension is persisted in the corresponding profile. The extension will still be installed the next time you use this profile. When an extension is installed from a folder path, adding the same extension from the same folder path means reinstalling this extension. When two extensions with the same Id are installed, only the later installed extension will be kept.

Extensions that are designed to include any UI interactions (e.g. icon, badge, pop up, etc.) can be loaded and used but will have missing UI entry points due to the lack of browser UI elements to host these entry points in WebView2.

207.3.4 AddScriptToExecuteOnDocumentCreated(JavaScript as String, tag as variant = nil)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Add the provided JavaScript to a list of scripts that should be executed after the global object has been created, but before the HTML document has been parsed and before any other script included by the HTML document is executed.
Notes: This method injects a script that runs on all top-level document and child frame page navigations. This method runs asynchronously, and you must wait for the completion handler to finish before the injected script is ready to run. When this method completes, the handler's Invoke method is called with the id of the injected script. id is a string. To remove the injected script, use RemoveScriptToExecuteOnDocumentCreated.
Note that if an HTML document has sandboxing of some kind via sandbox properties or the Content-Security-Policy HTTP header this will affect the script run here. So, for example, if the 'allow-modals' keyword is not set then calls to the alert function will be ignored.

Calls AddScriptToExecuteOnDocumentCreatedCompleted event later when done.

207.3.5 AddWebResourceRequestedFilter(URL as String, resourceType as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Adds a URI and resource context filter to the WebResourceRequested event.
Notes: The URI parameter can be a wildcard string ('*': zero or more, '?': exactly one). See kWebResourceContext constants for description of resource context filters.

207.3.6 AvailableCoreWebView2BrowserVersionString as string

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The available version of the WebView2 browser.
Notes: Allows you to query the browser version before creating a control.
Returns empty text if none is available.

207.3.7 CanGoBack as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Returns true if the WebView can navigate to a previous page in the navigation history.
Notes: The HistoryChanged event will fire if CanGoBack changes value.

Returns false if the browser is not yet initialized.

207.3.8 CanGoForward as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Returns true if the WebView can navigate to a next page in the navigation history.
Notes: The HistoryChanged event will fire if CanGoForward changes value.

Returns false if the browser is not yet initialized.

207.3.9 CapturePreview(ImageFormat as Integer = 0)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Capture an image of what WebView is displaying.
Notes: Specify the format of the image with the imageFormat parameter. The resulting image binary data is passed to the CapturePreviewCompleted event.

Calls CapturePreviewCompleted event when done or failed.

207.3.10 ClearSelection

MBS WinFrameworks Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: Asks webview to clear current selection.
Notes: This is the reverse for SelectAll.

207.3.11 ClearVirtualHostNameToFolderMapping(hostName as String)

MBS WinFrameworks Plugin, Plugin Version: 23.4, Platform: Windows, Targets: Desktop only.

Function: Clears a host name mapping for local folder that was added by SetVirtualHostNameToFolderMapping.
Notes: hostName: The host name to be removed from the mapping.

207.3.12 Copy

MBS WinFrameworks Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: Asks webview to copy current selection to clipboard.

207.3.13 CreatePrintSettings as WebView2PrintSettingsMBS

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop only.

Function: Creates the WebView2PrintSettingsMBS object used by the PrintToPdf method.

207.3.14 Cut

MBS WinFrameworks Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: Asks webview to cut current selection.
Notes: May do a copy, if selection is read only.

207.3.15 ExecuteScript(JavaScript as String, tag as variant = nil)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Execute JavaScript code from the javascript parameter in the current top level document rendered in the WebView.
Example:

```
Var web as WebView2ControlMBS // your control

web.ExecuteScript "1+5" , "tag value"

// triggers ExecuteScriptCompeleted later with result "6"

web.ExecuteScript "window.chrome.webview.postMessage( { 'Test': 'Hello, world!' } );"

// triggers later WebMessageReceived later
```

Notes: This will execute asynchronously and when complete, if a handler is provided in the ExecuteScriptCompletedHandler parameter, its Invoke method will be called with the result of evaluating the provided JavaScript. The result value is a JSON encoded string. If the result is undefined, contains a reference cycle, or otherwise cannot be encoded into JSON, the JSON null value will be returned as the string 'null'. Note that a function that has no explicit return value returns undefined. If the executed script throws an unhandled exception, then the result is also 'null'. This method is applied asynchronously. If the method is called after NavigationStarting event during a navigation, the script will be executed in the new document when loading it, around the time ContentLoading is fired. ExecuteScript will work even if IsScriptEnabled is set to false.

Calls ExecuteScriptCompleted event later.

207.3.16 ExecuteScriptSync(JavaScript as String, byref ErrorCode as Integer) as String

MBS WinFrameworks Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop only.

Function: Execute JavaScript code from the javascript parameter in the current top level document rendered in the WebView.
Example:

```
Var web as WebView2ControlMBS // your control

Var errorCode as integer
Var s as string = web.ExecuteScriptSync("1+2", errorCode)

Break // s contains 3
```

Notes: Same as ExecuteScript, but waits for event and returns result directly.
errorCode is zero on success.
Result is JSON as text, e.g. "null" if there is no result.

207.3.17 GetFavicon(ImageFormat as Integer = 0)

MBS WinFrameworks Plugin, Plugin Version: 25.4, Platform: Windows, Targets: Desktop only.

Function: Async function for getting the actual image data of the favicon.
Notes: Raises FaviconCompleted event later.

Please pass a kFaviconImageFormatJPEG or kFaviconImageFormatPNG values for the image format.

207.3.18 GoBack

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Navigates the WebView to the previous page in the navigation history.

207.3.19 GoForward

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Navigates the WebView to the next page in the navigation history.

207.3.20 HTMLText as String

MBS WinFrameworks Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop only.

Function: Queries HTML text of the current website.
Example:

```
Var web as WebView2ControlMBS // your control

Var text as string = web.plaintext
Var html as string = web.HTMLText

break // check in debugger
```

Notes: Please don't call directly from NavigationCompleted event since that can freeze. Better use timer.CallLater to call a method later to do this a millisecond later.

207.3.21 LoadHTML(HTML as String)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Initiates a navigation to htmlContent as source HTML of a new document.
Notes: The htmlContent parameter may not be larger than 2 MB in total size. The origin of the new page will be about:blank.

207.3.22 LoadURL(URL as String)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Cause a navigation of the top level document to the specified URI.
Notes: See the navigation events for more information. Note that this starts a navigation and the corresponding NavigationStarting event will fire sometime after this Navigate call completes.

207.3.23 MoveFocus(reason as integer = 0)

MBS WinFrameworks Plugin, Plugin Version: 26.2, Platform: Windows, Targets: Desktop only.

Function: Moves focus.
Example:

```
// set focus in Xojo and then also Focus to WebView:

WebView2ControlMBS1.SetFocus
```

WebView2ControlMBS1.MoveFocus(WebView2ControlMBS1.kMoveFocusReasonProgrammatic)

Notes: WebView will get focus and focus will be set to correspondent element in the page hosted in the WebView. For Programmatic reason, focus is set to previously focused element or the default element if no previously focused element exists. For Next reason, focus is set to the first element. For Previous reason, focus is set to the last element. WebView changes focus through user interaction including selecting into a WebView or Tab into it. For tabbing, the app runs MoveFocus with Next or Previous to align with Tab and Shift+Tab respectively when it decides the WebView is the next tabable element.

Pass kMoveFocusReasonNext, kMoveFocusReasonPrevious or kMoveFocusReasonProgrammatic as value.

207.3.24 OpenDevToolsWindow

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Opens the DevTools window for the current document in the WebView.
Notes: Does nothing if called when the DevTools window is already open.

207.3.25 Paste

MBS WinFrameworks Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: Asks webview to paste clipboard content into the current field.
Notes: This may do nothing if there is nothing to paste or nothing to receive (no field in focus).

207.3.26 PlainText as String

MBS WinFrameworks Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop only.

Function: Queries plain text of the current website.
Example:

```
Var web as WebView2ControlMBS // your control

Var text as string = web.plaintext
Var html as string = web.HTMLText

break // check in debugger
```

Notes: Please don't call directly from NavigationCompleted event since that can freeze. Better use timer.CallLater to call a method later to do this a millisecond later.

207.3.27 PostWebMessageAsJson(webMessageAsJson as String)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Post the specified webMessage to the top level document in this WebView.
Notes: The top level document's window.chrome.webview's message event fires. JavaScript in that document may subscribe and unsubscribe to the event via the following:

window.chrome.webview.addEventListener('message', handler)
window.chrome.webview.removeEventListener('message', handler)

The event args is an instance of MessageEvent. The IsWebMessageEnabled setting must be true or this method will fail with E_INVALIDARG. The event arg's data property is the webMessage string parameter parsed as a JSON string into a JavaScript object. The event arg's source property is a reference to the window.chrome.webview object. See add_WebMessageReceived for information on sending messages from the HTML document in the WebView to the host. This message is sent asynchronously. If a navigation occurs before the message is posted to the page, then the message will not be sent.

207.3.28 PostWebMessageAsString(webMessageAsString as String)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: This is a helper for posting a message that is a simple string rather than a JSON string representation of a JavaScript object..
Notes: This behaves in exactly the same manner as PostWebMessageAsJson but the window.chrome.webview message event arg's data property will be a string with the same value as webMessageAsString. Use this instead of PostWebMessageAsJson if you want to communicate via simple strings rather than JSON objects.

207.3.29 Print

MBS WinFrameworks Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: Asks webview to show print dialog.

207.3.30 PrintToPdf(File as FolderItem, PrintSettings as WebView2PrintSettingsMBS = nil)

MBS WinFrameworks Plugin, Plugin Version: 26.4, Platform: Windows, Targets: Desktop only.

Function: Print the current page to PDF asynchronously with the provided settings.
See also:

• 207.3.31 PrintToPdf(Path as String, PrintSettings as WebView2PrintSettingsMBS = nil) 24445

207.3.31 PrintToPdf(Path as String, PrintSettings as WebView2PrintSettingsMBS = nil)

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: Print the current page to PDF asynchronously with the provided settings.
Notes: Use Path to specify the path to the PDF file. The host should provide an absolute path, including file name. If the path points to an existing file, the file will be overwritten. If the path is not valid, the method fails with E_INVALIDARG.

The async PrintToPdf operation completes when the data has been written to the PDF file. At this time the PrintCompleted event is invoked. If the application exits before printing is complete, the file is not saved. Only one Printing operation can be in progress at a time. If PrintToPdf is called while a printing operation is in progress, the event is immediately invoked with isSuccessful set to false.

Requires WebView2 in version 1.0.1020.30 or later.
See also:

• 207.3.30 PrintToPdf(File as FolderItem, PrintSettings as WebView2PrintSettingsMBS = nil) 24444

207.3.32 Reload

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Reload the current page.
Notes: This is similar to navigating to the URI of current top level document including all navigation events firing and respecting any entries in the HTTP cache. But, the back/forward history will not be modified.

207.3.33 RemoveScriptToExecuteOnDocumentCreated(ID as String

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Remove the corresponding JavaScript added using AddScriptToExecuteOnDocumentCreated with the specified script id.

207.3.34 RemoveWebResourceRequestedFilter(URL as String, resourceType as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Removes a matching WebResource filter that was previously added for the WebResourceRequested event.
Notes: If the same filter was added multiple times, then it will need to be removed as many times as it was added for the removal to be effective. Raises exception with E_INVALIDARG for a filter that was never added.

207.3.35 SelectAll

MBS WinFrameworks Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: Asks webview to select all text.

207.3.36 SetVirtualHostNameToFolderMapping(hostName as String, folderPath as String, accessKind as Integer)

MBS WinFrameworks Plugin, Plugin Version: 23.4, Platform: Windows, Targets: Desktop only.

Function: Sets a mapping between a virtual host name and a folder path to make available to web sites via that host name.
Notes: hostName: A virtual host name.
folderPath: A folder path name to be mapped to the virtual host name. The length must not exceed the Windows MAX_PATH limit.
accessKind: The level of access to resources under the virtual host from other sites.

See kHostResourceAccessKind* constants.

207.3.37 Stop

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Stop all navigations and pending resource fetches.
Notes: Does not stop scripts.

207.3.38 Properties

207.3.39 AdditionalBrowserArguments as String

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Additional browser arguments can be specified to change the behavior of the WebView.

Notes: These will be passed to the browser process as part of the command line. See Run Chromium with Flags for more information about command line switches to browser process. If the app is launched with a command line switch –edge-webview-switches=xxx the value of that switch (xxx in the above example) will also be appended to the browser process command line. Certain switches like –user-data-dir are internal and important to WebView. Those switches will be ignored even if specified. If the same switches are specified multiple times, the last one wins. There is no attempt to merge the different values of the same switch, except for disabled and enabled features. The features specified by –enable-features and –disable-features will be merged with simple logic: the features will be the union of the specified features and built-in features, and if a feature is disabled, it will be removed from the enabled features list. App process's command line –edge-webview-switches value are processed after the additionalBrowserArguments parameter is processed. Certain features are disabled internally and can't be enabled. If parsing failed for the specified switches, they will be ignored. Default is to run browser process with no extra flags.
(Read and Write property)

207.3.40 AllowSingleSignOnUsingOSPrimaryAccount as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The AllowSingleSignOnUsingOSPrimaryAccount property is used to enable single sign on with Azure Active Directory (AAD) resources inside WebView using the logged in Windows account and single sign on with web sites using Microsoft account associated with the login in Windows account.
Notes: Default is disabled. Universal Windows Platform apps must also declare enterpriseCloudSSO restricted capability for the single sign on to work.
(Read and Write property)

207.3.41 areBrowserAcceleratorKeysEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.4, Platform: Windows, Targets: Desktop only.

Function: Whether all accelerator keys are enabled.
Notes: When this setting is set to false, it disables all accelerator keys that access features specific to a web browser, including but not limited to:

- Ctrl-F and F3 for Find on Page
- Ctrl-P for Print
- Ctrl-R and F5 for Reload
- Ctrl-Plus and Ctrl-Minus for zooming
- Ctrl-Shift-C and F12 for DevTools
- Special keys for browser functions, such as Back, Forward, and Search

It does not disable accelerator keys related to movement and text editing, such as:

- Home, End, Page Up, and Page Down
- Ctrl-X, Ctrl-C, Ctrl-V
- Ctrl-A for Select All
- Ctrl-Z for Undo

Those accelerator keys will always be enabled unless they are handled in the AcceleratorKeyPressed event. This setting has no effect on the AcceleratorKeyPressed event. The event will be fired for all accelerator keys, whether they are enabled or not.

The default value for AreBrowserAcceleratorKeysEnabled is true.

Needs WebView2 in version 1.0.864.35 or newer.
(Read and Write property)

207.3.42 AreBrowserExtensionsEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 24.5, Platform: Windows, Targets: Desktop only.

Function: Enable/disable browser extensions.
Notes: When AreBrowserExtensionsEnabled is set to true, new extensions can be added to user profile and used. AreBrowserExtensionsEnabled is default to be false, in this case, new extensions can't be installed, and already installed extension won't be available to use in user profile. If connecting to an already running environment with a different value for AreBrowserExtensionsEnabled property, it will fail with invalidate state error.

Must be set before browser is initialized.
(Read and Write property)

207.3.43 AreDefaultContextMenusEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The AreDefaultContextMenusEnabled property is used to prevent default context menus from being shown to user in WebView.
Notes: It is true by default.
(Read and Write property)

207.3.44 AreDefaultScriptDialogsEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: AreDefaultScriptDialogsEnabled is used when loading a new HTML document.
Notes: If set to false, then WebView won't render the default JavaScript dialog box (Specifically those shown by the JavaScript alert, confirm, prompt functions and beforeunload event). Instead, if an event handler is set via add_ScriptDialogOpening, WebView will send an event that will contain all of the information for the dialog and allow the host app to show its own custom UI. It is true by default.
(Read and Write property)

207.3.45 AreDevToolsEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: AreDevToolsEnabled controls whether the user is able to use the context menu or keyboard shortcuts to open the DevTools window.
Notes: It is true by default.
(Read and Write property)

207.3.46 AreHostObjectsAllowed as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The AreHostObjectsAllowed property is used to control whether host objects are accessible from the page in WebView.
Notes: It is true by default.
(Read and Write property)

207.3.47 Browser as WebView2BrowserMBS

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Queries the browser object for the WebView2 control.
Notes: (Read only property)

207.3.48 BrowserExecutableFolder as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The path to the browser executable to use.
Notes: Must be assigned very early, e.g. in Configure event, before initialization of the control runs.

Use browserExecutableFolder to specify whether WebView2 controls use a fixed or installed version of the WebView2 Runtime that exists on a user machine. To use a fixed version of the WebView2 Runtime, pass the relative folder path that contains the fixed version of the WebView2 Runtime to browserExecutableFolder. To create WebView2 controls that use the installed version of the WebView2 Runtime that exists on user machines, pass a empty string to browserExecutableFolder. In this scenario, the API tries to find a compatible version of the WebView2 Runtime that is installed on the user machine (first at the machine level, and then per user) using the selected channel preference. The path of fixed version of the WebView2 Runtime should not contain \Edge\Application\. When such a path is used, the API fails with HRESULT_FROM_WIN32(ERROR_NOT_SUPPORTED).
(Read and Write property)

207.3.49 BrowserVersionString as String

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The browser version info of the current environment, including channel name if it is not the stable channel.
Notes: This matches the format of the AvailableCoreWebView2BrowserVersionString API. Channel names are 'beta', 'dev', and 'canary'.
(Read only property)

207.3.50 ContainsFullScreenElement as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Indicates if the WebView contains a fullscreen HTML element.
Notes: (Read only property)

207.3.51 CookieManager as WebView2CookieManagerMBS

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: Gets the cookie manager object associated with this webview.
Notes: Requires WebView2 version 1.0.705.50 from January 2021.
(Read only property)

207.3.52 DefaultBackgroundColor as Color

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The DefaultBackgroundColor property is the color WebView renders underneath all web content.
Example:

```
// set transparent in Opened event:

web.DefaultBackgroundColor = &cFFFFFFFF
```

Notes: This means WebView renders this color when there is no web content loaded such as before the initial navigation or between navigations. This also means web pages with undefined css background properties or background properties containing transparent pixels will render their contents over this color. Web pages with defined and opaque background properties that span the page will obscure the DefaultBackgroundColor and display normally. The default value for this property is white to resemble the native browser experience.

The Color is specified by the color that represents an RGBA value. The A represents an Alpha value, meaning DefaultBackgroundColor can be transparent. In the case of a transparent DefaultBackgroundColor WebView will render hosting app content as the background. This Alpha value is not supported on Windows 7. Any A value other than 255 will result in an exception on Windows 7. It is supported on all other WebView compatible platforms.

Semi-transparent colors are not currently supported by this API and setting DefaultBackgroundColor to a semi-transparent color will fail with an exception. The only supported alpha values are 0 and 255, all other values will result in exception. DefaultBackgroundColor can only be an opaque color or transparent.

Requires version 1.0.774.44 of Webview2 or newer.
Can't be set in Open event as the control is not yet ready.
(Read and Write property)

207.3.53 DefaultDownloadFolderPath as String

MBS WinFrameworks Plugin, Plugin Version: 25.5, Platform: Windows, Targets: Desktop only.

Function: The default download folder path.
Notes: The default value is the system default download folder path for the user. The default download folder path is persisted in the user data folder across sessions. The value should be an absolute path to a folder that the user and application can write to. Throws an exception if the value is invalid, and the default download path is not changed. Otherwise the path is changed immediately. If the directory does not yet exist, it is created at the time of the next download. If the host application does not have permission to create the directory, then the user is prompted to provide a new path through the Save As dialog. The user can override the default download folder path for a given download by choosing a different path in the Save As dialog.
(Read and Write property)

207.3.54 DocumentTitle as String

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The title for the current top level document.
Notes: If the document has no explicit title or is otherwise empty, a default that may or may not match the URI of the document will be used.
(Read only property)

207.3.55 FaviconURI as String

MBS WinFrameworks Plugin, Plugin Version: 25.4, Platform: Windows, Targets: Desktop only.

Function: Get the current Uri of the favicon as a string.
Example:

```
Var url As String = web.FaviconURI

MessageBox url
```

Notes: If a page has no favicon then the value is an empty string.
(Read only property)

207.3.56 HiddenPdfToolbarItems as Integer

MBS WinFrameworks Plugin, Plugin Version: 24.2, Platform: Windows, Targets: Desktop only.

Function: Customize the PDF toolbar items.
Notes: By default, it is 0 and so it displays all of the items. Changes to this property apply to all CoreWebView2s in the same environment and using the same profile. Changes to this setting apply only after the next navigation.

Available values:

Seems like 256 hides the whole toolbar.
(Read and Write property)

207.3.57 IsBuiltInErrorPageEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The IsBuiltInErrorPageEnabled property is used to disable built in error page for navigation

Bookmarks	256	The contents button on PDF toolbar.
FitPage	64	The fit to width button on PDF toolbar.
FullScreen	2048	The full screen button on PDF toolbar.
MoreSettings	4096	The setting and more button on PDF toolbar. Gear icon.
None	0	No item. By default the HiddenPdfToolbarItems equal to this value.
PageLayout	128	The page view button on PDF toolbar.
PageSelector	512	The page number button on PDF toolbar.
Print	2	The print button on PDF toolbar.
Rotate	32	The rotate button on PDF toolbar.
Save	1	The save button on PDF toolbar.
SaveAs	4	The save as button on PDF toolbar.
Search	1024	The search button on PDF toolbar.
ZoomIn	8	The zoom in button on PDF toolbar.
ZoomOut	16	The zoom out button on PDF toolbar.

failure and render process failure.
Notes: It is true by default. When disabled, blank page will be shown when related error happens.
(Read and Write property)

207.3.58 IsDocumentPlayingAudio as Boolean

MBS WinFrameworks Plugin, Plugin Version: 24.5, Platform: Windows, Targets: Desktop only.

Function: Indicates whether any audio output from this web viewer is playing.
Notes: This property will be true if audio is playing even if IsMuted is true.
(Read only property)

207.3.59 IsGeneralAutofillEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.4, Platform: Windows, Targets: Desktop only.

Function: Whether autofill for information like names, street and email addresses, phone numbers, and arbitrary input is enabled.
Notes: This excludes password and credit card information. When IsGeneralAutofillEnabled is false, no suggestions appear, and no new information is saved. When IsGeneralAutofillEnabled is true, information is saved, suggestions appear and clicking on one will populate the form fields. The default value is true.

Needs WebView2 in version 1.0.902.49 or newer.
(Read and Write property)

207.3.60 IsInPrivateModeEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 26.3, Platform: Windows, Targets: Desktop only.

Function: Whether private mode is enabled.
Notes: (Read only property)

207.3.61 IsMuted as Boolean

MBS WinFrameworks Plugin, Plugin Version: 24.5, Platform: Windows, Targets: Desktop only.

Function: Indicates or sets whether all audio output from this web viewer is muted or not.
Notes: Can be read and set.
(Read and Write property)

207.3.62 IsPasswordAutosaveEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.4, Platform: Windows, Targets: Desktop only.

Function: Whether autosave for password information is enabled.
Notes: The IsPasswordAutosaveEnabled property behaves independently of the IsGeneralAutofillEnabled property. When IsPasswordAutosaveEnabled is false, no new password data is saved and no Save/Update Password prompts are displayed. However, if there was password data already saved before disabling this setting, then that password information is auto-populated, suggestions are shown and clicking on one will populate the fields. When IsPasswordAutosaveEnabled is true, password information is auto-populated, suggestions are shown and clicking on one will populate the fields, new data is saved, and a Save/Update Password prompt is displayed. The default value is false.

Needs WebView2 in version 1.0.902.49 or newer.
(Read and Write property)

207.3.63 IsPinchZoomEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.4, Platform: Windows, Targets: Desktop only.

Function: Enable or disable pitch zoom.
Notes: Pinch-zoom, referred to as "Page Scale" zoom, is performed as a post-rendering step, it changes the page scale factor property and scales the surface the web page is rendered onto when user performs a pinch zooming action.

It does not change the layout but rather changes the viewport and clips the web content, the content outside of the viewport isn't visible onscreen and users can't reach this content using mouse.

The IsPinchZoomEnabled property enables or disables the ability of the end user to use a pinching motion on touch input enabled devices to scale the web content in the WebView2. It defaults to TRUE. When set to FALSE, the end user cannot pinch zoom after the next navigation. Disabling/Enabling IsPinchZoomEnabled only affects the end user's ability to use pinch motions and does not change the page scale factor. This API only affects the Page Scale zoom and has no effect on the existing browser zoom properties (IsZoomControlEnabled and ZoomFactor) or other end user mechanisms for zooming.

Needs WebView2 in version 1.0.902.49 or newer.
(Read and Write property)

207.3.64 IsScriptEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Controls if JavaScript execution is enabled in all future navigations in the WebView.
Notes: This only affects scripts in the document; scripts injected with ExecuteScript will run even if script is disabled. It is true by default.
(Read and Write property)

207.3.65 IsStatusBarEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: IsStatusBarEnabled controls whether the status bar will be displayed.
Notes: The status bar is usually displayed in the lower left of the WebView and shows things such as the URI of a link when the user hovers over it and other information. It is true by default.
(Read and Write property)

207.3.66 IsSwipeNavigationEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 24.2, Platform: Windows, Targets: Desktop only.

Function: Determines whether the end user to use swiping gesture on touch input enabled devices to navigate in WebView2.
Notes: Swiping gesture navigation on touch screen includes:

- Swipe left/right (swipe horizontally) to navigate to previous/next page in navigation history.
- Pull to refresh (swipe vertically) the current page. (This feature is currently disabled by default in the browser, to enable in WebView2, set AdditionalBrowserArguments property with –pull-to-refresh switch).

It defaults to true. When set to false, the end user cannot swipe to navigate or pull to refresh. This API only affects the overscrolling navigation functionality and has no effect on the scrolling interaction used to explore the web content shown in WebView2.
(Read and Write property)

207.3.67 IsWebMessageEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The IsWebMessageEnabled property is used when loading a new HTML document.
Notes: If set to true, communication from the host to the WebView's top level HTML document is allowed via PostWebMessageAsJson, PostWebMessageAsString, and window.chrome.webview's message event (see PostWebMessageAsJson documentation for details). Communication from the WebView's top level HTML document to the host is allowed via window.chrome.webview's postMessage function and add_WebMessageReceived method (see add_WebMessageReceived documentation for details). If set to false, then communication is disallowed. PostWebMessageAsJson and PostWebMessageAsString will fail with E_ACCESSDENIED and window.chrome.webview.postMessage will fail by throwing an instance of an Error object. It is true by default.
(Read and Write property)

207.3.68 IsZoomControlEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The IsZoomControlEnabled property is used to prevent the user from impacting the zoom of the WebView.
Notes: It is true by default. When disabled, user will not be able to zoom using ctrl+/- or ctrl+mouse wheel, but the zoom can be set via ZoomFactor API.
(Read and Write property)

207.3.69 Language as String

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The default language that WebView will run with.
Notes: It applies to browser UIs like context menu and dialogs. It also applies to the accept-languages HTTP header that WebView sends to web sites. It is in the format of language [-country] where language is the 2 letter code from ISO 639 and country is the 2 letter code from ISO 3166.
(Read and Write property)

207.3.70 MemoryUsageTargetLevel as Integer

MBS WinFrameworks Plugin, Plugin Version: 25.4, Platform: Windows, Targets: Desktop only.

Function: Indicates desired memory consumption level of WebView.
Notes: Scripts will not be impacted and continue to run. This is useful for inactive apps that still want to run scripts and/or keep network connections alive and therefore could not call TrySuspend and Resume to reduce memory consumption. These apps can set memory usage target level to kMemoryUsageTargetLevelLow when the app becomes inactive, and set back to kMemoryUsageTargetLevelNormal when the app becomes active.

It is not necessary to set CoreWebView2Controller's IsVisible property to false when setting the property. It is a best effort operation to change memory usage level, and the API will return before the operation completes. Setting the level to kMemoryUsageTargetLevelLow could potentially cause memory for some WebView browser processes to be swapped out to disk in some circumstances. It is a best effort to reduce memory usage as much as possible. If a script runs after its related memory has been swapped out, the memory will be swapped back in to ensure the script can still run, but performance might be impacted. Therefore, the app should set the level back to kMemoryUsageTargetLevelNormal when the app becomes active again. Setting memory usage target level back to normal will not happen automatically.

An app should choose to use either the combination of TrySuspend and Resume or the combination of setting MemoryUsageTargetLevel to low and normal. It is not advisable to mix them. Trying to set MemoryUsageTargetLevel while suspended will be ignored. The TrySuspend and Resume methods will change the MemoryUsageTargetLevel. TrySuspend will automatically set MemoryUsageTargetLevel to low while Resume on suspended WebView will automatically set MemoryUsageTargetLevel to normal. Calling Resume when the WebView is not suspended would not change MemoryUsageTargetLevel.
(Read and Write property)

207.3.71 PreferredColorScheme as Integer

MBS WinFrameworks Plugin, Plugin Version: 25.5, Platform: Windows, Targets: Desktop only.

Function: The PreferredColorScheme property sets the overall color scheme of the WebView2s associated with this profile.
Example:

```
var web as WebView2ControlMBS // your web viewer
web.PreferredColorScheme = web.kPreferredColorSchemeDark
```

Notes: This sets the color scheme for WebView2 UI like dialogs, prompts, and menus by setting the media feature prefers-color-scheme. The default value for this is kPreferredColorSchemeAuto, which will follow whatever color scheme the OS is currently set to.
(Read and Write property)

207.3.72 ProcessID as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The process id of the browser process that hosts the WebView.
Notes: (Read only property)

207.3.73 ProfilePath as String

MBS WinFrameworks Plugin, Plugin Version: 25.5, Platform: Windows, Targets: Desktop only.

Function: Full path of the profile directory.
Notes: (Read only property)

207.3.74 TargetCompatibleBrowserVersion as String

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The version of the Edge WebView2 Runtime binaries required to be compatible with the calling application.
Notes: This defaults to the Edge WebView2 Runtime version that corresponds with the version of the SDK the application is using. The format of this value is the same as the format of the BrowserVersionString property and other BrowserVersion values. Only the version part of the BrowserVersion value is respected. The channel suffix, if it exists, is ignored. The version of the Edge WebView2 Runtime binaries actually used may be different from the specified TargetCompatibleBrowserVersion. They are only guaranteed to be compatible. You can check the actual version on the BrowserVersionString property on the control.
(Read and Write property)

207.3.75 URL as String

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The URI of the current top level document.
Notes: This value potentially changes as a part of the SourceChanged event firing for some cases such as navigating to a different site or fragment navigations. It will remain the same for other types of navigations such as page reloads or history.pushState with the same URL as the current page.

If assigned, calls LoadURL method.
(Read and Write property)

207.3.76 UserAgent as String

MBS WinFrameworks Plugin, Plugin Version: 21.4, Platform: Windows, Targets: Desktop only.

Function: The User Agent.
Notes: The default value is the default User Agent of the Microsoft Edge browser.

This property may be overridden if the User-Agent header is set in a request. If the parameter is empty the User Agent will not be updated and the current User Agent will remain.

Needs WebView2 in version 1.0.864.35 or newer.
(Read and Write property)

207.3.77 UserDataFolder as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The user data folder location.
Example:

```
Var w As WebView2ControlMBS // your control

Var SupportFolder As FolderItem = SpecialFolder.ApplicationData.Child("MyApp")
SupportFolder.CreateAsFolder

w.UserDataFolder = SupportFolder.NativePath
```

Notes: Must be assigned very early, e.g. in Configure event, before initialization of the control runs.

You may specify the userDataFolder to change the default user data folder location for WebView2. The path is either an absolute file path or a relative file path that is interpreted as relative to the compiled code for the current process. For UWP apps, the default user data folder is the app data folder for the package. For non-UWP apps, the default user data ({ Executable File Name } .WebView2) folder is created in the same directory next to the compiled code for the app. WebView2 creation fails if the compiled code is running in a directory in which the process does not have permission to create a new directory. The app is responsible to clean up the associated user data folder when it is done.
(Read and Write property)

207.3.78 ZoomFactor as Double

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The ZoomFactor property.

Notes: (Read and Write property)

207.3.79 Events

207.3.80 AddBrowserExtensionCompleted(extensionFolderPath as String, errorCode as Integer, Tag as Variant)

MBS WinFrameworks Plugin, Plugin Version: 24.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event called for AddBrowserExtension result.

207.3.81 AddScriptToExecuteOnDocumentCreatedCompleted(JavaScript as String, ErrorCode as Integer, ID as String, Tag as Variant)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event to report that AddScriptToExecuteOnDocumentCreated is done and provide the ID.

207.3.82 BasicAuthenticationRequested(URL as string, Challenge as String, byref UserName as String, byref Password as String, byref Cancel as boolean)

MBS WinFrameworks Plugin, Plugin Version: 25.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event to ask for authentication.
Example:

```
Sub BasicAuthenticationRequested(URL as string, Challenge as String, byref UserName as String, byref
Password as String, byref Cancel as boolean) Handles BasicAuthenticationRequested
System.DebugLog CurrentMethodName
System.DebugLog "URL: "+url
System.DebugLog "Challenge: "+Challenge

UserName = "xxx"
Password = "yyy"

// or
// Cancel = True

End Sub
```

Notes: BasicAuthenticationRequested event is raised when WebView encounters a Basic HTTP Authentication request as described in https://developer.mozilla.org/docs/Web/HTTP/Authentication, a Digest HTTP Authentication request as described in https://developer.mozilla.org/docs/Web/HTTP/Headers/Authorization#digest, an NTLM authentication or a Proxy Authentication request.

The host can provide a response with credentials for the authentication or cancel the request. If the host sets the Cancel property to false but does not provide either UserName or Password properties on the Response property, then WebView2 will show the default authentication challenge dialog prompt to the user.

207.3.83 CapturePreviewCompleted(ImageFormat as Integer, ErrorCode as Integer, PictureData as String)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event called when CapturePreview call is done.
Example:

```
Sub CapturePreviewCompleted(ImageFormat as Integer, ErrorCode as Integer, PictureData as String) Handles CapturePreviewCompleted
If PictureData.Length >0 Then

// write to a file on desktop and open it.
Var file As FolderItem = SpecialFolder.Desktop.Child("webview.png")
Var b As BinaryStream = BinaryStream.Create(file, True)

b.Write PictureData
b.Close

file.Launch
End If
End Sub
```

Notes: We pass you the image data as a string, so you can e.g. write it to a PNG or JPEG file.
Otherwise ErrorCode tells you the reason for the error.

207.3.84 Close

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function:

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

207.3.85 Closing

Plugin Version: 20.5, Platform: Windows, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

207.3.86 Configure

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event called while initializing, where you can apply properties just before plugin reads them.
Example:

```
Sub Configure() Handles Configure

// define where data goes for this web viewer:

Var folder As FolderItem = SpecialFolder.ApplicationData.Child("MyApp")
folder.CreateAsFolder

Me.UserDataFolder = folder.NativePath
End Sub
```

Notes: Can be used to set UserDataFolder property.

207.3.87 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 22.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This event is called when it is appropriate to display a contextual menu for the control.

207.3.88 ContainsFullScreenElementChanged

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: ContainsFullScreenElementChanged fires when the ContainsFullScreenElement property changes.
Notes: This means that an HTML element inside the WebView is entering fullscreen to the size of the WebView or leaving fullscreen. This event is useful when, for example, a video element requests to go fullscreen. The listener of ContainsFullScreenElementChanged can then resize the WebView in response.

207.3.89 ContentLoading(isErrorPage as Boolean, NavigationID as UInt64)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The content loading event.d
Notes: ContentLoading fires before any content is loaded, including scripts added with AddScriptToExecuteOnDocumentCreated. ContentLoading will not fire if a same page navigation occurs (such as through fragment navigations or history.pushState navigations). This follows the NavigationStarting and SourceChanged events and precedes the HistoryChanged and NavigationCompleted events.

207.3.90 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 22.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Called when a menuitem is chosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

207.3.91 DocumentTitleChanged

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event to report a document title change.
Notes: DocumentTitleChanged fires when the DocumentTitle property of the WebView changes and may fire before or after the NavigationCompleted event.

207.3.92 EnableMenuItems

MBS WinFrameworks Plugin, Plugin Version: 22.1, Platform: Windows, Targets: Desktop, Console & Web.

Function:

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

207.3.93 ExecuteScriptCompleted(JavaScript as String, ErrorCode as Integer, resultObjectAsJson as String, Tag as Variant)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event to report ExecuteScript method is done.

207.3.94 Failed(ErrorCode as Integer, ErrorMessage as String)

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event called when creating the control failed.
Notes: Allows you to close the window, show an error message or switch to a Xojo HTMLViewer.
e.g. you get a file not found error if the WebView2 component ist not installed.

207.3.95 FaviconChanged

MBS WinFrameworks Plugin, Plugin Version: 25.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: This event is raised when the favicon had a different URL then the previous URL.
Notes: The FaviconChanged event will be raised for first navigating to a new document, whether or not a document declares a Favicon in HTML if the favicon is different from the previous fav icon. The event will be raised again if a favicon is declared in its HTML or has script to set its favicon. The favicon information can then be retrieved with GetFavicon method and FaviconUri property.

207.3.96 FaviconCompleted(ImageFormat as Integer, ErrorCode as Integer, PictureData as String)

MBS WinFrameworks Plugin, Plugin Version: 25.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event called when the GetFavicon method completed.
Notes: PictureData contains JPEG or PNG data.

207.3.97 FocusLost

Plugin Version: 20.5, Platform: Windows, Targets: .

Function:

LostFocus fires when WebView lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

In the case where MoveFocusRequested event is fired, the focus is still on WebView when MoveFocusRequested event fires. LostFocus only fires afterwards when app's code or default action of MoveFocusRequested event set focus away from WebView.

207.3.98 FocusReceived

Plugin Version: 20.5, Platform: Windows, Targets: .

Function:

GotFocus fires when WebView got focus.
In older Xojo versions, this event is named GotFocus.

207.3.99 FrameNavigationCompleted(isSuccess as Boolean, ErrorStatus as Integer, NavigationID as UInt64)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: FrameNavigationCompleted fires when a child frame has completely loaded (body.onload has fired) or loading stopped with error.

207.3.100 FrameNavigationStarting(URL as String, IsUserInitiated as Boolean, IsRedirected as Boolean, NavigationID as UInt64) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: FrameNavigationStarting fires when a child frame in the WebView requests permission to navigate to a different URI. This will fire for redirects as well.
Notes: Corresponding navigations can be blocked until the event handler returns.
Return true to block the request.

207.3.101 GotFocus

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function:

GotFocus fires when WebView got focus.
In Xojo version 2021r3 and newer this event is named FocusReceived.

207.3.102 HistoryChanged

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event to report history change.
Notes: HistoryChanged listens to the change of navigation history for the top level document. Use Histo-

ryChanged to check if CanGoBack/CanGoForward value has changed. HistoryChanged also fires for using GoBack/GoForward. HistoryChanged fires after SourceChanged and ContentLoading.

207.3.103 LaunchingExternalUriScheme(URI as String, InitiatingOrigin as String, IsUserInitiated as Boolean, byref Cancel as Boolean)

MBS WinFrameworks Plugin, Plugin Version: 26.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The LaunchingExternalUriScheme event is raised when a navigation request is made to a URI scheme that is registered with the OS
Example:

```
Sub LaunchingExternalUriScheme(URI as String, InitiatingOrigin as String, IsUserInitiated as Boolean,
byref Cancel as Boolean) Handles LaunchingExternalUriScheme
// use ShowURL to open FMP URLs directly
If Left(URI,4) = "FMP:" Then
ShowURL URI
cancel = True
End If
End Sub
```

Notes: The LaunchingExternalUriScheme event handler may suppress the default dialog or replace the default dialog with a custom dialog.

The host has the option to cancel the URI scheme launch by setting Cancel to true.

The NavigationStarting and NavigationCompleted events will be raised, regardless of whether the Cancel property is set to TRUE or FALSE. The NavigationCompleted event will be raised with the IsSuccess property set to FALSE and the WebErrorStatus property set to ConnectionAborted regardless of whether the host sets the Cancel parameter. The SourceChanged, ContentLoading, and HistoryChanged events will not be raised for this navigation to the external URI scheme regardless of the Cancel property. The LaunchingExternalUriScheme event will be raised after the NavigationStarting event and before the NavigationCompleted event.

The WebView2 may not display the default dialog based on user settings, browser settings, and whether the origin is determined as a trustworthy origin; however, the event will still be raised.

If the request is initiated by a cross-origin frame without a user gesture, the request will be blocked and the LaunchingExternalUriScheme event will not be raised.

207.3.104 LostFocus

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function:

LostFocus fires when WebView lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.
Notes:

In the case where MoveFocusRequested event is fired, the focus is still on WebView when MoveFocusRequested event fires. LostFocus only fires afterwards when app's code or default action of MoveFocusRequested event set focus away from WebView.

207.3.105 MenuBarSelected

Plugin Version: 22.1, Platform: Windows, Targets: .

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

207.3.106 NavigationCompleted(isSuccess as Boolean, ErrorStatus as Integer, NavigationID as UInt64)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event to report a navigation action completed.
Notes: NavigationCompleted fires when the WebView has completely loaded (body.onload has fired) or loading stopped with error.

Please don't process directly here, but maybe call a method with timer.CallLater to do processing like using HTMLText or PlainText functions.

Like the DocumentCompleted event in Xojo.

207.3.107 NavigationStarting(URL as String, IsUserInitiated as Boolean, IsRedirected as Boolean, NavigationID as UInt64) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event to report a navigation action.
Notes: NavigationStarting fires when the WebView main frame is requesting permission to navigate to a different URI. This will fire for redirects as well.
Corresponding navigations can be blocked until the event handler returns.

Return true to cancel it like Xojo's CancelLoad event.

This event is great to check the URL. If you like to block it, you may just return true. If the user initiated the request, you may instead want to load a warning page. Also check the URL and decide whether to turn scripting on or off.

207.3.108 NewWindowRequested(URL as String, IsUserInitiated as Boolean, WindowFeatures as WebView2WindowFeaturesMBS, byref NewWindow as Variant) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event called when a new window needs to be opened.
Notes: Return true to indicate you handled the event.
If you create a new window with a WebView2ControlMBS (or DesktopWebView2ControlMBS), you can put it in NewWindow property.

IsUserInitiated:
True when the new window request was initiated through a user gesture.

Examples of user initiated requests are:
Selecting an anchor tag with target
Programmatic window open from a script that directly run as a result of user interaction such as via onclick handlers.
Non-user initiated requests are programmatic window opens from a script that are not directly triggered by user interaction, such as those that run while loading a new page or via timers. The Microsoft Edge popup blocker is disabled for WebView so the app is able to use this flag to block non-user initiated popups.

URL: The target uri of the new window requested.

NewWindow: Set the new control to use.

If the NewWindow is set, the top-level window returns as the opened WindowProxy. The NewWindow property should be set to a control that has not been navigated previously. Don't use methods that cause navigation or interact with the DOM on this web view. Setting event handlers, changing Settings properties, or other methods are fine to call. Changes to settings should be made before NewWindow is called to ensure that those settings take effect for the newly setup WebView. Once the NewWindow is set the underlying web contents of this CoreWebView2 will be replaced and navigated as appropriate for the new window. After setting new window it cannot be changed and error will be return otherwise.

207.3.109 Open

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function:

The control is about to was created and you can initialize it.
In Xojo version 2021r3 and newer this event is named Opening.

207.3.110 Opened

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event called when browser initialization is done.
Notes: Typical event flow is like this:

- Configure
- Open
- Window.Open
- Opened

Opened is called a few milliseconds later.

If you load an URL, the events happen like this:

- NavigationStarting
- SourceChanged
- ContentLoading
- HistoryChanged
- DocumentTitleChanged
- NavigationCompleted

207.3.111 Opening

Plugin Version: 20.5, Platform: Windows, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

207.3.112 PermissionRequested(URL as String, PermissionKind as Integer, IsUserInitiated as Boolean, byref State as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event to query permissions from user.
Notes: PermissionRequested fires when content in a WebView requests permission to access some privileged resources.
If a deferral is not taken on the event args, the subsequent scripts can be blocked until the event handler returns. If a deferral is taken, then the scripts are blocked until the deferral is completed.

URL: The origin of the web content that requests the permission.
PermissionKind: The type of the permission that is requested.
IsUserInitiated: True when the permission request was initiated through a user gesture.
State: The status of a permission request, i.e.

Please assign State the answer you like to provide.

207.3.113 PrintCompleted(Path as String, errorCode as Integer, isSuccessful as boolean)

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Receives the result of the PrintToPdf method.
Notes: If the print to PDF operation succeeds, isSuccessful is true. Otherwise, if the operation failed, isSuccessful is set to false. An invalid path returns E_INVALIDARG in errorCode.

207.3.114 ProcessFailed(processFailedKind as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: ProcessFailed fires when a WebView process is terminated unexpectedly or becomes unresponsive.

207.3.115 SourceChanged(isNewDocument as Boolean)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event to report a change in the URL.
Notes: SourceChanged fires when the Source property changes. SourceChanged fires for navigating to a different site or fragment navigations. It will not fire for other types of navigations such as page reloads or history.pushState with the same URL as the current page. SourceChanged fires before ContentLoading for navigation to a new document.

207.3.116 WebMessageReceived(Source as String, webMessageAsJson as String, webMessageAsString as String)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event called for a web message.
Notes: WebMessageReceived fires when the IsWebMessageEnabled setting is set and the top level document of the WebView calls window.chrome.webview.postMessage. The postMessage function is void postMessage(object) where object is any object supported by JSON conversion.

webMessageAsString is empty if we can't serialize it to text.

207.3.117 WindowCloseRequested

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event where JavaScript asks to close window.
Notes: WindowCloseRequested fires when content inside the WebView requested to close the window, such as after window.close is called. The app should close the WebView and related app window if that makes sense to the app.

207.3.118 ZoomFactorChanged

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: ZoomFactorChanged fires when the ZoomFactor property of the WebView changes.
Notes: The event could fire because the caller modified the ZoomFactor property, or due to the user manually modifying the zoom. When it is modified by the caller via the ZoomFactor property, the internal zoom factor is updated immediately and there will be no ZoomFactorChanged event. WebView associates the last used zoom factor for each site. Therefore, it is possible for the zoom factor to change when navigating to a different page. When the zoom factor changes due to this, the ZoomFactorChanged event fires right after the ContentLoading event.

207.3.119 Constants

Image Formats

Constant	Value	Description
kCapturePreviewImageFormatJPEG	1	JPEG format.
kCapturePreviewImageFormatPNG	0	PNG format.

Favicon Image Format

Constant	Value	Description
kFaviconImageFormatJPEG	1	JPEG format
kFaviconImageFormatPNG	0	PNG format

HostResourceAccessKind

Constant	Value	Description
kHostResourceAccessKindAllow	1	All cross origin resource access is allowed, including accesses that are subj to Cross-Origin Resource Sharing(CORS) check. The behavior is similar t web site sends back http header Access-Control-Allow-Origin: *.
kHostResourceAccessKindDeny	0	All cross origin resource access is denied, including normal sub resource acc as src of a script or image element.
kHostResourceAccessKindDenyCors	2	Cross origin resource access is allowed for normal sub resource access like src of a script or image element, while any access that subjects to CORS ch will be denied.

Memory Usage Target Levels

Constant	Value	Description
kMemoryUsageTargetLevelLow	1	Reduced memory usage.
kMemoryUsageTargetLevelNormal	0	Normal usage levels.

Move Focus Reasons

Constant	Value	Description
kMoveFocusReasonNext	1	Specifies that the focus is moving due to Tab traversal forward.
kMoveFocusReasonPrevious	2	Specifies that the focus is moving due to Tab traversal backward.
kMoveFocusReasonProgrammatic	0	Specifies that the code is setting focus into WebView.

Permission Kind

Constant	Value	Description
kPermissionKindCamera	2	Permission to capture video.
kPermissionKindClipboardRead	6	Permission to read system clipboard without a user gesture.
kPermissionKindGeoLocation	3	Permission to access geolocation.
kPermissionKindMicrophone	1	Permission to capture audio.
kPermissionKindNotifications	4	Permission to send web notifications.
kPermissionKindOtherSensors	5	Permission to access generic sensor.
kPermissionKindUnknownPermission	0	Unknown permission.

Permission States

Constant	Value	Description
kPermissionStateAllow	1	Grant the permission request.
kPermissionStateDefault	0	Use default browser behavior, which normally prompt users for decision.
kPermissionStateDeny	2	Deny the permission request.

Preferred Color Scheme

Constant	Value	Description
kPreferredColorSchemeAuto	0	Auto color scheme.
kPreferredColorSchemeDark	2	Dark color scheme.
kPreferredColorSchemeLight	1	Light color scheme.

Process Failure Kinds

Constant	Value	Description
kProcessFailedKindBrowserProcessExited	0	Indicates the browser process terminated unexpectedly.
kProcessFailedKindRenderProcessExited	1	Indicates the render process terminated unexpectedly.
kProcessFailedKindRenderProcessUnresponsive	2	Indicates the render process becomes unresponsive.

Error Status Values

Constant	Value	Description
kWebErrorStatusCannotConnect	12	Cannot connect to destination.
kWebErrorStatusCertificateCommonNameIsIncorrect	1	The SSL certificate common name does not match the we
kWebErrorStatusCertificateExpired	2	The SSL certificate has expired.
kWebErrorStatusCertificateIsInvalid	5	The SSL certificate is invalid –this could mean the certi the public key pins for the host name, the certificate is sig authority or using a weak sign algorithm, the certificate violate name constraints, the certificate contains a weak validity period is too long, lack of revocation information anism, non-unique host name, lack of certificate transpar the certificate is chained to a legacy Symantec root.
kWebErrorStatusCertificateRevoked	4	The SSL certificate has been revoked.
kWebErrorStatusClientCertificateContainsErrors	3	The SSL client certificate contains errors.
kWebErrorStatusConnectionAborted	9	The connection was aborted.
kWebErrorStatusConnectionReset	10	The connection was reset.
kWebErrorStatusDisconnected	11	The Internet connection has been lost.
kWebErrorStatusErrorHttpInvalidServerResponse	8	The server returned an invalid or unrecognized response.
kWebErrorStatusHostNameNotResolved	13	Could not resolve provided host name.
kWebErrorStatusOperationCanceled	14	The operation was canceled.
kWebErrorStatusRedirectFailed	15	The request redirect failed.
kWebErrorStatusServerUnreachable	6	The host is unreachable.
kWebErrorStatusTimeout	7	The connection has timed out.
kWebErrorStatusUnexpectedError	16	An unexpected error occurred.
kWebErrorStatusUnknown	0	An unknown error occurred.

Web Resource Context

Constant	Value	Description
kWebResourceContextAll	0	All resources.
kWebResourceContextCspViolationReport	15	CSP Violation Reports.
kWebResourceContextDocument	1	Document resources.
kWebResourceContextEventSource	10	EventSource API communication.
kWebResourceContextFetch	8	Fetch API communication.
kWebResourceContextFont	5	Font resources.
kWebResourceContextImage	3	Image resources.
kWebResourceContextManifest	12	Web App Manifests.
kWebResourceContextMedia	4	Other media resources such as videos.
kWebResourceContextOther	16	Other resources.
kWebResourceContextPing	14	Ping requests.
kWebResourceContextScript	6	Script resources.
kWebResourceContextSignedExchange	13	Signed HTTP Exchanges.
kWebResourceContextStylesheet	2	CSS resources.
kWebResourceContextTextTrack	9	TextTrack resources.
kWebResourceContextWebSocket	11	WebSocket API communication.
kWebResourceContextXMLHttpRequest	7	XML HTTP requests.

207.4 class WebView2CookieManagerMBS

207.4.1 class WebView2CookieManagerMBS

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: Creates, adds or updates, gets, or or view the cookies.
Example:

```
// This example needs a window with WebView2ControlMBS1.
// list the cookies of the WebView2 control on Windows
Var manager As WebView2CookieManagerMBS = WebView2ControlMBS1.CookieManager
Var lines() As String
For Each c As WebView2CookieMBS In manager.GetCookiesSync("https://www.example.com/")
lines.Add c.Name + " = " + c.Value + " (" + c.Domain + ")"
Next
MessageBox String.FromArray(lines, EndOfLine)

// add a cookie
Var cookie As WebView2CookieMBS = manager.CreateCookie("language", "de", "www.example.com", "/")
manager.AddOrUpdateCookie cookie
```

Notes: The changes would apply to the context of the user profile. That is, other WebViews under the same user profile could be affected.

All functions may raise WebView2ExceptionMBS in case of errors.
Requires WebView2 version 1.0.705.50 from January 2021.

207.4.2 Methods

207.4.3 AddOrUpdateCookie(cookie as WebView2CookieMBS)

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: Adds or updates a cookie with the given cookie data; may overwrite cookies with matching name, domain, and path if they exist.
Notes: This method will fail if the domain of the given cookie is not specified.

207.4.4 Constructor

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: The private constructor.
See also:

- 207.4.5 Constructor(cookie as WebView2CookieMBS) 24477

207.4.5 Constructor(cookie as WebView2CookieMBS)

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: The copy constructor.
Notes: Enables you to make a subclass and then initialize it with an existing cookie manager.
See also:

- 207.4.4 Constructor 24477

207.4.6 CopyCookie(Cookie as WebView2CookieMBS) as WebView2CookieMBS

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: Creates a cookie whose params matches those of the specified cookie.

207.4.7 CreateCookie(Name as String, Value as String, Domain as String, Path as String) as WebView2CookieMBS

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: Create a cookie object with a specified name, value, domain, and path.
Notes: One can set other optional properties after cookie creation. This only creates a cookie object and it is not added to the cookie manager until you call AddOrUpdateCookie. Leading or trailing whitespace(s), empty string, and special characters are not allowed for name. See WebView2CookieMBS class for more details.

207.4.8 DeleteAllCookies

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: Deletes all cookies under the same profile.
Notes: This could affect other WebViews under the same user profile.

207.4.9 DeleteCookie(cookie as WebView2CookieMBS)

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: Deletes a cookie whose name and domain/path pair match those of the specified cookie.

207.4.10 DeleteCookies(Name as String, URI as string)

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: Deletes cookies with matching name and uri.
Notes: Cookie name is required. All cookies with the given name where domain and path match provided URI are deleted.

207.4.11 DeleteCookiesWithDomainAndPath(Name as String, Domain as string, Path as String)

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: Deletes cookies with matching name and domain/path pair.
Notes: Cookie name is required. If domain is specified, deletes only cookies with the exact domain. If path is specified, deletes only cookies with the exact path.

207.4.12 GetCookies(URI as String = "")

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: Gets a list of cookies matching the specific URI.
Notes: If uri is empty string or null, all cookies under the same profile are returned. You can modify the cookie objects by calling AddOrUpdateCookie, and the changes will be applied to the webview.

Calls GotCookies event later.

207.4.13 GetCookiesSync(URI as String = "") as WebView2CookieMBS()

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: Gets a list of cookies matching the specific URI.
Example:

```
Var web as WebView2ControlMBS // your control
```

```
Var cookiemanager As WebView2CookieManagerMBS = web.CookieManager

// get all cookies synchronously
Var cookies() As WebView2CookieMBS = cookiemanager.GetCookiesSync
```

Notes: If uri is empty string or null, all cookies under the same profile are returned. You can modify the cookie objects by calling AddOrUpdateCookie, and the changes will be applied to the webview.

This is the synchronous version, where we wait for cookies.

207.4.14 Properties

207.4.15 Handle as Integer

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

207.4.16 Events

207.4.17 GotCookies(ErrorCode as Integer, Cookies() as WebView2CookieMBS)

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: Called when GetCookies finished.

207.5 class WebView2CookieMBS

207.5.1 class WebView2CookieMBS

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: Provides a set of properties that are used to manage a cookie.
Example:

```
// This example needs a window with WebView2ControlMBS1.
// list the cookies the WebView2 control has for a site
// Cookies is a property of the window: Cookies As WebView2CookieManagerMBS
Cookies = WebView2ControlMBS1.CookieManager
AddHandler Cookies.GotCookies, AddressOf GotCookies
Cookies.GetCookies("https://www.monkeybreadsoftware.de/")

// a method in the window:
Sub GotCookies(manager As WebView2CookieManagerMBS, ErrorCode As Integer, Cookies() As Web-
View2CookieMBS)
For Each c As WebView2CookieMBS In Cookies
System.DebugLog c.Domain + c.Path + " " + c.Name + "=" + c.Value + If(c.IsSession, " (session)", "")
+ If(c.IsSecure, " (secure)", "")
Next
End Sub
```

Notes: All functions may raise WebView2ExceptionMBS in case of errors.
Requires WebView2 version 1.0.705.50 from January 2021.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

207.5.2 Methods

207.5.3 Constructor

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: The private constructor.

207.5.4 Properties

207.5.5 Domain as String

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: The domain for which the cookie is valid.
Notes: The default is the host that this cookie has been received from. Note that, for instance, ".bing.com", "bing.com", and "www.bing.com" are considered different domains.
(Read only property)

207.5.6 Expires as Double

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: The expiration date and time for the cookie as the number of seconds since the UNIX epoch.
Notes: The default is -1.0, which means cookies are session cookies by default.

Cookies are session cookies and will not be persistent if Expires is set to -1.0. NaN, infinity, and any negative value set other than -1.0 is disallowed.
(Read and Write property)

207.5.7 Handle as Integer

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

207.5.8 IsHttpOnly as Boolean

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: Whether this cookie is http-only.
Notes: True if a page script or other active content cannot access this cookie. The default is false.
(Read and Write property)

207.5.9 IsSecure as Boolean

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: The security level of this cookie.
Notes: True if the client is only to return the cookie in subsequent requests if those requests use HTTPS. The default is false. Note that cookie that requests kCookieSameSiteKindNone but is not marked Secure will be rejected.
(Read and Write property)

207.5.10 IsSession as Boolean

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: Whether this is a session cookie. The default is false.
Notes: (Read only property)

207.5.11 Name as String

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: Cookie name.
Notes: (Read only property)

207.5.12 Path as String

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: The path for which the cookie is valid.
Notes: The default is "/", which means this cookie will be sent to all pages on the Domain.
(Read only property)

207.5.13 SameSite as Integer

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: SameSite status of the cookie which represents the enforcement mode of the cookie.
Notes: The default is kCookieSameSiteKindLax.
(Read and Write property)

207.5.14 Value as String

MBS WinFrameworks Plugin, Plugin Version: 23.1, Platform: Windows, Targets: Desktop only.

Function: Cookie value.
Notes: (Read and Write property)

207.5.15 Constants

Same Site Rules

Constant	Value	Description
kCookieSameSiteKindLax	1	Lax.
kCookieSameSiteKindNone	0	None.
kCookieSameSiteKindStrict	2	Strict.

207.6 class WebView2ExceptionMBS

207.6.1 class WebView2ExceptionMBS

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The class for the exceptions raised by our WebView2 control.
Notes: Subclass of the RuntimeException class.

207.7 class WebView2PrintSettingsMBS

207.7.1 class WebView2PrintSettingsMBS

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop only.

Function: Settings used by the PrintToPdf method.
Notes: Other programmatic printing is not currently supported, but Microsoft may add more later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

207.7.2 Methods

207.7.3 Constructor

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop only.

Function: The private constructor.

207.7.4 Properties

207.7.5 Collation as Integer

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop only.

Function: Printer collation.
Notes: See kCollation* constants for descriptions of collation.
The default value is kCollationDefault.

Printing uses default value of printer's collation if an invalid value is provided for the specific printer.

This value is ignored in PrintToPdf method.
(Read and Write property)

207.7.6 ColorMode as Integer

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop only.

Function: Printer color mode.
Notes: See kColorMode* constants for descriptions of color modes.
The default value is kColorModeDefault.

Printing uses default value of printer supported color if an invalid value is provided for the specific printer.
(Read and Write property)

207.7.7 Copies as Integer

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop only.

Function: Number of copies to print.
Notes: Minimum value is 1 and the maximum copies count is 999. The default value is 1.
(Read and Write property)

207.7.8 Duplex as Integer

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop only.

Function: Printer duplex settings.
Notes: See kDuplex* constants for descriptions of duplex.
The default value is CoreWebView2PrintDuplex.Default.
Printing uses default value of printer's duplex if an invalid value is provided for the specific printer.
This value is ignored in PrintToPdf method.
(Read and Write property)

207.7.9 FooterURI as String

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop only.

Function: The URI in the footer if ShouldPrintHeaderAndFooter is true.
Notes: The default value is the current URI. If an empty string value is provided, no URI is shown in the footer.
(Read and Write property)

207.7.10 HeaderTitle as String

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop only.

Function: The title in the header if ShouldPrintHeaderAndFooter is true.
Notes: The default value is the title of the current document. If an empty string value is provided, no title is shown in the header.
(Read and Write property)

207.7.11 MarginBottom as Double

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop only.

Function: The bottom margin in inches.
Notes: Unit is inches.
The default is 1 cm, or
textasciitilde 0.4 inches. A margin cannot be less than zero. If an invalid value is provided, the current value is not changed and an ArgumentException is thrown.
(Read and Write property)

207.7.12 MarginLeft as Double

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop only.

Function: The left margin in inches.
Notes: Unit is inches.
The default is 1 cm, or
textasciitilde 0.4 inches. A margin cannot be less than zero. If an invalid value is provided, the current value is not changed and an ArgumentException is thrown.
(Read and Write property)

207.7.13 MarginRight as Double

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop only.

Function: The right margin in inches.
Notes: Unit is inches.
The default is 1 cm, or
textasciitilde 0.4 inches. A margin cannot be less than zero. If an invalid value is provided, the current value is not changed and an ArgumentException is thrown.
(Read and Write property)

207.7.14 MarginTop as Double

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop only.

Function: The top margin in inches.
Notes: Unit is inches.
The default is 1 cm, or
textasciitilde 0.4 inches. A margin cannot be less than zero. If an invalid value is provided, the current value is not changed and an ArgumentException is thrown.
(Read and Write property)

207.7.15 Orientation as Integer

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop only.

Function: The orientation can be portrait or landscape.
Notes: The default orientation is portrait. See kOrientation* constants.
(Read and Write property)

207.7.16 PageHeight as Double

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop only.

Function: The page height in inches.
Notes: Unit is inches.
The default height is 11 inches. If the provided page height is less than or equal to zero, the current value is not changed and an ArgumentException is thrown.
(Read and Write property)

207.7.17 PageRanges as String

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop only.

Function: Page range to print.
Notes: Defaults to empty string, which means print all pages. The PageRanges property is a list of page ranges specifying one or more pages that should be printed separated by commas. Any whitespace between page ranges is ignored. A valid page range is either a single integer identifying the page to print, or a range in the form [start page] - [last page] where start page and last page are integers identifying the first and last inclusive pages respectively to print. Every page identifier is an integer greater than 0 unless wildcards are used (see below examples). The first page is 1.

In a page range of the form [start page] - [last page] the start page number must be larger than 0 and less than or equal to the document's total page count. If the start page is not present, then 1 is used as the start

page. The last page must be larger than the start page. If the last page is not present, then the document total page count is used as the last page.

Repeating a page does not print it multiple times. To print multiple times, use the Copies property.

The pages are always printed in ascending order, even if specified in non-ascending order.
If page range is not valid or if a page is greater than document total page count, ArgumentException is thrown.

The following examples assume a document with 20 total pages.

Example	Result	Notes
"2"	Page 2	
"1-4, 9, 3-6, 10, 11"	Pages 1-6, 9-11	
"1-4, -6"	Pages 1-6	The "-6" is interpreted as "1-6".
"2-"	Pages 2-20	The "2-" is interpreted as "pages 2 to the end of the document".
"4-2, 11, -6"	Invalid	"4-2" is an invalid range.
"-"	Pages 1-20	The "-" is interpreted as "page 1 to the end of the document".
"1-4dsf, 11"	Invalid	
"2-2"	Page 2	

(Read and Write property)

207.7.18 PagesPerSide as Integer

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop only.

Function: Prints multiple pages of a document on a single piece of paper.
Notes: Choose from 1, 2, 4, 6, 9 or 16. The default value is 1.

If an invalid value is provided, ArgumentException is thrown.

Below examples shows print output for PagesPerSide and Duplex.

PagesPerSide	Total pages	Two-sided printing	Result
1	1	-	1 page on the front side.
2	1	Yes	1 page on the front side.
2	4	-	2 pages on the first paper and 2 pages on the next paper.
2	4	Yes	2 pages on the front side and 2 pages on back side.
4	4	Yes	4 pages on the front side.
4	8	Yes	4 pages on the front side and 4 pages on the back side.

(Read and Write property)

207.7.19 PageWidth as Double

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop only.

Function: The page width in inches.
Notes: Unit is inches.
The default width is 8.5 inches. If the provided page width is less than or equal to zero, the current value is not changed and an ArgumentException is thrown.
(Read and Write property)

207.7.20 PrinterName as String

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop only.

Function: The name of the printer to use.
Notes: Defaults to empty string. If the printer name is empty string or null, then it prints to the default printer on the user OS.

If provided printer name doesn't match with the name of any installed printers on the user OS, the method returns with CoreWebView2PrintStatus.PrinterUnavailable.

Use DeviceInformation.FindAllAsync to get the list of local printers with AQS as "System.Devices.HardwareIds:
textasciitilde
textasciitilde "PRINTENUM\LocalPrintQueue""

This value is ignored in PrintToPdf method
(Read and Write property)

207.7.21 ScaleFactor as Double

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop only.

Function: The scale factor is a value between 0.1 and 2.0.
Notes: The default is 1.0. If an invalid value is provided, the current value is not changed and an ArgumentException is thrown.
(Read and Write property)

207.7.22 ShouldPrintBackgrounds as Boolean

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop only.

Function: True if background colors and images should be printed.
Notes: The default value is false.
(Read and Write property)

207.7.23 ShouldPrintHeaderAndFooter as Boolean

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop only.

Function: True if header and footer should be printed.
Notes: The default value is false. The header consists of the date and time of printing, and the title of the page. The footer consists of the URI and page number. The height of the header and footer is 0.5 cm, or textasciitilde 0.2 inches.
(Read and Write property)

207.7.24 ShouldPrintSelectionOnly as Boolean

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop only.

Function: True if only the current end user's selection of HTML in the document should be printed.
Notes: The default value is false.
(Read and Write property)

207.7.25 Constants

Collation

Constant	Value	Description
kCollationCollated	1	Indicate that the collation has been selected for the printed output.
kCollationDefault	0	The default collation for a printer.
kCollationUncollated	2	Indicate that the collation has not been selected for the printed output.

Color Modes

Constant	Value	Description
kColorModeColor	1	Indicate that the printed output will be in color.
kColorModeDefault	0	The default color mode for a printer.
kColorModeGrayScale	2	Indicate that the printed output will be in shades of gray.

Duplex Modes

Constant	Value	Description
kDuplexDefault	0	The default duplex for a printer.
kDuplexOneSided	1	Print on only one side of the sheet.
kDuplexTwoSidedLongEdge	2	Print on both sides of the sheet, flipped along the long edge.
kDuplexTwoSidedShortEdge	3	Print on both sides of the sheet, flipped along the short edge.

Orientations

Constant	Value	Description
kOrientationLandscape	1	Print the page(s) in landscape orientation.
kOrientationPortrait	0	Print the page(s) in portrait orientation.

207.8 class WebView2WindowFeaturesMBS

207.8.1 class WebView2WindowFeaturesMBS

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The window features for a WebView popup window.
Notes: The fields match the windowFeatures passed to window.open as specified in Window features on MDN. There is no requirement for you to respect the values. If your app does not have corresponding UI features (for example, no toolbar) or if all instance of WebView are opened in tabs and do not have distinct size or positions, then your app does not respect the values. You may want to respect values, but perhaps only some apply to the UI of you app. Accordingly, you may respect all, some, or none of the properties as appropriate for your app. For all numeric properties, if the value that is passed to window.open is outside the range of an unsigned 32bit int, the resulting value is the absolute value of the maximum for unsigned 32bit integer. If you are not able to parse the value an integer, it is considered 0. If the value is a floating point value, it is rounded down to an integer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

207.8.2 Methods

207.8.3 Constructor

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The private constructor.

207.8.4 Properties

207.8.5 HasPosition as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Specifies left and top values.
Notes: (Read and Write property)

207.8.6 HasSize as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Specifies height and width values.
Notes: (Read and Write property)

207.8.7 Height as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Specifies the height of the window.
Notes: Minimum value is 100. If HasSize is set to false, this field is ignored.
(Read and Write property)

207.8.8 Left as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Specifies the left position of the window.
Notes: If HasPosition is set to false, this field is ignored.
(Read and Write property)

207.8.9 ShouldDisplayMenuBar as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Indicates that the menu bar is displayed.
Notes: (Read and Write property)

207.8.10 ShouldDisplayScrollBars as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Indicates that the scroll bars are displayed.
Notes: (Read and Write property)

207.8.11 ShouldDisplayStatus as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Indicates that the status bar is displayed.
Notes: (Read and Write property)

207.8.12 ShouldDisplayToolbar as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Indicates that the browser toolbar is displayed.
Notes: (Read and Write property)

207.8.13 Top as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Specifies the top position of the window.
Notes: If HasPosition is set to false, this field is ignored.
(Read and Write property)

207.8.14 Width as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Specifies the width of the window.
Notes: Minimum value is 100. If HasSize is set to false, this field is ignored.
(Read and Write property)

Chapter 208

Whisper

208.1 class WhisperContextMBS

208.1.1 class WhisperContextMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a whisper context.
Example:

```
// transcribe speech to text with a local Whisper model
// The whisper library must be loaded before, see WhisperMBS.LoadLibrary.
// samples are 16 kHz mono audio as Single values, e.g. read with AVAudioFileMBS
Var samples() As Single // your audio

Var contextParams As New WhisperContextParamsMBS
Var context As New WhisperContextMBS(SpecialFolder.Desktop.Child("ggml-base.bin").NativePath, contextParams)

Var params As New WhisperFullParamsMBS(WhisperFullParamsMBS.SamplingStrategyGreedy)
params.Language = "en"

If context.full(params, samples) = 0 Then
Var lines() As String
For i As Integer = 0 To context.FullSegments - 1
lines.Add context.FullSegmentText(i)
Next
MessageBox String.FromArray(lines, EndOfLine)
End If
```

208.1.2 Methods

208.1.3 Constructor

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.
See also:

- 208.1.4 Constructor(Buffer as MemoryBlock, Params as WhisperContextParamsMBS, InitState as boolean = true) 24498
- 208.1.5 Constructor(File as FolderItem, Params as WhisperContextParamsMBS, InitState as boolean = true) 24498
- 208.1.6 Constructor(Path as String, Params as WhisperContextParamsMBS, InitState as boolean = true) 24499

208.1.4 Constructor(Buffer as MemoryBlock, Params as WhisperContextParamsMBS, InitState as boolean = true)

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads a model with a buffer holding the model.
See also:

- 208.1.3 Constructor 24498
- 208.1.5 Constructor(File as FolderItem, Params as WhisperContextParamsMBS, InitState as boolean = true) 24498
- 208.1.6 Constructor(Path as String, Params as WhisperContextParamsMBS, InitState as boolean = true) 24499

208.1.5 Constructor(File as FolderItem, Params as WhisperContextParamsMBS, InitState as boolean = true)

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads a model with a folderitem.
See also:

- 208.1.3 Constructor 24498
- 208.1.4 Constructor(Buffer as MemoryBlock, Params as WhisperContextParamsMBS, InitState as boolean = true) 24498
- 208.1.6 Constructor(Path as String, Params as WhisperContextParamsMBS, InitState as boolean = true) 24499

208.1.6 Constructor(Path as String, Params as WhisperContextParamsMBS, InitState as boolean = true)

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads a model with a path.
See also:

- 208.1.3 Constructor 24498
- 208.1.4 Constructor(Buffer as MemoryBlock, Params as WhisperContextParamsMBS, InitState as boolean = true) 24498
- 208.1.5 Constructor(File as FolderItem, Params as WhisperContextParamsMBS, InitState as boolean = true) 24498

208.1.7 Destructor

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

208.1.8 full(params as WhisperFullParamsMBS, samples as Ptr, sampleCount as Integer, state as WhisperStateMBS = nil) as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs the complete transcription process, typically taking audio input and generating text output.
Notes: It involves all the necessary steps, including audio feature extraction, language modeling, and decoding, to produce a full transcription of the audio input.

Run the entire model: PCM ->log mel spectrogram ->encoder ->decoder ->text
Not thread safe for same context.

You need to pass a pointer with floats for the sample data.
See also:

- 208.1.9 full(params as WhisperFullParamsMBS, samples() as Single, state as WhisperStateMBS = nil) as Integer 24500

208.1.9 full(params as WhisperFullParamsMBS, samples() as Single, state as WhisperStateMBS = nil) as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs the complete transcription process, typically taking audio input and generating text output.
Notes: It involves all the necessary steps, including audio feature extraction, language modeling, and decoding, to produce a full transcription of the audio input.

Run the entire model: PCM ->log mel spectrogram ->encoder ->decoder ->text
Not thread safe for same context.

For convenience you can pass here a Xojo array instead of a ptr.
See also:

- 208.1.8 full(params as WhisperFullParamsMBS, samples as Ptr, sampleCount as Integer, state as WhisperStateMBS = nil) as Integer 24499

208.1.10 FullGetSegmentSpeakerTurnNext(Segment as Integer) as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get whether the next segment is predicted as a speaker turn.

208.1.11 FullGetSegmentT0(Segment as Integer) as Int64

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the start time of the specified segment.

208.1.12 FullGetSegmentT1(Segment as Integer) as Int64

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the end time of the specified segment.

208.1.13 FullGetToken(Segment as Integer, Token as Integer) as WhisperTokenMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the token in the specified segment.

208.1.14 FullGetTokenData(Segment as Integer, Token as Integer) as WhisperTokenDataMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get token data for the specified token in the specified segment.
Notes: This contains probabilities, timestamps, etc.

208.1.15 FullGetTokenDatas(Segment as Integer) as WhisperTokenDataMBS()

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries all token data for the specified token in the specified segment.
Notes: This contains probabilities, timestamps, etc.

208.1.16 FullGetTokenP(Segment as Integer, Token as Integer) as Single

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the probability of the specified token in the specified segment.

208.1.17 FullGetTokens(Segment as Integer) as WhisperTokenMBS()

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get all the tokens in the specified segment.

208.1.18 FullGetTokenText(Segment as Integer, Token as Integer) as String

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the token text of the specified token in the specified segment.

208.1.19 FullGetTokenTexts(Segment as Integer) as String()

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get all token texts of the specified segment.

208.1.20 FullSegmentText(Segment as Integer) as String

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the text of the specified segment.

208.1.21 FullTokens(Segment as Integer) as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get number of tokens in the specified segment.

208.1.22 InitState as WhisperStateMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Initiales the state of the Whisper model before transcription begins.
Notes: This state includes setting up the model's internal variables, memory, and other necessary components to ensure the model can process audio effectively.

208.1.23 Logits as Ptr

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The Token logits obtained from the last call to Decode().

208.1.24 PrintSystemInfo as String

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Print system information.
Notes: e.g.
AVX = 0 | AVX2 = 0 | AVX512 = 0 | FMA = 0 | NEON = 1 | ARM_FMA = 1 | F16C = 0 | FP16_VA = 1 | WASM_SIMD = 0 | SSE3 = 0 | SSSE3 = 0 | VSX = 0 | COREML = 0 | OPENVINO = 0 |

208.1.25 PrintTimings

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Print timings.

208.1.26 ResetTimings

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Reset the timings.

208.1.27 Timings as WhisperTimingsMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries timing.
Notes: See also PrintTimings and ResetTiming.

208.1.28 TokenBEG as WhisperTokenMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Gets a special token for the beginning of the text.

208.1.29 TokenCount(text as String) as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Return the number of tokens in the provided text.

208.1.30 TokenEOT as WhisperTokenMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Gets a special token for the ending of the text.

208.1.31 Tokenize(text as String) as WhisperTokenMBS()

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Convert the provided text into tokens.
Notes: The plugin estimates the number of tokens, allocates a buffer and fills the token array with the result.

208.1.32 TokenLANG(LangID as Integer) as WhisperTokenMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Gets a token for the given language id.

208.1.33 TokenNOSP as WhisperTokenMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Gets special token for NOSP.

208.1.34 TokenNOT as WhisperTokenMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Gets special token for NOT

208.1.35 TokenPREV as WhisperTokenMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Gets special token for PREV.

208.1.36 TokenSOLM as WhisperTokenMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Gets special token for SOLM.

208.1.37 TokenSOT as WhisperTokenMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Gets special token for SOT.

208.1.38 TokenTranscribe as WhisperTokenMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The task token for transcribe.

208.1.39 TokenTranslate as WhisperTokenMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The task token for translation.

208.1.40 Properties

208.1.41 Abort as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to abort processing.
Notes: Set to true to cancel processing.
(Read and Write property)
See also:

- 208.1.65 Abort as Boolean 24511

208.1.42 AudioCtx as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Defines the context window size for the audio frames that the Whisper model processes at a time.
Notes: It determines how much of the surrounding audio the model uses to understand the current segment, influencing the model's ability to capture and transcribe continuous speech, especially in challenging or overlapping audio.
(Read only property)

208.1.43 ContextHandle as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The handle for the context.
Notes: (Read only property)

208.1.44 FullLangId as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Language id associated with the context's default state.
Notes: (Read only property)

208.1.45 FullSegments as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of generated text segments.
Notes: A segment can be a few words, a sentence, or even a paragraph.
(Read only property)

208.1.46 IsMultilingual as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to use the multilingual mode.
Notes: Whisper uses the first 30 seconds to detect the language.
(Read only property)

208.1.47 Length as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The length of the input sequence (in terms of tokens or frames) that the Whisper model can process at once.
Notes: It defines the maximum number of tokens or audio frames the model can handle in a single pass, helping to control memory usage and processing efficiency during transcription.
(Read only property)

208.1.48 ModelAaudioLayer as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Specifies the number of layers in the audio processing part of the Whisper model.
Notes: These layers are responsible for transforming the raw audio input into features that can be used for transcription, with more layers generally allowing the model to capture more complex acoustic patterns and improving its ability to transcribe audio accurately.
(Read only property)

208.1.49 ModelAudioCtx as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The context window size for the audio input in the Whisper model.
Notes: It specifies the number of audio frames or tokens the model considers at once when processing the input, helping it capture the necessary acoustic context to improve transcription accuracy, especially in noisy or complex audio scenarios.
(Read only property)

208.1.50 ModelAudioHead as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Specifies the number of attention heads in the audio processing part of the Whisper model. #
Notes: Each attention head allows the model to focus on different parts of the audio input simultaneously, helping it to better capture various acoustic features and relationships in the speech, leading to more accurate transcription.
(Read only property)

208.1.51 ModelAudioState as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal state or memory size of the audio processing part of the Whisper model.
Notes: It determines how much of the previous audio context the model retains when processing the current input, helping it maintain coherence and continuity over longer segments of speech for more accurate transcription.
(Read only property)

208.1.52 ModelFType as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Specifies the file type or format of the Whisper model files being used, such as whether the model is stored in a standard format or a compressed version.
Notes: It helps the system determine how to properly load and handle the model files during inference, affecting compatibility and potentially loading efficiency.
(Read only property)

208.1.53 ModelMels as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Specifies the number of Mel frequency bins used in the model's spectrogram representation of the audio input.
Notes: It determines the granularity of the frequency analysis, with a higher number of Mel bins providing more detailed frequency information, which can improve transcription accuracy, especially for complex audio.
(Read only property)

208.1.54 ModelTextCtx as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Defines the context window size for the text input in the Whisper model.
Notes: It specifies the maximum number of tokens (words or subwords) the model considers when processing the transcription, influencing how much of the preceding text the model uses to understand and generate the current token during transcription.
(Read only property)

208.1.55 ModelTextHead as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Specifies the number of attention heads in the text processing layers of the Whisper model.
Notes: Each attention head allows the model to focus on different parts of the input sequence simultaneously, improving its ability to capture diverse relationships and dependencies in the transcribed text.
(Read only property)

208.1.56 ModelTextLayer as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Specifies the number of layers in the text processing part of the Whisper model.
Notes: These layers are responsible for interpreting the sequence of tokens during transcription, with more layers generally allowing the model to capture more complex patterns and relationships in the text, improving accuracy at the cost of increased computational resources.
(Read only property)

208.1.57 ModelTextState as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Refers to the internal state or memory size of the text processing part of the Whisper model.
Notes: It controls how much of the previous context or information the model retains during the transcription process, influencing its ability to maintain coherence and context across longer segments of speech or text.
(Read only property)

208.1.58 ModelType as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Specifies the internal model type used by the Whisper system.
Notes: This corresponds to the architecture or variant of the model (e.g., ”base”, ”small”, ”medium”, ”large”). It determines the model’s capabilities in terms of performance, speed, and accuracy, with larger models generally providing better accuracy at the cost of higher resource usage.
(Read only property)

208.1.59 ModelTypeReadable as String

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Retruns a human-readable string that specifies the type of Whisper model being used, such as ”small”, ”medium”, or ”large.”
Notes: It helps identify the model variant, which can influence transcription speed, accuracy, and resource usage depending on the chosen size.
(Read only property)

208.1.60 ModelVocab as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the size of the vocabulary the Whisper model uses for tokenization during transcription.
Notes: It determines the number of unique tokens (such as words, subwords, or characters) that the model can recognize and generate.
(Read only property)

208.1.61 TextCtx as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Defines the maximum number of tokens the model considers as context during transcription.
Notes: It controls how much of the previous transcription the model "remembers" at any given time, balancing context accuracy with computational efficiency.
(Read only property)

208.1.62 Vocab as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Defines the size of the vocabulary that the Whisper model uses during transcription.
Notes: It specifies the number of unique tokens (such as words, subwords, or characters) that the model can recognize and generate, influencing the model's ability to handle various languages and transcription tasks.
(Read only property)

208.1.63 Yield as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: How much time is given back to Xojo for other ticks.
Example:

```
Var t as new WhisperContextMBS
t.Yield = 6 // only use 1/10th of a second
```

Notes: If value is greater than zero, the application will yield to another Xojo thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.

(Read and Write property)

208.1.64 Events

208.1.65 Abort as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to abort processing.
Notes: Return true to cancel processing.
See also:

- 208.1.41 Abort as Boolean 24505

208.1.66 EncoderBegin(State as WhisperStateMBS) as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The event called each time before the encoder starts.
Notes: If you return true, the computation is aborted.

208.1.67 Log(Level as Integer, Text as String)

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The event called for each log message.
Notes: Since the logger is global, we dispatch it to all instances.

208.1.68 NewSegment(State as WhisperStateMBS, n_new as Integer)

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The event called for every newly generated text segment.

208.1.69 Progress(State as WhisperStateMBS, progress as Integer)

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The event to report progress.

208.1.70 Constants

Logs

Constant	Value	Description
LogLevelDebug	4	Debug
LogLevelError	3	Error
LogLevelInfo	1	Information
LogLevelNone	0	No logging
LogLevelWarn	2	Warning

208.2 class WhisperContextParamsMBS

208.2.1 class WhisperContextParamsMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for context parameters.
Example:

```
// load a Whisper model and use the GPU if available
// The whisper library must be loaded before, see WhisperMBS.LoadLibrary.
Var params As New WhisperContextParamsMBS
params.UseGPU = True
params.FlashAttn = True

Var context As New WhisperContextMBS(SpecialFolder.Desktop.Child("ggml-base.bin").NativePath, params)
MessageBox "Model: " + context.ModelTypeReadable + ", multilingual: " + context.IsMultilingual.ToString
```

- How to Use Whisper in Xojo to Transcribe Audio Files

208.2.2 Methods

208.2.3 Constructor

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets the default parameters.

