Application Title	OneLondon Secure Data Environment (The OneLondon SDE) (non research app)	
Application Summary	This application from North West London ICB is for the purposes of both medical research and management of health and social care to create the OneLondon Secure Data Environment. The five ICBs in London are working together to create the OneLondon SDE, which forms part of a wider data strategy in London to make better use of the health data. The research element is also is part of a national initiative to move towards access of NHS data by default, rather than data sharing and is part of the Data Saves Lives strategy. SDEs across the country will also become interoperable to enable access. Further details on this national initiative and progress to date is here. Confidential Patient Information from NHS organisations and GP practices across London, as well as national datasets from NHS England, will be shared to North East London SDE for linkage and curation. The identifiable dataset will then be further shared to North West London ICB where the identifiable dataset will have a direct care use. For this application, the dataset will then be pseudonymised for secondary research and non-research uses. All requests to access data will be considered by the London Independent Information Access Group, which includes lay representation, who will make a recommendation before review by ICS level data access committees.	
Applicant Organisation Name	NHS North West London Integrated Care Board	
Contact Name	Mark Kewley	
Address	ELHCP PMO Office 2nd Floor Unex Tower, 5 Station Street, London	
Postcode	E15 1DA	
Telephone	07782 211993