208.2.4 Destructor

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

208.2.5 Properties

208.2.6 dtw_aheads_preset as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: DTW aheads preset.
Notes: Defaults to 0.
(Read and Write property)

208.2.7 dtw_token_timestamps as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: DTW token timestamps.
Notes: Defaults to false.
(Read and Write property)

208.2.8 FlashAttn as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Flash attention.
Notes: Defaults to false.
(Read and Write property)

208.2.9 GPUDevice as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The ID for the GPU device to use.
Notes: CUDA device.
(Read and Write property)

208.2.10 UseGPU as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to use the GPU.
Notes: Defaults to true.
(Read and Write property)

208.2.11 Constants

Alignment Heads Preset

Constant	Value	Description
AheadsBase	6	Base
AheadsBaseEN	5	Base EN
AheadsCustom	2	Custom
AheadsLargeV1	11	Large V1
AheadsLargeV2	12	Large V2
AheadsLargeV3	13	Large V3
AheadsLargeV3Turbo	14	Large V3 Turbo
AheadsMedium	10	Medium
AheadsMediumEN	9	Medium EN
AheadsNone	0	
AheadsNTopMost	1	NTopMost
AheadsSmall	8	Small
AheadsSmallEN	7	Small EN
AheadsTiny	4	Tiny
AheadsTinyEN	3	Tiny EN

208.3 class WhisperFullParamsMBS

208.3.1 class WhisperFullParamsMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Parameters for the Full function.
Example:

```
// transcribe German speech and translate it to English
Var params As New WhisperFullParamsMBS(WhisperFullParamsMBS.SamplingStrategyBeamSearch)
params.Language = "de"
params.Translate = True // output in English
params.Threads = 8
params.InitialPrompt = "Xojo, MBS Plugins" // helps with names and terms

// pass params to WhisperContextMBS.full, see there
```

- How to Use Whisper in Xojo to Transcribe Audio Files

208.3.2 Methods

208.3.3 Constructor(Strategy as Integer)

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets the default parameters.

208.3.4 Destructor

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

208.3.5 GrammarRules as WhisperGrammarElementMBS()

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the grammar rules.

208.3.6 PromptTokens as WhisperTokenMBS()

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries prompt tokens.

208.3.7 SetGrammarRules(rules() as WhisperGrammarElementMBS)

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets the grammar rules.

208.3.8 SetPromptTokens(tokens() as WhisperTokenMBS)

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets prompt tokens.
Notes: Tokens to provide to the whisper decoder as initial prompt.
These are prepended to any existing text context from a previous call use Tokenize() to convert text to tokens maximum of MaxTextContext/2 tokens are used (typically 224)

208.3.9 Properties

208.3.10 AudioContextSize as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Overwrite the audio context size (0 = use default).
Notes: (Read and Write property)

208.3.11 DebugMode as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Enable debug_mode provides extra info (eg. Dump log_mel).
Notes: (Read and Write property)

208.3.12 DetectLanguage as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to detect language.
Notes: (Read and Write property)

208.3.13 DurationMS as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Audio duration to process in ms.
Notes: (Read and Write property)

208.3.14 EntropyThold as Single

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: A parameter that influences the model's decoding behaviour.
Notes: It sets a threshold for the entropy of the generated text segments. If the entropy of a segment is below this threshold, the segment is considered unreliable or of low quality and may be discarded. This mechanism helps in filtering out segments that are likely to be erroneous or nonsensical.
(Read and Write property)

208.3.15 GrammarPenalty as Single

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: A parameter used to control how strictly the model adheres to grammatical correctness during transcription or text generation.
Notes: (Read and Write property)

208.3.16 GrammarRuleCount as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The number of grammar rules.
Notes: (Read only property)

208.3.17 InitialPrompt as String

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Initial prompt text.
Notes: Tokens to provide to the whisper decoder as initial prompt.
These are prepended to any existing text context from a previous call use Tokenize() to convert text to tokens maximum of MaxTextContext/2 tokens are used (typically 224)
(Read and Write property)

208.3.18 Language as String

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The language.
Notes: Use "" for auto-detection.
(Read and Write property)

208.3.19 LengthPenalty as Single

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Optional token length penalty coefficient (alpha).
Notes: uses simple length normalization by default.
(Read and Write property)

208.3.20 LogprobThold as Single

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Log probability threshold determines the cutoff point for the model,Äôs confidence in the generated tokens (words or parts of words).
Notes: (Read and Write property)

208.3.21 MaxInitialTS as Single

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The initial timestamp cannot be later than this.
Notes: (Read and Write property)

208.3.22 MaxLen as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Max segment length in characters.
Notes: (Read and Write property)

208.3.23 MaxTextContext as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Max tokens to use from past text as prompt for the decoder.
Notes: (Read and Write property)

208.3.24 MaxTokens as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Max tokens per segment (0 = no limit).
Notes: (Read and Write property)

208.3.25 NoContext as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Do not use past transcription (if any) as initial prompt for the decoder.
Notes: (Read and Write property)

208.3.26 NoSpeechThold as Single

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: A threshold for how confident the model must be that speech is present in the audio.
Notes: If the confidence is below this threshold, the model assumes there is no speech and stops transcribing that segment.
(Read and Write property)

208.3.27 NoTimestamps as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Do not generate timestamps.
Notes: (Read and Write property)

208.3.28 OffsetMS as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Start offset in ms.
Notes: (Read and Write property)

208.3.29 PrintProgress as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Print progress information.
Notes: (Read and Write property)

208.3.30 PrintRealtime as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Print results from within whisper.cpp (avoid it, use callback instead).
Notes: (Read and Write property)

208.3.31 PrintSpecial as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Print special tokens (e.g. <SOT>, <EOT>, <BEG>, etc.).
Notes: (Read and Write property)

208.3.32 PrintTimestamps as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Print timestamps for each text segment when printing realtime.
Notes: (Read and Write property)

208.3.33 SingleSegment as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Force single segment output (useful for streaming).
Notes: (Read and Write property)

208.3.34 SplitOnWord as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Split on word rather than on token (when used with MaxLen).
Notes: (Read and Write property)

208.3.35 StartRule as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Index of the start rule.
Notes: Defines the condition or trigger that determines when the transcription process begins. It ensures the model starts transcribing only when it detects certain criteria, such as speech activity or a specific audio event.
(Read and Write property)

208.3.36 Strategy as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The strategy passed in the constructor.
Notes: (Read only property)

208.3.37 SuppressBlank as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Suppress blank outputs.
Notes: (Read and Write property)

208.3.38 SuppressNst as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Surpress non non-speech tokens.
Notes: (Read and Write property)

208.3.39 SuppressRegex as String

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: A regular expression that matches tokens to suppress.
Notes: (Read and Write property)

208.3.40 TdrzEnable as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Enable tinydiarize speaker turn detection.
Notes: (Read and Write property)

208.3.41 Temperature as Single

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Initial decoding temperature.
Notes: (Read and Write property)

208.3.42 TemperatureInc as Single

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Controls how much the model's "creativity" or randomness increases during decoding as it generates text.
Notes: A higher value encourages the model to produce more diverse and less predictable outputs, while a lower value keeps the transcription more focused and deterministic.
(Read and Write property)

208.3.43 TholdPT as Single

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Timestamp token probability threshold (
textasciitilde 0.01).
Notes: (Read and Write property)

208.3.44 TholdPTSum as Single

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Timestamp token sum probability threshold (
textasciitilde 0.01).
Notes: (Read and Write property)

208.3.45 Threads as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of threads to use.
Notes: (Read and Write property)

208.3.46 TokenTimestamps as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Enable token-level timestamps.
Notes: (Read and Write property)

208.3.47 Translate as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to translate.
Notes: (Read and Write property)

208.3.48 Constants

Available sampling strategies

Constant	Value	Description
SamplingStrategyBeamSearch	1	Similar to OpenAI's BeamSearchDecoder.
SamplingStrategyGreedy	0	Similar to OpenAI's GreedyDecoder.

208.4 class WhisperGrammarElementMBS

208.4.1 class WhisperGrammarElementMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a grammar element.

208.4.2 Properties

208.4.3 Type as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The grammar element type.
Notes: (Read and Write property)

208.4.4 Value as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Unicode code point or rule ID.
Notes: (Read and Write property)

208.4.5 Constants

Grammar Element Types

Constant	Value	Description
GretypeAlt	1	Start of alternate definition for rule.
GretypeChar	3	Terminal element: character (code point)
GretypeCharAlt	6	Modifies a preceding GretypeChar or GretypeCharRngUpper to add an alternate char to match ([ab] , [a-zA])
GretypeCharNot	4	Inverse char(s) ([^a] , [^a-b] [^abc])
GretypeCharRngUpper	5	modifies a preceding WHISPER_GRETYPE_CHAR or LLAMA_GRETYPE_CHAR_ALT to be an inclusive range ([a-z])
GretypeEnd	0	End of rule definition.
GretypeRuleRef	2	Non-terminal element: reference to rule.

208.5 module WhisperMBS

208.5.1 module WhisperMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The module for global whisper functions.
Example:

```
// load the whisper library and list the languages it knows
If Not WhisperMBS.LoadLibrary(SpecialFolder.Resources.Child("libwhisper.dylib")) Then
MessageBox WhisperMBS.LoadErrorMessage
Return
End If

Var langs() As String
For id As Integer = 0 To WhisperMBS.LangMaxID
langs.Add WhisperMBS.LangString(id) + " = " + WhisperMBS.LangStringFull(id)
Next
MessageBox "whisper " + WhisperMBS.Version + EndOfLine + String.FromArray(langs, EndOfLine)
```

208.5.2 Methods

208.5.3 LangID(Name as String) as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Return the id of the specified language, returns -1 if not found.
Notes: Examples:
"de" ->2
"german" ->2

208.5.4 LangString(id as Integer) as String

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the language string for the id.
Notes: Return the short string of the specified language id (e.g. 2 ->"de"), returns "" if not found.

208.5.5 LangStringFull(id as Integer) as String

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the language string for the id.
Notes: Returns the short string of the specified language name (e.g. 2 ->"german"), returns "" if not found

208.5.6 Loaded as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether the library is loaded.

208.5.7 LoadErrorMessage as String

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The error message for loading the library.

208.5.8 LoadLibrary(File as FolderItem) as boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads the library.
Notes: Set the LoadErrorMessage property.
See also:

- 208.5.9 LoadLibrary(Path as String) as boolean 24528

208.5.9 LoadLibrary(Path as String) as boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads the library.
Notes: Set the LoadErrorMessage property.
See also:

- 208.5.8 LoadLibrary(File as FolderItem) as boolean 24528

208.5.10 Properties

208.5.11 LangMaxID as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Largest language id (i.e. number of available languages - 1)
Notes: (Read only property)

208.5.12 Version as String

MBS Tools Plugin, Plugin Version: 26.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the version of whisper library.
Example:

```
if WhisperMBS.LoadLibrary("/opt/homebrew/lib/libwhisper.dylib") Then
MessageBox WhisperMBS.Version
Else
MessageBox WhisperMBS.LoadErrorMessage
End If
```

Notes: e.g. "1.9.2"
(Read only property)

208.6 class WhisperStateMBS

208.6.1 class WhisperStateMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a whisper state.
Example:

```
// transcribe an audio file with whisper and show the text segments
// The whisper library must be loaded first, see WhisperMBS.LoadLibrary.
// samples() are 16 kHz mono Single values, e.g. read with AVAudioFileMBS or SoundFileMBS.
Var samples() As Single // your audio data
Var context As New WhisperContextMBS(SpecialFolder.Desktop.Child("ggml-base.bin").NativePath, New
WhisperContextParamsMBS)
Var state As WhisperStateMBS = context.InitState

Var params As New WhisperFullParamsMBS(WhisperFullParamsMBS.SamplingStrategyGreedy)
If context.full(params, samples, state) = 0 Then
Var lines() As String
For i As Integer = 0 To state.FullSegments - 1
lines.Add state.SegmentText(i)
Next
MessageBox String.FromArray(lines, EndOfLine)
End If
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

208.6.2 Methods

208.6.3 Constructor

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

208.6.4 Destructor

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

208.6.5 FullGetSegmentSpeakerTurnNext(Segment as Integer) as Boolean

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get whether the next segment is predicted as a speaker turn.

208.6.6 FullGetSegmentT0(Segment as Integer) as Int64

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the start time of the specified segment.

208.6.7 FullGetSegmentT1(Segment as Integer) as Int64

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the end time of the specified segment.

208.6.8 FullGetToken(Segment as Integer, Token as Integer) as WhisperTokenMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the token in the specified segment.

208.6.9 FullGetTokenData(Segment as Integer, Token as Integer) as WhisperTokenDataMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get token data for the specified token in the specified segment.
Notes: This contains probabilities, timestamps, etc.

208.6.10 FullGetTokenP(Segment as Integer, Token as Integer) as Single

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the probability of the specified token in the specified segment.

208.6.11 FullGetTokenText(Segment as Integer, Token as Integer) as String

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the token text of the specified token in the specified segment.

208.6.12 FullTokens(Segment as Integer) as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get number of tokens in the specified segment.

208.6.13 Logits as Ptr

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The Token logits obtained from the last call to Decode().

208.6.14 SegmentText(Segment as Integer) as String

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the text of the specified segment.

208.6.15 Properties

208.6.16 ContextHandle as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The handle for the context.
Notes: (Read only property)

208.6.17 FullLangId as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Language id associated with the provided state.
Notes: (Read only property)

208.6.18 FullSegments as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of generated text segments.
Notes: A segment can be a few words, a sentence, or even a paragraph.
(Read only property)

208.6.19 Handle as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

208.6.20 Length as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The Token logits obtained from the last call to Decode().
Notes: (Read only property)

208.7 class WhisperTimingsMBS

208.7.1 class WhisperTimingsMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performance information from the default state.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

208.7.2 Methods

208.7.3 Constructor

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

208.7.4 Properties

208.7.5 BatchdMS as Single

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The time needed for batch.
Notes: In milliseconds.
(Read only property)

208.7.6 DecodeMS as Single

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The time needed for decode.
Notes: In milliseconds.
(Read only property)

208.7.7 EncodeMS as Single

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The time needed for encode.
Notes: In milliseconds.
(Read only property)

208.7.8 PromptMS as Single

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The time needed for prompt.
Notes: In milliseconds.
(Read only property)

208.7.9 SampleMS as Single

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The time needed for sample.
Notes: In milliseconds.
(Read only property)

208.8 class WhisperTokenDataMBS

208.8.1 class WhisperTokenDataMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for token data.
Example:

```
// show each token of a whisper transcription with time and probability
// context is a WhisperContextMBS and state a WhisperStateMBS after calling full, see WhisperStateMBS
Var state As WhisperStateMBS // your state
If state = Nil Then Return

For s As Integer = 0 To state.FullSegments - 1
For t As Integer = 0 To state.FullTokens(s) - 1
Var d As WhisperTokenDataMBS = state.FullGetTokenData(s, t)
System.DebugLog state.FullGetTokenText(s, t) + " at " + Format(d.t0 / 100, "0.00") + " s, p=" + Format(d.p, "0.00")
Next
Next
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

208.8.2 Methods

208.8.3 Constructor

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

208.8.4 Destructor

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

208.8.5 Properties

208.8.6 ContextHandle as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The handle for the context.
Notes: (Read only property)

208.8.7 dtw as Int64

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Token-level timestamps with DTW.
Notes: (Read only property)

208.8.8 p as Single

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Probability of the token.
Notes: (Read only property)

208.8.9 plog as Single

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Log probability of the token.
Notes: (Read only property)

208.8.10 pt as Single

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Probability of the timestamp token.
Notes: (Read only property)

208.8.11 ptsum as Single

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sum of probabilities of all timestamp tokens.
Notes: (Read only property)

208.8.12 t0 as Int64

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Start time of the token.
Notes: (Read only property)

208.8.13 t1 as Int64

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: End time of the token.
Notes: (Read only property)

208.8.14 TokenID as WhisperTokenMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The token ID.
Notes: (Read only property)

208.8.15 TokenTID as WhisperTokenMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The forced timestamp token id.
Notes: (Read only property)

208.8.16 VoiceLength as Single

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Voice length of the token.
Notes: (Read only property)

208.9 class WhisperTokenMBS

208.9.1 class WhisperTokenMBS

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a token.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- How to Use Whisper in Xojo to Transcribe Audio Files

208.9.2 Methods

208.9.3 Constructor

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

208.9.4 Destructor

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

208.9.5 Properties

208.9.6 ContextHandle as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The handle for the context.
Notes: (Read only property)

208.9.7 Text as String

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The text representation of the token.
Notes: Works only as long as the context exists.
(Read only property)

208.9.8 Token as Integer

MBS Tools Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The token value.
Notes: (Read only property)

Chapter 209

Window

209.1 class DesktopWindow

209.1.1 class DesktopWindow

Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Extends Xojo's Window Class.
Example:

Window1.HasNoTitleBarMBS = true

Notes: In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

209.1.2 Methods

209.1.3 ActivateWindowMBS

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: Activates the window.
Notes: This function does more than just show. if the window has been minimized, it will restore it. Also the window is moved to front and made the current window for keyboard input.

Sadly windows limits which windows can go to front, so some windows may not come to front unless they are clicked on.

As activation can be asynchronously, the window may activate later, e.g. after current method ends.

For MacOS Cocoa apps, we simply bring the window to the front.

209.1.4 BackingScaleFactorMBS as double

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns the scale factor representing the number of backing store pixels corresponding to each linear unit in window space on this window.
Notes: This is generally only necessary when building a bitmap context or image whose resolution needs to match that of a particular Window. Note that a Window's backing scale factor can change over time, such as when the window moves from one display to another, or when a display's resolution changes, so clients should not cache the value returned by this function.

If platform does not support scaling factor, we return 1.0. (on Windows, Linux and older Mac OS X)
Supported for Carbon and Cocoa windows.

For apps which are not enabled for retina support, the function returns 1. So you only see 2 here if app is Cocoa, display is retina and info.plist has the NSHighResolutionCapable key.

209.1.5 CGContextMBS as CGContextMBS

MBS MacCG Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Creates a new CGContextMBS object for the given Window.
Example:

```
Var CGContext as CGContextMBS
Var OverlayPic as Picture=LogoMBS(500)
Var contentpicture as CGImageMBS= CGCreateImageMBS(OverlayPic)

CGContext=Window1.CGContextMBS

CGContext.ClearRect CGMakeRectMBS(0, 0, OverlayPic.width, OverlayPic.height)
CGContext.DrawPicture contentpicture, CGMakeRectMBS(0, 0, OverlayPic.width, OverlayPic.height)
```

Notes: Requires Mac OS X to work.
Please make sure the CGContextMBS object is released in the paint event if you use it there, so all the drawings are flushed. Not releasing it my be visible in missing statictext or other strange graphics effects.

But on a Cocoa window the context is not always available, so in the window paint event, you can context

from Graphics object.

209.1.6 CleanUpTransparentMBS(refValue as integer)

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Cleans up transparency support for a Xojo window.
Example:

```
Var p as Integer // property on Windows

p = Window1.MakeTransparentMBS

// later in close event

Window1.CleanUpTransparentMBS p
```

Notes: Call this in the close event of a window passing the value you got from the MakeTransparentMBS call.
Linux supported added with 14.0, but works only with Linux desktop which support alpha channel.

209.1.7 ClearTransparencyMBS

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Clears transparency of a window.

209.1.8 CollapsableMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns true if this window can be collapsed.
Example:

```
MessageBox str(Window1.CollapsableMBS)
```

Notes: Collapseable windows are the normal document windows.
You can't collapse dialogs or floating windows well.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

209.1.9 ConstrainWindowToScreenMBS(animate as Boolean)

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Makes sure the window is on one screen visible.
Notes: Implemented on Mac for both Carbon and Cocoa.

209.1.10 GTKWindow as GTKWindowMBS

MBS Linux Plugin, Plugin Version: 21.5, Platform: Linux, Targets: Desktop only.

Function: Queries a GTKWindow object for this window.
Notes: Returns only a valid object on Linux.
On other platforms, this function returns nil.

209.1.11 HideKeyboardMBS

MBS Win Plugin, Plugin Version: 23.2, Platforms: macOS, Windows, Targets: Desktop only.

Function: Hides the keyboard.
Notes: On Windows same as ShowKeyboardMBS, but may not launch the keyboard.

If you called ShowKeyboardMBS before, you can call this function to hide it.

209.1.12 InvalidateShadowMBS

MBS MacOSX Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: This method causes a window's shadow to be recalculated.
Notes: InvalidateShadowMBS is not typically used by applications. However, it may be useful for applications with customized window frames that change shape dynamically; in this case, after the application has drawn the new window shape, the window shadow must be recalculated to follow the new window shape.

This method causes the window shadow to be immediately recalculated and redrawn based on the current contents of the window's back buffer. For best performance and visual appearance, you should follow these steps when invalidating a window shadow: disable updates with DisableScreenUpdatesMBS, draw, flush, invalidate the shadow, and enable updates. For a compositing window, after invalidating any views that should be redrawn, you will need to explicitly draw and flush using HIWindowFlush, rather than waiting for the event loop to draw and flush the window, because you cannot disable updates or invalidate the window shadow if drawing is done via the event loop.

209.1.13 IsFullScreenMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Queries whether window is fullscreen.
Notes: Indicates that a window has fullscreen appearance.
A fullscreen window does not draw its titlebar, and may have special handling for its toolbar.
Available in Mac OS X v10.7 and later.

209.1.14 MakeTransparentMBS as integer

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Installs transparency support to a Xojo window.
Example:

```
Var p as Integer // property on Windows

p = Window1.MakeTransparentMBS

// later in close event

Window1.CleanUpTransparentMBS p
```

Notes: Will return non zero value if successful.
The window doesn't change if you don't use the CGContextMBS property.

Requires Mac OS X, Windows 2000 or Windows XP to work. The window must be a document window.

Set MacProcID of the window to 1104 and you can make it transparent without a title bar. (on Mac OS X)

With plugin version 11.1, we now return a value which should store with the window. Later in the Close event, you call CleanUpTransparentMBS passing this value.

Added Cocoa support in 11.3 plugins.
Linux supported added with 14.0, but works only with Linux desktop which support alpha channel. Calls to MakeTransparentMBS and CleanUpTransparentMBS are not required for Linux.

209.1.15 NSPanelMBS as NSPanelMBS

MBS MacBase Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Creates a NSPanel for the given Xojo window.
Example:

MessageBox Window1.NSPanelMBS.Title

Notes: Works only for Cocoa Windows in Cocoa target which are floating panels.

209.1.16 NSToolbarMBS as NSToolbarMBS

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The window's toolbar.
Notes: So you can get the toolbar without going over NSWindowMBS.
But there you can assign a new toolbar...

209.1.17 NSWindowMBS as NSWindowMBS

MBS MacBase Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Creates a NSWindow for the given Xojo window.
Example:

MessageBox Window1.NSWindowMBS.Title

Notes: Works only for Cocoa Windows in Cocoa target and for Carbon Windows in carbon targets.

209.1.18 RefreshThreadSafeMBS(immediately As Boolean = False)

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Refresh the rectangle.
Notes: This method is to allow you to refresh in a thread without a problem.

If called on main thread, the plugin will simply call Refresh method directly.
If called on other threads the plugin will schedule to call Refresh method a short time later on the main thread.
See also:

- 209.1.19 RefreshThreadSafeMBS(X As Integer, Y As Integer, Width As Integer, Height As Integer, immediately As Boolean = False)

209.1.19 RefreshThreadSafeMBS(X As Integer, Y As Integer, Width As Integer, Height As Integer, immediately As Boolean = False)

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Refresh the rectangle.
Notes: This method is to allow you to refresh in a thread without a problem.

If called on main thread, the plugin will simply call RefreshRect method directly.
If called on other threads the plugin will schedule to call RefreshRect method a short time later on the main thread.
See also:

- 209.1.18 RefreshThreadSafeMBS(immediately As Boolean = False) 24548

209.1.20 RemoveWindowProxyIconMBS

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Removes any Proxy Icon from the Window.
Example:

```
mainwindow.RemoveWindowProxyIconMBS
```

Notes: Requires Mac OS 8.5 or newer.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

209.1.21 ScreenshotWindowMBS as picture

MBS Picture Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns the content of the window buffer on Mac OS X.
Example:

```
Var p as Picture
p=mainwindow.screenshotWindowMBS
```

Notes: Only for Mac OS X. Image is taken from window back buffer.
This will not capture overlay windows.

On Xojo 2006 or newer, please add a self. on front of the method call in case you want to use the method on the current window.

209.1.22 ScreenshotWindowRectMBS(left as integer, top as integer, width as integer, height as integer) as picture

MBS Picture Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns a part of the content of the window buffer on Mac OS X.
Example:

```
Var p as picture
p=mainwindow.ScreenshotWindowRectMBS(100,100,200,200)
```

Notes: Only for Mac OS X. Image is taken from window back buffer.
This will not capture overlay windows.

On Xojo 2006 or newer, please add a self. on front of the method call in case you want to use the method on the current window.

209.1.23 SetTransparencyMBS(value as integer) as boolean

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Your window can have transparency on Mac OS X.
Example:

```
if Window1.SetTransparencyMBS(127) then
'fine
else
'error
end if
```

Notes: Use values between 0 and 255.
Requires Mac OS X, Windows 2000 or Windows XP to work.
May be limited to simple windows like normal document windows.
You need to call MakeTransparent before to install transparency.
(this function was replaced in v4.4)
Linux supported added with 14.0, but works only with Linux desktop which support alpha channel.

209.1.24 SetWindowFeedbackSettingMBS(Feedback as Integer, value as Variant) as Boolean

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Sets the feedback configuration for a window.
Example:

```
const FEEDBACK_TOUCH_CONTACTVISUALIZATION = 1
const FEEDBACK_PEN_BARRELVISUALIZATION = 2
const FEEDBACK_PEN_TAP = 3
const FEEDBACK_PEN_DOUBLETAP = 4
const FEEDBACK_PEN_PRESSANDHOLD = 5
const FEEDBACK_PEN_RIGHTTAP = 6
const FEEDBACK_TOUCH_TAP = 7
const FEEDBACK_TOUCH_DOUBLETAP = 8
const FEEDBACK_TOUCH_PRESSANDHOLD = 9
const FEEDBACK_TOUCH_RIGHTTAP = 10
const FEEDBACK_GESTURE_PRESSANDTAP = 11
```

```
Var r as Boolean = self.SetWindowFeedbackSettingMBS(FEEDBACK_TOUCH_TAP, true)

if r then
Var value as Boolean
Var b as Boolean = self.WindowFeedbackSettingMBS(FEEDBACK_TOUCH_TAP, value)
if b then
MessageBox "WindowFeedbackSettingMBS: "+str(value)
end if
end if
```

Notes: Returns true if successful; otherwise, returns false.

Value can be nil to reset value. Or true/false to set it.
Requires Windows 8 or Windows Server 2012 in desktop apps only.

Constant Name	Value	Description
FEEDBACK_TOUCH_CONTACTVISUALIZATION	1	Feedback for a touch contact event.
FEEDBACK_PEN_BARRELVISUALIZATION	2	Feedback for a pen barrel-button event.
FEEDBACK_PEN_TAP	3	Feedback for a pen tap event.
FEEDBACK_PEN_DOUBLETAP	4	Feedback for a pen double-tap event.
FEEDBACK_PEN_PRESSANDHOLD	5	Feedback for a pen press-and-hold event.
FEEDBACK_PEN_RIGHTTAP	6	Feedback for a pen right-tap event.
FEEDBACK_TOUCH_TAP	7	Feedback for a touch tap event.
FEEDBACK_TOUCH_DOUBLETAP	8	Feedback for a touch double-tap event.
FEEDBACK_TOUCH_PRESSANDHOLD	9	Feedback for a touch press-and-hold event.
FEEDBACK_TOUCH_RIGHTTAP	10	Feedback for a touch right-tap event.
FEEDBACK_GESTURE_PRESSANDTAP	11	Feedback for a press-and-tap gesture.

209.1.25 SetWindowIconMBS(Type as integer, File as FolderItem, IconID as integer) as Boolean

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Sets the window icon using the icon in the file.

Example:

```
call Window1.SetWindowIconMBS(0,New FolderItem("icon.ico"),1)
```

Notes: Returns true on success and false on failure.
What image depths are used and supported depends on the Windows version.

Type is 0 for a small icon and 1 for a big icon.
See also:

- 209.1.26 SetWindowIconMBS(Type as integer, Icon as Picture, Mask as Picture) as Boolean 24552

209.1.26 SetWindowIconMBS(Type as integer, Icon as Picture, Mask as Picture) as Boolean

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Sets the window icon using the given picture with mask.
Example:

```
// This example needs a window with Canvas1 and Canvas2.
Var p as Picture
Var m as Picture

// random colored circle image
p=New Picture(16,16,32)
p.Graphics.ForeColor=&c000000
p.Graphics.FillRect 0,0,16,16
p.Graphics.ForeColor=rgb(rnd*256,rnd*256,rnd*256)
p.Graphics.Filloval 0,0,16,16

// circle mask
m=New Picture(16,16,32)
m.Graphics.ForeColor=&cFFFFFF // transparent
m.Graphics.Fillrect 0,0,16,16
m.Graphics.ForeColor=&c000000 // color
m.Graphics.Filloval 0,0,16,16

Canvas1.Backdrop=p // show in canvas
Canvas2.Backdrop=m

call Window1.SetWindowIconMBS(0,p,m)
```

Notes: The mask picture ist converted to black/white.
What image depths are used and supported depends on the Windows version.
Returns true on success and false on failure.

Possible values for type:

ICON_BIG = 1	Set the large icon for the window.
ICON_SMALL = 0	Set the small icon for the window.

See also:

- 209.1.25 SetWindowIconMBS(Type as integer, File as FolderItem, IconID as integer) as Boolean 24551

209.1.27 SetWindowMaskMBS(p as picture, redraw as Boolean, transparentColor as color) as Boolean

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Sets the mask of a window.
Notes: Redraw decides whether the window is redrawn after it has been changed.
Returns true if successful.

If you want to do the same on Mac OS X, check the example projects "transparent window" and the Photoshop Splash Screen example.

209.1.28 ShowHideToolbarMBS(animate as Boolean, value as Boolean)

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Shows or hides the toolbar.
Notes: Only working on MacOS.

209.1.29 ShowKeyboardMBS

MBS Win Plugin, Plugin Version: 23.2, Platforms: macOS, Windows, Targets: Desktop only.

Function: Shows the keyboard viewer.
Notes: On Windows you can trigger this a second time to hide it.

See also ShowCharacterPaletteMBS function.

209.1.30 SmoothResizeCenteredMBS(width as integer,height as integer)

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Resizes the window smoothly to all directions.
Example:

```
Var w,h as Integer

// get destination dimension

w=300
h=200

// Resize

Window1.SmoothResizeCenteredMBS w,h

// Now resize via RB to make it permanent.

width=w
height=h
```

Notes: You need to set the new size using Xojo's Windows properties, too. (no longer needed with Xojo)
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

209.1.31 SmoothResizeMBS(width as integer,height as integer)

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Resizes the window smoothly.
Example:

```
Var w,h as Integer

// get destination dimension

w=300
h=200

// Resize

Window1.SmoothResizeMBS w,h

// Now resize via RB to make it permanent.

width=w
```

height=h

Notes: You need to set the new size using Xojo's Windows properties, too. (no longer needed with Xojo)
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

209.1.32 ToggleFullScreenMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Toggles fullscreen mode for this window.
Notes: Returns true on success.
If an application supports fullscreen, it should add a menu item to the View menu with toggleFullScreen as the action.
Available in Mac OS X v10.7 and later.
This method does not much if you don't mark a window to be the primary fullscreen window.

209.1.33 UpdateNowMBS

MBS MacOSX Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: On MacOS all windows are doublebuffered and the OS updates the screen from time to time. This method forces a screen update.
Example:

Mainwindow.UpdateNowMBS

Notes: Updated for 64-bit in plugin version 18.3.

209.1.34 UpdateNowRectMBS(left as integer, top as integer, width as integer, height as integer)

MBS MacOSX Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: On Mac OS all windows are doublebuffered and the OS updates the screen from time to time. This method forces a screen update for a part of your window.
Example:

Mainwindow.UpdateNowRectMBS Mainwindow.text.left, Mainwindow.text.top, Mainwindow.text.width, Mainwindow.text.height

209.1.35 WinAnimateWindowMBS(Flags as integer, Time as integer=200) as boolean

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The AnimateWindow function enables you to produce special effects when showing or hiding windows.
Example:

```
Var flags as Integer

const AW_SLIDE = &h040000 // Uses slide animation. By default, roll animation is used. This flag is ignored when used with AW_CENTER.
const AW_ACTIVATE = &h020000 // Activates the window. Do not use this value with AW_HIDE.
const AW_BLEND = &h080000 // Uses a fade effect. This flag can be used only if hwnd is a top-level window.
const AW_HIDE = &h010000 //Hides the window. By default, the window is shown.
const AW_CENTER = &h10 // Makes the window appear to collapse inward if AW_HIDE is used or expand outward if the AW_HIDE is not used. The various direction flags have no effect.
const AW_HOR_POSITIVE = 1 // Animates the window from left to right. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
const AW_HOR_NEGATIVE = 2 // Animates the window from right to left. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
const AW_VER_POSITIVE = 4 // Animates the window from top to bottom. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
const AW_VER_NEGATIVE = 8 // Animates the window from bottom to top. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.

Window2.hide

flags=BitwiseOr(AW_SLIDE, AW_HOR_POSITIVE)

if Window2.WinAnimateWindowMBS(flags, 1000) then
Window2.show
else
MessageBox "Animatin failed."
end if
```

Notes: There are four types of animation: roll, slide, collapse or expand, and alpha-blended fade.

self: The window to animate. The calling thread must own this window.
Time: Specifies how long it takes to play the animation, in milliseconds. Typically, an animation takes 200 milliseconds to play.
Flags: Specifies the type of animation. This parameter can be one or more of the following values. Note that, by default, these flags take effect when showing a window. To take effect when hiding a window, use AW_HIDE and a bitwiseor operator with the appropriate flags.

AW_SLIDE	= &h040000	Uses slide animation. By default, roll animation is used. This flag is ignored when used with AW_CENTER.
AW_ACTIVATE	= &h020000	Activates the window. Do not use this value with AW_HIDE.
AW_BLEND	= &h080000	Uses a fade effect. This flag can be used only if hwnd is a top-level window.
AW_HIDE	= &h010000	Hides the window. By default, the window is shown.
AW_CENTER	= &h10	Makes the window appear to collapse inward if AW_HIDE is used or expand outward if the AW_HIDE is not used. The various direction flags have no effect.
AW_HOR_POSITIVE	= 1	Animates the window from left to right. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
AW_HOR_NEGATIVE	= 2	Animates the window from right to left. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
AW_VER_POSITIVE	= 4	Animates the window from top to bottom. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
AW_VER_NEGATIVE	= 8	Animates the window from bottom to top. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.

Return Value:
If the function succeeds, the return value is true.
If the function fails, the return value is false.
The function will fail in the following situations:

- If the window uses the window region. Windows XP: This does not cause the function to fail.
- If the window is already visible and you are trying to show the window.
- If the window is already hidden and you are trying to hide the window.
- If there is no direction specified for the slide or roll animation.
- When trying to animate a child window with AW_BLEND.
- If the thread does not own the window. Note that, in this case, AnimateWindow fails but GetLastError returns ERROR_SUCCESS. To get extended error information, call the GetLastError function.

To show or hide a window without special effects, use Show.
When using slide or roll animation, you must specify the direction. It can be either AW_HOR_POSITIVE, AW_HOR_NEGATIVE, AW_VER_POSITIVE, or AW_VER_NEGATIVE.
You can combine AW_HOR_POSITIVE or AW_HOR_NEGATIVE with AW_VER_POSITIVE or AW_VER_NEGATIVE to animate a window diagonally.
The window procedures for the window and its child windows should handle any WM_PRINT or WM_PRINTCLIENT messages. Dialog boxes, controls, and common controls already handle WM_PRINTCLIENT. The default window procedure already handles WM_PRINT.
If a child window is displayed partially clipped, when it is animated it will have holes where it is clipped.
AnimateWindow supports RTL windows.
Avoid animating a window that has a drop shadow because it produces visually distracting, jerky animations.

209.1.36 WinClassNameMBS as string

MBS Win Plugin, Plugin Version: 26.3, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Returns internal control class name for a Windows control.

209.1.37 WindowFeedbackSettingMBS(Feedback as Integer, byref value as boolean, IncludeAncestors as Boolean = false) as Boolean

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Retrieves the feedback configuration for a window.
Notes: IncludeAncestors: Specifies that the parent window chain should be checked.

Returns true if the specified feedback setting is configured on the specified window. Otherwise, it returns false (and config won't be modified).

Requires Windows 8 [desktop apps only] or Windows Server 2012 [desktop apps only] .

Constant Name	Value	Description
FEEDBACK_TOUCH_CONTACTVISUALIZATION	1	Feedback for a touch contact event.
FEEDBACK_PEN_BARRELVISUALIZATION	2	Feedback for a pen barrel-button event.
FEEDBACK_PEN_TAP	3	Feedback for a pen tap event.
FEEDBACK_PEN_DOUBLETAP	4	Feedback for a pen double-tap event.
FEEDBACK_PEN_PRESSANDHOLD	5	Feedback for a pen press-and-hold event.
FEEDBACK_PEN_RIGHTTAP	6	Feedback for a pen right-tap event.
FEEDBACK_TOUCH_TAP	7	Feedback for a touch tap event.
FEEDBACK_TOUCH_DOUBLETAP	8	Feedback for a touch double-tap event.
FEEDBACK_TOUCH_PRESSANDHOLD	9	Feedback for a touch press-and-hold event.
FEEDBACK_TOUCH_RIGHTTAP	10	Feedback for a touch right-tap event.
FEEDBACK_GESTURE_PRESSANDTAP	11	Feedback for a press-and-tap gesture.

209.1.38 WinFlashWindowMBS(Invert as boolean)

MBS Util Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Flashes Window.
Example:

Window1.WinFlashWindowMBS true

Notes: Flashes the specified window one time. It does not change the active state of the window.

Invert: If this parameter is true, the window is flashed from one state to the other. If it is false, the window is returned to its original state (either active or inactive).

When an application is minimized and this parameter is true, the taskbar window button flashes active/inactive. If it is false, the taskbar window button flashes inactive, meaning that it does not change colors. It flashes, as if it were being redrawn, but it does not provide the visual invert clue to the user.

Flashing a window means changing the appearance of its caption bar as if the window were changing from inactive to active status, or vice versa. (An inactive caption bar changes to an active caption bar; an active caption bar changes to an inactive caption bar.)
Typically, a window is flashed to inform the user that the window requires attention but that it does not currently have the keyboard focus.
The FlashWindow function flashes the window only once; for repeated flashing, the application should create a system timer.

209.1.39 WinHideTooltipMBS as Integer

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Hides all tooltips.
Notes: You can call that in window.deactivate event to hide tooltips which did not hide themselves.
Returns number of hidden tooltips.

209.1.40 Properties

209.1.41 CanBeVisibleWithoutLoginMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether this window can be visible before login.
Example:

Window1.CanBeVisibleWithoutLoginMBS = true

Notes: This window can be made visible prior to user login. By default, in Mac OS X 10.5 and later no windows can be visible before a user logs into the system; this protects the user against certain types of malicious use of insecure applications. However, some software, such as input methods or other accessibility software, may need to deliberately make windows available prior to user login. Such software should add this window attribute to its windows. Available for all windows in Mac OS X 10.5 and later.
(Read and Write computed property)

209.1.42 CGColorSpaceMBS as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Get or set the colorspace profile for this window.
Example:

```
Var c as CGColorSpaceMBS = Window1.CGColorSpaceMBS

if c<>Nil then
MessageBox str(c.NumberOfComponents)
else
MessageBox "nil"
end if
```

Notes: Requires MacOS 10.6 or newer.

On Cocoa, the NSColorSpace is queried and the matching CGColorspace is returned. For setting a NSColorSpace is created for the given CGColorspace.
In Carbon applications, the CoreGraphics color space is passed directly.
(Read and Write computed property)

209.1.43 CollapsedMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns true if this window is collapsed. You can set it.
Example:

```
mainwindow.collapsedMBS=false 'show window
```

Notes: Collapseable windows are the normal document windows.
You can't collapse dialogs or floating windows well.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.1.44 FullScreenAuxiliaryMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether this window is setup as being the auxiliary fullscreen window.
Notes: (Read and Write computed property)

209.1.45 FullScreenPrimaryMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether this window is setup as being the primary fullscreen window.
Notes: If true, the window receives the fullscreen widget in the title bar.
(Read and Write computed property)

209.1.46 HasBorderMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Decides whether the window has a border.
Example:

```
mainwindow.HasborderMBS=false ' Remove border
```

Notes: This property has only an effect on Windows. The window needs to be redrawn before the change is visible (for example move it). This option removes the title bar. HasCaptionMBS removes even more.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.1.47 HasCaptionMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Whether the window has a caption (a title bar)
Example:

```
// Window1 is a window of the example project.
Window1.HasCaptionMBS=false
```

Notes: This property has only an effect on Windows. The window needs to be redrawn before the change is visible (for example move it).

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.1.48 HasCloseBoxMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether this window has a CloseBox.
Example:

mainwindow.HasCloseboxMBS=false 'remove closebox

Notes: You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.1.49 HasCollapseBoxMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether this window has a Collapsebox.
Example:

mainwindow.HasCollapseBoxMBS=false 'remove Collapsebox

Notes: You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.1.50 HasMaximizeBoxMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Returns true if this window has a Maximize Button.
Example:

mainwindow.HasMaximizeBoxMBS=false 'remove Maximize button

Notes: This property has only an effect on Windows. The window needs to be redrawn before the change is visible (for example move it).

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.1.51 HasMinimizeBoxMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Returns true if this window has a Minimize Button.
Example:

mainwindow.HasMinimizeBoxMBS=false 'remove Minimize button

Notes: This property has only an effect on Windows. The window needs to be redrawn before the change is visible (for example move it).

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.1.52 HasNoShadowMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether this window has no shadow.
Example:

mainwindow.HasNoShadowMBS=true 'remove shadow

Notes: Available for all windows on Mac OS X. This attribute is automatically given to windows of kOverlayWindowClass.

Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.1.53 HasNoTitleBarMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use NSWindowMBS for Cocoa instead. **Function:** For Document, Floating, and Utility windows, this attribute allows you to hide the title bar of a window.
Example:

```
Window1.HasNoTitleBarMBS = true

// for Cocoa:
Window1.HasCloseBoxMBS = false
Window1.HasCollapseBoxMBS = false
Window1.IsResizableMBS = false
Window1.HasNoTitleBarMBS = true
```

Notes: For Mac OS X 10.4 or later.

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.1.54 HasSystemMenuMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Whether the window has a system menu inside the title bar.
Example:

```
// Window1 is a window of the example project.
Window1.HasSystemMenuMBS=false
```

Notes: This property has only an effect on Windows. It will disable the system menu and also the minimize, maximize and close buttons. The window needs to be redrawn before the change is visible (for example move it).

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.1.55 HasToolbarButtonMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether this window has a toolbar button.
Example:

mainwindow.HasToolbarButtonMBS=true 'shows Toolbar Button

Notes: You can read the state on Mac Classic, but you can only change it on Mac Carbon.
The Button is shown on next redraw of the window frame.

Use the CarbonWindowsEventsMBS class to receive events when the button is pressed.

Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.1.56 IgnoreClicksMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Can be used to control whether mouse clicks are ignored for this window.
Example:

// Window1 is a window of the example project.
Window1.IgnoreClicksMBS=true

Notes: Whether this window never receives mouse events, even in areas that are opaque. Instead, clicks on the window will be passed through to windows beneath it. Available for all windows on Mac OS X 10.2 and later.

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.1.57 IsIconicMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Returns true if this window is inside the taskbar.
Example:

```
MessageBox str(Window1.IsIconicMBS)
```

Notes: If you set IsIconic to true the window is minimized and if you set it to false the window size and position is restored.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.1.58 IsMetalWindowMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether this window uses the Metal appearance.
Example:

```
if Window1.Frame = window.FrameTypeMetal then
MessageBox "Window is metal. "+str(Window1.IsMetalWindowMBS)
else
MessageBox "Window is not metal. "+str(Window1.IsMetalWindowMBS)
end if
```

Notes: Available for document windows on Mac OS X 10.2 and later, and for floating windows on Mac OS X 10.3 and later. Drawers can also be metal, but dynamically adjust their appearance based on their parent window's appearance; it is not necessary to specify this attribute for a metal drawer.

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.1.59 IsResizableMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether this window is resizeable.
Example:

```
// Window1 is a window of the example project.
Window1.IsResizableMBS=false
```

Notes: You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

Use GrowBoxTransparentMBS on Composite Mac OS windows to enable the transparent grow box.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Works in Cocoa.
(Read and Write computed property)

209.1.60 IsZoomedMacMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns true if the window is zoomed.
Example:

```
MessageBox str(Window1.IsZoomedMacMBS)
```

Notes: Requires Mac OS 8.5 or newer.
Seems not to work correctly on RB 5.5.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Added Cocoa support in plugin version 10.0.
(Read and Write computed property)

209.1.61 IsZoomedMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Returns true if this window has been maximized.
Example:

```
MessageBox str(Window1.IsZoomedMBS)
```

Notes: If you set IsZoomed to true the window is maximized and if you set it to false the window size and

position is restored.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Works on Cocoa.
(Read and Write computed property)

209.1.62 ModifiedMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: You can set or get the value of the modified state.
Example:

mainwindow.modifiedMBS=true

Notes: Requires Mac OS 8.5 or newer.
As long as you don't set modified to false the window keeps to tell you that it's modified. Not sure why, so just set modified to false early in creating the window.
(Read and Write computed property)

209.1.63 ToolbarVisibleMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether the toolbar is shown in this window or not.
Notes: Value is false on any error.
Only working on MacOS.
(Read and Write computed property)

209.1.64 TransparencyMBS as single

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The transparency of the window on Mac OS X, Windows 2000 and Windows XP.
Notes: 1 for opaque, 0 for invisible.
Return 1 on any error. On Windows it returns always 1 as the current transparency value can't be queried.
You need to call MakeTransparent before to install transparency.
(Read and Write computed property)

209.1.65 UnifiedTitleAndToolbarMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether this window has an unified title and toolbar look.
Example:

Window1.UnifiedTitleAndToolbarMBS = true

Notes: This window draws its window title and toolbar using a unified appearance that has no separator between the two areas. A window may not have both UnifiedTitleAndToolbar and Metal appearance. If a window already has the metal attribute, attempting to set the Unified attribute will cause ChangeWindows to return an error, and vice versa. This constant was not added to this header file until Mac OS X 10.5, but it is actually available at runtime on Mac OS X 10.4 and later for windows of kDocumentWindowClass. However, on Mac OS X 10.5 and later, kHIWindowBitUnifiedTitleAndToolbar no longer has any effect, since all windows with toolbars now have a unified look.
(Read and Write computed property)

209.1.66 WindowDisplayAffinityMBS as Integer

MBS Util Plugin, Plugin Version: 25.3, Platform: Windows, Targets: Desktop only.

Function: The window display affinity.
Example:

// Window1 is a window of the example project.
Window1.WindowDisplayAffinityMBS = &h11

Notes: Specifies where the content of the window can be displayed.
The display affinity setting that specifies where the content of the window can be displayed.

This parameter can be one of the following values:

Name	Value	Meaning
None	0	Imposes no restrictions on where the window can be displayed.
Monitor	1	The window content is displayed only on a monitor. Everywhere else, the window appears with no content.
ExcludeFromCapture	&h11	The window is displayed only on a monitor. Everywhere else, the window does not appear at all. One use for this affinity is for windows that show video recording controls, so that the controls are not included in the capture.

This property is designed to support the window content protection feature that is new to Windows 7. This feature enables applications to protect their own onscreen window content from being captured or copied through a specific set of public operating system features and APIs. However, it works only when the Desk-

top Window Manager(DWM) is composing the desktop.

It is important to note that unlike a security feature or an implementation of Digital Rights Management (DRM), there is no guarantee that using SetWindowDisplayAffinity, will strictly protect windowed content, for example where someone takes a photograph of the screen.

Starting in Windows 10 Version 2004, ExcludeFromCapture is a supported value. Setting the display affinity to ExcludeFromCapture on previous version of Windows will behave as if Monitor is applied.
(Read and Write computed property)

209.1.67 WindowProxyIconFileMBS as folderitem

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: That's the icon to the window which belongs to the file.
Example:

```
Var f as folderItem

f=FolderItem.ShowOpenFileDialog("special/any")
if f<>nil then
Window1.WindowProxyIconFileMBS=f
end if
```

Notes: Requires Mac OS 8.5 or newer.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.1.68 WinMenuHandleMBS as integer

MBS Util Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: A property to access the handle used for the menu of a Window.
Example:

```
// Window1 is a window of the example project.
Var menu as Integer // global

if menu=0 then
menu=Window1.WinMenuHandleMBS // read it on the first window
else
Window1.winmenuHandleMBS=menu // set it on the second window
```

```
end if
```

Notes: Used in the example "Menu in every Window" to have a menu bar in every window on Windows. But never forget to quit your app after all windows were closed.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.1.69 WinTopMostWindowMBS as boolean

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Whether a window is staying on the top of the other windows.
Example:

```
Window1.WinTopMostWindowMBS=true
```

Notes: If true the window stays in front of other windows. Default is false for Xojo windows and true for overlays.
(Read and Write computed property)

209.2 class GTKWindowMBS

209.2.1 class GTKWindowMBS

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: The class to control a GTKWindow.
Example:

```
// make the window semi transparent and keep it above other windows on Linux
Var gtk As New GTKWindowMBS(Self)
gtk.Opacity = 0.8
gtk.SetKeepAbove True
gtk.Title = "Always on top"
```

Notes: We can directly modify a window on Linux using this class.
If you need methods to do something special, please do not hesitate to email us.

209.2.2 Methods

209.2.3 Constructor(win as DesktopWindow)

MBS Linux Plugin, Plugin Version: 22.0, Platform: Linux, Targets: Desktop only.

Function: Creates a new GTKWindow object pointing to a given window.
Notes: Raises exception on Mac/Win to prevent you from creating invalid object.
See also:

- 209.2.4 Constructor(win as window)

209.2.4 Constructor(win as window)

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Creates a new GTKWindow object pointing to a given window.
Notes: Raises exception on Mac/Win to prevent you from creating invalid object.
See also:

- 209.2.3 Constructor(win as DesktopWindow) 24572

209.2.5 Deiconify

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to deiconify (i.e. unminimize) the specified window.
Notes: Note that you shouldn't assume the window is definitely deiconified afterward, because other entities (e.g. the user or window manager) could iconify it again before your code which assumes deiconification gets to run.

209.2.6 Fullscreen

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to place window in the fullscreen state.
Notes: Note that you shouldn't assume the window is definitely full screen afterward, because other entities (e.g. the user or window manager) could unfullscreen it again, and not all window managers honor requests to fullscreen windows. But normally the window will end up fullscreen. Just don't write code that crashes if not.

209.2.7 Iconify

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to iconify (i.e. minimize) the specified window.
Notes: Note that you shouldn't assume the window is definitely iconified afterward, because other entities (e.g. the user or window manager) could deiconify it again, or there may not be a window manager in which case iconification isn't possible, etc. But normally the window will end up iconified. Just don't write code that crashes if not.

It's permitted to call this function before showing a window, in which case the window will be iconified before it ever appears onscreen.

209.2.8 Maximize

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to maximize window, so that it becomes full-screen.
Notes: Note that you shouldn't assume the window is definitely maximized afterward, because other entities (e.g. the user or window manager) could unmaximize it again, and not all window managers support maximization. But normally the window will end up maximized. Just don't write code that crashes if not.

It's permitted to call this function before showing a window, in which case the window will be maximized when it appears onscreen initially.

209.2.9 SetIcon(pic as picture)

MBS Linux Plugin, Plugin Version: 14.0, Platform: Linux, Targets: Desktop only.

Function: Assigns an icon to the picture.
Notes: The operating system will scale the picture to required size, so please use bigger images.
Please use picture with alpha channel for best result.

209.2.10 SetKeepAbove(setting as boolean)

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to keep window above, so that it stays on top.
Notes: Note that you shouldn't assume the window is definitely above afterward, because other entities (e.g. the user or window manager) could not keep it above, and not all window managers support keeping windows above. But normally the window will end kept above. Just don't write code that crashes if not.

It's permitted to call this function before showing a window, in which case the window will be kept above when it appears onscreen initially.

Note that, according to the Extended Window Manager Hints specification, the above state is mainly meant for user preferences and should not be used by applications e.g. for drawing attention to their dialogs.

209.2.11 SetKeepBelow(setting as boolean)

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to keep window below, so that it stays in bottom.
Notes: Note that you shouldn't assume the window is definitely below afterward, because other entities

(e.g. the user or window manager) could not keep it below, and not all window managers support putting windows below. But normally the window will be kept below. Just don't write code that crashes if not.

It's permitted to call this function before showing a window, in which case the window will be kept below when it appears onscreen initially.

Note that, according to the Extended Window Manager Hints specification, the above state is mainly meant for user preferences and should not be used by applications e.g. for drawing attention to their dialogs.

209.2.12 Stick

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to stick window, which means that it will appear on all user desktops.
Notes: Note that you shouldn't assume the window is definitely stuck afterward, because other entities (e.g. the user or window manager) could unstick it again, and some window managers do not support sticking windows. But normally the window will end up stuck. Just don't write code that crashes if not.

It's permitted to call this function before showing a window.

209.2.13 Unfullscreen

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to toggle off the fullscreen state for window.
Notes: Note that you shouldn't assume the window is definitely not full screen afterward, because other entities (e.g. the user or window manager) could fullscreen it again, and not all window managers honor requests to unfullscreen windows. But normally the window will end up restored to its normal state. Just don't write code that crashes if not.

209.2.14 Unmaximize

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to unmaximize window.
Notes: Note that you shouldn't assume the window is definitely unmaximized afterward, because other entities (e.g. the user or window manager) could maximize it again, and not all window managers honor requests to unmaximize. But normally the window will end up unmaximized. Just don't write code that crashes if not.

209.2.15 Unstick

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to unstick window, which means that it will appear on only one of the user's desktops.
Notes: Note that you shouldn't assume the window is definitely unstuck afterward, because other entities (e.g. the user or window manager) could stick it again. But normally the window will end up stuck. Just don't write code that crashes if not.

209.2.16 Properties

209.2.17 AcceptFocus as Boolean

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Get/Set whether window should receive focus.
Notes: Windows may set a hint asking the desktop environment not to receive the input focus. This function sets this hint.
(Read and Write property)

209.2.18 Handle as Integer

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: The internal window handle.
Notes: (Read and Write property)

209.2.19 IsComposited as Boolean

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Whether this window can rely on having its alpha channel drawn correctly.
Notes: On X11 this function returns whether a compositing manager is running for window's screen.
(Read only property)

209.2.20 Opacity as Double

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Get or set the Opacity of this window.
Notes: Request the windowing system to make window partially transparent, with opacity 0 being fully

transparent and 1 fully opaque. (Values of the opacity parameter are clamped to the [0,1] range.) On X11 this has any effect only on X screens with a compositing manager running. See isComposited.
(Read and Write property)

209.2.21 Resizable as Boolean

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Get or set whether the user can resize a window.
Notes: (Read and Write property)

209.2.22 Title as string

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Get or set the window title.
Notes: The title of a window will be displayed in its title bar; on the X Window System, the title bar is rendered by the window manager, so exactly how the title appears to users may vary according to a user's exact configuration. The title should help a user distinguish this window from other windows they may have open. A good title might include the application name and current document filename, for example.
(Read and Write property)

209.2.23 XWindowID as Integer

MBS Linux Plugin, Plugin Version: 24.2, Platform: Linux, Targets: Desktop only.

Function: Queries the X-Window ID for the window.
Notes: Value is zero if not available.
(Read only property)

209.3 class MAAttachedWindowMBS

209.3.1 class MAAttachedWindowMBS

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. **Function:** A class for attached windows in Cocoa.
Notes: For Mac OS X 10.7 you can use NSPopoverMBS. This class does something similar for Mac OS X 10.4 to 10.7.

Base on MAAttachedWindow code by Matt Gemmell.
See his website http://mattgemmell.com/

Below are the positions the attached window can be displayed at.

ote that these positions are relative to the point passed to the constructor, e.g. MAPositionBottomRight will put the window below the point and towards the right, MAPositionTop will horizontally center the window above the point, MAPositionRightTop will put the window to the right and above the point, and so on.

You can also pass MAPositionAutomatic and the attached window will try to position itself sensibly, based on available screen-space.

Notes regarding automatically-positioned attached windows:

(a) The window prefers to position itself horizontally centered below the specified point. This gives a certain enhanced visual sense of an attachment/relationship.

(b) The window will try to align itself with its parent window (if any); i.e. it will attempt to stay within its parent window's frame if it can.

(c) The algorithm isn't perfect. :) If in doubt, do your own calculations and then explicitly request that the window attach itself to a particular side.

Notes regarding accessor methods:

1. The border is drawn inside the viewMargin area, expanding inwards; it does not increase the width/height of the window. You can use the BorderWidth and ViewMargin methods together to achieve the exact look/geometry you want. (viewMargin is the distance between the edge of the view and the window edge.)

2. The specified setter methods are primarily intended to be used _before_ the window is first shown. If

you use them while the window is already visible, be aware that they may cause the window to move and/or resize, in order to stay anchored to the point specified in the initializer. They may also cause the view to move within the window, in order to remain centered there.

Note that the HasArrow method can safely be used at any time, and will not cause moving/resizing of the window. This is for convenience, in case you want to add or remove the arrow in response to user interaction. For example, you could make the attached window movable by its background, and if the user dragged it away from its initial point, the arrow could be removed. This would duplicate how Aperture's attached windows behave.

3. drawsRoundCornerBesideArrow takes effect when the arrow is being drawn at a corner, i.e. when it's not at one of the four primary compass directions. In this situation, if drawsRoundCornerBesideArrow is true (the default), then that corner of the window will be rounded just like the other three corners, thus the arrow will be inset slightly from the edge of the window to allow room for the rounded corner. If this value is false, the corner beside the arrow will be a square corner, and the other three corners will be rounded.

This is useful when you want to attach a window very near the edge of another window, and don't want the attached window's edge to be visually outside the frame of the parent window.

4. Note that to retrieve the background color of the window, you should use the windowBackgroundColor method, instead of backgroundColor. This is because we draw the entire background of the window (rounded path, arrow, etc) in an NSColor pattern image, and set it as the backgroundColor of the window.
Subclass of the NSWindowMBS class.

209.3.2 Methods

209.3.3 attachedWindow(view as NSViewMBS, point as NSPointMBS = nil, window as NSWindowMBS = nil, onSide as Integer = 12, distance as Double = 0.0) as MAAttachedWindowMBS

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Creates a new attached window.
Notes: view: The view to display in the attached window. Must not be nil.
point: The point to which the attached window should be attached. If you are also specifying a parent window, the point should be in the coordinate system of that parent window. If you are not specifying a window, the point should be in the screen's coordinate space. This value is required.
window: The parent window to attach this one to. Note that no actual relationship is created (particularly, this window is not made a childWindow of the parent window). Default: nil.
onSide: The side of the specified point on which to attach this window. Default: MAPositionAutomatic.
distance: How far from the specified point this window should be. Default: 0.

Returns a new attached window.

209.3.4 Constructor(view as NSViewMBS, point as NSPointMBS = nil, window as NSWindowMBS = nil, onSide as Integer = 12, distance as Double = 0.0)

MBS MacExtras Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Creates a new attached window.
Notes: After constructor finished without exception, please check handle property for success. Handle is zero on failure.

view: The view to display in the attached window. Must not be nil.
point: The point to which the attached window should be attached. If you are also specifying a parent window, the point should be in the coordinate system of that parent window. If you are not specifying a window, the point should be in the screen's coordinate space. This value is required.
window: The parent window to attach this one to. Note that no actual relationship is created (particularly, this window is not made a childWindow of the parent window). Default: nil.
onSide: The side of the specified point on which to attach this window. Default: MAPositionAutomatic.
distance: How far from the specified point this window should be. Default: 0.

209.3.5 setBackgroundImage(image as NSImageMBS)

MBS MacExtras Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

Function: Here you can set the background image.

209.3.6 setPoint(point as NSPointMBS, side as Integer)

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Sets the position and redraws window.

209.3.7 side as Integer

MBS MacExtras Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Which side the attached window is showing at.
Notes: If you passed automatic side mode to Constructor or attachedWindow method, you can query here which side was chosen.

209.3.8 Properties

209.3.9 arrowBaseWidth as Double

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The arrow base width.
Notes: Default is 20.
(Read and Write computed property)

209.3.10 arrowHeight as Double

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The height of the arrow.
Notes: Default is 16.
(Read and Write computed property)

209.3.11 borderColor as NSColorMBS

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The border color.
Notes: Default is white.
(Read and Write computed property)

209.3.12 borderWidth as Double

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The border width.
Notes: Default is 2.
(Read and Write computed property)

209.3.13 cornerRadius as Double

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The corner radius.
Notes: Default is 8.
(Read and Write computed property)

209.3.14 drawsRoundCornerBesideArrow as boolean

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Whether to draw round corners beside arrow.
Notes: Default is true.
(Read and Write computed property)

209.3.15 hasArrow as boolean

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Whether the window shows an arrow.
Notes: Default is true.
(Read and Write computed property)

209.3.16 viewMargin as Double

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The view margin.
Notes: Default is 2.
(Read and Write computed property)

209.3.17 windowBackgroundColor as NSColorMBS

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The window background color.
Notes: Default is 25% dark gray.
(Read and Write computed property)

209.3.18 Constants

Position constants

Constant	Value	Description
MAPositionAutomatic	12	automatic
MAPositionBottom	1	bottom
MAPositionBottomLeft	10	bottom left
MAPositionBottomRight	11	bottom right
MAPositionLeft	0	left
MAPositionLeftBottom	5	left bottom
MAPositionLeftTop	4	left top
MAPositionRight	2	right
MAPositionRightBottom	7	right bottom
MAPositionRightTop	6	right top
MAPositionTop	3	top
MAPositionTopLeft	8	top left
MAPositionTopRight	9	top right

209.4 Globals

209.4.1 DisableScreenUpdatesMBS

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop only.

Function: Temporarily disables redraw of the screen after changes to window geometry or window contents.
Notes: It is appropriate to disable updates if you are moving or resizing multiple windows and you want all of the geometry changes to appear onscreen simulataneously. In most other cases, you should strive to avoid disabling screen updates. The window server will automatically re-enable updates (and print a message to the Console log) if you leave updates disabled for a sufficiently long period of time, currently about 1 second.

The window server records the number of calls to DisableScreenUpdates and does not re-enable updates until a matching number of calls to EnableScreenUpdates have been made.

Updated for 64-bit in plugin version 18.3.
Blog Entries

- MBS Xojo Plugins, version 18.3pr3

209.4.2 EnableScreenUpdatesMBS

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop only.

Function: Re-enables redraw of the screen after changes to window geometry or window contents.
Notes: Screen redraw is not actually enabled until the number of calls to EnableScreenUpdatesMBS matches the number of calls to DisableScreenUpdatesMBS.

Updated for 64-bit in plugin version 18.3.
Blog Entries

- MBS Xojo Plugins, version 18.3pr3

209.4.3 MenuBarHeightMBS as Integer

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns the height of the menu bar in pixels.
Example:

```
MessageBox "The menu bar is "+str(MenuBarHeightMBS)+" pixels height."
```

Notes: Requires the appearance manager.

Without plugin, you can use this:

```
declare function GetThemeMenuBarHeight lib "Carbon" (p as ptr) as Integer

Var l as Integer
Var p as memoryBlock
p=newmemoryBlock(10)

error=GetThemeMenuBarHeight(p) // 0 if okay.
menuheight=p.short(0) // in pixels. 22 on Mac OS X.
```

Added Cocoa support in plugin version 10.0.

209.5 class OverlayMBS

209.5.1 class OverlayMBS

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: This class gives you a window overlaying all other windows with an alpha channel.
Example:

```
Var o as OverlayMBS
Var p as Picture

o=new OverlayMBS(100,100,300,300)

p=New Picture(300,300,32)
p.Graphics.ForeColor=&c000000
p.Graphics.FillRect 0,0,300,300

o.Pict=p

p=New Picture(300,300,32)
p.Graphics.ForeColor=&c000000
p.Graphics.FillOval 0,0,300,300
p.Graphics.ForeColor=&cFFFFFF
p.Graphics.FillOval 100,100,100,100

o.Mask=p

o.UpdateShow

// wait 5 seconds to see the window
DelayMBS 5
```

Notes: Requires Mac OS X 10.3.9 or Windows 2000 or newer.

Cocoa implementation added with Mac OS X 10.4 class.
To support high resolution mode on Mac OS X high resolution displays, please make the picture+mask exact the double width and height of the window.

209.5.2 Methods

209.5.3 Close

MBS Overlay Plugin, Plugin Version: 8.7, Platforms: macOS, Windows, Targets: Desktop only.

Function: Calls the destructor.
Notes: Closes the window and releases all memory used from the overlay.

209.5.4 Constructor(left as Integer, top as Integer, width as Integer, height as Integer, MacAttributes as Integer, WinExStyle as Integer, WinStyle as Integer)

MBS Overlay Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The advanced constructor where you can pass flags for Mac and Windows directly.
Notes: Windows ExStyle flags:

WS_EX_DLGMODALFRAME	&h00000001
WS_EX_NOPARENTNOTIFY	&h00000004
WS_EX_TOPMOST	&h00000008
WS_EX_ACCEPTFILES	&h00000010
WS_EX_TRANSPARENT	&h00000020
WS_EX_MDICHILD	&h00000040

209.5.5 Constructor(left as Integer, top as Integer, width as Integer, height as Integer, WindowsNoActivate as boolean = false, WindowsTopMost as boolean=true)

MBS Overlay Plugin, Plugin Version: 8.7, Platforms: macOS, Windows, Targets: Desktop only.

Function: Creates a new window.
Example:

```
// a dark window with round edges

Var m,p as Picture
static o as OverlayMBS

const rect_width=300
const rect_height=300
const round_rect_int=30

p=New Picture(rect_width,rect_height,32)
m=New Picture(rect_width,rect_height,32)

p.Graphics.ForeColor = RGB( 20,20,20 )
p.Graphics.DrawRect 0, 0, rect_width, rect_height
p.Graphics.FillRect 0, 0, rect_width, rect_height

// fill the window mask with around 10% transparency
```

```
m.Graphics.ForeColor = RGB( 20,20,20 )
m.Graphics.FillRoundRect 0, 0, rect_width, rect_height, round_rect_int, round_rect_int

// write text into picture
p.Graphics.ForeColor=&cFFFFFF
p.Graphics.DrawString "Hello",10,20

// make the text not transparent
m.Graphics.ForeColor=&c000000
m.Graphics.DrawString "Hello",10,20

o=new OverlayMBS(200,200,rect_width, rect_height, true)
o.Pict=p
o.Mask=m
o.UpdateShow
```

Notes: Requires Mac OS X 10.3.9 or Windows 2000 or newer.
On success the handle property is not zero.

If WindowsNoActivate the window is setup to not become the front window. This may be a better setup for a toolbar like window.
If WindowsTopMost is false the window is not floating in front of all other windows.

Seems like WindowsNoActivate on Windows works better if you call Show(4) right after the constructor.

For proper support of high resolutions, the pictures used here may need to be 2x or 3x times the window size.
See also:

- 209.5.4 Constructor(left as Integer, top as Integer, width as Integer, height as Integer, MacAttributes as Integer, WinExStyle as Integer, WinStyle as Integer) 24587

209.5.6 Hide

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: Hides the window.

209.5.7 InvalidateShadow

MBS Overlay Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Invalidates the shadow of the window.

Notes: As soon as possible the operating system will recalculate the shadow.
Works only on Mac OS X with Carbon or Cocoa window.

209.5.8 Move(left as Integer, top as Integer)

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: Moves the window on the screen to the given position.

209.5.9 Resize(width as Integer, height as Integer)

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: Resizes the window.
Notes: You need to provide bigger picture before you call this method.

209.5.10 SetFocus

MBS Overlay Plugin, Plugin Version: 17.4, Platforms: macOS, Windows, Targets: Desktop only.

Function: The method to call to set focus to the overlay window.
Notes: Works for Windows and macOS Cocoa.

209.5.11 Show(WindowsShowMode as Integer = 0)

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: Shows the window onscreen.
Notes: Values for the Windows show mode:

default 0
SW_SHOWNORMAL 1
SW_NORMAL 1
SW_SHOWMINIMIZED 2
SW_SHOWMAXIMIZED 3
SW_MAXIMIZE 3
SW_SHOWNOACTIVATE 4
SW_SHOW 5
SW_MINIMIZE 6
SW_SHOWMINNOACTIVE 7
SW_SHOWNA 8

SW_RESTORE 9
SW_SHOWDEFAULT 10
SW_FORCEMINIMIZE 11

209.5.12 Update

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: Updates the window.
Notes: After you draw new content into the pict and mask pictures, you call this method to apply changes to the window.
See also:

- 209.5.13 Update(NSImage as Variant) 24591

209.5.13 Update(NSImage as Variant)

MBS Overlay Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Updates overlay window with given NSImage.
Notes: Please pass NSImageMBS object.

Version 16.2 and newer also accepts CGImageMBS object here.
If you pass picture, we use it as CGImage or NSImage depending on what picture type you pass.
See also:

- 209.5.12 Update 24591

209.5.14 UpdateShow

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: Shows the window and performs an update.
Notes: Runs Update and Show internally.

209.5.15 Properties

209.5.16 Alpha as Double

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: The alpha value of the window.
Notes: 0 is invisible and 1.0 is visible.
(Read and Write property)

209.5.17 AutoCaptureMouse as Boolean

MBS Overlay Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop only.

Function: Whether the mouse should be captured automatically on Windows.
Notes: If you return true from MouseDown the mouse is catched. This way you can get the drag events even if the mouse moves out of the window.
On MouseUp the mouse is released.
(Read and Write property)

209.5.18 CurrentImage as Variant

MBS Overlay Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Last image drawn.
Notes: For debugging only.
CGImageMBS or NSImageMBS depending on what you set.
(Read only property)

209.5.19 Height as Integer

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: The height of the window.
Notes: Using Resize method is more efficient than assigning width and height properties.
(Read and Write property)

209.5.20 IgnoreMouseClicks as Boolean

MBS Overlay Plugin, Plugin Version: 8.7, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether this window should react to mouse clicks.
Notes: In Mac OS X 10.7 and newer setting IgnoreMouseClicks = false does not give the same behavior as without setting this property before.

Implemented for windows in v24.1.
(Read and Write property)

209.5.21 Left as Integer

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: The position of the window.
Example:

```
static o as OverlayMBS // keep the variable global somewhere. Static or part of a module or in app class.

o = new OverlayMBS(100,100,100,100)

o.Pict = LogoMBS(100)
o.mask = LogoMBS(100)

o.Left = 200

o.UpdateShow
```

Notes: Using Move method is more efficient than assigning left and top properties.
(Read and Write property)

209.5.22 Mask as Picture

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: The mask for the window.
Notes: You need to create and assign your own image.
If you assign nil for the mask, the plugin uses the mask or alpha channel of the picture.

For proper support of high resolutions, the pictures used here may need to be 2x or 3x times the window size.
(Read and Write property)

209.5.23 MovableByWindowBackground as Boolean

MBS Overlay Plugin, Plugin Version: 24.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: A Boolean value that indicates whether the window is movable by clicking and dragging anywhere in its background.
Notes: The value of this property is true when the window is movable by clicking and dragging anywhere

in its background; otherwise, false.

Works on macOS and Windows.
(Read and Write property)

209.5.24 NSView as Variant

MBS Overlay Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

Function: The NSView showing the content of the overlay.
Notes: Value is a NSViewMBS. We use variant to reduce dependency to other plugins.
(Read only property)

209.5.25 NSWindow as Variant

MBS Overlay Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop only.

Function: Returns a reference to the NSWindowMBS object which you can use to make additional settings to the overlay window.
Example:

```
Var o as OverlayMBS // your window

Var n as NSWindowMBS = o.NSWindow
// this window should not hide if app hides
n.canHide = false
```

Notes: Only for the Cocoa target in Xojo.
(Read only property)

209.5.26 Pict as Picture

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: The picture for the window content.
Notes: You need to provide your own picture here.
Pict and Mask pictures must have the same size.

Alpha Channel Pictures are not really supported.
But for Mac OS X an alpha channel picture does currently work.

For proper support of high resolutions, the pictures used here may need to be 2x or 3x times the window size.
(Read and Write property)

209.5.27 Top as Integer

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: The position of the window.
Example:

```
static o as OverlayMBS // keep the variable global somewhere. Static or part of a module or in app class.

o = new OverlayMBS(100,100,100,100)

o.Pict = LogoMBS(100)
o.mask = LogoMBS(100)

o.top = 200

o.UpdateShow
```

Notes: Using Move method is more efficient than assigning left and top properties.
(Read and Write property)

209.5.28 Visible as Boolean

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether the window is visible.
Example:

```
Var o as OverlayMBS
// ....
o.visible=true
```

Notes: True if visible, false if hidden.
(Read and Write property)

209.5.29 Width as Integer

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: The width of the window.
Notes: Using Resize method is more efficient than assigning width and height properties.
(Read and Write property)

209.5.30 WindowHandle as Integer

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: The internal used window handle.
Notes: On Mac OS a WindowRef and on Windows a HWND.
(Read only property)

209.5.31 WindowID as Integer

MBS Overlay Plugin, Plugin Version: 10.2, Platform: macOS, Targets: Desktop only.

Function: Queries the CoreGraphics Window ID for the given window.
Notes: Returns 0 on any error.
This ID can be used for CGWindowListCreateImageMBS.
(Read only property)

209.5.32 WindowsClassName as String

MBS Overlay Plugin, Plugin Version: 18.4, Platform: Windows, Targets: Desktop only.

Function: The Windows' window class name.
Notes: (Read only property)

209.5.33 hasShadow as boolean

MBS Overlay Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Whether the window has a shadow.
Notes: (Read and Write computed property)

209.5.34 Title as string

MBS Overlay Plugin, Plugin Version: 11.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: The title of the window.
Notes: This name is not visible as the window has no title bar.
But if you see the window in some window list, this title property will give your overlay window a name.
(Read and Write computed property)

209.5.35 WinIsTopMost as boolean

MBS Overlay Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: Whether a window is staying on the top of the other windows.
Notes: If true the window stays in front of other windows. Default is false for Xojo windows and true for overlays.
(Read and Write computed property)

209.5.36 Events

209.5.37 Draw(CGContext as Variant, NSGraphicsContext as Variant)

MBS Overlay Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop only.

Function: Draws the content of the window.
Example:

```
Sub Draw(CGContext as Variant, NSGraphicsContext as Variant)
Var c as CGContextMBS = CGContext
Var n as NSGraphicsMBS = NSGraphicsContext
// draw here
End Sub
```

Notes: The drawing area is cleared for you.
Please put the given parameters in the local variables with correct type.
We use variants here to reduce plugin dependencies.

With version 19.5, the don't clear content anymore for you, so you may need to call ClearRect if needed.

209.5.38 GotFocus

MBS Overlay Plugin, Plugin Version: 17.4, Platforms: macOS, Windows, Targets: Desktop only.

Function: The event called when focus is set on the overlay window.
Notes: Works for Windows and macOS Cocoa.

209.5.39 KeyDown(key as String, keyCode as Integer, modifiers as integer) as Boolean

MBS Overlay Plugin, Plugin Version: 17.4, Platforms: macOS, Windows, Targets: Desktop only.

Function: The key down event.
Notes: The plugin translates keycodes into key as text, but also provides keycode and modifier flags.
Works for Windows and macOS Cocoa.

209.5.40 KeyUp(key as String, keyCode as Integer, modifiers as integer) as Boolean

MBS Overlay Plugin, Plugin Version: 17.4, Platforms: macOS, Windows, Targets: Desktop only.

Function: The key up event.
Notes: The plugin translates keycodes into key as text, but also provides keycode and modifier flags.
Works for Windows and macOS Cocoa.

209.5.41 LostFocus

MBS Overlay Plugin, Plugin Version: 17.4, Platforms: macOS, Windows, Targets: Desktop only.

Function: The event called when focus is lost on the overlay window.
Notes: Works for Windows and macOS Cocoa.

209.5.42 menuForEvent(NSEvent as variant) as Variant

MBS Overlay Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Provide a contextual menu for Cocoa Mac.
Notes: NSEvent is an NSEventMBS object.
Please return NSMenuMBS object. (and please keep a reference somewhere)

209.5.43 MouseDown(x as Integer, y as Integer, modifiers as Integer) as boolean

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: This event is called when the user clicks with the mouse inside the window.
Notes: Return true if you handled this event.
modifiers: Platform dependent keyboard modifiers. Different values for Carbon, Cocoa and Windows!

For Cocoa to set mouse cursor, please use NSCursorMBS class.

209.5.44 MouseDragged(x as Integer, y as Integer, modifiers as Integer) as boolean

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: This event is called when the user moves the mouse over the window while the mouse is pressed.
Notes: Return true if you handled this event.
modifiers: Platform dependent keyboard modifiers. Different values for Carbon, Cocoa and Windows!

For Cocoa to set mouse cursor, please use NSCursorMBS class.

209.5.45 MouseEnter(x as Integer, y as Integer, modifiers as Integer)

MBS Overlay Plugin, Plugin Version: 13.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: This is event is called when mouse enters window.
Notes: modifiers: Platform dependent keyboard modifiers. Different values for Carbon, Cocoa and Windows!

For Cocoa to set mouse cursor, please use NSCursorMBS class.

209.5.46 MouseExit(x as Integer, y as Integer, modifiers as Integer)

MBS Overlay Plugin, Plugin Version: 13.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: This is event is called when mouse leaves window.
Notes: modifiers: Platform dependent keyboard modifiers. Different values for Carbon, Cocoa and Windows!

For Cocoa to set mouse cursor, please use NSCursorMBS class.

209.5.47 MouseMoved(x as Integer, y as Integer, modifiers as Integer) as boolean

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: This event is called when the user moves the mouse over the window.
Notes: Return true if you handled this event.

modifiers: Platform dependent keyboard modifiers. Different values for Carbon, Cocoa and Windows!

For Cocoa to set mouse cursor, please use NSCursorMBS class.

209.5.48 MouseUp(x as Integer, y as Integer, modifiers as Integer) as boolean

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: This event is called when the user releases the mousebutton inside the window.
Notes: Return true if you handled this event.

modifiers: Platform dependent keyboard modifiers. Different values for Carbon, Cocoa and Windows!

For Cocoa to set mouse cursor, please use NSCursorMBS class.

209.5.49 MouseWheel(x as Integer, y as Integer, dx as Double, dy as Double, modifiers as Integer)

MBS Overlay Plugin, Plugin Version: 13.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: This event is called when the user uses the mouse wheel inside the window.
Notes: modifiers: Platform dependent keyboard modifiers. Different values for Carbon, Cocoa and Windows!

For Cocoa to set mouse cursor, please use NSCursorMBS class.

209.5.50 WindowBoundsChanged

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: This event is called whenever the size of the window changes.
Notes: Can also be called on position changes.

209.5.51 WindowClosed

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: This event is called when the window is closed.

209.5.52 WindowHidden

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: This event is called when the window is hidden.
Notes: Cocoa support added for version 14.0.

209.5.53 WindowShown

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: This event is called when the window is shown.
Notes: Cocoa support added for version 14.0.

209.5.54 Constants

Modifiers

Constant	Value	Description
kModifierFlagCommand	1048576	The command key is pressed. Use with BitwiseAnd(Modifiers, kModifierFlagCommand) <>0 to check if the flag is set in key events.
kModifierFlagControl	262144	The control key is pressed. Use with BitwiseAnd(Modifiers, kModifierFlagControl) <>0 to check if the flag is set in key events.
kModifierFlagOption	524288	The option (alt) key is pressed. Use with BitwiseAnd(Modifiers, kModifierFlagOption) <>0 to check if the flag is set in key events.
kModifierFlagShift	131072	The shift key is pressed. Use with BitwiseAnd(Modifiers, kModifierFlagShift) <>0 to check if the flag is set in key events.

209.6 class Window

209.6.1 class Window

Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Extends Xojo's Window Class.
Example:

Window1.HasNoTitleBarMBS = true

Notes: In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

209.6.2 Methods

209.6.3 ActivateWindowMBS

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Windows, Targets: Desktop only.

Function: Activates the window.
Notes: This function does more than just show. if the window has been minimized, it will restore it. Also the window is moved to front and made the current window for keyboard input.

Sadly windows limits which windows can go to front, so some windows may not come to front unless they are clicked on.

As activation can be asynchronously, the window may activate later, e.g. after current method ends.

For MacOS Cocoa apps, we simply bring the window to the front.

Videos

- Presentation from Xojo Developer Conference 2019 in Miami.

Xojo Developer Magazine

- 17.5, page 42: What's New in the MBS Plugins, With the Plugins growing every year, here are new capabilities you may have missed by Stefanie Juchmes

209.6.4 BackingScaleFactorMBS as Double

MBS Util Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns the scale factor representing the number of backing store pixels corresponding to each linear unit in window space on this window.
Notes: This is generally only necessary when building a bitmap context or image whose resolution needs to match that of a particular Window. Note that a Window's backing scale factor can change over time, such as when the window moves from one display to another, or when a display's resolution changes, so clients should not cache the value returned by this function.

If platform does not support scaling factor, we return 1.0. (on Windows, Linux and older Mac OS X)
Supported for Carbon and Cocoa windows.

For apps which are not enabled for retina support, the function returns 1. So you only see 2 here if app is Cocoa, display is retina and info.plist has the NSHighResolutionCapable key.

209.6.5 CGContextMBS as CGContextMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Creates a new CGContextMBS object for the given Window.
Example:

```
Var CGContext as CGContextMBS
Var OverlayPic as Picture=LogoMBS(500)
Var contentpicture as CGImageMBS= CGCreateImageMBS(OverlayPic)

CGContext=Window1.CGContextMBS

CGContext.ClearRect CGMakeRectMBS(0, 0, OverlayPic.width, OverlayPic.height)
CGContext.DrawPicture contentpicture, CGMakeRectMBS(0, 0, OverlayPic.width, OverlayPic.height)
```

Notes: Requires Mac OS X to work.
Please make sure the CGContextMBS object is released in the paint event if you use it there, so all the

drawings are flushed. Not releasing it my be visible in missing statictext or other strange graphics effects.

But on a Cocoa window the context is not always available, so in the window paint event, you can context from Graphics object.

209.6.6 CleanUpTransparentMBS(refValue as Integer)

MBS Util Plugin, Plugin Version: 5.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Cleans up transparency support for a Xojo window.
Example:

```
Var p as Integer // property on Windows

p = Window1.MakeTransparentMBS

// later in close event

Window1.CleanUpTransparentMBS p
```

Notes: Call this in the close event of a window passing the value you got from the MakeTransparentMBS call.
Linux supported added with 14.0, but works only with Linux desktop which support alpha channel.
Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

209.6.7 ClearTransparencyMBS

MBS Util Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop only.

Function: Clears transparency of a window.

209.6.8 CollapsableMBS as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns true if this window can be collapsed.
Example:

```
MessageBox str(Window1.CollapsableMBS)
```

Notes: Collapseable windows are the normal document windows.
You can't collapse dialogs or floating windows well.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Added Cocoa support in plugin version 10.0.

209.6.9 ConstrainWindowToScreenMBS(animate as boolean)

MBS Util Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop only.

Function: Makes sure the window is on one screen visible.
Notes: Implemented on Mac for both Carbon and Cocoa.
Blog Entries

- MBS REALbasic Plugins, version 10.6pr6

209.6.10 GTKWindow as GTKWindowMBS

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Queries a GTKWindow object for this window.
Notes: Returns only a valid object on Linux.
On other platforms, this function returns nil.

209.6.11 HideKeyboardMBS

MBS Win Plugin, Plugin Version: 23.2, Platforms: macOS, Windows, Targets: Desktop only.

Function: Hides the keyboard.
Notes: On Windows same as ShowKeyboardMBS, but may not launch the keyboard.

If you called ShowKeyboardMBS before, you can call this function to hide it.
Blog Entries

209.6.12 InvalidateRectThreadSafeMBS(X As Integer, Y As Integer, Width As Integer, Height As Integer, EraseBackground as boolean = true)

MBS Util Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Invalidate the rectangle.
Notes: This method is to allow you to invalidate in a thread without a problem.

If called on main thread, the plugin will simply call InvalidateRect method directly.
If called on other threads the plugin will schedule to call InvalidateRect method a short time later on the main thread.
Blog Entries

- MBS Xojo Plugins, version 19.5pr3

209.6.13 InvalidateShadowMBS

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop only.

Function: This method causes a window's shadow to be recalculated.
Notes: InvalidateShadowMBS is not typically used by applications. However, it may be useful for applications with customized window frames that change shape dynamically; in this case, after the application has drawn the new window shape, the window shadow must be recalculated to follow the new window shape.

This method causes the window shadow to be immediately recalculated and redrawn based on the current contents of the window's back buffer. For best performance and visual appearance, you should follow these steps when invalidating a window shadow: disable updates with DisableScreenUpdatesMBS, draw, flush, invalidate the shadow, and enable updates. For a compositing window, after invalidating any views that should be redrawn, you will need to explicitly draw and flush using HIWindowFlush, rather than waiting for the event loop to draw and flush the window, because you cannot disable updates or invalidate the window shadow if drawing is done via the event loop.

209.6.14 InvalidateThreadSafeMBS(EraseBackground as boolean = true)

MBS Util Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Invalidate the window.
Notes: This method is to allow you to invalidate in a thread without a problem.

If called on main thread, the plugin will simply call Invalidate method directly.
If called on other threads the plugin will schedule to call Invalidate method a short time later on the main thread.

209.6.15 IsFullScreenMBS as Boolean

MBS Util Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Queries whether window is fullscreen.
Notes: Indicates that a window has fullscreen appearance.
A fullscreen window does not draw its titlebar, and may have special handling for its toolbar.
Available in Mac OS X v10.7 and later.
Blog Entries

209.6.16 MakeTransparentMBS as Integer

MBS Util Plugin, Plugin Version: 5.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Installs transparency support to a Xojo window.
Example:

```
Var p as Integer // property on Windows

p = Window1.MakeTransparentMBS

// later in close event

Window1.CleanUpTransparentMBS p
```

Notes: Will return non zero value if successful.
The window doesn't change if you don't use the CGContextMBS property.

Requires Mac OS X, Windows 2000 or Windows XP to work. The window must be a document window.

Set MacProcID of the window to 1104 and you can make it transparent without a title bar. (on Mac OS X)

With plugin version 11.1, we now return a value which should store with the window. Later in the Close event, you call CleanUpTransparentMBS passing this value.

Added Cocoa support in 11.3 plugins.
Linux supported added with 14.0, but works only with Linux desktop which support alpha channel. Calls

to MakeTransparentMBS and CleanUpTransparentMBS are not required for Linux.

209.6.17 NSPanelMBS as NSPanelMBS

MBS MacBase Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop only.

Function: Creates a NSPanel for the given Xojo window.
Example:

MessageBox Window1.NSPanelMBS.Title

Notes: Works only for Cocoa Windows in Cocoa target which are floating panels.

209.6.18 NSToolbarMBS as NSToolbarMBS

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The window's toolbar.
Notes: So you can get the toolbar without going over NSWindowMBS.
But there you can assign a new toolbar...

209.6.19 NSWindowMBS as NSWindowMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop only.

Function: Creates a NSWindow for the given Xojo window.
Example:

MessageBox Window1.NSWindowMBS.Title

Notes: Works only for Cocoa Windows in Cocoa target and for Carbon Windows in carbon targets.

209.6.20 RefreshRectThreadSafeMBS(X As Integer, Y As Integer, Width As Integer, Height As Integer, EraseBackground as boolean = true)

MBS Util Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Refresh the rectangle.
Notes: This method is to allow you to refresh in a thread without a problem.

If called on main thread, the plugin will simply call RefreshRect method directly.
If called on other threads the plugin will schedule to call RefreshRect method a short time later on the main thread.
Blog Entries

- MBS Xojo Plugins, version 19.5pr3

209.6.21 RefreshThreadSafeMBS(EraseBackground as boolean = true)

MBS Util Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Refresh the rectangle.
Notes: This method is to allow you to refresh in a thread without a problem.

If called on main thread, the plugin will simply call Refresh method directly.
If called on other threads the plugin will schedule to call Refresh method a short time later on the main thread.

209.6.22 RemoveWindowProxyIconMBS

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Removes any Proxy Icon from the Window.
Example:

mainwindow.RemoveWindowProxyIconMBS

Notes: Requires Mac OS 8.5 or newer.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
Blog Entries

- MBS Plugins 11.1 Release notes

- MBS REALbasic Plugins, version 11.1pr4

209.6.23 ScreenshotWindowMBS as picture

MBS Picture Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns the content of the window buffer on Mac OS X.
Example:

```
Var p as Picture
p=mainwindow.screenshotWindowMBS
```

Notes: Only for Mac OS X. Image is taken from window back buffer.
This will not capture overlay windows.

On Xojo 2006 or newer, please add a self. on front of the method call in case you want to use the method on the current window.

209.6.24 ScreenshotWindowRectMBS(left as Integer, top as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 3.2, Platform: macOS, Targets: Desktop only.

Function: Returns a part of the content of the window buffer on Mac OS X.
Example:

```
Var p as picture
p=mainwindow.ScreenshotWindowRectMBS(100,100,200,200)
```

Notes: Only for Mac OS X. Image is taken from window back buffer.
This will not capture overlay windows.

On Xojo 2006 or newer, please add a self. on front of the method call in case you want to use the method on the current window.

209.6.25 SetTransparencyMBS(value as Integer) as boolean

MBS Util Plugin, Plugin Version: 5.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Your window can have transparency on Mac OS X.
Example:

```
if Window1.SetTransparencyMBS(127) then
'fine
else
'error
end if
```

Notes: Use values between 0 and 255.
Requires Mac OS X, Windows 2000 or Windows XP to work.
May be limited to simple windows like normal document windows.
You need to call MakeTransparent before to install transparency.
(this function was replaced in v4.4)
Linux supported added with 14.0, but works only with Linux desktop which support alpha channel.

209.6.26 SetWindowFeedbackSettingMBS(Feedback as Integer, value as Variant) as Boolean

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: Sets the feedback configuration for a window.
Example:

```
const FEEDBACK_TOUCH_CONTACTVISUALIZATION = 1
const FEEDBACK_PEN_BARRELVISUALIZATION = 2
const FEEDBACK_PEN_TAP = 3
const FEEDBACK_PEN_DOUBLETAP = 4
const FEEDBACK_PEN_PRESSANDHOLD = 5
const FEEDBACK_PEN_RIGHTTAP = 6
const FEEDBACK_TOUCH_TAP = 7
const FEEDBACK_TOUCH_DOUBLETAP = 8
const FEEDBACK_TOUCH_PRESSANDHOLD = 9
const FEEDBACK_TOUCH_RIGHTTAP = 10
const FEEDBACK_GESTURE_PRESSANDTAP = 11
```

```
Var r as Boolean = self.SetWindowFeedbackSettingMBS(FEEDBACK_TOUCH_TAP, true)

if r then
Var value as Boolean
Var b as Boolean = self.WindowFeedbackSettingMBS(FEEDBACK_TOUCH_TAP, value)
if b then
MessageBox "WindowFeedbackSettingMBS: "+str(value)
end if
end if
```

Notes: Returns true if successful; otherwise, returns false.

Value can be nil to reset value. Or true/false to set it.
Requires Windows 8 or Windows Server 2012 in desktop apps only.

Constant Name	Value	Description
FEEDBACK_TOUCH_CONTACTVISUALIZATION	1	Feedback for a touch contact event.
FEEDBACK_PEN_BARRELVISUALIZATION	2	Feedback for a pen barrel-button event.
FEEDBACK_PEN_TAP	3	Feedback for a pen tap event.
FEEDBACK_PEN_DOUBLETAP	4	Feedback for a pen double-tap event.
FEEDBACK_PEN_PRESSANDHOLD	5	Feedback for a pen press-and-hold event.
FEEDBACK_PEN_RIGHTTAP	6	Feedback for a pen right-tap event.
FEEDBACK_TOUCH_TAP	7	Feedback for a touch tap event.
FEEDBACK_TOUCH_DOUBLETAP	8	Feedback for a touch double-tap event.
FEEDBACK_TOUCH_PRESSANDHOLD	9	Feedback for a touch press-and-hold event.
FEEDBACK_TOUCH_RIGHTTAP	10	Feedback for a touch right-tap event.
FEEDBACK_GESTURE_PRESSANDTAP	11	Feedback for a press-and-tap gesture.

Videos

- Presentation from London conference about MBS Plugins.

209.6.27 SetWindowIconMBS(Type as Integer, File as FolderItem, IconID as Integer) as Boolean

MBS Win Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop only.

Function: Sets the window icon using the icon in the file.
Example:

```
call Window1.SetWindowIconMBS(0,New FolderItem("icon.ico"),1)
```

Notes: Returns true on success and false on failure.
What image depths are used and supported depends on the Windows version.

Type is 0 for a small icon and 1 for a big icon.
See also:

- 209.6.28 SetWindowIconMBS(Type as Integer, Icon as Picture, Mask as Picture) as Boolean 24613

209.6.28 SetWindowIconMBS(Type as Integer, Icon as Picture, Mask as Picture) as Boolean

MBS Win Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop only.

Function: Sets the window icon using the given picture with mask.
Example:

```
// This example needs a window with Canvas1 and Canvas2.
Var p as Picture
Var m as Picture

// random colored circle image
p=New Picture(16,16,32)
p.Graphics.ForeColor=&c000000
p.Graphics.FillRect 0,0,16,16
p.Graphics.ForeColor=rgb(rnd*256,rnd*256,rnd*256)
p.Graphics.Filloval 0,0,16,16

// circle mask
m=New Picture(16,16,32)
m.Graphics.ForeColor=&cFFFFFF // transparent
m.Graphics.Fillrect 0,0,16,16
m.Graphics.ForeColor=&c000000 // color
m.Graphics.Filloval 0,0,16,16

Canvas1.Backdrop=p // show in canvas
Canvas2.Backdrop=m

call Window1.SetWindowIconMBS(0,p,m)
```

Notes: The mask picture ist converted to black/white.
What image depths are used and supported depends on the Windows version.
Returns true on success and false on failure.

Possible values for type:

ICON_BIG = 1	Set the large icon for the window.
ICON_SMALL = 0	Set the small icon for the window.

See also:

- 209.6.27 SetWindowIconMBS(Type as Integer, File as FolderItem, IconID as Integer) as Boolean 24612

209.6.29 SetWindowMaskMBS(p as picture, redraw as Boolean, transparentColor as color) as Boolean

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop only.

Function: Sets the mask of a window.
Notes: Redraw decides whether the window is redrawn after it has been changed.
Returns true if successful.

If you want to do the same on Mac OS X, check the example projects "transparent window" and the Photoshop Splash Screen example.
Xojo Developer Magazine

209.6.30 ShowHideToolbarMBS(animate as boolean, value as boolean)

MBS Util Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop only.

Function: Shows or hides the toolbar.
Notes: Only working on MacOS.

209.6.31 ShowKeyboardMBS

MBS Win Plugin, Plugin Version: 23.2, Platforms: macOS, Windows, Targets: Desktop only.

Function: Shows the keyboard viewer.
Notes: On Windows you can trigger this a second time to hide it.

See also ShowCharacterPaletteMBS function.

209.6.32 SmoothResizeCenteredMBS(width as Integer,height as Integer)

MBS Util Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Resizes the window smoothly to all directions.
Example:

```
Var w,h as Integer

// get destination dimension

w=300
h=200

// Resize

Window1.SmoothResizeCenteredMBS w,h

// Now resize via RB to make it permanent.

width=w
height=h
```

Notes: You need to set the new size using Xojo's Windows properties, too. (no longer needed with Xojo) In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
Blog Entries

- MBS Real Studio Plugins, version 11.2pr3

209.6.33 SmoothResizeMBS(width as Integer,height as Integer)

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Resizes the window smoothly.
Example:

```
Var w,h as Integer

// get destination dimension

w=300
h=200

// Resize

Window1.SmoothResizeMBS w,h
```

// Now resize via RB to make it permanent.

width=w
height=h

Notes: You need to set the new size using Xojo's Windows properties, too. (no longer needed with Xojo)
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Works on Cocoa on 10.4 and newer.

209.6.34 ToggleFullScreenMBS as Boolean

MBS Util Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Toggles fullscreen mode for this window.
Notes: Returns true on success.
If an application supports fullscreen, it should add a menu item to the View menu with toggleFullScreen as the action.
Available in Mac OS X v10.7 and later.
This method does not much if you don't mark a window to be the primary fullscreen window.

209.6.35 UpdateNowMBS

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Function: On MacOS all windows are doublebuffered and the OS updates the screen from time to time. This method forces a screen update.
Example:

Mainwindow.UpdateNowMBS

Notes: Updated for 64-bit in plugin version 18.3.
Blog Entries

- MBS Xojo Plugins, version 18.3pr3

209.6.36 UpdateNowRectMBS(left as Integer, top as Integer, width as Integer, height as Integer)

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Function: On Mac OS all windows are doublebuffered and the OS updates the screen from time to time. This method forces a screen update for a part of your window.
Example:

Mainwindow.UpdateNowRectMBS Mainwindow.text.left, Mainwindow.text.top, Mainwindow.text.width, Mainwindow.text.height

Notes: Updated for 64-bit in plugin version 18.3.

209.6.37 WinAnimateWindowMBS(Flags as Integer, Time as Integer=200) as boolean

MBS Win Plugin, Plugin Version: 9.4, Platform: Windows, Targets: Desktop only.

Function: The AnimateWindow function enables you to produce special effects when showing or hiding windows.
Example:

```
Var flags as Integer

const AW_SLIDE = &h040000 // Uses slide animation. By default, roll animation is used. This flag is ignored when used with AW_CENTER.
const AW_ACTIVATE = &h020000 // Activates the window. Do not use this value with AW_HIDE.
const AW_BLEND = &h080000 // Uses a fade effect. This flag can be used only if hwnd is a top-level window.
const AW_HIDE = &h010000 //Hides the window. By default, the window is shown.
const AW_CENTER = &h10 // Makes the window appear to collapse inward if AW_HIDE is used or expand outward if the AW_HIDE is not used. The various direction flags have no effect.
const AW_HOR_POSITIVE = 1 // Animates the window from left to right. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
const AW_HOR_NEGATIVE = 2 // Animates the window from right to left. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
const AW_VER_POSITIVE = 4 // Animates the window from top to bottom. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
const AW_VER_NEGATIVE = 8 // Animates the window from bottom to top. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.

Window2.hide

flags=BitwiseOr(AW_SLIDE, AW_HOR_POSITIVE)
```

```
if Window2.WinAnimateWindowMBS(flags, 1000) then
Window2.show
else
MessageBox "Animatin failed."
end if
```

Notes: There are four types of animation: roll, slide, collapse or expand, and alpha-blended fade.

self: The window to animate. The calling thread must own this window.
Time: Specifies how long it takes to play the animation, in milliseconds. Typically, an animation takes 200 milliseconds to play.
Flags: Specifies the type of animation. This parameter can be one or more of the following values. Note that, by default, these flags take effect when showing a window. To take effect when hiding a window, use AW_HIDE and a bitwiseor operator with the appropriate flags.

AW_SLIDE	= &h040000	Uses slide animation. By default, roll animation is used. This flag is ignored when used with AW_CENTER.
AW_ACTIVATE	= &h020000	Activates the window. Do not use this value with AW_HIDE.
AW_BLEND	= &h080000	Uses a fade effect. This flag can be used only if hwnd is a top-level window.
AW_HIDE	= &h010000	Hides the window. By default, the window is shown.
AW_CENTER	= &h10	Makes the window appear to collapse inward if AW_HIDE is used or expand outward if the AW_HIDE is not used. The various direction flags have no effect.
AW_HOR_POSITIVE	= 1	Animates the window from left to right. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
AW_HOR_NEGATIVE	= 2	Animates the window from right to left. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
AW_VER_POSITIVE	= 4	Animates the window from top to bottom. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
AW_VER_NEGATIVE	= 8	Animates the window from bottom to top. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.

Return Value:
If the function succeeds, the return value is true.
If the function fails, the return value is false.
The function will fail in the following situations:

- If the window uses the window region. Windows XP: This does not cause the function to fail.
- If the window is already visible and you are trying to show the window.
- If the window is already hidden and you are trying to hide the window.
- If there is no direction specified for the slide or roll animation.
- When trying to animate a child window with AW_BLEND.
- If the thread does not own the window. Note that, in this case, AnimateWindow fails but GetLastError returns ERROR_SUCCESS. To get extended error information, call the GetLastError function.

To show or hide a window without special effects, use Show.
When using slide or roll animation, you must specify the direction. It can be either AW_HOR_POSITIVE, AW_HOR_NEGATIVE, AW_VER_POSITIVE, or AW_VER_NEGATIVE.
You can combine AW_HOR_POSITIVE or AW_HOR_NEGATIVE with AW_VER_POSITIVE or AW_VER_NEGATIVE to animate a window diagonally.
The window procedures for the window and its child windows should handle any WM_PRINT or WM_PRINTCLIENT messages. Dialog boxes, controls, and common controls already handle WM_PRINTCLIENT. The default window procedure already handles WM_PRINT.
If a child window is displayed partially clipped, when it is animated it will have holes where it is clipped.
AnimateWindow supports RTL windows.
Avoid animating a window that has a drop shadow because it produces visually distracting, jerky animations.

209.6.39 WindowFeedbackSettingMBS(Feedback as Integer, byref value as boolean, IncludeAncestors as Boolean = false) as Boolean

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: Retrieves the feedback configuration for a window.
Notes: IncludeAncestors: Specifies that the parent window chain should be checked.

Returns true if the specified feedback setting is configured on the specified window. Otherwise, it returns false (and config won't be modified).

Requires Windows 8 [desktop apps only] or Windows Server 2012 [desktop apps only] .

Blog Entries

- MBS Xojo Plugins, version 17.5pr6

Constant Name	Value	Description
FEEDBACK_TOUCH_CONTACTVISUALIZATION	1	Feedback for a touch contact event.
FEEDBACK_PEN_BARRELVISUALIZATION	2	Feedback for a pen barrel-button event.
FEEDBACK_PEN_TAP	3	Feedback for a pen tap event.
FEEDBACK_PEN_DOUBLETAP	4	Feedback for a pen double-tap event.
FEEDBACK_PEN_PRESSANDHOLD	5	Feedback for a pen press-and-hold event.
FEEDBACK_PEN_RIGHTTAP	6	Feedback for a pen right-tap event.
FEEDBACK_TOUCH_TAP	7	Feedback for a touch tap event.
FEEDBACK_TOUCH_DOUBLETAP	8	Feedback for a touch double-tap event.
FEEDBACK_TOUCH_PRESSANDHOLD	9	Feedback for a touch press-and-hold event.
FEEDBACK_TOUCH_RIGHTTAP	10	Feedback for a touch right-tap event.
FEEDBACK_GESTURE_PRESSANDTAP	11	Feedback for a press-and-tap gesture.

209.6.40 WinFlashWindowMBS(Invert as boolean)

MBS Util Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop only.

Function: Flashes Window.
Example:

Window1.WinFlashWindowMBS true

Notes: Flashes the specified window one time. It does not change the active state of the window.

Invert: If this parameter is true, the window is flashed from one state to the other. If it is false, the window is returned to its original state (either active or inactive).

When an application is minimized and this parameter is true, the taskbar window button flashes active/inactive. If it is false, the taskbar window button flashes inactive, meaning that it does not change colors. It flashes, as if it were being redrawn, but it does not provide the visual invert clue to the user.

Flashing a window means changing the appearance of its caption bar as if the window were changing from inactive to active status, or vice versa. (An inactive caption bar changes to an active caption bar; an active caption bar changes to an inactive caption bar.)
Typically, a window is flashed to inform the user that the window requires attention but that it does not currently have the keyboard focus.
The FlashWindow function flashes the window only once; for repeated flashing, the application should create a system timer.

- MBS Xojo / Real Studio Plugins, version 16.2pr2

209.6.41 WinHideTooltipMBS as Integer

MBS Win Plugin, Plugin Version: 16.1, Platform: Windows, Targets: Desktop only.

Function: Hides all tooltips.

Notes: You can call that in window.deactivate event to hide tooltips which did not hide themselves.
Returns number of hidden tooltips.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.1pr4

209.6.42 Properties

209.6.43 CanBeVisibleWithoutLoginMBS as Boolean

MBS Util Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: Whether this window can be visible before login.
Example:

```
Window1.CanBeVisibleWithoutLoginMBS = true
```

Notes: This window can be made visible prior to user login. By default, in Mac OS X 10.5 and later no windows can be visible before a user logs into the system; this protects the user against certain types of malicious use of insecure applications. However, some software, such as input methods or other accessibility software, may need to deliberately make windows available prior to user login. Such software should add this window attribute to its windows. Available for all windows in Mac OS X 10.5 and later.
(Read and Write computed property)

209.6.44 CGColorSpaceMBS as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Get or set the colorspace profile for this window.
Example:

```
Var c as CGColorSpaceMBS = Window1.CGColorSpaceMBS

if c<>Nil then
MessageBox str(c.NumberOfComponents)
else
MessageBox "nil"
end if
```

Notes: Requires MacOS 10.6 or newer.

On Cocoa, the NSColorSpace is queried and the matching CGColorspace is returned. For setting a NSColorSpace is created for the given CGColorspace.
In Carbon applications, the CoreGraphics color space is passed directly.

(Read and Write computed property)

209.6.45 collapsedMBS as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns true if this window is collapsed. You can set it.
Example:

mainwindow.collapsedMBS=false 'show window

Notes: Collapseable windows are the normal document windows.
You can't collapse dialogs or floating windows well.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Added Cocoa support in plugin version 10.0.
(Read and Write computed property)

209.6.46 FullScreenAuxiliaryMBS as Boolean

MBS Util Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Whether this window is setup as being the auxiliary fullscreen window.
Notes: (Read and Write computed property)

209.6.47 FullScreenPrimaryMBS as Boolean

MBS Util Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Whether this window is setup as being the primary fullscreen window.
Notes: If true, the window receives the fullscreen widget in the title bar.
(Read and Write computed property)

209.6.48 HasborderMBS as boolean

MBS Util Plugin, Platform: Windows, Targets: Desktop only.

Function: Decides whether the window has a border.
Example:

mainwindow.HasborderMBS=false ' Remove border

Notes: This property has only an effect on Windows. The window needs to be redrawn before the change is visible (for example move it). This option removes the title bar. HasCaptionMBS removes even more.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.6.49 HasCaptionMBS as Boolean

MBS Util Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop only.

Function: Whether the window has a caption (a title bar)
Example:

// Window1 is a window of the example project.
Window1.HasCaptionMBS=false

Notes: This property has only an effect on Windows. The window needs to be redrawn before the change is visible (for example move it).

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.6.50 HasCloseBoxMBS as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Whether this window has a CloseBox.
Example:

mainwindow.HasCloseboxMBS=false 'remove closebox

Notes: You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.6.51 HasCollapseBoxMBS as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Whether this window has a Collapsebox.
Example:

mainwindow.HasCollapseBoxMBS=false 'remove Collapsebox

Notes: You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.6.52 HasMaximizeBoxMBS as boolean

MBS Util Plugin, Platform: Windows, Targets: Desktop only.

Function: Returns true if this window has a Maximize Button.
Example:

mainwindow.HasMaximizeBoxMBS=false 'remove Maximize button

Notes: This property has only an effect on Windows. The window needs to be redrawn before the change is visible (for example move it).

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.6.53 HasMinimizeBoxMBS as boolean

MBS Util Plugin, Platform: Windows, Targets: Desktop only.

Function: Returns true if this window has a Minimize Button.
Example:

mainwindow.HasMinimizeBoxMBS=false 'remove Minimize button

Notes: This property has only an effect on Windows. The window needs to be redrawn before the change is visible (for example move it).

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.6.54 HasNoShadowMBS as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Whether this window has no shadow.
Example:

mainwindow.HasNoShadowMBS=true 'remove shadow

Notes: Available for all windows on Mac OS X. This attribute is automatically given to windows of kOverlayWindowClass.

Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Added Cocoa support in plugin version 10.0.
(Read and Write computed property)

209.6.55 HasNoTitleBarMBS as Boolean

MBS Util Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use NSWindowMBS for Cocoa instead. **Function:** For Document, Floating, and Utility windows, this attribute allows you to hide the title bar of a window.
Example:

Window1.HasNoTitleBarMBS = true

// for Cocoa:
Window1.HasCloseBoxMBS = false
Window1.HasCollapseBoxMBS = false
Window1.IsResizableMBS = false
Window1.HasNoTitleBarMBS = true

Notes: For Mac OS X 10.4 or later.

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Added Cocoa support in Plugin version 10.4.
(Read and Write computed property)

209.6.56 HasSystemMenuMBS as Boolean

MBS Util Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop only.

Function: Whether the window has a system menu inside the title bar.
Example:

```
// Window1 is a window of the example project.
Window1.HasSystemMenuMBS=false
```

Notes: This property has only an effect on Windows. It will disable the system menu and also the minimize, maximize and close buttons. The window needs to be redrawn before the change is visible (for example move it).

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.6.57 HasToolbarButtonMBS as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Whether this window has a toolbar button.
Example:

```
mainwindow.HasToolbarButtonMBS=true 'shows Toolbar Button
```

Notes: You can read the state on Mac Classic, but you can only change it on Mac Carbon.
The Button is shown on next redraw of the window frame.

Use the CarbonWindowsEventsMBS class to receive events when the button is pressed.

Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.6.58 IgnoreClicksMBS as Boolean

MBS Util Plugin, Plugin Version: 3.2, Platform: macOS, Targets: Desktop only.

Function: Can be used to control whether mouse clicks are ignored for this window.
Example:

```
// Window1 is a window of the example project.
Window1.IgnoreClicksMBS=true
```

Notes: Whether this window never receives mouse events, even in areas that are opaque. Instead, clicks on the window will be passed through to windows beneath it. Available for all windows on Mac OS X 10.2 and later.

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Added Cocoa support in plugin version 10.0.
(Read and Write computed property)

209.6.59 IsIconicMBS as boolean

MBS Util Plugin, Platform: Windows, Targets: Desktop only.

Function: Returns true if this window is inside the taskbar.
Example:

```
MessageBox str(Window1.IsIconicMBS)
```

Notes: If you set IsIconic to true the window is minimized and if you set it to false the window size and position is restored.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.6.60 IsMetalWindowMBS as Boolean

MBS Util Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Whether this window uses the Metal appearance.
Example:

```
if Window1.Frame = window.FrameTypeMetal then
MessageBox "Window is metal. "+str(Window1.IsMetalWindowMBS)
else
MessageBox "Window is not metal. "+str(Window1.IsMetalWindowMBS)
end if
```

Notes: Available for document windows on Mac OS X 10.2 and later, and for floating windows on Mac OS X 10.3 and later. Drawers can also be metal, but dynamically adjust their appearance based on their parent window's appearance; it is not necessary to specify this attribute for a metal drawer.

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.6.61 IsResizableMBS as Boolean

MBS Util Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Whether this window is resizeable.
Example:

```
// Window1 is a window of the example project.
Window1.IsResizableMBS=false
```

Notes: You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

Use GrowBoxTransparentMBS on Composite Mac OS windows to enable the transparent grow box.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Works in Cocoa.
(Read and Write computed property)

209.6.62 IsZoomedMacMBS as boolean

MBS Util Plugin, Plugin Version: 3.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if the window is zoomed.
Example:

MessageBox str(Window1.IsZoomedMacMBS)

Notes: Requires Mac OS 8.5 or newer.
Seems not to work correctly on RB 5.5.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Added Cocoa support in plugin version 10.0.
(Read and Write computed property)

209.6.63 IsZoomedMBS as boolean

MBS Util Plugin, Platform: Windows, Targets: Desktop only.

Function: Returns true if this window has been maximized.
Example:

MessageBox str(Window1.IsZoomedMBS)

Notes: If you set IsZoomed to true the window is maximized and if you set it to false the window size and position is restored.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Works on Cocoa.
(Read and Write computed property)

209.6.64 ModifiedMBS as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: You can set or get the value of the modified state.
Example:

mainwindow.modifiedMBS=true

Notes: Requires Mac OS 8.5 or newer.
As long as you don't set modified to false the window keeps to tell you that it's modified. Not sure why, so just set modified to false early in creating the window.

Added Cocoa support in plugin version 10.0.
(Read and Write computed property)

209.6.65 ToolbarVisibleMBS as boolean

MBS Util Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop only.

Function: Whether the toolbar is shown in this window or not.
Notes: Value is false on any error.
Only working on MacOS.
(Read and Write computed property)

209.6.66 TransparencyMBS as single

MBS Util Plugin, Plugin Version: 5.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The transparency of the window on Mac OS X, Windows 2000 and Windows XP.
Notes: 1 for opaque, 0 for invisible.
Return 1 on any error. On Windows it returns always 1 as the current transparency value can't be queried.
You need to call MakeTransparent before to install transparency.
(added Windows support in version 4.4)
Linux supported added with 14.0, but works only with Linux desktop which support alpha channel.
(Read and Write computed property)

209.6.67 UnifiedTitleAndToolbarMBS as Boolean

MBS Util Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: Whether this window has an unified title and toolbar look.
Example:

Window1.UnifiedTitleAndToolbarMBS = true

Notes: This window draws its window title and toolbar using a unified appearance that has no separator between the two areas. A window may not have both UnifiedTitleAndToolbar and Metal appearance. If a window already has the metal attribute, attempting to set the Unified attribute will cause ChangeWindows

to return an error, and vice versa. This constant was not added to this header file until Mac OS X 10.5, but it is actually available at runtime on Mac OS X 10.4 and later for windows of kDocumentWindowClass. However, on Mac OS X 10.5 and later, kHIWindowBitUnifiedTitleAndToolbar no longer has any effect, since all windows with toolbars now have a unified look.
(Read and Write computed property)

209.6.68 WindowDisplayAffinityMBS as Integer

MBS Util Plugin, Plugin Version: 25.3, Platform: Windows, Targets: Desktop only.

Function: The window display affinity.
Example:

```
// Window1 is a window of the example project.
Window1.WindowDisplayAffinityMBS = &h11
```

Notes: Specifies where the content of the window can be displayed.
The display affinity setting that specifies where the content of the window can be displayed.

This parameter can be one of the following values:

Name	Value	Meaning
None	0	Imposes no restrictions on where the window can be displayed.
Monitor	1	The window content is displayed only on a monitor. Everywhere else, the window appears with no content.
ExcludeFromCapture	&h11	The window is displayed only on a monitor. Everywhere else, the window does not appear at all. One use for this affinity is for windows that show video recording controls, so that the controls are not included in the capture.

This property is designed to support the window content protection feature that is new to Windows 7. This feature enables applications to protect their own onscreen window content from being captured or copied through a specific set of public operating system features and APIs. However, it works only when the Desktop Window Manager(DWM) is composing the desktop.

It is important to note that unlike a security feature or an implementation of Digital Rights Management (DRM), there is no guarantee that using SetWindowDisplayAffinity, will strictly protect windowed content, for example where someone takes a photograph of the screen.

Starting in Windows 10 Version 2004, ExcludeFromCapture is a supported value. Setting the display affinity to ExcludeFromCapture on previous version of Windows will behave as if Monitor is applied.
(Read and Write computed property)

209.6.69 WindowProxyIconFileMBS as folderitem

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: That's the icon to the window which belongs to the file.
Example:

```
Var f as folderItem

f=FolderItem.ShowOpenFileDialog("special/any")
if f<>nil then
Window1.WindowProxyIconFileMBS=f
end if
```

Notes: Requires Mac OS 8.5 or newer.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Added Cocoa support in plugin version 10.0.
(Read and Write computed property)

209.6.70 WinMenuHandleMBS as Integer

MBS Util Plugin, Platform: Windows, Targets: Desktop only.

Function: A property to access the handle used for the menu of a Window.
Example:

```
// Window1 is a window of the example project.
Var menu as Integer // global

if menu=0 then
menu=Window1.WinMenuHandleMBS // read it on the first window
else
Window1.winmenuHandleMBS=menu // set it on the second window
end if
```

Notes: Used in the example "Menu in every Window" to have a menu bar in every window on Windows. But never forget to quit your app after all windows were closed.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

209.6.71 WinTopMostWindowMBS as boolean

MBS Win Plugin, Plugin Version: 9.6, Platform: Windows, Targets: Desktop only.

Function: Whether a window is staying on the top of the other windows.
Example:

Window1.WinTopMostWindowMBS=true

Notes: If true the window stays in front of other windows. Default is false for Xojo windows and true for overlays.
(Read and Write computed property)

Chapter 210

Windows

210.1 control DesktopWinPreviewControlMBS

210.1.1 control DesktopWinPreviewControlMBS

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop only.

Function: The preview control for Windows.
Notes: Used to show PDF documents on Windows using the built-in preview handler on Windows 10 and newer.
Can also be used to use other built-in preview handlers on Windows by setting classID.

Since the control is handled by Windows, the key and mouse events are not expected to work.

210.1.2 Methods

210.1.3 LoadData(data as MemoryBlock)

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop only.

Function: Loads the given data.
Notes: Lasterror is set.
If loading from data is not supported for preview, we use a temporary file instead.
See also:

- 210.1.4 LoadData(data as string) 24636

210.1.4 LoadData(data as string)

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop only.

Function: Loads the given data.
Notes: Lasterror is set.
If loading from data is not supported for preview, we use a temporary file instead.
See also:

- 210.1.3 LoadData(data as MemoryBlock) 24636

210.1.5 LoadFile(file as folderitem)

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop only.

Function: Loads the given file.
Notes: Lasterror is set.
If the preview handler does not support reading file, the plugin reads the file and passes as data.

If the file path is invalid, the preview will show a file not found error message.

210.1.6 Properties

210.1.7 classID as String

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop only.

Function: The class ID for the previewer to use.
Notes: If empty, uses PDF viewer.
Available preview classes in a typical Windows 10 installation:

Class ID	Description
{ 13D3C4B8-B179-4ebb-BF62-F704173E7448 }	Windows Contact Preview Handler
{ 1531d583-8375-4d3f-b5fb-d23bbd169f22 }	Windows TXT Previewer
{ 53BEDF0B-4E5B-4183-8DC9-B844344FA104 }	Microsoft Windows MAPI Preview Handler
{ 8a7cae0e-5951-49cb-bf20-ab3fa1e44b01 }	Windows Font previewer
{ 92dbad9f-5025-49b0-9078-2d78f935e341 }	Microsoft Windows Mail Mime Preview Handler
{ a42c2ccb-67d3-46fa-abe6-7d2f3488c7a3 }	Windows RTF Previewer
{ b9815375-5d7f-4ce2-9245-c9d4da436930 }	Microsoft Windows Mail Mime Preview Handler
{ BFD468D2-D0A0-4bdc-878C-E69C2F5B435D }	Microsoft Windows Mail Html Preview Handler
{ E64164EB-1AE0-4C50-BAEF-A413C2B3A4BC }	Microsoft 3MF Shell Thumbnail and Preview Handler
{ f8b8412b-dea3-4130-b36c-5e8be73106ac }	Microsoft Windows Mail Html Preview Handler
{ 3A84F9C2-6164-485C-A7D9-4B27F8AC009E }	Microsoft PDF Previewer
{ DC6EFB56-9CFA-464D-8880-44885D7DC193 }	Adobe PDF Preview Handler for Vista

Must be set early, like in the IDE using property inspector or Configure event.
(Read and Write property)

210.1.8 Lasterror as Integer

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop only.

Function: The last error code.
Notes: (Read and Write property)

210.1.9 LasterrorString as String

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop only.

Function: The error message for the error number in the lasterror property.
Notes: (Read only property)

210.1.10 Events

210.1.11 Closing

Plugin Version: 23.3, Platform: Windows, Targets: .

Function:

The close event.
In older Xojo versions, this event is named Close.

210.1.12 Configure

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event called while initializing, where you can apply properties just before plugin reads them.
Notes: e.g. set classID here in code.

210.1.13 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 23.3, Platform: Windows, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

210.1.14 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 23.3, Platform: Windows, Targets: .

Function: Called when a menuitem is chosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

210.1.15 FocusLost

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop, Console & Web.

Function:

The lost focus event.
In older Xojo versions, this event is named LostFocus.

210.1.16 FocusReceived

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop, Console & Web.

Function:

The got focus event.
In older Xojo versions, this event is named GotFocus.

210.1.17 MenuBarSelected

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop, Console & Web.

Function:

The enable menu items event.
In older Xojo versions, this event is named EnableMenuItems.

210.1.18 Opening

Plugin Version: 23.3, Platform: Windows, Targets: .

Function:

The open event.
In older Xojo versions, this event is named Open.

210.2 class MapiFileMBS

210.2.1 class MapiFileMBS

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class contain information about a file containing a message attachment stored as a temporary file.
Example:

```
Var file as new MapiFileMBS
Var t as TextOutputStream
Var f as FolderItem

// write a temp file
f=SpecialFolder.Desktop.Child("test.txt")
t=TextOutputStream.Create(f)
t.WriteLine "Test file content"
t.Close

// create file
file=new MapiFileMBS
file.Path=f
file.Filename="test file"
file.Position=-1

// next add it to message
```

Notes: Important:
Simple MAPI is not installed by Exchange Server 2003 or later. However, Simple MAPI is supported for use with Exchange 2003. To function properly, the underlying Exchange or Microsoft Outlook®MAPI subsystem must be properly installed on the client computer.

210.2.2 Properties

210.2.3 Filename as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The attachment filename seen by the recipient, which may differ from the filename in the PathName member if temporary files are being used.
Notes: If the FileName member is empty, the filename from PathName is used.
(Read and Write property)

210.2.4 Flags as Integer

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The flags.
Notes: Currently not used with the plugin.
(Read and Write property)

210.2.5 Path as FolderItem

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The path of the attached file.
Notes: When this property is set the PathName property is filled with the absolute path. If you query this property, you get the PathName property as a folderitem.
So this property was made for your convenience.
(Read and Write property)

210.2.6 PathName as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The fully qualified path of the attached file.
Notes: This path should include the disk drive letter and directory name.
(Read and Write property)

210.2.7 Position as Integer

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: An integer used to indicate where in the message text to render the attachment.
Notes: Attachments replace the character found at a certain position in the message text. That is, attachments replace the character in the MapiMessage NoteText property at offset nPosition (nPosition is zero based!). A value of -1 means the attachment position is not indicated; the client application will have to provide a way for the user to access the attachment.
(Read and Write property)

210.3 class MapiMessageMBS

210.3.1 class MapiMessageMBS

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a message.
Example:

```
Var m as new MapiMessageMBS
Var r as new MapiRecipientMBS
Var o as new MapiRecipientMBS

o.Address="SMTP:sender@example.com"
o.Name="Me"
o.Type=o.TypeOriginator

r.Address="SMTP:receiver@example.com"
r.Name="You"
r.Type=o.TypeTo

m.AddRecipient r
m.Originator=o
m.Subject="Test Email"
m.NoteText="Hello World"
m.Flags=0

Var SendFlags as integer = m.kSendFlagDialog + m.kSendFlagLogonDialog

title=str(m.SendMail(self, SendFlags, false))
```

Notes: This can use Outlook or Thunderbird on Windows to send email with or without GUI.
Using Messaging Application Programming Interface (MAPI)

Does not work with Micorosft Outlook Web App as we need a locally installed Outlook with a MAPI component. Since Outlook for Windows is a web app wrapped in a desktop app, it doesn't do MAPI.

210.3.2 Methods

210.3.3 AddFile(file as MapiFileMBS)

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a file to the message file list.
Notes: File must be not nil.
Adds the file to the internal Files array.

210.3.4 AddRecipient(recipient as MapiRecipientMBS)

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a recipient to the message.
Notes: Recipient must not be nil.
Adds the recipient to the internal Recipients array.

210.3.5 Files as MapiFileMBS()

MBS Win Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the array with the files.
Example:

```
Var m As New MapiMessageMBS // your message

Var files() As MapiFileMBS = m.Files
// inspect
```

210.3.6 IsAvailable as boolean

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether MAPI is available.
Notes: Checks whether the library was loaded and whether the MAPI Registry key exists, so this has been initialized.
(mail account may not exist)

Returns true if MAPI can be used.

210.3.7 IsUnicodeAvailable as boolean

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether MAPI is available with unicode.
Notes: Checks whether the library was loaded and whether the MAPI Registry key exists, so this has been initialized.
(mail account may not exist)

Returns true if MAPI can be used with unicode.

210.3.8 Recipients as MapiRecipientMBS()

MBS Win Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the array with the recipients.
Example:

```
Var m As New MapiMessageMBS // your message

Var Recipients() As MapiRecipientMBS = m.Recipients
// inspect
```

210.3.9 SendMail(parent as DesktopWindow, SendFlags as Integer, Threaded as Boolean) as integer

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Sends an email.
Notes: Parameters:

parent:
The parent window for the dialogs used. If not nil the dialogs used will be modal.

SendFlags: Send flags. Default in older plugin versions was kSendFlagDialog when DisplayDialog parameter is true and kSendFlagLogonDialog if DisplayLogonDialog parameter was true.

Error codes:

The MAPI SendMail function sends a standard message, with or without any user interaction. The profile must be configured so that MAPISendMail can open the default service providers without requiring user interaction.

const SUCCESS_SUCCESS = 0	No error.
const MAPI_USER_ABORT = 1	The user canceled one of the dialog boxes. No message was sent.
const MAPI_E_FAILURE = 2	One or more unspecified errors occurred. No message was sent.
const MAPI_E_LOGON_FAILURE = 3	There was no default logon, and the user failed to log on successfully when the logon dialog box was displayed. No message was sent.
const MAPI_E_DISK_FULL = 4	
const MAPI_E_INSUFFICIENT_MEMORY = 5	There was insufficient memory to proceed. No message was sent.
const MAPI_E_ACCESS_DENIED = 6	
const MAPI_E_TOO_MANY_SESSIONS = 8	
const MAPI_E_TOO_MANY_FILES = 9	There were too many file attachments. No message was sent.
const MAPI_E_TOO_MANY_RECIPIENTS = 10	There were too many recipients. No message was sent.
const MAPI_E_ATTACHMENT_NOT_FOUND = 11	The specified attachment was not found. No message was sent.
const MAPI_E_ATTACHMENT_OPEN_FAILURE = 12	The specified attachment could not be opened. No message was sent.
const MAPI_E_ATTACHMENT_WRITE_FAILURE = 13	
const MAPI_E_UNKNOWN_RECIPIENT = 14	
const MAPI_E_BAD_RECIPTYPE = 15	The type of a recipient was not TypeTO, TypeCC, or TypeBCC. No message was sent.
const MAPI_E_NO_MESSAGES = 16	
const MAPI_E_INVALID_MESSAGE = 17	
const MAPI_E_TEXT_TOO_LARGE = 18	The text in the message was too large. No message was sent.
const MAPI_E_INVALID_SESSION = 19	
const MAPI_E_TYPE_NOT_SUPPORTED = 20	
const MAPI_E_AMBIGUOUS_RECIPIENT = 21	A recipient matched more than one of the recipient descriptor structures and Dialog is false. No message was sent.
const MAPI_E_MESSAGE_IN_USE = 22	
const MAPI_E_NETWORK_FAILURE = 23	
const MAPI_E_INVALID_EDITFIELDS = 24	
const MAPI_E_INVALID_RECIPS = 25	One or more recipients were invalid or did not resolve to any address.
const MAPI_E_NOT_SUPPORTED = 26	

Client applications can provide a full or partial list of recipient names, subject text, file attachments, or message text. If any information is missing, MAPISendMail can prompt the user for it. If no information is missing, either the message can be sent as is or the user can be prompted to verify the information, changing values if necessary.

A successful return from MAPISendMail does not necessarily imply recipient validation. The message might not have been sent to all recipients. Depending on the transport provider, recipient validation can be a lengthy process.

A "" value for the Subject indicates that there is no text for the subject of the message. A "" value for the NoteText member indicates that there is no message text. Some client applications can truncate subject lines that are too long or contain carriage returns, line feeds, or form feeds.

Each paragraph should be terminated with a CR (0x0d), an LF (0x0a), or a CRLF pair (0x0d0a). MAPISendMail wraps lines as appropriate. If the text exceeds system limits, the function returns the MAPI_E_TEXT_TOO_LARGE value.

The MessageType property is used only by non-IPM applications. Applications that handle IPM messages can set it to "".

The number of attachments per message can be limited in some messaging systems. If the limit is exceeded, the MAPI_E_TOO_MANY_FILES value is returned. File attachments are copied to the message before MAPISendMail returns; therefore, later changes to the files do not affect the contents of the message. The files must be closed when they are copied. Do not attempt to display attachments outside the range of the message text.

Some messaging systems can limit the number of recipients per message. If the client application passes a non-nil value indicating a number of recipients exceeding the system limit, MAPISendMail returns the MAPI_E_TOO_MANY_RECIPIENTS value. If the recipient array is empty, the Dialog parameter must be true in the call to MAPISendMail.

Note that the recipients can include either an entry identifier, the recipient's name, an address, or a name and address pair. The following table shows how MAPISendMail handles the variety of information that can be specified:

Information	Action
entry identifier	No name resolution; the name and address are ignored.
name	Name resolved using the Simple MAPI resolution rules.
address	No name resolution; address is used for both message delivery and for displaying the recipient name.
name and address	No name resolution; name used only for displaying the recipient name.

Client applications that send messages to custom recipients can avoid name resolution. Such clients should set the Address member of the recipient to the custom address.

MAPISendMail does not require an originator-type recipient to send a message.

Important Simple MAPI is not installed by Exchange Server 2003 or later. However, Simple MAPI is supported for use with Exchange 2003. To function properly, the underlying Exchange or Microsoft Outlook®MAPI subsystem must be properly installed on the client computer.

210.3.10 SendMail(parent as window, SendFlags as Integer, Threaded as Boolean) as integer

MBS Win Plugin, Plugin Version: 18.5, Platform: Windows, Targets: Desktop only.

Function: Sends an email.
Notes: Parameters:

parent:
The parent window for the dialogs used. If not nil the dialogs used will be modal.

SendFlags: Send flags. Default in older plugin versions was kSendFlagDialog when DisplayDialog parameter is true and kSendFlagLogonDialog if DisplayLogonDialog parameter was true.

Error codes:

const SUCCESS_SUCCESS = 0	No error.
const MAPI_USER_ABORT = 1	The user canceled one of the dialog boxes. No message was sent.
const MAPI_E_FAILURE = 2	One or more unspecified errors occurred. No message was sent.

210.3.11 SendMail(SendFlags as Integer, Threaded as Boolean) as integer

MBS Win Plugin, Plugin Version: 18.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends an email.
Notes: This method is without parent window for dialogs, so you can use it in a console project.
See also:

- 210.3.9 SendMail(parent as DesktopWindow, SendFlags as Integer, Threaded as Boolean) as integer 24644
- 210.3.10 SendMail(parent as window, SendFlags as Integer, Threaded as Boolean) as integer 24646

210.3.12 Properties

210.3.13 ConversationID as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string identifying the conversation thread to which the message belongs.
Notes: Some messaging systems can ignore and not return this member.
(Read and Write property)

210.3.14 DateReceived as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string indicating the date when the message was received.
Notes: The format is YYYY/MM/DD HH:MM, using a 24-hour clock.
(Read and Write property)

210.3.15 Flags as Integer

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Bitmask of message status flags.
Notes: Can be a combination of kFlagsReceiptRequested, kFlagsSent and kFlagsUnread.
(Read and Write property)

210.3.16 MessageType as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string indicating a non-IPM type of message.
Notes: Client applications can select message types for their non-IPM messages. Clients that only support IPM messages can ignore the MessageType member when reading messages and set it to empty when sending messages.
(Read and Write property)

210.3.17 NoteText as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string containing the message text.
Notes: If this member is empty, there is no message text.
(Read and Write property)

210.3.18 Originator as MapiRecipientMBS

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The reference to the originator of this message.
Notes: (Read and Write property)

210.3.19 Subject as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The text string describing the message subject, typically limited to 256 characters or less.
Notes: If this member is empty, the user has not entered subject text.
(Read and Write property)

210.3.20 UseUnicode as Boolean

MBS Win Plugin, Plugin Version: 18.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to use Unicode API.
Notes: Microsoft offers both unicode and ANSI interfaces.
By default UseUnicode is true and you can set it to false to use ANSI interface if needed.
If no unicode interface is needed, we automatically use the ANSI interface.
(Read and Write property)

210.3.21 Constants

Message Flags

Constant	Value	Description
kFlagsReceiptRequested	2	A receipt notification is requested. Client applications set this flag when sending a message. Note: Most email applications ignore the receipt notifications.
kFlagsSent	4	The message has been sent.
kFlagsUnread	1	The message has not been read.

Send Flags

Constant	Value	Description
kSendFlagDialog	8	Display a send note UI A dialog box should be displayed to prompt the user for recipients and other sending options. When Dialog is false, at least one recipient must be specified.
kSendFlagLogonDialog	1	Display logon UI. A dialog box should be displayed to prompt the user to log on if required. When the DisplayLogonDialog is false, the client application does not display a logon dialog box and returns an error value if the user is not logged on. SendMail ignores this flag if the MessageID parameter is empty.
kSendFlagNewSession	2	Don't use shared session Create a new session.

210.4 class MapiRecipientMBS

210.4.1 class MapiRecipientMBS

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class contains information about a message sender or recipient.
Example:

```
Var o as new MapiRecipientMBS

o.Address="SMTP:sender@example.com"
o.Name="Me"
o.Type=o.TypeOriginator

// next add it to message
```

210.4.2 Properties

210.4.3 Address as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Optional the recipient or sender's address.
Example:

```
Var o as new MapiRecipientMBS
o.Address="SMTP:sender@example.com"
o.Name="Me"
o.Type=o.TypeOriginator
```

Notes: This address is provider-specific message delivery data. Generally, the messaging system provides such addresses for inbound messages. For outbound messages, the Address member can point to an address entered by the user for a recipient not in an address book (that is, a custom recipient). The format of an address pointed to by the Address member is [address type] [e-mail address] . Examples of valid addresses are FAX:206-555-1212 and SMTP:M@X.COM.
(Read and Write property)

210.4.4 Name as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the recipient.
Notes: (Read and Write property)

210.4.5 Type as Integer

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Contains a numeric value that indicates the type of recipient.
Example:

```
Var o as new MapiRecipientMBS
o.Address="SMTP:you@example.com"
o.Name="You"
o.Type=o.TypeTo
```

Notes: Use one of the Type constants.
(Read and Write property)

210.4.6 Constants

Constants

Constant	Value	Description
TypeBCC	3	One of the constants for the type property. Indicates a recipient of a blind copy.
TypeCC	2	One of the constants for the type property. Indicates a recipient of a message copy.
TypeOriginator	0	One of the constants for the type property. Indicates the original sender of the message.
TypeTo	1	One of the constants for the type property. Indicates a primary message recipient.

210.5 class TaskDialogButtonMBS

210.5.1 class TaskDialogButtonMBS

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a button.
Xojo Developer Magazine

- 24.3, pages 83 to 84: Windows Dialogs, Advanced Dialogs in Windows by Stefanie Juchmes-Simonis

210.5.2 Properties

210.5.3 Default as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this is default button.
Notes: Only one button can be default.
(Read and Write property)

210.5.4 Enabled as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to enable this button.
Notes: Default: true.

This is a live property. Setting it while dialog is open changes the button state.
(Read and Write property)

210.5.5 ID as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The unique ID for the button.
Notes: The IDs should be unique for all buttons.
(Read and Write property)

210.5.6 Text as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The caption for the button.
Notes: (Read and Write property)

210.5.7 Visible as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this button is visible.
Notes: Default true.
(Read and Write property)

210.6 class TaskDialogMBS

210.6.1 class TaskDialogMBS

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a dialog in Windows.
Example:

```
// show a Windows task dialog with OK and Cancel buttons
Var td As New TaskDialogMBS

td.WindowTitle = "My Application"
td.MainInstruction = "Do you want to save the changes?"
td.Content = "Your changes will be lost if you don't save them."
td.CommonButtons = BitwiseOr(td.kCommonButtonOK, td.kCommonButtonCancel)
td.VerificationText = "Don't ask again"

If td.ShowDialog Then
If td.SelectedButton = td.kIDOK Then
If td.VerificationChecked Then
MessageBox "OK clicked and don't ask again."
Else
MessageBox "OK clicked."
End If
Else
MessageBox "Cancelled"
End If
End If
```

Notes: This class function creates, displays, and operates a task dialog. The task dialog contains application-defined icons, messages, title, verification check box, command links, push buttons, and radio buttons.

Requires Windows Vista or newer.

210.6.2 Methods

210.6.3 AppendButton(button as TaskDialogButtonMBS)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a button.
Example:

```
Var td as TaskDialogMBS

Var b as new TaskDialogButtonMBS
b.Text = "Hello"
b.ID = 123

td.AppendButton b
```

210.6.4 AppendRadioButton(button as TaskDialogButtonMBS)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a radio button.
Example:

```
Var td as TaskDialogMBS

Var b as new TaskDialogButtonMBS
b.Text = "Hello"
b.ID = 123

td.AppendRadioButton b
```

210.6.5 CloseDialog

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Closes the dialog.

210.6.6 FindButtonByID(ID as Integer) as TaskDialogButtonMBS

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Finds button by ID.
Notes: This searches buttons and radiobuttons for given ID.
It will not find common buttons.
Returns button if found or nil if not found.

210.6.7 ShowDialog as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Shows the dialog.
Example:

```
Var td as new TaskDialogMBS

td.CommonButtons = BitwiseOr(td.kCommonButtonOK, td.kCommonButtonCancel)
td.Content = "Hello World"

if td.ShowDialog then

if td.SelectedButton = td.kIDOK then
MessageBox "OK"
else
MessageBox "Cancel"
end if

else
MessageBox "Failed"
end if
```

Notes: Returns true if everything worked right.
Returns false if creation of dialog failed.

Requires Windows Vista or newer.

210.6.8 Properties

210.6.9 AllowDialogCancellation as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to allow cancel.
Notes: Indicates that the dialog should be able to be closed using Alt-F4, Escape, and the title bar's close button even if no cancel button is specified in either the CommonButtons or Buttons members.
(Read and Write property)

210.6.10 CanBeMinimized as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that the task dialog can be minimized.
Notes: (Read and Write property)

210.6.11 CollapsedControlText as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string to be used to label the button for expanding the expandable information.
Notes: This member is ignored when the ExpandedInformation member is empty. If this member is empty and the CollapsedControlText is specified, then the CollapsedControlText value will be used for this member as well.
(Read and Write property)

210.6.12 CommonButtons as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the push buttons displayed in the task dialog.
Example:

```
Var td as new TaskDialogMBS

td.CommonButtons = BitwiseOr(td.kCommonButtonOK, td.kCommonButtonCancel)
td.Content = "Hello World"

if td.ShowDialog then

if td.SelectedButton = td.kIDOK then
```

```
MessageBox "OK"
else
MessageBox "Cancel"
end if

else
MessageBox "Failed"
end if
```

Notes: If no common buttons are specified and no custom buttons are specified through buttons array, the task dialog will contain the OK button by default. This parameter may be a combination of flags from the following group:

kCommonButtonOK	The task dialog contains the push button: OK.
kCommonButtonYes	The task dialog contains the push button: Yes.
kCommonButtonNo	The task dialog contains the push button: No.
kCommonButtonCancel	The task dialog contains the push button: Cancel. If this button is specified, the task dialog will respond to typical cancel actions (Alt-F4 and Escape).
kCommonButtonRetry	The task dialog contains the push button: Retry.
kCommonButtonClose	The task dialog contains the push button: Close.

(Read and Write property)

210.6.13 Content as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string to be used for the dialog's primary content.
Example:

```
Var td as new TaskDialogMBS

td.CommonButtons = BitwiseOr(td.kCommonButtonOK, td.kCommonButtonCancel)
td.Content = "Hello World"

if td.ShowDialog then

if td.SelectedButton = td.kIDOK then
MessageBox "OK"
else
MessageBox "Cancel"
end if

else
```

```
MessageBox "Failed"
end if
```

Notes: If the EnableHyperlinks flag is true, then this string may contain hyperlinks in the form: <A HREF="executablestring">Hyperlink Text</A>.
WARNING: Enabling hyperlinks when using content from an unsafe source may cause security vulnerabilities.
(Read and Write property)

210.6.14 DefaultButton as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The default button for the task dialog.
Notes: This may be any of the values specified in ID of one of the buttons, or one of the IDs corresponding to the buttons specified in the CommonButtons property.

kIDCancel	Make the Cancel button the default.
kIDNo	Make the No button the default.
kIDOk	Make the OK button the default.
kIDRetry	Make the Retry button the default.
kIDYes	Make the Yes button the default.
kIDClose	Make the Close button the default.

You can also mark buttons default with their default flag.
(Read and Write property)

210.6.15 DefaultRadioButton as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The button ID of the radio button that is selected by default.
Notes: If this value does not correspond to a button ID, the first button in the array is selected by default.
You can also mark buttons default with their default flag.
(Read and Write property)

210.6.16 DialogHandle as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle of the dialog.
Notes: This is only valid (and non zero) while dialog is visible.
(Read only property)

210.6.17 EnableHyperlinks as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to enable hyperlinks.
Notes: Enables hyperlink processing for the strings specified in the Content, ExpandedInformation and Footer members. When enabled, these members may point to strings that contain hyperlinks in the following form:

<A HREF="executablestring">Hyperlink Text</A>

Warning: Enabling hyperlinks when using content from an unsafe source may cause security vulnerabilities.

Note: Task Dialogs will not actually execute any hyperlinks. Hyperlink execution must be handled in the HyperlinkClicked event.
(Read and Write property)

210.6.18 ExpandedByDefault as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that the string specified by the ExpandedInformation member is displayed when the dialog is initially displayed.
Notes: This flag is ignored if the ExpandedInformation member is empty.
(Read and Write property)

210.6.19 ExpandedControlText as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string to be used to label the button for collapsing the expandable information.
Notes: This member is ignored when the ExpandedInformation member is empty. If this member is empty and the CollapsedControlText is specified, then the CollapsedControlText value will be used for this member as well.
(Read and Write property)

210.6.20 ExpandedInformation as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string to be used for displaying additional information.
Notes: The additional information is displayed either immediately below the content or below the footer text depending on whether the ExpandFooterArea flag is true. If the EnableHyperlinks flag is true, then this string may contain hyperlinks in the form: <A HREF="executablestring">Hyperlink Text</A>.
WARNING: Enabling hyperlinks when using content from an unsafe source may cause security vulnerabilities.
(Read and Write property)

210.6.21 ExpandFooterArea as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether expand footer area is displayed at the bottom.
Notes: Indicates that the string specified by the ExpandedInformation member is displayed at the bottom of the dialog's footer area instead of immediately after the dialog's content. This flag is ignored if the ExpandedInformation member is empty.
(Read and Write property)

210.6.22 Flags as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The flags.
Notes: You should not need to set flags as we have properties for all relevant flags.
(Read and Write property)

210.6.23 Footer as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string to be used in the footer area of the task dialog.
Notes: If EnableHyperlinks is true, this can show clickable links.
(Read and Write property)

210.6.24 FooterIconPicture as Picture

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A picture to be used as Icon that is to be displayed in the footer of the task dialog.
Notes: The picture must have a valid mask.
(Read and Write property)

210.6.25 Icon as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The icon to be displayed in the task dialog.
Notes: Can be one of the kIcon* constants.
Or you set IconPicture property.
(Read and Write property)

210.6.26 IconPicture as Picture

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The icon to be displayed in the task dialog.
Notes: The picture must have a valid mask.
(Read and Write property)

210.6.27 MainInstruction as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string to be used for the main instruction.
Notes: (Read and Write property)

210.6.28 NoDefaultRadioButton as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that no default item will be selected.
Notes: (Read and Write property)

210.6.29 parent as Variant

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop only.

Function: Parent window.
Notes: Can reference a Window or DesktopWindow object.
(Read and Write property)

210.6.30 parentHandle as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Parent window handle.
Notes: (Read and Write property)

210.6.31 PositionRelativeToWindow as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that the task dialog is positioned (centered) relative to the window specified by parent.
Notes: If the flag is not supplied (or no parent member is specified), the task dialog is positioned (centered) relative to the monitor.
(Read and Write property)

210.6.32 ProgressbarMax as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The maximum of progress bar.
Notes: Default is 100.
This is a live property. Setting it while dialog is open will change the control.
(Read and Write property)

210.6.33 ProgressbarMin as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The minimum value of the progress bar.
Notes: This is a live property. Setting it while dialog is open will change the control.
(Read and Write property)

210.6.34 ProgressbarState as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The state of the progress bar.
Notes: Default kProgressbarNone.
Can be set to other states to turn on progressbar.
(Read and Write property)

210.6.35 ProgressbarValue as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current value of the progress bar.
Notes: This is a live property. Setting it while dialog is open will change the control.
(Read and Write property)

210.6.36 RightToLeftLayout as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that text is displayed reading right to left.
Notes: (Read and Write property)

210.6.37 SelectedButton as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ID of the clicked button.
Example:

```
Var td as new TaskDialogMBS

td.CommonButtons = BitwiseOr(td.kCommonButtonOK, td.kCommonButtonCancel)
td.Content = "Hello World"

if td.ShowDialog then

if td.SelectedButton = td.kIDOK then
MessageBox "OK"
else
MessageBox "Cancel"
end if
```

```
else
MessageBox "Failed"
end if
```

Notes: (Read and Write property)

210.6.38 SelectedRadioButton as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ID of the selected radio button.
Notes: (Read and Write property)

210.6.39 Showing as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether dialog is currently showing.
Notes: (Read and Write property)

210.6.40 TimedOut as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether we got a timeout.
Notes: (Read only property)

210.6.41 timeoutMS as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The timeout for the dialog.
Notes: In Milliseconds. The dialog closes after given time.
(Read and Write property)

210.6.42 TitleIcon as Picture

MBS Win Plugin, Plugin Version: 26.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The icon to add to the window title bar.
Notes: (Read and Write property)

210.6.43 VerificationChecked as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The state of the verification checkbox.
Example:

```
Var td as new TaskDialogMBS

td.CommonButtons = td.kCommonButtonOK
td.Content = "Hello World"

'td.VerificationChecked = true
td.VerificationText = "Don't show again"

call td.ShowDialog

if td.VerificationChecked then
MessageBox "and we will not show again"
end if
```

Notes: Before: Indicates whether the verification checkbox in the dialog is checked when the dialog is initially displayed.
After: True if the verification checkbox was checked when the dialog was dismissed.

This is a live property. Changing it while the dialog is open will change the checkbox.
(Read and Write property)

210.6.44 VerificationEnabled as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The enable state of the verification checkbox.
Notes: Can be true to enable the checkbox or false to disable.
(Read and Write property)

210.6.45 VerificationText as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string to be used to label the verification checkbox.
Example:

```
Var td as new TaskDialogMBS

td.CommonButtons = td.kCommonButtonOK
td.Content = "Hello World"

'td.VerificationChecked = true
td.VerificationText = "Don't show again"

call td.ShowDialog

if td.VerificationChecked then
MessageBox "and we will not show again"
end if
```

Notes: If this parameter is empty, the verification checkbox is not displayed in the task dialog. If the VerificationEnabled is false, the checkbox is not enabled.
(Read and Write property)

210.6.46 Width as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width of the task dialog's client area, in dialog units.
Notes: If 0, the task dialog manager will calculate the ideal width.
(Read and Write property)

210.6.47 WindowTitle as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string to be used for the task dialog title.
Notes: (Read and Write property)

210.6.48 Yield as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to yield time.
Notes: Whether the plugin should yield time to other Xojo threads while dialog is open.

(Read and Write property)

210.6.49 Button(index as Integer) as TaskDialogButtonMBS

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Array of the custom buttons that are to be displayed in the task dialog.
Notes: You can create TaskDialogButtonMBS objects and assign them to indexes in the array.
(Read and Write computed property)

210.6.50 RadioButton(index as Integer) as TaskDialogButtonMBS

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Array of the custom radio buttons that are to be displayed in the task dialog.
Notes: You can create TaskDialogButtonMBS objects and assign them to indexes in the array.
(Read and Write computed property)

210.6.51 Events

210.6.52 ButtonClicked(ID as Integer) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that a button has been selected.
Notes: The command ID of the button is specified by ID.
To prevent the task dialog from closing, the application must return true, otherwise the task dialog is closed and the button ID is returned via the original application call.

210.6.53 Close

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that the Task Dialog has been destroyed.

210.6.54 Constructed

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that the Task Dialog has been created but has not been displayed yet.
Notes: You can adjust here if you need.

210.6.55 ExpandButtonClicked(Expanded as Boolean)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that the expand button has been selected.

210.6.56 Help

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that the F1 key has been pressed while the Task Dialog has focus.

210.6.57 HyperlinkClicked(link as string)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that a hyperlink has been selected.

210.6.58 Navigated

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that navigation has occurred.

210.6.59 Open

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that the Task Dialog has been created.

210.6.60 RadioButtonClicked(ID as Integer) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that a radio button has been selected.
Notes: The command ID of the radio button is specified by ID.

210.6.61 Timer(Time as Integer)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that the Task Dialog timer has fired.
Notes: The total elapsed time is specified by Time. You can update the progress bar by setting ProgressbarValue.

This is called regularly so you can do background work.
(or check time and dismiss dialog automatically)

210.6.62 VerificationClicked(Checked as Boolean)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that the Task Dialog verification check box has been selected.

210.6.63 Constants

Common Buttons

Constant	Value	Description
kCommonButtonCancel	8	The task dialog contains the push button: Cancel. If this button is specified, the task dialog will respond to typical cancel actions (Alt-F4 and Escape).
kCommonButtonClose	32	The task dialog contains the push button: Close.
kCommonButtonNo	4	The task dialog contains the push button: No.
kCommonButtonOK	1	The task dialog contains the push button: OK.
kCommonButtonRetry	16	The task dialog contains the push button: Retry.
kCommonButtonYes	2	The task dialog contains the push button: Yes.

Icon Constants

Constant	Value	Description
kIconApplication	5	An application icon appears in the task dialog.
kIconError	2	A stop-sign icon appears in the task dialog.
kIconInformation	3	An icon consisting of a lowercase letter i in a circle appears in the task dialog.
kIconNone	0	No icon.
kIconShield	4	A shield icon appears in the task dialog.
kIconWarning	1	An exclamation-point icon appears in the task dialog.

Standard Button IDs

Constant	Value	Description
kIDAbort	3	Abort button
kIDCancel	2	Cancel button
kIDIgnore	5	Ignore button
kIDNo	7	No button
kIDOK	1	OK Button
kIDRetry	4	Retry Button
kIDYes	6	Yes Button

Progressbar State

Constant	Value	Description
kProgressbarError	3	Error state.
kProgressbarMarquee	8	Marquee state
kProgressbarNone	0	No progress bar.
kProgressbarNormal	1	Normal progressbar
kProgressbarPause	2	Paused progress bar

210.7 class TimerMBS

210.7.1 class TimerMBS

MBS Win Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a timer.
Example:

```
// run a timer every 10 milliseconds
// MyTimer is a subclass of TimerMBS with the Action event implemented.
// Ticker is a property of the window: Ticker As MyTimer
Ticker = New MyTimer(10, False) // not threaded, so Action runs on the main thread

// later stop it
// Ticker.Enabled = False

// in MyTimer:
Sub Action() Handles Action
Static count As Integer
count = count + 1
If count Mod 100 = 0 Then System.DebugLog count.ToString + " ticks"
End Sub
```

Notes: This timer can work with smaller periods than the normal Xojo timers on Windows.
Works on Mac OS X and Linux, too.

Please create TimerMBS only on the main thread on Windows.

210.7.2 Methods

210.7.3 Constructor(Period as Integer, Threaded as boolean = true)

MBS Win Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: Please pass a period between 1 and 999 Milliseconds.

The timer will try to be as exact as possible, but if main thread is busy, action events are delayed.

Threaded decides on Windows whether you like the high performance version with a thread in background or just a regular timer.

210.7.4 Destructor

MBS Win Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

210.7.5 Properties

210.7.6 Enabled as Boolean

MBS Win Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether timer is enabled.
Notes: Default is true, but you can set to false to disable the timer for some time.
(Read and Write property)

210.7.7 Period as Integer

MBS Win Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The period used.
Notes: In milliseconds.
(Read only property)

210.7.8 Threaded as Boolean

MBS Win Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether this timer uses a thread.
Notes: Only true on Windows if you requested a thread.
(Read only property)

210.7.9 Yield as Boolean

MBS Win Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether we should yield to keep other processes running.
Example:

```
// start timer to yield in order to keep threads running when you use PopupMenus
// in app.open:
#if TargetWindows
Static timer As TimerMBS

timer = New TimerMBS(50, False)
timer.Yield = True
#endif
```

Notes: Setting yield to true tells the plugin to yield time to other threads and timers in the Xojo application. By yielding with a non threaded TimerMBS, you can keep menus activate on Windows.
(Read and Write property)

210.7.10 Events

210.7.11 Action

MBS Win Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The action event.

210.8 Globals

210.8.1 GetWindowsErrorMessageMBS(ErrorCode as Integer) as String

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Formats a windows error message for the given error code.
Example:

EditField1.text = GetWindowsErrorMessageMBS(-2147352567)

Notes: Returns empty string for unknown error codes.
Blog Entries

- MBS Real Studio Plugins, version 12.1pr6

210.8.2 InitMessageFilterMBS

MBS Win Plugin, Plugin Version: 18.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Initializes COM message filter.
Notes: If a COM message can't be handled right away, COM may show a standard dialog to retry, switch task or cancel, which may bring your app in an endless dialog series. MBS Plugin implements a message filter which delays messages till the current processing is done and avoids the dialog. So long running options can perform well.

210.8.3 WindowsExecuteMBS(ApplicationName as string, CommandLine as string, CurrentDirectory as string, byref PID as integer, Flags as integer = 0, ShowWindow as Integer = -1) as integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new process and its primary thread. The new process runs in the security context of the calling process.
Example:

```
Var error, pid as Integer

pid = 0

error = WindowsExecuteMBS("", "explorer.exe", "", pid)
if error = 0 then
MessageBox "Launched explorer with process id: "+str(pid)
else
MessageBox "Error: "+str(error)
end if

pid = 0

error = WindowsExecuteMBS("", "notepad.exe ""C:\boot.ini""", "", pid)
if error = 0 then
MessageBox "Launched Notepad with process id: "+str(pid)
else
MessageBox "Error: "+str(error)
end if
```

Notes: ApplicationName:
The name of the module to be executed. This module can be a Windows-based application. It can be some other type of module (for example, MS-DOS or OS/2) if the appropriate subsystem is available on the local computer.

The string can specify the full path and file name of the module to execute or it can specify a partial name. In the case of a partial name, the function uses the current drive and current directory to complete the specification. The function will not use the search path. This parameter must include the file name extension; no default extension is assumed.

The ApplicationName parameter can be empty. In that case, the module name must be the first white space–delimited token in the CommandLine string. If you are using a long file name that contains a space, use quoted strings to indicate where the file name ends and the arguments begin; otherwise, the file name is ambiguous. For example, consider the string "c:\program files\sub dir\program name". This string can be interpreted in a number of ways. The system tries to interpret the possibilities in the following order:

- c:\program.exe files\sub dir\program name
- c:\program files\sub.exe dir\program name
- c:\program files\sub dir\program.exe name
- c:\program files\sub dir\program name.exe

If the executable module is a 16-bit application, ApplicationName should be empty, and the string pointed to by CommandLine should specify the executable module as well as its arguments.

To run a batch file, you must start the command interpreter; set ApplicationName to cmd.exe and set CommandLine to the following arguments: /c plus the name of the batch file.

CommandLine:
The command line to be executed. The maximum length of this string is 32,767 characters.. If ApplicationName is empty, the module name portion of CommandLine is limited to MAX_PATH (256) characters.

The CommandLine parameter can be empty. In that case, the function uses the string pointed to by ApplicationName as the command line.

If both ApplicationName and CommandLine are non-empty, the ApplicationName string specifies the module to execute, and the CommandLine string specifies the command line. The new process can use GetCommandLine to retrieve the entire command line. Console processes written in C can use the argc and argv arguments to parse the command line. Because argv [0] is the module name, C programmers generally repeat the module name as the first token in the command line.

If ApplicationName is empty, the first white space–delimited token of the command line specifies the module name. If you are using a long file name that contains a space, use quoted strings to indicate where the file name ends and the arguments begin (see the explanation for the ApplicationName parameter). If the file name does not contain an extension, .exe is appended. Therefore, if the file name extension is .com, this parameter must include the .com extension. If the file name ends in a period (.) with no extension, or if the file name contains a path, .exe is not appended. If the file name does not contain a directory path, the system searches for the executable file in the following sequence:

- The directory from which the application loaded.
- The current directory for the parent process.
- The 32-bit Windows system directory. Use the GetSystemDirectory function to get the path of this directory.
- The 16-bit Windows system directory. There is no function that obtains the path of this directory, but it is searched. The name of this directory is System.
- The Windows directory. Use the GetWindowsDirectory function to get the path of this directory.
- The directories that are listed in the PATH environment variable. Note that this function does not search the per-application path specified by the App Paths registry key. To include this per-application path in the search sequence, use the ShellExecute function.
- The system adds a terminating null character to the command-line string to separate the file name from the arguments. This divides the original string into two strings for internal processing.

CurrentDirectory:
The full path to the current directory for the process. The string can also specify a UNC path.

If this parameter is empty, the new process will have the same current drive and directory as the calling process. (This feature is provided primarily for shells that need to start an application and specify its initial drive and working directory.)

pid:
The variable to store the process ID of the new process.

Returns 0 for success or a windows error code for any error.

Note that the function returns before the process has finished initialization. If a required DLL cannot be located or fails to initialize, the process is terminated. To get the termination status of a process, call GetExitCodeProcess.

Possible Flags:

ShowWindow can be values for ShowWindow function to define how first window of new application is shown. Available values:

210.8.4 WindowsRunAsMBS(Username as string, Domain as string, Password as string, LoginFlags as Integer, ApplicationName as string, CommandLine as string, CurrentDirectory as string, byref PID as Integer, Flags as Integer = -1) as Integer

MBS Win Plugin, Plugin Version: 13.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs an application with a different user login.
Notes: Please see Microsoft website for details:
http://msdn.microsoft.com/en-us/library/windows/desktop/ms682431(v=vs.85).aspx

The plugin passes parameters. If Flags is -1, we use CREATE_DEFAULT_ERROR_MODE Or CREATE_NEW_CONSOLE Or CREATE_NEW_PROCESS_GROUP.
The StartupInfo handles are closed and the PID is returned in the PID parameter.
Returns the Windows error code on failure. Else we return zero for success. On Mac and Linux the result is always -1.

210.8.5 WindowsShellExecuteAsAdminMBS(ParentWindowHandle as integer, File as string, Parameters as string = """, Directory as string = """, ShowCmd as integer = 5) as integer

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs given file as admin.
Example:

```
// run me as admin
Var r As Integer = WindowsShellExecuteAsAdminMBS(0, app.ExecutableFile.NativePath, "", "", 3)

If r <>0 Then
MessageBox "error: "+Str(r)
End If
```

Notes: See also WindowsShellExecuteMBS function.
Returns Windows error code, zero on success.

ShowCmd values are shown in documentation WindowsExecuteMBS function.

210.8.6 WinGetSysColorMBS(Index as Integer) as Color

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the current color of the specified display element.
Example:

```
// get the Windows highlight color, e.g. to draw selections in a canvas
Const COLOR_HIGHLIGHT = 13
Var c As Color = WinGetSysColorMBS(COLOR_HIGHLIGHT)
MessageBox "Highlight color: " + c.ToString
```

Notes: Display elements are the parts of a window and the display that appear on the system display screen.

Index: The display element whose color is to be retrieved. This parameter can be one of the following values.

The function returns the red, green, blue (RGB) color value of the given element.

210.8.7 WinOpenFolderAndSelectItemsMBS(folder as folderitem, files() as folderItem, ShowOnDesktop as Boolean = false, EditName as Boolean = false) as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Opens a Windows Explorer window with specified items in a particular folder selected.
Example:

```
Var file as FolderItem = SpecialFolder.Desktop.Child("test.rtf")
Var folder as FolderItem = file.Parent

Var r as Integer = WinOpenFolderAndSelectItemsMBS(folder, array(file))

if r = 0 then
MessageBox "OK"
else
MessageBox "Error: "+str(r)
end if
```

Notes: Please pass a folder to open. Pass the files you want to select in that folder.
Returns Windows error code. Zero for success.

Under Windows XP the flag parameters are ignored. They work in Windows Vista and newer:

Editname: Pass true to select an item and put its name in edit mode. This flag can only be used when a single item is being selected. For multiple item selections, it is ignored.

ShowOnDesktop: Pass true to select the item or items on the desktop rather than in a Windows Explorer window. Note that if the desktop is obscured behind open windows, it will not be made visible.

For Mac, please use NSWorkspaceMBS.selectfile function.

210.8.8 WinSetSysColorMBS(Index as Integer, value as Color) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets the colors for the specified display elements.
Notes: Display elements are the various parts of a window and the display that appear on the system display screen.
If the function succeeds, the return value is true.
For indexes, please check WinGetSysColorMBS.

210.8.9 WindowsShellExecuteMBS(ParentWindowHandle as Integer, Operation as string, File as string, Parameters as string = """, Directory as string = """, ShowCmd as Integer = 5) as Integer

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Performs an operation on a specified file.
Example:

```
Var e as Integer
Var f as FolderItem

// show documents folder

f = SpecialFolder.Documents
e = WindowsShellExecuteMBS(0, "explore", f.NativePath, "", "", 10)

// Launch Notepad application

e = WindowsShellExecuteMBS(0, "", "notepad.exe", "", "", 10)

// launch file, folder or application

f = SpecialFolder.Desktop.Child("Auto1.JPG")
e = WindowsShellExecuteMBS(0, "", f.NativePath, "", "", 10)
```

Notes: Use ConsoleExecuteMBS on Mac OS X and Linux.

ParentWindowHandle:
A handle to the owner window used for displaying a UI or error messages. This value can be 0 if the operation is not associated with a window. You can pass window.handle from a Xojo window.

Operation:
A string, referred to in this case as a verb, that specifies the action to be performed. The set of available verbs depends on the particular file or folder. Generally, the actions available from an object's shortcut menu are available verbs. The following verbs are commonly used:

File:

A string that specifies the file or object on which to execute the specified verb. To specify a Shell namespace object, pass the fully qualified parse name. Note that not all verbs are supported on all objects. For example, not all document types support the "print" verb. If a relative path is used for the Directory parameter do not use a relative path for File.

Parameters:
If File specifies an executable file, this parameter is a string that specifies the parameters to be passed to the application. The format of this string is determined by the verb that is to be invoked. If File specifies a document file, Parameters should be "".

Directory:
A string that specifies the default (working) directory for the action. If this value is NULL, the current working directory is used. If a relative path is provided at File, do not use a relative path for Directory.

ShowCmd:
The flags that specify how an application is to be displayed when it is opened. If File specifies a document file, the flag is simply passed to the associated application. It is up to the application to decide how to handle it.

Return Value:
If the function succeeds, it returns a value greater than 32. If the function fails, it returns an error value that indicates the cause of the failure. The return value is cast as an HINSTANCE for backward compatibility with 16-bit Windows applications.

This method allows you to execute any commands in a folder's shortcut menu or stored in the registry.
To open a folder, use either of the following calls:

WindowsShellExecuteMBS(handle, "", <fully_qualified_path_to_folder>, "", "", SW_SHOWNORMAL);
or
WindowsShellExecuteMBS(handle, "open", <fully_qualified_path_to_folder>, "", "", SW_SHOWNORMAL);

To explore a folder, use the following call:
WindowsShellExecuteMBS(handle, "explore", <fully_qualified_path_to_folder>, "", "", SW_SHOWNORMAL);
To launch the Shell's Find utility for a directory, use the following call.

WindowsShellExecuteMBS(handle, "find", <fully_qualified_path_to_folder>, "", "", 0);

If Operation is empty, the function opens the file specified by File. If Operation is "open" or "explore", the function attempts to open or explore the folder.

Note The Launch folder windows in a separate process setting in Folder Options affects ShellExecute. If that option is disabled (the default setting), ShellExecute uses an open Explorer window rather than launch a new one. If no Explorer window is open, ShellExecute launches a new one.

See also ConsoleExecuteMBS, WindowsShellExecuteAsAdminMBS, WindowsProcessMBS (Windows only), NSTask (Mac only) and ShellMBS (cross platform).

210.8.10 DriveToUNCPathMBS(Driver as string) as string

MBS Win Plugin, Plugin Version: 13.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the system tables for which UNC network path belongs to a mapped drive.
Example:

```
MessageBox DriveToUNCPathMBS("W:")
```

Notes: Please pass the local drive name, which is drive letter and double colon.
Returns empty string on any error.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr5

210.8.11 GetFullWindowsNameMBS(UserName as string, Domain as string) as string

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the full username of an user in a domain.
Example:

```
Var ShortName as string = "your short name"
Var Domain as string = "your domain"

MessageBox GetFullWindowsNameMBS(ShortName, Domain)
```

Notes: Returns an empty string on any error.

Use a current Windows NT-style domain, and a username that exists on the PDC.

This will work with any NT-Style PDC (tested on XP bound to Mac OS X Server running SMB as PDC). Windows 2000/2003 and 2008 should also work.

210.9 class WindowsADSystemInfoMBS

210.9.1 class WindowsADSystemInfoMBS

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class retrieves data about the local computer if it is running a Windows operating system in a Windows domain.
Example:

```
// show Active Directory information for the computer and user on Windows
Var info As New WindowsADSystemInfoMBS
If info.Lasterror <>0 Then
MessageBox "Not in a domain or no access."
Return
End If

MessageBox "Domain: " + info.DomainDNSName + " (" + info.DomainShortName + ")" + EndOfLine + _
"Site: " + info.SiteName + EndOfLine + _
"Computer: " + info.ComputerName + EndOfLine + _
"User: " + info.UserName
```

Notes: For example, you can get the domain, site, and distinguished name of the local computer.

210.9.2 Methods

210.9.3 AnyDCName as String

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the DNS name of a domain controller in the local computer's domain.
Notes: Lasterror is set.

210.9.4 Constructor

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: Raises unsupportedOperationException on failure.

210.9.5 DCSiteName(Server as String) as String

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the name of the Active Directory site that contains the local computer.
Notes: Server: DNS name of the service server.

An Active Directory site is one or more well-connected TCP/IP subnets holding Active Directory domain controllers
Lasterror is set.

210.9.6 RefreshSchemaCache

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Refreshes the Active Directory schema cache.
Notes: When you call this method, it does a Put() of the schemaUpdateNow function on the RootDSE. Normally, when you make changes to the schema, they are not updated to the RootDSE until the next automatic update. This method does an immediate update to the schema so that you can view the changes to the schema.
Lasterror is set.

210.9.7 Properties

210.9.8 ComputerName as String

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the distinguished name of the local computer.
Notes: Lasterror is set.
(Read only property)

210.9.9 DomainDNSName as String

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the DNS name of the local computer's domain, such as "domainName.companyName.com".
Notes: Lasterror is set.
(Read only property)

210.9.10 DomainShortName as String

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the short name of the local computer's domain, such as "domainName".
Notes: Lasterror is set.
(Read only property)

210.9.11 ForestDNSName as String

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the DNS name of the local computer's forest.
Notes: Lasterror is set.
(Read only property)

210.9.12 Handle as Integer

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

210.9.13 IsNativeMode as Boolean

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Determines whether the local computer's domain is in native or mixed mode.
Notes: Lasterror is set.
(Read only property)

210.9.14 Lasterror as Integer

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error reported by any of the properties/methods.
Notes: (Read and Write property)

210.9.15 PDCRoleOwner as String

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the distinguished name of the directory service agent (DSA) object for the DC that owns the primary domain controller role in the local computer's domain.
Notes: Lasterror is set.
(Read only property)

210.9.16 SchemaRoleOwner as String

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the distinguished name of the directory service agent (DSA) object for the DC that owns the schema master role in the local computer's forest.
Notes: Lasterror is set.
(Read only property)

210.9.17 SiteName as String

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the site name of the local computer.
Notes: Lasterror is set.
(Read only property)

210.9.18 UserName as String

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the Active Directory distinguished name of the current user, which is the logged-on user or the user impersonated by the calling thread.
Notes: Lasterror is set.
(Read only property)

Constant	Value	Description
CREATE_BREAKAWAY_FROM_JOB	&h01000000	The child processes of a process associated with a job are not associated with the job. If the calling process is not associated with a job, this constant has no effect. If the calling process is associated with a job, the job must set the JOB_OBJECT_LIMIT_BREAKAWAY_OK limit.
CREATE_DEFAULT_ERROR_MODE	&h04000000	The new process does not inherit the error mode of the calling process. Instead, the new process gets the default error mode. This feature is particularly useful for multi-threaded shell applications that run with hard errors disabled. The default behavior is for the new process to inherit the error mode of the caller. Setting this flag changes that default behavior.
CREATE_NEW_CONSOLE	&h00000010	The new process has a new console, instead of inheriting its parent's console (the default). For more information, see Creation of a Console. This flag cannot be used with DETACHED_PROCESS.
CREATE_NEW_PROCESS_GROUP	&h00000200	The new process is the root process of a new process group. The process group includes all processes that are descendants of this root process. The process identifier of the new process group is the same as the process identifier, which is returned in the lpProcessInformation parameter. Process groups are used by the GenerateConsoleCtrlEvent function to enable sending a CTRL+BREAK signal to a group of console processes. If this flag is specified, CTRL+C signals will be disabled for all processes within the new process group. This flag is ignored if specified with CREATE_NEW_CONSOLE.
CREATE_NO_WINDOW	&h08000000	The process is a console application that is being run without a console window. Therefore, the console handle for the application is not set. This flag is ignored if the application is not a console application, or if it is used with either CREATE_NEW_CONSOLE or DETACHED_PROCESS.
CREATE_PROTECTED_PROCESS	&h00040000	The process is to be run as a protected process. The system restricts access to protected processes and the threads of protected processes. For more information on how processes can interact with protected processes, see Process Security and Access Rights. To activate a protected process, the binary must have a special signature. This signature is provided by Microsoft but not currently available for non-Microsoft binaries. There are currently four protected processes: media foundation, audio engine, Windows error reporting, and system. Components that load into these binaries must also be signed. Multimedia companies can leverage the first two protected processes. For more information, see Overview of the Protected Media Path. Windows Server 2003 and Windows XP/2000: This value is not supported.
CREATE_PRESERVE_CODE_AUTHZ_LEVEL	&h02000000	Allows the caller to execute a child process that bypasses the process restrictions that would normally be applied automatically to the process. Windows 2000: This value is not supported.
CREATE_SEPARATE_WOW_VDM	&h00000800	This flag is valid only when starting a 16-bit Windows-based application. If set, the new process runs in a private Virtual DOS Machine (VDM). By default, all 16-bit Windows-based applications run as threads in a single, shared VDM. The advantage of running separately is that a crash only terminates the single VDM; any other programs running in distinct VDMs continue to function normally. Also, 16-bit Windows-based applications that are run in separate VDMs have separate input queues. That means that if one application stops responding momentarily, applications in separate VDMs continue to receive input. The disadvantage of running separately is that it takes significantly more memory to do so. You should use this flag only if the user requests that 16-bit applications should run in their own VDM.
CREATE_SHARED_WOW_VDM	&h00001000	The flag is valid only when starting a 16-bit Windows-based application. If the DefaultSeparateVDM switch in the Windows section of WIN.INI is TRUE, this flag overrides the switch. The new process is run in the shared Virtual DOS Machine.
CREATE_SUSPENDED	&h00000004	The primary thread of the new process is created in a suspended state, and does not run until the ResumeThread function is called.
CREATE_UNICODE_ENVIRONMENT	&h00000400	If this flag is set, the environment block pointed to by lpEnvironment uses Unicode characters. Otherwise, the environment block uses ANSI characters.
DEBUG_ONLY_THIS_PROCESS	&h00000002	The calling thread starts and debugs the new process. It can receive all related debug events using the WaitForDebugEvent function.
DEBUG_PROCESS	&h00000001	The calling thread starts and debugs the new process and all child processes created by the new process. It can receive all related debug events using the WaitForDebugEvent function. A process that uses DEBUG_PROCESS becomes the root of a debugging chain. This continues until another process in the chain is created with DEBUG_PROCESS. If this flag is combined with DEBUG_ONLY_THIS_PROCESS, the caller debugs only the new process, not any child processes.
DETACHED_PROCESS	&h00000008	For console processes, the new process does not inherit its parent's console (the default). The new process can call the AllocConsole function at a later time to create a console. For more information, see Creation of a Console. This value cannot be used with CREATE_NEW_CONSOLE.
EXTENDED_STARTUPINFO_PRESENT	&h00080000	The process is created with extended startup information; the lpStartupInfo parameter specifies a STARTUPINFOEX structure. Windows Server 2003 and Windows XP/2000: This value is not supported.
INHERIT_PARENT_AFFINITY	&h00010000	The process inherits its parent's affinity. If the parent process has threads in more than one processor group, the new process inherits the group-relative affinity of an arbitrary group in use by the parent. Windows Server 2008, Windows Vista, Windows Server 2003, and Windows XP/2000: This value is not supported.
ABOVE_NORMAL_PRIORITY_CLASS	&h00008000	Process that has priority above NORMAL_PRIORITY_CLASS but below HIGH_PRIORITY_CLASS.
BELOW_NORMAL_PRIORITY_CLASS	&h00004000	Process that has priority above IDLE_PRIORITY_CLASS but below NORMAL_PRIORITY_CLASS.

Constants	Value	Meaning
SW_FORCEMINIMIZE	11	Minimizes a window, even if the thread that owns the window is not responding. This flag should only be used when minimizing windows from a different thread.
SW_HIDE	0	Hides the window and activates another window.
SW_MAXIMIZE	3	Maximizes the specified window.
SW_MINIMIZE	6	Minimizes the specified window and activates the next top-level window in the Z order.
SW_RESTORE	9	Activates and displays the window. If the window is minimized or maximized, the system restores it to its original size and position. An application should specify this flag when restoring a minimized window.
SW_SHOW	5	Activates the window and displays it in its current size and position.
SW_SHOWDEFAULT	10	Sets the show state based on the SW_ value specified in the STARTUPINFO structure passed to the CreateProcess function by the program that started the application.
SW_SHOWMAXIMIZED	3	Activates the window and displays it as a maximized window.
SW_SHOWMINIMIZED	2	Activates the window and displays it as a minimized window.
SW_SHOWMINNOACTIVE	7	Displays the window as a minimized window. This value is similar to SW_SHOWMINIMIZED, except the window is not activated.
SW_SHOWNA	8	Displays the window in its current size and position. This value is similar to SW_SHOW, except that the window is not activated.
SW_SHOWNOACTIVATE	4	Displays a window in its most recent size and position. This value is similar to SW_SHOWNORMAL, except that the window is not activated.
SW_SHOWNORMAL	1	Activates and displays a window. If the window is minimized or maximized, the system restores it to its original size and position. An application should specify this flag when displaying the window for the first time.

Name	Value	Description
COLOR_3DDKSHADOW	21	Dark shadow for three-dimensional display elements.
COLOR_3DFACE	15	Face color for three-dimensional display elements and for dialog box backgrounds.
COLOR_3DHIGHLIGHT	20	Highlight color for three-dimensional display elements (for edges facing the light source.)
COLOR_3DHILIGHT	20	Highlight color for three-dimensional display elements (for edges facing the light source.)
COLOR_3DLIGHT	22	Light color for three-dimensional display elements (for edges facing the light source.)
COLOR_3DSHADOW	16	Shadow color for three-dimensional display elements (for edges facing away from the light source).
COLOR_ACTIVEBORDER	10	Active window border.
COLOR_ACTIVECAPTION	2	Active window title bar. Specifies the left side color in the color gradient of an active window's title bar if the gradient effect is enabled.
COLOR_APPWORKSPACE	12	Background color of multiple document interface (MDI) applications.
COLOR_BACKGROUND	1	Desktop.
COLOR_BTNFACE	15	Face color for three-dimensional display elements and for dialog box backgrounds.
COLOR_BTNHIGHLIGHT	20	Highlight color for three-dimensional display elements (for edges facing the light source.)
COLOR_BTNHILIGHT	20	Highlight color for three-dimensional display elements (for edges facing the light source.)
COLOR_BTNSHADOW	16	Shadow color for three-dimensional display elements (for edges facing away from the light source).
COLOR_BTNTEXT	18	Text on push buttons.
COLOR_CAPTIONTEXT	9	Text in caption, size box, and scroll bar arrow box.
COLOR_DESKTOP	1	Desktop.
COLOR_GRADIENTACTIVECAPTION	27	Right side color in the color gradient of an active window's title bar. COLOR_ACTIVECAPTION specifies the left side color. Use SPI_GETGRADIENTCAPTIONS with the SystemParametersInfo function to determine whether the gradient effect is enabled.
COLOR_GRADIENTINACTIVECAPTION	28	Right side color in the color gradient of an inactive window's title bar. COLOR_INACTIVECAPTION specifies the left side color.
COLOR_GRAYTEXT	17	Grayed (disabled) text. This color is set to 0 if the current display driver does not support a solid gray color.
COLOR_HIGHLIGHT	13	Item(s) selected in a control.
COLOR_HIGHLIGHTTEXT	14	Text of item(s) selected in a control.
COLOR_HOTLIGHT	26	Color for a hyperlink or hot-tracked item.
COLOR_INACTIVEBORDER	11	Inactive window border.
COLOR_INACTIVECAPTION	3	Inactive window caption. Specifies the left side color in the color gradient of an inactive window's title bar if the gradient effect is enabled.
COLOR_INACTIVECAPTIONTEXT	19	Color of text in an inactive caption.
COLOR_INFOBK	24	Background color for tooltip controls.
COLOR_INFOTEXT	23	Text color for tooltip controls.
COLOR_MENU	4	Menu background.
COLOR_MENUHILIGHT	29	The color used to highlight menu items when the menu appears as a flat menu (see SystemParametersInfo). The highlighted menu item is outlined with COLOR_HIGHLIGHT. Windows 2000: This value is not supported.
COLOR_MENUBAR	30	The background color for the menu bar when menus appear as flat menus (see SystemParametersInfo). However, COLOR_MENU continues to specify the background color of the menu popup. Windows 2000: This value is not supported.
COLOR_MENUTEXT	7	Text in menus.
COLOR_SCROLLBAR	0	Scroll bar gray area.
COLOR_WINDOW	5	Window background.
COLOR_WINDOWFRAME	6	Window frame.
COLOR_WINDOWTEXT	8	Text in windows.

edit	Launches an editor and opens the document for editing. If File is not a document file, the function will fail.
explore	Explores a folder specified by File.
find	Initiates a search beginning in the directory specified by Directory.
open	Opens the item specified by the File parameter. The item can be a file or folder.
print	Prints the file specified by File. If File is not a document file, the function fails.
""	In systems prior to Windows 2000, the default verb is used if it is valid and available in the registry. If not, the "open" verb is used. In Windows 2000 and later, the default verb is used if available. If not, the "open" verb is used. If neither verb is available, the system uses the first verb listed in the registry.

SW_HIDE	0	Hides the window and activates another window.
SW_MAXIMIZE	3	Maximizes the specified window.
SW_MINIMIZE	6	Minimizes the specified window and activates the next top-level window in the z-order.
SW_RESTORE	9	Activates and displays the window. If the window is minimized or maximized, Windows restores it to its original size and position. An application should specify this flag when restoring a minimized window.
SW_SHOW	5	Activates the window and displays it in its current size and position.
SW_SHOWDEFAULT	10	Sets the show state based on the SW_ flag specified in the STARTUPINFO structure passed to the CreateProcess function by the program that started the application. An application should call ShowWindow with this flag to set the initial show state of its main window.
SW_SHOWMAXIMIZED	3	Activates the window and displays it as a maximized window.
SW_SHOWMINIMIZED	2	Activates the window and displays it as a minimized window.
SW_SHOWMINNOACTIVE	7	Displays the window as a minimized window. The active window remains active.
SW_SHOWNA	8	Displays the window in its current state. The active window remains active.
SW_SHOWNOACTIVATE	4	Displays a window in its most recent size and position. The active window remains active.
SW_SHOWNORMAL	1	Activates and displays a window. If the window is minimized or maximized, Windows restores it to its original size and position. An application should specify this flag when displaying the window for the first time.

Return code	Description
0	The operating system is out of memory or resources.
ERROR_FILE_NOT_FOUND = 2	The specified file was not found.
ERROR_PATH_NOT_FOUND = 3	The specified path was not found.
ERROR_BAD_FORMAT = 11	The .exe file is invalid (non-Win32 .exe or error in .exe image).
SE_ERR_ACCESSDENIED = 5	The operating system denied access to the specified file.
SE_ERR_ASSOCINCOMPLETE = 27	The file name association is incomplete or invalid.
SE_ERR_DDEBUSY = 30	The DDE transaction could not be completed because other DDE transactions were being processed.
SE_ERR_DDEFAIL = 29	The DDE transaction failed.
SE_ERR_DDETIMEOUT = 28	The DDE transaction could not be completed because the request timed out.
SE_ERR_DLLNOTFOUND = 32	The specified DLL was not found.
SE_ERR_FNF = 2	The specified file was not found.
SE_ERR_NOASSOC = 31	There is no application associated with the given file name extension. This error will also be returned if you attempt to print a file that is not printable.
SE_ERR_OOM = 8	There was not enough memory to complete the operation.
SE_ERR_PNF = 3	The specified path was not found.
SE_ERR_SHARE = 26	A sharing violation occurred.

210.10 class WindowsClipboardMBS

210.10.1 class WindowsClipboardMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The windows clipboard class.
Example:

```
// check the Windows clipboard for files or a picture
Var c As New WindowsClipboardMBS

If Not c.Valid Then
MessageBox "Clipboard is busy."
Return
End If

Var files() As String = c.GetFiles
If files.Count >0 Then
MessageBox "Files on clipboard:" + EndOfLine + String.FromArray(files, EndOfLine)
Else
Var pic As Picture = c.GetPicture
If pic <>Nil Then
MessageBox "Picture on clipboard: " + pic.Width.ToString + " x " + pic.Height.ToString
End If
End If

// the connection to the clipboard closes when c goes out of scope
```

Notes: Use it to access the clipboard on Windows.

Be aware that in the constructor we open the clipboard connection. Since Xojo may itself like to look into the clipboard to decide whether to enable copy & paste events, our clipboard connection may get taken or times out. Only one app at a time can have clipboard access.

210.10.2 Methods

210.10.3 Clear

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Clears the contents of the clipboard.

210.10.4 ClipboardFormats as Integer()

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns an array with all clipboard formats currently in the clipboard.

210.10.5 ClipboardSequenceNumber as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the clipboard sequence number for the current window station.
Notes: The return value is the clipboard sequence number. If you do not have WINSTA_ACCESSCLIPBOARD access to the window station, the function returns zero.

The system keeps a serial number for the clipboard for each window station. This number is incremented whenever the contents of the clipboard change or the clipboard is emptied. You can track this value to determine whether the clipboard contents have changed and optimize creating DataObjects. If clipboard rendering is delayed, the sequence number is not incremented until the changes are rendered.

210.10.6 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Connects to the clipboard.
Notes: As the clipboard has exclusive access, do not keep WindowsClipboardMBS objects around. Best you only use them within a method so once the method ends, everything is released.

210.10.7 CountClipboardFormats as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the number of different data formats currently on the clipboard.
Notes: If the function succeeds, the return value is the number of different data formats currently on the clipboard.

If the function fails, the return value is zero.

210.10.8 Destructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Automatically closes the clipboard.

210.10.9 EnumClipboardFormats(format as Integer = 0) as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enumerates the data formats currently available on the clipboard.
Example:

```
// show list of all formats
var w as new WindowsClipboardMBS

var formats() as string
var f as integer = w.EnumClipboardFormats(0)
while f <>0
formats.Add f.ToString+": "+w.GetClipboardFormatName(f)

f = w.EnumClipboardFormats(f)
wend
```

MessageBox join(formats, EndOfLine)

Notes: Clipboard data formats are stored in an ordered list. To perform an enumeration of clipboard data formats, you make a series of calls to the EnumClipboardFormats function. For each call, the format parameter specifies an available clipboard format, and the function returns the next available clipboard format.

format: A clipboard format that is known to be available.

To start an enumeration of clipboard formats, set format to zero. When format is zero, the function retrieves the first available clipboard format. For subsequent calls during an enumeration, set format to the result of the previous EnumClipboardFormats call.

If the function succeeds, the return value is the clipboard format that follows the specified format, namely the next available clipboard format.

If the function fails, the return value is zero.
If there are no more clipboard formats to enumerate, the return value is zero.

You must open the clipboard before enumerating its formats. Use the OpenClipboard function to open the clipboard. The EnumClipboardFormats function fails if the clipboard is not open.

The EnumClipboardFormats function enumerates formats in the order that they were placed on the clipboard. If you are copying information to the clipboard, add clipboard objects in order from the most descriptive clipboard format to the least descriptive clipboard format. If you are pasting information from the clipboard, retrieve the first clipboard format that you can handle. That will be the most descriptive clipboard format that you can handle.

The system provides automatic type conversions for certain clipboard formats. In the case of such a format, this function enumerates the specified format, then enumerates the formats to which it can be converted. For more information, see Standard Clipboard Formats and Synthesized Clipboard Formats.

210.10.10 GetClipboardFormatName(format as Integer) as string

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves from the clipboard the name of the specified registered format. The function copies the name to the specified buffer.
Example:

```
// show items on clipboard

Var w as new WindowsClipboardMBS
```

```
Var types(-1) as integer = w.ClipboardFormats
Var names() as string

for each type as integer in types
Var n as string = w.GetClipboardFormatName(type)

n = str(type)+" "+n

names.Add n
next

MessageBox Join(names,EndOfLine)
```

210.10.11 GetData(type as Integer) as string

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves data from the clipboard in a specified format.
Example:

```
Var TypeRTF as Integer = WindowsClipboardMBS.RegisterClipboardFormat("Rich Text Format")
var w as new WindowsClipboardMBS

if w.IsClipboardFormatAvailable(TypeRTF) then
var rtf as string = w.GetData(TypeRTF)

Break

end if
```

Notes: Format: A clipboard format.

If the function succeeds, the return value is the string with the clipboard data in the specified format.

If the function fails, the return value is "".

An application can enumerate the available formats in advance by using the EnumClipboardFormats function.

210.10.12 GetDIB as Picture

MBS Win Plugin, Plugin Version: 17.4, Platform: Windows, Targets: Desktop only.

Function: Queries DIB picture on the clipboard.
Notes: Returns nil on any error.
This is using DIB type in clipboard for a Device Independent Bitmap.

Please use GetPicture for bitmap handles.

210.10.13 GetFiles as string()

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries list of file paths on the clipboard.
Notes: This is for working with Explorers copy & paste feature.

210.10.14 GetPicture as Picture

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop only.

Function: Queries bitmap on the clipboard.
Notes: Returns nil on any error.
This is using BITMAP type in clipboard for a bitmap handle.

Please use GetDIB for Device Independent Bitmap.

210.10.15 IsClipboardFormatAvailable(type as Integer) as boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Determines whether the clipboard contains data in the specified format.
Notes: type: A standard or registered clipboard format.

If the clipboard format is available, the return value is true.
If the clipboard format is not available, the return value is false.

Typically, an application that recognizes only one clipboard format would call this function when processing the EnableMenuItems event. The application would then enable or disable the Paste menu item, depending on the return value.

210.10.16 RegisterClipboardFormat(type as string) as Integer

MBS Win Plugin, Plugin Version: 13.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Registers a new clipboard format. This format can then be used as a valid clipboard format.
Example:

```
Var TypeHTML as Integer
Var TypeRTF as Integer

TypeHTML = WindowsClipboardMBS.RegisterClipboardFormat("HTML Format")
TypeRTF = WindowsClipboardMBS.RegisterClipboardFormat("Rich Text Format")
```

Notes: If the function succeeds, the return value identifies the registered clipboard format.
If the function fails, the return value is zero.

If a registered format with the specified name already exists, a new format is not registered and the return value identifies the existing format. This enables more than one application to copy and paste data using the same registered clipboard format. Note that the format name comparison is case-insensitive.
Registered clipboard formats are identified by values in the range &hC000 through &hFFFF.

210.10.17 SetData(type as Integer, rawData as string) as boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Places data on the clipboard in a specified clipboard format.
Notes: Format: The clipboard format. This parameter can be a registered format or any of the standard clipboard formats.
rawData: A string with the data in the specified format.

If the function succeeds, the return value is true.
If the function fails, the return value is false.

The system performs implicit data format conversions between certain clipboard formats when an application calls the GetClipboardData function. For example, if the kTypeOEMTEXT format is on the clipboard, a window can retrieve data in the kTypeTEXT format. The format on the clipboard is converted to the requested format on demand. For more information, see Synthesized Clipboard Formats.

210.10.18 SetDIB(pic as Picture) as boolean

MBS Win Plugin, Plugin Version: 17.4, Platform: Windows, Targets: Desktop only.

Function: Puts a DIB picture on the clipboard.

Notes: Returns true on success.
This is using DIB type in clipboard for a bitmap handle.

Please use SetPicture for Device Independent Bitmap.

210.10.19 SetFiles(paths() as string) as boolean

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Puts a list of file paths on the clipboard.
Notes: This is for working with Explorers copy & paste feature.
Returns true on success.
Folder paths may work better if they have no training backslash.

210.10.20 SetPicture(pic as Picture) as boolean

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop only.

Function: Puts a bitmap picture on the clipboard.
Notes: Returns true on success.
This is using BITMAP type in clipboard for a bitmap handle.

Please use SetDIB for Device Independent Bitmap.

210.10.21 Properties

210.10.22 Valid as Boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A flag whether the constructor got a clipboard connection.
Notes: (Read and Write property)

210.10.23 Constants

Constants

Constant	Value	Description
kTypeBitmap	2	One of standard clipboard formats defined by the system. A handle to a bitmap (HBITMAP).
kTypeDIB	8	One of standard clipboard formats defined by the system. A memory object containing a BITMAPINFO structure followed by the bitmap bits.
kTypeDIBV5	17	One of standard clipboard formats defined by the system. A memory object containing a BITMAPV5HEADER structure followed by the bitmap color space information and the bitmap bits.
kTypeDIF	5	One of standard clipboard formats defined by the system. Software Arts' Data Interchange Format.
kTypeENHMetaFile	14	One of standard clipboard formats defined by the system. A handle to an enhanced metafile (HENHMETAFILE).
kTypeHDROP	15	One of standard clipboard formats defined by the system. A handle to type HDROP that identifies a list of files. An application can retrieve information about the files by passing the handle to the DragQueryFile function.
kTypeLocale	16	One of standard clipboard formats defined by the system. The data is a handle to the locale identifier associated with text in the clipboard. When you close the clipboard, if it contains kTypeText data but no kTypeLocale data, the system automatically sets the kTypeLocale format to the current input language. You can use the kTypeLocale format to associate a different locale with the clipboard text. An application that pastes text from the clipboard can retrieve this format to determine which character set was used to generate the text. Note that the clipboard does not support plain text in multiple character sets. To achieve this, use a formatted text data type such as RTF instead. The system uses the code page associated with kTypeLocale to implicitly convert from kTypeText to kTypeUnicodeText. Therefore, the correct code page table is used for the conversion.
kTypeMetaFilePict	3	One of standard clipboard formats defined by the system. Handle to a metafile picture format as defined by the METAFILEPICT structure. When passing a kTypeMetaFilePict handle by means of DDE, the application responsible for deleting hMem should also free the metafile referred to by the kTypeMetaFilePict handle.
kTypeOEMText	7	One of standard clipboard formats defined by the system. Text format containing characters in the OEM character set. Each line ends with a carriage return/linefeed (CR-LF) combination. A null character signals the end of the data.
kTypePalette	9	One of standard clipboard formats defined by the system. Handle to a color palette. Whenever an application places data in the clipboard that depends on or assumes a color palette, it should place the palette on the clipboard as well. If the clipboard contains data in the kTypePalette (logical color palette) format, the application should use the SelectPalette and RealizePalette functions to realize (compare) any other data in the clipboard against that logical palette. When displaying clipboard data, the clipboard always uses as its current palette any object on the clipboard that is in the kTypePalette format.
kTypePenData	10	One of standard clipboard formats defined by the system. Data for the pen extensions to the Microsoft Windows for Pen Computing
kTypeRIFF	11	One of standard clipboard formats defined by the system. Represents audio data more complex than can be represented in a CF_WAVE standard wave format.
kTypeSylk	4	One of standard clipboard formats defined by the system. Microsoft Symbolic Link (SYLK) format.
kTypeText	1	One of standard clipboard formats defined by the system. Text format. Each line ends with a carriage return/linefeed (CR-LF) combination. A null character signals the end of the data. Use this format for ANSI text.

210.11 class WindowsCompressorMBS

210.11.1 class WindowsCompressorMBS

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Windows compression class.
Example:

```
// build some data to compress
Var m As String = "Hello World "
m = m + m + m + m
m = m + m + m + m
m = m + m + m + m
m = m + m + m + m

Var algorithm As Integer = WindowsCompressorMBS.AlgorithmLZMS

// compress with one class
Var c As New WindowsCompressorMBS(algorithm)
Var m2 As String = c.Compress(m)

// and decompress with other class
Var d As New WindowsDecompressorMBS(algorithm)
Var m3 As String = d.Decompress(m2)

Break
```

Notes: Using the built-in compression libraries in Windows 8 or newer.

All methods and properties can raise an UnsupportedOperationException reporting back a Windows error.

210.11.2 Methods

210.11.3 Compress(UncompressedData as MemoryBlock) as MemoryBlock

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Compresses a block of data.

Notes: Returns compressed data on success.
See also:

- 210.11.4 Compress(UncompressedData as Ptr, UncompressedDataSize as Integer, CompressedBuffer as Ptr, CompressedBufferSize as Integer) as Integer 24706
- 210.11.5 Compress(UncompressedData as String) as String 24706

210.11.4 Compress(UncompressedData as Ptr, UncompressedDataSize as Integer, CompressedBuffer as Ptr, CompressedBufferSize as Integer) as Integer

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Compresses a block of data.
Notes: Returns number of bytes written to output buffer.

UncompressedData: Contains the block of information that is to be compressed. The size in bytes of the uncompressed block is given by UncompressedDataSize.
UncompressedDataSize: Size in bytes of the uncompressed information.
CompressedBuffer: The buffer that receives the compressed information. The maximum size in bytes of the buffer is given by CompressedBufferSize.
CompressedBufferSize: Maximum size in bytes of the buffer that receives the compressed information.
CompressedDataSize: Actual size in bytes of the compressed information received.
See also:

- 210.11.3 Compress(UncompressedData as MemoryBlock) as MemoryBlock 24705
- 210.11.5 Compress(UncompressedData as String) as String 24706

210.11.5 Compress(UncompressedData as String) as String

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Compresses a block of data.
Notes: Returns compressed data on success.
See also:

- 210.11.3 Compress(UncompressedData as MemoryBlock) as MemoryBlock 24705
- 210.11.4 Compress(UncompressedData as Ptr, UncompressedDataSize as Integer, CompressedBuffer as Ptr, CompressedBufferSize as Integer) as Integer 24706

210.11.6 CompressData(Algorithm as Integer, UncompressedData as MemoryBlock) as MemoryBlock

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Compresses a block of data.
Example:

```
// just empty memoryblock
var m as new MemoryBlock(1000)

var algorithm as integer = WindowsCompressorMBS.AlgorithmLZMS

// compress
var c as MemoryBlock = WindowsCompressorMBS.CompressData(algorithm, m)

// and decompress
var d as MemoryBlock = WindowsDecompressorMBS.DecompressData(algorithm, c)

Break
```

Notes: Convenience function to create the compressor, allocates output buffer and performs compression. Returns compressed data on success.
See also:

- 210.11.7 CompressData(Algorithm as Integer, UncompressedData as String) as String 24707

210.11.7 CompressData(Algorithm as Integer, UncompressedData as String) as String

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Compresses a block of data.
Example:

```
var m as string = "Hello World "
m = m + m + m + m
m = m + m + m + m

var algorithm as integer = WindowsCompressorMBS.AlgorithmLZMS

// compress
Var c As String = WindowsCompressorMBS.CompressData(algorithm, m)

// and decompress
Var d As String = WindowsDecompressorMBS.DecompressData(algorithm, c)
```

Break

Notes: Convenience function to create the compressor, allocates output buffer and performs compression. Returns compressed data on success.
See also:

- 210.11.6 CompressData(Algorithm as Integer, UncompressedData as MemoryBlock) as MemoryBlock 24707

210.11.8 Constructor(Algorithm as Integer)

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new compressor.
Notes: Algorithm: The type of compression algorithm and mode to be used by this compressor.
This parameter can have one of the following values optionally combined with the CompressRaw flag. Use a "bitwise OR" operator to include CompressRaw and to create a block mode compressor. If CompressRaw is not included, the Compression API creates a buffer mode compressor. For more information about selecting a compression algorithm and mode, see Using the Compression API.

210.11.9 Destructor

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

210.11.10 Reset

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Prepares the compressor for the compression of a new stream.
Notes: The compressor object retains properties set with BlockSize and Level properties. The sequence of blocks generated is independent of previous blocks.

210.11.11 Properties

210.11.12 BlockSize as Integer

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Customized block size.
Notes: The value specified may be from 65536 to 67108864 bytes. This value can be used only with the

LZMS compression algorithm. A minimum size of 1 MB is suggested to get a better compression ratio.
(Read and Write property)

210.11.13 Handle as Integer

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

210.11.14 Level as Integer

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Desired level of compression.
Notes: The default value is 0. The value 1 can improve the compression ratio with a slightly slower compression speed. This value can be used only with the XPRESS compression algorithm or the XPRESS with Huffman encoding compression algorithm.
(Read and Write property)

210.11.15 Constants

Algorithms

Constant	Value	Description
AlgorithmInvalid	0	Invalid value
AlgorithmLZMS	5	LZMS compression algorithm
AlgorithmMax	6	Maximum value
AlgorithmMSZip	2	MSZIP compression algorithm
AlgorithmNull	1	No compression
AlgorithmXPress	3	XPRESS compression algorithm
AlgorithmXPressHuff	4	XPRESS compression algorithm with Huffman encoding
CompressRaw	536870912	Use a "bitwise OR" operator to include CompressRaw and to create a block mode compressor. If CompressRaw is not included, the Compression API creates a buffer mode compressor.

210.12 class WindowsCredentialAttributeMBS

210.12.1 class WindowsCredentialAttributeMBS

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: An application-defined attribute of the credential.
Notes: An attribute is a keyword-value pair. It is up to the application to define the meaning of the attribute.
Blog Entries

- MBS Xojo Plugins, version 26.5pr1

210.12.2 Properties

210.12.3 Flags as Integer

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The flags.
Notes: Identifies characteristics of the credential attribute. This member is reserved and should be originally initialized as zero and not otherwise altered to permit future enhancement.
(Read and Write property)

210.12.4 Keyword as String

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Name of the application-specific attribute.
Notes: Names should be of the form <CompanyName>_<Name>.
This member cannot be longer than 256 characters.
(Read and Write property)

210.12.5 Text as String

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Read and write value as Unicode string.
Notes: (Read and Write property)

210.12.6 Value as MemoryBlock

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Data associated with the attribute.
Notes: By convention, if Value is a text string, then Value should not include the trailing zero character and should be in UNICODE.

Credentials are expected to be portable. The application should take care to ensure that the data in value is portable. It is the responsibility of the application to define the byte-endian and alignment of the data in Value.

You can use Text property to assign or read unicode text.
(Read and Write property)

210.13 class WindowsCredentialMBS

210.13.1 class WindowsCredentialMBS

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Values for one credential.
Example:

```
// write a sample credential

Var c As New WindowsCredentialMBS
c.Comment = "Xojo test"
c.TargetName = "MyApp_Login"
c.UserName = "John"
c.CredentialBlob = "Secret"
c.Type = c.TypeGeneric
c.Persist = c.PersistLocalMachine

If WindowsCredentialsMBS.Write(c) Then
MessageBox "saved"
Else
MessageBox WindowsCredentialsMBS.LastErrorMessage
End If
```

Notes: See KeychainMBS class for macOS/iOS.
Blog Entries

- MBS Xojo Plugins, version 26.5pr1

210.13.2 Methods

210.13.3 Constructor

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.

210.13.4 CredentialAttributes as WindowsCredentialAttributeMBS()

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the attributes array.
Notes: You can modify this array to add new attributes.

This is named CredentialAttributes instead of Attributes as Xojo doesn't allow something to be named Attributes.

210.13.5 Properties

210.13.6 AttributeCount as Integer

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the number of attributes.
Notes: (Read only property)

210.13.7 Comment as String

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string comment from the user that describes this credential.
Notes: This member cannot be longer than 256 characters.
(Read and Write property)

210.13.8 CredentialBlob as MemoryBlock

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Secret data for the credential.
Notes: The CredentialBlob member can be both read and written.

If the Type member is TypeDomainPassword, this member contains the plaintext Unicode password for UserName. The CredentialBlob and CredentialBlobSize members do not include a trailing zero character. Also, for TypeDomainPassword, this member can only be read by the authentication packages.

If the Type member is TypeDomainCertificate, this member contains the clear test Unicode PIN for UserName. The CredentialBlob and CredentialBlobSize members do not include a trailing zero character. Also, this member can only be read by the authentication packages.

If the Type member is TypeGeneric, this member is defined by the application.
Credentials are expected to be portable. Applications should ensure that the data in CredentialBlob is portable. The application defines the byte-endian and alignment of the data in CredentialBlob.
(Read and Write property)

210.13.9 Flags as Integer

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: A bit member that identifies characteristics of the credential.
Notes: Undefined bits should be initialized as zero and not otherwise altered to permit future enhancement.
(Read and Write property)

210.13.10 LastWritten as Date

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The time, in Coordinated Universal Time (Greenwich Mean Time), of the last modification of the credential.
Notes: For write operations, the value of this member is ignored.
(Read and Write property)

210.13.11 Persist as Integer

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Defines the persistence of this credential.
Notes: (Read and Write property)

210.13.12 TargetAlias as String

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Alias for the TargetName member.
Notes: This member can be read and written. It cannot be longer than 256 characters.

If the credential Type is TypeGeneric, this member can be non-empty, but the credential manager ignores the member.
(Read and Write property)

210.13.13 TargetName as String

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the credential.
Notes: The TargetName and Type members uniquely identify the credential. This member cannot be

changed after the credential is created. Instead, the credential with the old name should be deleted and the credential with the new name created.

If Type is TypeDomainPassword or TypeDomainCertificate, this member identifies the server or servers that the credential is to be used for. The member is either a NetBIOS or DNS server name, a DNS host name suffix that contains a wildcard character, a NetBIOS or DNS domain name that contains a wildcard character sequence, or an asterisk.

If TargetName is a DNS host name, the TargetAlias member can be the NetBIOS name of the host.

If the TargetName is a DNS host name suffix that contains a wildcard character, the leftmost label of the DNS host name is an asterisk (*), which denotes that the target name is any server whose name ends in the specified name, for example, *.microsoft.com.

If the TargetName is a domain name that contains a wildcard character sequence, the syntax is the domain name followed by a backslash and asterisk (*), which denotes that the target name is any server that is a member of the named domain (or realm).

If TargetName is a DNS domain name that contains a wildcard character sequence, the TargetAlias member can be a NetBIOS domain name that uses a wildcard sequence for the same domain.

If TargetName specifies a DFS share, for example, DfsRoot\DfsShare, then this credential matches the specific DFS share and any servers reached through that DFS share.

If TargetName is a single asterisk (*), this credential matches any server name.

If TargetName is SessionWildcardName, this credential matches any server name. This credential matches before a single asterisk and is only valid if Persist is PersistSession. The credential can be set by applications that want to temporarily override the default credential.

This member cannot be longer than 337 characters.

If the Type is TypeGeneric, this member should identify the service that uses the credential in addition to the actual target. Microsoft suggests the name be prefixed by the name of the company implementing the service. Microsoft will use the prefix "Microsoft". Services written by Microsoft should append their service name, for example Microsoft_RAS_TargetName. This member cannot be longer than 32767 characters.

This member is case-insensitive.
(Read and Write property)

210.13.14 Type as Integer

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The type of the credential.
Notes: This member cannot be changed after the credential is created.
Usually TypeGeneric.
(Read and Write property)

210.13.15 UserName as String

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The user name of the account used to connect to TargetName.
Notes: If the credential Type is TypeDomainPassword, this member can be either a DomainNameUserName or a UPN.

If the credential Type is TypeDomainCertificate, this member must be a marshaled certificate reference created by calling CredMarshalCredential with a CertCredential.

If the credential Type is TypeGeneric, this member can be non-empty, but the credential manager ignores the member.

This member cannot be longer than 513 characters.
(Read and Write property)

210.13.16 Constants

Flags

Constant	Value	Description
FlagsNGCCert	128	Indicates that the credential is VSM protected.
FlagsOWFCredBlob	8	
FlagsPasswordForCert	1	
FlagsPromptNow	2	Bit set if the credential does not persist the CredentialBlob and the credential has not been written during this logon session. This bit is ignored on input and is set automatically when queried. If Type is TypeDomainCertificate, the CredentialBlob is not persisted across logon sessions because the PIN of a certificate is very sensitive information. Indeed, when the credential is written to credential manager, the PIN is passed to the CSP associated with the certificate. The CSP will enforce a PIN retention policy appropriate to the certificate. If Type is TypeDomainPassword or TypeDomainCertificate, an authentication package always fails an authentication attempt when using credentials marked as FlagsPromptNow. The application (typically through the key ring UI) prompts the user for the password. The application saves the credential and retries the authentication. Because the credential has been recently written, the authentication package now gets a credential that is not marked as FlagsPromptNow.
FlagsRequireConfirmation	16	
FlagsUserNameTarget	4	Bit is set if this credential has a TargetName member set to the same value as the UserName member. Such a credential is one designed to store the CredentialBlob for a specific user. For more information, see the CredMarshalCredential function. This bit can only be specified if Type is TypeDomainPassword or TypeDomainCertificate.
FlagsValidFlags	&hF0FF	Mask for all valid flags.
FlagsValidInputFlags	&hF09F	Mask for all valid input flags.
FlagsVSMProtected	64	Indicates that the credential is VSM protected.

Persistence

Constant	Value	Description
PersistEnterprise	3	The credential persists for all subsequent logon sessions on this same computer. It is visible to other logon sessions of this same user on this same computer and to logon sessions for this user on other computers. This option can be implemented as locally persisted credential if the administrator or user configures the user account to not have roam-able state. For instance, if the user has no roaming profile, the credential will only persist locally.
PersistLocalMachine	2	The credential persists for all subsequent logon sessions on this same computer. It is visible to other logon sessions of this same user on this same computer and not visible to logon sessions for this user on other computers.
PersistNone	0	Not set.
PersistSession	1	The credential persists for the life of the logon session. It will not be visible to other logon sessions of this same user. It will not exist after this user logs off and back on.

Types

Constant	Value	Description
TypeDomainCertificate	3	The credential is a certificate credential and is specific to Microsoft's authentication packages. The Kerberos, Negotiate, and Schannel authentication packages automatically use this credential when connecting to the named target.
TypeDomainExtended	6	The credential is supported by extended Negotiate packages.
TypeDomainPassword	2	The credential is a password credential and is specific to Microsoft's authentication packages. The NTLM, Kerberos, and Negotiate authentication packages will automatically use this credential when connecting to the named target.
TypeGeneric	1	The credential is a generic credential. The credential will not be used by any particular authentication package. The credential will be stored securely but has no other significant characteristics.
TypeGenericCertificate	5	The credential is a certificate credential that is a generic authentication package.
TypeMaximum	7	The maximum number of supported credential types.

210.14 module WindowsCredentialsMBS

210.14.1 module WindowsCredentialsMBS

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The module for functions to read and write secure credentials.
Example:

```
// Write a password for a FileMaker database

Var c As New WindowsCredentialMBS

c.Type = WindowsCredentialMBS.TypeGeneric
c.Persist = WindowsCredentialMBS.PersistLocalMachine
c.TargetName = "FMP: Assets"
c.UserName = "Admin"
c.Comment = "FileMaker Pro password"
c.CredentialBlob = ConvertEncoding("test", Encodings.UTF16)

Var r As Boolean = WindowsCredentialsMBS.Write(c)

If r Then
MessageBox "Password saved"
Else
MessageBox WindowsCredentialsMBS.LastErrorMessage
End If
```

Blog Entries

- MBS Xojo Plugins, version 26.5pr1

210.14.2 Methods

210.14.3 Delete(TargetName as String, Type as Integer = 1, Flags as Integer = 0) as Boolean

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Deletes a credential from the user's credential set.
Example:

```
// delete a password for a FileMaker database:

Var type As Integer = WindowsCredentialMBS.TypeGeneric
```

```
Var r As Boolean = WindowsCredentialsMBS.Delete("FMP: Assets", type)

If r Then
MessageBox "deleted"
Else
MessageBox WindowsCredentialsMBS.LastErrorMessage
End If
```

Notes: The credential set used is the one associated with the logon session of the current token. The token must not have the user's SID disabled.

TargetName: the name of the credential to delete.
Type: Type of the credential to delete.

If the value of the type parameter is DomainExtended, this function can delete a credential that specifies a user name when there are multiple credentials for the same target. The value of the TargetName parameter must specify the user name as Target | UserName.

Returns true on success or false on failure. LastError property is set.

210.14.4 FindBestCredential(TargetName as String) as WindowsCredentialMBS

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Searches the Credentials Management (CredMan) database for the set of generic credentials that are associated with the current logon session and that best match the specified target resource.
Notes: TargetName: the name of the target resource for which to find credentials.
Type: The type of credentials to search for. Currently, this function supports only TypeGeneric.

Returns credential if found or nil in case of an error.

210.14.5 GetSessionTypes as Integer()

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the maximum persistence supported by the current logon session.
Example:

```
Var values() As Integer = WindowsCredentialsMBS.GetSessionTypes

if values = nil then
MessageBox WindowsCredentialsMBS.LastErrorMessage
```

```
Else

Var value As Integer = values(WindowsCredentialMBS.TypeGeneric)

Select Case value
Case WindowsCredentialMBS.PersistEnterprise
MessageBox "We can store generic credentials with enterprise persistence." // highest level
Case WindowsCredentialMBS.PersistLocalMachine
MessageBox "We can store generic credentials on local machine."
Case WindowsCredentialMBS.PersistSession
MessageBox "We can store generic credentials in session."
End Select

End If
```

Notes: A separate maximum persistence is returned for each credential type.

210.14.6 List(Filter as String = ""), Flags as Integer = 0) as WindowsCredentialMBS()

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enumerates the credentials from the user's credential set.
Example:

```
Var credentials() As WindowsCredentialMBS = WindowsCredentialsMBS.List

If credentials = Nil Then
MessageBox WindowsCredentialsMBS.LastErrorMessage
Else
For Each credential As WindowsCredentialMBS In credentials
MessageBox credential.TargetName+EndOfLine+credential.Comment+EndOfLine+credential.UserName
Next
End If
```

Notes: The credential set used is the one associated with the logon session of the current token. The token must not have the user's SID disabled.

Filter: The filter for the returned credentials. Only credentials with a TargetName matching the filter will be returned. The filter specifies a name prefix followed by an asterisk. For instance, the filter "FRED*" will return all credentials with a TargetName beginning with the string "FRED". If "" is specified, all credentials will be returned.

Flags: The value of this parameter can be zero or FlagsPreserveCredentialBlob.

Returns the credentials or nil in case of an error.

210.14.7 Read(TargetName as String, Type as Integer = 1, Flags as Integer = 0) as WindowsCredentialMBS

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads a credential from the user's credential set.
Example:

```
// Read our value after using code in Write function.

Var credential As WindowsCredentialMBS = WindowsCredentialsMBS.Read("MyApp_Login")
MessageBox credential.TargetName+EndOfLine+credential.Comment+EndOfLine+credential.UserName

Var attrs() As WindowsCredentialAttributeMBS = credential.CredentialAttributes
Break // inspect in debugger
```

Notes: The credential set used is the one associated with the logon session of the current token. The token must not have the user's SID disabled.

TargetName: the name of the credential to read.
Type: The type of item to read. Default is WindowsCredentialMBS.TypeGeneric value.
Flags: Currently reserved and must be zero.

Returns a credential object or nil in case of an error. See LastError property and error constants.

If the value of the Type member of the WindowsCredentialMBS is TypeDomainExtended, a namespace must be specified in the target name. This function can return only one credential of the specified type.

210.14.8 Write(Credential as WindowsCredentialMBS, Flags as Integer = 0) as Boolean

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new credential or modifies an existing credential in the user's credential set.
Example:

```
Var c As New WindowsCredentialMBS
c.Comment = "Xojo test"
```

```
c.TargetName = "MyApp_Login"
c.UserName = "John"
c.CredentialBlob = "Secret"
c.Type = c.TypeGeneric
c.Persist = c.PersistLocalMachine

Var attr As New WindowsCredentialAttributeMBS
attr.Keyword = "id"
attr.Text = "1234"

Var attrs() As WindowsCredentialAttributeMBS = c.CredentialAttributes
attrs.Add attr

If WindowsCredentialsMBS.Write(c) Then
MessageBox "saved"
Else
MessageBox WindowsCredentialsMBS.LastErrorMessage
End If
```

Notes: The new credential is associated with the logon session of the current token. The token must not have the user's security identifier (SID) disabled.

Credential: The Credential to be written.
Flags: Flags that control the function's operation. e.g. FlagsPreserveCredentialBlob to preserved existing credential.

Returns true on success or false on failure.

210.14.9 Properties

210.14.10 LastError as Integer

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

210.14.11 LastErrorMessage as String

MBS Win Plugin, Plugin Version: 26.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error message to show to user.
Notes: (Read only property)

210.14.12 Constants

Constants

Constant	Value	Description
FlagsPreserveCredentialBlob	1	One of the flags for Write(). The credential BLOB from an existing credential is preserved with the sam credential name and credential type.
SessionWildcardName	"*Session"	The constant for a session wildcard.
UniversalWildcard	"*"	The constant for an universal wildcard.

Errors

Constant	Value	Description
ErrorAlreadyExists	&hFDA	Already exists.
ErrorBadUserName	2202	The UserName member of the passed in Credential structure is not vali a description of valid user name syntax, see the definition of that memb
ErrorInvalidFlags	&h3EC	A flag that is not valid was specified for the Flags parameter.
ErrorInvalidParameter	87	Certain fields cannot be changed in an existing credential. This error is ret if a field does not match the value in a protected field of the existing cred
ErrorNone	0	Success
ErrorNoSuchLogonSession	&h520	The logon session does not exist or there is no credential set associate this logon session. Network logon sessions do not have an associated cred set.
ErrorNotFound	&h490	No credential exists with the specified TargetName.
ErrorSCardNoReadersAvailable	&h8010002E	The certificate credential being written requires the smart card reader available.
ErrorSCardNoSmartCard	&h8010000C	A certificate credential being written requires the smart card to be inser
ErrorSCardRemovedCard	&h80100069	A certificate credential being written requires the smart card to be inser
ErrorSCardWrongCHV	&h8010006B	The wrong PIN was supplied for the certificate credential being written.

210.15 class WindowsDecompressorMBS

210.15.1 class WindowsDecompressorMBS

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Windows decompression class.
Example:

```
// build some data to compress
Var m As String = "Hello World "
m = m + m + m + m
m = m + m + m + m
m = m + m + m + m
m = m + m + m + m

Var algorithm As Integer = WindowsCompressorMBS.AlgorithmLZMS

// compress with one class
Var c As New WindowsCompressorMBS(algorithm)
Var m2 As String = c.Compress(m)

// and decompress with other class
Var d As New WindowsDecompressorMBS(algorithm)
Var m3 As String = d.Decompress(m2)

Break
```

Notes: Using the built-in compression libraries in Windows 8 or newer.

All methods and properties can raise an UnsupportedOperationException reporting back a Windows error.

- MBS Xojo Plugins, version 25.2pr5

210.15.2 Methods

210.15.3 Constructor(Algorithm as Integer)

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new compressor.
Notes: Algorithm: The type of compression algorithm and mode to be used by this compressor.

This parameter can have one of the following values optionally combined with the CompressRaw flag. Use a "bitwise OR" operator to include CompressRaw and to create a block mode compressor. If CompressRaw is not included, the Compression API creates a buffer mode compressor. For more information about selecting a compression algorithm and mode, see Using the Compression API.

210.15.4 Decompress(CompressedData as MemoryBlock) as MemoryBlock

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Decompresses data.
Notes: Returns uncompressed data on success.
See also:

- 210.15.5 Decompress(CompressedData as Ptr, CompressedDataSize as Integer, UncompressedBuffer as Ptr, UncompressedBufferSize as Integer) as Integer 24726
- 210.15.6 Decompress(CompressedData as String) as String 24726

210.15.5 Decompress(CompressedData as Ptr, CompressedDataSize as Integer, UncompressedBuffer as Ptr, UncompressedBufferSize as Integer) as Integer

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Decompresses data.
Notes: Returns number of bytes of uncompressed data on success.

CompressedData: Contains the block of information that is to be decompressed. The size in bytes of the compressed block is given by CompressedDataSize.
CompressedDataSize: The size in bytes of the compressed information.
UncompressedBuffer: The buffer that receives the uncompressed information. The size in bytes of the buffer is given by UncompressedBufferSize.
UncompressedBufferSize: Size in bytes of the buffer that receives the uncompressed information.
UncompressedDataSize: Actual size in bytes of the uncompressed information received.
See also:

- 210.15.4 Decompress(CompressedData as MemoryBlock) as MemoryBlock 24726
- 210.15.6 Decompress(CompressedData as String) as String 24726

210.15.6 Decompress(CompressedData as String) as String

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Decompresses data.
Notes: Returns uncompressed data on success.
See also:

- 210.15.4 Decompress(CompressedData as MemoryBlock) as MemoryBlock 24726
- 210.15.5 Decompress(CompressedData as Ptr, CompressedDataSize as Integer, UncompressedBuffer as Ptr, UncompressedBufferSize as Integer) as Integer 24726

210.15.7 DecompressData(Algorithm as Integer, CompressedData as MemoryBlock) as MemoryBlock

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Decompresses data.
Example:

```
// just empty memoryblock
var m as new MemoryBlock(1000)

var algorithm as integer = WindowsCompressorMBS.AlgorithmLZMS

// compress
var c as MemoryBlock = WindowsCompressorMBS.CompressData(algorithm, m)

// and decompress
var d as MemoryBlock = WindowsDecompressorMBS.DecompressData(algorithm, c)

Break
```

Notes: Convenience function to create the decompressor, allocates output buffer and performs decompression.
Returns uncompressed data on success.
See also:

- 210.15.8 DecompressData(Algorithm as Integer, CompressedData as String) as String 24727

210.15.8 DecompressData(Algorithm as Integer, CompressedData as String) as String

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Decompresses data.
Example:

```
var m as string = "Hello World "
m = m + m + m + m
```

```
m = m + m + m + m

var algorithm as integer = WindowsCompressorMBS.AlgorithmLZMS

// compress
Var c As String = WindowsCompressorMBS.CompressData(algorithm, m)

// and decompress
Var d As String = WindowsDecompressorMBS.DecompressData(algorithm, c)

Break
```

Notes: Convenience function to create the decompressor, allocates output buffer and performs decompression.
Returns uncompressed data on success.
See also:

- 210.15.7 DecompressData(Algorithm as Integer, CompressedData as MemoryBlock) as MemoryBlock 24727

210.15.9 Destructor

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

210.15.10 Reset

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Prepares the decompressor for the decompression of a new stream.

210.15.11 Properties

210.15.12 BlockSize as Integer

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Customized block size.
Notes: The value specified may be from 65536 to 67108864 bytes. This value can be used only with the LZMS compression algorithm. A minimum size of 1 MB is suggested to get a better compression ratio.
(Read and Write property)

210.15.13 Handle as Integer

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

210.15.14 Level as Integer

MBS Win Plugin, Plugin Version: 25.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Desired level of compression.
Notes: The default value is 0. The value 1 can improve the compression ratio with a slightly slower compression speed. This value can be used only with the XPRESS compression algorithm or the XPRESS with Huffman encoding compression algorithm.
(Read and Write property)

210.15.15 Constants

Algorithms

Constant	Value	Description
AlgorithmInvalid	0	Invalid value
AlgorithmLZMS	5	LZMS compression algorithm
AlgorithmMax	6	Maximum value
AlgorithmMSZip	2	MSZIP compression algorithm
AlgorithmNull	1	No compression
AlgorithmXPress	3	XPRESS compression algorithm
AlgorithmXPressHuff	4	XPRESS compression algorithm with Huffman encoding
CompressRaw	536870912	Use a "bitwise OR" operator to include CompressRaw and to create a block mode compressor. If CompressRaw is not included, the Compression API creates a buffer mode compressor.

210.16 class WindowsDeviceMBS

210.16.1 class WindowsDeviceMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class is for device
Example:

```
Var devices(-1) as WindowsDeviceMBS = WindowsDeviceMBS.Devices
for each device as WindowsDeviceMBS in devices
MessageBox device.Description
next
```

Notes: For Mac you can take a look on the MacUSBDeviceMBS class and the IORegistryMBS class.
See also WinUSBDeviceMBS and WinUSBMBS classes.
For cross platform development also check LibUSBDeviceMBS classes.

210.16.2 Methods

210.16.3 CompatibleIDs as string()

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The list of compatible IDs for a device.
Notes: A device has only one device ID that is the most specific ID for a device. A device can also have less specific hardware IDs and compatible IDs. Windows first tries to find an INF file that matches the device ID. If it does not find such a match, Windows next tries to find a match to one of the less specific hardware IDs or compatible IDs.

210.16.4 Devices(ClassGUID as string, present as boolean = true) as WindowsDeviceMBS()

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries all devices on the system matching the given Class GUID.
Example:

```
const PortsGUID = " { 4D36E978-E325-11CE-BFC1-08002BE10318 } "
Var devices(-1) as WindowsDeviceMBS = WindowsDeviceMBS.Devices(PortsGUID)
```

Notes: If present is true, only devices currently present on the system are returned.
The array is empty on any error.

Class	{ GUID }	Device Description
CDROM	{ 4D36E965-E325-11CE-BFC1-08002BE10318 }	CD/DVD/Blu-ray drives
DiskDrive	{ 4D36E967-E325-11CE-BFC1-08002BE10318 }	Hard drives
Display	{ 4D36E968-E325-11CE-BFC1-08002BE10318 }	Video adapters
FDC	{ 4D36E969-E325-11CE-BFC1-08002BE10318 }	Floppy controllers
FloppyDisk	{ 4D36E980-E325-11CE-BFC1-08002BE10318 }	Floppy drives
HDC	{ 4D36E96A-E325-11CE-BFC1-08002BE10318 }	Hard drive controllers
HIDClass	{ 745A17A0-74D3-11D0-B6FE-00A0C90F57DA }	Some USB devices
1394	{ 6BDD1FC1-810F-11D0-BEC7-08002BE2092F }	IEEE 1394 host controller

Keyboard	{ 4D36E96B-E325-11CE-BFC1-08002BE10318 }	Keyboards
Modem	{ 4D36E96D-E325-11CE-BFC1-08002BE10318 }	Modems
Mouse	{ 4D36E96F-E325-11CE-BFC1-08002BE10318 }	Mice and pointing devices
Media	{ 4D36E96C-E325-11CE-BFC1-08002BE10318 }	Audio and video devices
Net	{ 4D36E972-E325-11CE-BFC1-08002BE10318 }	Network adapters
Ports	{ 4D36E978-E325-11CE-BFC1-08002BE10318 }	Serial and parallel ports
SCSIAdapter	{ 4D36E97B-E325-11CE-BFC1-08002BE10318 }	SCSI and RAID controllers
System	{ 4D36E97D-E325-11CE-BFC1-08002BE10318 }	System buses, bridges, etc.
USB	{ 36FC9E60-C465-11CF-8056-444553540000 }	USB host controllers and hubs

See also:

- 210.16.5 Devices(present as boolean = true) as WindowsDeviceMBS() 24731

210.16.5 Devices(present as boolean = true) as WindowsDeviceMBS()

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries all devices on the system.
Notes: If present is true, only devices currently present on the system are returned.
The array is empty on any error.
See also:

- 210.16.4 Devices(ClassGUID as string, present as boolean = true) as WindowsDeviceMBS() 24730

210.16.6 HardwareID as string()

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The list of hardware IDs for a device.

210.16.7 LocationPaths as string()

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The location of the device in the device tree.
Notes: Windows Server 2003 and later.

210.16.8 LowerFilters as string()

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The names of a device's lower-filter drivers.

210.16.9 UpperFilters as string()

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The names of a device's upper filter drivers.

210.16.10 Properties

210.16.11 Address as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device's address.
Notes: (Read and Write property)

210.16.12 BusNumber as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device's bus number.
Notes: (Read and Write property)

210.16.13 BusTypeGUID as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GUID for the device's bus type.
Notes: (Read and Write property)

210.16.14 Capabilities as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device capabilities.
Notes: A combination of the kDeviceCapability* constants.
(Read and Write property)

210.16.15 Characteristics as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device characteristics.
Notes: (Read and Write property)

210.16.16 ClassGUID as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GUID that represents the device setup class of a device.
Notes: (Read and Write property)

210.16.17 ClassName as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device setup class of a device.
Notes: (This property should be named Class, but was renamed ClassName as Class is a reserved word in Xojo)
(Read and Write property)

210.16.18 ConfigFlags as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device's configuration flags.
Notes: (Read and Write property)

210.16.19 Description as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The description of a device.
Notes: Maybe localized.
(Read and Write property)

210.16.20 DeviceID as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: If a device is associated with this device entry, here you have the ID string for this device.
Notes: (Read and Write property)

210.16.21 DevicePath as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: For devices with device ID, this is the device path.
Notes: (Read and Write property)

210.16.22 DeviceType as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device's type.
Notes: See kDeviceType* constants.
(Read and Write property)

210.16.23 Driver as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that identifies the device's software key (sometimes called the driver key).
Notes: (Read and Write property)

210.16.24 EnumeratorName as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string that contains the name of the device's enumerator.
Notes: (Read and Write property)

210.16.25 Exclusive as Boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether a user can obtain exclusive use of the device.
Notes: The value is true if exclusive use is allowed, or false otherwise.
(Read and Write property)

210.16.26 FriendlyName as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The friendly name of a device.
Notes: (Read and Write property)

210.16.27 HID as Boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the plugin found additional HID details on the device.
Notes: (Read and Write property)

210.16.28 HIDAccessible as Boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the plugin was able to access the device and query the properties.
Notes: HIDAccessible is true if and only if HID is also true.
(Read and Write property)

210.16.29 HIDFeatureReportByteLength as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The length of the HID feature reports for this USB HID device.
Notes: Only valid if HID and HIDAccessible are true.
(Read and Write property)

210.16.30 HIDInputReportByteLength as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The length of the HID input reports for this USB HID device.
Notes: Only valid if HID and HIDAccessible are true.
(Read and Write property)

210.16.31 HIDManufacturerName as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The manufacturer name for this device.
Notes: Only valid if HID and HIDAccessible are true.
(Read and Write property)

210.16.32 HIDOutputReportByteLength as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The length of the HID output reports for this USB HID device.
Notes: Only valid if HID and HIDAccessible are true.
(Read and Write property)

210.16.33 HIDProductID as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The product ID for this USB device.
Notes: Only valid if HID and HIDAccessible are true.
(Read and Write property)

210.16.34 HIDProductName as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The product name for this HID Device.
Notes: Only valid if HID and HIDAccessible are true.
(Read and Write property)

210.16.35 HIDSerialNumber as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The serial number for this USB device.
Notes: Only valid if HID and HIDAccessible are true.
(Read and Write property)

210.16.36 HIDVendorID as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The vendor ID for this USB device.
Notes: Only valid if HID and HIDAccessible are true.
(Read and Write property)

210.16.37 HIDVersionNumber as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The version number for this HID Device.
Notes: Only valid if HID and HIDAccessible are true.
(Read and Write property)

210.16.38 InstallState as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The install state of this device.
Notes: See kInstallState* constants.
(Read and Write property)

210.16.39 LegacyBusType as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device's legacy bus type.
Notes: (Read and Write property)

210.16.40 LocationInformation as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The hardware location of a device.
Notes: (Read and Write property)

210.16.41 Manufacturer as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the device manufacturer.
Notes: (Read and Write property)

210.16.42 PhysicalDeviceObjectName as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name that is associated with the device's PDO.
Notes: (Read and Write property)

210.16.43 RemovalPolicy as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device's current removal policy.
Notes: Windows XP and later
(Read and Write property)

210.16.44 RemovalPolicyHWDefault as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device's hardware-specified default removal policy.
Notes: Windows XP and later
(Read and Write property)

210.16.45 RemovalPolicyOverride as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device's override removal policy (if it exists) from the registry.
Notes: Windows XP and later
(Read and Write property)

210.16.46 SecurityDescriptor as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device's security descriptor.
Notes: The format of security descriptor strings is described in Microsoft Windows SDK documentation.
(Read and Write property)

210.16.47 Service as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The service name for a device.
Notes: (Read and Write property)

210.16.48 UINumber as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The UINumber.
Notes: Specifies a number associated with the device that can be displayed in the user interface.

This number is typically a user-perceived slot number, such as a number printed next to the slot on the board, or some other number that makes locating the physical device easier for the user. For buses with no such convention, or when the UINumber is unknown, the bus driver leaves this member at its default value of -1.
(Read and Write property)

210.16.49 Constants

Constants

Constant	Value	Description
kDeviceCapabilityDockDevice	8	One of the capabilities constants. Dock Device
kDeviceCapabilityEjectSupported	2	One of the capabilities constants. Eject Supported
kDeviceCapabilityHardwareDisabled	256	One of the capabilities constants. Hardware Disabled
kDeviceCapabilityLockSupported	1	One of the capabilities constants. Lock Supported
kDeviceCapabilityNonDynamic	512	One of the capabilities constants. Non Dynamic
kDeviceCapabilityRAWDeviceOK	64	One of the capabilities constants. Raw Device OK
kDeviceCapabilityRemovable	4	One of the capabilities constants. Removable
kDeviceCapabilitySilentInstall	32	One of the capabilities constants. Silent Install
kDeviceCapabilitySurpriseRemovalOK	128	One of the capabilities constants. Surprise Removal OK
kDeviceCapabilityUniqueID	16	One of the capabilities constants. Unique ID
kDeviceType8042Port	&h27	One of the device type constants.
kDeviceTypeACPI	&h32	One of the device type constants.
kDeviceTypeBattery	&h29	One of the device type constants.
kDeviceTypeBeep	&h01	One of the device type constants.
kDeviceTypeBusExtender	&h2a	One of the device type constants.
kDeviceTypeCDROM	&h02	One of the device type constants.
kDeviceTypeCDROWFileSystem	&h03	One of the device type constants.
kDeviceTypeChanger	&h30	One of the device type constants.
kDeviceTypeController	&h04	One of the device type constants.
kDeviceTypeDataLink	&h05	One of the device type constants.
kDeviceTypeDFS	&h06	One of the device type constants.
kDeviceTypeDFSFileSystem	&h35	One of the device type constants.
kDeviceTypeDFSVolume	&h36	One of the device type constants.
kDeviceTypeDisk	&h07	One of the device type constants.
kDeviceTypeDiskFileSystem	&h08	One of the device type constants.
kDeviceTypeDVD	&h33	One of the device type constants.
kDeviceTypeFileSystem	&h09	One of the device type constants.
kDeviceTypeFips	&h3a	One of the device type constants.
kDeviceTypeFullscreenVideo	&h34	One of the device type constants.
kDeviceTypeInportPort	&h0a	One of the device type constants.
kDeviceTypeKeyboard	&h0b	One of the device type constants.
kDeviceTypeKS	&h2f	One of the device type constants.
kDeviceTypeKSec	&h39	One of the device type constants.
kDeviceTypeMailslot	&h0c	One of the device type constants.
kDeviceTypeMassStorage	&h2d	One of the device type constants.
kDeviceTypeMidiIn	&h0d	One of the device type constants.
kDeviceTypeMidiOut	&h0e	One of the device type constants.
kDeviceTypeModem	&h2b	One of the device type constants.
kDeviceTypeMouse	&h0f	One of the device type constants.
kDeviceTypeMultiUncProvider	&h10	One of the device type constants.
kDeviceTypeNamedPipe	&h11	One of the device type constants.
kDeviceTypeNetwork	&h12	One of the device type constants.
kDeviceTypeNetworkBrowser	&h13	One of the device type constants.
kDeviceTypeNetworkFileSystem	&h14	One of the device type constants.
kDeviceTypeNetworkRedirector	&h28	One of the device type constants.
kDeviceTypeNull	&h15	One of the device type constants.
kDeviceTypeParallelPort	&h16	One of the device type constants.
kDeviceTypePhysicalNetcard	&h17	One of the device type constants.

210.17 class WindowsDiscInfoMBS

210.17.1 class WindowsDiscInfoMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class to query details on a disc drive on Windows.
Example:

```
Var discs(-1) as WindowsDiscInfoMBS = WindowsDiscInfoMBS.Devices

for each disc as WindowsDiscInfoMBS in discs
MessageBox disc.ModelNumber
next
```

Blog Entries

- MBS REALbasic Plugins, version 10.4pr4

210.17.2 Methods

210.17.3 Device(file as folderitem) as WindowsDiscInfoMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the device with the given path.
Example:

```
// volume(0) is boot volume
Var disc as WindowsDiscInfoMBS = WindowsDiscInfoMBS.Device(volume(0))
```

Notes: Returns nil on any error (like missing permissions).
Seems like on Windows Vista/7 you need admin rights to query this.
The path of the folderitem must be something starting with a drive letter.
See also:

- 210.17.4 Device(path as string) as WindowsDiscInfoMBS 24741

210.17.4 Device(path as string) as WindowsDiscInfoMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the device with the given path.
Example:

```
Var disc as WindowsDiscInfoMBS = WindowsDiscInfoMBS.Device("C")
```

Notes: Returns nil on any error (like missing permissions).
Seems like on Windows Vista/7 you need admin rights to query this.
Path must be something starting with a drive letter.
See also:

- 210.17.3 Device(file as folderitem) as WindowsDiscInfoMBS 24741

210.17.5 Devices() as WindowsDiscInfoMBS()

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the device list.
Example:

```
// enumerate all drives
Var discs(-1) as WindowsDiscInfoMBS = WindowsDiscInfoMBS.Devices
```

Notes: Returns empty array on error.
May get more information on Windows Vista/7 if application runs as administrator.

210.17.6 Properties

210.17.7 BufferSize as Int64

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The buffer size of the disc controller.
Notes: This value is set if Mode contains 1.
(Read only property)

210.17.8 BytesPerSector as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of bytes per sector.
Notes: This value is set if Mode contains 4.
Typically 512 bytes, but that can increase in the future.

(Read and Write property)

210.17.9 Drive as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The drive number.
Notes: (Read and Write property)

210.17.10 Fixed as Boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this device is fixed.
Notes: This value is set if Mode contains 1 or 4.
(Read and Write property)

210.17.11 Mode as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: This value shows which properties of the instance have been set with values.
Notes: Mode is a bitwise or combination of values 1, 2 or 4. So value is 6 if mode 2 and 4 are set. You can test with bitwiseand(mode,mask). For example if bitwiseAnd(mode,4)=4 then BytesPerSector is valid.
(Read and Write property)

210.17.12 ModelNumber as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The model number string for this device.
Example:

```
Var discs(-1) as WindowsDiscInfoMBS = WindowsDiscInfoMBS.Devices

for each disc as WindowsDiscInfoMBS in discs
MessageBox disc.ModelNumber
next
```

Notes: This string is not available for all discs.
This value is set if Mode contains 1 or 2.

(Read and Write property)

210.17.13 ProductRevision as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The product revision string.
Notes: This string is not available for all discs.
This value is set if Mode contains 2.
(Read and Write property)

210.17.14 Removable as Boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this device is removable.
Notes: This value is set if Mode contains 1 or 4.
(Read and Write property)

210.17.15 RevisionNumber as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The revision number of the disc.
Notes: This string is not available for all discs.
This value is set if Mode contains 1.
(Read and Write property)

210.17.16 SectorsPerTrack as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of sectors per track.
Notes: This value is set if Mode contains 4.
(Read and Write property)

210.17.17 SerialNumber as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The serial number of the device.
Notes: This string is not available for all discs.
This value is set if Mode contains 1 or 2.
(Read and Write property)

210.17.18 Size as Int64

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size of this disc in bytes.
Notes: This value is set if Mode contains 1 or 4.
(Read only property)

210.17.19 TracksPerCylinder as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of tracks per cylinder.
Notes: This value is set if Mode contains 4.
(Read and Write property)

210.17.20 VendorId as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The vendor ID of the disc.
Notes: This value is set if Mode contains 2.
This string is not available for all discs.
(Read and Write property)

210.18 class WindowsDisplayMBS

210.18.1 class WindowsDisplayMBS

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for details on displays.
Example:

```
// list all displays on Windows with size, position and DPI
Var lines() As String
For Each d As WindowsDisplayMBS In WindowsDisplayMBS.Displays
lines.Add d.DeviceName + ": " + d.Width.ToString + " x " + d.Height.ToString + _
" at " + d.X.ToString + "/" + d.Y.ToString + ", " + d.WidthDPI.ToString + " dpi, scale " + d.LogScale-
Factor.ToString
Next

MessageBox String.FromArray(lines, EndOfLine)
```

210.18.2 Methods

210.18.3 Displays as WindowsDisplayMBS()

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries list of displays.
Notes: Returns nil in case of error.

210.18.4 Properties

210.18.5 DeviceInstanceID as String

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device instance ID in setup database.
Notes: (Read only property)

210.18.6 DeviceName as String

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device name of display.
Notes: (Read only property)

210.18.7 DisplayAdapterActive as Boolean

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether a monitor is presented as being "on" by the respective GDI view.
Notes: (Read only property)

210.18.8 DisplayAdapterDeviceID as String

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device ID for the display adapter.
Notes: (Read only property)

210.18.9 DisplayAdapterDeviceKey as String

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The display adapter device key.
Notes: (Read only property)

210.18.10 DisplayAdapterDeviceName as String

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The adapter device name.
Notes: (Read only property)

210.18.11 DisplayAdapterDeviceString as String

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device context string.
Notes: This is a description of the display adapter.
(Read only property)

210.18.12 DisplayAdapterRemovable as Boolean

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device is removable; it cannot be the primary display.
Notes: (Read only property)

210.18.13 DisplayAdapterStateFlags as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The state flags.
Notes: (Read only property)

210.18.14 DisplayMonitorActive as Boolean

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether a monitor is presented as being "on" by the respective GDI view.
Notes: (Read only property)

210.18.15 DisplayMonitorDeviceID as String

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device ID for the display monitor.
Notes: (Read only property)

210.18.16 DisplayMonitorDeviceKey as String

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The display monitor device key.
Notes: (Read only property)

210.18.17 DisplayMonitorDeviceName as String

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The monitor device name.
Notes: (Read only property)

210.18.18 DisplayMonitorDeviceString as String

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device context string.
Notes: This is a description of the display monitor.
(Read only property)

210.18.19 DisplayMonitorRemovable as Boolean

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device is removable; it cannot be the primary display.
Notes: (Read only property)

210.18.20 DisplayMonitorStateFlags as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The state flags.
Notes: (Read only property)

210.18.21 Height as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height of the display in pixels.
Notes: (Read only property)

210.18.22 HeightDPI as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The DPI for the display.
Notes: Calculated based on HeightInch property.
Value is zero if we don't know.
(Read only property)

210.18.23 HeightInch as Double

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The physical height of the screen in inches.
Notes: Value is zero if we don't know.
(Read only property)

210.18.24 HeightMM as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The physical height of the screen in millimeters.
Notes: Value is zero if we don't know.
(Read only property)

210.18.25 LogHeight as Integer

MBS Win Plugin, Plugin Version: 24.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height of the display in logical points.
Notes: This is basically Height * 96 / LogPixelY;
(Read only property)

210.18.26 LogPixelsX as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of pixels per logical inch along the screen width.
Notes: In a system with multiple display monitors, this value is the same for all monitors.

e.g. 200% is 96 * 2 = 192
(Read only property)

210.18.27 LogPixelsY as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of pixels per logical inch along the screen height.
Notes: In a system with multiple display monitors, this value is the same for all monitors.

e.g. 200% is 96 * 2 = 192
(Read only property)

210.18.28 LogScaleFactor as Double

MBS Win Plugin, Plugin Version: 24.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The logical scale factor.
Notes: Same as LogPixelsX/96.
(Read only property)

210.18.29 LogWidth as Integer

MBS Win Plugin, Plugin Version: 24.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width of the display in logical points.
Notes: This is basically Width * 96 / LogPixelX;
(Read only property)

210.18.30 LogX as Integer

MBS Win Plugin, Plugin Version: 24.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The position of the display in the virtual desktop space in logical points..
Notes: Primary display is always at 0/0.
This is basically X * 96 / LogPixelX;
(Read only property)

210.18.31 LogY as Integer

MBS Win Plugin, Plugin Version: 24.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The position of the display in the virtual desktop space in logical points.
Notes: Primary display is always at 0/0.
This is basically Y * 96 / LogPixelY;
(Read only property)

210.18.32 MonitorHandle as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle for the monitor.
Notes: (Read only property)

210.18.33 MonitorHeight as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The monitor height.
Notes: (Read only property)

210.18.34 MonitorWidth as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The monitor width.
Notes: (Read only property)

210.18.35 MonitorX as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The position of monitor.
Notes: The display monitor rectangle, expressed in virtual-screen coordinates. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read only property)

210.18.36 MonitorY as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The position of monitor.
Notes: The display monitor rectangle, expressed in virtual-screen coordinates. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read only property)

210.18.37 Primary as Boolean

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this is primary display.
Notes: (Read only property)

210.18.38 Width as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width of the display in pixels.
Notes: (Read only property)

210.18.39 WidthDPI as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The DPI for the display.
Notes: Calculated based on WidthInch property.
Value is zero if we don't know.
(Read only property)

210.18.40 WidthInch as Double

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The physical width of the screen in inches.
Notes: Value is zero if we don't know.
(Read only property)

210.18.41 WidthMM as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The physical width of the screen in millimeters.
Notes: Value is zero if we don't know.
(Read only property)

210.18.42 WorkHeight as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The work area height in pixels.
Notes: (Read only property)

210.18.43 WorkWidth as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The work area width in pixels.
Notes: (Read only property)

210.18.44 WorkX as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The work area position.
Notes: The work area rectangle of the display monitor that can be used by applications, expressed in virtual-screen coordinates. Windows uses this rectangle to maximize an application on the monitor. The rest of the area in rcMonitor contains system windows such as the task bar and side bars. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read only property)

210.18.45 WorkY as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The work area position.
Notes: The work area rectangle of the display monitor that can be used by applications, expressed in virtual-screen coordinates. Windows uses this rectangle to maximize an application on the monitor. The rest of the area in rcMonitor contains system windows such as the task bar and side bars. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read only property)

210.18.46 X as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The position of the display in the virtual desktop space in pixels.
Notes: Primary display is always at 0/0.
(Read only property)

210.18.47 Y as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The position of the display in the virtual desktop space in pixels.
Notes: Primary display is always at 0/0.
(Read only property)

210.19 class WindowsFileCopyMBS

210.19.1 class WindowsFileCopyMBS

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to help you copying files on Windows using system functions.
Example:

```
// copy a file and move another one into a folder using Windows system functions
Var w As New WindowsFileCopyMBS

Var source As FolderItem = SpecialFolder.Desktop.Child("test.txt")
Var dest As FolderItem = SpecialFolder.Desktop.Child("test copy.txt")

If w.CopyFileSimple(source, dest) Then
MessageBox "Copied."
Else
MessageBox "Copy failed: " + w.Lasterror.ToString
End If

// move with the Windows progress dialog
Var target As FolderItem = SpecialFolder.Documents
If Not w.FileOperationMove(dest, target, 0, "Moving file") Then
MessageBox "Move failed: " + w.Lasterror.ToString
End If
```

210.19.2 Methods

210.19.3 CopyFileEx(ExistingFileName as folderitem, NewFileName as folderitem, Flags as Integer) as boolean

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Copies an existing file to a new file, notifying the application of its progress through the progress event.
Notes: Returns true on success and false on failure.

ExistingFileName: The name of an existing file.
NewFileName: The name of the new file.
Flags: Flags that specify how the file is to be copied. This parameter can be a combination of the CopyFile* constants.
See also:

- 210.19.4 CopyFileEx(ExistingFileName as String, NewFileName as String, Flags as Integer) as boolean 24757

210.19.4 CopyFileEx(ExistingFileName as String, NewFileName as String, Flags as Integer) as boolean

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Copies an existing file to a new file, notifying the application of its progress through the progress event.
Notes: Returns true on success and false on failure.

ExistingFileName: The name of an existing file.
NewFileName: The name of the new file.
Flags: Flags that specify how the file is to be copied. This parameter can be a combination of the CopyFile* constants.
See also:

- 210.19.3 CopyFileEx(ExistingFileName as folderitem, NewFileName as folderitem, Flags as Integer) as boolean 24756

210.19.5 CopyFileSimple(ExistingFileName as folderitem, NewFileName as folderitem, FailIfExists as boolean=false) as boolean

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Copies an existing file to a new file.
Notes: ExistingFileName: The name of an existing file.
NewFileName: The name of the new file.
FailIfExists: If this parameter is true and the new file specified by NewFileName already exists, the function fails. If this parameter is false and the new file already exists, the function overwrites the existing file and succeeds.

Returns true on success and false on failure.
See also:

- 210.19.6 CopyFileSimple(ExistingFileName as String, NewFileName as String, FailIfExists as boolean=false) as boolean 24758

210.19.6 CopyFileSimple(ExistingFileName as String, NewFileName as String, FailIfExists as boolean=false) as boolean

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Copies an existing file to a new file.
Notes: ExistingFileName: The name of an existing file.
NewFileName: The name of the new file.
FailIfExists: If this parameter is true and the new file specified by NewFileName already exists, the function fails. If this parameter is false and the new file already exists, the function overwrites the existing file and succeeds.

Returns true on success and false on failure.
See also:

- 210.19.5 CopyFileSimple(ExistingFileName as folderitem, NewFileName as folderitem, FailIfExists as boolean=false) as boolean 24757

210.19.7 FileOperationCopy(source as folderitem, dest as folderitem, Flags as Integer, ProgressTitle as string="") as boolean

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Copy the files specified in the source parameter to the location specified in the dest parameter.
Notes: This method has several varations so you can call it with a folderitem or a string to specify a file or folder. You can also pass an array of folderitems or strings to delete several files/folders in one operation.

source:
These names should be fully-qualified paths to prevent unexpected results.
Standard Microsoft MS-DOS wildcard characters, such as "*", are permitted only in the file-name position. Using a wildcard character elsewhere in the string will lead to unpredictable results.

dest:
The destination file or directory name. Wildcard characters are not allowed. Their use will lead to unpredictable results.

Copy and Move operations can specify destination directories that do not exist. In those cases, the system attempts to create them and normally displays a dialog box to ask the user if they want to create the new directory. To suppress this dialog box and have the directories created silently, set the FileOperationNoConfirmationMkDir flag in Flags.
For Copy and Move operations, the buffer can contain multiple destination file names if the fFlags member

specifies FileOperationMultiDestFiles.
Use fully-qualified paths. Using relative paths is not prohibited, but can have unpredictable results.

Use the FileOperation* constants for the flags.
If a dialog is displayed, the window used in the parent property is used for the parent window.
If ProgressTitle is not empty, this string is used to specify the progress window title text.

Returns true on success and false on failure.

210.19.20 FileOperationMove(source as string, dest as folderitem, Flags as Integer, ProgressTitle as string="") as boolean

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Move the files specified in the source parameter to the location specified in the dest parameter.
Notes: This method has several varations so you can call it with a folderitem or a string to specify a file or folder. You can also pass an array of folderitems or strings to delete several files/folders in one operation.

source:
These names should be fully-qualified paths to prevent unexpected results.
Standard Microsoft MS-DOS wildcard characters, such as "*", are permitted only in the file-name position. Using a wildcard character elsewhere in the string will lead to unpredictable results.

dest:
The destination file or directory name. Wildcard characters are not allowed. Their use will lead to unpredictable results.

Copy and Move operations can specify destination directories that do not exist. In those cases, the system attempts to create them and normally displays a dialog box to ask the user if they want to create the new directory. To suppress this dialog box and have the directories created silently, set the FileOperationNoConfirmationMkDir flag in Flags.
For Copy and Move operations, the buffer can contain multiple destination file names if the fFlags member specifies FileOperationMultiDestFiles.
Use fully-qualified paths. Using relative paths is not prohibited, but can have unpredictable results.

Use the FileOperation* constants for the flags.
If a dialog is displayed, the window used in the parent property is used for the parent window.
If ProgressTitle is not empty, this string is used to specify the progress window title text.

Returns true on success and false on failure.

210.19.27 MoveFileSimple(ExistingFileName as folderitem, NewFileName as folderitem) as boolean

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Moves an existing file or a directory, including its children.
Notes: ExistingFileName:The current name of the file or directory on the local computer.

NewFileName: The new name for the file or directory. The new name must not already exist. A new file may be on a different file system or drive. A new directory must be on the same drive.

Returns true on success and false on failure.

The MoveFile function will move (rename) either a file or a directory (including its children) either in the same directory or across directories. The one caveat is that the MoveFile function will fail on directory moves when the destination is on a different volume.

If a file is moved across volumes, MoveFile does not move the security descriptor with the file. The file will be assigned the default security descriptor in the destination directory.

The MoveFile function coordinates its operation with the link tracking service, so link sources can be tracked as they are moved.
See also:

- 210.19.28 MoveFileSimple(ExistingFileName as String, NewFileName as String) as boolean 24779

210.19.28 MoveFileSimple(ExistingFileName as String, NewFileName as String) as boolean

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Moves an existing file or a directory, including its children.
Notes: ExistingFileName:The current name of the file or directory on the local computer.

NewFileName: The new name for the file or directory. The new name must not already exist. A new file may be on a different file system or drive. A new directory must be on the same drive.

Returns true on success and false on failure.

The MoveFile function will move (rename) either a file or a directory (including its children) either in the same directory or across directories. The one caveat is that the MoveFile function will fail on directory moves when the destination is on a different volume.

If a file is moved across volumes, MoveFile does not move the security descriptor with the file. The file will be assigned the default security descriptor in the destination directory.

The MoveFile function coordinates its operation with the link tracking service, so link sources can be tracked as they are moved.
See also:

- 210.19.27 MoveFileSimple(ExistingFileName as folderitem, NewFileName as folderitem) as boolean 24779

210.19.29 MoveFileWithProgress(ExistingFileName as folderitem, NewFileName as folderitem, Flags as Integer) as boolean

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Moves a file or directory, including its children.
Notes: ExistingFileName: The name of the existing file or directory on the local computer.

If Flags specifies MOVEFILE_DELAY_UNTIL_REBOOT, the file cannot exist on a remote share because delayed operations are performed before the network is available.

NewFileName: The new name of the file or directory on the local computer.

When moving a file, NewFileName can be on a different file system or volume. If NewFileName is on another drive, you must set the MOVEFILE_COPY_ALLOWED flag in Flags.

When moving a directory, ExistingFileName and NewFileName must be on the same drive.

If Flags specifies MOVEFILE_DELAY_UNTIL_REBOOT and NewFileName is nil, MoveFileWithProgress

registers ExistingFileName to be deleted when the system restarts. The function fails if it cannot access the registry to store the information about the delete operation. If ExistingFileName refers to a directory, the system removes the directory at restart only if the directory is empty.

Flags: The move options. This parameter can be one or more of the following values: MoveFileCopyAllowed, MoveFileReplaceExisting, MoveFileCreateHardLink, MoveFileDelayUntilReboot and MoveFileWriteThrough.

Return Value: If the function succeeds, the return value is true. If the function fails, the return value is false.

When moving a file across volumes, if the Progress event returns PROGRESS_CANCEL due to the user canceling the operation, MoveFileWithProgress will return zero and GetLastError will return ERROR_REQUEST_ABORTED. The existing file is left intact.

When moving a file across volumes, if the Progress event returns PROGRESS_STOP due to the user stopping the operation, MoveFileWithProgress will return zero and GetLastError will return ERROR_REQUEST_ABORTED. The existing file is left intact.

210.19.30 MoveFileWithProgress(ExistingFileName as String, NewFileName as String, Flags as Integer) as boolean

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Moves a file or directory, including its children.
Notes: ExistingFileName: The name of the existing file or directory on the local computer.

If Flags specifies MOVEFILE_DELAY_UNTIL_REBOOT, the file cannot exist on a remote share because delayed operations are performed before the network is available.

NewFileName: The new name of the file or directory on the local computer.

When moving a file, NewFileName can be on a different file system or volume. If NewFileName is on another drive, you must set the MOVEFILE_COPY_ALLOWED flag in Flags.

When moving a directory, ExistingFileName and NewFileName must be on the same drive.

If Flags specifies MOVEFILE_DELAY_UNTIL_REBOOT and NewFileName is "", MoveFileWithProgress registers ExistingFileName to be deleted when the system restarts. The function fails if it cannot access the registry to store the information about the delete operation. If ExistingFileName refers to a directory, the

system removes the directory at restart only if the directory is empty.

Flags: The move options. This parameter can be one or more of the following values: MoveFileCopyAllowed, MoveFileReplaceExisting, MoveFileCreateHardLink, MoveFileDelayUntilReboot and MoveFileWriteThrough.

Return Value: If the function succeeds, the return value is true. If the function fails, the return value is false.

When moving a file across volumes, if the Progress event returns PROGRESS_CANCEL due to the user canceling the operation, MoveFileWithProgress will return zero and GetLastError will return ERROR_REQUEST_ABORTED. The existing file is left intact.

When moving a file across volumes, if the Progress event returns PROGRESS_STOP due to the user stopping the operation, MoveFileWithProgress will return zero and GetLastError will return ERROR_REQUEST_ABORTED. The existing file is left intact.

210.19.31 Properties

210.19.32 Lasterror as Integer

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: This value is typically zero on success and -1 if the function is not supported by the plugin.

The FileOperation* functions have special error codes as following, but other methods have normal Windows Error codes:

(Read and Write property)

210.19.33 MultiThreaded as Boolean

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to use helper thread for better GUI responsiveness.
Notes: This property allows you to call this method in a Thread. The plugin will perform the actual operation on a helper thread, so it does not block Xojo's threading. Your GUI can continue to run this way. Progress event fires asynchronously.

DE_SAMEFILE	= &h71	The source and destination files are the same file.
DE_MANYSRC1DEST	= &h72	Multiple file paths were specified in the source buffer, but only one destination file path.
DE_DIFFDIR	= &h73	Rename operation was specified but the destination path is a different directory. Use the move operation instead.
DE_ROOTDIR	= &h74	The source is a root directory, which cannot be moved or renamed.
DE_OPCANCELLED	= &h75	The operation was cancelled by the user, or silently cancelled if the appropriate flags were supplied to SHFileOperation.
DE_DESTSUBTREE	= &h76	The destination is a subtree of the source.
DE_ACCESSDENIEDSRC	= &h78	Security settings denied access to the source.
DE_PATHTOODEEP	= &h79	The source or destination path exceeded or would exceed MAX_PATH.
DE_MANYDEST	= &h7A	The operation involved multiple destination paths, which can fail in the case of a move operation.
DE_INVALIDFILES	= &h7C	The path in the source or destination or both was invalid.
DE_DESTSAMETREE	= &h7D	The source and destination have the same parent folder.
DE_FLDDESTISFILE	= &h7E	The destination path is an existing file.
DE_FILEDESTISFLD	= &h80	The destination path is an existing folder.
DE_FILENAMETOOLONG	= &h81	The name of the file exceeds MAX_PATH.
DE_DEST_IS_CDROM	= &h82	The destination is a read-only CD-ROM, possibly unformatted.
DE_DEST_IS_DVD	= &h83	The destination is a read-only DVD, possibly unformatted.
DE_DEST_IS_CDRECORD	= &h84	The destination is a writable CD-ROM, possibly unformatted.
DE_FILE_TOO_LARGE	= &h85	The file involved in the operation is too large for the destination media or file system.
DE_SRC_IS_CDROM	= &h86	The source is a read-only CD-ROM, possibly unformatted.
DE_SRC_IS_DVD	= &h87	The source is a read-only DVD, possibly unformatted.
DE_SRC_IS_CDRECORD	= &h88	The source is a writable CD-ROM, possibly unformatted.
DE_ERROR_MAX	= &hB7	MAX_PATH was exceeded during the operation.
UnknownError	= &h402	An unknown error occurred. This is typically due to an invalid path in the source or destination. This error does not occur on Windows Vista and later.
ERRORONDEST	= &h10000	An unspecified error occurred on the destination.
DE_ROOTDIR | ERRORONDEST	= &h10074	Destination is a root directory and cannot be renamed.

(Read and Write property)

210.19.34 OperationsAborted as Boolean

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: This flag is set by the FileOperation method to indicate whether the operation was aborted.
Notes: (Read and Write property)

210.19.35 Parent as Variant

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop only.

Function: The parent window for the FileOperation methods.
Notes: Can reference a Window or DesktopWindow object.
(Read and Write property)

210.19.36 Events

210.19.37 Progress(TotalFileSize as int64, TotalBytesTransferred as int64, StreamSize as int64, StreamBytesTransferred as Int64, StreamNumber as Integer, Reason as Integer) as Integer

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: It is called when a portion of a copy or move operation is completed.
Notes: This event is called by the CopyFileEx and the MoveFileWithProgress methods.

TotalFileSize: The total size of the file, in bytes.
TotalBytesTransferred: The total number of bytes transferred from the source file to the destination file since the copy operation began.
StreamSize: The total size of the current file stream, in bytes.
StreamBytesTransferred: The total number of bytes in the current stream that have been transferred from the source file to the destination file since the copy operation began.
StreamNumber: A handle to the current stream. The first time CopyProgressRoutine is called, the stream number is 1.
Reason: CallbackChunkFinished or CallbackStreamSwitched.

Return ProgressCancel, ProgressStop, ProgressContinue or ProgressQuiet.
If you use multithreading option, you may receive additional events after you cancelled or stopped the operation due to the events coming asynchronously.

210.19.38 Constants

Constants

Constant	Value	Description
CallbackChunkFinished	0	One of the reason constants for the Progress event. Another part of the data file was copied.
CallbackStreamSwitched	1	One of the reason constants for the Progress event. Another stream was created and is about to be copied. This is th reason given when the callback routine is first invoked.
CopyFileAllowDecryptedDestination	8	One of the constants used with CopyFileEx. An attempt to copy an encrypted file will succeed even if the destin cannot be encrypted. Windows 2000: This value is not supported.
CopyFileCopySymLink	&h800	One of the constants used with CopyFileEx. If the source file is a symbolic link, the destination file is also a sym pointing to the same file that the source symbolic link is pointing to. Server 2003 and Windows XP/2000: This value is not supported.
CopyFileFailIfExists	1	One of the constants used with CopyFileEx. The copy operation fails immediately if the target file already exists
CopyFileOpenSourceForWrite	4	One of the constants used with CopyFileEx. The file is copied and the original file is opened for write access.
CopyFileRestartable	2	One of the constants used with CopyFileEx. Progress of the copy is tracked in the target file in case the copy failed copy can be restarted at a later time by specifying the same source and dest as those used in the call that failed.
FileOperationAllowUndo	&h40	One of the flag constants for the FileOperation methods. Preserve undo information, if possible. Prior to Windows Vista, operations could be undone only from the sa that performed the original operation. In Windows Vista and later systems, the scope of the undo is a us Any process running in the user session can undo another operation. state is held in the Explorer.exe process, and as long as that process i it can coordinate the undo functions. If the source file parameter does not contain fully qualified path and this flag is ignored.
FileOperationFilesOnly	&h80	One of the flag constants for the FileOperation methods. Perform the operation only on files (not on folders) if a wildcard file is specified.
FileOperationMultiDestFiles	1	One of the flag constants for the FileOperation methods. The destination multiple destination files (one for each source fil rather than one directory where all source files are to be deposited.
FileOperationNoConfirmation	&h10	One of the flag constants for the FileOperation methods. Respond with Yes to All for any dialog box that is displayed.
FileOperationNoConfirmationMkDir	&h200	One of the flag constants for the FileOperation methods. Do not ask the user to confirm the creation of a new directory if the requires one to be created.
FileOperationNoConnectedElements	&H2000	One of the flag constants for the FileOperation methods. Do not move connected files as a group. Only move the specified fil
FileOperationNoCopySecurityAttributes	&h800	One of the flag constants for the FileOperation methods. Do not copy the security attributes of the file. The destination file r security attributes of its new folder.
FileOperationNoErrorUI	&h400	One of the flag constants for the FileOperation methods. Do not display a dialog to the user if an error occurs.
FileOperationNoRecursion	&h1000	One of the flag constants for the FileOperation methods. Only perform the operation in the local directory. Don't operate into subdirectories, which is the default behavior.
FileOperationRenameCollision	8	One of the flag constants for the FileOperation methods. Give the file being operated on a new name in a move, copy, or rename if a file with the target name already exists at the destination.
FileOperationSilent	4	One of the flag constants for the FileOperation methods. Do not display a progress dialog box.
FileOperationSimpleProgress	&h100	One of the flag constants for the FileOperation methods. Display a progress dialog box but do not show individual file nam

210.20 class WindowsFileInfoMBS

210.20.1 class WindowsFileInfoMBS

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The window file information class.
Example:

```
Var f as FolderItem = SelectFolder

if f<>Nil then
Var w as new WindowsFileInfoMBS(f)
MessageBox str(w.FileIndex)
end if
```

Notes: The identifier that is stored in the FileIndex members is called the file ID. Support for file IDs is file system-specific. File IDs are not guaranteed to be unique over time, because file systems are free to reuse them. In some cases, the file ID for a file can change over time.

In the FAT file system, the file ID is generated from the first cluster of the containing directory and the byte offset within the directory of the entry for the file. Some defragmentation products change this byte offset. (Windows in-box defragmentation does not.) Thus, a FAT file ID can change over time. Renaming a file in the FAT file system can also change the file ID, but only if the new file name is longer than the old one.

In the NTFS file system, a file keeps the same file ID until it is deleted. You can replace one file with another file without changing the file ID by using the ReplaceFile function. However, the file ID of the replacement file, not the replaced file, is retained as the file ID of the resulting file.

Not all file systems can record creation and last access time, and not all file systems record them in the same manner. For example, on a Windows FAT file system, create time has a resolution of 10 milliseconds, write time has a resolution of 2 seconds, and access time has a resolution of 1 day (the access date). On the NTFS file system, access time has a resolution of 1 hour. For more information, see File Times.

210.20.2 Methods

210.20.3 Constructor(file as folderitem)

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor using a folderitem.
Notes: On success the valid property is set to true.
See also:

- 210.20.4 Constructor(handle as Integer) 24787
- 210.20.5 Constructor(path as string) 24787
- 210.20.6 Constructor(stream as BinaryStream) 24788

210.20.4 Constructor(handle as Integer)

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor using a Windows File Handle.
Notes: On success the valid property is set to true.
See also:

- 210.20.3 Constructor(file as folderitem) 24787
- 210.20.5 Constructor(path as string) 24787
- 210.20.6 Constructor(stream as BinaryStream) 24788

210.20.5 Constructor(path as string)

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor using a file path.
Notes: On success the valid property is set to true.
See also:

- 210.20.3 Constructor(file as folderitem) 24787
- 210.20.4 Constructor(handle as Integer) 24787
- 210.20.6 Constructor(stream as BinaryStream) 24788

210.20.6 Constructor(stream as BinaryStream)

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor using a binarystream.
Notes: On success the valid property is set to true.
See also:

- 210.20.3 Constructor(file as folderitem) 24787
- 210.20.4 Constructor(handle as Integer) 24787
- 210.20.5 Constructor(path as string) 24787

210.20.7 Properties

210.20.8 CreationDate as Date

MBS Win Plugin, Plugin Version: 18.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: A date that specifies when a file or directory is created.
Notes: If the underlying file system does not support creation time, this member is nil.
(Read only property)

210.20.9 CreationTime as UInt64

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: An UInt64 that specifies when a file or directory is created.
Notes: If the underlying file system does not support creation time, this member is zero (0).
(Read only property)

210.20.10 FileAttributes as Integer

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file attributes.
Notes: For possible values and their descriptions, see kFileAttribute* constants.
(Read only property)

210.20.11 FileIndex as UInt64

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The unique identifier that is associated with a file.
Notes: The identifier and the volume serial number uniquely identify a file on a single computer. To determine whether two open handles represent the same file, combine the identifier and the volume serial number for each file and compare them.
(Read only property)

210.20.12 FileSize as UInt64

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file size.
Notes: (Read only property)

210.20.13 LastAccessDate as Date

MBS Win Plugin, Plugin Version: 18.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: For a file, the structure specifies the last time that a file is read from or written to.
Notes: For a directory, the structure specifies when the directory is created. For both files and directories, the specified date is correct, but the time of day is always set to midnight. If the underlying file system does not support the last access time, this member is nil.
(Read only property)

210.20.14 LastAccessTime as UInt64

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: For a file, the structure specifies the last time that a file is read from or written to.
Notes: For a directory, the structure specifies when the directory is created. For both files and directories, the specified date is correct, but the time of day is always set to midnight. If the underlying file system does not support the last access time, this member is zero (0).
(Read only property)

210.20.15 LastWriteDate as Date

MBS Win Plugin, Plugin Version: 18.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: For a file, the structure specifies the last time that a file is written to.
Notes: For a directory, the structure specifies when the directory is created. If the underlying file system does not support the last write time, this member is nil.

(Read only property)

210.20.16 LastWriteTime as UInt64

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: For a file, the structure specifies the last time that a file is written to.
Notes: For a directory, the structure specifies when the directory is created. If the underlying file system does not support the last write time, this member is zero (0).
(Read only property)

210.20.17 NumberOfLinks as Integer

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of links to this file.
Notes: For the FAT file system this member is always 1. For the NTFS file system, it can be more than 1.
(Read only property)

210.20.18 Valid as Boolean

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the constructor got the values.
Notes: (Read only property)

210.20.19 VolumeSerialNumber as Integer

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The serial number of the volume that contains a file.
Notes: (Read only property)

210.20.20 Constants

Constants

Constant	Value	Description
kFileAttributeArchive	32	One of the file attribute constants. A file or directory that is an archive file or directory. Applications typicall use this attribute to mark files for backup or removal.
kFileAttributeCompressed	2048	One of the file attribute constants. A file or directory that is compressed. For a file, all of the data in the file compressed. For a directory, compression is the default for newly created fil and subdirectories.
kFileAttributeDevice	64	One of the file attribute constants. This value is reserved for system use.
kFileAttributeDirectory	16	One of the file attribute constants. The handle that identifies a directory.
kFileAttributeEncrypted	16384	One of the file attribute constants. A file or directory that is encrypted. For a file, all data streams in the file a encrypted. For a directory, encryption is the default for newly created files an subdirectories.
kFileAttributeHidden	2	One of the file attribute constants. The file or directory is hidden. It is not included in an ordinary director listing.
kFileAttributeNormal	128	One of the file attribute constants. A file that does not have other attributes set. This attribute is valid only whe used alone.
kFileAttributeNotContentIndexed	8192	One of the file attribute constants. The file or directory is not to be indexed by the content indexing service.
kFileAttributeOffline	4096	One of the file attribute constants. The data of a file is not available immediately. This attribute indicates that th file data is physically moved to offline storage. This attribute is used by Remot Storage, which is the hierarchical storage management software. Applicatio should not arbitrarily change this attribute.
kFileAttributeReadonly	1	One of the file attribute constants. A file that is read-only. Applications can read the file, but cannot write to it delete it. This attribute is not honored on directories. For more informatio see "You cannot view or change the Read-only or the System attributes folders in Windows Server 2003, in Windows XP, or in Windows Vista".
kFileAttributeReparsePoint	1024	One of the file attribute constants. A file or directory that has an associated reparse point, or a file that is symbolic link.
kFileAttributeSparseFile	512	One of the file attribute constants. A file that is a sparse file.
kFileAttributeSystem	4	One of the file attribute constants. A file or directory that the operating system uses a part of, or uses exclusivel
kFileAttributeTemporary	256	One of the file attribute constants. A file that is being used for temporary storage. File systems avoid writing dat back to mass storage if sufficient cache memory is available, because typicall an application deletes a temporary file after the handle is closed. In tha scenario, the system can entirely avoid writing the data. Otherwise, the dat is written after the handle is closed.
kFileAttributeVirtual	65536	One of the file attribute constants. This value is reserved for system use.

210.21 class WindowsFileStreamMBS

210.21.1 class WindowsFileStreamMBS

MBS Win Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for file streams on Windows.
Notes: Windows can store more than one data stream in a file.

(on Mac/Linux, please check the ExtendedAttributesMBS module)
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.4pr5

210.21.2 Methods

210.21.3 Constructor

MBS Win Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

210.21.4 List(file as folderitem) as WindowsFileStreamMBS()

MBS Win Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Lists file streams in a file at given folderitem.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
Var w() as WindowsFileStreamMBS = WindowsFileStreamMBS.List(f)

Break
```

Notes: Returns nil in case of error.
Else returns an array with stream details.

Requires Windows Vista or newer. Raises exception on Windows XP.
See also:

- 210.21.5 List(Path as String) as WindowsFileStreamMBS()

210.21.5 List(Path as String) as WindowsFileStreamMBS()

MBS Win Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Lists file streams in a file at given path.
Notes: Returns nil in case of error.
Else returns an array with stream details.

Requires Windows Vista or newer. Raises exception on Windows XP.
See also:

- 210.21.4 List(file as folderitem) as WindowsFileStreamMBS() 24792

210.21.6 Properties

210.21.7 Name as String

MBS Win Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the stream.
Notes: (Read only property)

210.21.8 Size as UInt64

MBS Win Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size in bytes.
Notes: (Read only property)

210.22 class WindowsFileVersionMBS

210.22.1 class WindowsFileVersionMBS

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to read Windows version information from a file.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MessageBox w.GetInternalName
end if
```

Blog Entries

- MBS Plugins 10.3 Release Notes
- Tipp of the day: WindowsFileVersionMBS

210.22.2 Methods

210.22.3 FileVersion as string

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file version in an user readable string.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MessageBox w.FileVersion
end if
```

Notes: format is "1.2.3.4".

210.22.4 GetCompanyName as string

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns value for key CompanyName.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MessageBox w.GetCompanyName
end if
```

210.22.5 GetFileDescription as string

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns value for key FileDescription.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MessageBox w.GetFileDescription
end if
```

210.22.6 GetFileVersion as string

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns value for key FileVersion.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MessageBox w.GetFileVersion
end if
```

210.22.7 GetInternalName as string

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns value for key InternalName.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MessageBox w.GetInternalName
```

```
end if
```

210.22.8 GetLegalCopyright as string

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns value for key LegalCopyright.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MessageBox w.GetLegalCopyright
end if
```

210.22.9 GetOriginalFilename as string

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns value for key OriginalFilename.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MessageBox w.GetOriginalFilename
end if
```

210.22.10 GetProductName as string

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns value for key ProductName.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MessageBox w.GetProductName
end if
```

210.22.11 GetProductVersion as string

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns value for key ProductVersion.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MessageBox w.GetProductVersion
end if
```

210.22.12 OpenFile(file as folderitem) as boolean

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Loads file information from a given file.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MessageBox w.GetCompanyName
end if
```

Notes: Returns true on success and false on failure.

210.22.13 ProductVersion as string

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The product version in an user readable string.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MessageBox w.ProductVersion
end if
```

Notes: format is "1.2.3.4"

210.22.14 QueryBinaryValue(key as string) as string

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Low level function to read a binary item from the information resource.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
// we define encoding as UTF16 as we know the value for ProductName is an UTF16 string.
MessageBox DefineEncoding(w.QueryBinaryValue("ProductName"), encodings.UTF16)
end if
```

Notes: Returns "" on any error.

210.22.15 QueryUnicodeValue(key as string) as string

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Low level function to read an unicode string item from the information resource.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MessageBox str(w.QueryUnicodeValue("ProductName"))
end if
```

Notes: Returns "" on any error.

210.22.16 Properties

210.22.17 FileDateLS as Integer

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: File date number. Lower part.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MessageBox str(w.FileDateLS)
```

```
end if
```

Notes: Filedate is a 64 bit integer. This is the lower 32 bit part.

Specifies the least significant 32 bits of the file's 64-bit binary creation date and time stamp.
(Read and Write property)

210.22.18 FileDateMS as Integer

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: File date number. Higher part.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MessageBox str(w.FileDateMS)
end if
```

Notes: Filedate is a 64 bit integer. This is the higher 32 bit part.

Specifies the most significant 32 bits of the file's 64-bit binary creation date and time stamp.
(Read and Write property)

210.22.19 FileFlags as Integer

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file flags.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MessageBox str(w.FileFlags)
end if
```

Notes: Contains a bitmask that specifies the Boolean attributes of the file. This member can include one or more of the following values.

(Read and Write property)

VS_FF_DEBUG	= 1	The file contains debugging information or is compiled with debugging features enabled.
VS_FF_INFOINFERRED	= 16	The file's version structure was created dynamically; therefore, some of the members in this structure may be empty or incorrect. This flag should never be set in a file's VS_VERSIONINFO data.
VS_FF_PATCHED	= 4	The file has been modified and is not identical to the original shipping file of the same version number.
VS_FF_PRERELEASE	= 2	The file is a development version, not a commercially released product.
VS_FF_PRIVATEBUILD	= 8	The file was not built using standard release procedures. If this flag is set, the StringFileInfo structure should contain a PrivateBuild entry.
VS_FF_SPECIALBUILD	= 32	The file was built by the original company using standard release procedures but is a variation of the normal file of the same version number. If this flag is set, the StringFileInfo structure should contain a SpecialBuild entry.

210.22.20 FileOS as Integer

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file os settings.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MessageBox str(w.FileOS)
end if
```

Notes: Specifies the operating system for which this file was designed. This member can be one of the following values.

VOS_DOS	= &h00010000	The file was designed for MS-DOS.
VOS_NT	= &h00040000	The file was designed for Windows NT.
VOS___WINDOWS16	= &h00000001	The file was designed for 16-bit Windows.
VOS___WINDOWS32	= &h00000004	The file was designed for 32-bit Windows.
VOS_OS216	= &h00020000	The file was designed for 16-bit OS/2.
VOS_OS232	= &h00030000	The file was designed for 32-bit OS/2.
VOS___PM16	= &h00000002	The file was designed for 16-bit Presentation Manager.
VOS___PM32	= &h00000003	The file was designed for 32-bit Presentation Manager.
VOS_UNKNOWN	= &h00000000	The operating system for which the file was designed is unknown to the system.

An application can combine these values to indicate that the file was designed for one operating system running on another. The following FileOS values are examples of this, but are not a complete list.

(Read and Write property)

VOS_DOS_WINDOWS16	= &h00010001	The file was designed for 16-bit Windows running on MS-DOS.
VOS_DOS_WINDOWS32	= &h00010004	The file was designed for 32-bit Windows running on MS-DOS.
VOS_NT_WINDOWS16	= ?	The file was designed for Windows NT.
VOS_OS216_PM16	= &h00020002	The file was designed for 16-bit Presentation Manager running on 16-bit OS/2.
VOS_OS232_PM32	= &h00030003	The file was designed for 32-bit Presentation Manager running on 32-bit OS/2.

210.22.21 FileSubtype as Integer

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Windows file subtype code.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MessageBox str(w.FileSubType)
end if
```

Notes: Specifies the function of the file. The possible values depend on the value of FileType. For all values of FileType not described in the following list, FileSubtype is zero.

If FileType is VFT_DRV, FileSubtype can be one of the following values.

VFT2_UNKNOWN	= 0	The driver type is unknown by the system.
VFT2_DRV_COMM	= 10	The file contains a communications driver.
VFT2_DRV_PRINTER	= 1	The file contains a printer driver.
VFT2_DRV_KEYBOARD	= 2	The file contains a keyboard driver.
VFT2_DRV_LANGUAGE	= 3	The file contains a language driver.
VFT2_DRV_DISPLAY	= 4	The file contains a display driver.
VFT2_DRV_MOUSE	= 5	The file contains a mouse driver.
VFT2_DRV_NETWORK	= 6	The file contains a network driver.
VFT2_DRV_SYSTEM	= 7	The file contains a system driver.
VFT2_DRV_INSTALLABLE	= 8	The file contains an installable driver.
VFT2_DRV_SOUND	= 9	The file contains a sound driver.
VFT2_DRV_VERSIONED_PRINTER	= 10	The file contains a versioned printer driver.

If FileType is VFT_FONT, FileSubtype can be one of the following values.

VFT2_UNKNOWN	= 0	The font type is unknown by the system.
VFT2_FONT_RASTER	= 1	The file contains a raster font.
VFT2_FONT_VECTOR	= 2	The file contains a vector font.
VFT2_FONT_TRUETYPE	= 3	The file contains a TrueType font.

If FileType is VFT_VXD, FileSubtype contains the virtual device identifier included in the virtual device control block.
All FileSubtype values not listed here are reserved.
(Read and Write property)

210.22.22 FileType as Integer

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Windows file type code.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MessageBox str(w.FileType)
end if
```

Notes: Specifies the general type of file. This member can be one of the following values. All other values are reserved.

VFT_UNKNOWN	= 0	The file type is unknown to the system.
VFT_APP	= 1	The file contains an application.
VFT_DLL	= 2	The file contains a DLL.
VFT_DRV	= 3	The file contains a device driver. If dwFileType is VFT_DRV, FileSubtype contains a more specific description of the driver.
VFT_FONT	= 4	The file contains a font. If dwFileType is VFT_FONT, FileSubtype contains a more specific description of the font file.
VFT_VXD	= 5	The file contains a virtual device.
VFT_STATIC_LIB	= 7	The file contains a static-link library.

(Read and Write property)

210.22.23 FileVersionLS as Integer

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: File version number. Lower part.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
```

```
MessageBox str(w.FileVersionLS)
end if
```

Notes: Fileversion is a 64 bit integer. This is the lower 32 bit part.

Specifies the least significant 32 bits of the file's binary version number. This member is used with FileVersionMS to form a 64-bit value used for numeric comparisons.
(Read and Write property)

210.22.24 FileVersionMS as Integer

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: File version number. Higher part.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MessageBox str(w.FileVersionMS)
end if
```

Notes: Fileversion is a 64 bit integer. This is the higher 32 bit part.

Specifies the most significant 32 bits of the file's binary version number. This member is used with FileVersionLS to form a 64-bit value used for numeric comparisons.
(Read and Write property)

210.22.25 LangCharset as Integer

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The language charset to use.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MessageBox str(w.LangCharset)
end if
```

Notes: OpenFile sets this to the default value.

You can change it later.
Value is used on each call of GetOriginalFilename, GetFileVersion, GetCompanyName, GetProductName, GetInternalName, GetProductVersion, GetFileDescription, GetLegalCopyright, QueryUnicodeValue and QueryBinaryValue.
(Read and Write property)

210.22.26 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Lasterror means no error has happend.
Normally a Windows error code.
(Read and Write property)

210.22.27 ProductVersionLS as Integer

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Product version number. Lower part.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MessageBox str(w.ProductVersionLS)
end if
```

Notes: Productversion is a 64 bit integer. This is the lower 32 bit part.

Specifies the least significant 32 bits of the binary version number of the product with which this file was distributed. This member is used with ProductVersionMS to form a 64-bit value used for numeric comparisons.
(Read and Write property)

210.22.28 ProductVersionMS as Integer

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Product version number. Higher part.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MessageBox str(w.ProductVersionMS)
end if
```

Notes: Productversion is a 64 bit integer. This is the higher 32 bit part.

Specifies the most significant 32 bits of the binary version number of the product with which this file was distributed. This member is used with ProductVersionLS to form a 64-bit value used for numeric comparisons.
(Read and Write property)

210.22.29 RawData as String

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the data of the file version record as string.
Notes: (Read only property)

210.22.30 Success as Boolean

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether last call to OpenFile was successful.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
Var w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MessageBox str(w.Success)
end if
```

Notes: (Read and Write property)

210.23 class WindowsIniMBS

210.23.1 class WindowsIniMBS

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to handle INI files on Windows.
Example:

```
// store settings in an INI file on Windows
Var ini As New WindowsIniMBS
ini.Filename = SpecialFolder.ApplicationData.Child("MyApp.ini").NativePath

Call ini.WritePrivateProfileString("Window", "Left", "100")
Call ini.WritePrivateProfileString("Window", "Top", "80")
Call ini.WritePrivateProfileString("User", "Name", "Bob")

MessageBox "Name: " + ini.GetPrivateProfileString("User", "Name", "unknown") + EndOfLine + _
"Left: " + ini.GetPrivateProfileInt("Window", "Left", 0).ToString
```

Notes: Ini files are build by this:

```
[ Sectionname ]
key1=value1

[ Appname ]
key2=value2
```

An ini file contains one or more sections which are labeled with a name of a section or in the Win.ini file with the application name.
Each section is filled with one or more key = value pairs.
Blog Entries

- MBS Real Studio Plugins, version 13.0pr10

210.23.2 Methods

210.23.3 GetPrivateProfileInt(appname as string, keyname as string, defaultValue as Integer = 0) as Integer

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads an integer value from the ini file.
Notes: This is the function to work on a private ini file.

Returns the default value on any error.

210.23.4 GetPrivateProfileSection(appname as string) as string

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns a section from an ini file.
Notes: This is the function to work on a private ini file.
The string is built using CStrings (with ending chr(0)).
Returns "" on any error.

210.23.5 GetPrivateProfileString(appname as string, keyname as string, defaultValue as string = "") as string

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads a string from an ini file.
Example:

```
Var l as new WindowsIniMBS

l.filename="c:\test.ini"

Var value as string = l.GetPrivateProfileString("appname","keyname")
MessageBox "Read: "+value
```

Notes: This is the function to work on a private ini file.
Returns the default value on any error.

210.23.6 GetPrivateProfileStruct(section as string, keyname as string, size as Integer) as memoryblock

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads a structure from an ini file.
Notes: This is the function to work on a private ini file.
Size is the size of the memoryblock returned.
Returns nil on any error.
A checksum is checked to verify that the data is unchanged.

210.23.7 GetProfileInt(appname as string, keyname as string, defaultValue as Integer = 0) as Integer

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns an integer value of the Win.ini file.
Notes: Returns the default value on any error.

210.23.8 GetProfileSection(appname as string) as string

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns a profile section of the Win.ini file.
Notes: The string is built using CStrings (with ending chr(0)).
Returns "" on any error.

210.23.9 GetProfileString(appname as string, keyname as string, defaultValue as string = "") as string

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns an integer value of the Win.ini file.
Example:

```
Var l as new WindowsIniMBS

l.filename="c:\test.ini"

Var value as string = l.GetProfileString("appname","keyname")
MessageBox "Read: "+value
```

Notes: Searches for a string.
All three parameters are not allowed to be empty. And you must pass trimmed strings (no space on the left and/or right side)
Returns the default string on any error.

210.23.10 WritePrivateProfileSection(appname as string, value as string) as boolean

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Write a section to an ini file.
Notes: This is the function to work on a private ini file.

Value is an array of strings concated with chr(0) as the delimiter.
Returns true if successful.

210.23.11 WritePrivateProfileString(appname as string, keyname as string, value as string) as boolean

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Writes a string to an ini file.
Example:

```
Var l as windowsIniMBS

l=new windowsIniMBS
l.filename="c:\test.ini"

if l.writePrivateProfileString("appname","keyname","value") then
MessageBox "ok"
end if
```

Notes: This is the function to work on a private ini file.

210.23.12 WritePrivateProfileStruct(section as string, keyname as string, mem as memoryblock, size as Integer) as boolean

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Writes a memoryblock as a structure to a ini file.
Notes: This is the function to work on a private ini file.
Returns true if successful.
A checksum is stored to verify later whether the data was changed.

210.23.13 Properties

210.23.14 BufferSize as Integer

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size of the buffer used for reading strings from the INI files.
Notes: Should not be bigger than 32767 bytes on Windows 95/98/ME.
Default size is 32000.

(Read and Write property)

210.23.15 Filename as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file path of the private profile file to use.
Notes: e.g. "C:\Test.ini" or just "myapp.ini".
(Read and Write property)

210.24 class WindowsKeyboardLayoutMBS

210.24.1 class WindowsKeyboardLayoutMBS

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a keyboard layout on Windows.
Example:

```
// show the current and all installed keyboard layouts on Windows
Var lines() As String
lines.Add "Current: " + WindowsKeyboardLayoutMBS.KeyboardLayoutName

For Each layout As WindowsKeyboardLayoutMBS In WindowsKeyboardLayoutMBS.List
lines.Add layout.Name + " (" + layout.PrimaryLanguageID.ToString + "/" + layout.SubLanguageID.ToString
+ ")"
Next

MessageBox String.FromArray(lines, EndOfLine)
```

Blog Entries

- MBS Real Studio Plugins, version 12.5pr8

210.24.2 Methods

210.24.3 Constructor

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new keyboard layout object with current layout.
Example:

```
Var w as new WindowsKeyboardLayoutMBS
MessageBox w.name
```

See also:

- 210.24.4 Constructor(SubLanguageID as Integer, PrimaryLanguageID as Integer) 24811

210.24.4 Constructor(SubLanguageID as Integer, PrimaryLanguageID as Integer)

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new keyboard layout object with the given ID.
See also:

- 210.24.3 Constructor 24811

210.24.5 KeyboardLayoutName as string

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop only.

Function: Returns the name of the current keyboard layout name.
Example:

```
MessageBox WindowsKeyboardLayoutMBS.KeyboardLayoutName
```

210.24.6 List as WindowsKeyboardLayoutMBS()

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop only.

Function: Returns a list of all keyboard layouts installed.
Example:

```
Var list() as WindowsKeyboardLayoutMBS = WindowsKeyboardLayoutMBS.List
MessageBox str(list.Count)+" keyboard layouts."
```

210.24.7 Properties

210.24.8 Handle as Integer

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal ID of the keyboard layout.
Notes: (Read only property)

210.24.9 Name as String

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the name of the keyboard layout.
Example:

```
Var w as new WindowsKeyboardLayoutMBS
MessageBox w.name
```

Notes: (Read only property)

210.24.10 PrimaryLanguageID as Integer

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The primary ID for this language.
Notes: (Read and Write property)

210.24.11 SubLanguageID as Integer

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The sub language ID.
Notes: This is needed as there are for example 16 different English variants.
(Read and Write property)

210.25 class WindowsKeyFilterMBS

210.25.1 class WindowsKeyFilterMBS

MBS Win Plugin, Plugin Version: 6.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to filter several windows keyboard shortcuts with a low level event filter.
Example:

```
// block Alt-Tab and the Windows keys while a kiosk app runs
// KeyFilter is a property of the app: KeyFilter As WindowsKeyFilterMBS
KeyFilter = New WindowsKeyFilterMBS
KeyFilter.BlockAltTab = True
KeyFilter.BlockLeftWindowsKey = True
KeyFilter.BlockRightWindowsKey = True
If Not KeyFilter.Install Then MessageBox "Can't install the key filter."
```

Notes: There is no need to keep the instance as all internal data is stored in global variables.

Key codes for Windows:

Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- MBS Xojo Plugins, version 21.5pr5

210.25.2 Methods

210.25.3 Install as boolean

MBS Win Plugin, Plugin Version: 6.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Install the event filter.
Notes: Returns true on success and false on failure.
Second call in an application will return false unless Uninstall was called between.

210.25.4 Uninstall as boolean

MBS Win Plugin, Plugin Version: 6.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Uninstalls the event filter.
Notes: You only call this after Install returned true.

210.25.5 Properties

210.25.6 BlockAlt as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the alt key.
Notes: (Read and Write property)

210.25.7 BlockAltEscape as boolean

MBS Win Plugin, Plugin Version: 6.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the Alt-Escape key combination.
Notes: (Read and Write property)

210.25.8 BlockAltF4 as boolean

MBS Win Plugin, Plugin Version: 6.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the ALT-F4 key combination.
Notes: By default this one closes the application.
(Read and Write property)

210.25.9 BlockAltTab as boolean

MBS Win Plugin, Plugin Version: 6.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the ALT-Tab key combination.
Notes: This combination is for task switching.
(Read and Write property)

210.25.10 BlockApplicationWindowsKey as boolean

MBS Win Plugin, Plugin Version: 6.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the application windows key.
Notes: (Read and Write property)

210.25.11 BlockBack as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the back key.
Notes: (Read and Write property)

210.25.12 BlockCancel as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the Cancel key.
Notes: (Read and Write property)

210.25.13 BlockCapital as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the CapsLock key.
Notes: (Read and Write property)

210.25.14 BlockClear as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the Clear key.
Notes: (Read and Write property)

210.25.15 BlockControl as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the control key.
Notes: (Read and Write property)

210.25.16 BlockControlAltDelete as boolean

MBS Win Plugin, Plugin Version: 6.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the Control-Alt-Delete key combination.
Notes: Sorry, does not have any effect as this key combination is processed earlier in event chain.
(Read and Write property)

210.25.17 BlockControlEscape as boolean

MBS Win Plugin, Plugin Version: 6.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the Control-Escape key combination.
Notes: (Read and Write property)

210.25.18 BlockDelete as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the delete key.
Notes: (Read and Write property)

210.25.19 BlockDown as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the down key.
Notes: (Read and Write property)

210.25.20 BlockEnd as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the end key.
Notes: (Read and Write property)

210.25.21 BlockEscape as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the escape key.
Notes: (Read and Write property)

210.25.22 BlockExecute as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the execute key.
Notes: (Read and Write property)

210.25.23 BlockF1 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F1 key.
Notes: (Read and Write property)

210.25.24 BlockF10 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F10 key.
Notes: (Read and Write property)

210.25.25 BlockF11 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F11 key.
Notes: (Read and Write property)

210.25.26 BlockF12 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F12 key.
Notes: (Read and Write property)

210.25.27 BlockF13 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F13 key.
Notes: (Read and Write property)

210.25.28 BlockF14 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F14 key.
Notes: (Read and Write property)

210.25.29 BlockF15 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F15 key.
Notes: (Read and Write property)

210.25.30 BlockF16 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F16 key.
Notes: (Read and Write property)

210.25.31 BlockF17 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F17 key.
Notes: (Read and Write property)

210.25.32 BlockF18 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F18 key.
Notes: (Read and Write property)

210.25.33 BlockF19 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F19 key.
Notes: (Read and Write property)

210.25.34 BlockF2 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F2 key.
Notes: (Read and Write property)

210.25.35 BlockF20 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F20 key.
Notes: (Read and Write property)

210.25.36 BlockF21 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F21 key.
Notes: (Read and Write property)

210.25.37 BlockF22 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F22 key.
Notes: (Read and Write property)

210.25.38 BlockF23 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F23 key.
Notes: (Read and Write property)

210.25.39 BlockF24 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F24 key.
Notes: (Read and Write property)

210.25.40 BlockF3 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F3 key.
Notes: (Read and Write property)

210.25.41 BlockF4 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F4 key.
Notes: (Read and Write property)

210.25.42 BlockF5 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F5 key.
Notes: (Read and Write property)

210.25.43 BlockF6 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F6 key.
Notes: (Read and Write property)

210.25.44 BlockF7 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F7 key.
Notes: (Read and Write property)

210.25.45 BlockF8 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F8 key.
Notes: (Read and Write property)

210.25.46 BlockF9 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F9 key.
Notes: (Read and Write property)

210.25.47 BlockHelp as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the help key.
Notes: (Read and Write property)

210.25.48 BlockHome as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the home key.
Notes: (Read and Write property)

210.25.49 BlockInsert as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the insert key.
Notes: (Read and Write property)

210.25.50 BlockLeft as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the left key.
Notes: (Read and Write property)

210.25.51 BlockLeftButton as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the left mouse button.
Notes: (Read and Write property)

210.25.52 BlockLeftWindowsKey as boolean

MBS Win Plugin, Plugin Version: 6.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the left windows key.
Notes: (Read and Write property)

210.25.53 BlockMiddleButton as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the middle mouse button.
Notes: (Read and Write property)

210.25.54 BlockPause as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the pause key.
Notes: (Read and Write property)

210.25.55 BlockPrint as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the print key.
Notes: BlockSnapshot is to block screenshots.
(Read and Write property)

210.25.56 BlockReturn as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the return key.
Notes: (Read and Write property)

210.25.57 BlockRight as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the right key.
Notes: (Read and Write property)

210.25.58 BlockRightButton as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the right mouse button.
Notes: (Read and Write property)

210.25.59 BlockRightWindowsKey as boolean

MBS Win Plugin, Plugin Version: 6.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the right windows key.
Notes: (Read and Write property)

210.25.60 BlockSelect as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the select key.
Notes: (Read and Write property)

210.25.61 BlockShift as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the shift key.
Notes: (Read and Write property)

210.25.62 BlockShiftSpace as boolean

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the Shift-Space key combination.
Notes: This combination is for making non-breakable spaces.
(Read and Write property)

210.25.63 BlockSleep as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the sleep key.
Notes: (Read and Write property)

210.25.64 BlockSnapshot as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the snapshot key.
Notes: This is the print key to do screenshots.
(Read and Write property)

210.25.65 BlockSpace as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the space key.
Notes: (Read and Write property)

210.25.66 BlockTab as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the tab key.
Notes: (Read and Write property)

210.25.67 BlockUp as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the up key.
Notes: (Read and Write property)

210.25.68 BlockKey(virtualkeycode as Integer) as boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to block a key with a specific virtual key code.
Notes: You can set this to true for all keys you want to block.
The virtual key codes are in the windows header files.
For most common keys this class has properties. More can be added.
(Read and Write computed property)

210.25.69 Events

210.25.70 KeyDown(vkCode as Integer, scanCode as Integer, flags as Integer, time as Integer) as Boolean

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The key down event.
Notes: vkCode: Specifies a virtual-key code. The code must be a value in the range 1 to 254.
scanCode: Specifies a hardware scan code for the key.
flags: Specifies the extended-key flag, event-injected flag, context code, and transition-state flag. This member is specified as follows.
time: Specifies the time stamp for this message.

the flag bits are like this:
bit 0: Specifies whether the key is an extended key, such as a function key or a key on the numeric keypad. The value is 1 if the key is an extended key; otherwise, it is 0.
bit 4: Specifies whether the event was injected. The value is 1 if the event was injected; otherwise, it is 0.

bit 5: Specifies the context code. The value is 1 if the ALT key is pressed; otherwise, it is 0.
bit 7: Specifies the transition state. The value is 0 if the key is pressed and 1 if it is being released.
Other bits are reserved.

There can be only one WindowsKeyFilterMBS object in your application which receives this events.

We have currently no idea in what context this event is received. And you should return as soon as possible as this event may be called a lot of times and can block user input.

Return true if you handled the key and false if you did not handle it.
Please have this event being as fast as possible. Do not put MessageBox there. Better detect a key shortcut and launch a timer to perform the action a millisecond later, so you don't block the keyboard event system.
Blocks only KeyUp or only KeyDown can lead to trouble if the internal counters for special keys get our of sync.

210.25.71 KeyUp(vkCode as Integer, scanCode as Integer, flags as Integer, time as Integer) as Boolean

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The key up event.
Notes: vkCode: Specifies a virtual-key code. The code must be a value in the range 1 to 254.
scanCode: Specifies a hardware scan code for the key.
flags: Specifies the extended-key flag, event-injected flag, context code, and transition-state flag. This member is specified as follows.
time: Specifies the time stamp for this message.

the flag bits are like this:
bit 0: Specifies whether the key is an extended key, such as a function key or a key on the numeric keypad. The value is 1 if the key is an extended key; otherwise, it is 0.
bit 4: Specifies whether the event was injected. The value is 1 if the event was injected; otherwise, it is 0.
bit 5: Specifies the context code. The value is 1 if the ALT key is pressed; otherwise, it is 0.
bit 7: Specifies the transition state. The value is 0 if the key is pressed and 1 if it is being released.
Other bits are reserved.

There can be only one WindowsKeyFilterMBS object in your application which receives this events.

We have currently no idea in what context this event is received. And you should return as soon as possible as this event may be called a lot of times and can block user input.

Return true if you handled the key and false if you did not handle it.
Please have this event being as fast as possible. Do not put MessageBox there. Better detect a key shortcut

and launch a timer to perform the action a millisecond later, so you don't block the keyboard event system. Blocks only KeyUp or only KeyDown can lead to trouble if the internal counters for special keys get our of sync.

210.26 class WindowsListMBS

210.26.1 class WindowsListMBS

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to list all the windows on a Windows system.
Example:

```
// list the titles of all visible top level windows on Windows
Var list As New WindowsListMBS
Var lines() As String

For i As Integer = 0 To list.WindowCount - 1
If list.WindowVisible(i) And list.WindowText(i) <>"" Then
lines.Add list.WindowText(i)
End If
Next

MessageBox String.FromArray(lines, EndOfLine)
```

Notes: To find all processes on Mac, use the ProcessMBS class.
To find all windows on Mac OS X, use the CGSWindowListMBS class.

- MBS Xojo / Real Studio Plugins, version 16.4pr1

210.26.2 Methods

210.26.3 ActivateWindow(index as integer)

MBS Win Plugin, Plugin Version: 19.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Activates the window.
Notes: This function does more than just show. if the window has been minimized, it will restore it. Also the window is moved to front and made the current window for keyboard input.

Sadly windows limits which windows can go to front, so some windows may not come to front unless they are clicked on.

As activation can be asynchronously, the window may activate later, e.g. after current method ends.

210.26.4 Constructor

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor which queries the values.
See also:

- 210.26.5 Constructor(win as DesktopWindow) 24834
- 210.26.6 Constructor(win as window) 24834
- 210.26.7 Constructor(WindowHandle as Integer) 24834

210.26.5 Constructor(win as DesktopWindow)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: The constructor which queries the values.
Notes: If win is not nil, we lookup child windows of this window.
See also:

- 210.26.4 Constructor 24834
- 210.26.6 Constructor(win as window) 24834
- 210.26.7 Constructor(WindowHandle as Integer) 24834

210.26.6 Constructor(win as window)

MBS Win Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop only.

Function: The constructor which queries the values.
Notes: If win is not nil, we lookup child windows of this window.
See also:

- 210.26.4 Constructor 24834
- 210.26.5 Constructor(win as DesktopWindow) 24834
- 210.26.7 Constructor(WindowHandle as Integer) 24834

210.26.7 Constructor(WindowHandle as Integer)

MBS Win Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor which queries the values.
Notes: If WindowHandle is not zero, we lookup child windows of this window.
See also:

- 210.26.4 Constructor 24834
- 210.26.5 Constructor(win as DesktopWindow) 24834
- 210.26.6 Constructor(win as window) 24834

210.26.8 Focus as Integer

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the handle to the window that has the keyboard focus, if the window is attached to the calling thread's message queue.
Notes: If the calling thread's message queue does not have an associated window with the keyboard focus, the return value is 0.

210.26.9 ForegroundWindow as Integer

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves a handle to the foreground window (the window with which the user is currently working).
Notes: The system assigns a slightly higher priority to the thread that creates the foreground window than it does to other threads.
The return value is a handle to the foreground window. The foreground window can be 0 in certain circumstances, such as when a window is losing activation.

210.26.10 Update

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the values and returns true on success.

210.26.11 WindowClassName(index as Integer) as string

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the window class name of the window with the given index.
Notes: For example "SciCalc" for the calc.exe main window.

This may send a message to the thread owning the window and if that one doesn't answer quickly, the call may wait for an answer.
You may want to skip your own process windows to not wait for your own threads.

210.26.12 WindowClassNameFromHandle(Handle as Integer) as String

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the window class name of the window with the given handle.
Notes: For example "SciCalc" for the calc.exe main window.

210.26.13 WindowHandle(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle of the window with the given index.
Notes: This value is updated by the Constructor and the Update method.

210.26.14 WindowHeight(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height of the window with the given index.
Notes: This value is updated by the Constructor and the Update method.

210.26.15 WindowIconic(index as Integer) as boolean

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the window with the given index is minimized.

210.26.16 WindowImageFileName(index as Integer) as string

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the path to the execuable file of the process which owns the window with the given index.
Notes: Requires Windows XP or newer.
Returns an empty string on any error.

210.26.17 WindowLeft(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The x position of the window with the given index.
Notes: This value is updated by the Constructor and the Update method.

210.26.18 WindowProcessID(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The process ID of the process which ows the window with the given index.
Notes: This value is updated by the Constructor and the Update method.

210.26.19 WindowText(index as Integer) as string

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the title of the window with the given index.
Notes: This may send a message to the thread owning the window and if that one doesn't answer quickly, the call may wait for an answer.
You may want to skip your own process windows to not wait for your own threads.

210.26.20 WindowTextFromHandle(Handle as Integer) as String

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the title of the window with the given handle.
Notes: This may send a message to the thread owning the window and if that one doesn't answer quickly, the call may wait for an answer.
You may want to skip your own process windows to not wait for your own threads.

210.26.21 WindowThreadHandle(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The thread handle of the window with the given index.
Notes: This value is updated by the Constructor and the Update method.

210.26.22 WindowTop(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Y position of the window with the given index.
Notes: This value is updated by the Constructor and the Update method.

210.26.23 WindowVisible(index as Integer) as boolean

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the window with the given index is visible.

210.26.24 WindowWidth(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width of the window with the given index.
Notes: This value is updated by the Constructor and the Update method.

210.26.25 WindowZoomed(index as Integer) as boolean

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the window with the given index is zoomed.

210.26.26 Properties

210.26.27 CurrentProcessID as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current process ID.
Notes: This value is updated by the Constructor and the Update method.
(Read and Write property)

210.26.28 CurrentThreadID as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current thread ID.
Notes: This value is updated by the Constructor and the Update method.
(Read and Write property)

210.26.29 DesktopWindowHandle as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle of the desktop window.
Notes: This value is updated by the Constructor and the Update method.
(Read and Write property)

210.26.30 ForegroundWindowHandle as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle of the foreground window.
Notes: This value is updated by the Constructor and the Update method.
(Read and Write property)

210.26.31 ParentWindowHandle as Integer

MBS Win Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle of the parent window.
Notes: This value is set by the Constructor.
(Read and Write property)

210.26.32 WindowCount as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of windows.
Notes: This value is updated by the Constructor and the Update method.
(Read and Write property)

210.27 class WindowsMonitorMBS

210.27.1 class WindowsMonitorMBS

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class to query monitor details on Windows.
Example:

```
for each m as WindowsMonitorMBS in WindowsMonitorMBS.AllMonitors
MessageBox m.DeviceName+": "+str(m.Left)+"x"+str(m.top)+" "+str(m.Width)+"x"+str(m.Height)
next
```

Blog Entries

- MBS Real Studio Plugins, version 11.3pr2

210.27.2 Methods

210.27.3 AllMonitors as WindowsMonitorMBS()

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries all monitors.
Example:

```
for each m as WindowsMonitorMBS in WindowsMonitorMBS.AllMonitors
MessageBox m.DeviceName+": "+str(m.Left)+"x"+str(m.top)+" "+str(m.Width)+"x"+str(m.Height)
next
```

Notes: Returns an array with an entry for each monitor connected to this computer.
See also:

- 210.27.4 AllMonitors(monitors() as WindowsMonitorMBS) as Integer 24840

210.27.4 AllMonitors(monitors() as WindowsMonitorMBS) as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries all monitors.
Notes: Returns the number of monitors found and sets the monitor objects in the array.
if the array is too short, you get the first ubound(monitors)+1 fonts set there.
See also:

- 210.27.3 AllMonitors as WindowsMonitorMBS() 24840

210.27.5 MonitorFromPoint(x as Integer, y as Integer, flags as Integer = 0) as WindowsMonitorMBS

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The MonitorFromPoint function retrieves a handle to the display monitor that contains a specified point.
Example:

```
Var m as WindowsMonitorMBS = WindowsMonitorMBS.MonitorFromPoint(1900, 1000)

if m = nil then
MessageBox "Your display is smaller than 1900 x 1000"
else
MessageBox m.DeviceName
end if
```

Notes: x and y: The point of interest in virtual-screen coordinates.
Flags: Determines the function's return value if the point is not contained within any display monitor.

This parameter can be one of the following values.

Value	Meaning
kDefaultToNearest	Returns a handle to the display monitor that is nearest to the point.
kDefaultToNull	Returns nil.
kDefaultToPrimary	Returns a handle to the primary display monitor.

If the point is contained by a display monitor, the return value is that display monitor.
If the point is not contained by a display monitor, the return value depends on the value of flags.

210.27.6 MonitorFromRect(left as Integer, top as Integer, width as Integer, height as Integer, flags as Integer = 0) as WindowsMonitorMBS

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The MonitorFromRect function retrieves the display monitor that has the largest area of intersection with a specified rectangle.
Example:

```
Var m as WindowsMonitorMBS = WindowsMonitorMBS.MonitorFromRect(0,0,100,100)
MessageBox m.DeviceName
```

Notes: left, top, width, height: The rectangle of interest in virtual-screen coordinates.

Flags: Determines the function's return value if the rectangle does not intersect any display monitor.

This parameter can be one of the following values.

Value	Meaning
kDefaultToNearest	Returns a handle to the display monitor that is nearest to the rectangle.
kDefaultToNull	Returns nil.
kDefaultToPrimary	Returns a handle to the primary display monitor.

If the rectangle intersects one or more display monitor rectangles, the return value is the display monitor that has the largest area of intersection with the rectangle.
If the rectangle does not intersect a display monitor, the return value depends on the value of Flags.

210.27.7 MonitorFromWindow(win as DesktopWindow, flags as integer = 0) as WindowsMonitorMBS

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: The MonitorFromWindow function retrieves the display monitor that has the largest area of intersection with the bounding rectangle of a specified window.
Notes: win: The window of interest.
Flags: Determines the function's return value if the window does not intersect any display monitor.

This parameter can be one of the following values:

Value	Meaning
kDefaultToNearest	Returns the display monitor that is nearest to the window.
kDefaultToNull	Returns nil.
kDefaultToPrimary	Returns the primary display monitor.

If the window intersects one or more display monitor rectangles, the return value is the display monitor that has the largest area of intersection with the window.

If the window does not intersect a display monitor, the return value depends on the value of Flags.
If the window is currently minimized, MonitorFromWindow uses the rectangle of the window before it was minimized.
See also:

- 210.27.8 MonitorFromWindow(win as window, flags as Integer = 0) as WindowsMonitorMBS 24843

- 210.27.9 MonitorFromWindow(WindowHandle as Integer, flags as Integer = 0) as WindowsMonitorMBS 24843

210.27.8 MonitorFromWindow(win as window, flags as Integer = 0) as WindowsMonitorMBS

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop only.

Function: The MonitorFromWindow function retrieves the display monitor that has the largest area of intersection with the bounding rectangle of a specified window.
Example:

```
Var m as WindowsMonitorMBS = WindowsMonitorMBS.MonitorFromWindow(Window1)
MessageBox m.DeviceName
```

Notes: win: The window of interest.
Flags: Determines the function's return value if the window does not intersect any display monitor.

This parameter can be one of the following values:

Value	Meaning
kDefaultToNearest	Returns the display monitor that is nearest to the window.
kDefaultToNull	Returns nil.
kDefaultToPrimary	Returns the primary display monitor.

If the window intersects one or more display monitor rectangles, the return value is the display monitor that has the largest area of intersection with the window.

If the window does not intersect a display monitor, the return value depends on the value of Flags.
If the window is currently minimized, MonitorFromWindow uses the rectangle of the window before it was minimized.

- 210.27.7 MonitorFromWindow(win as DesktopWindow, flags as integer = 0) as WindowsMonitorMBS 24842
- 210.27.9 MonitorFromWindow(WindowHandle as Integer, flags as Integer = 0) as WindowsMonitorMBS 24843

210.27.9 MonitorFromWindow(WindowHandle as Integer, flags as Integer = 0) as WindowsMonitorMBS

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The MonitorFromWindow function retrieves the display monitor that has the largest area of intersection with the bounding rectangle of a specified window.
Example:

```
Var m as WindowsMonitorMBS = WindowsMonitorMBS.MonitorFromWindow(Window1.handle)
MessageBox m.DeviceName
```

Notes: WindowHandle: A handle to the window of interest.
Flags: Determines the function's return value if the window does not intersect any display monitor.

This parameter can be one of the following values:

Value	Meaning
kDefaultToNearest	Returns the display monitor that is nearest to the window.
kDefaultToNull	Returns nil.
kDefaultToPrimary	Returns the primary display monitor.

If the window intersects one or more display monitor rectangles, the return value is the display monitor that has the largest area of intersection with the window.

If the window does not intersect a display monitor, the return value depends on the value of Flags.
If the window is currently minimized, MonitorFromWindow uses the rectangle of the window before it was minimized.

- 210.27.7 MonitorFromWindow(win as DesktopWindow, flags as integer = 0) as WindowsMonitorMBS 24842
- 210.27.8 MonitorFromWindow(win as window, flags as Integer = 0) as WindowsMonitorMBS 24843

210.27.10 Properties

210.27.11 Bottom as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bottom value of the display monitor.
Notes: Specifies the display monitor rectangle, expressed in virtual-screen coordinates. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

210.27.12 DeviceName as String

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that specifies the device name of the monitor being used.
Notes: (Read and Write property)

210.27.13 Height as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height of the display monitor.
Notes: Specifies the display monitor rectangle, expressed in virtual-screen coordinates. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values. (Read and Write property)

210.27.14 HMonitor as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal window handle for this monitor.
Notes: (Read and Write property)

210.27.15 IsPrimary as Boolean

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this is the primary display monitor.
Notes: (Read and Write property)

210.27.16 Left as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The left position of the display monitor.
Notes: Specifies the display monitor rectangle, expressed in virtual-screen coordinates. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values. (Read and Write property)

210.27.17 Right as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The right value of the display monitor.
Notes: Specifies the display monitor rectangle, expressed in virtual-screen coordinates. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

210.27.18 Top as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The top position of the display monitor.
Notes: Specifies the display monitor rectangle, expressed in virtual-screen coordinates. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

210.27.19 Width as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width of the display monitor.
Notes: Specifies the display monitor rectangle, expressed in virtual-screen coordinates. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

210.27.20 WorkBottom as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bottom value from useable screen area.
Notes: Specifies the work area rectangle of the display monitor that can be used by applications, expressed in virtual-screen coordinates. Windows uses this rectangle to maximize an application on the monitor. The rest of the area of the monitor contains system windows such as the task bar and side bars. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

210.27.21 WorkHeight as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height value from useable screen area.
Notes: Specifies the work area rectangle of the display monitor that can be used by applications, expressed in virtual-screen coordinates. Windows uses this rectangle to maximize an application on the monitor. The rest of the area of the monitor contains system windows such as the task bar and side bars. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

210.27.22 WorkLeft as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The left value from useable screen area.
Notes: Specifies the work area rectangle of the display monitor that can be used by applications, expressed in virtual-screen coordinates. Windows uses this rectangle to maximize an application on the monitor. The rest of the area of the monitor contains system windows such as the task bar and side bars. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

210.27.23 WorkRight as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The right value from useable screen area.
Notes: Specifies the work area rectangle of the display monitor that can be used by applications, expressed in virtual-screen coordinates. Windows uses this rectangle to maximize an application on the monitor. The rest of the area of the monitor contains system windows such as the task bar and side bars. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

210.27.24 WorkTop as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The top value from useable screen area.
Notes: Specifies the work area rectangle of the display monitor that can be used by applications, expressed in virtual-screen coordinates. Windows uses this rectangle to maximize an application on the monitor. The rest of the area of the monitor contains system windows such as the task bar and side bars. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

210.27.25 WorkWidth as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width value from useable screen area.
Notes: Specifies the work area rectangle of the display monitor that can be used by applications, expressed in virtual-screen coordinates. Windows uses this rectangle to maximize an application on the monitor. The rest of the area of the monitor contains system windows such as the task bar and side bars. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

210.27.26 Constants

Constants

Constant	Value	Description
kDefaultToNearest	2	One of the flag constants. Return the display monitor that is nearest to the window, point or rectangle.
kDefaultToNull	0	One of the flag constants. Returns nil if no monitor matches is located at point, window or rectangle.
kDefaultToPrimary	1	One of the flag constants. Returns the primary display monitor if point, rect or window does not point to a monitor.

210.28 class WindowsPipeMBS

210.28.1 class WindowsPipeMBS

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a Windos Pipe.
Example:

```
// connect to a named pipe of another application on Windows and send a command
// MyPipe is a subclass of WindowsPipeMBS with the DataAvailable event implemented.
// Pipe is a property of the window: Pipe As MyPipe
Pipe = New MyPipe

If Not Pipe.OpenPipe("\\.\pipe\MyServicePipe") Then
MessageBox "Failed to open pipe, error " + Pipe.LastError.ToString
Return
End If

Pipe.Write "status" + EndOfLine.Windows

// to be the server instead, use Pipe.CreatePipe("\\.\pipe\MyServicePipe")

// in MyPipe:
Sub DataAvailable(BytesAvailable As Integer, MessageBytesAvailable As Integer) Handles DataAvailable
System.DebugLog "Received: " + Me.ReadAll
End Sub
```

Notes: A replacement for IPCSocket on Windows.
Can be used in two applications to exchange data.

Videos

- XDC 2020 MBS Plugins Presentation

Xojo Developer Magazine

- 18.3, page 51: Happy Birthday MonkeyBread Software, What is new in the MBS Xojo Plugins by Stefanie Juchmes

210.28.2 Methods

210.28.3 Close

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Closes the pipe.
Notes: Called by destructor automatically.

210.28.4 Constructor

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.

210.28.5 CreatePipe(Name as string, MessageMode as Boolean = false, BufferSize as Integer = &h100000, AllowAllUsers as Boolean = false) as Boolean

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a named pipe.
Notes: Buffersize defines the size for input/output buffers.
Returns true on success or false on failure.
Lasterror is set.

Normally the pipe allows only same user.
But if AllowAllUsers is true, you can talk to other users or from service to user.

If name does not start with \then we prefix it with "\\.\Pipe\".

210.28.6 OpenPipe(Name as string) as Boolean

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Opens an existing named pipe from client side.
Notes: Returns true on success or false on failure.
Lasterror is set.

If name does not start with \then we prefix it with "\\.\Pipe\".

210.28.7 Peek(ByteCount as Integer) as String

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads data without removing it from the buffer.
Notes: Reads up to the given number of bytes.
BytesRead property is set and data is returned.
LastError property is set.

210.28.8 PeekAll as String

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads all data without removing it from the buffer.
Notes: Reads whole message or in byte mode
BytesRead property is set and data is returned.
LastError property is set.

210.28.9 Read(ByteCount as Integer) as String

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads data.
Notes: Reads up to the given number of bytes.
BytesRead property is set and data is returned.
LastError property is set.

210.28.10 ReadAll as String

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads all data.
Example:

```
Var Pipe as WindowsPipeMBS // your pipe

Var r As String = pipe.ReadAll
Var d As String = DefineEncoding(r, Encodings.UTF8)

List.AddRow d
```

Notes: Reads whole message or in byte mode what is available.
BytesRead property is set and data is returned.

LastError property is set.

210.28.11 Write(data as MemoryBlock)

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Writes data.
Notes: Lasterror is set.
BytesWritten is set to number of bytes sent.
See also:

- 210.28.12 Write(data as string) 24852

210.28.12 Write(data as string)

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Writes data.
Example:

```
Var Pipe as WindowsPipeMBS // your pipe

Var d As String = ConvertEncoding(MessageField.Text, encodings.UTF8)
If d.Len >0 Then
pipe.Write d
MessageField.Text = ""
End If
```

Notes: Lasterror is set.
BytesWritten is set to number of bytes sent.
See also:

- 210.28.11 Write(data as MemoryBlock) 24852

210.28.13 Properties

210.28.14 BytesAvailable as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries number of bytes available in buffer.
Notes: (Read only property)

210.28.15 BytesRead as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of bytes read.
Notes: (Read and Write property)

210.28.16 BytesWritten as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of bytes written.
Notes: (Read and Write property)

210.28.17 Handle as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle for the pipe.
Notes: (Read only property)

210.28.18 InputBufferSize as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The input buffer size.
Notes: (Read only property)

210.28.19 IsClient as Boolean

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this is client or server side.
Notes: True if this is client side.
(Read only property)

210.28.20 IsMessageMode as Boolean

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this pipe is in message mode.
Notes: (Read only property)

210.28.21 IsOpen as Boolean

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries whether pipe is open.
Notes: (Read only property)

210.28.22 IsServer as Boolean

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this is client or server side.
Notes: True if this is server side.
(Read only property)

210.28.23 LastError as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: A Windows error code.
(Read and Write property)

210.28.24 MessageBytesAvailable as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries number of bytes available for current message.
Notes: (Read only property)

210.28.25 Name as String

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the pipe.
Notes: This is name as used in CreatePipe or OpenPipe method.

(Read and Write property)

210.28.26 NamedPipeClientComputerName as String

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the client computer name for the specified named pipe.
Example:

```
Var Pipe as WindowsPipeMBS // your pipe

MessageBox "NamedPipeClientComputerName: "+pipe.NamedPipeClientComputerName
```

Notes: (Read only property)

210.28.27 NamedPipeClientProcessId as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the client process identifier for the specified named pipe.
Example:

```
Var Pipe as WindowsPipeMBS // your pipe

MessageBox "NamedPipeClientProcessId: "+str(pipe.NamedPipeClientProcessId)
```

Notes: (Read only property)

210.28.28 NamedPipeClientSessionId as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the client session identifier for the specified named pipe.
Example:

```
Var Pipe as WindowsPipeMBS // your pipe

MessageBox "NamedPipeClientSessionId: "+str(pipe.NamedPipeClientSessionId)
```

Notes: (Read only property)

210.28.29 NamedPipeServerProcessId as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the server process identifier for the specified named pipe.
Example:

```
Var Pipe as WindowsPipeMBS // your pipe

MessageBox "NamedPipeServerProcessId: "+str(pipe.NamedPipeServerProcessId)
```

Notes: (Read only property)

210.28.30 NamedPipeServerSessionId as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the server session identifier for the specified named pipe.
Example:

```
Var Pipe as WindowsPipeMBS // your pipe

MessageBox "NamedPipeServerSessionId: "+str(pipe.NamedPipeServerSessionId)
```

Notes: (Read only property)

210.28.31 OutputBufferSize as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The output buffer size.
Notes: (Read only property)

210.28.32 Events

210.28.33 Connected

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The connected event.
Notes: Called when pipe is connected on either client or server side.

210.28.34 DataAvailable(BytesAvailable as Integer, MessageBytesAvailable as Integer)

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event called when new data is available.

210.28.35 PipeBroken

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event called when pipe breaks.
Notes: The plugin will stop calling DataAvailable handler.
You can call Close and CreatePipe method to open pipe again.

210.29 class WindowsPowerManagerMBS

210.29.1 class WindowsPowerManagerMBS

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides access to information about a device's battery and power supply status.
Example:

MessageBox str(WindowsPowerManagerMBS.RemainingChargePercent)+"% remaining"

Notes: See also WindowsPowerStateMBS class.

- MBS Xojo Plugins, version 25.1pr5

Xojo Developer Magazine

- 23.4, page 10: News

210.29.2 Methods

210.29.3 Constructor

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: Registers the events.

210.29.4 Destructor

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.
Notes: Unregisters the events.

210.29.5 Properties

210.29.6 BatteryStatus as Integer

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the device's battery status.
Example:

```
var status as integer = WindowsPowerManagerMBS.BatteryStatus
var message as string

Select case status
case WindowsPowerManagerMBS.BatteryStatusCharging
message = "Charging"
case WindowsPowerManagerMBS.BatteryStatusDischarging
message = "Discharging"
case WindowsPowerManagerMBS.BatteryStatusIdle
message = "Idle"
case WindowsPowerManagerMBS.BatteryStatusNotPresent
message = "NotPresent"
end Select

MessageBox status.ToString+" "+message
```

Notes: (Read only property)

210.29.7 EnergySaverStatus as Integer

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the devices's battery saver status, indicating when to save energy.
Example:

```
var status as integer = WindowsPowerManagerMBS.EnergySaverStatus
var message as string

Select case status
case WindowsPowerManagerMBS.EnergySaverStatusDisabled
message = "Disabled"
case WindowsPowerManagerMBS.EnergySaverStatusOff
message = "Off"
case WindowsPowerManagerMBS.EnergySaverStatusOn
message = "On"
end Select
```

```
MessageBox status.ToString+" "+message
```

Notes: (Read only property)

210.29.8 PowerSupplyStatus as Integer

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the device's power supply status.
Example:

```
var status as integer = WindowsPowerManagerMBS.PowerSupplyStatus
var message as string

Select case status
case WindowsPowerManagerMBS.PowerSupplyStatusAdequate
message = "Adequate"
case WindowsPowerManagerMBS.PowerSupplyStatusInadequate
message = "Inadequate"
case WindowsPowerManagerMBS.PowerSupplyStatusNotPresent
message = "NotPresent"
end Select

MessageBox status.ToString+" "+message
```

Notes: (Read only property)

210.29.9 RemainingChargePercent as Integer

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the total percentage of charge remaining from all batteries connected to the device.
Example:

```
MessageBox str(WindowsPowerManagerMBS.RemainingChargePercent)+"% remaining"
```

Notes: (Read only property)

210.29.10 RemainingDischargeTime as Int64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the total runtime remaining from all batteries connected to the device.
Notes: This is Max Int64 if unknown.
(Read only property)

210.29.11 Yield as Boolean

MBS WinFrameworks Plugin, Plugin Version: 25.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to yield to other Xojo threads.
Notes: If true allows other cooperative threads to run in the background.
(Read and Write property)

210.29.12 Events

210.29.13 BatteryStatusChanged

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Occurs when BatteryStatus changes.

210.29.14 EnergySaverStatusChanged

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Occurs when EnergySaverStatus changes.

210.29.15 PowerSupplyStatusChanged

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Occurs when the PowerSupplyStatus changes.

210.29.16 RemainingChargePercentChanged

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Occurs when RemainingChargePercent changes.

210.29.17 RemainingDischargeTimeChanged

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Occurs when RemainingDischargeTime changes.

210.29.18 Constants

Constants

Constant	Value	Description
EnergySaverStatusOff	1	One of the constants to specify the status of battery saver. Battery saver is off now, but ready to turn on automatically.
EnergySaverStatusOn	2	One of the constants to specify the status of battery saver. Battery saver is on. Save energy where possible.

Battery Status

Constant	Value	Description
BatteryStatusCharging	3	The battery is charging.
BatteryStatusDischarging	1	The battery is discharging.
BatteryStatusIdle	2	The battery is idle.
BatteryStatusNotPresent	0	The battery or battery controller is not present.

EnergySaver Status

Constant	Value	Description
EnergySaverStatusDisabled	0	Battery saver is off permanently or the device is plugged in.

Power Supply Status

Constant	Value	Description
PowerSupplyStatusAdequate	2	The device has an adequate power supply.
PowerSupplyStatusInadequate	1	The device has an inadequate power supply.
PowerSupplyStatusNotPresent	0	The device has no power supply.

210.30 class WindowsPreviewHandlerMBS

210.30.1 class WindowsPreviewHandlerMBS

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: The class for showing previews on windows.
Example:

```
// This example needs a window with Canvas1.
// show the Windows preview of a PDF file inside a canvas
// The class ID of the preview handler for a file type is in the registry:
// HKEY_CLASSES_ROOT\.pdf\shellex\{ 8895b1c6-b41f-4c1c-a562-0d564250836f }
Var classID As String = " { ... } " // read it from the registry, e.g. with RegistryItem
Var handler As New WindowsPreviewHandlerMBS(classID)
handler.InitWithFile SpecialFolder.Desktop.Child("test.pdf")
handler.SetWindow(Canvas1, 0, 0, Canvas1.Width, Canvas1.Height)
handler.DoPreview
```

Notes: This is linke a control which you can put into a window to show a preview for a file.

Uses IPreviewHandler class from Microsoft, so also see here:
https://docs.microsoft.com/en-us/windows/win32/api/shobjidl_core/nn-shobjidl_core-ipreviewhandler
https://docs.microsoft.com/de-de/windows/win32/shell/preview-handlers

The preview handlers we find are those listed in the registry here:
Computer\HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\PreviewHandlers

See WinPreviewControlMBS control to use this class as a control.

210.30.2 Methods

210.30.3 Constructor(ClassID as string)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: Initializes the object with loading the class with the given classid.
Notes: You find those ClassIDs in the registry (See example project).

See HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\PreviewHandlers in the registry.

210.30.4 DoPreview

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: Directs the preview handler to load data from the source specified in an earlier Initialize method call, and to begin rendering to the previewer window.
Notes: Lasterror is set.

If the previewer window has not yet been created, then it must be created after this method has been called. The preview handler is responsible for painting the area specified in SetWindow or SetRect. If these methods are called while the preview handler is rendering, the window must be reparented/resized without stopping or restarting the rendering of the item.
This method should be called only after SetWindow has been called.
Additionally, this method should be called only after Constructor has been called.

210.30.5 InitWithData(data as MemoryBlock)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: Loads the given data.
Notes: Lasterror is set.
If loading from data is not supported for preview, we use a temporary file instead.

You need to call Preview next on success to show a preview.
See also:

- 210.30.6 InitWithData(data as string)

210.30.6 InitWithData(data as string)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: Loads the given data.
Notes: Lasterror is set.
If loading from data is not supported for preview, we use a temporary file instead.

You need to call Preview next on success to show a preview.
See also:

- 210.30.5 InitWithData(data as MemoryBlock) 24864

210.30.7 InitWithFile(file as folderitem)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: Loads the given file.
Notes: Lasterror is set.
If the preview handler does not support reading file, the plugin reads the file and passes as data.

You need to call Preview next on success to show a preview.

If the file path is invalid, the preview will show a file not found error message.

210.30.8 SetBackgroundColor(red as Integer, green as Integer, blue as Integer)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: Sets the background color of the preview handler.
Notes: Lasterror is set.
Not all preview handlers implement this method.

210.30.9 SetFocus

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: Directs the preview handler to set focus to itself.
Notes: Lasterror is set.

210.30.10 SetFont(size as Integer, font as string)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: Sets the font attributes to be used for text within the preview handler.
Notes: Lasterror is set.
Not all preview handlers implement this method.

210.30.11 SetRect(left as Integer, top as Integer, width as Integer, height as Integer)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: Directs the preview handler to change the area within the parent hwnd that it draws into.
Notes: Lasterror is set.

If called before the preview handler window has been created, the new rectangle replaces the rectangle previously received in the SetWindow call.
If called after the preview handler window has been created, the preview handler window must be resized.
If the preview handler is already rendering, then the preview must be resized without interrupting the render process.

210.30.12 SetTextColor(red as Integer, green as Integer, blue as Integer)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: Sets the color of the text within the preview handler.
Notes: Lasterror is set.
Not all preview handlers implement this method.

210.30.13 SetWindow(win as ContainerControl)

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop only.

Function: Sets the parent of the preview to be the container with it's size.
Notes: We query size of the container automatically to set the right size independent of the screen scaling.

- 210.30.24 SetWindow(win as window, left as Integer, top as Integer, width as Integer, height as Integer) 24874

210.30.14 SetWindow(win as ContainerControl, left as integer, top as integer, width as integer, height as integer)

MBS Win Plugin, Plugin Version: 22.1, Platform: Windows, Targets: Desktop only.

Function: Sets the parent to a container control.
Notes: Coordinates in pixels.
See also:

- 210.30.13 SetWindow(win as ContainerControl) 24866

- 210.30.24 SetWindow(win as window, left as Integer, top as Integer, width as Integer, height as Integer) 24874

210.30.15 SetWindow(win as Control)

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop only.

Function: Sets the parent of the preview to be the control with it's size.
Notes: e.g. use a Canvas to host the preview.

We query size of the container automatically to set the right size independent of the screen scaling.

- 210.30.23 SetWindow(win as Window) 24873
- 210.30.24 SetWindow(win as window, left as Integer, top as Integer, width as Integer, height as Integer) 24874

210.30.22 SetWindow(win as DesktopWindow, left as integer, top as integer, width as integer, height as integer)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Sets the parent window of the previewer window, as well as the area within the parent to be used for the previewer window.
Notes: Pass the window and the area for the previewer.
Lasterror is set.

The preview handler is responsible for painting the entire area. If the previewer window has been created, the preview handler must associate the previewer window to the new parent hwnd and resize the previewer window to the area defined by the rectangle. If the previewer window has not yet been created, the preview handler must remember this information for when the previewer window is created in DoPreview.
It is preferred that this information be stored prior to calling DoPreview. Doing so increases performance

at setup time for any cases where the preview does not start.

Coordinates in pixels.

210.30.25 Unload

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: Directs the preview handler to cease rendering a preview and to release all resources that have been allocated based on the item passed in during the initialization.
Notes: Lasterror is set.
When called, the preview window will be destroyed.

This method should be called only after Constructor has been called. All resources associated with this initialization will be released. Prior to calling DoPreview, this preview handler will be re-initialized with a call to one of the initialization interfaces and a call to SetWindow.

210.30.26 Properties

210.30.27 Handle as Integer

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read only property)

210.30.28 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: The last error code.
Notes: (Read and Write property)

210.30.29 LasterrorString as String

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: The error message for the error number in the lasterror property.
Notes: (Read only property)

210.30.30 SupportsDataLoading as Boolean

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: Whether the preview handler supports loading data from a string or memoryblock.
Notes: (Read only property)

210.30.31 SupportsFileLoading as Boolean

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: Whether the preview handler supports loading files.
Notes: As the plugin can also load file and pass as data if needed, this function also returns true if SupportsDataLoading is also true.
(Read only property)

210.30.32 Window as Variant

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: The parent window.
Notes: Can reference a Window or DesktopWindow object.
(Read only property)

210.31 class WindowsProcessCpuUsageReportMBS

210.31.1 class WindowsProcessCpuUsageReportMBS

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides data about the CPU usage of the process.
Example:

```
// This example needs a window with ListBox1.
var s as new WindowsProcessDiagnosticInfoMBS
var c as WindowsProcessCpuUsageReportMBS = s.CpuUsage

ListBox1.AddRow c.UserTime.ToString+" user time"
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

210.31.2 Methods

210.31.3 Constructor

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

210.31.4 Destructor

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

210.31.5 Properties

210.31.6 Handle as Integer

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

210.31.7 KernelTime as Int64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the amount of CPU kernel time consumed by the process.
Notes: (Read only property)

210.31.8 UserTime as Int64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the amount of CPU user time consumed by the process.
Example:

```
// This example needs a window with ListBox1.
var s as new WindowsProcessDiagnosticInfoMBS
var c as WindowsProcessCpuUsageReportMBS = s.CpuUsage

ListBox1.AddRow c.UserTime.ToString+" user time"
```

Notes: (Read only property)

210.32 class WindowsProcessDiagnosticExceptionMBS

210.32.1 class WindowsProcessDiagnosticExceptionMBS

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop only.

Function: The exception to report issues with the process/system diagnostic classes.
Notes: Subclass of the RuntimeException class.
Blog Entries

- MBS Xojo Plugins, version 25.1pr5

210.33 class WindowsProcessDiagnosticInfoMBS

210.33.1 class WindowsProcessDiagnosticInfoMBS

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides diagnostic information about a process, such as CPU usage, disk usage, memory usage and so on.
Example:

```
var s as new WindowsProcessDiagnosticInfoMBS

MessageBox s.ExecutableFileName
```

- News from the MBS Xojo Plugins in Version 25.1
- MBS Xojo Plugins, version 25.1pr5

210.33.2 Methods

210.33.3 Constructor

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The convenience constructor to initialize an object for the current process.

210.33.4 Destructor

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

210.33.5 Process(ProcessID as UInt32) as WindowsProcessDiagnosticInfoMBS

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a ProcessDiagnosticInfo object for the specified process.
Example:

```
var s as WindowsProcessDiagnosticInfoMBS

// please put in a process ID
```

```
s = WindowsProcessDiagnosticInfoMBS.Process(9156)

MessageBox s.ExecutableFileName
```

Notes: If you call this method for the current app process ID, there is no capability check. Calling the method for any other process requires user consent, which defaults to denied. Users can provide consent in the Settings app.

210.33.6 Processes as WindowsProcessDiagnosticInfoMBS()

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a list of ProcessDiagnosticInfo objects for all running processes that are accessible to the caller.
Example:

```
var Names() as string
var processes() as WindowsProcessDiagnosticInfoMBS = WindowsProcessDiagnosticInfoMBS.Processes

for each process as WindowsProcessDiagnosticInfoMBS in processes
names.add process.ExecutableFileName
next

MessageBox join(names, EndOfLine)
```

210.33.7 Properties

210.33.8 CpuUsage as WindowsProcessCpuUsageReportMBS

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the CPU time used by the process.
Example:

```
// This example needs a window with ListBox1.
var s as new WindowsProcessDiagnosticInfoMBS
var c as WindowsProcessCpuUsageReportMBS = s.CpuUsage

ListBox1.AddRow c.UserTime.ToString+" user time"
```

Notes: (Read only property)

210.33.9 CurrentProcess as WindowsProcessDiagnosticInfoMBS

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the ProcessDiagnosticInfo for the currently running process.
Example:

```
var s as WindowsProcessDiagnosticInfoMBS

s = WindowsProcessDiagnosticInfoMBS.CurrentProcess

MessageBox s.ProcessId.ToString
```

Notes: (Read only property)

210.33.10 DiskUsage as WindowsProcessDiskUsageReportMBS

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the disk I/O usage of the process.
Notes: (Read only property)

210.33.11 ExecutableFileName as String

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the name of the executable file for the process.
Example:

```
var s as new WindowsProcessDiagnosticInfoMBS

MessageBox s.ExecutableFileName
```

Notes: (Read only property)

210.33.12 Handle as Integer

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

210.33.13 IsPackaged as Boolean

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a Boolean value indicating whether or not this ProcessDiagnosticInfo instance has any related UWP information.
Notes: (Read only property)

210.33.14 MemoryUsage as WindowsProcessMemoryUsageReportMBS

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets memory usage data for the process.
Example:

```
var s as new WindowsProcessDiagnosticInfoMBS
var m as WindowsProcessMemoryUsageReportMBS = s.MemoryUsage

MessageBox m.WorkingSetSizeInBytes.ToString + " bytes used for this app"
```

Notes: (Read only property)

210.33.15 Parent as WindowsProcessDiagnosticInfoMBS

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the ProcessDiagnosticInfo for the parent process.
Example:

```
var s as WindowsProcessDiagnosticInfoMBS

s = WindowsProcessDiagnosticInfoMBS.CurrentProcess

var p as WindowsProcessDiagnosticInfoMBS = s.Parent

MessageBox s.ExecutableFileName+" has parent "+p.ExecutableFileName
```

Notes: (Read only property)

210.33.16 ProcessId as UInt32

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the unique process ID.
Example:

```
var s as new WindowsProcessDiagnosticInfoMBS

MessageBox s.ExecutableFileName+" with process id "+s.ProcessId.ToString
```

Notes: (Read only property)

210.33.17 ProcessStartTime as Int64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the time the process was started.
Notes: (Read only property)

210.34 class WindowsProcessDiskUsageReportMBS

210.34.1 class WindowsProcessDiskUsageReportMBS

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides data about the disk usage of the process.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Xojo Plugins, version 25.1pr5

210.34.2 Methods

210.34.3 Constructor

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

210.34.4 Destructor

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

210.34.5 Properties

210.34.6 BytesReadCount as Int64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the number of bytes the process has read from disk.
Example:

```
var s as new WindowsProcessDiagnosticInfoMBS
var c as WindowsProcessDiskUsageReportMBS = s.DiskUsage

MessageBox c.BytesReadCount.ToString+" bytes read"
```

Notes: (Read only property)

210.34.7 BytesWrittenCount as Int64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the number of bytes the process has written to disk.
Notes: (Read only property)

210.34.8 Handle as Integer

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

210.34.9 OtherBytesCount as Int64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the number of bytes used by the process in disk operations that were not read or write operations.
Notes: (Read only property)

210.34.10 OtherOperationCount as Int64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the number of disk operations performed by the process that were not read or write operations.
Notes: (Read only property)

210.34.11 ReadOperationCount as Int64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the number of disk read operations performed by the process.
Notes: (Read only property)

210.34.12 WriteOperationCount as Int64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the number of disk write operations performed by the process.
Notes: (Read only property)

210.35 class WindowsProcessMemoryUsageReportMBS

210.35.1 class WindowsProcessMemoryUsageReportMBS

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides data about the memory usage of the process.
Example:

```
var s as new WindowsProcessDiagnosticInfoMBS
var m as WindowsProcessMemoryUsageReportMBS = s.MemoryUsage

MessageBox m.WorkingSetSizeInBytes.ToString + " bytes used for this app"
```

Notes: See also WindowsProcessMemoryInfoMBS and WindowsProcessStatisticsMBS classes.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Xojo Plugins, version 25.1pr5

210.35.2 Methods

210.35.3 Constructor

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

210.35.4 Destructor

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

210.35.5 Properties

210.35.6 Handle as Integer

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

210.35.7 NonPagedPoolSizeInBytes as UInt64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the amount of non-paged memory available to the process, in bytes.
Notes: (Read only property)

210.35.8 PagedPoolSizeInBytes as UInt64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the amount of paged memory available to the process, in bytes.
Notes: (Read only property)

210.35.9 PageFaultCount as UInt32

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the number of memory page faults.
Notes: (Read only property)

210.35.10 PageFileSizeInBytes as UInt64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the size of the memory page file in bytes.
Notes: (Read only property)

210.35.11 PeakNonPagedPoolSizeInBytes as UInt64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum amount of non-paged memory used by the process, in bytes.
Notes: (Read only property)

210.35.12 PeakPagedPoolSizeInBytes as UInt64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum amount of paged memory used by the process, in bytes.
Notes: (Read only property)

210.35.13 PeakPageFileSizeInBytes as UInt64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum size of the memory page file used by the process, in bytes.
Notes: (Read only property)

210.35.14 PeakVirtualMemorySizeInBytes as UInt64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum amount of virtual memory used by the associated process.
Notes: (Read only property)

210.35.15 PeakWorkingSetSizeInBytes as UInt64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum amount of physical memory used by the associated process.
Notes: (Read only property)

210.35.16 PrivatePageCount as UInt64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the number of private memory pages allocated for the associated process.
Notes: (Read only property)

210.35.17 VirtualMemorySizeInBytes as UInt64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the amount of the virtual memory allocated for the associated process.
Notes: (Read only property)

210.35.18 WorkingSetSizeInBytes as UInt64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the amount of physical memory allocated for the associated process.
Example:

```
var s as new WindowsProcessDiagnosticInfoMBS
var m as WindowsProcessMemoryUsageReportMBS = s.MemoryUsage

MessageBox m.WorkingSetSizeInBytes.ToString + " bytes used for this app"
```

Notes: (Read only property)

210.36 class WindowsPropertiesMBS

210.36.1 class WindowsPropertiesMBS

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: The class for window properties.
Example:

```
Var w as new WindowsPropertiesMBS(self)

Var key as string = w.EdgeGestureDisableTouchWhenFullscreen

w.Value(key) = true

Var c as integer = w.count
for i as integer = 0 to c-1
Var k as string = w.key(i)
MessageBox k+" "+w.Value(k)
next
```

210.36.2 Methods

210.36.3 Close

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: Closes properties.
Notes: Same as destructor.

210.36.4 Commit

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: Commits values.
Notes: Optional as window properties are set directly.
LastError and LastErrorMessage are set.

210.36.5 Constructor(Win as DesktopWindow)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves an object that represents a specific window's collection of properties, which allows those properties to be queried or set.
Notes: Requires Windows 7 or Windows Server 2008 R2 or newer.

An application can use this function to obtain access to a window's property store so that it can set an explicit Application User Model ID (AppUserModelID) in the System.AppUserModel.ID property.

Raises FunctionNotFoundException if function is not available, PlatformNotSupportedException if not running on Windows, NilObjectException if window is nil or invalid and UnsupportedOperationException if Window properties can't be queried.
See also:

- 210.36.6 Constructor(Win as Window) 24893

210.36.6 Constructor(Win as Window)

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: Retrieves an object that represents a specific window's collection of properties, which allows those properties to be queried or set.
Notes: Requires Windows 7 or Windows Server 2008 R2 or newer.

An application can use this function to obtain access to a window's property store so that it can set an explicit Application User Model ID (AppUserModelID) in the System.AppUserModel.ID property.

Raises FunctionNotFoundException if function is not available, PlatformNotSupportedException if not running on Windows, NilObjectException if window is nil or invalid and UnsupportedOperationException if Window properties can't be queried.
See also:

- 210.36.5 Constructor(Win as DesktopWindow) 24893

210.36.7 Count as Integer

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: Queries number of values.
Example:

```
Var w as new WindowsPropertiesMBS(self)

// show all keys with values
Var c as integer = w.count
for i as integer = 0 to c-1
Var k as string = w.key(i)
MessageBox k+" "+w.Value(k)
next
```

Notes: LastError and LastErrorMessage are set.

210.36.8 EdgeGestureDisableTouchWhenFullscreen as String

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: The property name used to disable touch gesture with full screen window.
Example:

```
Var w as new WindowsPropertiesMBS(self)
Var key as string = w.EdgeGestureDisableTouchWhenFullscreen

w.Value(key) = true
```

210.36.9 Key(Index as Integer) as String

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: The key with given index.
Notes: Index from 0 to Count-1.
Keys are passed as UUID followed by property ID.
LastError and LastErrorMessage are set.

210.36.10 Values as Dictionary

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Queries all values as dictionary.
Notes: The dictionary is a copy, so changes to the dictionary are not going back to the window.

210.36.11 Properties

210.36.12 Handle as Integer

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

210.36.13 LastError as Integer

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: The last error code.
Notes: (Read and Write property)

210.36.14 LastErrorMessage as String

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: The last error message.
Notes: (Read and Write property)

210.36.15 Value(Key as String) as Variant

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: Set or query property value.
Example:

```
Var w as new WindowsPropertiesMBS(self)

// show all keys with values
Var c as integer = w.count
for i as integer = 0 to c-1
Var k as string = w.key(i)
MessageBox k+" "+w.Value(k)
```

next

Notes: Keys are passed as UUID followed by property ID.
LastError and LastErrorMessage are set.
(Read and Write computed property)

210.37 class WindowsReportErrorMBS

210.37.1 class WindowsReportErrorMBS

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for an event source on Windows to report errors.
Example:

```
// early on app start, setup this
Var r as new WindowsReportErrorMBS("Application")

// later report something
const Category = 1
const EventID = 1000
r.Report r.kEventLogWarningType, Category, EventID, array("Hello World")
```

- 19.2, page 9: News

210.37.2 Methods

210.37.3 Constructor(SourceName as String, UNCServerName as String = "")

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves a registered handle to the specified event log.
Notes: UNCServerName: The Universal Naming Convention (UNC) name of the remote server on which this operation is to be performed. If this parameter is "", the local computer is used.
SourceName: The name of the event source whose handle is to be retrieved. The source name must be a subkey of a log under the Eventlog registry key. Note that the Security log is for system use only.
Note This string must not contain characters prohibited in XML Attributes, with the exception of XML Escape sequences such as &lt &gl.

If the source name cannot be found, the event logging service uses the Application log. Although events will be reported , the events will not include descriptions because there are no message and category message files for looking up descriptions related to the event identifiers.

Raises exception on failure.

210.37.4 Report(Type as Integer, Category as Integer, EventID as Integer, Strings() as string = nil, RawData as MemoryBlock = nil)

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Writes an entry at the end of the event log.
Notes: Type: The type of event to be logged. See kEventLog* constants.
Category: The event category. This is source-specific information; the category can have any value.
EventID: The event identifier. The event identifier specifies the entry in the message file associated with the event source.
Strings: An array of strings that are merged into the message before Event Viewer displays the string to the user. This parameter must can be nil for no strings. Each string is limited to 31,839 characters.
RawData:

210.37.5 Properties

210.37.6 Handle as Integer

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle to the event source.
Notes: (Read and Write property)

210.37.7 Constants

Event Types

Constant	Value	Description
kEventLogAuditFailure	16	Failure Audit event
kEventLogAuditSuccess	8	Success Audit event
kEventLogErrorType	1	Error event
kEventLogInformationType	4	Information event
kEventLogSuccess	0	Information event
kEventLogWarningType	2	Warning event

210.38 class WindowsScriptErrorExceptionMBS

210.38.1 class WindowsScriptErrorExceptionMBS

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The exception class raised when an error happens while executing a script.
Example:

```
Var w as new WindowsScriptMBS

w.Language = "VBScript"

w.AddCode "a = 1"
w.AddCode "b = 2"

w.AllowUI = false
w.ExecuteStatement "msgbox a+b" // shows exception with access denied

Exception e as WindowsScriptErrorExceptionMBS
MessageBox e.message
```

Notes: Subclass of the RuntimeException class.

- Windows Scripts in REALbasic

210.39 class WindowsScriptErrorMBS

210.39.1 class WindowsScriptErrorMBS

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for error details.
Example:

```
Var w as new WindowsScriptMBS

w.Language = "JScript"

try
w.AddCode "function Test(a,b) { 1 return a+b; } " // 1 is there to make error

Var p(-1) as string = array("Hello ", "World from JavaScript")
Var x as string = w.Run("Test", p)
catch e as WindowsScriptErrorExceptionMBS
Var error as WindowsScriptErrorMBS = w.Error
MessageBox error.Description+EndOfLine+"in "+str(error.Line)+":"+str(error.Column)
end try
```

210.39.2 Properties

210.39.3 Column as Integer

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Source code column position where the error occurred.
Notes: (Read and Write property)

210.39.4 Description as String

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Friendly description of error.
Notes: (Read and Write property)

210.39.5 Line as Integer

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Source code line number where the error occurred.
Notes: (Read and Write property)

210.39.6 Number as Integer

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Error number.
Notes: (Read and Write property)

210.39.7 Source as String

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Source of the error.
Notes: (Read and Write property)

210.39.8 Text as String

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Line of source code on which the error occurred.
Notes: (Read and Write property)

210.40 class WindowsScriptMBS

210.40.1 class WindowsScriptMBS

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class to run Windows Scripts.
Example:

```
Var w as new WindowsScriptMBS

w.Language = "JScript"
w.AddCode "function Test(a,b) { return a+b; } "

Var p(-1) as string = array("Hello ", "World from JavaScript")
Var x as string = w.Run("Test", p)

MessageBox x
```

210.40.2 Methods

210.40.3 AddCode(code as string)

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Add code to the global module.
Example:

```
Var w as new WindowsScriptMBS

w.Language = "VBScript"
```

```
w.AddCode "a = 1" // define some global variables
w.AddCode "b = 2"
```

Notes: If you use VBScript, you don't need "dim" keyword for defining variables.

210.40.4 ClearError

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Clears the current error.

210.40.5 Eval(code as string) as string

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Evaluate an expression within the context of the global module.

210.40.6 ExecuteStatement(statement as string)

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Execute a statement within the context of the global module.
Example:

```
Var w as new WindowsScriptMBS

w.Language = "VBScript"

w.AddCode "a = 1"
w.AddCode "b = 2"

w.AllowUI = true
w.ExecuteStatement "msgbox a+b" // shows 3

w.AllowUI = false
w.ExecuteStatement "msgbox a+b" // shows exception with access denied

Exception e as WindowsScriptErrorExceptionMBS
MessageBox e.message
```

210.40.7 Reset

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reset the scripting engine to a newly created state.

210.40.8 Run(functionName as string, parameters() as string) as string

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Call a procedure defined in the global module.
Example:

```
Var w as new WindowsScriptMBS

// First try VBScript
w.Language = "VBScript"

Var lines(-1) as string

lines.Add "Function Test(a,b)"
lines.Add "Test = a+b"
lines.Add "End Function"

w.AddCode Join(lines, EndOfLine.Windows)

Var p(-1) as string = array("Hello ", "World from VBScript")
Var x as string = w.Run("Test", p)

'MessageBox x

// Second try JScript
w.Language = "JScript"

redim lines(-1)
lines.Add "function Test(a,b)"
lines.Add " { "
lines.Add "return a+b;"
lines.Add " } "

w.AddCode Join(lines, EndOfLine.Windows)

p = array("Hello ", "World from JavaScript")
x = w.Run("Test", p)

MessageBox x
```

```
Exception e as WindowsScriptErrorExceptionMBS
MessageBox "Exception: "+e.message
```

210.40.9 Properties

210.40.10 AllowUI as Boolean

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enable or disable display of the UI.
Example:

```
Var w as new WindowsScriptMBS

w.Language = "VBScript"

w.AddCode "a = 1"
w.AddCode "b = 2"

w.AllowUI = true
w.ExecuteStatement "msgbox a+b" // shows 3

w.AllowUI = false
w.ExecuteStatement "msgbox a+b" // shows exception with access denied

Exception e as WindowsScriptErrorExceptionMBS
MessageBox e.message
```

Notes: (Read and Write property)

210.40.11 Error as WindowsScriptErrorMBS

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current error status.
Notes: (Read only property)

210.40.12 Language as String

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Language engine to use.
Example:

```
Var w as new WindowsScriptMBS

w.Language = w.kLanguageJScript

MessageBox w.Language // shows "JScript"

w.Language = w.kLanguageVBScript

MessageBox w.Language // shows "VBScript"
```

Notes: Use kLanguageVBScript or kLanguageJScript constants.
Setting this property calls reset internally.
(Read and Write property)

210.40.13 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: 0 is no error. -1 is a parameter error on the plugin side. All other codes are from Windows.
(Read and Write property)

210.40.14 SitehWnd as Integer

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The window handle for the window being parent to any window the scripts create.
Example:

```
Var w as new WindowsScriptMBS
w.SitehWnd = Window1.handle
```

Notes: The window is used as the parent window for message boxes, alerts, etc.
(Read and Write property)

210.40.15 Timeout as Integer

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Length of time in milliseconds that a script can execute before being considered hung.
Notes: (Read and Write property)

210.40.16 UseSafeSubset as Boolean

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Force script to execute in safe mode and disallow potentially harmful actions.
Notes: (Read and Write property)

210.40.17 Constants

Constants

Constant	Value	Description
kLanguageJScript	"JScript"	One of the language constants. Using this constant you can switch to JavaScript.
kLanguageVBScript	"VBScript"	One of the language constants. Using this constant you can switch to VBScript.

210.41 class WindowsSerialPortsMBS

210.41.1 class WindowsSerialPortsMBS

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This is a class to query the serial ports on a Windows system.
Example:

```
// list the serial ports with their friendly names on Windows
Var ports As New WindowsSerialPortsMBS
Var lines() As String

For i As Integer = 0 To ports.Count - 1
lines.Add ports.FriendlyName(i) + " - " + ports.Description(i)
Next

MessageBox String.FromArray(lines, EndOfLine)
```

Notes: This class was created in response to feedback report 8212: Serial Port Hangup on Windows.

210.41.2 Methods

210.41.3 Constructor(OnlyPresent as boolean = true)

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor which builds the list of devices.

210.41.4 Description(index as Integer) as string

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The description of this serial port.

210.41.5 DevicePath(index as Integer) as string

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device path of this serial port.

210.41.6 FriendlyName(index as Integer) as string

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The display name of this serial port.

210.41.7 Location(index as Integer) as string

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The location of this serial port.

210.41.8 QueryComDevices as String()

MBS Win Plugin, Plugin Version: 19.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries list of DOS COM Port names.
Notes: While Constructor builds a list based on registry information (setup database), this function will use QueryDosDevice to ask Windows about device names for DOS starting with COM in their name and return the list.

Returns nil in case of failure.

210.41.9 Properties

210.41.10 Count as Integer

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of serial ports found.
Notes: (Read and Write property)

210.42 class WindowsSystemCpuUsageReportMBS

210.42.1 class WindowsSystemCpuUsageReportMBS

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides data about the CPU usage of the system.
Example:

```
var s as new WindowsSystemDiagnosticInfoMBS
var c as WindowsSystemCpuUsageReportMBS = s.CpuUsage

var t as Int64 = c.IdleTime + c.KernelTime + c.UserTime
var percentIdle as Double = c.IdleTime / t
var percentUser as Double = c.UserTime / t
var percentKernel as Double = c.KernelTime / t

var i,u,k as string

i = str(percentIdle, "0.0%") + " idle, "
u = str(percentUser, "0.0%") + " user, "
k = str(percentKernel, "0.0%") + " kernel."

MessageBox i+u+k
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

210.42.2 Methods

210.42.3 Constructor

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

210.42.4 Destructor

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

210.42.5 Properties

210.42.6 Handle as Integer

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

210.42.7 IdleTime as Int64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the amount of time the CPU was idle.
Notes: (Read only property)

210.42.8 KernelTime as Int64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the amount of CPU kernel time consumed by the system.
Notes: (Read only property)

210.42.9 UserTime as Int64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the amount of CPU user time consumed by the system.
Notes: (Read only property)

210.43 class WindowsSystemDiagnosticInfoMBS

210.43.1 class WindowsSystemDiagnosticInfoMBS

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides diagnostic information about the system, such as CPU usage, disk usage, memory usage and so on.
Example:

```
// show memory usage and CPU times of the system on Windows
Var info As WindowsSystemDiagnosticInfoMBS = WindowsSystemDiagnosticInfoMBS.CurrentSystem
Var memory As WindowsSystemMemoryUsageReportMBS = info.MemoryUsage
Var cpu As WindowsSystemCpuUsageReportMBS = info.CpuUsage

MessageBox "Total memory: " + Format(memory.TotalPhysicalSizeInBytes / 1024 / 1024 / 1024, "0.0") +
" GB" + EndOfLine + _
"Available: " + Format(memory.AvailableSizeInBytes / 1024 / 1024 / 1024, "0.0") + " GB" + EndOfLine
+ _
"CPU user time: " + cpu.UserTime.ToString + ", kernel time: " + cpu.KernelTime.ToString + ", idle time:
" + cpu.IdleTime.ToString
```

210.43.2 Methods

210.43.3 Constructor

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The convenience constructor to initialize an object for the current system.

210.43.4 Destructor

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

210.43.5 IsArchitectureSupported(type as Integer) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Determines if the system supports the specified processor architecture..
Example:

```
var t as integer

t = WindowsSystemDiagnosticInfoMBS.ProcessorArchitectureArm64

if WindowsSystemDiagnosticInfoMBS.IsArchitectureSupported(t) then
// ARM 64-bit app
MessageBox "ARM64 supported"
else
// not an ARM 64-bit app
MessageBox "ARM64 not supported"
end if
```

210.43.6 Properties

210.43.7 CpuUsage as WindowsSystemCpuUsageReportMBS

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the CPU time used by the system.
Example:

```
var s as new WindowsSystemDiagnosticInfoMBS
var c as WindowsSystemCpuUsageReportMBS = s.CpuUsage

var t as Int64 = c.IdleTime + c.KernelTime + c.UserTime
var percentIdle as Double = c.IdleTime / t
var percentUser as Double = c.UserTime / t
var percentKernel as Double = c.KernelTime / t

var i,u,k as string

i = str(percentIdle, "0.0%") + " idle, "
u = str(percentUser, "0.0%") + " user, "
k = str(percentKernel, "0.0%") + " kernel."

MessageBox i+u+k
```

Notes: (Read only property)

210.43.8 CurrentSystem as WindowsSystemDiagnosticInfoMBS

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the SystemDiagnosticInfo for the current system.
Example:

```
var s as WindowsSystemDiagnosticInfoMBS
s = WindowsSystemDiagnosticInfoMBS.CurrentSystem
var c as WindowsSystemMemoryUsageReportMBS = s.MemoryUsage

var a,t as string
a = str(c.AvailableSizeInBytes/1024/1024,"0")
t = str(c.TotalPhysicalSizeInBytes/1024/1024,"0")

MessageBox a+" of "+t+" MegaBytes available"
```

Notes: (Read only property)

210.43.9 Handle as Integer

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

210.43.10 MemoryUsage as WindowsSystemMemoryUsageReportMBS

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets memory usage data for the system.
Example:

```
var s as new WindowsSystemDiagnosticInfoMBS
var c as WindowsSystemMemoryUsageReportMBS = s.MemoryUsage

var a,t as string
a = str(c.AvailableSizeInBytes/1024/1024,"0")
t = str(c.TotalPhysicalSizeInBytes/1024/1024,"0")

MessageBox a+" of "+t+" MegaBytes available"
```

Notes: (Read only property)

210.43.11 PreferredArchitecture as Integer

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the system's preferred processor architecture.
Example:

```
var s as new WindowsSystemDiagnosticInfoMBS

Select case s.PreferredArchitecture
case s.ProcessorArchitectureArm64
MessageBox "Arm64"
case s.ProcessorArchitectureArm
MessageBox "Arm"
case s.ProcessorArchitectureX64
MessageBox "X64"
case s.ProcessorArchitectureX86
MessageBox "X86"
case s.ProcessorArchitectureX86OnArm64
MessageBox "X86OnArm64"
end Select
```

Notes: (Read only property)

210.43.12 Constants

Processor Architectures

Constant	Value	Description
ProcessorArchitectureArm	5	ARM 32-bit
ProcessorArchitectureArm64	12	ARM 64-bit
ProcessorArchitectureNeutral	11	Neutral
ProcessorArchitectureUnknown	65535	Unknown
ProcessorArchitectureX64	9	Intel 64-bit.
ProcessorArchitectureX86	0	Intel 32-bit.
ProcessorArchitectureX86OnArm64	14	Intel 64-bit in emulation on ARM 64-bit.

210.44 class WindowsSystemMemoryUsageReportMBS

210.44.1 class WindowsSystemMemoryUsageReportMBS

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides data about the memory usage of the system.
Example:

```
var s as new WindowsSystemDiagnosticInfoMBS
var c as WindowsSystemMemoryUsageReportMBS = s.MemoryUsage

var a,t as string
a = str(c.AvailableSizeInBytes/1024/1024,"0")
t = str(c.TotalPhysicalSizeInBytes/1024/1024,"0")

MessageBox a+" of "+t+" MegaBytes available"
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

210.44.3 Constructor

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

210.44.4 Destructor

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

210.44.5 Properties

210.44.6 AvailableSizeInBytes as UInt64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the amount of system memory available in bytes.
Notes: (Read only property)

210.44.7 CommittedSizeInBytes as UInt64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the amount of committed memory for the system.
Notes: (Read only property)

210.44.8 Handle as Integer

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

210.44.9 TotalPhysicalSizeInBytes as UInt64

MBS WinFrameworks Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Get the total amount of physical memory for the system.
Notes: (Read only property)

210.45 class WindowsTaskbarListMBS

210.45.1 class WindowsTaskbarListMBS

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class for windows with methods that control the taskbar.
Example:

```
// show the progress of a long task in the taskbar button of the window
Var taskbar As New WindowsTaskbarListMBS
Var handle As Integer = Integer(Self.Handle)
taskbar.SetProgressState(handle, WindowsTaskbarListMBS.ProgressStateFlagNormal)
taskbar.SetProgressValue(handle, 40, 100) // 40%

// when done:
// taskbar.SetProgressState(handle, WindowsTaskbarListMBS.ProgressStateFlagNoProgress)
```

Notes: It allows you to dynamically add, remove, and activate items on the taskbar.
Blog Entries

- Show progress in task bar on Windows
- SetProgressState on Windows
- MBS REALbasic plug-ins version 10.2

210.45.2 Methods

210.45.3 ActivateTab(WindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Activates an item on the taskbar.
Notes: The window is not actually activated; the window's item on the taskbar is merely displayed as active.
Lasterror is set.

210.45.4 AddTab(WindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds an item to the taskbar.
Notes: Any type of window can be added to the taskbar, but it is recommended that the window at least have the WS_CAPTION style.

Any window added with this method must be removed with the DeleteTab method when the added window is destroyed.

Lasterror is set.

210.45.5 DeleteTab(WindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Deletes an item from the taskbar.

210.45.6 MarkFullscreenWindow(WindowHandle as Integer, Fullscreen as Boolean)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Marks a window as full-screen.
Notes: Fullscreen: A Boolean value marking the desired full-screen status of the window.

Setting the value of fFullscreen to TRUE, the Shell treats this window as a full-screen window, and the taskbar is moved to the bottom of the z-order when this window is active. Setting the value of fFullscreen to FALSE removes the full-screen marking, but does not cause the Shell to treat the window as though it were definitely not full-screen. With a FALSEfFullscreen value, the Shell depends on its automatic detection facility to specify how the window should be treated, possibly still flagging the window as full-screen.

Requires Windows XP or Windows Server 2003 or newer.
Lasterror is set.

210.45.7 RegisterTab(TabWindowHandle as Integer, MDIWindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Informs the taskbar that a new tab or document thumbnail has been provided for display in an application's taskbar group flyout.
Notes: Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.
By itself, registering a tab thumbnail alone will not result in its being displayed. You must also call SetTabOrder to instruct the group where to display it.

210.45.8 SetActiveAlt(WindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Marks a taskbar item as active but does not visually activate it.
Notes: SetActiveAlt marks the item associated with hwnd as the currently active item for the window's process without changing the pressed state of any item. Any user action that would activate a different tab in that process will activate the tab associated with hwnd instead. The active state of the window's item is not guaranteed to be preserved when the process associated with this window is not active. To ensure that a given tab is always active, call SetActiveAlt whenever any of your windows are activated. Calling SetActiveAlt with a nil window handle clears this state.

210.45.9 SetOverlayIcon(TabWindowHandle as Integer, IconHandle as Integer, Description as string)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Applies an overlay to a taskbar button to indicate application status or a notification to the user.
Notes: Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.

TabWindowHandle:
The handle of the window whose associated taskbar button receives the overlay. This handle must belong to a calling process associated with the button's application and must be a valid HWND or the call is ignored.

IconHandle:
The handle of an icon to use as the overlay. This should be a small icon, measuring 16x16 pixels at 96 dpi. If an overlay icon is already applied to the taskbar button, that existing overlay is replaced.

This value can be 0. How a 0 value is handled depends on whether the taskbar button represents a single window or a group of windows.

- If the taskbar button represents a single window, the overlay icon is removed from the display.
- If the taskbar button represents a group of windows and a previous overlay is still available (received earlier than the current overlay, but not yet freed by a 0 value), then that previous overlay is displayed in place of the current overlay.

It is the responsibility of the calling application to free hIcon when it is no longer needed. This can generally be done after you've called SetOverlayIcon because the taskbar makes and uses its own copy of the icon.

Description:
A string that provides an alt text version of the information conveyed by the overlay, for accessibility purposes.

In versions of Windows earlier than Windows 7, applications often used icons in the notification area of the taskbar to display application status and notifications to the user. The Windows 7 taskbar allows an application to provide that same sort of user feedback through its taskbar button, centralizing more of the application information in one place. These overlays are similar to existing overlays used for shortcut icons or security notifications, displayed at the lower-right corner of the button.

The following illustration shows an overlay (the small, green square that indicates the user status as "Available") applied to the far-right taskbar button.

Windows Messenger taskbar button with an overlay to indicate an Available status.

Icon overlays serve as a contextual notification of status, and are intended to negate the need for a separate notification area status icon to communicate that information to the user. The application designer must decide during the development cycle which method—icon overlay or notification area status icon—best serves that application. Overlay icons are intended to supply important, long-standing status or notifications such as network status, messenger status, or new mail. They should not be frequently changed, nor should they be animated.

To display an overlay icon, the taskbar must be in the default large icon mode. If the taskbar is configured through Taskbar and Start Menu Properties to show small icons, overlays cannot be applied and calls to this method are ignored.

Because a single overlay is applied to the taskbar button instead of to the individual window thumbnails, this is a per-group feature rather than per-window. Requests for overlay icons can be received from individual windows in a taskbar group, but they do not queue. The last overlay received is the overlay shown. If the last overlay received is removed, the overlay that it replaced is restored so long as it is still active. As an example, windows 1, 2, and 3 set, in order, overlays A, B, and C. Because overlay C was received last, it is shown on the taskbar button. Window 2 calls SetOverlayIcon with a 0 value to remove overlay B. Window 3 then does the same to remove overlay C. Because window 1's overlay A is still active, that overlay is then displayed on the taskbar button.

If Windows Explorer shuts down unexpectedly, overlays are not restored when Windows Explorer is restored. The application should wait to receive the TaskbarButtonCreated message that indicates that Windows Explorer has restarted and the taskbar button has been re-created, and then call SetOverlayIcon again to reapply the overlay.

210.45.10 SetProgressState(WindowHandle as Integer, Flags as Integer)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets the type and state of the progress indicator displayed on a taskbar button.

Notes: Use the ProgressStateFlag* constants. Flags that control the current state of the progress button. Specify only one of the following flags; all states are mutually exclusive of all others.

Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.

Progress bar information is not shown in high contrast color schemes to guarantee that no accessibility needs are compromised.

Developers accustomed to the existing progress bar control should find the taskbar button progress indicator to be a similar experience both in concept and visuals. Here, the taskbar button itself becomes a progress bar. A taskbar button's progress indicator should be a reflection of a more detailed progress bar in the associated window. This allows the user to see specifics, such as the percentage number and the amount of time remaining, that cannot be shown in a taskbar button. Also, because a taskbar button can show the progress of only a single window in a group, it allows the user to check the progress of individual windows. It also provides progress information to the user when the taskbar button cannot, such as in a high-contrast color scheme.

Note that a taskbar button progress bar is not intended for use with normally peripheral actions such as the loading of a Web page or the printing of a document. That type of progress should continue to be shown in a window's status bar.

The progress indicator is displayed between the taskbar button's icon or text and the background. If progress is shown for both the active taskbar button and an inactive button, shading in the respective progress bars is such that the active button is still obvious to the user. Also, button functionality such as the display of thumbnails continues to work normally when the button is being used to display progress.

When exiting an error or paused state, call this method again with the ProgressStateFlagNormal or ProgressStateFlagIndeterminate flag to continue in the original state or TBPF_NOPROGRESS if the operation is cancelled.

How the Taskbar Button Chooses the Progress Indicator for a Group

The taskbar button can show a progress indicator for only one window at a time. This includes the situation where the taskbar button represents a group and more than one window in that group is broadcasting progress information. In that case, the taskbar button chooses its progress display based on state priority. State priority is shown in the following table with priority 1 being the highest.

Changing a window's state changes its priority in relation to other windows in the group which in turn might change which window in a group is used for the progress indicator in the taskbar button.

In the case of a priority collision between two windows that are broadcasting determinate progress, the

Priority	State
1	ProgressStateFlagError
2	ProgressStateFlagPaused
3	ProgressStateFlagNormal
4	ProgressStateFlagIndeterminate

window with the least progress is used.

Based on this priority, the indeterminate progress indicator can be displayed in the taskbar button only in these cases:

- The taskbar button does not represent a group and the single window that it represents has set ProgressStateFlagIndeterminate.
- The taskbar button represents a group, only one window in that group is broadcasting progress information, and that window has set ProgressStateFlagIndeterminate.
- The taskbar button represents a group, multiple windows in that group are broadcasting progress information, and all of those windows have set ProgressStateFlagIndeterminate.

A determinate progress indicator can be displayed in these cases:

- The taskbar button does not represent a group and the single window that it represents is broadcasting determinate progress information.
- The taskbar button represents a group, only one window in that group is broadcasting progress information, and that window is broadcasting determinate progress information.
- The taskbar button represents a group, multiple windows in that group are broadcasting progress information, at least one of those windows is broadcasting determinate progress information, and no window has set ProgressStateFlagError or ProgressStateFlagPaused.

Note that a call to SetProgressValue will switch a progress indicator currently in an indeterminate mode (ProgressStateFlagIndeterminate) to a normal (determinate) display and clear the ProgressStateFlagIndeterminate flag.

If the handle is a ptr, you need to cast it with Integer(YourPtr) to pass it.

210.45.11 SetProgressValue(WindowHandle as Integer, Completed as UInt64, Total as UInt64)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Displays or updates a progress bar hosted in a taskbar button to show the specific percentage completed of the full operation.
Notes: Completed: An application-defined value that indicates the proportion of the operation that has been completed at the time the method is called.
Total: An application-defined value that specifies the value ullCompleted will have when the operation is complete.

Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.

Determinate Progress Bar Lifecycle

An application first calls SetProgressValue to begin the display of a determinate progress bar, and then calls it again as needed to update the bar as the progress changes. When progress is complete, the application must call SetProgressState with the TBPF_NOPROGRESS flag to dismiss the progress bar.

How the Taskbar Button Chooses the Progress Indicator for a Group

The taskbar button can show a progress indicator for only one window at a time. When the taskbar button represents a group and more than one of the windows in that group are broadcasting progress information, the taskbar button chooses its progress display based on the following state priority.

Priority	State
1	ProgressStateFlagError
2	ProgressStateFlagPaused
3	ProgressStateFlagNormal
4	ProgressStateFlagIndeterminate

Unless SetProgressState has set a blocking state (ProgressStateFlagError or ProgressStateFlagPaused) for the window, a call to SetProgressValue assumes the ProgressStateFlagNormal state even if it is not explicitly set. A call to SetProgressValue overrides and clears the ProgressStateFlagIndeterminate state.

In the case of a priority collision where two windows are broadcasting determinate progress, the window with the least progress is used.

Based on that priority, this determinate (specific percentage) progress indicator can be displayed in these cases:

- The taskbar button does not represent a group and the single window that it represents is broadcasting determinate progress information through this method.

- The taskbar button represents a group, only one window in that group is broadcasting progress information, and that window is broadcasting determinate progress information through this method.

- The taskbar button represents a group, multiple windows in that group are broadcasting progress information, at least one of those windows is broadcasting progress information through this method, and none of those windows has set the ProgressStateFlagError or ProgressStateFlagPaused state.

If a window in the group has set ProgressStateFlagError or ProgressStateFlagPaused, that state will be used for the button display. However, you can still make calls to SetProgressValue on other, unblocked windows in the group to update their progress in the background.

If the handle is a ptr, you need to cast it with Integer(YourPtr) to pass it.

210.45.12 SetTabActive(TabWindowHandle as Integer, MDIWindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Informs the taskbar that a tab or document window has been made the active window.
Notes: Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.

TabWindowHandle: Handle of the active tab window. This handle must already be registered through RegisterTab. This value can be 0 if no tab is active.

MDIWindowHandle: Handle of the application's main window. This value tells the taskbar which group the thumbnail is a member of. This value is required and cannot be 0.

210.45.13 SetTabOrder(TabWindowHandle as Integer, InsertBeforeWindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Inserts a new thumbnail into a tabbed-document interface (TDI) or multiple-document interface (MDI) application's group flyout or moves an existing thumbnail to a new position in the application's group.
Notes: TabWindowHandle: The handle of the tab window whose thumbnail is being placed. This value is required, must already be registered through RegisterTab, and cannot be 0.
InsertBeforeWindowHandle: The handle of the tab window whose thumbnail that hwndTab is inserted to the left of. This handle must already be registered through RegisterTab. If this value is 0, the new thumbnail is added to the end of the list.

210.45.14 SetTabProperties(TabWindowHandle as Integer, flags as Integer)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Allows a tab to specify whether the main application frame window or the tab window should be used as a thumbnail or in the peek feature under certain circumstances.
Notes: An application might want to use the thumbnail or peek representation of its associated parent window if the application cannot generate its own thumbnail for a tab or for its active tab content (such as an animation) to appear live.

flags: One of the TabPropertyFlag* constants.
Available on Windows 7 or Windows Server 2008 R2 or newer.

210.45.15 SetThumbnailClip(TabWindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Selects a portion of a window's client area to display as that window's thumbnail in the taskbar.
Notes: This variant of the method clears the clip that is already in place and return to the default display of the thumbnail.

Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.
See also:

- 210.45.16 SetThumbnailClip(TabWindowHandle as Integer, x as Integer, y as Integer, w as Integer, h as Integer) 24926

210.45.16 SetThumbnailClip(TabWindowHandle as Integer, x as Integer, y as Integer, w as Integer, h as Integer)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Selects a portion of a window's client area to display as that window's thumbnail in the taskbar.
Notes: Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.
See also:

- 210.45.15 SetThumbnailClip(TabWindowHandle as Integer) 24926

210.45.17 SetThumbnailTooltip(TabWindowHandle as Integer, tip as string)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies or updates the text of the tooltip that is displayed when the mouse pointer rests on an individual preview thumbnail in a taskbar button flyout.
Notes: Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.

TabWindowHandle: The handle to the window whose thumbnail displays the tooltip. This handle must belong to the calling process.

tip: The text to be displayed in the tooltip. This value can be empty, in which case the title of the window specified by WindowHandle is used as the tooltip.

210.45.18 UnregisterTab(TabWindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Removes a thumbnail from an application's preview group when that tab or document is closed in the application.
Notes: It is the responsibility of the calling application to free hwndTab through DestroyWindow. UnregisterTab must be called before the handle is freed.
Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.

210.45.19 Properties

210.45.20 Handle1 as Integer

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference for the ITaskbarList interface.
Notes: The ITaskbarList interface is available on Windows 2000 Professional, Windows XP or Windows 2000 Server or newer.
(Read and Write property)

210.45.21 Handle2 as Integer

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference for the ITaskbarList2 interface.
Notes: The ITaskbarList4 interface is available on Windows XP or Windows Server 2003 or newer.
(Read and Write property)

210.45.22 Handle3 as Integer

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference for the ITaskbarList3 interface.
Notes: The ITaskbarList3 interface is available on Windows 7 or Windows Server 2008 R2 or newer.
(Read and Write property)

210.45.23 Handle4 as Integer

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference for the ITaskbarList4 interface.
Notes: The ITaskbarList4 interface is available on Windows 7 or Windows Server 2008 R2 or newer.
(Read and Write property)

210.45.24 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code from one of the methods.
Notes: (Read and Write property)

210.45.25 Constants

Constants

Constant	Value	Description
ProgressStateFlagError	4	One of the progress state flag constants. The progress indicator turns red to show that an error has oc the windows that is broadcasting progress. This is a determina progress indicator is in the indeterminate state, it switches to a display of a generic percentage not indicative of actual progres
ProgressStateFlagIndeterminate	1	One of the progress state flag constants. The progress indicator does not grow in size, but cycles repea length of the taskbar button. This indicates activity without proportion of the progress is complete. Progress is taking pla no prediction as to how long the operation will take.
ProgressStateFlagNoProgress	0	One of the progress state flag constants. Stops displaying progress and returns the button to its norr this method with this flag to dismiss the progress bar when t complete or cancelled.
ProgressStateFlagNormal	2	One of the progress state flag constants. The progress indicator grows in size from left to right in pr estimated amount of the operation completed. This is a deter indicator; a prediction is being made as to the duration of the
ProgressStateFlagPaused	8	One of the progress state flag constants. he progress indicator turns yellow to show that progress is curre one of the windows but can be resumed by the user. No error and nothing is preventing the progress from continuing. This i state. If the progress indicator is in the indeterminate state a yellow determinate display of a generic percentage not indi progress.
TabPropertyFlagNone	0	One of the flag values you can use with SetTabProperties. No specific property values are specified. The default behavior window provides a thumbnail and peek image, either live or sta ate.
TabPropertyFlagUseAppPeekAlways	4	One of the flag values you can use with SetTabProperties. Always use the peek image provided by the main application rather than a peek image provided by the individual tab wi combine this value with TabPropertyFlagUseAppPeekWhenA will result in an error.
TabPropertyFlagUseAppPeekWhenActive	8	One of the flag values you can use with SetTabProperties. When the application tab is active and a live representation available, show the main application frame in the peek feature. use the tab window. Do not combine this value with TabPr AppPeekAlways; doing so will result in an error.
TabPropertyFlagUseAppThumbnailAlways	1	One of the flag values you can use with SetTabProperties. Always use the thumbnail provided by the main application rather than a thumbnail provided by the individual tab windo bine this value with TabPropertyFlagUseAppThumbnailWhen will result in an error.
TabPropertyFlagUseAppThumbnailWhenActive	2	One of the flag values you can use with SetTabProperties. When the application tab is active and a live representation available, use the main application frame window thumbnail. use the tab window thumbnail. Do not combine this value w tyFlagUseAppThumbnailAlways; doing so will result in an erro

210.46 class WindowsThreadExecutionStateMBS

210.46.1 class WindowsThreadExecutionStateMBS

MBS Win Plugin, Plugin Version: 23.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets the thread execution state.
Example:

```
Var flags as integer = WindowsThreadExecutionStateMBS.kSystemRequired
Var w as new WindowsThreadExecutionStateMBS(flags)
Window1.WindowsThreadExecutionState = w // store it in property
```

Notes: The state is set in constructor and reset in destructor, so you can put this object in a property of a window, so when the window is destroyed, the state is reset automatically.

Enables an application to inform the system that it is in use, thereby preventing the system from entering sleep or turning off the display while the application is running.

For macOS, please check NSProcessInfoMBS class.

The system automatically detects activities such as local keyboard or mouse input, server activity, and changing window focus. Activities that are not automatically detected include disk or CPU activity and video display.

To run properly on a power-managed computer, applications such as fax servers, answering machines, backup agents, and network management applications must use both kSystemRequired when they process events. Multimedia applications, such as video players and presentation applications, must use kDisplayRequired when they display video for long periods of time without user input. Applications such as word processors, spreadsheets, browsers, and games do not need to use this.

The kAwayModeRequired value should be used only when absolutely necessary by media applications that require the system to perform background tasks such as recording television content or streaming media to other devices while the system appears to be sleeping. Applications that do not require critical background processing or that run on portable computers should not enable away mode because it prevents the system from conserving power by entering true sleep.

To enable away mode, an application uses both kAwayModeRequired; to disable away mode, let the destructor reset. When away mode is enabled, any operation that would put the computer to sleep puts it in away mode instead. The computer appears to be sleeping while the system continues to perform tasks that do not require user input. Away mode does not affect the sleep idle timer; to prevent the system from entering sleep when the timer expires, an application must also set the kSystemRequired value.

This class cannot be used to prevent the user from putting the computer to sleep. Applications should respect that the user expects a certain behavior when they close the lid on their laptop or press the power button.

This function does not stop the screen saver from executing.

- 21.2, page 9: News

210.46.2 Methods

210.46.3 Constructor(Flags as Integer)

MBS Win Plugin, Plugin Version: 23.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets the state and stores old state in property.
Example:

```
Var flags as integer = WindowsThreadExecutionStateMBS.kSystemRequired
Var w as new WindowsThreadExecutionStateMBS(flags)
Window1.WindowsThreadExecutionState = w // store it in property
```

Notes: Does nothing if called on macOS, iOS or Linux.

210.46.4 Destructor

MBS Win Plugin, Plugin Version: 23.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.
Notes: Puts back the old state.
Does nothing if called on macOS, iOS or Linux.

210.46.5 Properties

210.46.6 newState as Integer

MBS Win Plugin, Plugin Version: 23.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The new state set.
Notes: (Read only property)

210.46.7 oldState as Integer

MBS Win Plugin, Plugin Version: 23.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The old state before.
Notes: (Read only property)

210.46.8 Constants

Flags

Constant	Value	Description
kAwayModeRequired	64	Enables away mode. Away mode should be used only by media-recording and media-distribution applications that must perform critical background processing on desktop computers while the computer appears to be sleeping.
kDisplayRequired	2	Forces the display to be on by resetting the display idle timer.
kSystemRequired	1	Forces the system to be in the working state by resetting the system idle timer.

210.47 class WindowsVerticalBlankMBS

210.47.1 class WindowsVerticalBlankMBS

MBS ComputerControl Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class for checking on Windows with the retrace of the display.
Example:

```
// read the refresh rate of the display and wait for the next vertical blank on Windows
Var vb As New WindowsVerticalBlankMBS
If Not vb.Available Then
MessageBox vb.LasterrorString
Return
End If

MessageBox "Monitor frequency: " + vb.GetMonitorFrequency.ToString + " Hz"
vb.WaitForVerticalBlankBegin // now draw to avoid tearing
```

Notes: Sometimes you may want to draw only if the device is currently not touching the video memory.
Blog Entries

- MBS Real Studio Plugins, version 12.3pr10

210.47.2 Methods

210.47.3 Constructor

MBS ComputerControl Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Initializes the class.

210.47.4 GetMonitorFrequency as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the frequency of the monitor that the DirectDraw object controls.
Notes: Returns the monitor frequency, in Hz.
Lasterror is set.

210.47.5 GetScanLine as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: This method retrieves the scan line that is currently being drawn on the monitor.
Notes: To synchronize with the vertical blank, use the WaitForVerticalBlank method.
Lasterror is set.

Scan lines are reported as zero-based integers.
The returned scan line value is between 0 and n, where scan line 0 is the first visible scan line on the screen and n is the last visible scan line, plus scan lines that occur during the vertical blank period.
So, in a case where an application is running at 640x480, and there are 12 scan lines during the vertical blank period, the values returned by this method will range from 0 to 491.

210.47.6 GetVerticalBlankStatus as boolean

MBS ComputerControl Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the status of the vertical blank.
Notes: Returns the status of the vertical blank. True if a vertical blank is occurring, and false otherwise.
Lasterror is set.

210.47.7 WaitForVerticalBlankBegin

MBS ComputerControl Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Helps the application synchronize itself with the vertical-blank interval.
Notes: WaitForVerticalBlank returns when the vertical-blank interval begins.
Lasterror is set.

210.47.8 WaitForVerticalBlankEnd

MBS ComputerControl Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Helps the application synchronize itself with the vertical-blank interval.
Notes: WaitForVerticalBlank returns when the vertical-blank interval ends and the display begins.
Lasterror is set.

210.47.9 Properties

210.47.10 Available as Boolean

MBS ComputerControl Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this class will work.
Notes: (Read and Write property)

210.47.11 Lasterror as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last windows error string.
Notes: (Read and Write property)

210.47.12 LasterrorString as String

MBS ComputerControl Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last windows error string.
Notes: (Read only property)

210.48 class WindowsWMIMBS

210.48.1 class WindowsWMIMBS

MBS Win Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to run queries in the Windows Management Interface.
Example:

```
Var w as WindowsWMIMBS

w=new WindowsWMIMBS

if w.ConnectServer("root\cimv2") then
MessageBox "ConnectServer: ok"

if w.query("WQL","SELECT * FROM Win32_Processor") then
MessageBox "query: ok"

if w.NextItem then
MessageBox "NextItem: ok"

MessageBox w.GetPropertyString("Name") // string
MessageBox str(w.GetPropertyInteger("MaxClockSpeed")) // uint32
MessageBox str(w.GetPropertyInteger("ProcessorType")) // uint16

else
MessageBox "NextItem: fail"
end if
else
MessageBox "query: fail"
end if

else
MessageBox "ConnectServer: fail"
end if
```

Notes: In Windows 8.1 (or later) it looks like WindowsWMIMBS.InitSecurity(false) must be called at app.Constructor time as Xojo will do some things in background when opening first window which block our queries.
Subclass of the WMIObjectMBS class.

Xojo Developer Magazine

- 24.1, page 9: News

210.48.2 Methods

210.48.3 CancelAsyncCall as boolean

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Stops events being delivered to this WindowsWMIMBS object.
Notes: Lasterror is set.

210.48.4 ConnectServer(NetworkResource as string, Username as string="", Password as string="", Locale as string="", Authority as string="") as boolean

MBS Win Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Connect to WMI server.
Example:

```
Var w as WindowsWMIMBS // your WMI object
call w.ConnectServer("root\cimv2")
```

Notes: Returns true on success and false on failure.
Authority parameter added in plugin version 12.2.

210.48.5 Constructor

MBS Win Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.

210.48.6 ExecNotificationQueryAsync(QueryLanguage as string, QueryText as string) as boolean

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ExecNotificationQueryAsync method executes a query to receive events.
Notes: The plugin receives events and enqueues them in a queue. You read objects from this queue in a timer and process them.
NextItem returns nil if the queue is empty.

Returns true on success and false on failure.
Lasterror is set. e.g. &h80041018 if you have syntax error in the query or &h80041058 if the query can't be parsed.

210.48.7 InitAuthentication(User as string, Domain as string, Password as string) as boolean

MBS Win Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Initializes authentication data.
Notes: Call before ConnectServer.
This settings are passed to objects for authentication.

210.48.8 InitSecurity(AuthnLevel as Integer, ImpLevel as Integer) as boolean

MBS Win Plugin, Plugin Version: 13.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Registers security and sets the default security values for the process.
Notes: You can call this method before creating WindowsWMIMBS object, you can prepare security settings for remote connections.

AuthnLevel:
The default authentication level for the process. Both servers and clients use this parameter when they call CoInitializeSecurity. COM will fail calls that arrive with a lower authentication level. By default, all proxies will use at least this authentication level. This value should contain one of the authentication level constants.

By default, all calls to IUnknown are made at this level.

ImpLevel:
The default impersonation level for proxies. The value of this parameter is used only when the process is a client. It should be a value from the impersonation level constants, except for kImpersonationLevelDefault, which is not for use with CoInitializeSecurity.
Outgoing calls from the client always use the impersonation level as specified. (It is not negotiated.) Incoming calls to the client can be at any impersonation level. By default, all IUnknown calls are made with this impersonation level, so even security-aware applications should set this level carefully. To determine which impersonation levels each authentication service supports, see the description of the authentication services in COM and Security Packages. For more information about impersonation levels, see Impersonation.

Please call in App.Constructor before Xojo can initialize COM and prevent our function from working!
See also:

- 210.48.9 InitSecurity(remote as boolean) as boolean 24939

210.48.9 InitSecurity(remote as boolean) as boolean

MBS Win Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Initializes security.
Notes: You can call this method before creating WindowsWMIMBS object, you can prepare security settings for remote connections.

Calling InitSecurity with remote=true will initialize security with kImpersonationLevelImpersonate. If remote=false, we use kImpersonationLevelIdentity which is the default.

Please call in App.Constructor before Xojo can initialize COM and prevent our function from working!
See also:

- 210.48.8 InitSecurity(AuthnLevel as Integer, ImpLevel as Integer) as boolean 24938

210.48.10 NextItem as boolean

MBS Win Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Moves to next item in the list.
Notes: You need to call this at least once to move to the first item.
Returns false if no more items are there.

210.48.11 Query(QueryLanguage as string, QueryText as string) as boolean

MBS Win Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs a query.
Example:

```
Var w as WindowsWMIMBS
call w.query("WQL","SELECT * FROM Win32_Processor")
```

Notes: Returns true on success and false on failure.

210.48.12 Properties

210.48.13 EnumeratorHandle as Integer

MBS Win Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle to the used IEnumWbemClassObject object.
Notes: (Read only property)

210.48.14 LocatorHandle as Integer

MBS Win Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle to the used IWbemLocator object.
Notes: (Read only property)

210.48.15 ServiceHandle as Integer

MBS Win Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle to the used IWbemServices object.
Notes: (Read only property)

210.48.16 Constants

Authentication Level

Constant	Value	Description
kAuthenticationLevelCall	3	Authenticates only at the beginning of each remote procedure call when server receives the request. Datagram transports use kAuthenticationLe Paket instead.
kAuthenticationLevelConnect	2	Authenticates the credentials of the client only when the client establish relationship with the server. Datagram transports always use kAuthenticat LevelPacket instead.
kAuthenticationLevelDefault	0	Tells DCOM to choose the authentication level using its normal security bla negotiation algorithm. For more information, see Security Blanket Negotiat
kAuthenticationLevelNone	1	Performs no authentication.
kAuthenticationLevelPacket	4	Authenticates that all data received is from the expected client.
kAuthenticationLevelPacketIntegrity	5	Authenticates and verifies that none of the data transferred between client server has been modified.
kAuthenticationLevelPacketPrivacy	6	Authenticates all previous levels and encrypts the argument value of each mote procedure call.

Impersonation Level Constants

Constant	Value	Description
kImpersonationLevelAnonymous	1	The client is anonymous to the server. The server process can impersonate the client, but the impersonation token will not contain any information and cannot be used.
kImpersonationLevelDefault	0	DCOM can choose the impersonation level using its normal security blanket negotiation algorithm. For more information, see Security Blanket Negotiation
kImpersonationLevelDelegate	4	The server process can impersonate the client's security context while acting on behalf of the client. The server process can also make outgoing calls to other servers while acting on behalf of the client, using cloaking. The server may use the client's security context on other machines to access local and remote resources as the client. When impersonating at this level, the impersonation token can be passed across any number of computer boundaries.
kImpersonationLevelIdentity	2	The server can obtain the client's identity. The server can impersonate the client for ACL checking, but it cannot access system objects as the client.
kImpersonationLevelImpersonate	3	The server process can impersonate the client's security context while acting on behalf of the client. This level of impersonation can be used to access local resources such as files. When impersonating at this level, the impersonation token can only be passed across one machine boundary. The Schannel authentication service only supports this level of impersonation.

210.49 class WinExceptionMBS

210.49.1 class WinExceptionMBS

MBS Win Plugin, Plugin Version: 8.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class to catch windows system exceptions.
Example:

```
// log Windows system exceptions like access violations before the app crashes
// MyExceptionHandler is a subclass of WinExceptionMBS with the GotException event implemented.
// Handler is a property of the app: Handler As MyExceptionHandler
Handler = New MyExceptionHandler

// in MyExceptionHandler:
Function GotException() As Integer Handles GotException
System.DebugLog "Exception " + Hex(ExceptionCode) + " " + ExceptionName + " at &h" + Hex(ExceptionAddress)
Return 0 // continue the normal exception handling
End Function
```

Notes: This class was made to intercept crashes in a Xojo application.
Whenever the application crashes, this class will fire its event so you have a chance to report that crash to your user and maybe save a crash report.

Do not try to save data as this could overwrite good data with bad data. Remember your application already crashed. Maybe because of data corruption!

Only one instance can exist in your application.

See also SignalHandlerMBS, NSExceptionHandlerMBS and GlobalExceptionHandlerMBS classes.

210.49.2 Methods

210.49.3 Close

MBS Win Plugin, Plugin Version: 8.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: Removes the exception handler from the system.

210.49.4 Properties

210.49.5 ExceptionAddress as Integer

MBS Win Plugin, Plugin Version: 8.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: The address in memory where the exception was raised.
Notes: (Read only property)

210.49.6 ExceptionCode as Integer

MBS Win Plugin, Plugin Version: 8.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: The code of this exception.
Notes: Normally one of the kException* constants.
(Read only property)

210.49.7 ExceptionFlags as Integer

MBS Win Plugin, Plugin Version: 8.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: The exception flags.
Notes: (Read only property)

210.49.8 ExceptionIsNonContinuable as Boolean

MBS Win Plugin, Plugin Version: 8.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this exception allows to continue in code.
Notes: For example a division by zero can be continued.
(Read only property)

210.49.9 ExceptionName as String

MBS Win Plugin, Plugin Version: 8.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the exception.
Notes: If ExceptionCode=kExceptionAccessViolation then returns "ExceptionAccessViolation".

This is a convenience function which you can use to show the exception to the user.
(Read only property)

210.49.10 Events

210.49.11 GotException() as Integer

MBS Win Plugin, Plugin Version: 8.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event called when an exception was received.
Notes: Your application has crashed on this point, but instead of seeing the Microsoft dialog to tell you that the application crashed, your application has the chance to report that problem.

Return one of the following constants: kExecuteHandler, kContinueCode, kNextHandler, kExecuteHandlerNoDialog.

The plugin already removed the crash callback from the system so if the code in this event crashes again, the system dialog shows.

210.49.12 Constants

Constants

Constant	Value	Description
kContinueCode	2	One of the constants you can use for the GotException event ret This one is not recommented as it can raise the same exception a your application.
kExceptionAccessViolation	&hC0000005	One of the constants for exception codes. The thread attempts to read from or write to a virtual addres does not have access.
kExceptionArrayBoundsExceeded	&hC000008C	One of the constants for exception codes. The thread attempts to access an array element that is out of bo underlying hardware supports bounds checking.
kExceptionBreakPoint	&h80000003	One of the constants for exception codes. A breakpoint is encountered.
kExceptionDataTypeMisalignment	&h80000002	One of the constants for exception codes. The thread attempts to read or write data that is misaligned on h does not provide alignment. For example, 16-bit values must 2-byte boundaries, 32-bit values on 4-byte boundaries, and so on
kExceptionFloatDenormalOperand	&hC000008D	One of the constants for exception codes. One of the operands in a floating point operation is denormal. value is one that is too small to represent as a standard floating
kExceptionFloatDivideByZero	&hC000008E	One of the constants for exception codes. The thread attempts to divide a floating point value by a floating of 0 (zero).
kExceptionFloatInexactResult	&hC000008F	One of the constants for exception codes. The result of a floating point operation cannot be represented decimal fraction.
kExceptionFloatInvalidOperation	&hC0000090	One of the constants for exception codes. A floating point exception that is not included in this list.
kExceptionFloatOverflow	&hC0000091	One of the constants for exception codes. The exponent of a floating point operation is greater than the lowed by the corresponding type.
kExceptionFloatStackCheck	&hC0000092	One of the constants for exception codes. The stack has overflowed or underflowed, because of a floating po
kExceptionFloatUnderflow	&hC0000093	One of the constants for exception codes. The exponent of a floating point operation is less than the magn by the corresponding type.
kExceptionIllegalInstruction	&hC000001D	One of the constants for exception codes. The thread tries to execute an invalid instruction.
kExceptionInPageError	&hC0000006	One of the constants for exception codes. The thread tries to access a page that is not present, and the syste load the page. For example, this exception might occur if a netwo is lost while running a program over a network.
kExceptionIntegerDivideByZero	&hC0000094	One of the constants for exception codes. The thread attempts to divide an integer value by an integer divis
kExceptionIntegerOverflow	&hC0000095	One of the constants for exception codes. The result of an integer operation causes a carry out of the most of the result.
kExceptionInvalidDisposition	&hC0000026	One of the constants for exception codes. An exception handler returns an invalid disposition to the excepti Programmers using a high-level language such as C should never exception.
kExceptionNonContinueableException	&hC0000025	One of the constants for exception codes. The thread attempts to continue execution after a non-continua occurs.
kExceptionPrivilegedInstruction	&hC0000096	One of the constants for exception codes. The thread attempts to execute an instruction with an operati allowed in the current computer mode.
kExceptionSingleStep	&h80000004	One of the constants for exception codes. A trace trap or other single instruction mechanism signals that o is executed.

210.50 class WinGestureConfigMBS

210.50.1 class WinGestureConfigMBS

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: ets and sets the configuration for enabling gesture messages and the type of this configuration.
Example:

```
// make a config for accepting pan/rotate gestures
Var c1 as new WinGestureConfigMBS

c1.ID = c1.kGestureIDPan
c1.Want = c1.kPan
c1.Block = 0

Var c2 as new WinGestureConfigMBS
c2.ID = c2.kGestureIDRotate
c2.Want = c2.kRotate
c2.Block = 0

Var configs() as WinGestureConfigMBS
configs.Add c1
configs.Add c2

// and add to window
if WinPointerEventsMBS.SetGestureConfig(Window1, configs) then
MessageBox "OK"
end if
```

Notes: It is impossible to disable two-finger panning and keep single finger panning. You must set the want bits for GC_PAN before you can set them for GC_PAN_WITH_SINGLE_FINGER_HORIZONTALLY or GC_PAN_WITH_SINGLE_FINGER_VERTICALLY.
An inertia vector is included in the GID_PAN message with the GF_END flag if inertia was disabled by a call to SetGestureConfig.
When you pass this structure, the dwID member contains information for a set of gestures. This determines what the other flags will mean. If you set flags for pan messages, they will be different from those flags that are set for rotation messages.
The following table indicates the various identifiers for gestures that are supported by the dwID member of the GESTURECONFIG structure. Note that setting dwID to 0 indicates that global gesture configuration flags are set.

The following flags are used when dwID is set to 0.

The following flags are used when dwID is set to GID_ZOOM.

Name	Value	Description
GID_ZOOM	3	Indicates configuration settings for the zoom gesture.
GID_PAN	4	Indicates the pan gesture.
GID_ROTATE	5	Indicates the rotation gesture.
GID_TWOFINGERTAP	6	Indicates the two-finger tap gesture.
GID_PRESSANDTAP	7	Indicates the press and tap gesture.

Name	Value	Description
GC_ALLGESTURES	0x00000001	Indicates all of the gestures.

Name	Value	Description
GC_ZOOM	0x00000001	Indicates the zoom gesture.

The following flags are used when dwID is set to GID_PAN.

Note Setting the GID_PAN flags in SetGestureConfig will affect the default gesture handler for panning. You should not have both dwWant and dwBlock set for the same flags; this will result in unexpected behavior. See Windows Touch Gestures for more information on panning and legacy panning support; see SetGestureConfig for examples of enabling and blocking gestures.

The following flags are used when dwID is set to GID_ROTATE.

The following flags are used when dwID is set to GID_TWOFINGERTAP.

The following flags are used when dwID is set to GID_PRESSANDTAP.

- Presentation from Munich conference about MBS Plugins.

210.50.2 Properties

210.50.3 Block as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Name	Value	Description
GC_PAN	0x00000001	Indicates all pan gestures.
GC_PAN_WITH_SINGLE_FINGER_VERTICALLY	0x00000002	Indicates vertical pans with one finger.
GC_PAN_WITH_SINGLE_FINGER_HORIZONTALLY	0x00000004	Indicates horizontal pans with one finger.
GC_PAN_WITH_GUTTER	0x00000008	Limits perpendicular movement to primary direction until a threshold is reached to break out of the gutter.
GC_PAN_WITH_INERTIA	0x00000010	Indicates panning with inertia to smoothly slow when pan gestures stop.

Name	Value	Description
GC_ROTATE	0x00000001	Indicates the rotation gesture.

Function: The messages to disable.
Example:

```
// make a config for accepting some pan gestures
Var c as new WinGestureConfigMBS

c.ID = kGestureIDPan
c.Want = c.kPanWithSingleFingerVertically + c.kPanWithGutter + c.kPanWithInteria
c.Block = c.kPanWithSingleFingerHorizontally
```

Notes: (Read and Write property)

210.50.4 ID as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The identifier for the type of configuration that will have messages enabled or disabled.
Example:

```
// make a config for accepting some pan/rotate gestures
Var c1 as new WinGestureConfigMBS

c1.ID = 0
c1.Want = c1.kAllGestures
c1.Block = 0

Var configs() as WinGestureConfigMBS
configs.Add c1

// and add to window
if WinPointerEventsMBS.SetGestureConfig(Window1, configs) then
MessageBox "OK"
end if
```

Notes: (Read and Write property)

Name	Value	Description
GC_TWOFINGERTAP	0x00000001	Indicates the two-finger tap gesture.

Name	Value	Description
GC_PRESSANDTAP	0x00000001	Indicates the press and tap gesture.

210.50.5 Want as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The messages to enable.
Example:

```
// make a config for accepting all gestures
Var c as new WinGestureConfigMBS

c.ID = 0 // catch all IDs
c.Want = c.kAllGestures
```

Notes: (Read and Write property)

210.50.6 Constants

Gesture Options

Constant	Value	Description
kAllGestures	1	Indicates all of the gestures. (for ID = 0)
kPan	1	Indicates all pan gestures.
kPanWithGutter	8	Limits perpendicular movement to primary direction until a threshold reached to break out of the gutter.
kPanWithInteria	16	Indicates panning with inertia to smoothly slow when pan gestures stop.
kPanWithSingleFingerHorizontally	4	Indicates horizontal pans with one finger.
kPanWithSingleFingerVertically	2	Indicates vertical pans with one finger.
kPressAndTap	1	Indicates the press and tap gesture.
kRotate	1	Indicates the rotation gesture.
kTwoFingerTap	1	Indicates the two-finger tap gesture.
kZoom	1	Indicates the zoom gesture. (for ID = kGestureIDZoom)

Gesture IDs

Constant	Value	Description
kGestureIDBegin	1	Begin of gesture.
kGestureIDEnd	2	End of a gesture
kGestureIDPan	4	Pan gesture
kGestureIDPressAndTap	7	Press and Tap gesture
kGestureIDRotate	5	Rotate gesture
kGestureIDTwoFingerTap	6	Two-Finger Tap
kGestureIDZoom	3	Zoom gesture

210.51 class WinGestureInfoMBS

210.51.1 class WinGestureInfoMBS

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Stores information about a gesture.
Example:

```
// react to zoom and rotate gestures on a Windows touch screen
// MyPointerEvents is a subclass of WinPointerEventsMBS with the Gesture event implemented.
// PointerEvents is a property of the window: PointerEvents As MyPointerEvents
PointerEvents = New MyPointerEvents(Self)

// in MyPointerEvents:
Function Gesture(info As WinGestureInfoMBS) As Boolean Handles Gesture
Select Case info.ID
Case WinGestureInfoMBS.kGestureIDZoom
System.DebugLog "Zoom, distance " + info.Arguments.ToString + " at " + info.LocationX.ToString + "/"
+ info.LocationY.ToString
Return True
Case WinGestureInfoMBS.kGestureIDRotate
System.DebugLog "Rotate by " + Format(info.RotateAngle, "0.0")
Return True
End Select
End Function
```

Notes: Parameters for touches:
If kFlagBegin flag is set, save Location so you have first point. And save argument to check later.

For Zoom, get second point from this class. Than you can calculate center point and zoom factor is OldArgumentsLower/NewArgumentsLower.

For Pan, check difference between last point and new point to know how much moved.

For Rotate, please check difference between old RotateAngle and new RotateAngle.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- Windows Touch Events

210.51.2 Methods

210.51.3 Constructor

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop only.

Function: The private constructor.

210.51.4 Properties

210.51.5 Arguments as Int64

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A 64-bit unsigned integer that contains the arguments for gestures that fit into 8 bytes.
Notes: (Read only property)

210.51.6 ArgumentsHigher as UInt32

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The higher 32bits from Arguments.
Notes: (Read only property)

210.51.7 ArgumentsLower as UInt32

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The lower 32bits from Arguments.
Notes: Most events just use lower bits.
(Read only property)

210.51.8 Flags as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The state of the gesture.
Notes: See kFlagBegin/kFlagInertia/kFlagEnd constants.
(Read only property)

210.51.9 ID as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The identifier of the gesture command.
Notes: see kGestureID* constants.
(Read only property)

210.51.10 InstanceID as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: An internally used identifier for the structure.
Notes: (Read only property)

210.51.11 LocationInWindowX as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A x coordinate associated with the gesture.
Notes: This is LocationX relative to target window.
(Read only property)

210.51.12 LocationInWindowY as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A x coordinate associated with the gesture.
Notes: This is LocationY relative to target window.
(Read only property)

210.51.13 LocationX as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A x coordinate associated with the gesture.
Notes: These coordinates are always relative to the origin of the screen.
(Read only property)

210.51.14 LocationY as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A x coordinate associated with the gesture.
Notes: These coordinates are always relative to the origin of the screen.
(Read only property)

210.51.15 RotateAngle as Double

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The argument as angle for rotate gesture.
Notes: (Read only property)

210.51.16 SequenceID as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: An internally used identifier for the sequence.
Notes: (Read only property)

210.51.17 TargetWindow as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A handle to the window that is targeted by this gesture.
Notes: (Read only property)

210.51.18 Constants

Flags

Constant	Value	Description
kFlagBegin	1	A gesture is starting.
kFlagEnd	4	A gesture has finished.
kFlagInertia	2	A gesture has triggered inertia.

Gesture IDs

Constant	Value	Description
kGestureIDBegin	1	Begin of a gesture
kGestureIDEnd	2	End of a gesture
kGestureIDPan	4	Pan gesture
kGestureIDPressAndTap	7	Press and Tap gesture
kGestureIDRotate	5	Rotate gesture
kGestureIDTwoFingerTap	6	Two-Finger Tap
kGestureIDZoom	3	Zoom gesture

210.52 class WinMouseFilterMBS

210.52.1 class WinMouseFilterMBS

MBS Win Plugin, Plugin Version: 21.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to filter mouse events in the whole application.
Example:

```
// watch all left mouse clicks in the application on Windows
// MyMouseFilter is a subclass of WinMouseFilterMBS with the ReceivedEvent event implemented.
// Filter is a property of the window: Filter As MyMouseFilter
Filter = New MyMouseFilter
WinMouseFilterMBS.Enabled = True

// in MyMouseFilter:
Function ReceivedEvent(Message As Integer, mouseX As Integer, mouseY As Integer, windowHandle As
Integer, HitTestCode As Integer, ExtraInfo As Integer) As Boolean Handles ReceivedEvent
Const WM_LBUTTONDOWN = &h201
If Message = WM_LBUTTONDOWN Then
System.DebugLog "Click at " + mouseX.ToString + "/" + mouseY.ToString
End If
Return False // True would swallow the event
End Function
```

Notes: You may be able to intercept all mouse actions and block mouse events.

You can only have one instance to receive events at a time.

210.52.2 Methods

210.52.3 Constructor

MBS Win Plugin, Plugin Version: 21.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.

210.52.4 Properties

210.52.5 Enabled as Boolean

MBS Win Plugin, Plugin Version: 21.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Global flag to enable/disable it.
Notes: Set true to enable or false to disable.
(Read and Write property)

210.52.6 IncludeMouseHOver as Boolean

MBS Win Plugin, Plugin Version: 21.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to include hover events.
Notes: By default false to disable hover events.
Set to true to include those.
(Read and Write property)

210.52.7 IncludeMouseMove as Boolean

MBS Win Plugin, Plugin Version: 21.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to include move events.
Notes: By default false to disable move events.
Set to true to include those.
(Read and Write property)

210.52.8 IncludeMouseWheel as Boolean

MBS Win Plugin, Plugin Version: 21.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to include wheel events.
Notes: By default false to disable wheel events.
Set to true to include those.
(Read and Write property)

210.52.9 Events

210.52.10 ReceivedEvent(Message as Integer, mouseX as Integer, mouseY as Integer, windowHandle as Integer, HitTestCode as Integer, ExtraInfo as Integer) as Boolean

MBS Win Plugin, Plugin Version: 21.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Received an event.
Notes: Message: The identifier of the mouse message. See constants.
mouseX and mouseY: The x- and y-coordinates of the cursor, in screen coordinates.
WindowHandle: A handle to the window that will receive the mouse message corresponding to the mouse event.
HitTestCode: The hit-test value. For a list of hit-test values, see the description of the WM_NCHITTEST message.
ExtraInfo: Additional information associated with the message.

210.52.11 Constants

Mouse Events

Constant	Value	Description
kLButtonDoubleClick	&h0203	Left mouse button double click
kLButtonDown	&h0201	Left mouse button down
kLButtonUp	&h0202	Left mouse button up
kMButtonDoubleClick	&h0209	Middle mouse button double click
kMButtonDown	&h0207	Middle mouse button down
kMButtonUp	&h0208	Middle mouse button up
kMouseHOver	&h02a1	Mouse hover
kMouseHWheel	&h020e	Horizontal mouse wheel
kMouseLeave	&h02a3	Mouse Leave
kMouseMove	&h0200	Mouse moved
kMouseWheel	&h020a	Vertical mouse wheel
kRButtonDoubleClick	&h0206	Right mouse button double click
kRButtonDown	&h0204	Right mouse button down
kRButtonUp	&h0205	Right mouse button up
kXButtonDoubleClick	&h020d	Other mouse button double click
kXButtonDown	&h020b	Other mouse button down
kXButtonUp	&h020c	Other mouse button up

210.53 class WinPointerEventsMBS

210.53.1 class WinPointerEventsMBS

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class to capture touch events on Windows.
Example:

```
// receive touch and pen input for a window on Windows
// MyPointerEvents is a subclass of WinPointerEventsMBS with the PointerDown event implemented.
// Pointer is a property of the window: Pointer As MyPointerEvents
Pointer = New MyPointerEvents(Self)

// in MyPointerEvents:
Function PointerDown(PointerID As Integer, Flags As Integer, X As Integer, Y As Integer, info As Win-
PointerInfoMBS) As Boolean Handles PointerDown
System.DebugLog "Pointer " + PointerID.ToString + " down at " + X.ToString + "/" + Y.ToString
Return False // True to stop default handling
End Function
```

Notes: The plugin can only deliver events the Xojo runtime doesn't consume.

210.53.2 Methods

210.53.3 Close

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Cleans up.
Notes: Optional and does same as destructor, but now.
You can call this in a window's close event to shutdown the event handler class.

210.53.4 Constructor(control as DesktopUIControl)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: The constructor events to a control.
Notes: Call in a control's open event to attach event listener to the control.
See also:

- 210.53.5 Constructor(control as RectControl) 24960
- 210.53.6 Constructor(win as DesktopWindow) 24960
- 210.53.7 Constructor(win as window) 24961
- 210.53.8 Constructor(WindowHandle as Integer) 24961

210.53.5 Constructor(control as RectControl)

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop only.

Function: The constructor events to a control.
Notes: Call in a control's open event to attach event listener to the control.
See also:

- 210.53.4 Constructor(control as DesktopUIControl) 24959
- 210.53.6 Constructor(win as DesktopWindow) 24960
- 210.53.7 Constructor(win as window) 24961
- 210.53.8 Constructor(WindowHandle as Integer) 24961

210.53.6 Constructor(win as DesktopWindow)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: The constructor events to a window.
Notes: Call in a window's open event to attach event listener to the window.
See also:

- 210.53.4 Constructor(control as DesktopUIControl) 24959
- 210.53.5 Constructor(control as RectControl) 24960
- 210.53.7 Constructor(win as window) 24961
- 210.53.8 Constructor(WindowHandle as Integer) 24961

210.53.7 Constructor(win as window)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop only.

Function: The constructor events to a window.
Notes: Call in a window's open event to attach event listener to the window.
See also:

- 210.53.4 Constructor(control as DesktopUIControl) 24959
- 210.53.5 Constructor(control as RectControl) 24960
- 210.53.6 Constructor(win as DesktopWindow) 24960
- 210.53.8 Constructor(WindowHandle as Integer) 24961

210.53.8 Constructor(WindowHandle as Integer)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: This method allows you to attach to any window.
So this works in console projects, too.
With any window, not just xojo windows.
See also:

- 210.53.4 Constructor(control as DesktopUIControl) 24959
- 210.53.5 Constructor(control as RectControl) 24960
- 210.53.6 Constructor(win as DesktopWindow) 24960
- 210.53.7 Constructor(win as window) 24961

210.53.9 EnableMouseInPointer(enable as boolean) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enables the mouse to act as a pointer input device and send pointer events.
Notes: Requires Windows 8 or newer.

If the function succeeds, the return value is true.
If the function fails, the return value is false.
To get extended error information, call GetLastError.

This function can be called only once in the context of a process lifetime. Prior to the first call, Windows Store apps run with mouse-in-pointer enabled, as do any desktop applications that consume mshtml.dll. All

other desktop applications run with mouse-in-pointer disabled.

On the first call in the process lifetime, the state is changed as specified and the call succeeds.
On subsequent calls, the state will not change. If the current state is not equal to the specified state, the call fails.

Call IsMouseInPointerEnabled to verify the mouse-in-pointer state.

210.53.10 GetGestureConfig(Control as DesktopUIControl, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves the configuration for which Windows Touch gesture messages are sent from a window.
Notes: Same as other GetGestureConfig, but for a control, not a window.
See also:

- 210.53.11 GetGestureConfig(Control as RectControl, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer 24962
- 210.53.12 GetGestureConfig(win as DesktopWindow, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer 24963
- 210.53.13 GetGestureConfig(win as window, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer 24963

210.53.11 GetGestureConfig(Control as RectControl, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves the configuration for which Windows Touch gesture messages are sent from a window.
Notes: Same as other GetGestureConfig, but for a control, not a window.
See also:

- 210.53.10 GetGestureConfig(Control as DesktopUIControl, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer 24962
- 210.53.12 GetGestureConfig(win as DesktopWindow, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer 24963
- 210.53.13 GetGestureConfig(win as window, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer 24963

210.53.12 GetGestureConfig(win as DesktopWindow, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves the configuration for which Windows Touch gesture messages are sent from a window.
Notes: win: The window to get the gesture configuration from.
Flags: A gesture command flag value indicating options for retrieving the gesture configuration. Can be 1 to return consolidated configuration for the specified window and its parent window chain.
Config: an array of gesture configuration structures that specify the gesture configuration.

Please pass an empty array and the plugin appends config objects.

Return function returns number of configs found.
Returns -1 in case of error.
See also:

- 210.53.10 GetGestureConfig(Control as DesktopUIControl, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer 24962
- 210.53.11 GetGestureConfig(Control as RectControl, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer 24962
- 210.53.13 GetGestureConfig(win as window, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer 24963

210.53.13 GetGestureConfig(win as window, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop only.

Function: Retrieves the configuration for which Windows Touch gesture messages are sent from a window.
Notes: win: The window to get the gesture configuration from.
Flags: A gesture command flag value indicating options for retrieving the gesture configuration. Can be 1 to return consolidated configuration for the specified window and its parent window chain.
Config: an array of gesture configuration structures that specify the gesture configuration.

Please pass an empty array and the plugin appends config objects.

Return function returns number of configs found.
Returns -1 in case of error.

- 210.53.12 GetGestureConfig(win as DesktopWindow, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer 24963

210.53.14 IsMouseInPointerEnabled as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates whether EnableMouseInPointer is set for the mouse to act as a pointer input device and send pointer events.
Notes: Requires Windows 8 or newer.

If EnableMouseInPointer is set, the return value is true.
If EnableMouseInPointer is not set, the return value is false.

EnableMouseInPointer can be called only once in the context of a process lifetime. Prior to the first call, Windows Store apps run with mouse-in-pointer enabled, as do any desktop applications that consume mshtml.dll. All other desktop applications run with mouse-in-pointer disabled.
On the first call to EnableMouseInPointer in the process lifetime, the state is changed as specified and the call succeeds.
On subsequent calls to EnableMouseInPointer, the state will not change. If the current state is not equal to the specified state, the call fails.
Call IsMouseInPointerEnabled to verify the mouse-in-pointer state.

210.53.15 SetGestureConfig(Control as DesktopUIControl, config() as WinGestureConfigMBS = nil) as boolean

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Configures the messages that are sent from a window for Windows Touch gestures.
Notes: Same as other SetGestureConfig, but for a control, not a window.
See also:

- 210.53.16 SetGestureConfig(Control as RectControl, config() as WinGestureConfigMBS = nil) as boolean 24965

- 210.53.17 SetGestureConfig(win as DesktopWindow, config() as WinGestureConfigMBS = nil) as boolean 24965

- 210.53.18 SetGestureConfig(win as window, config() as WinGestureConfigMBS = nil) as boolean 24965

210.53.16 SetGestureConfig(Control as RectControl, config() as WinGestureConfigMBS = nil) as boolean

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop only.

Function: Configures the messages that are sent from a window for Windows Touch gestures.
Notes: Same as other SetGestureConfig, but for a control, not a window.
See also:

- 210.53.15 SetGestureConfig(Control as DesktopUIControl, config() as WinGestureConfigMBS = nil) as boolean 24964
- 210.53.17 SetGestureConfig(win as DesktopWindow, config() as WinGestureConfigMBS = nil) as boolean 24965
- 210.53.18 SetGestureConfig(win as window, config() as WinGestureConfigMBS = nil) as boolean 24965

210.53.17 SetGestureConfig(win as DesktopWindow, config() as WinGestureConfigMBS = nil) as boolean

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Configures the messages that are sent from a window for Windows Touch gestures.
Notes: Win: The window to set the gesture configuration on.
config: An array of gesture configuration structures that specify the gesture configuration.

If the function succeeds, the return value is true, else false.

If you don't expect to change the gesture configuration, call SetGestureConfig at window creation time. If you want to dynamically change the gesture configuration, call SetGestureConfig in response to GestureNotify event.
See also:

- 210.53.15 SetGestureConfig(Control as DesktopUIControl, config() as WinGestureConfigMBS = nil) as boolean 24964
- 210.53.16 SetGestureConfig(Control as RectControl, config() as WinGestureConfigMBS = nil) as boolean 24965
- 210.53.18 SetGestureConfig(win as window, config() as WinGestureConfigMBS = nil) as boolean 24965

210.53.18 SetGestureConfig(win as window, config() as WinGestureConfigMBS = nil) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop only.

Function: Configures the messages that are sent from a window for Windows Touch gestures.
Notes: Win: The window to set the gesture configuration on.
config: An array of gesture configuration structures that specify the gesture configuration.

If the function succeeds, the return value is true, else false.

If you don't expect to change the gesture configuration, call SetGestureConfig at window creation time. If you want to dynamically change the gesture configuration, call SetGestureConfig in response to GestureNotify event.
See also:

- 210.53.15 SetGestureConfig(Control as DesktopUIControl, config() as WinGestureConfigMBS = nil) as boolean 24964
- 210.53.16 SetGestureConfig(Control as RectControl, config() as WinGestureConfigMBS = nil) as boolean 24965
- 210.53.17 SetGestureConfig(win as DesktopWindow, config() as WinGestureConfigMBS = nil) as boolean 24965

210.53.19 Properties

210.53.20 WindowHandle as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The window handle.
Notes: (Read only property)

210.53.21 Events

210.53.22 Gesture(info as WinGestureInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Passes information about a gesture.
Notes: Return true, if you processed the message, else false.

210.53.23 GestureNotify

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gives you a chance to set the gesture configuration.
Notes: When the GestureNotify event is received, the application can use SetGestureConfig to specify the gestures to receive.

210.53.24 PointerDeviceChange(Change as Integer, Param as Integer) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sent to a window when there is a change in the settings of a monitor that has a digitizer attached to it.
Notes: This message contains information regarding the scaling of the display mode.
See kDeviceChange* constants.

210.53.25 PointerDeviceInRange(Param1 as Integer, Param2 as Integer) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sent to a window when a pointer device is detected within range of an input digitizer.
Notes: This message contains information regarding the device and its proximity.

If the application processes this message, it should return true, else false.

210.53.26 PointerDeviceOutOfRange(Param1 as Integer, Param2 as Integer) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sent to a window when a pointer device has departed the range of an input digitizer.
Notes: This message contains information regarding the device and its proximity.

If the application processes this message, it should return true, else false.

210.53.27 PointerDown(PointerID as Integer, Flags as Integer, X as Integer, Y as Integer, info as WinPointerInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Posted when a pointer makes contact over the client area of a window.
Notes: This input message targets the window over which the pointer makes contact, and the pointer is implicitly captured to the window so that the window continues to receive input for the pointer until it

breaks contact.

We provide pointer ID, flags, X and Y.

BitwiseAnd(flags, WinPointerInfoMBS.kFlagNew) <>0	A flag that indicates whether this message represents the first input generated by a new pointer.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInRange) <>0	A flag that indicates whether this message was generated by a pointer during its lifetime. This flag is not set on messages that indicate that the pointer has left detection range
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInContact) <>0	A flag that indicates whether this message was generated by a pointer that is in contact with the window surface. This flag is not set on messages that indicate a hovering pointer.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagPrimary) <>0	Indicates that this pointer has been designated as primary.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFirstButton) <>0	A flag that indicates whether there is a primary action. This is analogous to a mouse left button down. A touch pointer will have this set when it is in contact with the digitizer surface. A pen pointer will have this set when it is in contact with the digitizer surface with no buttons pressed.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagSecondButton) <>0	A flag that indicates whether there is a secondary action. This is analogous to a mouse right button down. A pen pointer will have this set when it is in contact with the digitizer surface with the pen barrel button pressed.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagThirdButton) <>0	A flag that indicates whether there are one or more tertiary actions based on the pointer type; applications that wish to respond to tertiary actions must retrieve information specific to the pointer type to determine which tertiary buttons are pressed. For example, an application can determine the buttons states of a pen by calling GetPointerPenInfo and examining the flags that specify button states.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFourthButton) <>0	A flag that indicates whether the specified pointer took fourth action. Applications that wish to respond to fourth actions must retrieve information specific to the pointer type to determine if the first extended mouse (XButton1) button is pressed.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFifthButton) <>0	A flag that indicates whether the specified pointer took fifth action. Applications that wish to respond to fifth actions must retrieve information specific to the pointer type to determine if the second extended mouse (XButton2) button is pressed.

Note:
A hovering pointer has none of the button flags set. This is analogous to a mouse move with no mouse buttons down. An application can determine the buttons states of a hovering pen, for example, by calling GetPointerPenInfo and examining the flags that specify button states.

Note:
Because the pointer may make contact with the device over a non-trivial area, this point location may be a simplification of a more complex pointer area. Whenever possible, an application should use the complete pointer area information instead of the point location.

If an application processes this message, it should return true, else false.

Important When a window loses capture of a pointer and it receives the PointerCaptureChanged notification, it typically will not receive any further notifications. For this reason, it is important that you not make any assumptions based on evenly paired PointerDown/PointerUp or PointerEnter/PointerLeave notifications.

Each pointer has a unique pointer identifier during its lifetime. The lifetime of a pointer begins when it is

first detected.
A PointerEnter event is generated if a hovering pointer is detected. A PointerDown event followed by a PointerEnter event is generated if a non-hovering pointer is detected.
During its lifetime, a pointer may generate a series of PointerUpdate events while it is hovering or in contact.
The lifetime of a pointer ends when it is no longer detected. This generates a PointerLeave event.
When a pointer is aborted, kFlagCanceled is set.
A WM_POINTERLEAVE message may also be generated when a non-captured pointer moves outside the bounds of a window.

To convert the lParam parameter to a POINTS structure, use the MAKEPOINTS macro.
To retrieve further information associated with the message, use the GetPointerInfo function.
To determine the keyboard modifier key states associated with this message, use the GetKeyState function.
For example, to detect that the ALT key was pressed, check whether GetKeyState(VK_MENU) <0.
Note that if the application does not process this message, DefWindowProc may generate one or more WM_GESTURE messages if the sequence of input from this and, possibly, other pointers is recognized as a gesture. If a gesture is not recognized, DefWindowProc may generate mouse input.
If an application selectively consumes some pointer input and passes the rest to DefWindowProc, the resulting behavior is undefined.
When a window loses capture of a pointer and receives the WM_POINTERCAPTURECHANGED notification, it will typically not receive any further notifications. Therefore, it is important that a window does not make any assumptions of its pointer status, regardless of whether it receives evenly paired DOWN / UP or ENTER / LEAVE notifications.

210.53.28 PointerEnter(PointerID as Integer, Flags as Integer, X as Integer, Y as Integer, info as WinPointerInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sent to a window when a new pointer enters detection range over the window (hover) or when an existing pointer moves within the boundaries of the window.
Notes: We provide Pointer ID, Flags, X and Y.

BitwiseAnd(flags, WinPointerInfoMBS.kFlagNew) <>0	Indicates whether this message is the first message generated by a new pointer entering detection range (hover).
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInRange) <>0	Indicates whether this message was generated by a pointer that has not left detection range. This flag is always set for PointerEnter messages.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInContact) <>0	A flag that indicates whether this message was generated by a pointer that is in contact. This flag is not set for a pointer in detection range (hover).

Contains the point location of the pointer.
Note:
Because the pointer may make contact with the device over a non-trivial area, this point location may be a simplification of a more complex pointer area. Whenever possible, an application should use the complete pointer area information instead of the point location.

If an application processes this message, it should return true, else false.

The PointerEnter notification can be used by a window to provide feedback to the user while the pointer is over its surface or to otherwise react to the presence of a pointer over its surface.
This notification is only sent to the window that is receiving input for the pointer. The following table lists some of the situations in which this notification is sent.

Action	Flags Set	Notifications Sent To
A new pointer enters detection range (hover).	kFlagNew and kFlagInRange	Window over which the pointer enters detection range.
A hovering pointer crosses within the window boundaries.	kFlagInRange	Window within which the pointer has crossed.

Important:
When a window loses capture of a pointer and it receives the PointerCaptureChange notification, it typically will not receive any further notifications. For this reason, it is important that you not make any assumptions based on evenly paired PointerDown/PointerUp or PointerEnter/PointerLeave notifications.

When inputs come from the mouse, as a result of mouse and pointer message integration, PointerEnter is not sent.

210.53.29 PointerHWheel(PointerID as Integer, Delta as Integer, X as Integer, Y as Integer, info as WinPointerInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Posted to the window with foreground keyboard focus when a horizontal scroll wheel is rotated.
Notes: We provide, the pointer ID, the delta and x/y coordinate.
Info object provides pointer details.

To retrieve the wheel scroll units, use the inputData filed of the WinPointerInfoMBS object. This field contains a signed value and is expressed in a multiple of WHEEL_DELTA (120). A positive value indicates a rotation forward and a negative value indicates a rotation backward.
Note that the wheel inputs may be delivered even if the mouse cursor is located outside of application,Äôs window. The wheel messages are delivered in a way very similar to the keyboard inputs. The focus window of the foregournd message queue receives the wheel messages.

210.53.30 PointerLeave(PointerID as Integer, Flags as Integer, X as Integer, Y as Integer, info as WinPointerInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sent to a window when a pointer leaves detection range over the window (hover) or when a pointer moves outside the boundaries of the window.

Notes: We provide the pointer ID, Flags, X and Y values.

BitwiseAnd(flags, WinPointerInfoMBS.kFlagInRange) <>0	Indicates whether this message was generated by a pointer that has not left detection range. This flag is not set when the pointer leaves the detection range of the window.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInContact) <>0	A flag that indicates whether this message was generated by a pointer that is in contact. This flag is not set for a pointer in detection range (hover).

Note:
Because the pointer may make contact with the device over a non-trivial area, this point location may be a simplification of a more complex pointer area. Whenever possible, an application should use the complete pointer area information instead of the point location.

If an application processes this message, it should return true, else false.

The PointerLeave notification can be used by a window to change mode or stop any feedback to the user while the pointer is over the window surface.
This notification is only sent to the window that is receiving input for the pointer. The following table lists some of the situations in which this notification is sent.

Action	Flags Set	Notifications Sent To
A hovering pointer crosses window boundaries.	BitwiseAnd(flags, WinPointerInfoMBS.kFlagInRange) <>0	Window outside of whose boundary the pointer moved.
A pointer goes out of detection range.	N/A	Window for which the pointer leaves detection range.

Important:
When a window loses capture of a pointer and it receives the PointerCaptureChange notification, it typically will not receive any further notifications. For this reason, it is important that you not make any assumptions based on evenly paired PointerDown/PointerUp or PointerEnter/PointerLeave notifications.

If contact is maintained with the input digitizer and the pointer moves outside the window, PointerLeave is not generated. PointerLeave is generated only when a hovering pointer crosses window boundaries or contact is terminated.
PointerLeave is posted to the posted message queue if the input is originated from a mouse device.

210.53.31 PointerUp(PointerID as Integer, Flags as Integer, X as Integer, Y as Integer, info as WinPointerInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Posted when a pointer that made contact over the client area of a window breaks contact.
Notes: This input message targets the window over which the pointer makes contact and the pointer is, at that point, implicitly captured to the window so that the window continues to receive input messages including the WM_POINTERUP notification for the pointer until it breaks contact.

We provide pointer ID, flags, X and Y.

BitwiseAnd(flags, WinPointerInfoMBS.kFlagNew) <>0	A flag that indicates whether this message represents the first input generated by a new pointer.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInRange) <>0	A flag that indicates whether this message was generated by a pointer during its lifetime. This flag is not set on messages that indicate that the pointer has left detection range
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInContact) <>0	A flag that indicates whether this message was generated by a pointer that is in contact with the window surface. This flag is not set on messages that indicate a hovering pointer.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagPrimary) <>0	Indicates that this pointer has been designated as primary.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFirstButton) <>0	A flag that indicates whether there is a primary action. This is analogous to a mouse left button down. A touch pointer will have this set when it is in contact with the digitizer surface. A pen pointer will have this set when it is in contact with the digitizer surface with no buttons pressed.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagSecondButton) <>0	A flag that indicates whether there is a secondary action. This is analogous to a mouse right button down. A pen pointer will have this set when it is in contact with the digitizer surface with the pen barrel button pressed.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagThirdButton) <>0	A flag that indicates whether there are one or more tertiary actions based on the pointer type; applications that wish to respond to tertiary actions must retrieve information specific to the pointer type to determine which tertiary buttons are pressed. For example, an application can determine the buttons states of a pen by calling GetPointerPenInfo and examining the flags that specify button states.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFourthButton) <>0	A flag that indicates whether the specified pointer took fourth action. Applications that wish to respond to fourth actions must retrieve information specific to the pointer type to determine if the first extended mouse (XButton1) button is pressed.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFifthButton) <>0	A flag that indicates whether the specified pointer took fifth action. Applications that wish to respond to fifth actions must retrieve information specific to the pointer type to determine if the second extended mouse (XButton2) button is pressed.

See Pointer Flags for more details.

Note:
A hovering pointer has none of the button flags set. This is analogous to a mouse move with no mouse buttons down. An application can determine the buttons states of a hovering pen, for example, by calling GetPointerPenInfo and examining the flags that specify button states.

Note:
Because the pointer may make contact with the device over a non-trivial area, this point location may be a simplification of a more complex pointer area. Whenever possible, an application should use the complete pointer area information instead of the point location.

If an application processes this message, it should return true, else false.

Each pointer has a unique pointer identifier during its lifetime. The lifetime of a pointer begins when it is first detected.
A PointerEnter event is generated if a hovering pointer is detected. A PointerDown event followed by a PointerEnter event is generated if a non-hovering pointer is detected.
During its lifetime, a pointer may generate a series of PointerUpdate event while it is hovering or in contact. The lifetime of a pointer ends when it is no longer detected. This generates a WM_POINTERLEAVE

message.
When a pointer is aborted, kFlagCanceled is set.
A PointerLeave event may also be generated when a non-captured pointer moves outside the bounds of a window.
To obtain the horizontal and vertical position of a pointer, use the following:

If the application does not process this message, Windows may generate one or more Gesture event if the sequence of input from this and, possibly, other pointers is recognized as a gesture. If a gesture is not recognized, DefWindowProc may generate mouse input.
If an application selectively consumes some pointer input and passes the rest back to Windows, the resulting behavior is undefined.

210.53.32 PointerUpdate(PointerID as Integer, Flags as Integer, X as Integer, Y as Integer, info as WinPointerInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Posted to provide an update on a pointer that made contact over the client area of a window or on a hovering uncaptured pointer over the client area of a window.
Notes: While the pointer is hovering, the message targets whichever window the pointer happens to be over. While the pointer is in contact with the surface, the pointer is implicitly captured to the window over which the pointer made contact and that window continues to receive input for the pointer until it breaks contact.

We provide pointer ID, flags, X and Y.

BitwiseAnd(flags, WinPointerInfoMBS.kFlagNew) <>0	A flag that indicates whether this message represents the first input generated by a new pointer.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInRange) <>0	A flag that indicates whether this message was generated by a pointer during its lifetime. This flag is not set on messages that indicate that the pointer has left detection range
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInContact) <>0	A flag that indicates whether this message was generated by a pointer that is in contact with the window surface. This flag is not set on messages that indicate a hovering pointer.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagPrimary) <>0	Indicates that this pointer has been designated as primary.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFirstButton) <>0	A flag that indicates whether there is a primary action. This is analogous to a mouse left button down. A touch pointer will have this set when it is in contact with the digitizer surface. A pen pointer will have this set when it is in contact with the digitizer surface with no buttons pressed.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagSecondButton) <>0	A flag that indicates whether there is a secondary action. This is analogous to a mouse right button down.

A pen pointer will have this set when it is in contact with the digitizer surface with the pen barrel button pressed.

See Pointer Flags for more details.

BitwiseAnd(flags, WinPointerInfoMBS.kFlagThirdButton) <>0	A flag that indicates whether there are one or more tertiary actions based on the pointer type; applications that wish to respond to tertiary actions must retrieve information specific to the pointer type to determine which tertiary buttons are pressed. For example, an application can determine the buttons states of a pen by calling GetPointerPenInfo and examining the flags that specify button states.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFourthButton) <>0	A flag that indicates whether the specified pointer took fourth action. Applications that wish to respond to fourth actions must retrieve information specific to the pointer type to determine if the first extended mouse (XButton1) button is pressed.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFifthButton) <>0	A flag that indicates whether the specified pointer took fifth action. Applications that wish to respond to fifth actions must retrieve information specific to the pointer type to determine if the second extended mouse (XButton2) button is pressed.

Note:
A hovering pointer has none of the button flags set. This is analogous to a mouse move with no mouse buttons down. An application can determine the buttons states of a hovering pen, for example, by calling GetPointerPenInfo and examining the flags that specify button states.

Note:
Because the pointer may make contact with the device over a non-trivial area, this point location may be a simplification of a more complex pointer area. Whenever possible, an application should use the complete pointer area information instead of the point location.

If an application processes this message, it should return true, else false.

Each pointer has a unique pointer identifier during its lifetime. The lifetime of a pointer begins when it is first detected.
A PointerEnterevent is generated if a hovering pointer is detected. A PointerDown event followed by a PointerEnter event is generated if a non-hovering pointer is detected.
During its lifetime, a pointer may generate a series of PointerUpdate events while it is hovering or in contact.
The lifetime of a pointer ends when it is no longer detected. This generates a PointerLeave event.
When a pointer is aborted, kFlagCanceled is set.
A PointerLeave event may also be generated when a non-captured pointer moves outside the bounds of a window.

If the application does not process this message, Windows may generate one or more Gesture event if the sequence of input from this and, possibly, other pointers is recognized as a gesture. If a gesture is not recognized, Windows may generate mouse input.
If an application selectively consumes some pointer input and passes the rest back to Windows, the resulting behavior is undefined.
If the application does not process these messages as fast as they are generated, some moves may be coalesced. The history of inputs that were coalesced into this message can be retrieved using the GetPointerInfoHistory function.

210.53.33 PointerWheel(PointerID as Integer, Delta as Integer, X as Integer, Y as Integer, info as WinPointerInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Posted to the window with foreground keyboard focus when a vertical scroll wheel is rotated.
Notes: We provide, the pointer ID, the delta and x/y coordinate.
Info object provides pointer details.

To retrieve the wheel scroll units, use the inputData filed of the WinPointerInfoMBS object. This field contains a signed value and is expressed in a multiple of WHEEL_DELTA (120). A positive value indicates a rotation forward and a negative value indicates a rotation backward.
Note that the wheel inputs may be delivered even if the mouse cursor is located outside of application,Äôs window. The wheel messages are delivered in a way very similar to the keyboard inputs. The focus window of the foregournd message queue receives the wheel messages.

210.53.34 Constants

Device Change Flags

Constant	Value	Description
kDeviceChangeArrival	1	A new device is attached.
kDeviceChangeAspectRatioPreserved	2048	The display aspect ratio.
kDeviceChangeMapping	256	The change in display to digitizer mapping.
kDeviceChangeModeCentered	128	Centered display mode.
kDeviceChangeModeDefault	64	The default display mode.
kDeviceChangeOrientation0	4	Orientation of the device: 0¬∞
kDeviceChangeOrientation180	16	Orientation of the device: 180¬∞
kDeviceChangeOrientation270	32	Orientation of the device: 270¬∞
kDeviceChangeOrientation90	8	Orientation of the device: 90¬∞
kDeviceChangeOrigin	1024	The display origin.
kDeviceChangeRemoval	2	A device has been detached.
kDeviceChangeResolution	512	Display resolution.

210.54 class WinPointerInfoMBS

210.54.1 class WinPointerInfoMBS

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for pointer input details.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- Windows Touch Events

210.54.2 Methods

210.54.3 Constructor

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop only.

Function: The private constructor.

210.54.4 Properties

210.54.5 ButtonChangeType as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the change in button state between this input and the previous input.
Notes: See kPointerChange* constants.
(Read only property)

210.54.6 frameId as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: An identifier common to multiple pointers for which the source device reported an update in a single input frame.
Notes: For example, a parallel-mode multi-touch digitizer may report the positions of multiple touch contacts in a single update to the system.
Note that frame identifier is assigned as input is reported to the system for all pointers across all devices. Therefore, this field may not contain strictly sequential values in a single series of messages that a window receives. However, this field will contain the same numerical value for all input updates that were reported in the same input frame by a single device.

(Read only property)

210.54.7 HimetricLocationRawX as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The screen coordinates of the pointer, in HIMETRIC units.
Notes: For adjusted screen coordinates, see HimetricLocation.
(Read only property)

210.54.8 HimetricLocationRawY as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The screen coordinates of the pointer, in HIMETRIC units.
Notes: For adjusted screen coordinates, see HimetricLocation.
(Read only property)

210.54.9 HimetricLocationX as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The predicted screen coordinates of the pointer, in HIMETRIC units.
Notes: The predicted value is based on the pointer position reported by the digitizer and the motion of the pointer. This correction can compensate for visual lag due to inherent delays in sensing and processing the pointer location on the digitizer. This is applicable to pointers of type touch. For other pointer types, the predicted value will be the same as the non-predicted value (see ptHimetricLocationRaw).
(Read only property)

210.54.10 HimetricLocationY as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The predicted screen coordinates of the pointer, in HIMETRIC units.
Notes: The predicted value is based on the pointer position reported by the digitizer and the motion of the pointer. This correction can compensate for visual lag due to inherent delays in sensing and processing the pointer location on the digitizer. This is applicable to pointers of type touch. For other pointer types, the predicted value will be the same as the non-predicted value (see ptHimetricLocationRaw).
(Read only property)

210.54.11 historyCount as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Count of inputs that were coalesced into this message.
Notes: This count matches the total count of entries that can be returned by a call to GetPointerInfoHistory. If no coalescing occurred, this count is 1 for the single input represented by the message.
(Read only property)

210.54.12 hwndTarget as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Window to which this message was targeted.
Notes: If the pointer is captured, either implicitly by virtue of having made contact over this window or explicitly using the pointer capture API, this is the capture window. If the pointer is uncaptured, this is the window over which the pointer was when this message was generated.
(Read only property)

210.54.13 InputData as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A value whose meaning depends on the nature of input.
Notes: When flags indicate kFlagWheel, this value indicates the distance the wheel is rotated, expressed in multiples or factors of WHEEL_DELTA. A positive value indicates that the wheel was rotated forward and a negative value indicates that the wheel was rotated backward.
When flags indicate kFlagWheel, this value indicates the distance the wheel is rotated, expressed in multiples or factors of WHEEL_DELTA. A positive value indicates that the wheel was rotated to the right and a negative value indicates that the wheel was rotated to the left.
(Read only property)

210.54.14 KeyStates as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates which keyboard modifier keys were pressed at the time the input was generated.
Notes: May be zero or a combination of the following values:

(Read only property)

8 A SHIFT key was pressed.
4 A CTRL key was pressed.

210.54.15 PerformanceCount as Int64

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The value of the high-resolution performance counter when the pointer message was received (high-precision, 64 bit alternative to Time).
Notes: The value can be calibrated when the touch digitizer hardware supports the scan timestamp information in its input report.
(Read only property)

210.54.16 PixelLocationRawX as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The screen coordinates of the pointer, in pixels.
Notes: For adjusted screen coordinates, see PixelLocation.
(Read only property)

210.54.17 PixelLocationRawY as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The screen coordinates of the pointer, in pixels.
Notes: For adjusted screen coordinates, see PixelLocation.
(Read only property)

210.54.18 PixelLocationX as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The predicted screen coordinates of the pointer, in pixels.
Notes: The predicted value is based on the pointer position reported by the digitizer and the motion of the pointer. This correction can compensate for visual lag due to inherent delays in sensing and processing the pointer location on the digitizer. This is applicable to pointers of type touch. For other pointer types, the predicted value will be the same as the non-predicted value (see ptPixelLocationRaw).
(Read only property)

210.54.19 PixelLocationY as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The predicted screen coordinates of the pointer, in pixels.
Notes: The predicted value is based on the pointer position reported by the digitizer and the motion of the pointer. This correction can compensate for visual lag due to inherent delays in sensing and processing the pointer location on the digitizer. This is applicable to pointers of type touch. For other pointer types, the predicted value will be the same as the non-predicted value (see ptPixelLocationRaw).
(Read only property)

210.54.20 pointerFlags as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: May be any reasonable combination of flags from the flags constants.
Notes: See kFlag* constants.
(Read only property)

210.54.21 pointerId as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: An identifier that uniquely identifies a pointer during its lifetime.
Notes: A pointer comes into existence when it is first detected and ends its existence when it goes out of detection range. Note that if a physical entity (finger or pen) goes out of detection range and then returns to be detected again, it is treated as a new pointer and may be assigned a new pointer identifier.
(Read only property)

210.54.22 pointerType as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The pointer type.
Notes: See kType* constants.
(Read only property)

210.54.23 sourceDevice as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Handle to the source device that can be used in calls to the raw input device API and the digitizer device API.
Notes: (Read only property)

210.54.24 Time as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The time of the event.
Notes: Value is 0 or the time stamp of the message, based on the system tick count when the message was received.
The application can specify the input time stamp in either Time or PerformanceCount. The value cannot be more recent than the current tick count or QueryPerformanceCount (QPC) value of the injection thread. Once a frame is injected with a time stamp, all subsequent frames must include a timestamp until all contacts in the frame go to an UP state. The custom timestamp value must also be provided for the first element in the contacts array. The time stamp values after the first element are ignored. The custom timestamp value must increment in every injection frame.
When PerformanceCount is specified, the time stamp will be converted to the current time in .1 millisecond resolution upon actual injection. If a custom PerformanceCount resulted in the same .1 millisecond window from the previous injection, ERROR_NOT_READY is returned and injection will not occur. While injection will not be invalidated immediately by the error, the next successful injection must have a PerformanceCount value that is at least 0.1 millisecond from the previously successful injection. This is also true if Time is used.
If both Time and PerformanceCount are specified in InjectTouchInput, ERROR_INVALID_PARAMETER is returned.
InjectTouchInput cannot switch between Time and PerformanceCount once injection has started.
If neither Time and PerformanceCount are specified, InjectTouchInput allocates the timestamp based on the timing of the call. If InjectTouchInput calls are repeatedly less than 0.1 millisecond apart, ERROR_NOT_READY might be returned. The error will not invalidate the input immediately, but the injection application needs to retry the same frame again for injection to succeed.
(Read only property)

210.54.25 Constants

Constants

Constant	Value	Description
kPointerChangeFifthButtonDown	9	The fifth button transitioned to a pressed state.
kPointerChangeFifthButtonUp	10	The fifth button transitioned to a released state.
kPointerChangeFirstButtonDown	1	The first button transitioned to a pressed state.
kPointerChangeFirstButtonUp	2	The first button transitioned to a released state.
kPointerChangeFourthButtonDown	7	The fourth button transitioned to a pressed state.
kPointerChangeFourthButtonUp	8	The fourth button transitioned to a released state.
kPointerChangeNone	0	No change in button state.
kPointerChangeSecondButtonDown	3	The second button transitioned to a pressed state.
kPointerChangeSecondButtonUp	4	The second button transitioned to a released state.
kPointerChangeThirdButtonDown	5	The third button transitioned to a pressed state.
kPointerChangeThirdButtonUp	6	The third button transitioned to a released state.

Flag Constants

Constant	Value	Description
kFlagCanceled	&h8000	Indicates that the pointer is departing in an abnormal manner, such as when the system receives invalid input for the pointer or when a device with active pointers departs abruptly. If the application receiving the input is in a position to do so, it should treat the interaction as not completed and reverse any effects of the concerned pointer.
kFlagCaptureChanged	&h200000	Indicates that this pointer was captured by (associated with) another element and the original element has lost capture.
kFlagConfidence	&h4000	Confidence is a suggestion from the source device about whether the pointer represents an intended or accidental interaction, which is especially relevant for touch pointers where an accidental interaction (such as with the palm of the hand) can trigger input. The presence of this flag indicates that the source device has high confidence that this input is part of an intended interaction.
kFlagDown	&h10000	Indicates that this pointer transitioned to a down state; that is, it made contact with the digitizer surface.
kFlagFifthButton	&h100	Analogous to a second extended mouse (XButton2) button down. A touch pointer does not use this flag. A pen pointer does not use this flag. A mouse pointer has this flag set when the second extended mouse (XBUTTON2) button is down.
kFlagFirstButton	&h10	Indicates a primary action, analogous to a left mouse button down. A touch pointer has this flag set when it is in contact with the digitizer surface. A pen pointer has this flag set when it is in contact with the digitizer surface with no buttons pressed. A mouse pointer has this flag set when the left mouse button is down.
kFlagFourthButton	&h80	Analogous to a first extended mouse (XButton1) button down. A touch pointer does not use this flag. A pen pointer does not use this flag. A mouse pointer has this flag set when the first extended mouse (XBUTTON1) button is down.
kFlagHasTransform	&h400000	Indicates that this pointer has an associated transform.
kFlagHWheel	&h100000	Indicates input associated with a pointer h-wheel. For mouse pointers, this is equivalent to the action of the mouse horizontal scroll wheel.
kFlagInContact	4	Indicates that this pointer is in contact with the digitizer surface. When this flag is not set, it indicates a hovering pointer.
kFlagInRange	2	Indicates that this pointer continues to exist. When this flag is not set, it indicates the pointer has left detection range. This flag is typically not set only when a hovering pointer leaves detection range (kFlagUpdate is set) or when a pointer in contact with a window surface leaves detection range (kFlagUp is set).
kFlagNew	1	Indicates the arrival of a new pointer.
kFlagNone	0	Default
kFlagPrimary	&h2000	Indicates that this pointer has been designated as the primary pointer. A primary pointer is a single pointer that can perform actions beyond those available to non-primary pointers. For example, when a primary pointer makes contact with a window,Äôs surface, it may provide the window an opportunity to activate by sending it a PointerActivate event. The primary pointer is identified from all current user interactions on the system (mouse, touch, pen, and so on). As such, the primary pointer might not be associated with your app. The first contact in a multi-touch interaction is set as the primary pointer. Once a primary pointer is identified, all contacts must be lifted before a new contact can be identified as a primary pointer. For apps that don't process pointer input, only the primary pointer's events are promoted to mouse events.
kFlagSecondButton	&h20	Indicates a secondary action, analogous to a right mouse button down. A touch pointer does not use this flag. A pen pointer has this flag set when it is in contact with the digitizer surface with the pen barrel button pressed. A mouse pointer has this flag set when the right mouse button is down.

Pointer Types

Constant	Value	Description
kTypeMouse	4	Mouse pointer type.
kTypePen	3	Pen pointer type.
kTypePointer	1	Generic pointer type. This type never appears in pointer messages or pointer data. Some data query functions allow the caller to restrict the query to specific pointer type. The kTypePointer type can be used in these functions to specify that the query is to include pointers of all types
kTypeTouch	2	Touch pointer type.
kTypeTouchpad	5	Touchpad pointer type (Windows 8.1 and later).

210.55 control WinPreviewControlMBS

210.55.1 control WinPreviewControlMBS

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop only.

Function: The preview control for Windows.
Notes: Used to show PDF documents on Windows using the built-in preview handler on Windows 10 and newer.
Can also be used to use other built-in preview handlers on Windows by setting classID.

Since the control is handled by Windows, the key and mouse events are not expected to work.

Available on Windows 10 and newer.
Use QLPreviewViewControlMBS or PDFViewControlMBS for macOS to show previews and QLPreview-ControllerMBS or PDFViewIOSControlMBS for iOS.

Xojo Developer Magazine

- 21.5, page 10: News

210.55.2 Methods

210.55.3 LoadData(data as MemoryBlock)

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop only.

Function: Loads the given data.
Notes: Lasterror is set.
If loading from data is not supported for preview, we use a temporary file instead.
See also:

- 210.55.4 LoadData(data as string) 24986

210.55.4 LoadData(data as string)

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop only.

Function: Loads the given data.
Notes: Lasterror is set.
If loading from data is not supported for preview, we use a temporary file instead.
See also:

- 210.55.3 LoadData(data as MemoryBlock) 24985

210.55.5 LoadFile(file as folderitem)

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop only.

Function: Loads the given file.
Notes: Lasterror is set.
If the preview handler does not support reading file, the plugin reads the file and passes as data.

If the file path is invalid, the preview will show a file not found error message.

210.55.6 Properties

210.55.7 classID as String

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop only.

Function: The class ID for the previewer to use.
Notes: If empty, uses PDF viewer.
Available preview classes in a typical Windows 10 installation:

Class ID	Description
{ 13D3C4B8-B179-4ebb-BF62-F704173E7448 }	Windows Contact Preview Handler
{ 1531d583-8375-4d3f-b5fb-d23bbd169f22 }	Windows TXT Previewer
{ 53BEDF0B-4E5B-4183-8DC9-B844344FA104 }	Microsoft Windows MAPI Preview Handler
{ 8a7cae0e-5951-49cb-bf20-ab3fa1e44b01 }	Windows Font previewer
{ 92dbad9f-5025-49b0-9078-2d78f935e341 }	Microsoft Windows Mail Mime Preview Handler
{ a42c2ccb-67d3-46fa-abe6-7d2f3488c7a3 }	Windows RTF Previewer
{ b9815375-5d7f-4ce2-9245-c9d4da436930 }	Microsoft Windows Mail Mime Preview Handler
{ BFD468D2-D0A0-4bdc-878C-E69C2F5B435D }	Microsoft Windows Mail Html Preview Handler
{ E64164EB-1AE0-4C50-BAEF-A413C2B3A4BC }	Microsoft 3MF Shell Thumbnail and Preview Handler
{ f8b8412b-dea3-4130-b36c-5e8be73106ac }	Microsoft Windows Mail Html Preview Handler
{ 3A84F9C2-6164-485C-A7D9-4B27F8AC009E }	Microsoft PDF Previewer
{ DC6EFB56-9CFA-464D-8880-44885D7DC193 }	Adobe PDF Preview Handler for Vista

Must be set early, like in the IDE using property inspector or Configure event.

(Read and Write property)

210.55.8 Lasterror as Integer

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop only.

Function: The last error code.
Notes: (Read and Write property)

210.55.9 LasterrorString as String

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop only.

Function: The error message for the error number in the lasterror property.
Notes: (Read only property)

210.55.10 Events

210.55.11 Close

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop, Console & Web.

Function:

The close event.
In Xojo version 2021r3 and newer this event is named Closing.

210.55.12 Closing

Plugin Version: 23.3, Platform: Windows, Targets: .

Function:

The close event.
In older Xojo versions, this event is named Close.

210.55.13 Configure

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event called while initializing, where you can apply properties just before plugin reads them.
Notes: e.g. set classID here in code.

210.55.14 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: This event is called when it is appropriate to display a contextual menu for the control.

210.55.15 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Called when a menuitem is chosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

210.55.16 EnableMenuItems

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop, Console & Web.

Function:

The enable menu items event.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

210.55.17 FocusLost

Plugin Version: 23.3, Platform: Windows, Targets: .

Function:

The lost focus event.
In older Xojo versions, this event is named LostFocus.

210.55.18 FocusReceived

Plugin Version: 23.3, Platform: Windows, Targets: .

Function:

The got focus event.
In older Xojo versions, this event is named GotFocus.

210.55.19 GotFocus

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop, Console & Web.

Function:

The got focus event.
In Xojo version 2021r3 and newer this event is named FocusReceived.

210.55.20 LostFocus

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop, Console & Web.

Function:

The lost focus event.
In Xojo version 2021r3 and newer this event is named FocusLost.

210.55.21 MenuBarSelected

Plugin Version: 23.3, Platform: Windows, Targets: .

Function:

The enable menu items event.
In older Xojo versions, this event is named EnableMenuItems.

210.55.22 Open

MBS Win Plugin, Plugin Version: 23.3, Platform: Windows, Targets: Desktop, Console & Web.

Function:

The open event.
In Xojo version 2021r3 and newer this event is named Opening.

210.55.23 Opening

Plugin Version: 23.3, Platform: Windows, Targets: .

Function:

The open event.
In older Xojo versions, this event is named Open.

210.56 class WinThreadPoolMBS

210.56.1 class WinThreadPoolMBS

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class to control Windows Thread Pool.
Example:

```
static pool as WinThreadPoolMBS // global or window property

pool = New WinThreadPoolMBS
pool.ThreadMaximum = 4
```

Notes: You can have an instance of this class to create and define a thread pool.
If you never initialize a pool with this class, the default pool is used.
Blog Entries

- Thread Pool for Windows
- MBS Xojo Plugins, version 21.5pr4

210.56.2 Methods

210.56.3 Constructor

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.

210.56.4 Destructor

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

210.56.5 Properties

210.56.6 Handle as Integer

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle of the thread pool.
Notes: (Read and Write property)

210.56.7 LastError as Integer

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

210.56.8 StackCommit as Integer

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The stack commit size.
Notes: Default is 4 KB for the default stack grow size.
The rate the stack grows.
Should be in page size multiplies, e.g. 4096.

Sets the stack reserve and commit sizes for new threads in the specified thread pool. Stack reserve and commit sizes for existing threads are not changed.
(Read and Write property)

210.56.9 StackReserve as Integer

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The stack reservie size.
Example:

```
static pool as WinThreadPoolMBS // property or global

// increase stack size from default
pool = New WinThreadPoolMBS
pool.StackReserve = 2048*1024
```

Notes: Default is 1 MB for the default stack size.
The rate the stack grows.
Should be in page size multiplies, e.g. 4096.

Sets the stack reserve and commit sizes for new threads in the specified thread pool. Stack reserve and commit sizes for existing threads are not changed.
(Read and Write property)

210.56.10 ThreadMaximum as Integer

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The upper limit for thread count.
Example:

```
static pool as WinThreadPoolMBS // property or global

pool = New WinThreadPoolMBS
pool.StackReserve = 2048*1024
pool.ThreadMaximum = 4
```

Notes: Default for Windows is 500, but it may be much lower in practice as it's relative to the number of CPU cores and jobs.
(Read and Write property)

210.56.11 ThreadMinimum as Integer

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The lower limit for thread count.
Notes: Default 0 to allow having no thread.
(Read and Write property)

210.57 class WMIObjectMBS

210.57.1 class WMIObjectMBS

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a WMI object.

210.57.2 Methods

210.57.3 GetNames as string()

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the names of all properties in this object.

210.57.4 GetProperty(Name as string) as Variant

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a property as a variant.
Notes: Objects, booleans, strings and numbers are supported directly. Also string arrays in version 13.1. Other values are casted to string first.

Added support for integer, double, single and boolean arrays in v25.4.

If you find a type we don't handle, please let us know. See GetPropertyType() or GetPropertyTypeString().

210.57.5 GetPropertyBoolean(Name as string) as Boolean

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a value as an integer.
Notes: Value must be of a numeric type.

210.57.6 GetPropertyBooleanArray(Name as string) as Boolean()

MBS Win Plugin, Plugin Version: 25.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a property as a boolean array.
Notes: If values are not Boolean, we cast them to Boolean.

210.57.7 GetPropertyDouble(Name as string) as Double

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a value as a double.
Notes: Value must be of a numeric type.

210.57.8 GetPropertyDoubleArray(Name as string) as Double()

MBS Win Plugin, Plugin Version: 25.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a property as a Double array.
Notes: If values are not Double, we cast them to Double.

210.57.9 GetPropertyInt16Array(Name as string) as Int16()

MBS Win Plugin, Plugin Version: 25.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a property as a Int16 array.
Notes: If values are not Int16, we cast them to Int16.

210.57.10 GetPropertyInt32Array(Name as string) as Int32()

MBS Win Plugin, Plugin Version: 25.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a property as a Int32 array.
Notes: If values are not Int32, we cast them to Int32.

210.57.11 GetPropertyInt64(Name as string) as Int64

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a property as an integer value.

210.57.12 GetPropertyInt64Array(Name as string) as Int64()

MBS Win Plugin, Plugin Version: 25.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a property as a Int64 array.
Notes: If values are not Int64, we cast them to Int64.

210.57.13 GetPropertyInt8Array(Name as string) as Int8()

MBS Win Plugin, Plugin Version: 25.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a property as a Int8 array.
Notes: If values are not Int8, we cast them to Int8.

210.57.14 GetPropertyInteger(Name as string) as Integer

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a value as an integer.
Example:

```
Var w as WindowsWMIMBS // your WMI object

MessageBox str(w.GetPropertyInteger("MaxClockSpeed")) // uint32
```

Notes: Value must be of a numeric type.

210.57.15 GetPropertyObject(Name as string) as WMIObjectMBS

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a value as an object.
Notes: Value must be of an IUnknown type.

210.57.16 GetPropertySingleArray(Name as string) as Single()

MBS Win Plugin, Plugin Version: 25.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a property as a Single array.
Notes: If values are not Single, we cast them to Single.

210.57.17 GetPropertyString(Name as string) as string

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a property as a string.
Example:

```
Var w as WindowsWMIMBS
MessageBox w.GetPropertyString("Name") // string
```

210.57.18 GetPropertyStringArray(Name as string) as string()

MBS Win Plugin, Plugin Version: 13.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a property as a string array.
Example:

```
Var w as WindowsWMIMBS
MessageBox join(w.GetPropertyStringArray("Name"), ", ")
```

210.57.19 GetPropertyType(Name as string) as Integer

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the type of a property.
Notes: You can send in the value you get here and the plugin can be changed to handle this type, too. Currently only numbers and strings are handled.

210.57.20 GetPropertyTypeString(Name as string) as string

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the type of a property as a string.
Notes: For example type 8 is returned as "string".

210.57.21 GetPropertyUInt16Array(Name as string) as UInt16()

MBS Win Plugin, Plugin Version: 25.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a property as a UInt16 array.
Notes: If values are not UInt16, we cast them to UInt16.

210.57.22 GetPropertyUInt32Array(Name as string) as UInt32()

MBS Win Plugin, Plugin Version: 25.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a property as a UInt32 array.
Notes: If values are not UInt32, we cast them to UInt32.

210.57.23 GetPropertyUInt64Array(Name as string) as UInt64()

MBS Win Plugin, Plugin Version: 25.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a property as a UInt64 array.
Notes: If values are not UInt64, we cast them to UInt64.

210.57.24 GetPropertyUInt8Array(Name as string) as UInt8()

MBS Win Plugin, Plugin Version: 25.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a property as a UInt8 array.
Notes: If values are not UInt8, we cast them to UInt8.

210.57.25 Properties

210.57.26 Handle as Integer

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Internal object reference.
Notes: (Read and Write property)

210.57.27 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code reported from one of the functions.
Notes: -1 is the value used by the plugin if the function is not available.
(Read and Write property)

210.57.28 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The error message for the last error.
Notes: This may help to debug the errors.
(Read only property)

Chapter 211

Windows Console

211.1 class ConsoleStateMBS

211.1.1 class ConsoleStateMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class for handling a console window state.

211.1.2 Properties

211.1.3 BackColor as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The colorcode of the background.
Notes: Color codes can be build up from red, blue, green and highlight.
red=1, blue=2, green=4 and highlight=8.
(Read and Write property)

211.1.4 CursorX as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The horizontal cursor position in characters.
Notes: (Read and Write property)

211.1.5 CursorY as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The vertical cursor position in characters.
Notes: (Read and Write property)

211.1.6 Height as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height of the window in characters.
Notes: (Read and Write property)

211.1.7 MaxHeight as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The maximum height of the window in characters.
Notes: (Read and Write property)

211.1.8 MaxWidth as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The maximum width of the window in characters.
Notes: (Read and Write property)

211.1.9 TextColor as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The colorcode of the text.
Notes: Color codes can be build up from red, blue, green and highlight.
red=1, blue=2, green=4 and highlight=8.
(Read and Write property)

211.1.10 Width as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width of the window in characters.
Notes: (Read and Write property)

211.1.11 WindowHeight as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height of the console window.
Notes: (Read and Write property)

211.1.12 WindowLeft as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The left position of the console window.
Notes: (Read and Write property)

211.1.13 WindowTop as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The top position of the console window.
Notes: (Read and Write property)

211.1.14 WindowWidth as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width of the console window.
Notes: (Read and Write property)

211.2 class WindowsConsoleMBS

211.2.1 class WindowsConsoleMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class for handling a console window in Windows.
Example:

```
// open a console window for a desktop app on Windows and write to it
Var console As New WindowsConsoleMBS
If console.GotConsole Then
console.Title = "MyApp log"
Call console.WriteConsole("Starting import..." + EndOfLine)
End If
```

211.2.2 Methods

211.2.3 Close

MBS Win Plugin, Plugin Version: 4.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

211.2.4 FlushConsole

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The FlushConsole function flushes the console input buffer.
Notes: All input records currently in the input buffer are discarded.

211.2.5 ReadConsole(maxcount as Integer) as string

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads maximum of maxcount characters from the input stream.

211.2.6 SetCursorPosition(x as Integer,y as Integer)

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets the cursor position inside the console window.

211.2.7 SetWindowPosition(absolute as boolean, left as Integer,top as Integer, right as Integer, bottom as Integer)

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets the window position and size.
Notes: If absolute=false, the coordinates are relative to the current one.

211.2.8 State as ConsoleStateMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current state of the console window.

211.2.9 WriteConsole(message as string) as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Writes the message to the console.
Notes: Returns true if successful.

211.2.10 Properties

211.2.11 AutoScrollAtEOL as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Automatical scrolling at end of line?
Notes: When writing with WriteConsole or echoing with ReadFile, the cursor moves to the beginning of the next row when it reaches the end of the current row. This causes the rows displayed in the console window to scroll up automatically when the cursor advances beyond the last row in the window. It also causes the contents of the screen buffer to scroll up (discarding the top row of the screen buffer) when the cursor advances beyond the last row in the screen buffer. If this mode is disabled, the last character in the row is overwritten with any subsequent characters.

(Read and Write property)

211.2.12 BackColor as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The text background color used.
Notes: (Read and Write property)

211.2.13 CursorSize as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size of the cursor in percent (from 0 to 100).
Notes: (Read and Write property)

211.2.14 CursorVisible as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Is the cursor visible?
Notes: (Read and Write property)

211.2.15 EchoInput as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Echo the input on the screen?
Notes: Characters read by the ReadFile function are written to the active screen buffer as they are read. This mode can be used only if the WaitForReturn mode is also enabled.
(Read and Write property)

211.2.16 GotConsole as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: whether the console was created inside the constructor.
Notes: (Read only property)

211.2.17 InputCodepage as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Codepage of the input stream.
Notes: (Read and Write property)

211.2.18 OutputCodepage as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Codepage of the output stream.
Notes: (Read and Write property)

211.2.19 ProcessInput as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Process input before reading?
Notes: Ctrl+c is processed by the system and is not placed in the input buffer. If the input buffer is being read by ReadConsole, other control keys are processed by the system and are not returned in the ReadConsole buffer. If the WaitForReturn mode is also enabled, backspace, carriage return, and linefeed characters are handled by the system.
(Read and Write property)

211.2.20 ProcessOutput as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Process output before reading?
Notes: Characters written by the WriteConsole function or echoed by the ReadFile or ReadConsole function are parsed for ASCII control sequences, and the correct action is performed. Backspace, tab, bell, carriage return, and linefeed characters are processed.
(Read and Write property)

211.2.21 TextColor as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The text color used.
Notes: (Read and Write property)

211.2.22 Title as string

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The title bar of the console window.
Notes: (Read and Write property)

211.2.23 WaitForReturn as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Wait for return key on reading?
Notes: The ReadConsole function returns only when a carriage return character is read. If this mode is disabled, the functions return when one or more characters are available.
(Read and Write property)

211.2.24 Events

211.2.25 ConsoleClosed

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Console was closed.

211.2.26 ConsoleOpened

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Console was opened.

211.2.27 ControlBreak as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Control-Break was pressed.
Notes: Return true if you handled it yourself.
Return false for the default handler.

211.2.28 ControlC as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Control-C was pressed.
Notes: Return true if you handled it yourself.
Return false for the default handler.

211.2.29 Logoff as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The user is logging off.
Notes: Return true if you handled it yourself.
Return false for the default handler.

211.2.30 Shutdown as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The user is shutting down the computer.
Notes: Return true if you handled it yourself.
Return false for the default handler.

211.2.31 UserClose as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The user pressed the close button.
Notes: Return true if you handled it yourself.
Return false for the default handler.

211.2.32 Constants

Constants

Constant	Value	Description
Black	0	The color code for Black. Read only property with value 0.
Blue	1	The color code for Blue. Read only property with value 2.
Green	2	The color code for Green. Read only property with value 4.
Highlight	8	The color code for Highlight. Read only property with value 8.
Red	4	The color code for Red. Read only property with value 1.

Chapter 212

Windows Graphics

212.1 class DirectDrawGraphicsMBS

212.1.1 class DirectDrawGraphicsMBS

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for drawing with DirectDraw 2D into a graphics context in Xojo.
Example:

```
Var p as Picture = BitmapForCaching(me.Width, me.Height)
Var g as graphics = p.Graphics

// Clear image with white
g.DrawingColor = &cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height

// now draw a few things
Var d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(&cFF0000)
call d.CreateStrokeStyle 0, 0, 0, 0, 0, d.DashStyleDash

const size = 50
const offset = 10
const delta = offset + size

d.FillRectangle offset + delta * 0, offset + 0 * delta, offset + delta * 0 + size, offset + 0 * delta +
size
d.DrawRectangle offset + delta * 0, offset + 1 * delta, offset + delta * 0 + size, offset + 1 * delta + size

d.FillEllipse offset + delta * 1 + size/2, offset + 0 * delta + size/2, size /2, size /2
```

```
d.DrawEllipse offset + delta * 1 + size/2, offset + 1 * delta + size/2, size /2, size /2

d.FillRoundedRectangle offset + delta * 2, offset + 0 * delta, offset + delta * 2 + size, offset + 0 *
delta + size, 20, 20
d.DrawRoundedRectangle offset + delta * 2, offset + 1 * delta, offset + delta * 2 + size, offset + 1 * delta
+ size, 20, 20

// save to desktop
Var f as FolderItem = SpecialFolder.Desktop.Child("directdraw.jpg")
p.Save(f, Picture.Formats.JPEG, picture.QualityMaximum)

// show in window
Window1.Backdrop = p
```

212.1.2 Methods

212.1.3 ClearStrokeStyle

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Clears stroke style.
Notes: If no stroke style is defined, a default one is used.

212.1.4 Constructor(Graphics as Graphics)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Example:

```
Var p as new Picture(200,200)
Var g as Graphics = p.Graphics
// Clear image with white
g.DrawingColor = &cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height
```

```
Var d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(&cFF0000)
d.DrawLine 10, 10, 190,190

Backdrop = p
```

Notes: Pass the graphics in a paint event or from a picture.

Requires Xojo 2019r2 or newer.

212.1.5 CreateSolidColorBrush(c as Color) as Boolean

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new solid color brush that has the specified color and a base opacity of 1.0.
Example:

```
Var d as new DirectDrawGraphicsMBS(g)

// make full blue with no alpha
call d.CreateSolidColorBrush(&c0000FFFF)
```

Notes: Pass the red, green, blue, and alpha values of the brush's color as a Xojo color.
See also:

- 212.1.6 CreateSolidColorBrush(red as Single, green as Single, blue as Single, alpha as Single = 1.0) as Boolean 25013

212.1.6 CreateSolidColorBrush(red as Single, green as Single, blue as Single, alpha as Single = 1.0) as Boolean

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new solid color brush that has the specified color and a base opacity of 1.0.
Notes: Pass the red, green, blue, and alpha values of the brush's color.
Range of values is from 0.0 to 1.0.
See also:

- 212.1.5 CreateSolidColorBrush(c as Color) as Boolean 25013

212.1.7 CreateStrokeStyle(startCap as Integer = 0, endCap as Integer = 0, dashCap as Integer = 0, lineJoin as Integer = 0, miterLimit as Single = 1.0, dashStyle as Integer = 0, dashOffset as Single = 0, Dashes() as Single = nil) as Boolean

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates an stroke style that describes start cap, dash pattern, and other features of a stroke.
Notes: Creates and sets the stroke style. Returns true on success and false on failure.

startCap	The cap applied to the start of all the open figures in a stroked geometry.
endCap	The cap applied to the end of all the open figures in a stroked geometry.
dashCap	The shape at either end of each dash segment.
lineJoin	A value that describes how segments are joined. This value is ignored for a vertex if the segment flags specify that the segment should have a smooth join.
miterLimit	The limit of the thickness of the join on a mitered corner. This value is always treated as though it is greater than or equal to 1.0.
dashStyle	A value that specifies whether the stroke has a dash pattern and, if so, the dash style.
dashOffset	A value that specifies an offset in the dash sequence. A positive dash offset value shifts the dash pattern, in units of stroke width, toward the start of the stroked geometry. A negative dash offset value shifts the dash pattern, in units of stroke width, toward the end of the stroked geometry.
Dashes	An array whose elements are set to the length of each dash and space in the dash pattern. The first element sets the length of a dash, the second element sets the length of a space, the third element sets the length of a dash, and so on. The length of each dash and space in the dash pattern is the product of the element value in the array and the stroke width.

212.1.8 Destructor

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

212.1.9 DrawEllipse(x as single, y as single, radiusX as single, radiusY as single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Draws the outline of the specified ellipse using the specified stroke style.
Example:

```
Var p as new Picture(200,200)
Var g as Graphics = p.Graphics
// Clear image with white
g.DrawingColor = &cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height

Var d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(&cFF0000)
call d.CreateStrokeStyle 0, 0, 0, 0, 0, d.DashStyleDash
d.DrawEllipse 100, 100, 90, 90

Backdrop = p
```

Notes: x/y: The position of the ellipse to draw, in device-independent pixels.
radiusX/radiusY: The radius of the ellipse to draw, in device-independent pixels.

Uses current brush, strokeWidth and strokeStyle.

212.1.10 DrawLine(x1 as single, y1 as single, x2 as single, y2 as single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Draws a line between the specified points using the specified stroke style.
Example:

```
Var p as new Picture(200,200)
Var g as Graphics = p.Graphics
// Clear image with white
g.DrawingColor = &cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height

Var d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(&cFF0000)
d.DrawLine 10, 10, 190,190

Backdrop = p
```

Notes: x1/y1: The start point of the line, in device-independent pixels.
x2/y2: The end point of the line, in device-independent pixels.

Uses current brush, strokeWidth and strokeStyle.

212.1.11 DrawRectangle(left as single, top as single, right as single, bottom as single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Draws the outline of a rectangle that has the specified dimensions and stroke style.
Example:

```
Var p as new Picture(200,200)
Var g as Graphics = p.Graphics
// Clear image with white
g.DrawingColor = &cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height

Var d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(&cFF0000)
call d.CreateStrokeStyle 0, 0, 0, 0, 0, d.DashStyleDash
d.DrawRectangle 10, 10, 190, 190

Backdrop = p
```

Notes: Pass the dimensions of the rectangle to draw, in device-independent pixels.

Uses current brush, strokeWidth and strokeStyle.

212.1.12 DrawRoundedRectangle(left as single, top as single, right as single, bottom as single, radiusX as single, radiusY as single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Draws the outline of the specified rounded rectangle using the specified stroke style.
Example:

```
Var p as new Picture(200,200)
Var g as Graphics = p.Graphics
// Clear image with white
g.DrawingColor = &cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height

Var d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(&cFF0000)
call d.CreateStrokeStyle 0, 0, 0, 0, 0, d.DashStyleDash
d.DrawRoundedRectangle 10, 10, 190, 190, 20, 20
```

```
Backdrop = p
```

Notes: Pass the dimensions of the rounded rectangle to draw, in device-independent pixels.

Uses current brush, strokeWidth and strokeStyle.

212.1.13 FillEllipse(x as single, y as single, radiusX as single, radiusY as single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Paints the interior of the specified ellipse.
Example:

```
Var p as new Picture(200,200)
Var g as Graphics = p.Graphics
// Clear image with white
g.DrawingColor = &cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height

Var d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(&cFF0000)

d.FillEllipse 100, 100, 90, 90

Backdrop = p
```

Notes: The position and radius, in device-independent pixels, of the ellipse to paint.
Uses current brush.

212.1.14 FillRectangle(left as single, top as single, right as single, bottom as single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Paints the interior of the specified rectangle.
Example:

```
Var p as new Picture(200,200)
Var g as Graphics = p.Graphics
// Clear image with white
g.DrawingColor = &cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height
```

```
Var d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(&cFF0000)

d.FillRectangle 10, 10, 190, 190

Backdrop = p
```

Notes: The dimension of the rectangle to paint, in device-independent pixels.
Uses current brush.

212.1.15 FillRoundedRectangle(left as single, top as single, right as single, bottom as single, radiusX as single, radiusY as single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Paints the interior of the specified rounded rectangle.
Example:

```
Var p as new Picture(200,200)
Var g as Graphics = p.Graphics
// Clear image with white
g.DrawingColor = &cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height

Var d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(&cFF0000)

d.FillRoundedRectangle 10, 10, 190, 190, 20, 20

Backdrop = p
```

Notes: The dimensions of the rounded rectangle to paint, in device independent pixels.
Uses current brush.

212.1.16 GetTransform(byref m11 as Single, byref m12 as Single, byref m21 as Single, byref m22 as Single, byref dx as Single, byref dy as Single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the current transform of the render target.

212.1.17 RestoreDrawingState

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Restores the current drawing state.
Notes: Our plugin manages the stack of drawing states saved.
We raise an exception if your calls to restore are not balanced with save.

212.1.18 SaveDrawingState

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Saves the current drawing state.
Notes: Our plugin manages the stack of drawing states saved, so you can restore them later.

212.1.19 SetTransform(m11 as Single, m12 as Single, m21 as Single, m22 as Single, dx as Single, dy as Single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Applies the specified transform to the render target, replacing the existing transformation.
Notes: All subsequent drawing operations occur in the transformed space.

212.1.20 Properties

212.1.21 AntialiasMode as Integer

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The antialiasing mode of the render target.
Notes: The antialiasing mode applies to all subsequent drawing operations, excluding text and glyph drawing operations.
To specify the antialiasing mode for text and glyph operations, use the SetTextAntialiasMode method.
(Read and Write property)

212.1.22 brushHandle as Integer

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference for current brush.
Notes: Reference to ID2D1Brush object.
(Read and Write property)

212.1.23 DPIX as Single

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Return the render target's dots per inch (DPI).
Notes: The horizontal DPI of the render target.
(Read only property)

212.1.24 DPIY as Single

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Return the render target's dots per inch (DPI).
Notes: The vertical DPI of the render target.
(Read only property)

212.1.25 factoryHandle as Integer

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference for the factory.
Notes: Reference to ID2D1Factory object.
(Read and Write property)

212.1.26 Handle as Integer

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Reference to ID2D1RenderTarget object.
(Read and Write property)

212.1.27 Height as Single

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size of the render target in device-independent pixels.
Notes: (Read only property)

212.1.28 PixelHeight as UInt32

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size of the render target in device pixels.
Notes: (Read only property)

212.1.29 PixelWidth as UInt32

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size of the render target in device pixels.
Notes: (Read only property)

212.1.30 strokeStyleHandle as Integer

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference for current stroke style.
Notes: Reference to ID2D1StrokeStyle object.
(Read and Write property)

212.1.31 strokeWidth as Single

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The stroke width to use.
Notes: Default is 1.

The width of the stroke, in device-independent pixels. The value must be greater than or equal to 0.0. If this parameter isn't specified, it defaults to 1.0. The stroke is centered on the line.
(Read and Write property)

212.1.32 TextAntialiasMode as Integer

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the antialiasing mode to use for subsequent text and glyph drawing operations.
Notes: The antialiasing mode to use for subsequent text and glyph drawing operations.
(Read and Write property)

212.1.33 Width as Single

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size of the render target in device-independent pixels.
Notes: (Read only property)

212.1.34 Constants

Anti Alias Modes

Constant	Value	Description
AntiAliasModeAliased	1	Objects are aliased in most cases. Objects are antialiased only when they are drawn to a render target created by the CreateDxgiSurfaceRenderTarget method and Direct3D multisampling has been enabled on the backing DirectX Graphics Infrastructure (DXGI) surface.
AntiAliasModePerPrimitive	0	Edges are antialiased using the Direct2D per-primitive method of high-quality antialiasing.

Cap Styles

Constant	Value	Description
CapStyleFlat	0	A cap that does not extend past the last point of the line. Comparable to cap used for objects other than lines.
CapStyleRound	0	A semicircle that has a diameter equal to the line thickness.
CapStyleSquare	0	Half of a square that has a length equal to the line thickness.
CapStyleTriangle	0	An isosceles right triangle whose hypotenuse is equal in length to the thickness of the line.

Dash Styles

Constant	Value	Description
DashStyleCustom	5	The dash pattern is specified by an array of floating-point values.
DashStyleDash	1	A dash followed by a gap of equal length. The dash and the gap are each twice as long as the stroke thickness. The equivalent dash array for D2D1_DASH_STYLE_DASH is { 2, 2 } .
DashStyleDashDot	3	A dash, followed by a gap, followed by a dot, followed by another gap. The equivalent dash array for D2D1_DASH_STYLE_DASH_DOT is { 2, 2, 0, 2 } .
DashStyleDashDotDot	4	A dash, followed by a gap, followed by a dot, followed by another gap, followed by another dot, followed by another gap. The equivalent dash array for D2D1_DASH_STYLE_DASH_DOT_DOT is { 2, 2, 0, 2, 0, 2 } .
DashStyleDot	2	A dot followed by a longer gap. The equivalent dash array for D2D1_DASH_STYLE_DOT is { 0, 2 } .
DashStyleSolid	0	A solid line with no breaks.

Line Join

Constant	Value	Description
LineJoinBevel	1	Beveled vertices.
LineJoinMiter	0	Regular angular vertices.
LineJoinMiterOrBevel	3	Regular angular vertices unless the join would extend beyond the miter limit; otherwise, beveled vertices.
LineJoinRound	2	Rounded vertices.

Text Anti Alias Modes

Constant	Value	Description
TextAntiAliasModeAliased	1	Do not use antialiasing.
TextAntiAliasModeClearType	1	Use ClearType antialiasing.
TextAntiAliasModeDefault	0	Use the system default. See Remarks.
TextAntiAliasModeGrayscale	1	Use grayscale antialiasing.

212.2 Globals

212.2.1 WindowsDrawPictureIntoDeviceContextMBS(pic as picture, HDC as Integer, x as Integer, y as Integer, w as Integer, h as Integer, Transparent as boolean)

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Draws a Xojo Picture into a HDC on Windows.
Example:

```
// get a picture
Var logo as Picture = LogoMBS(500)

// get HDC
Var h as Integer = g.Handle(g.HandleTypeHDC)

// and draw into it
WindowsDrawPictureIntoDeviceContextMBS(logo, h, 0, 0, 500, 500, false)
```

Notes: Some SDKs from other companies give you sometimes HDC value to draw your stuff inside. You can prepare a Xojo picture and copy it into the HDC.
Specify rectangle and whether to use transparency.

212.3 class WindowsAVIWriteMBS

212.3.1 class WindowsAVIWriteMBS

MBS Audio Plugin, Plugin Version: 25.1, Platform: Windows, Targets: All.

Function: The class to create an AVI video file from pictures.
Example:

```
Var w As New WindowsAVIWriteMBS
Var p as Picture = logoMBS(500)
w.Width = p.width
w.Height = p.Height

Var file as FolderItem = SpecialFolder.Desktop.Child("test.avi")

call w.CreateFile(file)
call w.CreateVideoStream
call w.SetOptions
call w.AddFrame(p)
call w.CloseFile
```

Notes: This classes uses Video for Windows functions to create videos from images.
No sound functions.

You frist create the file, then the video stream, set options and add frames.
Destructor or CloseFile method will close the file.
Blog Entries

- News from the MBS Xojo Plugins in Version 25.1
- MonkeyBread Software Releases the MBS Xojo Plugins in version 25.1
- MBS Xojo Plugins, version 25.1pr1

Xojo Developer Magazine

- 23.4, page 10: News
- 23.3, page 10: News

212.3.2 Methods

212.3.3 AddFrame(Pic as Picture) as boolean

MBS Audio Plugin, Plugin Version: 25.1, Platform: Windows, Targets: All.

Function: Adds a frame to the video track.
Notes: Updates time property.

Returns true on success and false on failure.
Sets LastError property.

The picture size must match the size given with Height and Width properties.

212.3.4 CloseFile

MBS Audio Plugin, Plugin Version: 25.1, Platform: Windows, Targets: All.

Function: Explicitly closes the video file.

212.3.5 Constructor

MBS Audio Plugin, Plugin Version: 25.1, Platform: Windows, Targets: All.

Function: The constructor.

212.3.6 CreateFile(File as FolderItem) as Boolean

MBS Audio Plugin, Plugin Version: 25.1, Platform: Windows, Targets: All.

Function: Creates a new video file.
Notes: Returns true on success and false on failure.
Sets LastError property.

212.3.7 CreateVideoStream as boolean

MBS Audio Plugin, Plugin Version: 25.1, Platform: Windows, Targets: All.

Function: Creates the video stream.
Notes: Returns true on success.

212.3.8 SetOptions as boolean

MBS Audio Plugin, Plugin Version: 25.1, Platform: Windows, Targets: All.

Function: Sets options without dialog.
Notes: Sets default settings, basically no compression.

Returns true on success and false on failure.
Sets LastError property.
See also:

- 212.3.9 SetOptions(ParentWindow as DesktopWindow) as boolean 25026
- 212.3.10 SetOptions(ParentWindow as Window) as boolean 25027

212.3.9 SetOptions(ParentWindow as DesktopWindow) as boolean

MBS Audio Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop only.

Function: Sets options by showing the options dialog box.
Notes: Returns true on success and false on failure.

Sets LastError property.
See also:

- 212.3.8 SetOptions as boolean 25026
- 212.3.10 SetOptions(ParentWindow as Window) as boolean 25027

212.3.10 SetOptions(ParentWindow as Window) as boolean

MBS Audio Plugin, Plugin Version: 25.1, Platform: Windows, Targets: Desktop only.

Function: Sets options by showing the options dialog box.
Notes: Returns true on success and false on failure.
Sets LastError property.
See also:

- 212.3.8 SetOptions as boolean 25026
- 212.3.9 SetOptions(ParentWindow as DesktopWindow) as boolean 25026

212.3.11 Properties

212.3.12 BufferSize as Integer

MBS Audio Plugin, Plugin Version: 25.1, Platform: Windows, Targets: All.

Function: The suggested buffer size for the new video stream.
Notes: e.g. width * height * 4.
(Read and Write property)

212.3.13 Handle as Integer

MBS Audio Plugin, Plugin Version: 25.1, Platform: Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

212.3.14 Height as Integer

MBS Audio Plugin, Plugin Version: 25.1, Platform: Windows, Targets: All.

Function: The height of the video frame.
Notes: (Read and Write property)

212.3.15 LastError as Integer

MBS Audio Plugin, Plugin Version: 25.1, Platform: Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

212.3.16 LastErrorString as String

MBS Audio Plugin, Plugin Version: 25.1, Platform: Windows, Targets: All.

Function: The last error message.
Notes: (Read only property)

212.3.17 Rate as Integer

MBS Audio Plugin, Plugin Version: 25.1, Platform: Windows, Targets: All.

Function: The rate for the time.
Notes: The Rate/TimeScale defines the frame rate.

By default, the rate is 30 and timescale 30, which gives 30 pictures per second.
(Read and Write property)

212.3.18 Time as Integer

MBS Audio Plugin, Plugin Version: 25.1, Platform: Windows, Targets: All.

Function: The current time in frames.
Notes: (Read and Write property)

212.3.19 TimeScale as Integer

MBS Audio Plugin, Plugin Version: 25.1, Platform: Windows, Targets: All.

Function: The time scale.
Notes: Default is 30 for 30 frames per second.
(Read and Write property)

212.3.20 Width as Integer

MBS Audio Plugin, Plugin Version: 25.1, Platform: Windows, Targets: All.

Function: The width of the video frame.
Notes: (Read and Write property)

212.4 module WindowsBitmapMBS

212.4.1 module WindowsBitmapMBS

MBS Picture Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Windows bitmap handling module.
Example:

```
// convert a Xojo picture into a Windows HBITMAP, e.g. for a declare, and back
Var pic As New Picture(100, 50)
pic.Graphics.DrawingColor = &c3366CC
pic.Graphics.FillRectangle(0, 0, 100, 50)

Var hBitmap As Ptr = WindowsBitmapMBS.PictureToHBitmap(pic)
Var w, h, rowBytes, planes, bits As Integer
If WindowsBitmapMBS.HBitmapInfo(hBitmap, w, h, rowBytes, planes, bits) Then
System.DebugLog "HBITMAP: " + w.ToString + " x " + h.ToString + ", " + bits.ToString + " bits per
pixel"
End If
Var copy As Picture = WindowsBitmapMBS.HBitmapToPicture(hBitmap)
```

Notes: In this module we collect a few useful conversion functions for handling bitmap in Xojo.
Please contact us if you have idea for new function.

- MBS Releases the MBS Xojo / Real Studio plug-ins in version 15.1

Xojo Developer Magazine

- 13.4, page 10: News

212.4.2 Methods

212.4.3 BitmapToDIB(HBitmap as Ptr, HPalette as Ptr = nil) as Ptr

MBS Picture Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Converts a HBitmap to a HDIB.
Notes: HPalette is optional a color palette handle for images with 8 bit or less per pixel.

212.4.4 DeleteBitmap(HBitmap as Ptr)

MBS Picture Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Frees a HDIB or HBITMAP.
Notes: You need to free the images you allocate to make sure memory is released.

212.4.5 DIBToBitmap(HDIB as Ptr, HPalette as Ptr = nil) as Ptr

MBS Picture Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Converts a HDIB to HBitmap.
Notes: HPalette is optional a color palette handle for images with 8 bit or less per pixel.
Returns nil in case of no memory.

212.4.6 DuplicateHBitmap(HBitmap as Ptr, Width as Integer, Height as Integer) as Ptr

MBS Picture Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Duplicates a bitmap handle.
Notes: Please use DeleteBitmap later to free bitmap.

212.4.7 HBitmapInfo(HBitmap as Ptr, byref Width as Integer, byref Height as Integer, byref WidthBytes as Integer, byref Planes as Integer, byref BitsPixel as Integer) as Boolean

MBS Picture Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Queries details about a bitmap handle.
Notes: Returns true on success.

212.4.8 HBitmapToPicture(HBitmap as Ptr, UsingDraw as boolean = false) as Picture

MBS Picture Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Converts a HBITMAP to Xojo picture.
Notes: If UsingDraw is true, the plugin creates a new HBitmap and draws picture inside.
Else if UsingDraw is false, the plugin copies picture and mask into a new picture.

UsingDraw with false works only for 24 or 32 bit images with one plane.
See also:

• 212.4.9 HBitmapToPicture(HBitmap as Ptr, Width as Integer, Height as Integer) as Picture 25032

212.4.9 HBitmapToPicture(HBitmap as Ptr, Width as Integer, Height as Integer) as Picture

MBS Picture Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Converts a HBITMAP to Xojo picture.
Notes: Draws the HBitmap in a new picture of the given size.
This method can be used to resize the bitmap on the fly while drawing.
See also:

• 212.4.8 HBitmapToPicture(HBitmap as Ptr, UsingDraw as boolean = false) as Picture 25031

212.4.10 PictureToHBitmap(Pic as Picture) as Ptr

MBS Picture Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Queries HBitmap of a picture.
Notes: As Xojo picture's are internally HBitmaps, the plugin returns the handle of the picture.
No copy is made and you should not free the image. If you need a copy, please use DuplicateHBitmap function.

Please use DeleteBitmap later to free bitmap.

212.5 class WindowsGraphicsDeviceContextMBS

212.5.1 class WindowsGraphicsDeviceContextMBS

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop only.

Function: The class to safely access a HDC of a graphics object.
Example:

```
// get the device context handle of a picture to pass it to Windows API calls
Var pic As New Picture(200, 100)
Var dc As New WindowsGraphicsDeviceContextMBS(pic)
System.DebugLog "HDC: " + Hex(dc.Handle)
// call your declares with dc.Handle here
dc.Close // release it again
```

Notes: The plugin will get the handle in constructor and release it in destructor/close.

- MBS Xojo Plugins, version 20.3pr5

212.5.2 Methods

212.5.3 Close

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop only.

Function: Closes the handle by releasing memory.
Notes: Same as destructor.

212.5.4 Constructor(c as control)

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop only.

Function: The constructor for a control object.
Notes: Queries HDC for control object.
Raises exceptions on failure.
See also:

- 212.5.5 Constructor(c as DesktopControl) 25034
- 212.5.6 Constructor(g as graphics) 25034

- 212.5.8 Constructor(w as DesktopWindow) 25035
- 212.5.9 Constructor(w as window) 25035

212.5.5 Constructor(c as DesktopControl)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: The constructor for a control object.
Notes: Queries HDC for control object.
Raises exceptions on failure.
See also:

- 212.5.4 Constructor(c as control) 25033
- 212.5.6 Constructor(g as graphics) 25034

- 212.5.8 Constructor(w as DesktopWindow) 25035
- 212.5.9 Constructor(w as window) 25035

212.5.7 Constructor(p as Picture)

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop only.

Function: The constructor for a picture object.
Notes: Queries HDC for picture object.

Raises exceptions on failure.
See also:

- 212.5.4 Constructor(c as control) 25033
- 212.5.5 Constructor(c as DesktopControl) 25034
- 212.5.6 Constructor(g as graphics) 25034
- 212.5.8 Constructor(w as DesktopWindow) 25035
- 212.5.9 Constructor(w as window) 25035

212.5.8 Constructor(w as DesktopWindow)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: The constructor for a window object.
Notes: Queries HDC for window object.
Raises exceptions on failure.
See also:

- 212.5.4 Constructor(c as control) 25033
- 212.5.5 Constructor(c as DesktopControl) 25034
- 212.5.6 Constructor(g as graphics) 25034
- 212.5.7 Constructor(p as Picture) 25034
- 212.5.9 Constructor(w as window) 25035

212.5.9 Constructor(w as window)

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop only.

Function: The constructor for a window object.
Notes: Queries HDC for window object.
Raises exceptions on failure.
See also:

- 212.5.4 Constructor(c as control) 25033
- 212.5.5 Constructor(c as DesktopControl) 25034

- 212.5.7 Constructor(p as Picture) 25034
- 212.5.8 Constructor(w as DesktopWindow) 25035

212.5.10 Properties

212.5.11 Graphics as Graphics

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop only.

Function: The references graphics object.
Notes: (Read only property)

212.5.12 Handle as Integer

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop only.

Function: The handle.
Notes: This is HDC to be used with declares.
(Read only property)

212.6 class WindowsGUIResourcesMBS

212.6.1 class WindowsGUIResourcesMBS

MBS Win Plugin, Plugin Version: 18.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Class to retrieves the count of handles to graphical user interface (GUI) objects in use by the specified process.
Example:

```
// check how many GDI and USER handles the app uses on Windows, e.g. to find leaks
Var r As New WindowsGUIResourcesMBS // current process
MessageBox "GDI objects: " + r.GDIObjectCount.ToString + " (peak " + r.GDIObjectPeak.ToString +
")" + EndOfLine + _
"USER objects: " + r.UserObjectCount.ToString + " (peak " + r.UserObjectPeak.ToString + ")"
```

Notes: Allows you to monitor how many handles you use from GDI.
As they are limited, your app will crash if it hits a limit.

- Presentation from Xojo Developer Conference 2019 in Miami.

212.6.2 Methods

212.6.3 Constructor

MBS Win Plugin, Plugin Version: 18.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: Examines current process and sets properties.

If the constructor succeeds, the properties are set to the count of handles to GUI objects in use by the process. If no GUI objects are in use, the return value is zero.

A process without a graphical user interface does not use GUI resources, therefore, GetGuiResources will return zero.
See also:

• 212.6.4 Constructor(ProcessID as integer) 25038

212.6.4 Constructor(ProcessID as integer)

MBS Win Plugin, Plugin Version: 18.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: Examines given process and sets properties.

If the constructor succeeds, the properties are set to the count of handles to GUI objects in use by the process. If no GUI objects are in use, the return value is zero.

A process without a graphical user interface does not use GUI resources, therefore, GetGuiResources will return zero.
See also:

212.6.5 Properties

212.6.6 GDIObjectCount as Integer

MBS Win Plugin, Plugin Version: 18.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The count of GDI objects.
Notes: (Read only property)

212.6.7 GDIObjectPeak as Integer

MBS Win Plugin, Plugin Version: 18.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The peak count of GDI objects.
Notes: (Read only property)

212.6.8 LastError as Integer

MBS Win Plugin, Plugin Version: 18.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error from Windows.
Notes: Should be zero on success.
But could give error code like permissions denied, if you want to examine another process.

(Read only property)

212.6.9 UserObjectCount as Integer

MBS Win Plugin, Plugin Version: 18.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The count of USER objects.
Notes: (Read only property)

212.6.10 UserObjectPeak as Integer

MBS Win Plugin, Plugin Version: 18.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The peak count of USER objects.
Notes: (Read only property)

Chapter 213

Windows ICM

213.1 class WindowsICMColorMBS

213.1.1 class WindowsICMColorMBS

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a color value.
Notes: A variable of type color may be accessed as any of the supported color space colors by accessing the appropriate member of the union.

213.1.2 Properties

213.1.3 a as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The a color value of a Lab color.
Notes: (Read and Write property)

213.1.4 b as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The b color value of a Lab color.
Notes: (Read and Write property)

213.1.5 black as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The black color value of a CMYK color.
Notes: (Read and Write property)

213.1.6 blue as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The blue value.
Notes: Range from 0 to 255.
(Read and Write property)

213.1.7 ch1 as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The first channel color value of a three channel color.
Notes: (Read and Write property)

213.1.8 ch2 as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The second channel color value of a three channel color.
Notes: (Read and Write property)

213.1.9 ch3 as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The third channel color value of a three channel color.
Notes: (Read and Write property)

213.1.10 cyan as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The cyan color value of a CMYK color.
Notes: (Read and Write property)

213.1.11 gray as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The gray color value.
Notes: For grayscale color space.
(Read and Write property)

213.1.12 green as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The green value.
Notes: Range from 0 to 255.
(Read and Write property)

213.1.13 Index as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The index value for an indexed color space.
Notes: (Read and Write property)

213.1.14 L as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The L color value of a Lab color.
Notes: (Read and Write property)

213.1.15 magenta as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The magenta color value of a CMYK color.
Notes: (Read and Write property)

213.1.16 red as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The red value.
Notes: Range from 0 to 255.
(Read and Write property)

213.1.17 XYZ_X as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The X value of a XYZ color.
Notes: (Read and Write property)

213.1.18 XYZ_Y as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Y value of a XYZ color.
Notes: (Read and Write property)

213.1.19 XYZ_Z as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Z value of a XYZ color.
Notes: (Read and Write property)

213.1.20 yellow as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The yellow color value of a CMYK color.
Notes: (Read and Write property)

213.1.21 Yxy_x as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The x value of a Yxy color.
Notes: (Read and Write property)

213.1.22 Yxy_y as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The y value of a Yxy color.
Notes: Yxy_YY is the first Y and Yxy_Y the second one in a Yxy color.
(Read and Write property)

213.1.23 Yxy_YY as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The y value of a Yxy color.
Notes: Yxy_YY is the first Y and Yxy_Y the second one in a Yxy color.
(Read and Write property)

213.1.24 Channel(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The channel value of a colorspaces with 3 to 8 channels.
Notes: Index from 0 to 7.
(Read and Write computed property)

213.1.25 Constants

Constants

Constant	Value	Description
MAX_COLOR_CHANNELS	8	The maximum number of supported color channels.

Color Type Constants

Constant	Value	Description
COLOR_3_CHANNEL	6	The COLOR is in the GENERIC3CHANNEL color space.
COLOR_5_CHANNEL	8	The COLOR is in a five channel color space.
COLOR_6_CHANNEL	9	The COLOR is in a six channel color space.
COLOR_7_CHANNEL	10	The COLOR is in a seven channel color space.
COLOR_8_CHANNEL	11	The COLOR is in an eight channel color space.
COLOR_CMYK	7	The COLOR is in the CMYKCOLOR color space.
COLOR_GRAY	1	The COLOR is in the GRAYCOLOR color space.
COLOR_Lab	5	The COLOR is in the LabCOLOR color space.
COLOR_NAMED	12	The COLOR is in a named color space.
COLOR_RGB	2	The COLOR is in the RGBCOLOR color space.
COLOR_XYZ	3	The COLOR is in the XYZCOLOR color space.
COLOR_Yxy	4	The COLOR is in the YxyCOLOR color space.

213.2 class WindowsICMEnumMBS

213.2.1 class WindowsICMEnumMBS

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WindowsICMEnumMBS class contains information that defines the profile enumeration constraints.
Example:

```
Var c as new WindowsICMEnumMBS // no options set

Var a(-1) as string = WindowsICMModuleMBS.EnumColorProfiles(c)

for each s as string in a
MessageBox s
next
```

Notes: see also
http://msdn.microsoft.com/en-us/library/dd316895(v=VS.85).aspx
Blog Entries

- MBS Real Studio Plugins, version 11.1pr11

213.2.2 Properties

213.2.3 Attributes0 as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Attributes of profile that can be any of the following values.
Notes:

Constant	Meaning
ATTRIB_TRANSPARENCY	Turns transparency on. If this flag is not used, the attribute is reflective by default.
ATTRIB_MATTE	Turns matte display on. If this flag is not used, the attribute is glossy by default.

(Read and Write property)

213.2.4 Attributes1 as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Attributes of profile that can be any of the following values.
Notes:

Constant	Meaning
ATTRIB_TRANSPARENCY	Turns transparency on. If this flag is not used, the attribute is reflective by default.
ATTRIB_MATTE	Turns matte display on. If this flag is not used, the attribute is glossy by default.

(Read and Write property)

213.2.5 Classs as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates the profile class.
Notes: For a description of profile classes, see Using Device Profiles with WCS.
http://msdn.microsoft.com/en-us/library/dd372213(v=VS.85).aspx

A profile class may have any of the following values.

Profile Class	Signature
Input Device Profile	CLASS_SCANNER
Display Device Profile	CLASS_MONITOR
Output Device Profile	CLASS_PRINTER
Device Link Profile	CLASS_LINK
Color Space Conversion Profile	CLASS_COLORSPACE
Abstract Profile	CLASS_ABSTRACT
Named Color Profile	CLASS_NAMED
Color Appearance Model Profile	CLASS_CAMP
Color Gamut Map Model Profile	CLASS_GMMP

(Read and Write property)

213.2.6 CMMType as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The identification number of the CMM that is used in the profile.
Notes: Identification numbers are registered with the ICC.
(Read and Write property)

213.2.7 ConnectionSpace as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A signature value that indicates the color space in which the profile connection space (PCS) is defined.
Notes: Can be any of the following values: SPACE_XYZ or SPACE_Lab

When the Classs member is set to CLASS_LINK, the PCS is taken from the DataColorSpace member.
(Read and Write property)

213.2.8 Creator as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Signature of the software that created the profile.
Notes: Signatures are registered with the ICC.
(Read and Write property)

213.2.9 DataColorSpace as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A signature value that indicates the color space in which the profile data is defined.
Notes: Can be any value from the SPACE_* Constants.
(Read and Write property)

213.2.10 DeviceClass as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates the device class.
Notes: A device class may have one of the following values.

Profile Class	Signature
Input Device Profile	CLASS_SCANNER
Display Device Profile	CLASS_MONITOR
Output Device Profile	CLASS_PRINTER

(Read and Write property)

213.2.11 DeviceName as String

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: User friendly name of the device.
Notes: (Read and Write property)

213.2.12 DitheringMode as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates the style of dithering that will be used when an image is displayed.
Notes: (Read and Write property)

213.2.13 Fields as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates which fields in this class are being used.
Notes: Can be set to any combination of the following constant values:

ET_DEVICENAME
ET_MEDIATYPE
ET_DITHERMODE
ET_RESOLUTION
ET_CMMTYPE
ET_CLASS
ET_DATACOLORSPACE
ET_CONNECTIONSPACE
ET_SIGNATURE
ET_PLATFORM
ET_PROFILEFLAGS
ET_MANUFACTURER
ET_MODEL
ET_ATTRIBUTES
ET_RENDERINGINTENT
ET_CREATOR
ET_DEVICECLASS
(Read and Write property)

213.2.14 Manufacturer as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The identification number of the device profile manufacturer.
Notes: All manufacturer identification numbers are registered with the ICC.
(Read and Write property)

213.2.15 MediaType as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates which type of media is associated with the profile, such as a printer or screen.
Notes: (Read and Write property)

213.2.16 Model as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device manufacturer's device model number.
Notes: All model identification numbers are registered with the ICC.
(Read and Write property)

213.2.17 Platform as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The primary platform for which the profile was created.
Notes: The member can be set to any of the following values.

Platform	Value
Apple Computer, Inc.	'APPL'
Microsoft Corp.	'MSFT'
Silicon Graphics, Inc.	'SGI'
Sun Microsystems, Inc.	'SUNW'
Taligent	'TGNT'

(Read and Write property)

213.2.18 ProfileFlags as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Bit flags containing hints that the CMM uses to interpret the profile data and can be set to one of the following values.
Notes:

Constant	Meaning
FLAG_EMBEDDEDPROFILE	The profile is embedded in a bitmap file.
FLAG_DEPENDENTONDATA	The profile can't be used independently of the embedded color data. Used for profiles that are embedded in bitmap files.

(Read and Write property)

213.2.19 RenderingIntent as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The profile rendering intent.
Notes: The member can be set to one of the following values:

INTENT_PERCEPTUALINTENT_SATURATIONINTENT_RELATIVE_COLORIMETRICINTENT_ABSOLUTE_COLORIMETRIC

For more information, see Rendering Intents.
http://msdn.microsoft.com/en-us/library/dd372183(v=VS.85).aspx
(Read and Write property)

213.2.20 ResolutionX as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The horizontal resolution in pixels of the device on which the image will be displayed.
Notes: (Read and Write property)

213.2.21 ResolutionY as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The vertical resolution in pixels of the device on which the image will be displayed.
Notes: (Read and Write property)

213.2.22 Signature as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reserved for internal use.
Notes: (Read and Write property)

213.2.23 Constants

Attribute Constants

Constant	Value	Description
ATTRIB_MATTE	2	Turns matte display on. If this flag is not used, the attribute is glossy by default.
ATTRIB_TRANSPARENCY	1	Turns transparency on. If this flag is not used, the attribute is reflective by default.

Profile Class Constants

Constant	Value	Description
CLASS_ABSTRACT	&h61627374	
CLASS_CAMP	&h6C616D70	
CLASS_COLORSPACE	&h73706163	
CLASS_GMMP	&h676D6D70	
CLASS_LINK	&h6C696E6B	
CLASS_MONITOR	&h6D6E7472	
CLASS_NAMED	&h6E6D636C	
CLASS_PRINTER	&h70727472	
CLASS_SCANNER	&h73636E72	

Field usage flags

Constant	Value	Description
ET_ATTRIBUTES	&h02000	
ET_CLASS	&h00020	
ET_CMMTYPE	&h00010	
ET_CONNECTIONSPACE	&h00080	
ET_CREATOR	&h08000	
ET_DATACOLORSPACE	&h00040	
ET_DEVICECLASS	&h10000	
ET_DEVICENAME	&h00001	
ET_DITHERMODE	&h00004	
ET_MANUFACTURER	&h00800	
ET_MEDIATYPE	&h00002	
ET_MODEL	&h01000	
ET_PLATFORM	&h00200	
ET_PROFILEFLAGS	&h00400	
ET_RENDERINGINTENT	&h04000	
ET_RESOLUTION	&h00008	
ET_SIGNATURE	&h00100	

Profile flag constants.

Constant	Value	Description
FLAG_DEPENDENTONDATA	2	The profile can't be used independently of the embed profiles that are embedded in bitmap files.
FLAG_EMBEDDEDPROFILE	1	The profile is embedded in a bitmap file.
FLAG_ENABLE_CHROMATIC_ADAPTATION	&h02000000	

Platform signature

Constant	Value	Description
SigMacintosh	&h4150504C	APPL = Apple Computer, Inc.
SigMicrosoft	&h4D534654	MSFT = Microsoft Corp.
SigSGI	&h53474920	SGI = Silicon Graphics, Inc.
SigSolaris	&h53554E57	SUNW = Sun Microsystems, Inc.
SigTaligent	&h54474E54	TGNT = Taligent

Color Space Constants

Constant	Value	Description
SPACE_Lab	&h4C616220	Lab
SPACE_XYZ	&h58595A20	XYZ

213.3 class WindowsICMLogColorSpaceMBS

213.3.1 class WindowsICMLogColorSpaceMBS

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class contains information that defines a logical color space.
Notes: If the CSType member is set to LCS_sRGB or LCS_WINDOWS_COLOR_SPACE, the other members of this structure are ignored, and WCS uses the sRGB color space. The Endpoints, GammaRed, GammaGreen, and GammaBlue members are used to describe the logical color space. The Endpoints member is a CIEXYZTRIPLE that contains the x, y, and z values of the color space's RGB endpoint.

The required DWORD bit format for the GammaRed, GammaGreen, and GammaBlue is an 8.8 fixed point interger left-shifted by 8 bits. The plugin takes care about that detail.

Whenever the Filename member contains a file name and the CSType member is set to LCS_CALIBRATED_RGB, WCS ignores the other members of this class. It uses the color space in the file as the color space to which this LOGCOLORSPACE structure refers.

The relation between tri-stimulus values X,Y,Z and chromaticity values x,y,z is as follows:

x = X/(X+Y+Z)
y = Y/(X+Y+Z)
z = Z/(X+Y+Z)

If the CSType member is set to LCS_sRGB or LCS_WINDOWS_COLOR_SPACE, the other members of this structure are ignored, and ICM uses the sRGB color space. Applications should still initialize the rest of the structure since CreateProfileFromLogColorSpace ignores CSType member and uses Endpoints, GammaRed, GammaGreen, GammaBlue members to create a profile, which may not be initialized in case of LCS_sRGB or LCS_WINDOWS_COLOR_SPACE color spaces.
Blog Entries

- MBS Real Studio Plugins, version 11.1pr11

213.3.2 Properties

213.3.3 CSType as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Color space type.
Notes: The member can be one of the following values.

Value	Meaning
LCS_CALIBRATED_RGB	Color values are calibrated RGB values. The values are translated using the endpoints specified by the lcsEndpoints member before being passed to the device.
LCS_sRGB	Color values are values are sRGB values.
LCS_WINDOWS_COLOR_SPACE	Color values are Windows default color space color values.

(Read and Write property)

213.3.4 EndpointsBX as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The X value of the Blue Endpoint.
Notes: (Read and Write property)

213.3.5 EndpointsBY as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Y value of the Blue Endpoint.
Notes: (Read and Write property)

213.3.6 EndpointsBZ as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Z value of the Blue Endpoint.
Notes: (Read and Write property)

213.3.7 EndpointsGX as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The X value of the Green Endpoint.
Notes: (Read and Write property)

213.3.8 EndpointsGY as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Y value of the Green Endpoint.
Notes: (Read and Write property)

213.3.9 EndpointsGZ as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Z value of the Green Endpoint.
Notes: (Read and Write property)

213.3.10 EndpointsRX as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The X value of the Red Endpoint.
Notes: (Read and Write property)

213.3.11 EndpointsRY as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Y value of the Red Endpoint.
Notes: (Read and Write property)

213.3.12 EndpointsRZ as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Z value of the Red Endpoint.
Notes: (Read and Write property)

213.3.13 Filename as String

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that names a color profile file.
Notes: This member is typically set to "", but may be used to set the color space to be exactly as specified by the color profile. This is useful for devices that input color values for a specific printer, or when using an installable image color matcher. If a color profile is specified, all other members of this class should be set to reasonable values, even if the values are not completely accurate.
(Read and Write property)

213.3.14 GammaBlue as Double

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Scale of the blue coordinate.
Notes: (Read and Write property)

213.3.15 GammaGreen as Double

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Scale of the green coordinate.
Notes: (Read and Write property)

213.3.16 GammaRed as Double

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Scale of the red coordinate.
Notes: (Read and Write property)

213.3.17 Intent as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The gamut mapping method.
Notes: This member can be one of the following values.

Value	Value	Intent	ICC Name	Meaning
LCS_GM_BUSINESS	1	Graphic	Saturation	Maintain saturation. Used for business charts and other situations in which undithered colors are required.
LCS_GM_GRAPHICS	2	Proof	Relative Colorimetric	Maintain colorimetric match. Used for graphic designs and named colors.
LCS_GM_IMAGES	4	Picture	Perceptual	Maintain contrast. Used for photographs and natural images.
LCS_GM_ABS_COLORIMETRIC	8	Match	Absolute Colorimetric	Maintain the white point. Match the colors to their nearest color in the destination gamut.

(Read and Write property)

213.3.18 Constants

Rendering Intent Constants

Constant	Value	Description
INTENT_ABSOLUTE_COLORIMETRIC	3	Maintain the white point. Match the colors to their nearest color i nation gamut.
INTENT_PERCEPTUAL	0	Maintain contrast. Used for photographs and natural images.
INTENT_RELATIVE_COLORIMETRIC	1	Maintain colorimetric match. Used for graphic designs and named
INTENT_SATURATION	2	Maintain saturation. Used for business charts and other situatio undithered colors are required.

Color Space Type Constants

Constant	Value	Description
LCS_CALIBRATED_RGB	0	Color values are calibrated RGB values. The values are translate endpoints specified by the Endpoints member before being passed t
LCS_sRGB	&h73524742	Color values are values are sRGB values.
LCS_WINDOWS_COLOR_SPACE	&h57696E20	Color values are Windows default color space color values.

213.4 module WindowsICMModuleMBS

213.4.1 module WindowsICMModuleMBS

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The main module for Windows Image Color Matching functions.
Example:

```
// install a color profile on Windows and show the color folder
Var profile As FolderItem = SpecialFolder.Desktop.Child("MyPrinter.icc")
If WindowsICMModuleMBS.InstallColorProfile(profile) Then
MessageBox "Installed into " + WindowsICMModuleMBS.GetColorDirectory.NativePath
End If
```

Blog Entries

- MBS Real Studio Plugins, version 11.1pr11

213.4.2 Methods

213.4.3 AssociateColorProfileWithDevice(ProfileName as string, DeviceName as string) as boolean

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The AssociateColorProfileWithDevice function associates a specified color profile with a specified device.
Notes: ProfileName: The file name of the profile to associate.
DeviceName: The name of the device to associate.

Returns true on success and false on failure.

The AssociateColorProfileWithDevice function will fail if the profile has not been installed on the computer using the InstallColorProfile function.

Note that under Windows (Windows 95 or later), the PostScript device driver for printers assumes a CMYK color model. Therefore, all PostScript printers must use a CMYK color profile. Windows 2000 does not have this limitation.

If the specified device is a monitor, this function updates the default profile.

Several profiles are typically associated with printers, based on paper and ink types. There is no default.

The GDI selects the best one from the associated profiles when your application creates a device context (DC).

Scanners also have no default profile. However, it is atypical to associate more than one profile with a scanner.

AssociateColorProfileWithDevice always adds the specified profile to the current user's per-user profile association list for the specified device. Before adding the profile to the list, AssociateColorProfileWithDevice determines whether the user has previously expressed the desire to use a per-user profile association list for the device. If so, then AssociateColorProfileWithDevice simply adds the specified profile to the existing per-user profile association list for the device. If not, then AssociateColorProfileWithDevice creates a new per-user profile association list for the device by copying the system-wide association list for that device. It then appends the specified profile to the per-user list. From that point on, the current user will be using a per-user profile association list for the specified device, as if SetUsePerUserProfiles had been called for Device with the usePerUserProfiles parameter set to TRUE.

213.4.4 DisassociateColorProfileFromDevice(ProfileName as string, DeviceName as string) as boolean

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The DisassociateColorProfileFromDevice function disassociates a specified color profile with a specified device on a specified computer.
Notes: Returns true on success and false on failure.

ProfileName: The file name of the profile to disassociate.
DeviceName: The name of the device to disassociate.

If more than one profile is associated with a device, WCS uses the last one associated as the default. That is, if your application sequentially associates three profiles with a device, WCS will use the last one associated as the default. If your application then calls the DisassociateColorProfileFromDevice function to disassociate the third profile (which is the default in this example), the WCS will use the second profile as the default.

If your application disassociates all profiles from a device, WCS uses the sRGB profile as the default.

DisassociateColorProfileFromDevice always removes the specified profile from the current user's per-user profile association list for the specified device. Before removing the profile from the list, DisassociateColorProfileFromDevice determines whether the user has previously expressed the desire to use a per-user profile association list for the device. If so, then DisassociateColorProfileFromDevice simply removes the specified profile from the existing per-user profile association list for the device. If not, then DisassociateColorProfileFromDevice creates a new per-user profile association list for the device by copying the system-wide association list for that device. It then removes the specified profile from the per-user list. From that point on, the current user will be using a per-user profile association list for the specified device, as if SetUsePerUserProfiles had been called for Device with the usePerUserProfiles parameter set to TRUE.

213.4.5 EnumColorProfiles(criterias as WindowsICMEnumMBS) as string()

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The EnumColorProfiles function enumerates all the profiles satisfying the given enumeration criteria.
Example:

```
Var c as new WindowsICMEnumMBS // no options set

Var a(-1) as string = WindowsICMModuleMBS.EnumColorProfiles(c)

for each s as string in a
MessageBox s
next
```

Notes: On success the function returns an array of profile names.

Several profiles are typically associated with printers, based on the paper and ink types. There is a default profile for each device. For International Color Consortium (ICC) profiles, GDI selects the best one from the ICC-associated profiles when your application creates a device context (DC).

Do not attempt to use EnumColorProfiles to determine the default profile for a device. Instead, create a device context for the device and then invoke the GetICMProfile function. On Windows Vista and Windows 7, the WcsGetDefaultColorProfile function can also be used to determine a device's default color profile.

If the Fields member of WindowsICMEnumMBS that is pointed to by the criterias parameter is set to ET_DEVICENAME, this function will enumerate all of the color profiles associated with all types of devices attached to the user's computer, regardless of the device class. If the Fields member is set to ET_DEVICENAME or ET_DEVICECLASS and a device class is specified in the DeviceClass member, this function will only enumerate the profiles associated with the specified device class. If the Fields member is set only to ET_DEVICECLASS, the EnumColorProfiles function will enumerate all profiles that can be associated with that type of device.

Whenever EnumColorProfiles is examining the profiles associated with a specific device, the results depend on whether the user has chosen to use the system-wide list of profiles associated with that device, or his or her own ("per-user") list. Calling SetUsePerUserProfiles with its usePerUserProfiles parameter set to TRUE causes future calls to EnumColorProfiles to look at only the current user's per-user list of profile associations for the specified device. Calling WcsSetUsePerUserProfiles with its usePerUserProfiles parameter set to FALSE causes future calls to EnumColorProfiles to look at the system-wide list of profile associations for the specified device. If SetUsePerUserProfiles has never been called for the current user, EnumColorProfiles examines the system-wide list.

This function will provide the information for converting WCS-specific DMP information to the legacy EnumType record in enable consistent profile enumeration. The defaults will be the same as ICC if this information is not present.

Per-user/LUA support

The enumeration is specific to current user. Both system wide and current user device associations are considered. For default profile configuration, current user settings override system wide ones.

213.4.6 GetColorDirectory as folderitem

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetColorDirectory function retrieves the path of the Windows COLOR directory on a specified machine.
Example:

```
Var f as FolderItem = WindowsICMModuleMBS.GetColorDirectory

if f=nil then
MessageBox "No path?"
else
MessageBox f.NativePath
end if
```

Notes: On success returns folderitem for color directory. Returns nil on any error.

213.4.7 GetStandardColorSpaceProfile(ProfileID as Integer) as string

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetStandardColorSpaceProfile function retrieves the color profile registered for the specified standard color space.
Example:

```
MessageBox WindowsICMModuleMBS.GetStandardColorSpaceProfile(WindowsICMModuleMBS.LCS_WINDOWS_COLOR_SPACE)
```

Notes: ProfileID: Specifies the ID value of the standard color space for which to retrieve the profile. The only valid values for this parameter are LCS_sRGB and LCS_WINDOWS_COLOR_SPACE.

This function supports Windows Color System (WCS) device model profiles (DMPs) in addition to Interna-

tional Color Consortium (ICC) profiles. It does not support WCS CAMP or GMMP profiles and will return an error if such profiles are used.

Overview of Windows Vista Specific Functionality

This will support WCS DMPs in addition to ICC profiles. It will not support WCS CAMP or GMMP profiles and will return an error if such profiles are used with this API.

Per-user/LUA support

This will retrieve the color profile registered for the given standard color space for current user. If there is no such setting for the current user, it retrieves the system wide setting.

This uses WcsGetDefaultColorProfile with WCS_PROFILE_MANAGEMENT_SCOPE_CURRENT_USER.

This is executable in LUA context.

213.4.8 InstallColorProfile(file as folderitem) as boolean

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The InstallColorProfile function installs a given profile for use on a specified machine.
Notes: The profile is also copied to the COLOR directory.
Returns true on success and false on failure.

213.4.9 RegisterCMM(cmmID as Integer, file as folderitem) as boolean

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: RegisterCMM associates a specified identification value with the specified color management module dynamic link library (CMM DLL).
Notes: When this ID appears in a color profile, Windows can then locate the corresponding CMM so as to create a transform.

cmmID: Specifies the ID signature of the CMM registered with the International Color Consortium (ICC).

file: Points to the CMM DLL.

Returns true on success and false on failure.

213.4.10 SelectCMM(cmmID as Integer) as boolean

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: SelectCMM allows an application to select the preferred color management module (CMM) to use.
Notes: cmmID: Specifies the signature of the desired CMM as registered with the International Color Consortium (ICC).

Windows 2000 only: Setting this parameter to 0 causes the WCS system to select the default CMM.

Returns true on success and false on failure.

213.4.11 SetStandardColorSpaceProfile(ProfileID as Integer, ProfileName as folderitem) as boolean

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The SetStandardColorSpaceProfile function registers a specified profile for a given standard color space.
Notes: The profile can be queried using GetStandardColorSpaceProfile.

ProfileID: Specifies the ID value of the standard color space that the given profile represents.
Profilename: path to the profile file.

Returns true on success and false on failure.

The profile must already be installed on the system before it can be registered for a standard color space.

This function supports Windows Color System (WCS) device model profiles (DMPs) in addition to International Color Consortium (ICC) profiles. It does not support WCS CAMP or GMMP profiles and will return an error if such profiles are used.

Per-user/LUA support

This will register a specified profile for a given standard color space only for current user.

This uses SetDefaultColorProfile with WCS_PROFILE_MANAGEMENT_SCOPE_CURRENT_USER.

This is executable in LUA context if the profile is already installed, fails otherwise with access denied since install is system-wide and requires administrator privileges.

213.4.12 UninstallColorProfile(ProfileName as string, DeleteFile as boolean = true) as boolean

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: UninstallColorProfile removes a specified color profile from a specified computer. Associated files are optionally deleted from the system.
Notes: ProfileName: Points to the file name of the profile to uninstall.

DeleteFile: If set to true, the function deletes the profile from the COLOR directory. If set to false, this function has no effect.

Returns true on success and false on failure.

213.4.13 UnregisterCMM(cmmID as Integer) as boolean

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The UnregisterCMM function dissociates a specified ID value from a given color management module dynamic-link library (CMM DLL).
Notes: cmmID: Specifies the ID value identifying the CMM whose registration is to be removed. This is the signature of the CMM registered with the International Color Consortium (ICC).

Returns true on success and false on failure.

213.4.14 Constants

Info selectors for GetInfo

Constant	Value	Description
CMM_DESCRIPTION	5	A text string that describes the color management module.
CMM_DLL_VERSION	3	Version number of the CMM DLL.
CMM_DRIVER_VERSION	2	
CMM_IDENT	1	The CMM identification signature registered with the International Color Consortium (ICC).
CMM_LOGOICON	6	The logo icon for this CMM.
CMM_VERSION	4	Version of Windows supported.
CMM_WIN_VERSION	0	Backward compatibility with Windows 95.

Profile ID Constants

Constant	Value	Description
LCS_sRGB	&h73524742	
LCS_WINDOWS_COLOR_SPACE	&h57696E20	

213.5 class WindowsICMNamedProfileInfoMBS

213.5.1 class WindowsICMNamedProfileInfoMBS

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class is used to store information about a named color profile.
Blog Entries

- MBS Real Studio Plugins, version 11.1pr11

213.5.2 Properties

213.5.3 Count as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Total number of named colors in the profile.
Notes: (Read and Write property)

213.5.4 CountDevCoordinates as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Total number of device coordinates for each named color.
Notes: (Read and Write property)

213.5.5 Flags as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Flags for this information record.
Notes: Not currently used by the default CMM.
(Read and Write property)

213.5.6 Prefix as String

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string containing the prefix for each color name.
Notes: (Read and Write property)

213.5.7 Suffix as String

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string containing the suffix for each color name.
Notes: (Read and Write property)

213.6 class WindowsICMProfileHeaderMBS

213.6.1 class WindowsICMProfileHeaderMBS

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class contains information that describes the contents of a device profile file.
Notes: This header occurs at the beginning of a device profile file.
Blog Entries

- MBS Real Studio Plugins, version 11.1pr11

213.6.2 Properties

213.6.3 Attributes0 as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Attributes of profile.
Notes: (Read and Write property)

213.6.4 Attributes1 as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Attributes of profile.
Notes: (Read and Write property)

213.6.5 Classs as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates the profile class.
Example:

```
// some profile file
Var file as FolderItem = SpecialFolder.Desktop.Child("test.icc")

// open profile read only
Var w as WindowsICMProfileMBS = WindowsICMProfileMBS.OpenProfileFile(file, WindowsICMProfileMBS.PRO-
FILE_READ, WindowsICMProfileMBS.FILE_SHARE_READ, WindowsICMProfileMBS.OPEN_EXIST-
ING)

// get headers
```

```
Var h as WindowsICMProfileHeaderMBS = w.ColorProfileHeader

// show color space name
Select case h.Classs
case WindowsICMProfileHeaderMBS.CLASS_MONITOR
MessageBox "Monitor"
case WindowsICMProfileHeaderMBS.CLASS_PRINTER
MessageBox "Printer"
case WindowsICMProfileHeaderMBS.CLASS_SCANNER
MessageBox "Scanner"
case WindowsICMProfileHeaderMBS.CLASS_LINK
MessageBox "Link"
case WindowsICMProfileHeaderMBS.CLASS_ABSTRACT
MessageBox "Abstract"
case WindowsICMProfileHeaderMBS.CLASS_COLORSPACE
MessageBox "Colorspace"
case WindowsICMProfileHeaderMBS.CLASS_NAMED
MessageBox "Named"
case WindowsICMProfileHeaderMBS.CLASS_CAMP
MessageBox "Camp"
case WindowsICMProfileHeaderMBS.CLASS_GMMP
MessageBox "GNMP"
else
MessageBox "Unknown: "+hex(h.Classs)
end Select
```

Notes: For a description of profile classes, see Using Device Profiles with WCS:
http://msdn.microsoft.com/en-us/library/dd372213(v=VS.85).aspx

A profile class may have any of the values from the CLASS_* constants.

Class is written with three s here as Class is a reserved word in Xojo.
(Read and Write property)

213.6.6 CMMType as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The identification number of the CMM that is used in the profile.
Notes: Identification numbers are registered with the ICC.
(Read and Write property)

213.6.7 ConnectionSpace as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A signature value that indicates the color space in which the profile connection space (PCS) is defined.
Notes: The member can be any of the following values: SPACE_XYZ or SPACE_Lab.
(Read and Write property)

213.6.8 Creator as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Signature of the software that created the profile.
Example:

```
Var file as FolderItem = SpecialFolder.Desktop.Child("test.icc")
Var w as WindowsICMProfileMBS = WindowsICMProfileMBS.OpenProfileFile(file, WindowsICMProfileMBS.PRO-
FILE_READ, WindowsICMProfileMBS.FILE_SHARE_READ, WindowsICMProfileMBS.OPEN_EXIST-
ING)
Var h as WindowsICMProfileHeaderMBS = w.ColorProfileHeader

MessageBox hex(h.Creator)
```

Notes: Signatures are registered with the ICC.
(Read and Write property)

213.6.9 DataColorSpace as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A signature value that indicates the color space in which the profile data is defined.
Example:

```
function Name() as string
Var w as WindowsICMProfileMBS // your profile
Var h as WindowsICMProfileHeaderMBS = w.ColorProfileHeader

if h=nil then Return "?"

Select case h.DataColorSpace
case WindowsICMProfileHeaderMBS.SPACE_XYZ
Return "XYZ"
case WindowsICMProfileHeaderMBS.SPACE_Lab
Return "Lab"
```

```
case WindowsICMProfileHeaderMBS.SPACE_Luv
Return "Luv"
case WindowsICMProfileHeaderMBS.SPACE_YCbCr
Return "YCbCr"
case WindowsICMProfileHeaderMBS.SPACE_Yxy
Return "Yxy"
case WindowsICMProfileHeaderMBS.SPACE_RGB
Return "RGB"
case WindowsICMProfileHeaderMBS.SPACE_GRAY
Return "GRAY"
case WindowsICMProfileHeaderMBS.SPACE_HSV
Return "HSV"
case WindowsICMProfileHeaderMBS.SPACE_HLS
Return "HLS"
case WindowsICMProfileHeaderMBS.SPACE_CMYK
Return "CMYK"
case WindowsICMProfileHeaderMBS.SPACE_CMY
Return "CMY"
case WindowsICMProfileHeaderMBS.SPACE_2_CHANNEL
Return "2 Channel"
case WindowsICMProfileHeaderMBS.SPACE_3_CHANNEL
Return "2 Channel"
case WindowsICMProfileHeaderMBS.SPACE_4_CHANNEL
Return "2 Channel"
case WindowsICMProfileHeaderMBS.SPACE_5_CHANNEL
Return "2 Channel"
case WindowsICMProfileHeaderMBS.SPACE_6_CHANNEL
Return "2 Channel"
case WindowsICMProfileHeaderMBS.SPACE_7_CHANNEL
Return "2 Channel"
case WindowsICMProfileHeaderMBS.SPACE_8_CHANNEL
Return "2 Channel"
else
Return "Unknown: "+hex(h.DataColorSpace)
end Select
end function
```

Notes: The member can be any of value from the SPACE_* Constants.
(Read and Write property)

213.6.10 DateTime0 as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data and time that the profile was created.
Notes: (Read and Write property)

213.6.11 DateTime1 as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data and time that the profile was created.
Notes: (Read and Write property)

213.6.12 DateTime2 as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data and time that the profile was created.
Notes: (Read and Write property)

213.6.13 IlluminantX as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: X value of the Profile illuminant.
Notes: (Read and Write property)

213.6.14 IlluminantY as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Y value of the Profile illuminant.
Notes: (Read and Write property)

213.6.15 IlluminantZ as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Z value of the Profile illuminant.
Notes: (Read and Write property)

213.6.16 Manufacturer as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The identification number of the device profile manufacturer.
Notes: All manufacturer identification numbers are registered with the ICC.
(Read and Write property)

213.6.17 Model as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device manufacturer's device model number.
Notes: All model identification numbers are registered with the ICC.
(Read and Write property)

213.6.18 Platform as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The primary platform for which the profile was created.
Example:

```
Var file as FolderItem = SpecialFolder.Desktop.Child("test.icc")
Var w as WindowsICMProfileMBS = WindowsICMProfileMBS.OpenProfileFile(file, WindowsICMProfileMBS.PROFILE_READ, WindowsICMProfileMBS.FILE_SHARE_READ, WindowsICMProfileMBS.OPEN_EXISTING)
Var h as WindowsICMProfileHeaderMBS = w.ColorProfileHeader

MessageBox DecodingFromHexMBS(hex(h.Platform)) // shows platform, e.g. "APPL"
```

Notes: The primary platform can be set to any of the following values.

Platform	Value
Apple Computer, Inc.	'APPL'
Microsoft Corp.	'MSFT'
Silicon Graphics, Inc.	'SGI'
Sun Microsystems, Inc.	'SUNW'
Taligent	'TGNT'

(Read and Write property)

213.6.19 ProfileFlags as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Bit flags containing hints that the CMM uses to interpret the profile data.
Notes: The member can be set to the following values.

Constant	Meaning
FLAG_EMBEDDEDPROFILE	The profile is embedded in a bitmap file.
FLAG_DEPENDENTONDATA	The profile can't be used independently of the embedded color data. Used for profiles that are embedded in bitmap files.

(Read and Write property)

213.6.20 RenderingIntent as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The profile rendering intent.
Notes: The member can be set to one of the following values:

INTENT_PERCEPTUALINTENT_SATURATIONINTENT_RELATIVE_COLORIMETRICINTENT_ABSOLUTE_COLORIMETRIC

For more information, see Rendering Intents.
http://msdn.microsoft.com/en-us/library/dd372183(v=VS.85).aspx
(Read and Write property)

213.6.21 Signature as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reserved for internal use.
Notes: (Read and Write property)

213.6.22 Version as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The version number of the profile.
Notes: The version number is determined by the ICC. The current major version number is &h02. The

current minor version number is &h10. The major and minor version numbers are in binary coded decimal (BCD). They must be stored in the following format.

Byte Number	Contents
0	Major version number in BCD.
1	Minor version number in the most significant nibble of this byte. Bug fix version number in the least significant nibble.
2	Reserved. Must be set to 0.
3	Reserved. Must be set to 0.

(Read and Write property)

213.6.23 Constants

Attribute Constants

Constant	Value	Description
ATTRIB_MATTE	2	Turns matte display on. If this flag is not used, the attribute is glossy by default.
ATTRIB_TRANSPARENCY	1	Turns transparency on. If this flag is not used, the attribute is reflective by default.

Profile Class Constants

Constant	Value	Description
CLASS_ABSTRACT	&h61627374	Abstract Profile
CLASS_CAMP	&h6C616D70	Color Appearance Model Profile
CLASS_COLORSPACE	&h73706163	Color Space Conversion Profile
CLASS_GMMP	&h676D6D70	Color Gamut Map Model Profile
CLASS_LINK	&h6C696E6B	Device Link Profile
CLASS_MONITOR	&h6D6E7472	Display Device Profile
CLASS_NAMED	&h6E6D636C	Named Color Profile
CLASS_PRINTER	&h70727472	Output Device Profile
CLASS_SCANNER	&h73636E72	Input Device Profile

Profile Flags

Constant	Value	Description
FLAG_DEPENDENTONDATA	2	The profile can't be used independently of the embe profiles that are embedded in bitmap files.
FLAG_EMBEDDEDPROFILE	1	The profile is embedded in a bitmap file.
FLAG_ENABLE_CHROMATIC_ADAPTATION	&h02000000	

Color Space Constants

Constant	Value	Description
SPACE_2_CHANNEL	&h32434C52	Generic 2 channel
SPACE_3_CHANNEL	&h33434C52	Generic 3 channel
SPACE_4_CHANNEL	&h34434C52	Generic 4 channel
SPACE_5_CHANNEL	&h35434C52	Generic 5 channel
SPACE_6_CHANNEL	&h36434C52	Generic 6 channel
SPACE_7_CHANNEL	&h37434C52	Generic 7 channel
SPACE_8_CHANNEL	&h38434C52	Generic 8 channel
SPACE_CMY	&h434D5920	CMY
SPACE_CMYK	&h434D594B	CMYK
SPACE_GRAY	&h47524159	Gray scale
SPACE_HLS	&h484C5320	HLS
SPACE_HSV	&h48535620	HSV
SPACE_Lab	&h4C616220	Lab
SPACE_Luv	&h4C757620	Luv
SPACE_RGB	&h52474220	RGB
SPACE_XYZ	&h58595A20	XYZ
SPACE_YCbCr	&h59436272	YCbCr
SPACE_Yxy	&h59787920	Yxy

213.7 class WindowsICMProfileMBS

213.7.1 class WindowsICMProfileMBS

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a color profile.
Example:

```
// open an ICC color profile on Windows and check it
Var file As FolderItem = SpecialFolder.Desktop.Child("sRGB.icc")
Var profile As WindowsICMProfileMBS = WindowsICMProfileMBS.OpenProfileFile(file, WindowsICMPro-
fileMBS.PROFILE_READ, WindowsICMProfileMBS.FILE_SHARE_READ, WindowsICMProfileMBS.OPEN_EX-
ISTING)
If profile = Nil Then
MessageBox "Can't open profile."
Return
End If

MessageBox "Valid: " + profile.IsValid.ToString + EndOfLine + _
"Tags: " + profile.CountColorProfileElements.ToString + EndOfLine + _
"Size: " + profile.GetProfileData.Bytes.ToString + " bytes"
```

- MBS Xojo / Real Studio Plugins, version 14.1pr3
- MBS Real Studio Plugins, version 11.1pr11

213.7.2 Methods

213.7.3 ConvertColorNameToIndex(name as string) as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The CMConvertColorNameToIndex function converts color names in a named color space to index numbers in a color profile.
Notes: name: The name of the color.

Returns the color index.

This function is required in the default CMM. It is optional for all other CMMs.

213.7.4 ConvertIndexToColorName(index as Integer) as string

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ConvertIndexToColorName transforms indices in a color space to an array of names in a named color space.
Notes: This function is required in the default CMM. It is optional for all other CMMs.

213.7.5 CountColorProfileElements as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetCountColorProfileElements function retrieves the number of tagged elements in a given color profile.
Example:

```
Var file as FolderItem = SpecialFolder.Desktop.Child("test.icc")
Var w as WindowsICMProfileMBS = WindowsICMProfileMBS.OpenProfileFile(file, WindowsICMProfileMBS.PROFILE_READ, WindowsICMProfileMBS.FILE_SHARE_READ, WindowsICMProfileMBS.OPEN_EXISTING)

MessageBox "CountColorProfileElements: "+str(w.CountColorProfileElements)
```

Notes: Returns number of tagged elements in the profile or 0 on any error.
This function will fail if hProfile is not a valid ICC profile.
This function does not support Windows Color System (WCS) profiles CAMP, DMP, and GMMP.

213.7.6 CreateIccProfile(options as Integer = 0) as WindowsICMProfileMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Converts a WCS profile into an International Color Consortium (ICC) profile.
Notes: Options: A flag value that specifies the profile conversion options.By default, the original WCS profiles used for the conversion are embedded in the output ICC profile in a Microsoft private tag, ProfilesTag (with signature "MS000". This produces an ICC profile that is compatible with ICC software, yet retains the original WCS profile data available to code designed to parse it.The possible values of this parameter are as follows. Any bits not defined in this list are reserved and should be set to zero:

WCS_DEFAULT	Specifies that the new ICC profile contains the original WCS profile in a private ProfilesTag.
WCS_ICCONLY	Specifies that the new ICC profile does not contain either the ProfilesTag or the original WCS profile.

Returns new profile object.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd372239(v=vs.85).aspx

213.7.7 GetColorProfileElement(tag as Integer) as string

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetColorProfileElement function copies data from a specified tagged profile element of a specified color profile into a buffer.
Example:

```
Var file as FolderItem = SpecialFolder.Desktop.Child("sRGB Profile.icc")
Var w as WindowsICMProfileMBS = WindowsICMProfileMBS.OpenProfileFile(file, WindowsICMProfileMBS.PROFILE_READ, WindowsICMProfileMBS.FILE_SHARE_READ, WindowsICMProfileMBS.OPEN_EXISTING)

MessageBox w.GetColorProfileElement(&h64657363) // that's the code for desc, the description
```

Notes: tag: Identifies the tagged element from which to copy.

This function will fail if Profile is not a valid International Color Consortium (ICC) profile.

This function does not support Windows Color System (WCS) profiles CAMP, DMP, and GMMP; because profile elements are implicitly associated with, and hard coded to, ICC tag types and there exist many robust XML parsing libraries.

213.7.8 GetColorProfileElementTag(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetColorProfileElementTag function retrieves the tag name specified by dwIndex in the tag table of a given International Color Consortium (ICC) color profile, where Index is a one-based index into that table.
Example:

```
Var file as FolderItem = SpecialFolder.Desktop.Child("test.icc")
Var w as WindowsICMProfileMBS = WindowsICMProfileMBS.OpenProfileFile(file, WindowsICMProfileMBS.PROFILE_READ, WindowsICMProfileMBS.FILE_SHARE_READ, WindowsICMProfileMBS.OPEN_EXISTING)
Var list(-1) as string
Var c as Integer = w.CountColorProfileElements-1
```

```
for i as Integer = 0 to c
list.Add DecodingFromHexMBS(hex(w.GetColorProfileElementTag(i)))
next

MessageBox "Tags: "+Join(list, ", ")
```

Notes: Index: Specifies the one-based index of the tag to retrieve.

This function will fail if Profile is not a valid ICC profile.

GetColorProfileElementTag can be used to enumerate all tags in a profile after getting the number of tags in the profile using GetCountColorProfileElements.

This function does not support Windows Color System (WCS) profiles CAMP, DMP, and GMMP; because profile elements are implicitly associated with, and hard coded to, ICC tag types and there exist many robust XML parsing libraries.

213.7.9 GetNamedProfileInfo as WindowsICMNamedProfileInfoMBS

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetNamedProfileInfo function retrieves information about the International Color Consortium (ICC) named color profile that is specified in the first parameter.
Notes: This function will fail if hProfile is not a valid ICC profile.
This function does not support Windows Color System (WCS) profiles CAMP, DMP, and GMMP; because named profiles are explicit ICC profile types.
Returns nil on any error.

213.7.10 GetProfileData as string

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Given valid color profile, the GetProfileData function will return the contents of the profile.
Notes: If the object is a Windows Color System (WCS) handle, then the DMP is returned and the CAMP and GMMP associated with the HPROFILE are ignored.

Returns the data or an empty string on any error.
See GetColorProfileFromHandle in MSDN documentation.

213.7.11 IsColorProfileTagPresent(tag as Integer) as boolean

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IsColorProfileTagPresent function reports whether a specified International Color Consortium (ICC) tag is present in the specified color profile.
Notes: tag: Specifies the ICC tag to check.

Returns true if the tag is valid and false if not.

This function will fail if Profile is not a valid ICC profile.

This function does not support Windows Color System (WCS) profiles CAMP, DMP, and GMMP; because profile elements are implicitly associated with and hard coded to ICC tag types and there exist many robust XML parsing libraries.

213.7.12 IsValid as boolean

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IsValid function reports whether the given profile is a valid ICC profile that can be used for color management.
Example:

```
Var file as FolderItem = SpecialFolder.Desktop.Child("test.icc")
Var w as WindowsICMProfileMBS = WindowsICMProfileMBS.OpenProfileFile(file, WindowsICMProfileMBS.PROFILE_READ, WindowsICMProfileMBS.FILE_SHARE_READ, WindowsICMProfileMBS.OPEN_EXISTING)

MessageBox "Valid: "+str(w.IsValid)
```

Notes: Returns true if the profile is valid.

Only the Windows default CMM is required to export this function; it is optional for all other CMMs.

If a CMM does not support this function, Windows uses the default CMM to validate the profile.

213.7.13 OpenProfileData(data as string, DesiredAccess as Integer) as WindowsICMProfileMBS

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The OpenColorProfile function opens or create a color profile.
Notes: file: The file where to load profile from.
DesiredAccess: Specifies how to access the given profile. This parameter must take one the following constant values.

Value	Meaning
PROFILE_READ	Opens the profile for read access.
PROFILE_READWRITE	Opens the profile for both read and write access. Has no effect for WCS XML profiles.

Returns the profile on success and nil on error.

For ICC and WCS profiles, a CAMP and GMMP are provided by the function based on the current default CAMP and GMMP in the registry.

When OpenColorProfile encounters an ICC profile with an embedded WCS profile, and if the dwType member within the Profile structure does not take the value DONT_USE_EMBEDDED_WCS_PROFILES, it should extract and use the WCS profile(s) contained in this WcsProfilesTag. The HPROFILE returned would be a WCS HPROFILE.

When the function opens the ICC profile, it will look for a WcsProfilesTag and, if there is one, it will extract and use the original WCS profiles contained therein. (See WcsCreateIccProfile.)

An profile with WCS profile information is derived from a DMP by acquiring the default CAMP and default GMMP from the registry. An HPROFILE is a composition of a DMP, CAMP and GMMP.

213.7.14 OpenProfileFile(file as folderitem, DesiredAccess as Integer, ShareMode as Integer, CreationMode as Integer) as WindowsICMProfileMBS

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The OpenColorProfile function opens or create a color profile.
Notes: file: The file where to load profile from.
DesiredAccess: Specifies how to access the given profile. This parameter must take one the following constant values.

Value	Meaning
PROFILE_READ	Opens the profile for read access.
PROFILE_READWRITE	Opens the profile for both read and write access. Has no effect for WCS XML profiles.

ShareMode: Specifies how the profile should be shared, if the profile is contained in a file. A value of zero prevents the profile from being shared at all. The parameter can contain one or both of the following constants (combined by addition or logical OR).

Value	Meaning
FILE_SHARE_READ	Other open operations can be performed on the profile for read access.
FILE_SHARE_WRITE	Other open operations can be performed on the profile for write access. Has no effect for WCS XML profiles.

CreationMode: Specifies which actions to take on the profile while opening it, if it is contained in a file. This parameter must take one of the following constant values.

Value	Meaning
CREATE_NEW	Creates a new profile. Fails if the profile already exists.
CREATE_ALWAYS	Creates a new profile. Overwrites the profile if it exists.
OPEN_EXISTING	Opens the profile. Fails if it does not exist
OPEN_ALWAYS	Opens the profile if it exists. For ICC profiles, if the profile does not exist, creates the profile. For WCS XML profiles, if the profile does not exist, returns an error.
TRUNCATE_EXISTING	Opens the profile, and truncates it to zero bytes, returning a blank ICC profile. Fails if the profile doesn't exist.

Returns the profile on success and nil on error.

For ICC and WCS profiles, a CAMP and GMMP are provided by the function based on the current default CAMP and GMMP in the registry.

When OpenColorProfile encounters an ICC profile with an embedded WCS profile, and if the dwType member within the Profile structure does not take the value DONT_USE_EMBEDDED_WCS_PROFILES, it should extract and use the WCS profile(s) contained in this WcsProfilesTag. The HPROFILE returned would be a WCS HPROFILE.

CreationMode flags CREATE_NEW, CREATE_ALWAYS, and TRUNCATE_EXISTING, will always return blank ICC HPROFILEs. If other CreationMode flags are present, InternalOpenColorProfile is called (using the flags as provided by the API) to determine whether the profile is ICC or WCS XML.

Within the ICC code path, an ICC Profile is returned using the requested sharing, access and creation flags as specified in the tables above.

Within the WCS path, the CreationMode flag OPEN_ALWAYS will fail if the profile doesn't exist, since WCS profiles cannot be created or edited within the WCS architecture (they must be edited outside of it, using MSXML6). For the same reason, dwShareMode flag FILE_SHARE_WRITE, and dwDesiredAccess

flag PROFILE_READWRITE are ignored within the WCS path.

When the function opens the ICC profile, it will look for a WcsProfilesTag and, if there is one, it will extract and use the original WCS profiles contained therein. (See WcsCreateIccProfile.)

An profile with WCS profile information is derived from a DMP by acquiring the default CAMP and default GMMP from the registry. An HPROFILE is a composition of a DMP, CAMP and GMMP.

213.7.15 OpenProfilePath(path as string, DesiredAccess as Integer, ShareMode as Integer, CreationMode as Integer) as WindowsICMProfileMBS

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The OpenColorProfile function opens or create a color profile.
Notes: file: The file where to load profile from.
DesiredAccess: Specifies how to access the given profile. This parameter must take one the following constant values.

Value	Meaning
PROFILE_READ	Opens the profile for read access.
PROFILE_READWRITE	Opens the profile for both read and write access. Has no effect for WCS XML profiles.

ShareMode: Specifies how the profile should be shared, if the profile is contained in a file. A value of zero prevents the profile from being shared at all. The parameter can contain one or both of the following constants (combined by addition or logical OR).

Value	Meaning
FILE_SHARE_READ	Other open operations can be performed on the profile for read access.
FILE_SHARE_WRITE	Other open operations can be performed on the profile for write access. Has no effect for WCS XML profiles.

CreationMode: Specifies which actions to take on the profile while opening it, if it is contained in a file. This parameter must take one of the following constant values.

Returns the profile on success and nil on error.

For ICC and WCS profiles, a CAMP and GMMP are provided by the function based on the current default CAMP and GMMP in the registry.

Value	Meaning
CREATE_NEW	Creates a new profile. Fails if the profile already exists.
CREATE_ALWAYS	Creates a new profile. Overwrites the profile if it exists.
OPEN_EXISTING	Opens the profile. Fails if it does not exist
OPEN_ALWAYS	Opens the profile if it exists. For ICC profiles, if the profile does not exist, creates the profile. For WCS XML profiles, if the profile does not exist, returns an error.
TRUNCATE_EXISTING	Opens the profile, and truncates it to zero bytes, returning a blank ICC profile. Fails if the profile doesn't exist.

When OpenColorProfile encounters an ICC profile with an embedded WCS profile, and if the dwType member within the Profile structure does not take the value DONT_USE_EMBEDDED_WCS_PROFILES, it should extract and use the WCS profile(s) contained in this WcsProfilesTag. The HPROFILE returned would be a WCS HPROFILE.

CreationMode flags CREATE_NEW, CREATE_ALWAYS, and TRUNCATE_EXISTING, will always return blank ICC HPROFILEs. If other CreationMode flags are present, InternalOpenColorProfile is called (using the flags as provided by the API) to determine whether the profile is ICC or WCS XML.

Within the ICC code path, an ICC Profile is returned using the requested sharing, access and creation flags as specified in the tables above.

Within the WCS path, the CreationMode flag OPEN_ALWAYS will fail if the profile doesn't exist, since WCS profiles cannot be created or edited within the WCS architecture (they must be edited outside of it, using MSXML6). For the same reason, dwShareMode flag FILE_SHARE_WRITE, and dwDesiredAccess flag PROFILE_READWRITE are ignored within the WCS path.

When the function opens the ICC profile, it will look for a WcsProfilesTag and, if there is one, it will extract and use the original WCS profiles contained therein. (See WcsCreateIccProfile.)

An profile with WCS profile information is derived from a DMP by acquiring the default CAMP and default GMMP from the registry. An HPROFILE is a composition of a DMP, CAMP and GMMP.

213.7.16 SetColorProfileHeader(header as WindowsICMProfileHeaderMBS) as boolean

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The SetColorProfileHeader function sets the header data in a specified ICC color profile.
Notes: Header: the profile header data to write to the specified profile.

Returns true on success.

This function will fail if Profile is not a valid ICC profile.

If the color profile was not opened with read/write permission, SetColorProfileHeader fails.

SetColorProfileHeader overwrites the current header in the ICC profile.

This function does not support Windows Color System (WCS) profiles CAMP, DMP, and GMMP; because profile elements are implicitly associated with and hard coded to ICC tag types and there exist many robust XML parsing libraries.

213.7.17 Properties

213.7.18 ColorProfileHeader as WindowsICMProfileHeaderMBS

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetColorProfileHeader function retrieves or derives ICC header structure from either ICC color profile or WCS XML profile.
Notes: Drivers and applications should assume returning TRUE only indicates that a properly structured header is returned. Each tag will still need to be validated independently using either legacy ICM2 APIs or XML schema APIs.

To determine whether the header is derived from an ICC or DMP profile handle, check the header signature (header bytes 36-39). If the signature is "acsp" (big endian) then an ICC profile was used. If the signature is "cdmp" (big-endian) then a DMP was used.

The distinguishing features that identify a header as having been "synthesized" for a WCS DMP are:

WindowsICMProfileHeaderMBS.Signature = 'pmdc' (little endian = big endian 'cdmp')
WindowsICMProfileHeaderMBS.CMMType = '1scw' (little endian = big endian 'wcs1').
(Read only property)

213.7.19 Handle as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference to the object.
Notes: Value is a HPROFILE.

(Read and Write property)

213.7.20 Constants

Creation Mode Constants

Constant	Value	Description
CREATE_ALWAYS	2	Creates a new profile. Overwrites the profile if it exists.
CREATE_NEW	1	Creates a new profile. Fails if the profile already exists.
OPEN_ALWAYS	4	Opens the profile if it exists. For ICC profiles, if the profile does not exist, creates the profile. For WCS XML profiles, if the profile does not exist, returns an error.
OPEN_EXISTING	3	Opens the profile. Fails if it does not exist
TRUNCATE_EXISTING	5	Opens the profile, and truncates it to zero bytes, returning a blank ICC profile. Fails if the profile doesn't exist.

Profile sharing flags

Constant	Value	Description
FILE_SHARE_READ	1	Other open operations can be performed on the profile for read access.
FILE_SHARE_WRITE	2	Other open operations can be performed on the profile for write access. Has no effect for WCS XML profiles.

Profile access flags

Constant	Value	Description
PROFILE_READ	1	Opens the profile for read access.
PROFILE_READWRITE	2	Opens the profile for both read and write access. Has no effect for WCS XML profiles.

CreateICCProfile Flags

Constant	Value	Description
WCS_DEFAULT	0	Specifies that the new ICC profile contains the original WCS profile in a private WcsProfilesTag.
WCS_ICCONLY	&h00010000	Specifies that the new ICC profile does not contain either the WcsProfilesTag or the original WCS profile.

213.8 class WindowsICMSetupMBS

213.8.1 class WindowsICMSetupMBS

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class is made to query color matching setup information from the user.
Notes: This class contains information that the Setup function uses to initialize the ColorManagement dialog box. After the user closes the dialog box, Setup returns information about the user's selection in this class.
Blog Entries

- MBS Xojo Plugins, version 21.6pr3
- MBS Real Studio Plugins, version 11.1pr11

213.8.2 Methods

213.8.3 Setup as boolean

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Setup function creates a Color Management dialog box that lets the user choose whether to enable color management, and if so, provides control over the color profiles used and over the rendering intent.
Notes: Returns true if the user clicked OK and false on any error or when dialog was cancelled.

213.8.4 Properties

213.8.5 DisplayName as String

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string naming the monitor to be used for color management.
Notes: If this is not the name of a valid monitor, the first enumerated monitor is used.
(Read and Write property)

213.8.6 Flags as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A set of bit flags used to initialize the dialog box.
Notes: If set to 0 on entry, all controls assume their default states.

When the dialog box returns, these flags are set to indicate the user's input.

See CMS_* flag constants.
(Read and Write property)

213.8.7 MonitorProfile as String

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string in which to place the name of the user-selected monitor profile.
Notes: If the CMS_SETMONITORPROFILE flag is used, this flag can also be used to select a profile other than the monitor default when the dialog is first displayed.
(Read and Write property)

213.8.8 Parent as Variant

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop only.

Function: The parent window.
Notes: Can reference a Window or DesktopWindow object.
(Read and Write property)

213.8.9 PrinterName as String

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string naming the printer on which the image is to be rendered.
Notes: If this is not a valid printer name, the default printer is used and named in the dialog.
(Read and Write property)

213.8.10 PrinterProfile as String

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string in which to place the name of the user-selected printer profile.
Notes: If the CMS_SETPRINTERPROFILE flag is used, this flag can also be used to select a profile other than the printer default when the dialog is first displayed.
(Read and Write property)

213.8.11 ProofingIntent as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The type of color management desired for the proofed image.
Notes: Valid values are:

INTENT_PERCEPTUAL
INTENT_SATURATION
INTENT_RELATIVE_COLORIMETRIC
INTENT_ABSOLUTE_COLORIMETRIC

For more information, see Rendering Intents.
http://msdn.microsoft.com/en-us/library/dd372183(v=vs.85).aspx
(Read and Write property)

213.8.12 RenderIntent as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The type of color management desired.
Notes: Valid values are:

INTENT_PERCEPTUAL
INTENT_SATURATION
INTENT_RELATIVE_COLORIMETRIC
INTENT_ABSOLUTE_COLORIMETRIC

For more information, see Rendering Intents.
http://msdn.microsoft.com/en-us/library/dd372183(v=vs.85).aspx
(Read and Write property)

213.8.13 SourceName as String

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: An application-specified string which describes the source profile of the item for which color management is to be performed.
Notes: If this is "", the Image Source control displays the name of the Windows default color profile.
(Read and Write property)

213.8.14 TargetProfile as String

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string in which to place the name of the user-selected target profile for proofing.
Notes: If the CMS_SETTARGETPROFILE flag is used, this flag can also be used to select a profile other than the printer default when the dialog is first displayed.
(Read and Write property)

213.8.15 Events

213.8.16 Apply

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This event is invoked when the Apply button of the Color Management dialog box is selected.

213.8.17 Idle

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This event is called regularly if the CMS_USEHOOK flag is used.

213.8.18 Constants

Flag Constants

Constant	Value	Description
CMS_DISABLEICM	1	If set on entry, this flag indicates that the "Enable Color Management" ch box is cleared, disabling all other controls. If set on exit, it means that the u does not wish color management performed.
CMS_DISABLEINTENT	1024	
CMS_DISABLERENDERINTENT	2048	
CMS_ENABLEPROOFING	2	If set on entry, this flag indicates that the Proofing controls are to be enabl and the Proofing check box is checked. If set on exit, it means that the u wishes to perform color management for a different target device than selected printer.
CMS_SETMONITORPROFILE	16	If set on entry, this flag indicates that the color management profile namec the MonitorProfile member is to be the initial selection in the monitor pro control. If the specified profile is not associated with the monitor, this flag ignored, and the default profile for the monitor is used.
CMS_SETPRINTERPROFILE	32	If set on entry, this flag indicates that the color management profile namec the PrinterProfile member is to be the initial selection in the printer pro control. If the specified profile is not associated with the printer, this flag ignored, and the default profile for the printer is used.
CMS_SETPROOFINTENT	5	Ignored unless CMS_ENABLEPROOFING is also set. If set on entry, a CMS_ENABLEPROOFING is also set, this flag indicates that the Proofi Intent member is to be used to initialize the Target Rendering Intent cont Otherwise, the control defaults to Picture rendering. This flag is set on exi proofing is enabled.
CMS_SETRENDERINTENT	4	If set on entry, this flag indicates that the RenderIntent member contains value to use to initialize the Rendering Intent control. Otherwise, the cont defaults to Picture rendering. This flag is set on exit if WCS is enabled.
CMS_SETTARGETPROFILE	64	If set on entry, this flag indicates that the color profile named in the Targ Profile member is to be the initial selection in the target profile control. If specified profile is not installed, this flag is ignored, and the default profile the printer is used. If the printer has no default profile, then the first profil alphabetical order will be displayed.
CMS_USEAPPLYCALLBACK	256	If set on entry, this flag indicates that the SetupColorMatching function sho call the Apply event.
CMS_USEDESCRIPTION	512	If set on entry, this flag instructs the Setup function to retrieve the pro description contained in the profile description tags (See ICC Profile Forn Specification v3.4). It will insert them into the Monitor Profile, Printer Prof Emulated Device Profile edit boxes in the Color Management common dia box.
CMS_USEHOOK	128	The idle event is called regularly if this flag is set.

Rendering Intent Constants

Constant	Value	Description
INTENT_ABSOLUTE_COLORIMETRIC	3	Maintain the white point. Match the colors to their nearest color i nation gamut.
INTENT_PERCEPTUAL	0	Maintain contrast. Used for photographs and natural images.
INTENT_RELATIVE_COLORIMETRIC	1	Maintain colorimetric match. Used for graphic designs and named
INTENT_SATURATION	2	Maintain saturation. Used for business charts and other situatio undithered colors are required.

213.9 class WindowsICMTransformMBS

213.9.1 class WindowsICMTransformMBS

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a color transformation.
Blog Entries

- MBS Real Studio Plugins, version 11.1pr11

213.9.2 Methods

213.9.3 CheckColors(InputColors() as WindowsICMColorMBS, ctInput as Integer, Results() as Integer) as boolean

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The CheckColors function determines whether the colors in an array lie within the output gamut of a specified transform.
Notes: InputColors: an array of colors.
ctInput: Specifies the input color type.
Results: An array of nColors bytes that receives the results of the test.

If this function succeeds, the return value is TRUE.

If this function fails, the return value is FALSE. For extended error information, call GetLastError.

Remarks

If the input color type is not compatible with the color transform, CheckColors fails.

The function places results of the tests in the array pointed to by paResult. Each byte in the array corresponds to a COLOR element in the array pointed to by paInputColors and has an unsigned value between 0 and 255. The value 0 denotes that the color is in gamut, while a nonzero value denotes that it is out of gamut. For any integer n such that 0 <n <255, a result value of n+1 indicates that the corresponding color is at least as far out of gamut as would be indicated by a result value of n.

The out-of-gamut information in the gamut tags created in WCS use the perceptual color distance in CIECAM02, which is the mean square root in CIECAM02 Jab space. The distance in the legacy ICC profile gamut tags is the mean square root in CIELAB space. We recommend that you use the CIECAM02 space when it is available because it provides more perceptually accurate distance metrics.

213.9.4 Constructor(LogColorSpace as WindowsICMLogColorSpaceMBS, DestProfile as WindowsICMProfileMBS, TargetProfile as WindowsICMProfileMBS, Flags as Integer)

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The CreateColorTransform function creates a color transform that applications can use to perform color management.
Notes: LogColorSpace: The input colorspace.

DestProfile: The profile of the destination device. The function determines whether the profile contains International Color Consortium (ICC) or Windows Color System (WCS) profile information.

TargetProfile: The profile of the target device. The function determines whether the profile contains ICC or WCS profile information.

Flags: Specifies flags to used control creation of the transform. See Remarks.

On success the handle property is not zero.

If the target profile is nil, the transform goes from the source logical color space to the destination profile. If the target profile is given, the transform goes from the source logical color space to the target profile and then to the destination profile. This allows previewing output meant for the target device on the destination device.

The values in Flags are intended as hints only. The color management module must determine the best way to use them.

Windows Vista: Three new flags have been added that can be used with dwFlags:

PRESERVEBLACK	If this bit is set, the transform engine inserts the appropriate black generation GMMP as the last GMMP in the transform sequence. This flag only works in a pure WCS transform.
SEQUENTIAL_TRANSFORM	If this bit is set, each step in the WCS processing pipeline is performed for every pixel in the image and no optimized color transform is built. This flag only works in a pure WCS transform. Restrictions: A transform created with the SEQUENTIAL_TRANSFORM flag set may only be used in the thread on which it was created and only for one color translation call at a time. COM must be initialized prior to creating the sequential transform and must remain initialized for the lifetime of the transform object.
WCS_ALWAYS	If this bit is set, even all-ICC transforms will use the WCS code path.

For details, see CMM Transform Creation Flags. All of the flags mentioned there are supported for all types

of transforms, except for FAST_TRANSLATE, which only works in a pure ICC-to-ICC transform.

The CreateColorTransform function is used outside of a device context. Colors may shift when transforming from a color profile to the same color profile. This is due to precision errors. Therefore, a color transform should not be performed under these circumstances.

The B2Ax tags are required for any profile that is the target of a transform.

WCS transform support for ICC ColorSpace profiles is limited to RGB colorspace profiles. The following ICC profile types cannot be used in a CITE-processed transform, either a mixed WCS/ICC transform or an all-ICC transform with WCS_ALWAYS set:

Non-RGB ColorSpace profiles
NamedColor profiles
n-channel profiles (where n >8)
DeviceLink profiles
Abstract profiles
See also:

- 213.9.5 Constructor(Profiles() as WindowsICMProfileMBS, Intents() as Integer, Flags as Integer, indexPreferredCMM as Integer) 25098

213.9.5 Constructor(Profiles() as WindowsICMProfileMBS, Intents() as Integer, Flags as Integer, indexPreferredCMM as Integer)

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The CreateMultiProfileTransform function accepts an array of profiles or a single device link profile and creates a color transform that applications can use to perform color mapping.
Notes: Profiles: An array of profiles to be used. The function determines whether the HPROFILEs contain International Color Consortium (ICC) or Windows Color System (WCS) profile information and processes them appropriately. When valid WCS profiles are returned by OpenColorProfile, these profiles contain the combination of DMP, CAMP, and GMMP profiles.
Intent: An array of intents to use. Each intent is one of the following values:

INTENT_PERCEPTUAL
INTENT_SATURATION
INTENT_RELATIVE_COLORIMETRIC
INTENT_ABSOLUTE_COLORIMETRIC

GMMPs are a generalization of intents. There are two possible sources of intents: the "destination" profile and the intent list parameter to CreateMultiProfileTransform. The term "destination" is not used since all but two of the profiles in the profile list parameter will serve as first destination and then source.

For more information, see Rendering Intents.

nIntents
Specifies the number of elements in the intents array: can either be 1 or the same value as nProfiles. For profile arrays that contain any WCS profiles, the first rendering intent is ignored and only nProfiles -1 elements are used for these profile arrays. The maximum number of nIntents is 10.

Flags: Specifies flags used to control creation of the transform.

indexPreferredCMM: Specifies the one-based index of the color profile that indicates what color management module (CMM) to use. The application developer may allow Windows to choose the CMM by setting this parameter to INDEX_DONT_CARE. See Using Color Management Modules (CMM) Third party CMMs are only available for ICC workflows. Profile arrays containing WCS profiles will ignore this flag. It is also ignored when only ICC profiles are used and when the WCS_ALWAYS flag is used.

On success the handle property is not zero.

If a device link profile is being used, the function will fail if Profiles contains more than one value.

The array of intents specifies how profiles should be combined. The nth intent is used for combining the nth profile in the array. If only one intent is specified, it is used for the first profile, and all other profiles are combined using Match intent.

The values in Flags are intended as hints only. The color management module must determine the best way to use them.

Windows Vista: Three new flags have been added that can be used with dwFlags:

PRESERVEBLACK	If this bit is set, the transform engine inserts the appropriate black generation GMMP as the last GMMP in the transform sequence. This flag only works in a pure WCS transform.
SEQUENTIAL_TRANSFORM	If this bit is set, each step in the WCS processing pipeline is performed for every pixel in the image and no optimized color transform is built. This flag only works in a pure WCS transform. Restrictions: A transform created with the SEQUENTIAL_TRANSFORM flag set may only be used in the thread on which it was created and only for one color translation call at a time. COM must be initialized prior to creating the sequential transform and must remain initialized for the lifetime of the transform object.
WCS_ALWAYS	If this bit is set, even all-ICC transforms will use the WCS code path.

For details, see CMM Transform Creation Flags. All of the flags mentioned there are supported for all types of transforms, except for FAST_TRANSLATE and USE_RELATIVE_COLORIMETRIC, which only work

in a pure ICC-to-ICC transform.

The CreateMultiProfileTransform function is used outside of a device context. Colors may shift when transforming from a color profile to the same color profile. This is due to precision errors. Therefore, a color transform should not be performed under these circumstances.

We recommend that there be only one GMMP between a source and destination DMP. Gamut boundary descriptions (GBDs) are created from the DMP/CAMP combinations. The subsequent GMMPs use the GDBs prior to them in the processing chain until there exists a DMP/CAMP GBD next in the sequence to be used. For example, assume a sequence DMP1, CAMP1, GMMP1, GMMP2, GMMP3, DMP2, CAMP2, GMMP4, GMMP5, CAMP3, DMP3. Then GMMP1, GMMP2 use GBD1 as their source and destination. Then GMMP3 uses GBD1 as source and GBD2 as destination. Then GMMP4 uses GBD2 as source and destination. Finally GMMP5 uses GBD2 as source and GBD3 as destination. This assumes no GMMP is identical to one next to it.

For WCS profiles, we recommend that the rendering intents be set to DWORD_MAX in order to use the GMMP within the WCS profile handle. This is because the array of rendering intents takes precedence over the rendering intents or gamut mapping models specified or contained in the profiles specified by the PROFILEs. The array of rendering intents references the default GMMP for those rendering intents. Ideally, only one gamut mapping is performed between a source and destination device by setting one or the other GMMP to NULL when creating the HPROFILE with WCS profile information. Any legacy application that uses a WCS DMP will invoke a sequence of GMMPs. GDBs are chosen based on DMPs and CAMPs. For intermediate GMMP gamut boundaries, the source and destination GBDs are used.

In summary, if ubound(Intents)=0, then the first GMM is set based on the GMMP that is set as default* for the padwIntent value, unless that value is DWORD_MAX, in which case the embedded GMM information from the second profile is used (The embedded GMM information is either a GMMP or, in the case of an ICC profile, the baseline GMM corresponding to** the intent from the profile header). The remainder of the GMMs are set based on the GMMP that is set as default* for RelativeColorimetric.

If ubound(Intents) = ubound(Profiles) - 1, then each GMM is set based on the GMMP that is set as default* for the value in the padwIntent array at the corresponding index, except where padwIntent values are DWORD_MAX. For values in the padwIntent array that are DWORD_MAX, the GMMs at corresponding positions are set based on the embedded GMM information from the second of the two profiles whose gamuts are mapped by the GMM. (Again, the embedded GMM information is either a GMMP or, in the case of an ICC profile, the baseline GMM corresponding to** the intent from the profile header).

If ubound(Intents) = ubound(Profiles), then first intent is ignored and funtion behaves as it does in the case when ubound(Intents) = ubound(Profiles) - 1.

Any other combination of padwIntents and nIntents will return an error.

- ”set as default” means that the default GMMP is queried using WcsGetDefaultColorProfile with

its profileManagementScope parameter set to WCS_PROFILE_MANAGEMENT_SCOPE_CURRENT_USER. This may return either current-user or system-wide defaults as described in the documentation for WcsGetDefaultColorProfile.

- "GMM corresponding to" does not mean "GMM from the GMMP set as default for". Instead it means "a constant association between ICC profile intents and baseline GMM algorithms."

WCS transform support for ICC ColorSpace profiles is limited to RGB colorspace profiles. The following ICC profile types cannot be used in a CITE-processed transform, either a mixed WCS/ICC transform or an all-ICC transform with WCS_ALWAYS set:

- Non-RGB ColorSpace profiles
- NamedColor profiles
- n-channel profiles (where n >8)
- DeviceLink profiles
- Abstract profiles

See also:

- 213.9.4 Constructor(LogColorSpace as WindowsICMLogColorSpaceMBS, DestProfile as WindowsICMProfileMBS, TargetProfile as WindowsICMProfileMBS, Flags as Integer) 25097

213.9.6 GetCMMInfo(what as Integer) as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetCMMInfo function retrieves various information about the color management module (CMM) that created the specified color transform.
Notes: what: Specifies the information to be retrieved. This parameter can take one of the following constant values.

Value	Meaning
CMM_WIN_VERSION	Retrieves the version of Windows targeted by the color management module (CMM).
CMM_DLL_VERSION	Retrieves the version number of the CMM.
CMM_IDENT	Retrieves the CMM signature registered with the International Color Consortium (ICC).

If this function succeeds, the return value is the information specified in What.
If this function fails, the return value is zero.

213.9.7 TranslateBitmapBits(SrcBits as memoryblock, InputType as Integer, Width as Integer, Height as Integer, InputRowBytes as Integer, DestBits as memoryblock, DestType as Integer, DestRowBytes as Integer) as boolean

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The TranslateBitmapBits function translates the colors of a bitmap having a defined format so as to produce another bitmap in a requested format.
Notes: SrcBits: Pointer to the bitmap to translate.
InputType: Specifies the format of the input bitmap. Use one of the BM_* constants.
Width: Specifies the number of pixels per scan line in the input bitmap.
Height: Specifies the number of scan lines in the input bitmap.
InputRowBytes: Specifies the number of bytes from the beginning of one scan line to the beginning of the next in the input bitmap; if set to zero, the function assumes that scan lines are padded so as to be DWORD-aligned.
DestBits: Pointer to the buffer in which to place the translated bitmap.
DestType: Specifies the format of the output bitmap. Use one of the BM_* constants.
DestRowBytes: Specifies the number of bytes from the beginning of one scan line to the beginning of the next in the output bitmap; if set to zero, the function assumes that scan lines should be padded to be DWORD-aligned.

If this function succeeds, the return value is TRUE.
If this function fails, the return value is FALSE.

Remarks

If the input and output formats are not compatible with the color transform, this function fails.

When either of the floating point BMFORMATs, BM_32b_scARGB or BM_32b_scRGB are used, the color data being translated should not contain NaN or infinity. NaN and infinity are not considered to represent legitimate color component values, and the result of translating pixels containing NaN or infinity is meaningless in color terms. NaN or infinity values in the color data being processed will be handled silently, and an error will not be returned.

213.9.8 TranslateColors(InputColors() as WindowsICMColorMBS, ctInput as Integer, OutputColors() as WindowsICMColorMBS, ctOutput as Integer) as boolean

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The TranslateColors function translates an array of colors from the source color space to the destination color space as defined by a color transform.

Notes: InputColors: The input color.
ctInput: Specifies the input color type.
OutputColors: The output color.
ctOutput: Specifies the output color type.

Returns true on success and false on failure.

213.9.9 TranslatePictures(InputPicture as picture, OutputPicture as picture) as boolean

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The TranslateBitmapBits function translates the colors of a bitmap having a defined format so as to produce another bitmap in a requested format.
Notes: InputPicture: input picture
OutputPicture: output picture

If this function succeeds, the return value is TRUE.
If this function fails, the return value is FALSE.

Make sure the pictures have the same size.

If the input and output formats are not compatible with the color transform, this function fails.

213.9.10 Properties

213.9.11 Handle as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle for the transformation.
Notes: (Read and Write property)

213.9.12 Events

213.9.13 Progress(Maximum as Integer, Current as Integer) as boolean

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The progress event for long operations.

213.9.14 Constants

Constants

Constant	Value	Description
CMM_DLL_VERSION	3	One of the values for the GetCMMInfo function. Retrieves the version number of the CMM.
CMM_IDENT	1	One of the values for the GetCMMInfo function. Retrieves the CMM signature registered with the International Color Consortium (ICC).
CMM_WIN_VERSION	0	One of the values for the GetCMMInfo function. Retrieves the version of Windows targeted by the color management module (CMM).
INDEX_DONT_CARE	0	A special value for index in constructor. The application developer may allow Windows to choose the CMM by setting the indexPreferredCMM parameter to INDEX_DONT_CARE for the constructor.
WCS_ALWAYS	&h200000	One of the flags passed when creating a transformation. If this bit is set, even all-ICC transforms will use the WCS code path.

Transform creation Flags

Constant	Value	Description
BEST_MODE	3	Transform will be used for the display of the highest-quality imag the target device.
ENABLE_GAMUT_CHECKING	&h10000	Use this transform for gamut checking.
FAST_TRANSLATE	&h40000	Look up color only. Do not interpolate the color.
NORMAL_MODE	2	Transform will be used for normal image display. Average image
PRESERVEBLACK	&h100000	If this bit is set, the transform engine inserts the appropriate blac GMMP as the last GMMP in the transform sequence. This flag o a pure WCS transform.
PROOF_MODE	1	Transform will be used to preview the image. Low image quality.
SEQUENTIAL_TRANSFORM	&h80800000	If this bit is set, each step in the WCS processing pipeline is p every pixel in the image and no optimized color transform is bui only works in a pure WCS transform. Restrictions: A transform created with the SEQUENTIAL_TR flag set may only be used in the thread on which it was created one color translation call at a time. COM must be initialized prio the sequential transform and must remain initialized for the lif transform object.
USE_RELATIVE_COLORIMETRIC	&h20000	

Bitmap Format Constants

Constant	Value	Description
BM_10b_G3CH	&h0404	32 bits per pixel. 10 bits are used for each color channel. The 2 most significa bits are ignored.
BM_10b_Lab	&h0403	32 bits per pixel. 10 bits are used for each color channel. The 2 most significa bits are ignored.
BM_10b_RGB	9	32 bits per pixel. 10 bits are used for each color channel. The 2 most significa bits are ignored.
BM_10b_XYZ	&h0401	32 bits per pixel. 10 bits are used for each color channel. The 2 most significa bits are ignored.
BM_10b_Yxy	&h0402	32 bits per pixel. 10 bits are used for each color channel. The 2 most significa bits are ignored.
BM_16b_G3CH	&h0504	64 bits per pixel. 16 bits are used for the gray-scale value. Each of the thr color channels uses 16 bits.
BM_16b_GRAY	&h0505	64 bits per pixel. 16 bits are used for the gray-scale value. All other bits a ignored.
BM_16b_Lab	&h0503	64 bits per pixel. 16 bits are used for the gray-scale value. Each of the thr color channels uses 16 bits.
BM_16b_RGB	10	64 bits per pixel. 16 bits are used for the gray-scale value. Each of the thr color channels uses 16 bits.
BM_16b_XYZ	&h0501	64 bits per pixel. 16 bits are used for the gray-scale value. Each of the thr color channels uses 16 bits.
BM_16b_Yxy	&h0502	64 bits per pixel. 16 bits are used for the gray-scale value. Each of the thr color channels uses 16 bits.
BM_32b_scARGB	&h0602	128 bits per pixel. 32 bits are used for each color channel, as defined by t IEEE 32-bit floating point standard.
BM_32b_scRGB	&h0601	96 bits per pixel. 32 bits are used for each color channel, as defined by t IEEE 32-bit floating point standard.
BM_565RGB	1	16 bits per pixel. 5 bits are used for red, 6 for green, and 5 for blue.
BM_5CHANNEL	&h0205	40 bits per pixel. 8 bits apiece are used for each channel.
BM_6CHANNEL	&h0206	48 bits per pixel. 8 bits apiece are used for each channel.
BM_7CHANNEL	&h0207	56 bits per pixel. 8 bits apiece are used for each channel.
BM_8CHANNEL	&h0208	64 bits per pixel. 8 bits apiece are used for each channel.
BM_BGRTRIPLETS	4	24 bits per pixel maximum. For three channel colors, such as red, green, a blue, the total size is 24 bits per pixel. For single channel colors, such as gra the total size is 8 bits per pixel.
BM_CMYKQUADS	&h0020	32 bits per pixel. 8 bits are used for each color channel.
BM_G3CHTRIPLETS	&h0204	24 bits per pixel maximum. For three channel values, the total size is 24 b per pixel. For single channel gray scale, the total size is 8 bits per pixel.
BM_GRAY	&h0209	32 bits per pixel. Only the 8 bit gray-scale value is used.
BM_KYMCQUADS	&h0305	32 bits per pixel. 8 bits are used for each color channel.
BM_LabTRIPLETS	&h0203	24 bits per pixel maximum. For three channel, L, a, and b values, the tot size is 24 bits per pixel. For single channel gray scale, the total size is 8 b per pixel.
BM_NAMED_INDEX	&h0405	32 bits per pixel. Named color indices. Index numbering begins at one.
BM_R10G10B10A2	&h0701	Only in Windows Vista.
BM_R10G10B10A2_XR	&h0702	Only in Windows Vista.
BM_R16G16B16A16_FLOAT	&h0703	Only in Windows Vista.
BM_RGBTRIPLETS	2	24 bits per pixel maximum. For three channel colors, such as red, green, a blue, the total size is 24 bits per pixel. For single channel colors, such as gra the total size is 8 bits per pixel.
BM_S2DOT13FIXED_scARGB	&h0604	64 bits per pixel. Color data is stored as one 16-bit word per channel, with fixed range of -4 to +4, inclusive. A signed format is used, with 1 bit for t sign, 2 bits for the integer portion, and 13 bits for the fractional portion.
BM_S2DOT13FIXED_scRGB	&h0603	48 bits per pixel. Color data is stored as one 16-bit word per channel, with fixed range of -4 to +4, inclusive. A signed format is used, with 1 bit for t sign, 2 bits for the integer portion, and 13 bits for the fractional portion.
BM_x555G3CH	&h0104	16 bits per pixel. G3CH color space. 5 bits per channel. The most significa bit is ignored.
BM_x555Lab	&h0103	16 bits per pixel. Lab color space. 5 bits per channel. The most significant b

Info selectors for GetInfo

Constant	Value	Description
CMM_DESCRIPTION	5	A text string that describes the color management module.
CMM_DRIVER_VERSION	2	
CMM_FROM_PROFILE	0	
CMM_LOGOICON	6	The logo icon for this CMM.
CMM_VERSION	4	Version of Windows supported.
CMM_WINDOWS_DEFAULT	&h57696E20	

Rendering Intent Constants

Constant	Value	Description
INTENT_ABSOLUTE_COLORIMETRIC	3	Maintain the white point. Match the colors to their nearest color i nation gamut.
INTENT_PERCEPTUAL	0	Maintain contrast. Used for photographs and natural images.
INTENT_RELATIVE_COLORIMETRIC	1	Maintain colorimetric match. Used for graphic designs and named
INTENT_SATURATION	2	Maintain saturation. Used for business charts and other situatio undithered colors are required.

Chapter 214

Windows Location

214.1 class WindowsLocationExceptionMBS

214.1.1 class WindowsLocationExceptionMBS

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for errors in the Windows Location API.
Notes: Subclass of the RuntimeException class.
Blog Entries

- News from the MBS Xojo Plugins Version 20.4
- MBS Xojo Plugins, version 20.4pr2

214.2 class WindowsLocationManagerMBS

214.2.1 class WindowsLocationManagerMBS

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for accessing Location API on Windows.
Example:

```
// get the current location on Windows
// MyLocationManager is a subclass of WindowsLocationManagerMBS with the events implemented.
// Manager is a property of the window: Manager As MyLocationManager
Manager = New MyLocationManager
Manager.RequestPermissions Self
Manager.StartEvents

// in MyLocationManager:
Sub LocationChanged(Report As WindowsLocationMBS) Handles LocationChanged
System.DebugLog "Position: " + Report.Latitude.ToString + ", " + Report.Longitude.ToString + " +/- "
+ Report.ErrorRadius.ToString + " m"
End Sub
```

Notes: You may need to StartEvents to later query location or receive events.

see MSDN for details:
https://docs.microsoft.com/en-us/windows/win32/locationapi/windows-location-api-portal

See CLLocationManagerMBS class for macOS.

Xojo Developer Magazine

- 22.2, page 66: Find Yourself, How to determine the location of devices with MBS under Windows and Mac by Stefanie Juchmes-Simonis

214.2.2 Methods

214.2.3 Constructor

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.

214.2.4 RequestPermissions(win as DesktopWindow)

MBS WinFrameworks Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Opens a system dialog box to request user permission to enable location devices.
Notes: win: the parent window for the dialog.
See also:

- 214.2.5 RequestPermissions(win as window) 25109

214.2.5 RequestPermissions(win as window)

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop only.

Function: Opens a system dialog box to request user permission to enable location devices.
Notes: win: the parent window for the dialog.
See also:

- 214.2.4 RequestPermissions(win as DesktopWindow) 25109

214.2.6 StartEvents(RequestedReportInterval as Integer = 0)

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Starts events.
Notes: Should be called once to start events and get LocationChanged or StatusChanged to work.

214.2.7 StopEvents

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Stop events.

214.2.8 Properties

214.2.9 DesiredAccuracy as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current requested accuracy setting.
Notes: See kLocationDesiredAccuracyHigh and kLocationDesiredAccuracyDefault constants.
(Read and Write property)

214.2.10 Handle as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

214.2.11 Report as WindowsLocationMBS

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves a location report.
Notes: When Report is called, it may result in a notification being displayed in the taskbar, and a Location Activity event being logged in Event Viewer, if it is the application's first use of location.
(Read only property)

214.2.12 ReportInterval as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The requested amount of time, in milliseconds, between report events.
Notes: If this value is set to zero, no minimum interval is specified and your application receives events at the location sensor's default interval.
(Read and Write property)

214.2.13 ReportStatus as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the status for the specified report type.
Notes: (Read only property)

214.2.14 Events

214.2.15 LocationChanged(Report as WindowsLocationMBS)

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Called when a new location report is available.
Notes: If the application calls LocationChanged as a result of its first use of location, the call might cause a notification to appear in the taskbar, and cause a Location Activity event to be logged in Event Viewer.

214.2.16 StatusChanged(Status as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Called when a report status changes.
Notes: This event provides report status for new reports. The most recent reports remain available through GetReport, regardless of the status reported by this event.

214.2.17 Constants

Location Desired Accuracy

Constant	Value	Description
kLocationDesiredAccuracyDefault	0	The sensor should use the accuracy for which it can optimize power use an other cost considerations.
kLocationDesiredAccuracyHigh	1	The sensor should deliver the most accurate report possible. This include using services that might charge money, or consuming higher levels of batter power or connection bandwidth.

Location Report Status

Constant	Value	Description
kLocationReportStatusAccessDenied	2	No permissions have been granted to access this report type. Call Request missions.
kLocationReportStatusError	1	There was an error when creating the report, or location providers fo requested type are unable to provide any data. Location providers migh currently unavailable, or location providers cannot obtain any data. For e ple, this state may occur when a GPS sensor is indoors and no satellites a view.
kLocationReportStatusInitializing	3	The report is being initialized.
kLocationReportStatusNotSupported	0	The requested report type is not supported by the API. No location prov of the requested type are installed.
kLocationReportStatusRunning	4	The report is running. New location data for the requested report ty available.

214.3 class WindowsLocationMBS

214.3.1 class WindowsLocationMBS

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: WindowsLocationMBS represents a location report that contains information in the form of latitude and longitude.
Example:

```
// get the current position from the Windows location service
// MyLocationManager is a subclass of WindowsLocationManagerMBS with the LocationChanged event implemented.
// Manager is a property of the window: Manager As MyLocationManager
Manager = New MyLocationManager
Manager.RequestPermissions Self
Manager.StartEvents

// in MyLocationManager:
Sub LocationChanged(Report As WindowsLocationMBS) Handles LocationChanged
System.DebugLog "Lat " + Format(Report.Latitude, "0.00000") + ", lon " + Format(Report.Longitude, "0.00000") + ", +/- " + Format(Report.ErrorRadius, "0") + " m"
End Sub
```

Notes: Querying the property may raise a WindowsLocationExceptionMBS if this field is not available.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- News from the MBS Xojo Plugins Version 20.4

Xojo Developer Magazine

- 22.2, page 67: Find Yourself, How to determine the location of devices with MBS under Windows and Mac by Stefanie Juchmes-Simonis

214.3.2 Methods

214.3.3 Constructor

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

214.3.4 Properties

214.3.5 Altitude as Double

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the altitude, in meters.
Notes: Altitude is relative to the reference ellipsoid.

The Altitude property retrieves the altitude relative to the reference ellipsoid that is defined by the latest revision of the World Geodetic System (WGS 84), rather than the altitude relative to sea level.

Querying the property may raise a WindowsLocationExceptionMBS if this field is not available.
(Read only property)

214.3.6 AltitudeError as Double

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the altitude error, in meters.
Notes: Querying the property may raise a WindowsLocationExceptionMBS if this field is not available.
(Read only property)

214.3.7 DateTime as DateTime

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the date and time when the report was generated.
Notes: Time stamps are provided as Coordinated Universal Time (UTC).
(Read only property)

214.3.8 ErrorRadius as Double

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves a distance from the reported location, in meters.
Notes: Combined with the location reported as the origin, this radius describes the circle in which the actual location is probably located.

Querying the property may raise a WindowsLocationExceptionMBS if this field is not available.
(Read only property)

214.3.9 Handle as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

214.3.10 Latitude as Double

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the latitude, in degrees.
Notes: The latitude is between -90 and 90, where north is positive.

Querying the property may raise a WindowsLocationExceptionMBS if this field is not available.
(Read only property)

214.3.11 Longitude as Double

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the longitude, in degrees.
Notes: The longitude is between -180 and 180, where East is positive.

Querying the property may raise a WindowsLocationExceptionMBS if this field is not available.
(Read only property)

214.3.12 SensorID as String

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the ID of the sensor that generated the location report.
Notes: Provided as formatted UUID.
Maybe all zero if ID is not provided by OS.
(Read only property)

214.3.13 Timestamp as Date

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the date and time when the report was generated.
Notes: Time stamps are provided as Coordinated Universal Time (UTC).
(Read only property)

Chapter 215

Windows Media Foundation

215.1 class MFPMediaItemMBS

215.1.1 class MFPMediaItemMBS

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: An item to playback.
Notes: Can be loaded asynchronously before playing, so you can preload the next file while another is playing.
For Windows 7, Windows Server 2008 R2 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- News from the MBS Xojo Plugins Version 23.2
- MonkeyBread Software Releases the MBS Xojo Plugins in version 23.2
- MBS Xojo Plugins, version 23.2pr1
- MBS Xojo Plugins, version 19.6pr4

215.1.2 Methods

215.1.3 Constructor

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

215.1.4 PresentationAttribute(UUID as String) as Variant

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the media item for a presentation attribute.
Notes: see
https://docs.microsoft.com/windows/win32/medfound/presentation-descriptor-attributes

If needed a future MBS Plugin version could include explicit properties for some of those values.

215.1.5 StreamAttribute(index as Integer, UUID as String) as Variant

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the media item for a stream attribute.
Notes: see
https://docs.microsoft.com/windows/win32/medfound/stream-descriptor-attributes

215.1.6 Properties

215.1.7 AudioBitsPerSample as Variant

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of bits per audio sample in an audio media type.
Notes: e.g. 16
(Read only property)

215.1.8 AudioChannels as Variant

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of audio channels in an audio media type.
Notes: e.g. 1
(Read only property)

215.1.9 AudioSamplesPerSecond as Variant

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of audio samples per second in an audio media type.
Notes: e.g. 44100
(Read only property)

215.1.10 CanPause as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The media item can pause.
Notes: If this flag is absent, the Pause method will likely fail.
(Read only property)

215.1.11 CanSeek as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The media item supports seeking.
Notes: If this flag is absent, setting the Position property will fail.
(Read only property)

215.1.12 Duration as Double

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the duration of the media item.
Notes: (Read only property)

215.1.13 Handle as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

215.1.14 HasAudio as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries whether the media item contains an audio stream.
Notes: Returns the value true if the media item contains at least one audio stream, or false otherwise.

(Read only property)

215.1.15 HasAudioSelected as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries whether the media item contains an audio stream.
Notes: Returns the value true if at least one audio stream is selected, or false otherwise.

To select or deselect streams before playback starts, set StreamSelection(index).
(Read only property)

215.1.16 HasSlowSeek as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Seeking can take a long time.
Notes: For example, the source might download content through HTTP.
(Read only property)

215.1.17 HasVideo as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries whether the media item contains a video stream.
Notes: Returns the value true if the media item contains at least one video stream, or false otherwise.
(Read only property)

215.1.18 HasVideoSelected as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries whether the media item contains a video stream.
Notes: Returns the value true if at least one video stream is selected, or false otherwise.

To select or deselect streams before playback starts, set StreamSelection(index).
(Read only property)

215.1.19 IsLive as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The media item represents a live data source, such as video camera.
Notes: If playback is stopped and then restarted, there will be a gap in the content.
(Read only property)

215.1.20 IsProtected as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries whether the media item contains protected content.
Notes: If true then the media item contains protected content. Attempting to play this media item will cause a playback error.
(Read only property)

215.1.21 Metadata as Dictionary

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a dictionary that contains metadata for the source, such as author or title.
Notes: (Read only property)

215.1.22 NumberOfStreams as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the number of streams (audio, video, and other) in the media item.
Notes: (Read only property)

215.1.23 StartPosition as Double

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The start time for the media item.
Notes: The adjusted start and stop times are used the next time that SetMediaItem is called with this media item. If the media item is already set on the player, the change does not happen unless you call SetMediaItem again.
(Read and Write property)

215.1.24 StopPosition as Double

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The stop time for the media item.
Notes: The adjusted start and stop times are used the next time that SetMediaItem is called with this media item. If the media item is already set on the player, the change does not happen unless you call SetMediaItem again.
(Read and Write property)

215.1.25 Tag as Variant

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The tag value associated with this plugin object.
Notes: Can be used freely by you.
(Read and Write property)

215.1.26 URL as String

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the URL that was used to create the media item.
Notes: (Read only property)

215.1.27 VideoFrameRate as Variant

MBS WinFrameworks Plugin, Plugin Version: 23.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Frame rate of a video media type, in frames per second.
Notes: The frame rate is expressed as a ratio. The upper 32 bits of the attribute value contain the numerator and the lower 32 bits contain the denominator. For example, if the frame rate is 30 frames per second (fps), the ratio is 30/1. If the frame rate is 29.97 fps, the ratio is 30,000/1001.

e.g. 2147483648016679, which gives with BitWise.ShiftRight(v, 32) the value 500000 and with BitWise-And(v, &hFFFFFFFF) the value 16679. 500000/16679 gives 29.97.
(Read only property)

215.1.28 StreamSelection(index as Integer) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Selects or deselects a stream.
Notes: Zero-based index of the stream. To get the number of streams, call NumberOfStreams.

Set to true: The stream is selected. During playback, this stream will play.
Set to false: The stream is not selected. During playback, this stream will not play.
(Read and Write computed property)

215.2 class MFPMediaPlayerExceptionMBS

215.2.1 class MFPMediaPlayerExceptionMBS

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for an error with MFPMediaPlayerMBS class.
Notes: See ErrorCode and Message properties.
Subclass of the RuntimeException class.

215.3 class MFPMediaPlayerMBS

215.3.1 class MFPMediaPlayerMBS

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Windows Media Foundation Media Player class.
Example:

```
// play a video inside the window with Windows Media Foundation
// Player is a property of the window: Player As MFPMediaPlayerMBS
Var file As FolderItem = SpecialFolder.Movies.Child("test.mp4")
Player = New MFPMediaPlayerMBS(file.URLPath, True, Self)
Player.Volume = 0.8

// later
// Player.Pause
```

Notes: An alternative movie and audio player for Xojo.
For Windows 7, Windows Server 2008 R2 or newer.

215.3.2 Methods

215.3.3 ClearMediaItem

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Clears the current media item.
Notes: This method stops playback and releases the player object's references to the current media item. This method completes asynchronously. When the operation completes, the MediaItemCleared event is invoked. The event type is

215.3.4 Constructor(URL as String = """, StartPlayback as Boolean = false)

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new instance of the MFPlay player object for audio only.
Notes: URL: The string that contains the URL of a media file to open (or file path). This parameter can be empty. If the parameter is empty, StartPlayback must be false.
If this parameter is empty, you can open a URL later by calling CreateMediaItemFromURL.

StartPlayback: If true, playback starts automatically. If false, playback does not start until the application calls Play method. If URL is empty, this parameter is ignored.

Please call this in main thread of application only.

215.3.5 Constructor(URL as String, StartPlayback as Boolean, control as DesktopControl)

MBS WinFrameworks Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Creates a new instance of the MFPlay player object.
Notes: URL: The string that contains the URL of a media file to open (or file path). This parameter can be empty. If the parameter is empty, StartPlayback must be false.
If this parameter is empty, you can open a URL later by calling CreateMediaItemFromURL.

StartPlayback: If true, playback starts automatically. If false, playback does not start until the application calls Play method. If URL is empty, this parameter is ignored.

Control: A reference to a control where the video will appear. For audio-only playback, this parameter can be nil.

The control specified is used for the first selected video stream in the source.
If control is nil, MFPlay will not display any video.

Please call this in main thread of application only.

215.3.6 Constructor(URL as String, StartPlayback as Boolean, control as RectControl)

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Creates a new instance of the MFPlay player object.
Notes: URL: The string that contains the URL of a media file to open (or file path). This parameter can be empty. If the parameter is empty, StartPlayback must be false.
If this parameter is empty, you can open a URL later by calling CreateMediaItemFromURL.

StartPlayback: If true, playback starts automatically. If false, playback does not start until the application calls Play method. If URL is empty, this parameter is ignored.

Control: A reference to a control where the video will appear. For audio-only playback, this parameter can be nil.

The control specified is used for the first selected video stream in the source.
If control is nil, MFPlay will not display any video.

Please call this in main thread of application only.

215.3.7 Constructor(URL as String, StartPlayback as Boolean, Handle as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new instance of the MFPlay player object.
Notes: URL: The string that contains the URL of a media file to open (or file path). This parameter can be empty. If the parameter is empty, StartPlayback must be false.
If this parameter is empty, you can open a URL later by calling CreateMediaItemFromURL.

StartPlayback: If true, playback starts automatically. If false, playback does not start until the application calls Play method. If URL is empty, this parameter is ignored.

Handle: A handle to a window or control where the video will appear. For audio-only playback, this parameter can be nil.

The window specified is used for the first selected video stream in the source.

If windows is nil, MFPlay will not display any video.

Please call this in main thread of application only.
